Dexamethasone	07 Dec 2020 (Study Day 123) - 16 Dec 2020 (Study Day 132)	COVID-19
Salbutamol	07 Dec 2020 (Study Day 123) - 11 Dec 2020 (Study Day 127)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US321-2112 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Severe COVID-19, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ Symptomatic COVID-19	COVID-19, AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	14 Oct 2020 (Study Day 66) – 30 Nov 2020 (Study Day 113)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US321-2112, a 28-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 10 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 14 Oct 2020 (Study Day 66), 65 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/Moderate non-serious adverse event of symptomatic COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 29 Oct 2020 (Study Day 81), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
14 Oct 2020 (Study Day 66)	New Loss of Taste	Mild
15 Oct 2020 (Study Day 67)	New Loss of Taste	Mild
16 Oct 2020 (Study Day 68)	Nausea	Mild
17 Oct 2020 (Study Day 69)	Nausea	Mild

Symptom Date	Symptom	Result
19 Oct 2020 (Study Day 71)	Nasal Congestion	Moderate
19 Oct 2020 (Study Day 71)	Temperature (°F)	103.0
20 Oct 2020 (Study Day 72)	Nasal Congestion	Mild
20 Oct 2020 (Study Day 72)	Temperature (°F)	103
21 Oct 2020 (Study Day 73)	Body Aches	Mild
21 Oct 2020 (Study Day 73)	Chills	Mild
21 Oct 2020 (Study Day 73)	Sore Throat	Mild
22 Oct 2020 (Study Day 74)	Sore Throat	Mild
23 Oct 2020 (Study Day 75)	Sore Throat	Mild
24 Oct 2020 (Study Day 76)	Diarrhea	Moderate
24 Oct 2020 (Study Day 76)	Sore Throat	Mild
24 Oct 2020 (Study Day 76)	Vomiting	Moderate
25 Oct 2020 (Study Day 77)	Diarrhea	Moderate
25 Oct 2020 (Study Day 77)	Sore Throat	Mild
25 Oct 2020 (Study Day 77)	Vomiting	Moderate
09 Nov 2020 (Study Day 92)	O2 Saturation (%)	92
10 Nov 2020 (Study Day 93)	O2 Saturation (%)	92
11 Nov 2020 (Study Day 94)	O2 Saturation (%)	90

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
09 Nov 2020 (Study Day 92)	Oxygen Saturation	92%
09 Nov 2020 - 30 Nov 2020 (Study Day 92-113)	Oxygen Saturation of SpO2 ≤93% on room air at sea level	Yes

On 06 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of symptomatic COVID-19 lasted for 48 days, after which it was considered to be recovered/resolved on 30 Nov 2020 (Study Day 113). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000605	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Appendicectomy	Appendectomy	2014 - 2014
Appendicitis	Appendicitis	2014 - 2014
Nasal septal operation	Septoplasty	2017 - 2017
Nasal septum deviation	Deviated septum	2017 - 2017

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Dietary supplement	2020 - Ongoing	Pre Work Out Supplement
Influenza vaccine	13 Oct 2020 (Study Day 65) - 13 Oct 2020 (Study Day 65)	Prevent Flu
Ascorbic acid	09 Nov 2020 (Study Day 92) - Ongoing	Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	14 Oct 2020 (Study Day 66) - 30 Nov 2020 (Study Day 113)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US323-2056 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	17 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	14 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	COVID-19	Grade 3/severe	Not related	02 Jan 2021 (Study Day 139) – 21 Jan 2021 (Study Day 158)	Recovered/ resolved
Atrioventricular Block Complete/Complete Heart Blockage	SAE	Grade 3/severe	Not related	16 Jan 2021 (Study Day 153) – 19 Jan 2021 (Study Day 156)	Recovered/ resolved
Syncope/Syncope	SAE	Grade 3/severe	Not related	16 Jan 2021 (Study Day 153) – 19 Jan 2021 (Study Day 156)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US323-2056, a 72-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 17 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 14 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Jan 2021 (Study Day 153), 152 days after the first dose and 124 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of atrioventricular block complete. Action taken with the IP was not applicable. The event of complete heart blockage lasted for 4 days, after which it was considered to be recovered/resolved on 19 Jan 2021 (Study Day 156). The investigator assessed the event of atrioventricular block complete to be not related to the IP.

On 16 Jan 2021 (Study Day 153), 152 days after the first dose and 124 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of syncope. Action taken with the IP was not applicable. The event of syncope lasted for 4 days, after which it was considered to be recovered/resolved on 19 Jan 2021 (Study Day 156). The investigator assessed the event of syncope to be not related to the IP.

Severe COVID-19 Details

On 02 Jan 2021 (Study Day 139), 138 days after the first dose and 110 days after the second dose of the IP, the participant experienced a Grade 3/Severe non-serious adverse event of COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 14 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 08 Jan 2021 (Study Day 145), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
02 Jan 2021 (Study Day 139)	Body Aches	Mild
02 Jan 2021 (Study Day 139)	Cough	Mild
02 Jan 2021 (Study Day 139)	Headache	Mild
03 Jan 2021 (Study Day 140)	Body Aches	Mild
03 Jan 2021 (Study Day 140)	Cough	Mild
03 Jan 2021 (Study Day 140)	Headache	Mild
04 Jan 2021 (Study Day 141)	Body Aches	Mild
04 Jan 2021 (Study Day 141)	Cough	Mild
04 Jan 2021 (Study Day 141)	Headache	Mild
05 Jan 2021 (Study Day 142)	Body Aches	Mild
05 Jan 2021 (Study Day 142)	Cough	Mild
05 Jan 2021 (Study Day 142)	Headache	Mild
06 Jan 2021 (Study Day 143)	Body Aches	Mild
06 Jan 2021 (Study Day 143)	Cough	Mild
06 Jan 2021 (Study Day 143)	Headache	Mild
07 Jan 2021 (Study Day 144)	Body Aches	Mild
07 Jan 2021 (Study Day 144)	Cough	Mild
07 Jan 2021 (Study Day 144)	Headache	Mild
08 Jan 2021 (Study Day 145)	Body Aches	Mild
08 Jan 2021 (Study Day 145)	Cough	Mild
08 Jan 2021 (Study Day 145)	Headache	Mild
09 Jan 2021 (Study Day 146)	Body Aches	Mild
09 Jan 2021 (Study Day 146)	Cough	Mild
09 Jan 2021 (Study Day 146)	Fatigue	Mild
09 Jan 2021 (Study Day 146)	Headache	Moderate
10 Jan 2021 (Study Day 147)	Body Aches	Mild
10 Jan 2021 (Study Day 147)	Cough	Mild
10 Jan 2021 (Study Day 147)	Fatigue	Mild
10 Jan 2021 (Study Day 147)	Headache	Mild
11 Jan 2021 (Study Day 148)	Cough	Mild

Symptom Date	Symptom	Result
11 Jan 2021 (Study Day 148)	Fatigue	Mild
11 Jan 2021 (Study Day 148)	Headache	Mild
12 Jan 2021 (Study Day 149)	Cough	Mild
12 Jan 2021 (Study Day 149)	Fatigue	Mild
12 Jan 2021 (Study Day 149)	Headache	Mild
13 Jan 2021 (Study Day 150)	Cough	Mild
13 Jan 2021 (Study Day 150)	Fatigue	Mild
13 Jan 2021 (Study Day 150)	Headache	Moderate
13 Jan 2021 (Study Day 150)	Nausea	Mild
14 Jan 2021 (Study Day 151)	Headache	Mild
27 Jan 2021 (Study Day 164)	Headache	Mild
27 Jan 2021 (Study Day 164)	O2 Saturation (%)	91
16 Apr 2021 (Study Day 243)	Fatigue	Mild
16 Apr 2021 (Study Day 243)	Headache	Moderate
16 Apr 2021 (Study Day 243)	Nasal Congestion	Moderate
18 Apr 2021 (Study Day 245)	O2 Saturation (%)	91

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
27 Jan 2021 (Study Day 164)	Oxygen Saturation	91%
27 Jan 2021 - 28 Jan 2021 (Study Day 164-165)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID-19 lasted for 20 days, after which it was considered to be recovered/resolved on 21 Jan 2021 (Study Day 158). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious and serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-003140	COVID-19
MOD-2021-003140	Atrioventricular block complete
MOD-2021-003140	Syncope

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraine headaches	1956 - Ongoing
Herpes zoster	Shingles	1957 - 2000
Breast cancer	Breast (bilateral) cancer	1990 - 2015
Anaemia	Anemia	1994 - Ongoing
Hysterectomy	Hysterectomy	1997 - Ongoing
Irritable bowel syndrome	Irritable bowel syndrome	2010 - Ongoing
Transfusion	Transfusions	2015 - 2015
Carpal tunnel syndrome	Carpol tunnel syndrome	2017 - Ongoing
Chronic obstructive pulmonary disease	Copd	2017 - Ongoing
Wheezing	Asthma/wheezing	2017 - Ongoing
Cataract	Cataracts	2018 - 2019
Sleep apnoea syndrome	Sleep apnea	2018 - Ongoing
Vitamin B12 deficiency	Vitamin b12 deficiency	2018 - Ongoing
Cardiac failure congestive	Congestive heart failure	2019 - Ongoing
Hypertension	Hypertension	2019 - Ongoing
Hypothyroidism	Hypothyroidism	2019 - Ongoing
Vitamin D deficiency	Vitamin d deficiency	2019 - Ongoing
Anxiety	Anxiety	02 Mar 2020 (Study Day -168) - Ongoing
Depression	Depression	02 Mar 2020 (Study Day -168) - Ongoing
Tinnitus	Tinnitus	10 Aug 2020 (Study Day -7) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ferrous sulfate	1994 - Ongoing	Anemia
Fluticasone furoate; vilanterol trifenatate	2017 - Ongoing	Asthma/ Copd
Salbutamol	2017 - Ongoing	Asthma
Cyanocobalamin	2018 - Ongoing	B12 Deficiency
Acetylsalicylic acid	2019 - Ongoing	Cardiac Prophylactic
Carvedilol	2019 - Ongoing	Hypertension
Colecalciferol	2019 - Ongoing	General Health
Levothyroxine	2019 - Ongoing	Hypothyroid

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fluoxetine	12 Mar 2020 (Study Day -158) - Ongoing	Anxiety
Lisinopril	06 Aug 2020 (Study Day -11) - Ongoing	Hypertension
Cefdinir	30 Sep 2020 (Study Day 45) - 10 Oct 2020 (Study Day 55)	Pansinusitis
Ascorbic acid	08 Jan 2021 (Study Day 145) - Ongoing	COVID-19
Azithromycin	08 Jan 2021 (Study Day 145) - 08 Jan 2021 (Study Day 145)	COVID-19
Colecalciferol	08 Jan 2021 (Study Day 145) - Ongoing	COVID-19
Melatonin	08 Jan 2021 (Study Day 145) - Ongoing	COVID-19
Nattokinase	08 Jan 2021 (Study Day 145) - Ongoing	COVID-19
Zinc	08 Jan 2021 (Study Day 145) - Ongoing	COVID-19
Azithromycin	09 Jan 2021 (Study Day 146) - 12 Jan 2021 (Study Day 149)	COVID-19
Caffeine; paracetamol	13 Jan 2021 (Study Day 150) - Ongoing	Headache
Amlodipine	16 Jan 2021 (Study Day 153) - Ongoing	Hypertension
Docusate sodium	16 Jan 2021 (Study Day 153) - 19 Jan 2021 (Study Day 156)	Prophylactic Constipation
Lisinopril	16 Jan 2021 (Study Day 153) - 02 Feb 2021 (Study Day 170)	Hypertension
Naloxone hydrochloride	16 Jan 2021 (Study Day 153) - 16 Jan 2021 (Study Day 153)	Syncope
Ondansetron	16 Jan 2021 (Study Day 153) - 16 Jan 2021 (Study Day 153)	Nausea Prophylaxis
Paracetamol	16 Jan 2021 (Study Day 153) - 19 Jan 2021 (Study Day 156)	Pre/Post Operative Pain (Surgical Site-Pacemaker)
Sodium chloride	16 Jan 2021 (Study Day 153) - 16 Jan 2021 (Study Day 153)	Syncope
Chlorhexidine	17 Jan 2021 (Study Day 154) - 18 Jan 2021 (Study Day 155)	Prophylactic For Infection
Promethazine	17 Jan 2021 (Study Day 154) - 17 Jan 2021 (Study Day 154)	Prophylactic N//V
Pacemaker placement*	18 Jan 2021 (Study Day 155) - 18 Jan 2021 (Study Day 155)	Adverse Event
Doxycycline hyclate	19 Jan 2021 (Study Day 156) - Ongoing	Prophylaxis Bacteria Infection
Ibuprofen	27 Jan 2021 (Study Day 164) - 27 Jan 2021 (Study Day 164)	Headache
Lisinopril	03 Feb 2021 (Study Day 171) - Ongoing	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	23 Aug 2020 (Study Day 7) - 28 Aug 2020 (Study Day 12)
Oropharyngeal Pain	Grade 1/mild	Not related	30 Sep 2020 (Study Day 45) - 03 Oct 2020 (Study Day 48)
Sinusitis	Grade 1/mild	Not related	30 Sep 2020 (Study Day 45) - 03 Oct 2020 (Study Day 48)
COVID-19	Grade 3/severe	Not related	02 Jan 2021 (Study Day 139) - 21 Jan 2021 (Study Day 158)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US323-2157 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	09 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	07 Oct 2020 (Study Day 29)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	COVID-19	Grade 3/severe	Not related	06 Jan 2021 (Study Day 120) – 05 Feb 2021 (Study Day 150)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US323-2157, a 62-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 09 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 07 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 06 Jan 2021 (Study Day 120), 119 days after the first dose and 91 days after the second dose of the IP, the participant experienced a Grade 3/Severe non-serious adverse event of COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 07 Oct 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 08 Jan 2021 (Study Day 122), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
06 Jan 2021 (Study Day 120)	Cough	Mild
07 Jan 2021 (Study Day 121)	Body Aches	Mild
07 Jan 2021 (Study Day 121)	Chills	Mild
07 Jan 2021 (Study Day 121)	Cough	Mild
08 Jan 2021 (Study Day 122)	Body Aches	Mild
08 Jan 2021 (Study Day 122)	Chills	Mild

Symptom Date	Symptom	Result
08 Jan 2021 (Study Day 122)	Cough	Mild
09 Jan 2021 (Study Day 123)	Body Aches	Severe
09 Jan 2021 (Study Day 123)	Cough	Mild
09 Jan 2021 (Study Day 123)	Fatigue	Severe
09 Jan 2021 (Study Day 123)	Runny Nose (Rhinorrhea)	Mild
10 Jan 2021 (Study Day 124)	Body Aches	Severe
10 Jan 2021 (Study Day 124)	Cough	Mild

20 Jan 2021 (Study Day 134)	Fatigue	Moderate
20 Jan 2021 (Study Day 134)	New Loss of Smell	Severe
20 Jan 2021 (Study Day 134)	New Loss of Taste	Moderate
20 Jan 2021 (Study Day 134)	Runny Nose (Rhinorrhea)	Mild
21 Jan 2021 (Study Day 135)	Cough	Mild
21 Jan 2021 (Study Day 135)	Fatigue	Moderate
21 Jan 2021 (Study Day 135)	New Loss of Smell	Severe
21 Jan 2021 (Study Day 135)	New Loss of Taste	Moderate
21 Jan 2021 (Study Day 135)	Runny Nose (Rhinorrhea)	Mild
22 Jan 2021 (Study Day 136)	Cough	Mild
22 Jan 2021 (Study Day 136)	Fatigue	Moderate
22 Jan 2021 (Study Day 136)	New Loss of Smell	Severe
22 Jan 2021 (Study Day 136)	New Loss of Taste	Moderate
22 Jan 2021 (Study Day 136)	Runny Nose (Rhinorrhea)	Mild
23 Jan 2021 (Study Day 137)	Cough	Mild
23 Jan 2021 (Study Day 137)	Fatigue	Moderate
23 Jan 2021 (Study Day 137)	New Loss of Smell	Severe
23 Jan 2021 (Study Day 137)	New Loss of Taste	Moderate
23 Jan 2021 (Study Day 137)	Runny Nose (Rhinorrhea)	Mild
24 Jan 2021 (Study Day 138)	Cough	Mild
24 Jan 2021 (Study Day 138)	Fatigue	Moderate
24 Jan 2021 (Study Day 138)	New Loss of Smell	Severe
24 Jan 2021 (Study Day 138)	New Loss of Taste	Moderate
24 Jan 2021 (Study Day 138)	Runny Nose (Rhinorrhea)	Mild
25 Jan 2021 (Study Day 139)	Cough	Mild
25 Jan 2021 (Study Day 139)	Fatigue	Moderate
25 Jan 2021 (Study Day 139)	New Loss of Smell	Moderate
25 Jan 2021 (Study Day 139)	New Loss of Taste	Moderate
26 Jan 2021 (Study Day 140)	Cough	Mild
26 Jan 2021 (Study Day 140)	Fatigue	Moderate
26 Jan 2021 (Study Day 140)	New Loss of Smell	Moderate

Symptom Date	Symptom	Result
26 Jan 2021 (Study Day 140)	New Loss of Taste	Moderate
27 Jan 2021 (Study Day 141)	Cough	Mild
27 Jan 2021 (Study Day 141)	Fatigue	Mild
27 Jan 2021 (Study Day 141)	New Loss of Smell	Moderate
27 Jan 2021 (Study Day 141)	New Loss of Taste	Moderate
28 Jan 2021 (Study Day 142)	Cough	Mild
28 Jan 2021 (Study Day 142)	Fatigue	Mild
28 Jan 2021 (Study Day 142)	New Loss of Smell	Moderate
28 Jan 2021 (Study Day 142)	New Loss of Taste	Moderate

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
10 Jan 2021 (Study Day 124)	Oxygen Saturation	92%
10 Jan 2021 - 10 Jan 2021 (Study Day 124-124)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID-19 lasted for 31 days, after which it was considered to be recovered/resolved on 05 Feb 2021 (Study Day 150). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002985	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraine headaches	1980 - Ongoing
Neck surgery	Cervical surgery	1998 - 1998
Hyperlipidaemia	Hyperlipedemia	2000 - Ongoing
Vision correction operation	Laser vision correction	2005 - 2005

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Herpes simplex	Herpes simplex virus 2 (face)	29 Aug 2013 (Study Day -2568) - Ongoing
Back pain	Recurrent back pain	2016 - Ongoing
Osteoarthritis	Osteoarthritis	2016 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2018 - Ongoing
Sleep apnoea syndrome	Sleep apnea	2018 - Ongoing
Cataract	Cataracts	2019 - 2019
Blood donor	Frequent blood donor	15 Mar 2020 (Study Day -178) - 15 Mar 2020 (Study Day -178)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2000 - Ongoing	Cardiac Prophylactic
Atorvastatin	2000 - Ongoing	Hyperlipidemia
Famotidine	2018 - Ongoing	Reflux
Pantoprazole	2018 - Ongoing	Gerd
Valaciclovir	05 Apr 2019 (Study Day -523) - Ongoing	Herpes Simplex Virus 2 (Face)
Ascorbic acid	08 Jan 2021 (Study Day 122) - 22 Jan 2021 (Study Day 136)	COVID-19
Azithromycin	08 Jan 2021 (Study Day 122) - 08 Jan 2021 (Study Day 122)	COVID-19
Azithromycin	08 Jan 2021 (Study Day 122) - 12 Jan 2021 (Study Day 126)	COVID-19
Budesonide	08 Jan 2021 (Study Day 122) - Ongoing	Pulmonary Infiltrates
Colecalciferol	08 Jan 2021 (Study Day 122) - 22 Jan 2021 (Study Day 136)	COVID-19
Melatonin	08 Jan 2021 (Study Day 122) - 22 Jan 2021 (Study Day 136)	COVID-19
Zinc	08 Jan 2021 (Study Day 122) - 22 Jan 2021 (Study Day 136)	COVID-19
Dietary supplement	15 Feb 2021 (Study Day 160) - Ongoing	Gastroenteritis
Simeticone	15 Feb 2021 (Study Day 160) - Ongoing	Gastroenteritis
Naproxen sodium	25 Feb 2021 (Study Day 170) - 10 Mar 2021 (Study Day 183)	Abdominal Pain
Dicycloverine	08 Mar 2021 (Study Day 181) - Ongoing	Gastric Emptying Secondary To Cholangitis
Fentanyl	11 Mar 2021 (Study Day 184) - Ongoing	Abdominal Pain (Pancreatic Mass)

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metoclopramide	11 Mar 2021 (Study Day 184) - Ongoing	Gastric Empyting Secondary To Cholangitis
Mirtazapine	11 Mar 2021 (Study Day 184) - Ongoing	Insomnia
Tramadol hydrochloride	11 Mar 2021 (Study Day 184) - 11 Mar 2021 (Study Day 184)	Abdominal Pain
Enoxaparin sodium	12 Mar 2021 (Study Day 185) - 13 Mar 2021 (Study Day 186)	Prophylactic Cardiac
Esophagogastroduodenoscopy*	12 Mar 2021 (Study Day 185) - 12 Mar 2021 (Study Day 185)	Adverse Event
Lidocaine hydrochloride	12 Mar 2021 (Study Day 185) - 12 Mar 2021 (Study Day 185)	Pre-Op Egd
Morphine	12 Mar 2021 (Study Day 185) - 13 Mar 2021 (Study Day 186)	Abdominal Pain
Paracetamol	12 Mar 2021 (Study Day 185) - 12 Mar 2021 (Study Day 185)	Fever
Piperacillin; tazobactam	12 Mar 2021 (Study Day 185) - 13 Mar 2021 (Study Day 186)	Cholangitis/Sepsis
Promethazine	12 Mar 2021 (Study Day 185) - 13 Mar 2021 (Study Day 186)	Nausea Secondary To Worsening Gastroesophageal Reflux Disease
Propofol	12 Mar 2021 (Study Day 185) - 12 Mar 2021 (Study Day 185)	Anesthesia Egd Secondary To Abdominal Pain
Sodium chloride	12 Mar 2021 (Study Day 185) - 13 Mar 2021 (Study Day 186)	Fluid Resuscitation Secondary To Dehydration
Endoscopic retrograde cholangiopancreatography*	13 Mar 2021 (Study Day 186) - 13 Mar 2021 (Study Day 186)	Adverse Event
Levofloxacin	13 Mar 2021 (Study Day 186) - 23 Mar 2021 (Study Day 196)	Cholangitis/Sepsis
Metronidazole	13 Mar 2021 (Study Day 186) - 23 Mar 2021 (Study Day 196)	Sepsis/Cholangitis
Ondansetron	13 Mar 2021 (Study Day 186) - Ongoing	Nausea Secondary To Worsening Gastroesophageal Reflux Disease
Promethazine	13 Mar 2021 (Study Day 186) - Ongoing	Nausea Secondary To Worsening Gastroesophageal Reflux Disease
Laparoscopic biopsy of peritoneal and omental masses with frozen section and infusaport placement*	25 Mar 2021 (Study Day 198) - 25 Mar 2021 (Study Day 198)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 3/severe	Not related	06 Jan 2021 (Study Day 120) - 05 Feb 2021 (Study Day 150)
Cough	Grade 1/mild	Not related	06 Jan 2021 (Study Day 120) - 05 Feb 2021 (Study Day 150)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Lung Infiltration	Grade 2/moderate	Not related	08 Jan 2021 (Study Day 122) - 13 Jan 2021 (Study Day 127)
Gastroenteritis	Grade 2/moderate	Not related	10 Feb 2021 (Study Day 155) - Ongoing
Pancreatic Carcinoma	Grade 3/severe	Not related	26 Feb 2021 (Study Day 171) - Ongoing
Abdominal Pain	Grade 2/moderate	Not related	07 Mar 2021 (Study Day 180) - Ongoing
Insomnia	Grade 2/moderate	Not related	11 Mar 2021 (Study Day 184) - Ongoing
Pyrexia	Grade 2/moderate	Not related	11 Mar 2021 (Study Day 184) - 13 Mar 2021 (Study Day 186)
Bile Duct Obstruction	Grade 3/severe	Not related	12 Mar 2021 (Study Day 185) - 13 Mar 2021 (Study Day 186)
Cholangitis	Grade 3/severe	Not related	12 Mar 2021 (Study Day 185) - 13 Mar 2021 (Study Day 186)
Early Satiety	Grade 3/severe	Not related	12 Mar 2021 (Study Day 185) - 13 Mar 2021 (Study Day 186)
Gastrooesophageal Reflux Disease	Grade 3/severe	Not related	12 Mar 2021 (Study Day 185) - 13 Mar 2021 (Study Day 186)
Sepsis	Grade 3/severe	Not related	12 Mar 2021 (Study Day 185) - 13 Mar 2021 (Study Day 186)
Transaminases Increased	Grade 3/severe	Not related	12 Mar 2021 (Study Day 185) - 13 Mar 2021 (Study Day 186)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US329-2241 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	20 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Headache/Occipital Headache	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	20 Aug 2020 (Study Day 1) – 30 Sep 2020 (Study Day 42)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US329-2241, a 67-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 20 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Aug 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of headache. On 16 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of occipital headache lasted for 42 days, after which it was considered to be recovered/resolved on 30 Sep 2020 (Study Day 42). The investigator assessed the event of headache to be related to the IP.

Additional Information From the Safety Database

No additional details for the events are available.

Study Completion/Discontinuation

On 31 Dec 2020 (Study Day 134), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Mycotic allergy	Seasonal allergies - mold	1959 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies - cedar	1959 - Ongoing
Seasonal allergy	Seasonal allergies - oak	1959 - Ongoing
Food allergy	Food allergy - melon	1960 - Ongoing
Myopia	Myopia	1967 - Ongoing
Uterine leiomyoma	Uterine fibroids	1973 - 2000
Asthma	Asthma	1983 - Ongoing
Delivery	Vaginal delivery	1989 - 1989
Delivery	Vaginal delivery	1991 - 1991
Artificial menopause	Surgical menopause	2000 - Ongoing
Constipation	Constipation	2000 - Ongoing
Drug hypersensitivity	Allergy to sulfa drugs	2000 - Ongoing
Dry eye	Dry eyes	2000 - Ongoing
Hormone replacement therapy	Hormone replacement therapy	2000 - Ongoing
Hypertension	Hypertension	2000 - Ongoing
Hysterectomy	Total hysterectomy	2000 - 2000
Rubber sensitivity	Allergy - latex	2000 - Ongoing
Salpingo-oophorectomy bilateral	Bilateral salpingo - oophorectomy	2000 - 2000
Urinary incontinence	Urinary incontinence	2000 - Ongoing
Hyperthyroidism	Hyperthyroidism	2001 - 2001
Hypothyroidism	Hypothyroidism	2001 - Ongoing
Thyroidectomy	Thyroidectomy	2001 - 2001
Cholecystectomy	Cholecystectomy	2003 - 2003
Cholelithiasis	Cholelithiasis	2003 - 2003
Intervertebral disc operation	Discectomy - c5-c6	2007 - 2007
Intervertebral disc protrusion	Bulging disc (c5,c6)	2007 - 2007
Insomnia	Insomnia	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	1960 - Ongoing	Supplement
Carmellose sodium	2000 - Ongoing	Dry Eyes
Estradiol	2000 - Ongoing	Hormone Replacement
Fibre, dietary	2000 - Ongoing	Constipation
Progesterone	2000 - Ongoing	Hormone Replacement
Quercetin	2000 - Ongoing	Seasonal Allergies
Thyroid	2001 - Ongoing	Hypothyroidism
Triamcinolone acetonide	2010 - Ongoing	Seasonal Allergies
Melatonin	2015 - Ongoing	Insomnia
Prednisolone	2015 - Ongoing	Asthma

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Zolpidem	2015 - Ongoing	Insomnia
Montelukast	2017 - Ongoing	Seasonal Allergies
Telmisartan	Jan 2020 - Ongoing	Hypertension
Analgesics	20 Aug 2020 (Study Day 1) - 27 Aug 2020 (Study Day 8)	Headache - Reactogenicity
Paracetamol	20 Aug 2020 (Study Day 1) - 27 Aug 2020 (Study Day 8)	Reactogenicity (Headaches,fatigue)
Clindamycin	22 Sep 2020 (Study Day 34) - 24 Sep 2020 (Study Day 36)	Bilateral Lymphadenitis (Neck)
Influenza vaccine	13 Oct 2020 (Study Day 55) - 13 Oct 2020 (Study Day 55)	Prophylaxis
Punctal plugs*	06 Nov 2020 (Study Day 79) - 06 Nov 2020 (Study Day 79)	Medical History
Amoxicillin; clavulanic acid	27 Nov 2020 (Study Day 100) - 04 Dec 2020 (Study Day 107)	Abdominal Pain
Metronidazole	27 Nov 2020 (Study Day 100) - 04 Dec 2020 (Study Day 107)	Abdominal Pain
Other viral vaccines	24 Dec 2020 (Study Day 127) - 24 Dec 2020 (Study Day 127)	COVID-19 Vaccination

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	20 Aug 2020 (Study Day 1) - 21 Sep 2020 (Study Day 33)
Headache	Grade 2/moderate	Related	20 Aug 2020 (Study Day 1) - 30 Sep 2020 (Study Day 42)
Eye Swelling	Grade 1/mild	Not related	21 Aug 2020 (Study Day 2) - 12 Nov 2020 (Study Day 85)
Lymphadenitis	Grade 2/moderate	Related	21 Aug 2020 (Study Day 2) - 27 Oct 2020 (Study Day 69)
Abdominal Pain	Grade 2/moderate	Not related	24 Nov 2020 (Study Day 97) - 16 Dec 2020 (Study Day 119)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US334-2253 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	11 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pleurisy/Idiopathic Pleurisy With Recurrence	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	18 Sep 2020 (Study Day 8) – 19 Oct 2020 (Study Day 39)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US334-2253, a 24-year-old Hispanic or Latino male, received the first dose of placebo in the right arm on 11 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 18 Sep 2020 (Study Day 8), 7 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of pleurisy. On 08 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of idiopathic pleurisy with recurrence lasted for 32 days, after which it was considered to be recovered/resolved on 19 Oct 2020 (Study Day 39). The investigator assessed the event of pleurisy to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Pleurisy	Pleurisy	Oct 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cyclobenzaprine hydrochloride	02 Oct 2020 (Study Day 22) - 19 Oct 2020 (Study Day 39)	Ae Idiopathic Pleurisy With Recurrence
Salbutamol	02 Oct 2020 (Study Day 22) - 19 Oct 2020 (Study Day 39)	Ae Idiopathic Pleurisy With Recurrence
Ibuprofen	08 Oct 2020 (Study Day 28) - 22 Oct 2020 (Study Day 42)	Ae Idiopathic Pleurisy With Recurrence
Influenza vaccine	21 Oct 2020 (Study Day 41) - 21 Oct 2020 (Study Day 41)	Wellness

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Pleurisy	Grade 2/moderate	Related	18 Sep 2020 (Study Day 8) - 19 Oct 2020 (Study Day 39)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US336-2023 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	03 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Swollen Tongue/Tongue Swelling - Post Injection Allergic Reaction	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	03 Aug 2020 (Study Day 1) – 03 Aug 2020 (Study Day 1)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US336-2023, a 55-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 03 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Aug 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of swollen tongue. On 30 Aug 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of tongue swelling - post injection allergic reaction lasted for 1 days, after which it was considered to be recovered/resolved on 03 Aug 2020 (Study Day 1). The investigator assessed the event of swollen tongue to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Dermal filler injection	Cosmetic dermal injection	Not reported
Depression	Depression	2000 - Ongoing
Postmenopause	Post menopausal	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bupropion hydrochloride	2000 - Ongoing	Depression

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Swollen Tongue	Grade 2/moderate	Related	03 Aug 2020 (Study Day 1) - 03 Aug 2020 (Study Day 1)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US336-2166 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	17 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	14 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Kidney Injury/Acute Kidney Injury	SAE	Grade 4	Not related	24 Nov 2020 (Study Day 100) – 07 Dec 2020 (Study Day 113)	Recovered/resolved
Type 2 Diabetes Mellitus/Worsening Of Diabetes Type 2	SAE	Grade 4	Not related	24 Nov 2020 (Study Day 100) – 07 Dec 2020 (Study Day 113)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US336-2166, a 65-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 17 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 14 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Nov 2020 (Study Day 100), 99 days after the first dose and 71 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of acute kidney injury. Action taken with the IP was not applicable. The event of acute kidney injury lasted for 14 days, after which it was considered to be recovered/resolved on 07 Dec 2020 (Study Day 113). The investigator assessed the event of acute kidney injury to be not related to the IP.

On 24 Nov 2020 (Study Day 100), 99 days after the first dose and 71 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of type 2 diabetes mellitus. Action taken with the IP was not applicable. The event of worsening of diabetes type 2 lasted for 14 days, after which it was considered to be recovered/resolved on 07 Dec 2020 (Study Day 113). The investigator assessed the event of type 2 diabetes mellitus to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001104	Acute kidney injury

CIOMS Number	MedDRA Preferred Term
MOD-2020-001104	Type 2 diabetes mellitus

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Appendicectomy	Appendectomy	1967 - 1967
Hypertension	Hypertension	1990 - Ongoing
Obesity	Obesity	2000 - Ongoing
Pulmonary embolism	Bilateral pulmonary emobolus	2009 - 2009
Hyperlipidaemia	Hyperlipidemia	2010 - Ongoing
Type 2 diabetes mellitus	Diabetes type ii	2010 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Liraglutide	Not reported - May 2020	Diabetes Type Ii
Lisinopril	1990 - Ongoing	Hypertension
Metoprolol	Sep 1990 - Ongoing	Hypertension
Rivaroxaban	2009 - Ongoing	History Of Pulmonary Embolus/ Cardiac Health And Wellness
Insulin glargine	2010 - May 2020	Diabetes Type Ii
Pravastatin	2010 - Ongoing	Hyperlipidemia
Amoxicillin	01 Oct 2020 (Study Day 46) - 08 Oct 2020 (Study Day 53)	Fractured Tooth Resulting In Need For Tooth Extraction.
Hydrocodone bitartrate; paracetamol	01 Oct 2020 (Study Day 46) - Ongoing	Tooth Extraction/ Tooth Cracked
Root canal*	01 Oct 2020 (Study Day 46) - 01 Oct 2020 (Study Day 46)	Adverse Event
Tooth extraction*	01 Oct 2020 (Study Day 46) - 01 Oct 2020 (Study Day 46)	Adverse Event
Calcium chloride; potassium chloride; sodium lactate	24 Nov 2020 (Study Day 100) - 24 Nov 2020 (Study Day 100)	Hyperglycemia
Chemistry panel*	24 Nov 2020 (Study Day 100) - 24 Nov 2020 (Study Day 100)	Diagnostic
Glucagon	24 Nov 2020 (Study Day 100) - 24 Nov 2020 (Study Day 100)	Hyperglycemia
Glucose	24 Nov 2020 (Study Day 100) - 24 Nov 2020 (Study Day 100)	Hyperglycemia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin human	24 Nov 2020 (Study Day 100) - 24 Nov 2020 (Study Day 100)	Hyperglycemia
Insulin lispro	24 Nov 2020 (Study Day 100) - 24 Nov 2020 (Study Day 100)	Hyperglycemia
Sodium chloride	24 Nov 2020 (Study Day 100) - 24 Nov 2020 (Study Day 100)	Hyperglycemia/Acute Kidney Injury
Insulin glargine	25 Nov 2020 (Study Day 101) - Ongoing	Diabetes Type Ii
Liraglutide	25 Nov 2020 (Study Day 101) - 01 Dec 2020 (Study Day 107)	Diabetes Mellitus Type Ii
Liraglutide	01 Dec 2020 (Study Day 107) - Ongoing	Diabetes Mellitus
Amlodipine	07 Dec 2020 (Study Day 113) - Ongoing	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diarrhoea	Grade 1/mild	Not related	24 Aug 2020 (Study Day 8) - 25 Aug 2020 (Study Day 9)
Nausea	Grade 1/mild	Not related	24 Aug 2020 (Study Day 8) - 25 Aug 2020 (Study Day 9)
Hypertension	Grade 2/moderate	Not related	14 Sep 2020 (Study Day 29) - 07 Dec 2020 (Study Day 113)
Tooth Fracture	Grade 2/moderate	Not related	30 Sep 2020 (Study Day 45) - 01 Oct 2020 (Study Day 46)
Upper Respiratory Tract Infection	Grade 1/mild	Not related	28 Nov 2020 (Study Day 104) - 07 Dec 2020 (Study Day 113)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US336-2210 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	22 Sep 2020 (Study Day 33)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pneumonia/Pneumonia Right Lower Lobe	SAE	Grade 3/ severe	Not related	08 Jan 2021 (Study Day 141) – 14 Jan 2021 (Study Day 147)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US336-2210, a 52-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 21 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 22 Sep 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Jan 2021 (Study Day 141), 140 days after the first dose and 108 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pneumonia. Action taken with the IP was not applicable. The event of pneumonia right lower lobe lasted for 7 days, after which it was considered to be recovered/resolved on 14 Jan 2021 (Study Day 147). The investigator assessed the event of pneumonia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-003211	Pneumonia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma	1969 - Ongoing
Gastrooesophageal reflux disease	Gerd (acid reflux)	2015 - 29 Sep 2020 (Study Day 40)
Barrett's oesophagus	Barrett's esophagus dysplasia	21 Sep 2018 (Study Day -700) - Ongoing
Foot fracture	Right foot fracture	2019 - 2019
Localised infection	Right foot infection	2019 - 2019
Skin graft	Right foot skin graft	2019 - 2019
Hyperlipidaemia	Hyperlipidemia	14 Jun 2019 (Study Day -434) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fluticasone propionate; salmeterol	2015 - Ongoing	Asthma
Montelukast	2015 - Ongoing	Asthma
Salbutamol	2015 - Ongoing	Asthma
Pantoprazole	2017 - Ongoing	Gerd (Acid Reflux)
Atorvastatin	2019 - Ongoing	Hyperlipidemia
Ibuprofen	22 Aug 2020 (Study Day 2) - 26 Aug 2020 (Study Day 6)	Upper Respiratory Illness
Azithromycin	08 Jan 2021 (Study Day 141) - 08 Jan 2021 (Study Day 141)	Pneumonia Right Lower Lobe
Calcium chloride; potassium chloride; sodium lactate	08 Jan 2021 (Study Day 141) - 08 Jan 2021 (Study Day 141)	Pneumonia Right Lower Lobe
Ceftriaxone	08 Jan 2021 (Study Day 141) - 08 Jan 2021 (Study Day 141)	Pneumonia Right Lower Lobe
Oxygen	08 Jan 2021 (Study Day 141) - 08 Jan 2021 (Study Day 141)	Pneumonia Right Lower Lobe
Azithromycin	10 Jan 2021 (Study Day 143) - 14 Jan 2021 (Study Day 147)	Pneumonia
Benzonatate	10 Jan 2021 (Study Day 143) - 14 Jan 2021 (Study Day 147)	Pneumonia
Dextromethorphan hydrobromide; guaifenesin	10 Jan 2021 (Study Day 143) - 14 Jan 2021 (Study Day 147)	Pneumonia
Ipratropium; salbutamol	10 Jan 2021 (Study Day 143) - 14 Jan 2021 (Study Day 147)	Pneumonia/Asthma Exacerbation

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Upper Respiratory Tract Infection	Grade 2/moderate	Not related	22 Aug 2020 (Study Day 2) - 30 Aug 2020 (Study Day 10)
Asthma	Grade 3/severe	Not related	08 Jan 2021 (Study Day 141) - 14 Jan 2021 (Study Day 147)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US336-2222 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	02 Oct 2020 (Study Day 36)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cholecystitis/Cholecystitis	SAE	Grade 4	Not related	09 Oct 2020 (Study Day 43) – 11 Oct 2020 (Study Day 45)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US336-2222, a 51-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 02 Oct 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Oct 2020 (Study Day 43), 42 days after the first dose and 7 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of cholecystitis. Action taken with the IP was not applicable. The event of cholecystitis lasted for 3 days, after which it was considered to be recovered/resolved on 11 Oct 2020 (Study Day 45). The investigator assessed the event of cholecystitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000458	Cholecystitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Pseudodementia	Pseudodementia	Not reported - Ongoing
Anxiety	Anxiety	1984 - Ongoing
Depression	Depression	1984 - Ongoing
Migraine	Migraine	1984 - Ongoing
Female sterilisation	Bilateral tubal ligation	2013 - 2013
Asthma	Asthma	2014 - Ongoing
Autoimmune thyroiditis	Hashimoto's thyroiditis	2014 - Ongoing
Hypothyroidism	Hypothyroidism	2015 - Ongoing
Anal fissure excision	Anal fissure repair	Jun 2019 - Jun 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bupropion	2010 - Ongoing	Anxiety
Topiramate	2010 - 28 Sep 2020 (Study Day 32)	Migraine
Salbutamol	2014 - Ongoing	Asthma
Sumatriptan	2015 - Ongoing	Migraine
Levothyroxine sodium	Feb 2020 - Ongoing	Hypothyroidism
Duloxetine hydrochloride	08 Sep 2020 (Study Day 12) - 02 Oct 2020 (Study Day 36)	Migraine
Duloxetine hydrochloride	02 Oct 2020 (Study Day 36) - Ongoing	Migraine
Paracetamol	03 Oct 2020 (Study Day 37) - 04 Oct 2020 (Study Day 38)	Headache, Pain At Injection Site, Muscle Aches, Fatigue, To Treat/Prevent Pain/Fever From Occurring/Already Occurred.
Calcium chloride; potassium chloride; sodium lactate	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Cholecystectomy
Cholecystectomy*	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Adverse Event
Dexamethasone	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Cholecystectomy
Fentanyl	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Cholecystectomy
Glycopyrronium	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Cholecystectomy
Ketorolac	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Cholecystectomy
Lidocaine	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Cholecystitis/ Cholecystectomy

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Midazolam	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Cholecystitis/ Cholecystectomy
Neostigmine	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Cholecystitis/ Cholecystectomy
Ondansetron	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Cholecystitis/ Cholecystectomy
Propofol	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Cholecystitis/ Cholecystectomy
Rocuronium	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Cholecystitis/ Cholecystectomy
Docusate sodium	11 Oct 2020 (Study Day 45) - Ongoing	Constipation Prevention
Methocarbamol	11 Oct 2020 (Study Day 45) - 17 Oct 2020 (Study Day 51)	Cholecystitis
Ondansetron	11 Oct 2020 (Study Day 45) - 12 Oct 2020 (Study Day 46)	Nausea Prevention
Oxycodone	11 Oct 2020 (Study Day 45) - 12 Oct 2020 (Study Day 46)	Post Operative Pain/Prevention
Ofloxacin	04 Feb 2021 (Study Day 161) - 10 Feb 2021 (Study Day 167)	Ear Infection
Paracetamol	08 Mar 2021 (Study Day 193) - 08 Mar 2021 (Study Day 193)	Migraine
Sumatriptan	08 Mar 2021 (Study Day 193) - 08 Mar 2021 (Study Day 193)	Migraine

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Upper Respiratory Tract Infection	Grade 2/moderate	Not related	17 Dec 2020 (Study Day 112) - 21 Dec 2020 (Study Day 116)
Otitis Externa	Grade 2/moderate	Not related	04 Feb 2021 (Study Day 161) - 11 Feb 2021 (Study Day 168)
Glucose Tolerance Impaired	Grade 2/moderate	Not related	09 Mar 2021 (Study Day 194) - Ongoing
Lymphadenopathy	Grade 2/moderate	Not related	09 Mar 2021 (Study Day 194) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US336-2244 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	24 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Arthritis/Worsening Of Left Hip Pain/Arthritis	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	08 Sep 2020 (Study Day 16) – 11 Nov 2020 (Study Day 80)	Recovered/resolved
Fracture Nonunion/Worsening Of Anterior Left Pelvic Ring Non-Union	SAE, AE leading to withdrawal from study vaccine	Grade 4	Not related	09 Sep 2020 (Study Day 17) – 05 Oct 2020 (Study Day 43)	Recovered/resolved
Postoperative Abscess/Post Operative Intra-Abdominal Abscess	SAE	Grade 4	Not related	12 Oct 2020 (Study Day 50) – 13 Oct 2020 (Study Day 51)	Recovered/resolved
Axillary Vein Thrombosis/Right Axillary Deep Vein Thrombosis	SAE	Grade 4	Not related	19 Oct 2020 (Study Day 57) – 05 Nov 2020 (Study Day 74)	Recovered/resolved
Deep Vein Thrombosis/Right Brachial Deep Vein Thrombosis	SAE	Grade 4	Not related	19 Oct 2020 (Study Day 57) – 05 Nov 2020 (Study Day 74)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US336-2244, a 66-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 24 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Sep 2020 (Study Day 16), 15 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of arthritis. On 20 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of worsening of left hip pain/arthritis lasted for 65 days, after which it was considered to be recovered/resolved

on 11 Nov 2020 (Study Day 80). The investigator assessed the event of arthritis to be not related to the IP.

On 09 Sep 2020 (Study Day 17), 16 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of fracture nonunion. On 20 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of worsening of anterior left pelvic ring non-union lasted for 27 days, after which it was considered to be recovered/resolved on 05 Oct 2020 (Study Day 43). The investigator assessed the event of fracture nonunion to be not related to the IP.

On 12 Oct 2020 (Study Day 50), 49 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of postoperative abscess. On 20 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of post operative intra-abdominal abscess lasted for 2 days, after which it was considered to be recovered/resolved on 13 Oct 2020 (Study Day 51). The investigator assessed the event of postoperative abscess to be not related to the IP.

On 19 Oct 2020 (Study Day 57), 56 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of axillary vein thrombosis. On 20 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of right axillary deep vein thrombosis lasted for 18 days, after which it was considered to be recovered/resolved on 05 Nov 2020 (Study Day 74). The investigator assessed the event of axillary vein thrombosis to be not related to the IP.

On 19 Oct 2020 (Study Day 57), 56 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of deep vein thrombosis. On 20 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of right brachial deep vein thrombosis lasted for 18 days, after which it was considered to be recovered/resolved on 05 Nov 2020 (Study Day 74). The investigator assessed the event of deep vein thrombosis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious and serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000570	Axillary vein thrombosis
MOD-2020-000570	Deep venous thrombosis arm
MOD-2020-000570	Postoperative abscess
MOD-2020-000592	Fracture nonunion

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Arrhythmia	Abnormal heart rhythm	Not reported - Ongoing
Postmenopause	Post menopause	Not reported - Ongoing
Thalassaemia alpha	Alpha thalassemia	Not reported - Ongoing
Osteoarthritis	Osteoarthritis bilateral hands	2010 - Ongoing
Osteoporosis	Osteoporosis	2010 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2015 - Ongoing
Arthralgia	Left hip pain	Feb 2020 - Ongoing
Pelvic fracture	Fractured pelvis (left pelvic ring non-union)	Feb 2020 - Ongoing
Upper limb fracture	Fractured left elbow	Feb 2020 - Feb 2020
Intervertebral disc degeneration	Degenerative disc disease	27 Apr 2020 (Study Day -119) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	2010 - Ongoing	Osteoarthritis
Atorvastatin	2015 - 03 Nov 2020 (Study Day 72)	Hyperlipidemia
Alendronate sodium	2019 - Ongoing	Osteoporosis
Tramadol	Feb 2020 - 03 Nov 2020 (Study Day 72)	Osteoarthritis
Paracetamol	25 Aug 2020 (Study Day 2) - 27 Aug 2020 (Study Day 4)	Osteoarthritis
Gabapentin	09 Sep 2020 (Study Day 17) - 03 Nov 2020 (Study Day 72)	Worsening Of Anterior Left Pelvic Ring Non-Union
Methylprednisolone	09 Sep 2020 (Study Day 17) - 13 Sep 2020 (Study Day 21)	Pain/ Hip Fracture
Bisacodyl	22 Sep 2020 (Study Day 30) - 29 Oct 2020 (Study Day 67)	Help Prevent Constipation From Pain Medication
Hydrocodone bitartrate; paracetamol	22 Sep 2020 (Study Day 30) - 03 Nov 2020 (Study Day 72)	Pain Secondary Worsening Of Anterior Left Pelvic Ring Non-Union
Left pelvic ring fracture nonunion repair*	29 Sep 2020 (Study Day 37) - 29 Sep 2020 (Study Day 37)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium chloride; potassium chloride; sodium lactate	12 Oct 2020 (Study Day 50) - 12 Oct 2020 (Study Day 50)	Iv Hydration Secondary To Post Operative Intra-Abdominal Abscess
Drainage of abscess*	13 Oct 2020 (Study Day 51) - 13 Oct 2020 (Study Day 51)	Adverse Event
Picc line placement right arm*	18 Oct 2020 (Study Day 56) - 18 Oct 2020 (Study Day 56)	Adverse Event
Apixaban	20 Oct 2020 (Study Day 58) - 20 Nov 2020 (Study Day 89)	Right Axillary And Brachial Deep Vein Thrombosis
Cefradine	20 Oct 2020 (Study Day 58) - 03 Nov 2020 (Study Day 72)	Post Operative Intra-Abdominal Abscess
Diclofenac	20 Oct 2020 (Study Day 58) - 03 Nov 2020 (Study Day 72)	Left Hip Pain Due To Worsening Of Anterior Left Pelvic Ring Non-Union
Ferrous sulfate	20 Oct 2020 (Study Day 58) - Ongoing	Alpha Thalassemia
Picc line placement left arm*	20 Oct 2020 (Study Day 58) - 20 Oct 2020 (Study Day 58)	Adverse Event
Rifampicin	20 Oct 2020 (Study Day 58) - 03 Nov 2020 (Study Day 72)	Post Operative Intra-Abdominal Abscess
Linezolid	04 Nov 2020 (Study Day 73) - 13 Nov 2020 (Study Day 82)	Post-Operative Intrabdominal Abscess
Denosumab	05 Nov 2020 (Study Day 74) - 05 Nov 2020 (Study Day 74)	Osteoporosis
Daptomycin	09 Nov 2020 (Study Day 78) - 19 Nov 2020 (Study Day 88)	Post Operative Intrabdominal Abscess
Calcium	13 Nov 2020 (Study Day 82) - Ongoing	Osteoporosis
Doxycycline	24 Nov 2020 (Study Day 93) - Ongoing	Joint Infection Prophylaxis - Suppression Antibiotics

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthritis	Grade 2/moderate	Not related	08 Sep 2020 (Study Day 16) - 11 Nov 2020 (Study Day 80)
Rash Macular	Grade 1/mild	Not related	11 Sep 2020 (Study Day 19) - 18 Sep 2020 (Study Day 26)
Diarrhoea	Grade 2/moderate	Not related	29 Oct 2020 (Study Day 67) - 12 Nov 2020 (Study Day 81)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US336-2285 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	24 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	22 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cerebrovascular Accident/ Cerebrovascular Accident	SAE	Grade 4	Not related	16 Nov 2020 (Study Day 54) – 18 Nov 2020 (Study Day 56)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US336-2285, a 66-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 24 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 22 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Nov 2020 (Study Day 54), 53 days after the first dose and 25 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of cerebrovascular accident. Action taken with the IP was not applicable. The event of cerebrovascular accident lasted for 3 days, after which it was considered to be recovered/resolved on 18 Nov 2020 (Study Day 56). The investigator assessed the event of cerebrovascular accident to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000873	Cerebrovascular accident

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Drug allergy - penicillin	1955 - Ongoing
Erectile dysfunction	Erectile disease	2001 - Ongoing
Hypertension	Hypertension	2001 - Ongoing
Type 2 diabetes mellitus	Diabetes type ii	2001 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2010 - Ongoing
Benign prostatic hyperplasia	Benign prostaste hypertrophy	2013 - Ongoing
Drug hypersensitivity	Drug allergy - statins	2014 - Ongoing
Drug hypersensitivity	Drug allergy - clarithromycin	2015 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2018 - Ongoing
Intervertebral disc operation	Lumbar discetomy	2018 - 2018
Polyarthritis	Generalized arthritis	2018 - Ongoing
Vascular stent insertion	Right vascular stent placement	2019 - 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Glipizide	2001 - 2020	Diabetes Type Ii
Hydrochlorothiazide; losartan potassium	2001 - Ongoing	Hypertension
Vardenafil hydrochloride	2001 - Ongoing	Erectile Dysfunction
Omeprazole	2010 - Ongoing	Gastroesophageal Reflux Disease
Finasteride	2013 - Ongoing	Benign Prostate Hypertrophy
Tamsulosin	2013 - Ongoing	Benign Prostate Hypertrophy
Acetylsalicylic acid	2018 - 16 Nov 2020 (Study Day 54)	Cardiac Health
Dulaglutide	2018 - Ongoing	Diabetes Type Ii
Ezetimibe	2018 - Ongoing	Hyperlipidemia
Meloxicam	2018 - 16 Nov 2020 (Study Day 54)	Generalized Arthritis
Empagliflozin	Sep 2020 - Ongoing	Diabetes Type Ii
Influenza vaccine	11 Nov 2020 (Study Day 49) - 11 Nov 2020 (Study Day 49)	Influenza Prevention
Pneumococcal vaccine	11 Nov 2020 (Study Day 49) - 11 Nov 2020 (Study Day 49)	Pneumonia Prevention
Acetylsalicylic acid	16 Nov 2020 (Study Day 54) - 18 Nov 2020 (Study Day 56)	Cerebrovascular Accident
Glimepiride	16 Nov 2020 (Study Day 54) - Mar 2021	Diabetes Type Ii
Clopidogrel	24 Nov 2020 (Study Day 62) - Ongoing	Prevention Of Cerebrovascular Accident

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	15 Dec 2020 (Study Day 83) - Ongoing	Cerebrovascular Accident
Pacemaker*	25 Feb 2021 (Study Day 155) - 25 Feb 2021 (Study Day 155)	Medical History
Vancomycin	25 Feb 2021 (Study Day 155) - 25 Feb 2021 (Study Day 155)	Pre-Op Surgery For Pace Maker Placement

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Atrioventricular Block	Grade 3/severe	Not related	05 Jan 2021 (Study Day 104) - 25 Feb 2021 (Study Day 155)
Syncope	Grade 3/severe	Not related	05 Jan 2021 (Study Day 104) - 05 Jan 2021 (Study Day 104)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US337-2005 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	04 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	15 Sep 2020 (Study Day 43)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hip Fracture/Fractured Left Hip	SAE	Grade 3/ severe	Not related	25 Aug 2020 (Study Day 22) – 26 Aug 2020 (Study Day 23)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US337-2005, a 94-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 04 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 15 Sep 2020 (Study Day 43). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Aug 2020 (Study Day 22), 21 days after the first dose and 21 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of hip fracture. The IP dose was delayed due to the fractured left hip. The event of fractured left hip lasted for 2 days, after which it was considered to be recovered/resolved on 26 Aug 2020 (Study Day 23). The investigator assessed the event of hip fracture to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000234	Hip fracture

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Inguinal hernia	Inguinal hernia - left	1995 - 1995
Inguinal hernia	Inguinal hernia - right	1995 - 1995
Inguinal hernia repair	Left inguinal herniorrhaphy	1995 - 1995
Inguinal hernia repair	Right inguinal herniorrhaphy	1995 - 1995
Knee arthroplasty	Left knee replacement	2009 - 2009
Osteoarthritis	Osteoarthritis left knee	2009 - 2009
Knee arthroplasty	Right knee replacement	2018 - 2018
Osteoarthritis	Osteoarthritis right knee	2018 - 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid	1990 - Ongoing	Dietary Supplement
Calcium	1990 - Ongoing	Dietary Supplement
Colecalciferol	1990 - Ongoing	Dietary Supplement
Curcuma longa	1990 - Ongoing	Dietary Supplement
Krill oil	1990 - Ongoing	Dietary Supplement
Lycopene	1990 - Ongoing	Dietary Supplement
Lycopene; pinus spp. bark; prunus africana bark; selenium amino acid chelate; serenoa repens fruit; sitosterol; urtica dioica leaf; vitis spp.; zinc	1990 - Ongoing	Dietary Supplement
Magnesium	1990 - Ongoing	Dietary Supplement
Monascus purpureus	1990 - Ongoing	Dietary Supplement
Prasterone	1990 - Ongoing	Dietary Supplement
Ubidecarenone	1990 - Ongoing	Dietary Supplement
Vitamin b complex	1990 - Ongoing	Dietary Supplement
Vitamin b12 nos	1990 - Ongoing	Dietary Supplement
Vitamin k nos	1990 - Ongoing	Dietary Supplement
Vitamins nos	1990 - Ongoing	Dietary Supplement
Xantofyl	1990 - Ongoing	Dietary Supplement
Influenza vaccine	Nov 2019 - Nov 2019	Influenza Prophylaxis/Prevention
Pneumococcal vaccine	Nov 2019 - Nov 2019	Pneumonia Prophylaxis/Prevention
Varicella zoster vaccine	Nov 2019 - Nov 2019	Herpes Zoster Prophylaxis/Prevention
Famotidine	25 Aug 2020 (Study Day 22) - 31 Aug 2020 (Study Day 28)	Gastroesophageal Reflux Disease

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Left hip x-ray*	25 Aug 2020 (Study Day 22) - 25 Aug 2020 (Study Day 22)	Adverse Event
Oxycodone hydrochloride; paracetamol	25 Aug 2020 (Study Day 22) - Ongoing	Left Hip Pain
Left hip hemiarthroplasty*	26 Aug 2020 (Study Day 23) - 26 Aug 2020 (Study Day 23)	Adverse Event
Bisacodyl	28 Aug 2020 (Study Day 25) - Ongoing	Constipation
Paracetamol	28 Aug 2020 (Study Day 25) - Ongoing	Left Hip Pain
Rivaroxaban	28 Aug 2020 (Study Day 25) - 08 Sep 2020 (Study Day 36)	Blood Clot Prevention
Zolpidem	17 Sep 2020 (Study Day 45) - Ongoing	Insomnia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fall	Grade 2/moderate	Related	25 Aug 2020 (Study Day 22) - 25 Aug 2020 (Study Day 22)
Gastrooesophageal Reflux Disease	Grade 1/mild	Not related	25 Aug 2020 (Study Day 22) - 31 Aug 2020 (Study Day 28)
Constipation	Grade 1/mild	Not related	28 Aug 2020 (Study Day 25) - Ongoing
Insomnia	Grade 1/mild	Not related	28 Aug 2020 (Study Day 25) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US337-2060 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	07 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	10 Sep 2020 (Study Day 35)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Joint Injury/Right Hip Trauma	SAE	Grade 4	Not related	14 Aug 2020 (Study Day 8) – 16 Aug 020 (Study Day 10)	Recovered/resolved
Joint Injury/Right Knee Trauma	SAE	Grade 4	Not related	14 Aug 2020 (Study Day 8) – 04 Sep 2020 (Study Day 29)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US337-2060, a 60-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 07 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 10 Sep 2020 (Study Day 35). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 14 Aug 2020 (Study Day 8), 7 days after the first dose and 27 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of joint injury. The IP dose was not changed due to the right hip trauma. The event of right hip trauma lasted for 3 days, after which it was considered to be recovered/resolved on 16 Aug 2020 (Study Day 10). The investigator assessed the event of joint injury to be not related to the IP.

On 14 Aug 2020 (Study Day 8), 7 days after the first dose and 27 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of joint injury. Action taken with the IP was not applicable. The event of right knee trauma lasted for 22 days, after which it was considered to be recovered/resolved on 04 Sep 2020 (Study Day 29). The investigator assessed the event of joint injury to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000406	Joint injury
MOD-2020-000406	Joint injury

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Knee arthroplasty	Arthroplasty right knee	Apr 1996 - Apr 1996
Meniscus injury	Torn meniscus right knee	Apr 1996 - Apr 1996
Pancreatitis chronic	Chronic pancreatitis	2014 - Ongoing
Coronary angioplasty	Coronary artery angioplasty	Sep 2014 - Sep 2014
Coronary artery disease	Coronary artery disease	Sep 2014 - Sep 2014
Insomnia	Insomnia	2017 - Ongoing
Arthralgia	Bilateral knee pain	2018 - Ongoing
Back pain	Chronic lower back pain	2018 - Ongoing
Head injury	Head trauma	Sep 2018 - Sep 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2016 - Ongoing	Cardiac Prophylaxis
Zolpidem tartrate	2017 - Ongoing	Insomnia
Oxycodone hydrochloride	2018 - Ongoing	Bilateral Knee Pain
Oxycodone hydrochloride	2018 - Ongoing	Lower Back Pain
Trazodone	2019 - Ongoing	Bilateral Knee Pain
Trazodone	2019 - Ongoing	Lower Back Pain
Influenza vaccine	Sep 2019 - Sep 2019	Influenza Prophylaxis/Prevention
Cat scan of the abdomen*	14 Aug 2020 (Study Day 8) - 14 Aug 2020 (Study Day 8)	Adverse Event
Cat scan of the cervical spine*	14 Aug 2020 (Study Day 8) - 14 Aug 2020 (Study Day 8)	Adverse Event
Cefazolin	14 Aug 2020 (Study Day 8) - 14 Aug 2020 (Study Day 8)	Right Knee Laceration
Diphtheria vaccine toxoid; pertussis vaccine acellular; tetanus vaccine toxoid	14 Aug 2020 (Study Day 8) - 14 Aug 2020 (Study Day 8)	Tetanus Prophylaxis/Prevention
Iopamidol	14 Aug 2020 (Study Day 8) - 14 Aug 2020 (Study Day 8)	Radiopaque Contrast Agent
Oxycodone hydrochloride; paracetamol	14 Aug 2020 (Study Day 8) - 14 Aug 2020 (Study Day 8)	Right Knee Pain

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
X-ray of right knee*	14 Aug 2020 (Study Day 8) - 14 Aug 2020 (Study Day 8)	Adverse Event
Morphine	15 Aug 2020 (Study Day 9) - 15 Aug 2020 (Study Day 9)	Right Knee Pain
Pancrelipase	15 Aug 2020 (Study Day 9) - 16 Aug 2020 (Study Day 10)	Pancreatic Enzyme Replacement
Doxycycline	16 Aug 2020 (Study Day 10) - 26 Aug 2020 (Study Day 20)	Right Knee Trauma Laceration Infection Prevention
Cyclobenzaprine	17 Aug 2020 (Study Day 11) - Ongoing	Right Knee Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US337-2110 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID 19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	31 Aug 2020 (Study Day 19) – 14 Sep 2020 (Study Day 33)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US337-2110, a 52-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 13 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 31 Aug 2020 (Study Day 19), 18 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 09 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of COVID-19 lasted for 15 days, after which it was considered to be recovered/resolved on 14 Sep 2020 (Study Day 33). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cleft lip	Cleft lip	1970 - 1970
Cleft lip repair	Cleft lip repair	1970 - 1970
Sinuplasty	Sinus ostial dilation	1998 - 1998

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Blood testosterone decreased	Low testosterone	2010 - Ongoing
Chronic sinusitis	Chronic sinusitis	2010 - Ongoing
Hypertension	Hypertension	2016 - Ongoing
Sinus polyp	Removal of sinus polyps	2018 - 2018
Sinus polyp	Sinus polyps	2018 - 2018
Hypercholesterolaemia	Hypercholesterolemia	24 Jul 2020 (Study Day -20) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Montelukast sodium	2010 - Ongoing	Chronic Sinusitis
Testosterone	2010 - Ongoing	Low Testosterone
Losartan	2016 - Ongoing	Hypertension
Rosuvastatin	24 Jul 2020 (Study Day -20) - Ongoing	Hypercholesterolemia
Azithromycin	04 Sep 2020 (Study Day 23) - 08 Sep 2020 (Study Day 27)	Sinus Infection
Methylprednisolone	04 Sep 2020 (Study Day 23) - 10 Sep 2020 (Study Day 29)	Acute Sinusitis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	31 Aug 2020 (Study Day 19) - 14 Sep 2020 (Study Day 33)
Acute Sinusitis	Grade 1/mild	Not related	04 Sep 2020 (Study Day 23) - 10 Sep 2020 (Study Day 29)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US337-2137 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	15 Sep 2020 (Study Day 33)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Dizziness/Dizziness	SAE	Grade 3/severe	Not related	19 Jan 2021 (Study Day 159) – 22 Jan 2021 (Study Day 162)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US337-2137, a 73-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 14 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 15 Sep 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 19 Jan 2021 (Study Day 159), 158 days after the first dose and 126 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of dizziness. Action taken with the IP was not applicable. The event of dizziness lasted for 4 days, after which it was considered to be recovered/resolved on 22 Jan 2021 (Study Day 162). The investigator assessed the event of dizziness to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-008634	Dizziness

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Allergy - sulfa	1962 - Ongoing
Basal cell carcinoma	Left ear basal cell carcinoma	1980 - Apr 2019
Basal cell carcinoma	Left leg basal cell carcinoma	1980 - Jan 2020
Basal cell carcinoma	Right upper arm basal cell carcinoma	1980 - Dec 2018
Osteoarthritis	Bilateral knee osteoarthritis	2000 - Ongoing
Postmenopause	Postmenopausal	2002 - Ongoing
Anxiety	Anxiety	2008 - Ongoing
Depression	Depression	2008 - Ongoing
Oedema peripheral	Edema bilateral lower extremities	2010 - Ongoing
Appendicectomy	Appendectomy	Dec 2010 - Dec 2010
Appendicitis	Appendicitis	Dec 2010 - Dec 2010
Dermal filler injection	Juvederm (cosmetic)	2016 - 2016
Electrodesiccation	Right upper arm curettage and electrodesiccation	Dec 2018 - Dec 2018
Uterine dilation and curettage	Dilation and curettage	Jan 2019 - Jan 2019
Uterine polyp	Uterine polyps	Jan 2019 - Jan 2019
Electrodesiccation	Left ear curettage and electrodesiccation	Apr 2019 - Apr 2019
Electrodesiccation	Left leg curettage and electrodesiccation	Jan 2020 - Jan 2020
Umbilical hernia	Umbilical hernia	14 Aug 2020 (Study Day 1) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Escitalopram	2008 - Ongoing	Anxiety
Escitalopram	2008 - Ongoing	Depression
Calcium; magnesium	2018 - Ongoing	Dietary Supplement
Colecalciferol	2018 - Ongoing	Dietary Supplement
Influenza vaccine	Oct 2019 - Oct 2019	Influenza Prophylaxis/Prevention
Amoxicillin trihydrate; clavulanate potassium	14 Dec 2020 (Study Day 123) - 24 Dec 2020 (Study Day 133)	Upper Respiratory Infection
Guaifenesin	14 Dec 2020 (Study Day 123) - 21 Dec 2020 (Study Day 130)	Sinus Congestion
Benzonatate	16 Dec 2020 (Study Day 125) - 21 Dec 2020 (Study Day 130)	Cough

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cat head/brain w/o contrast*	19 Jan 2021 (Study Day 159) - 19 Jan 2021 (Study Day 159)	Adverse Event
Chest x-ray*	19 Jan 2021 (Study Day 159) - 19 Jan 2021 (Study Day 159)	Adverse Event
Mri brain*	21 Jan 2021 (Study Day 161) - 21 Jan 2021 (Study Day 161)	Adverse Event
Mri cervical spine*	21 Jan 2021 (Study Day 161) - 21 Jan 2021 (Study Day 161)	Adverse Event
Acetylsalicylic acid	23 Jan 2021 (Study Day 163) - Ongoing	Cardiac Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Cough	Grade 2/moderate	Not related	12 Dec 2020 (Study Day 121) - 28 Dec 2020 (Study Day 137)
Headache	Grade 1/mild	Not related	12 Dec 2020 (Study Day 121) - 20 Dec 2020 (Study Day 129)
Sinus Congestion	Grade 1/mild	Not related	12 Dec 2020 (Study Day 121) - 19 Dec 2020 (Study Day 128)
Upper Respiratory Tract Infection	Grade 1/mild	Not related	14 Dec 2020 (Study Day 123) - 24 Dec 2020 (Study Day 133)
Wheezing	Grade 1/mild	Not related	14 Dec 2020 (Study Day 123) - 17 Dec 2020 (Study Day 126)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US337-2184 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	22 Sep 2020 (Study Day 35)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Appendicitis/ Appendicitis	SAE	Grade 3/severe	Not related	02 Sep 2020 (Study Day 15) – 02 Sep 2020 (Study Day 15)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US337-2184, a 72-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 22 Sep 2020 (Study Day 35). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Sep 2020 (Study Day 15), 14 days after the first dose and 20 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of appendicitis. The IP dose was not changed due to the appendicitis. The event of appendicitis lasted for 1 day, after which it was considered to be recovered/resolved on 02 Sep 2020 (Study Day 15). The investigator assessed the event of appendicitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000254	Appendicitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Genital herpes	Genital herpes	1958 - Ongoing
Hypertension	Hypertension	1970 - Ongoing
Anxiety	Anxiety	1974 - Ongoing
Hypersensitivity	Allergy - environmental	1994 - Ongoing
Sinusitis	Sinusitis	1994 - Ongoing
Osteoarthritis	Generalized osteoarthritis	1995 - Ongoing
Essential tremor	Essential tremors	1997 - Ongoing
Erectile dysfunction	Erectile dysfunction	1999 - Ongoing
Osteopenia	Osteopenia	1999 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2005 - Ongoing
Vocal cord polyp	Vocal cord polyps	2005 - 2005
Vocal cord polypectomy	Vocal cord polypectomy	2005 - 2005
Craniotomy	Burr hole	2007 - 2007
Subdural haematoma	Subdural hematoma	2007 - 2007
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2009 - Ongoing
Cataract	Cataracts bilateral	2013 - 2013
Cataract operation	Cataracts surgery bilateral	2013 - 2013
Carpal tunnel syndrome	Carpal tunnel syndrome left wrist	2017 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia (bph)	2019 - Ongoing
Haemorrhoids	Internal hemorrhoids	2019 - Ongoing
Urinary retention	Urinary retention	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	1975 - Ongoing	Dietary Supplement
Azelastine	1994 - Ongoing	Sinusitis
Atenolol	1995 - Ongoing	Hypertension
Naproxen	1995 - Ongoing	Generalized Osteoarthritis Pain
Propranolol	1999 - Ongoing	Essential Tremors
Sildenafil	1999 - Ongoing	Erectile Dysfunction
Celecoxib	2002 - Ongoing	Generalized Osteoarthritis Pain
Atorvastatin	2005 - Ongoing	Hypercholesterolemia
Calcium	2009 - Ongoing	Dietary Supplement
Colecalciferol	2009 - Ongoing	Dietary Supplement

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Famciclovir	2009 - Ongoing	Genital Herpes
Alprazolam	2010 - Ongoing	Anxiety
Diphtheria vaccine toxoid; pertussis vaccine; tetanus vaccine toxoid	2011 - 2011	Diphtheria Tetanus And Acellular Pertussis Prophylaxis/Prevention
Esomeprazole	2012 - Ongoing	Gastroesophageal Reflux Disease
Pneumococcal vaccine	2015 - 2015	Pneumonia Prophylaxis/Prevention
Losartan	2017 - Ongoing	Hypertension
Docusate	2018 - Ongoing	Constipation Prophylaxis/Prevention
Macrogol 3350	2018 - Ongoing	Constipation Prophylaxis/Prevention
Tamsulosin	2019 - Ongoing	Benign Prostatic Hyperplasiia (Bph)
Tamsulosin	2019 - Ongoing	Urinary Retention
Influenza vaccine	Sep 2019 - Sep 2019	Influenza Prophylaxis/Prevention
Varicella zoster vaccine	Sep 2019 - Sep 2019	Herpes Zoster Prophylaxis/Prevention
Corticosteroid nos	Oct 2019 - Oct 2019	Carpal Tunnel Syndrome Left Wrist
Paracetamol	28 Aug 2020 (Study Day 10) - 28 Aug 2020 (Study Day 10)	Right Lower Abdominal Pain
Appendectomy*	02 Sep 2020 (Study Day 15) - 02 Sep 2020 (Study Day 15)	Adverse Event
Calcium chloride; potassium chloride; sodium lactate	02 Sep 2020 (Study Day 15) - 05 Sep 2020 (Study Day 18)	Keep Vein Open For Iv Medications
Hydralazine	02 Sep 2020 (Study Day 15) - 05 Sep 2020 (Study Day 18)	Hypertension
Morphine	02 Sep 2020 (Study Day 15) - 05 Sep 2020 (Study Day 18)	Right Lower Abdominal Pain
Ondansetron	02 Sep 2020 (Study Day 15) - 05 Sep 2020 (Study Day 18)	Nausea
Oxycodone hydrochloride; paracetamol	02 Sep 2020 (Study Day 15) - 05 Sep 2020 (Study Day 18)	Right Lower Abdominal Pain
Pantoprazole	02 Sep 2020 (Study Day 15) - 05 Sep 2020 (Study Day 18)	Gastroesophageal Reflux Disease
Piperacillin; tazobactam	02 Sep 2020 (Study Day 15) - 03 Sep 2020 (Study Day 16)	Appendicitis
Amoxicillin; clavulanic acid	07 Sep 2020 (Study Day 20) - 10 Sep 2020 (Study Day 23)	Post Surgical Infection Prevention
Influenza vaccine	14 Oct 2020 (Study Day 57) - 14 Oct 2020 (Study Day 57)	Influenza Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Abdominal Pain Lower	Grade 2/moderate	Not related	28 Aug 2020 (Study Day 10) - 28 Aug 2020 (Study Day 10)
Diarrhoea	Grade 1/mild	Not related	29 Aug 2020 (Study Day 11) - 30 Aug 2020 (Study Day 12)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Nausea	Grade 1/mild	Not related	02 Sep 2020 (Study Day 15) - 05 Sep 2020 (Study Day 18)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US337-2209 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	23 Sep 2020 (Study Day 34)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Atrial Fibrillation/Atrial Fibrillation	SAE	Grade 4	Not related	16 Dec 2020 (Study Day 118) – 17 Dec 2020 (Study Day 119)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US337-2209, a 73-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 21 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 23 Sep 2020 (Study Day 34). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Dec 2020 (Study Day 118), 117 days after the first dose and 84 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of atrial fibrillation. Action taken with the IP was not applicable. The event of atrial fibrillation lasted for 2 days, after which it was considered to be recovered/resolved on 17 Dec 2020 (Study Day 119). The investigator assessed the event of atrial fibrillation to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001204	Atrial fibrillation

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Chronic tonsillitis	Tonsillitis - chronic	1965 - 1965
Tonsillectomy	Tonsillectomy	1965 - 1965
Hypertension	Hypertension	2000 - Ongoing
Cholesteatoma	Right ear cholesteatoma	2004 - 2004
Mastoidectomy	Right ear mastoidectomy	2004 - 2004
Hypercholesterolaemia	Hypercholesterolemia	2005 - Ongoing
Prostate cancer	Prostate cancer	2018 - 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid	1995 - Ongoing	Dietary Supplement
Fish oil	1995 - Ongoing	Dietary Supplement
Ubidecarenone	1995 - Ongoing	Dietary Supplement
Vitamin b12 nos	1995 - Ongoing	Dietary Supplement
Vitamins nos	1995 - Ongoing	Dietary Supplement
Atenolol	2000 - Ongoing	Hypertension
Atorvastatin	2005 - Ongoing	Hypercholesterolemia
Acetylsalicylic acid	2010 - Ongoing	Cardiac Prophylaxis
Magnesium	2015 - Ongoing	Dietary Supplement
Melatonin	2015 - Ongoing	Dietary Supplement
Pneumococcal vaccine	2018 - 2018	Pneumonia Prophylaxis/Prevention
Influenza vaccine	Nov 2019 - Nov 2019	Influenza Prophylaxis/Prevention
Influenza vaccine	08 Sep 2020 (Study Day 19) - 08 Sep 2020 (Study Day 19)	Influenza Prophylaxis/Prevention
Apixaban	16 Dec 2020 (Study Day 118) - Ongoing	Atrial Fibrillation
Cat scan brain*	16 Dec 2020 (Study Day 118) - 16 Dec 2020 (Study Day 118)	Adverse Event
Chest x-ray*	16 Dec 2020 (Study Day 118) - 16 Dec 2020 (Study Day 118)	Adverse Event
Diltiazem	16 Dec 2020 (Study Day 118) - 16 Dec 2020 (Study Day 118)	Atrial Fibrillation
Electrocardiogram*	16 Dec 2020 (Study Day 118) - 16 Dec 2020 (Study Day 118)	Adverse Event
Sodium chloride	16 Dec 2020 (Study Day 118) - 16 Dec 2020 (Study Day 118)	Dehydration

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Dehydration	Grade 2/moderate	Not related	16 Dec 2020 (Study Day 118) - 17 Dec 2020 (Study Day 119)
Palpitations	Grade 1/mild	Not related	16 Dec 2020 (Study Day 118) - 16 Dec 2020 (Study Day 118)
Syncope	Grade 2/moderate	Not related	16 Dec 2020 (Study Day 118) - 16 Dec 2020 (Study Day 118)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US337-2274 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	29 Sep 2020 (Study Day 34)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Myocardial Infarction/Myocardial Infarct	SAE	Grade 2/ moderate	Not related	13 Dec 2020 (Study Day 109) – 14 Dec 2020 (Study Day 110)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US337-2274, a 76-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 29 Sep 2020 (Study Day 34). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 13 Dec 2020 (Study Day 109), 108 days after the first dose and 75 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of myocardial infarction. Action taken with the IP was not applicable. The event of myocardial infarct lasted for 2 days, after which it was considered to be recovered/resolved on 14 Dec 2020 (Study Day 110). The investigator assessed the event of myocardial infarction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001137	Myocardial infarction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	1949 - 1949
Appendicectomy	Appendectomy	1954 - 1954
Appendicitis	Appendicitis	1954 - 1954
Coronary artery bypass	Coronary artery bypass graft - double	1990 - 1990
Coronary artery disease	Coronary artery disease	1990 - 1990
Umbilical hernia	Umbilical hernia	1990 - 1990
Umbilical hernia repair	Umbilical herniorrhaphy	1990 - 1990
Metabolic surgery	Bariatric surgery	2000 - 2000
Obesity	Obesity	2000 - 2000
Hypercholesterolaemia	Hypercholesterolemia	2017 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia (bph)	Aug 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2010 - Ongoing	Cardiac Prophylaxis
Atorvastatin	2017 - Ongoing	Hypercholesterolemia
Influenza vaccine	2019 - 2019	Influenza Prophylaxis/Prevention
Pneumococcal vaccine polysacch 23v	2019 - 2019	Pneumonia Prophylaxis/Prevention
Varicella zoster vaccine	2019 - 2019	Herpes Zoster Prophylaxis/Prevention
Doxazosin	2020 - 24 Aug 2020 (Study Day -3)	Benign Prostatic Hyperplasia (Bph)
Vitamins nos	2020 - Ongoing	Nutritional Supplement
Alfuzosin	24 Aug 2020 (Study Day -3) - Ongoing	Benign Prostatic Hyperplasia (Bph)
Influenza vaccine	17 Oct 2020 (Study Day 52) - 17 Oct 2020 (Study Day 52)	Influenza Prophylaxis/Prevention
Cat scan thorax*	13 Dec 2020 (Study Day 109) - 13 Dec 2020 (Study Day 109)	Adverse Event
Diltiazem	13 Dec 2020 (Study Day 109) - 13 Dec 2020 (Study Day 109)	Atrial Fibrillation
Electrocardiogram*	13 Dec 2020 (Study Day 109) - 13 Dec 2020 (Study Day 109)	Adverse Event
Glyceryl trinitrate	13 Dec 2020 (Study Day 109) - 13 Dec 2020 (Study Day 109)	Atrial Fibrillation
Heparin sodium	13 Dec 2020 (Study Day 109) - 13 Dec 2020 (Study Day 109)	Myocardial Infarction
Apixaban	15 Dec 2020 (Study Day 111) - Ongoing	Myocardial Infarct

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Angina Pectoris	Grade 2/moderate	Not related	13 Dec 2020 (Study Day 109) - 13 Dec 2020 (Study Day 109)
Atrial Fibrillation	Grade 2/moderate	Not related	13 Dec 2020 (Study Day 109) - 13 Dec 2020 (Study Day 109)
Pain In Jaw	Grade 2/moderate	Not related	13 Dec 2020 (Study Day 109) - 13 Dec 2020 (Study Day 109)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US337-2394 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	11 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	09 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Arteriosclerosis/Symptomatic Atherosclerotic Disease.	SAE	Grade 2/ moderate	Not related	11 Nov 2020 (Study Day 62) – 03 Dec 2020 (Study Day 84)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US337-2394, a 68-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 11 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 09 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 11 Nov 2020 (Study Day 62), 61 days after the first dose and 33 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of arteriosclerosis. Action taken with the IP was not applicable. The event of symptomatic atherosclerotic disease. lasted for 23 days, after which it was considered to be recovered/resolved on 03 Dec 2020 (Study Day 84). The investigator assessed the event of arteriosclerosis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000795	Arteriosclerosis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cholecystectomy	Cholecystectomy	1976 - 1976
Cholelithiasis	Cholelithiasis	1976 - 1976
Pelvic inflammatory disease	Pelvic inflammatory disease	1979 - 1979
Fallopian tube operation	Bilateral cuff tuboplasty	1980 - 1980
Fallopian tube operation	Fallopian tube fimbriae fusion	1980 - 1980
Postmenopause	Postmenopausal	1998 - Ongoing
External fixation of fracture	Surgical reduction of wrist fracture with external fixator	2004 - 2004
Wrist fracture	Fractured right wrist	2004 - 2004
Hypercholesterolaemia	Hypercholesterolemia	2005 - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type ii	2008 - Ongoing
Hip arthroplasty	Total hip replacement left	2009 - 2009
Osteoarthritis	Osteoarthritis of left hip	2009 - 2009
Hypertension	Hypertension	2010 - Ongoing
Hip arthroplasty	Total hip replacement right	2012 - 2012
Osteoarthritis	Osteoarthritis right hip	2012 - 2012

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metformin	2008 - 17 Sep 2020 (Study Day 7)	Diabetes Mellitus Type II
Losartan	2010 - Ongoing	Hypertension
Colecalciferol	2016 - Ongoing	Dietary Supplement
Vitamin b12 nos	2016 - Ongoing	Dietary Supplement
Pneumococcal vaccine	26 Apr 2018 (Study Day -869) - 26 Apr 2018 (Study Day -869)	Pneumonia Prophylaxis/Prevention
Varicella zoster vaccine	22 May 2018 (Study Day -843) - 22 May 2018 (Study Day -843)	Herpes Zoster Prophylaxis/Prevention
Varicella zoster vaccine	11 Aug 2018 (Study Day -762) - 11 Aug 2018 (Study Day -762)	Herpes Zoster Prophylaxis/Prevention
Cinnamomum verum	2019 - Ongoing	Dietary Supplement
Simvastatin	Feb 2019 - Ongoing	Hypercholesterolemia
Influenza vaccine	27 Aug 2020 (Study Day -15) - 27 Aug 2020 (Study Day -15)	Influenza Prophylaxis/Prevention
Metformin	05 Oct 2020 (Study Day 25) - Ongoing	Diabetes Mellitus Type IIa
Acetylsalicylic acid	11 Nov 2020 (Study Day 62) - 13 Nov 2020 (Study Day 64)	Cardiac Prophylaxis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cat scan head*	11 Nov 2020 (Study Day 62) - 11 Nov 2020 (Study Day 62)	Diagnostic
Insulin	11 Nov 2020 (Study Day 62) - 11 Nov 2020 (Study Day 62)	Diabetes Mellitus Type II
Mri brain*	11 Nov 2020 (Study Day 62) - 11 Nov 2020 (Study Day 62)	Diagnostic
Clopidogrel	12 Nov 2020 (Study Day 63) - Feb 2021	Cardiac Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

US3382085 Participant Number:	US338-2085 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	20 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Dermatitis Allergic/Allergic Rash - Unknown Etiology	AE leading to study discontinuation	Grade 2/moderate	Not related	12 Sep 2020 (Study Day 24) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US338-2085, a 41-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 20 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Sep 2020 (Study Day 24), 23 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of dermatitis allergic. On 16 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of allergic rash - unknown etiology was considered to be ongoing. The investigator assessed the event of dermatitis allergic to be not related to the IP.

Additional Information From the Safety Database

No additional details for the events are available.

Study Completion/Discontinuation

On 25 Sep 2020 (Study Day 37), the participant discontinued from the study due to adverse event.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Sulfa allergy	1985 - Ongoing
Knee operation	Left knee scope with meniscal loose body removal	1992 - 1992
Loose body in joint	Meniscal loose body - left knee	1992 - 1992

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Appendicectomy	Appendectomy	1994 - 1994
Seasonal allergy	Seasonal allergies	2000 - Ongoing
Cholecystectomy	Cholecystectomy	2013 - 2013
Cholelithiasis	Cholelithiasis	2013 - 2013
Anxiety	Anxiety	2014 - Ongoing
Depression	Depression	2014 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ethinylestradiol; levonorgestrel	1999 - Ongoing	Contraception
Cetirizine hydrochloride	2000 - 08 Sep 2020 (Study Day 20)	Seasonal Allergies
Escitalopram oxalate	2014 - Ongoing	Depression
Lamotrigine	2014 - Ongoing	Depression
Diphenhydramine hydrochloride	13 Sep 2020 (Study Day 25) - 14 Sep 2020 (Study Day 26)	Allergic Rash - Unknown Etiology
Cetirizine hydrochloride	15 Sep 2020 (Study Day 27) - 20 Sep 2020 (Study Day 32)	Allergic Reaction - Unknown Etiology
Methylprednisolone	15 Sep 2020 (Study Day 27) - 15 Sep 2020 (Study Day 27)	Allergic Reaction - Unknown Etiology
Montelukast sodium	15 Sep 2020 (Study Day 27) - 22 Sep 2020 (Study Day 34)	Allergic Rash - Unknown Etiology
Methylprednisolone	16 Sep 2020 (Study Day 28) - 16 Sep 2020 (Study Day 28)	Allergic Reaction - Unknown Etiology
Methylprednisolone	17 Sep 2020 (Study Day 29) - 17 Sep 2020 (Study Day 29)	Allergic Reaction - Unknown Etiology
Methylprednisolone	18 Sep 2020 (Study Day 30) - 18 Sep 2020 (Study Day 30)	Allergic Reaction - Unknown Etiology
Methylprednisolone	19 Sep 2020 (Study Day 31) - 19 Sep 2020 (Study Day 31)	Allergic Reaction - Unknown Etiology
Methylprednisolone	20 Sep 2020 (Study Day 32) - 20 Sep 2020 (Study Day 32)	Allergic Dermatitis Of Unknown Etiology

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Dermatitis Allergic	Grade 2/moderate	Not related	12 Sep 2020 (Study Day 24) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US338-2284 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	16 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Gastric Cancer/Gastric Cancer	SAE, AE leading to withdrawal from study vaccine, AE leading to study discontinuation	Grade 2/ moderate	Not related	29 Oct 2020 (Study Day 44) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US338-2284, a 45-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 16 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 29 Oct 2020 (Study Day 44), 43 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate serious adverse event of gastric cancer. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of gastric cancer was considered to be ongoing. The investigator assessed the event of gastric cancer to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000690	Gastric cancer

Study Completion/Discontinuation

On 20 Nov 2020 (Study Day 66), the participant discontinued from the study due to serious adverse event.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Omeprazole	Oct 2020 - Ongoing	Abdominal Pain/Gastric Cancer
Sucralfate	Oct 2020 - Ongoing	Abdominal Pain/Gastric Cancer
Helicobacter pylori blood test*	12 Oct 2020 (Study Day 27) - 12 Oct 2020 (Study Day 27)	Adverse Event
Endoscopy with biopsies*	29 Oct 2020 (Study Day 44) - 29 Oct 2020 (Study Day 44)	Adverse Event
Ct scan abdomen*	31 Oct 2020 (Study Day 46) - 31 Oct 2020 (Study Day 46)	Adverse Event
Morphine	11 Nov 2020 (Study Day 57) - Ongoing	Gastric Cancer

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 2/moderate	Related	23 Sep 2020 (Study Day 8) - 25 Sep 2020 (Study Day 10)
Abdominal Pain	Grade 2/moderate	Not related	06 Oct 2020 (Study Day 21) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US339-2049 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	14 Sep 2020 (Study Day 27)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Myocardial Infarction/Acute Myocardial Infarction	SAE	Grade 3/ severe	Not related	21 Dec 2020 (Study Day 125) – 23 Dec 2020 (Study Day 127)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US339-2049, a 71-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 14 Sep 2020 (Study Day 27). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 21 Dec 2020 (Study Day 125), 124 days after the first dose and 98 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of acute myocardial infarction. Action taken with the IP was not applicable. The event of acute myocardial infarction lasted for 3 days, after which it was considered to be recovered/resolved on 23 Dec 2020 (Study Day 127). The investigator assessed the event of acute myocardial infarction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001369	Acute myocardial infarction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Coronary artery disease	Coronary artery disease	May 1997 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	May 1997 - Ongoing
Hypertension	Hypertension	May 1997 - Ongoing
Vascular graft	Bypass surgery	May 1997 - May 1997
Gout	Gout, unspecified	Jun 2004 - Ongoing
Stent placement	Stent placement	May 2007 - May 2007
Prostatomegaly	Enlarged prostate	May 2015 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	Mar 2018 - Ongoing
Osteoarthritis	Osteo arthritis of left foot	May 2018 - Ongoing
Insomnia	Insomnia	Jun 2018 - Ongoing
Cholecystectomy	Cholecystectomy	Apr 2020 - Apr 2020
Cholelithiasis	Gall stones	Apr 2020 - Apr 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Rosuvastatin	Mar 1997 - Ongoing	Hypercholesterolemia
Acetylsalicylic acid	May 1997 - Ongoing	Cardiovascular Disease
Folic acid	May 1997 - Ongoing	Worsening Coronary Artery Disease
Metoprolol	May 1997 - Ongoing	Hypertension
Omega-3 fatty acids	May 1997 - Ongoing	Worsening Coronary Arterydisease
Vitamins nos	May 1997 - Ongoing	Worsening Coronary Artery Disease
Indometacin	Jun 2004 - Ongoing	Gout, Unspecified
Tamsulosin	2015 - Ongoing	Enlarged Prostate
Esomeprazole	Mar 2016 - Ongoing	Gastroesophageal Reflux Disease
Potassium citrate	Jun 2017 - Ongoing	Worsening Coronary Artery Disease
Celecoxib	May 2018 - Ongoing	Arthritis, Left Foot
Alprazolam	Jun 2018 - Ongoing	Insomnia
Evolocumab	Jun 2018 - Ongoing	Hypercholesterolemia
Zolpidem	Jun 2018 - Ongoing	Insomnia
Allopurinol	Jan 2019 - Ongoing	Gout, Unspecified
Cardiac catheterization for non-st elevated myocardial infarction*	22 Dec 2020 (Study Day 126) - 22 Dec 2020 (Study Day 126)	Adverse Event
Echocardiogram for non-st elevated myocardial infarction*	23 Dec 2020 (Study Day 127) - 23 Dec 2020 (Study Day 127)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

FDA-CBER-2022-1614-3379397

Participant Number:	US339-2112 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	22 Sep 2020 (Study Day 26)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Small Intestinal Obstruction/Small Bowel Obstruction	SAE	Grade 3/severe	Not related	27 Dec 2020 (Study Day 122) – 30 Dec 2020 (Study Day 125)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US339-2112, a 72-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 22 Sep 2020 (Study Day 26). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 27 Dec 2020 (Study Day 122), 121 days after the first dose and 96 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of small intestinal obstruction. Action taken with the IP was not applicable. The event of small bowel obstruction lasted for 4 days, after which it was considered to be recovered/resolved on 30 Dec 2020 (Study Day 125). The investigator assessed the event of small intestinal obstruction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001438	Small intestinal obstruction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Herpes simplex	Herpes simplex	Mar 1951 - Ongoing
Postmenopause	Post-menopausal	May 2005 - Ongoing
Arthralgia	Knee pain	Aug 2005 - Ongoing
Hypertension	Hypertension	Jan 2010 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	Aug 2015 - Ongoing
Back pain	Back pain	Aug 2017 - Ongoing
Back pain	Lumbar back pain	Aug 2017 - Ongoing
Anaemia	Anemia	Jul 2018 - Ongoing
Fibromyalgia	Fibromyalgia	Jul 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Aciclovir	Mar 1951 - Ongoing	Herpes Simplex
Gabapentin	Jun 1982 - Ongoing	Neuropathy
Ibuprofen	Aug 2005 - Ongoing	Knee Pain
Benazepril	Jan 2010 - Ongoing	Hypertension
Pantoprazole	Aug 2015 - Ongoing	Acid Reflux
Methocarbamol	Aug 2017 - Ongoing	Lumbar Back Pain
Ergocalciferol	Jul 2018 - Ongoing	Anemia
Pregabalin	Aug 2019 - Ongoing	Fibromyalgia
Furosemide	Jan 2020 - Ongoing	Hypertension
Potassium chloride	Jan 2020 - Ongoing	Hypertension
Ibuprofen	29 Aug 2020 (Study Day 2) - 29 Aug 2020 (Study Day 2)	Injection Site Pain
Ibuprofen	31 Aug 2020 (Study Day 4) - 02 Sep 2020 (Study Day 6)	Pain At Injection Site, Headache
Ketorolac tromethamine	23 Sep 2020 (Study Day 27) - Ongoing	Knee Pain
Ibuprofen	24 Sep 2020 (Study Day 28) - 24 Sep 2020 (Study Day 28)	Pain At Injection Site, Headache
Metoclopramide hydrochloride	27 Dec 2020 (Study Day 122) - 30 Dec 2020 (Study Day 125)	Small Bowel Obstruction
Ondansetron	27 Dec 2020 (Study Day 122) - 30 Dec 2020 (Study Day 125)	Nausea, Secondary To Small Bowel Obstruction
Sodium chloride	26 Feb 2021 (Study Day 183) - 01 Mar 2021 (Study Day 186)	Acute Kidney Injury

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	24 Sep 2020 (Study Day 28) - 02 Oct 2020 (Study Day 36)
Myalgia	Grade 3/severe	Related	24 Sep 2020 (Study Day 28) - 02 Oct 2020 (Study Day 36)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US339-2120 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	30 Sep 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Myocardial Infarction/Myocardial Infarction	SAE	Grade 3/severe	Not related	24 Oct 2020 (Study Day 55) – 26 Oct 2020 (Study Day 57)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US339-2120, a 63-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 30 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Oct 2020 (Study Day 55), 54 days after the first dose and 24 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of myocardial infarction. Action taken with the IP was not applicable. The event of myocardial infarction lasted for 3 days, after which it was considered to be recovered/resolved on 26 Oct 2020 (Study Day 57). The investigator assessed the event of myocardial infarction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000613	Myocardial infarction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Coronary artery disease	Coronary artery disease	Mar 2009 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	Mar 2009 - Ongoing
Hypertension	Hypertension	Mar 2009 - Ongoing
Myocardial infarction	Myocardial infarction	Mar 2009 - Mar 2009
Anxiety	Anxiety	Apr 2009 - Ongoing
Depression	Depression	Apr 2009 - Ongoing
Gender dysphoria	Gender dysphoria	Oct 2014 - Ongoing
Urinary retention	Urinary retention	Oct 2014 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	Mar 2009 - Ongoing	Hypercholesterolemia
Metoprolol tartrate	Mar 2009 - Ongoing	Coronary Artery Disease
Escitalopram	Apr 2009 - Ongoing	Anxiety
Estradiol valerate	Oct 2014 - Ongoing	Gender Dysphoria
Finasteride	Oct 2014 - Ongoing	Urinary Retention
Spironolactone	Oct 2014 - Ongoing	Hypertension
Metformin	24 Oct 2020 (Study Day 55) - Ongoing	Type Ii Diabetes
Ticagrelor	24 Oct 2020 (Study Day 55) - Ongoing	Myocardial Infarcation
Percutaneous transluminal coronary angioplasty, right coronary artery*	26 Oct 2020 (Study Day 57) - 26 Oct 2020 (Study Day 57)	Adverse Event
Ticagrelor	28 Oct 2020 (Study Day 59) - 26 Nov 2020 (Study Day 88)	Worsening Of Cardiovascular Disease/Secondary To Myocardial Infarction
Acetylsalicylic acid	29 Oct 2020 (Study Day 60) - Ongoing	Worsening Of Cardiovascular Disease/Secondary To Myocardial Infarction
Gabapentin	10 Mar 2021 (Study Day 192) - Ongoing	Muscle Spasms, Right Leg
Methocarbamol	10 Mar 2021 (Study Day 192) - Ongoing	Muscle Spasms, Right Leg

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Type 2 Diabetes Mellitus	Grade 2/moderate	Not related	24 Oct 2020 (Study Day 55) - Ongoing
Muscle Spasms	Grade 1/mild	Not related	10 Mar 2021 (Study Day 192) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US339-2149 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hepatitis A/Hepatitis A	SAE, AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	24 Sep 2020 (Study Day 23) – 25 Sep 2020 (Study Day 24)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US339-2149, a 30-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 02 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Sep 2020 (Study Day 23), 22 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of hepatitis a. On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of hepatitis a lasted for 2 days, after which it was considered to be recovered/resolved on 25 Sep 2020 (Study Day 24). The investigator assessed the event of hepatitis a to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000370	Hepatitis A

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	04 Sep 2020 (Study Day 3) - 05 Sep 2020 (Study Day 4)	Injection Site Pain; Headache
Chemistry labs*	24 Sep 2020 (Study Day 23) - 24 Sep 2020 (Study Day 23)	Adverse Event
Coagulation*	24 Sep 2020 (Study Day 23) - 24 Sep 2020 (Study Day 23)	Adverse Event
Hematology labs*	24 Sep 2020 (Study Day 23) - 24 Sep 2020 (Study Day 23)	Adverse Event
Ondansetron	24 Sep 2020 (Study Day 23) - 24 Sep 2020 (Study Day 23)	Nausea, Secondary To Hepatitis A
Pantoprazole sodium sesquihydrate	24 Sep 2020 (Study Day 23) - 24 Sep 2020 (Study Day 23)	Gastroesophageal Reflux Disease, Secondary To Hepatitis A
Ultrasound*	25 Sep 2020 (Study Day 24) - 25 Sep 2020 (Study Day 24)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US339-2251 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	12 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	08 Oct 2020 (Study Day 27)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pneumonia/Pneumonia	SAE	Grade 4	Not related	20 Oct 2020 (Study Day 39) – 22 Oct 2020 (Study Day 41)	Recovered/resolved
Pyrexia/Fever	SAE	Grade 3/severe	Not related	25 Dec 2020 (Study Day 105) – 28 Dec 2020 (Study Day 108)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US339-2251, a 65-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 12 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 08 Oct 2020 (Study Day 27). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Oct 2020 (Study Day 39), 38 days after the first dose and 12 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pneumonia. Action taken with the IP was not applicable. The event of pneumonia lasted for 3 days, after which it was considered to be recovered/resolved on 22 Oct 2020 (Study Day 41). The investigator assessed the event of pneumonia to be not related to the IP.

On 25 Dec 2020 (Study Day 105), 104 days after the first dose and 78 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pyrexia. Action taken with the IP was not applicable. The event of fever lasted for 4 days, after which it was considered to be recovered/resolved on 28 Dec 2020 (Study Day 108). The investigator assessed the event of pyrexia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000517	Pneumonia
MOD-2020-001368	Pyrexia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	Jan 1970 - Ongoing
Postmenopause	Post-menopausal	Dec 2000 - Ongoing
Diabetes mellitus	Diabetes	Jan 2010 - Ongoing
Hypertension	Hypertension	Jan 2010 - 23 Oct 2020 (Study Day 42)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrochlorothiazide	Jan 2010 - Ongoing	Hypertension
Lisinopril	Jan 2010 - Ongoing	Hypertension
Metformin	Jan 2010 - Ongoing	Diabetes
Carvedilol	Jan 2018 - Ongoing	Hypertension
Dulaglutide	Jan 2018 - Ongoing	Diabetes

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US340-2042 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	28 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	25 Aug 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Emphysema/ Worsening Of Emphysema	SAE	Grade 2/ moderate	Not related	01 Oct 2020 (Study Day 66) – 17 Oct 2020 (Study Day 82)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2042, a 72-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 28 Jul 2020 (Study Day 1). The second dose was administered in the right arm on 25 Aug 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Oct 2020 (Study Day 66), 65 days after the first dose and 37 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of emphysema. Action taken with the IP was not applicable. The event of worsening of emphysema lasted for 17 days, after which it was considered to be recovered/resolved on 17 Oct 2020 (Study Day 82). The investigator assessed the event of emphysema to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000465	Emphysema

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Urticaria	Uticaria	1967 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	1990 - Ongoing
Hiatus hernia	Hiatal hernia	1990 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hypertrophy	1992 - Ongoing
Emphysema	Emphysema	2000 - Ongoing
Hypertension	Hypertension	2000 - Ongoing
Depression	Depression	2010 - Ongoing
Irritable bowel syndrome	Irritable bowel syndrome	2010 - Ongoing
Pneumonia	Pneumonia	2016 - 2016
Deep vein thrombosis	Deep vein thrombosis, right leg	2018 - Ongoing
Pulmonary embolism	Pulmonary embolism	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Omeprazole	1990 - Ongoing	Gastroesophageal Reflux Disease
Tamsulosin	1992 - Ongoing	Benign Prostatic Hypertrophy
Bisoprolol	2000 - 17 Oct 2020 (Study Day 82)	Hypertension
Hydrochlorothiazide	2000 - Ongoing	Hypertension
Fluoxetine	2012 - Ongoing	Depression
Roflumilast	2016 - Ongoing	Emphysema
Apixaban	2018 - Ongoing	Deep Vein Thrombosis/ Pulminary Embolism
Formoterol fumarate; glycopyrronium bromide	2018 - Ongoing	Emphysema
Ceftriaxone	01 Oct 2020 (Study Day 66) - 12 Oct 2020 (Study Day 77)	Worsening Emphysema
Doxycycline	01 Oct 2020 (Study Day 66) - 12 Oct 2020 (Study Day 77)	Worsening Of Emphysema
Prednisone	01 Oct 2020 (Study Day 66) - 04 Oct 2020 (Study Day 69)	Worsening Of Emphysema
Prednisone	05 Oct 2020 (Study Day 70) - 06 Oct 2020 (Study Day 71)	Worsening Of Emphysema
Prednisone	07 Oct 2020 (Study Day 72) - 08 Oct 2020 (Study Day 73)	Worsening Of Emphysema
Prednisone	09 Oct 2020 (Study Day 74) - 10 Oct 2020 (Study Day 75)	Worsening Of Emphysema
Apixaban	12 Oct 2020 (Study Day 77) - Ongoing	Worsening Emphysema
Azithromycin	12 Oct 2020 (Study Day 77) - 17 Oct 2020 (Study Day 82)	Worsening Emphysema
Chest xray*	12 Oct 2020 (Study Day 77) - 12 Oct 2020 (Study Day 77)	Adverse Event
Methylprednisolone	12 Oct 2020 (Study Day 77) - Ongoing	Worsening Emphysema

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Oxygen	12 Oct 2020 (Study Day 77) - 17 Oct 2020 (Study Day 82)	Worsening Emphysema
Cefdinir	17 Oct 2020 (Study Day 82) - Ongoing	Pneumonia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US340-2139 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	01 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	31 Aug 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Osteoarthritis/Worsening Left Knee Osteoarthritis	SAE	Grade 2/ moderate	Not related	09 Aug 2020 (Study Day 9) – 14 Oct 2020 (Study Day 75)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2139, a 55-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 01 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 31 Aug 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Aug 2020 (Study Day 9), 8 days after the first dose and 22 days before the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of osteoarthritis. The IP dose was not changed due to the worsening left knee osteoarthritis. The event of worsening left knee osteoarthritis lasted for 67 days, after which it was considered to be recovered/resolved with sequelae on 14 Oct 2020 (Study Day 75). The investigator assessed the event of osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000549	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraine headaches	1990 - Ongoing
Osteoarthritis	Osteoarthritis left knee arthritis	2002 - Ongoing
Hypersensitivity	Environmental allergies	2010 - Ongoing
Postmenopause	Post-menopausal	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Rizatriptan benzoate	2007 - Ongoing	Migraine Headaches
Levocetirizine	May 2019 - Ongoing	Environmental Allergies
Curcuma longa	Apr 2020 - Ongoing	Nutritional Supplement
Magnesium oxide	Apr 2020 - Ongoing	Nutritional Supplement
Paracetamol	01 Sep 2020 (Study Day 32) - 02 Sep 2020 (Study Day 33)	Mild Pain At Injection Site And Body Aches
Acetylsalicylic acid	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Amoxicillin; clavulanic acid	12 Oct 2020 (Study Day 73) - 22 Oct 2020 (Study Day 83)	Left Knee Replacement (Arthoplasty)
Bisacodyl	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Calcium chloride; potassium chloride; sodium lactate	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Celecoxib	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Famotidine	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Fentanyl	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Ferrous sulfate	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Gabapentin	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Hydrocodone bitartrate; paracetamol	12 Oct 2020 (Study Day 73) - 22 Oct 2020 (Study Day 83)	Left Knee Replacement (Arthroplasty)
Hydroxyzine hydrochloride	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Left knee replacement*	12 Oct 2020 (Study Day 73) - 12 Oct 2020 (Study Day 73)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levofloxacin	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Magnesium hydroxide	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Morphine	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Oxycodone	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Sodium phosphate dibasic; sodium phosphate monobasic	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Zolpidem tartrate	12 Oct 2020 (Study Day 73) - 14 Oct 2020 (Study Day 75)	Worsening Left Knee Arthritis
Complete blood count*	13 Oct 2020 (Study Day 74) - 13 Oct 2020 (Study Day 74)	Adverse Event

Meloxicam	22 Mar 2021 (Study Day 234) - Ongoing	Left Knee Arthritis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US340-2211 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	04 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	01 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Intraductal Proliferative Breast Lesion/Ductal Carcinoma Insitu Right Breast	SAE	Grade 2/moderate	Not related	23 Oct 2020 (Study Day 81) – 23 Dec 2020 (Study Day 142)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2211, a 66-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 04 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 01 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Oct 2020 (Study Day 81), 80 days after the first dose and 52 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of intraductal proliferative breast lesion. Action taken with the IP was not applicable. The event of ductal carcinoma insitu right breast lasted for 62 days, after which it was considered to be recovered/resolved with sequelae on 23 Dec 2020 (Study Day 142). The investigator assessed the event of intraductal proliferative breast lesion to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001455	Intraductal proliferative breast lesion

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypersensitivity	Environmental allergies	1958 - Ongoing
Seasonal allergy	Seasonal allergies	1958 - Ongoing
Bronchitis chronic	Chronic bronchitis	2000 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2003 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2009 - Ongoing
Osteoporosis	Osteoporosis	2010 - Ongoing
Glaucoma	Glaucoma bilateral	2011 - Ongoing
Postmenopause	Post-menopausal	2011 - Ongoing
Hip fracture	Right hip fracture	2012 - 2013
Cataract	Left cataract	Feb 2015 - Feb 2015
Cataract	Right cataract	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bimatoprost	2011 - Ongoing	Glaucoma Bilateral
Brimonidine tartrate; brinzolamide	2011 - Ongoing	Glaucoma Bilateral
Vitamin d nos	2016 - Ongoing	Supplement
Vitamins nos	2016 - Ongoing	Supplement
Allergens nos	2018 - Ongoing	Environmental Allergies
Influenza vaccine	19 Oct 2020 (Study Day 77) - 19 Oct 2020 (Study Day 77)	Influenza Prophylaxis
Mammogram*	23 Oct 2020 (Study Day 81) - 23 Oct 2020 (Study Day 81)	Diagnostic
Cefalexin	07 Nov 2020 (Study Day 96) - Ongoing	Urinary Tract Infection
Right breast biopsy*	19 Nov 2020 (Study Day 108) - 19 Nov 2020 (Study Day 108)	Adverse Event
Right breast lumpectomy*	23 Dec 2020 (Study Day 142) - 23 Dec 2020 (Study Day 142)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Glycosylated Haemoglobin Increased	Grade 1/mild	Not related	30 Oct 2020 (Study Day 88) - Ongoing
Urinary Tract Infection	Grade 2/moderate	Not related	07 Nov 2020 (Study Day 96) - 19 Nov 2020 (Study Day 108)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379416

Participant Number:	US340-2212 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	04 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	04 Sep 2020 (Study Day 32)

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Spinal Stenosis/Worsening Spinal Stenosis	SAE	Grade 3/ severe	Not related	23 Aug 2020 (Study Day 20) – 29 Sep 2020 (Study Day 57)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2212, a 79-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 04 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 04 Sep 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Aug 2020 (Study Day 20), 19 days after the first dose and 12 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of spinal stenosis. The IP dose was not changed due to the worsening spinal stenosis. The event of worsening spinal stenosis lasted for 38 days, after which it was considered to be recovered/resolved on 29 Sep 2020 (Study Day 57). The investigator assessed the event of spinal stenosis to be not related to the IP.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Nephrolithiasis	Grade 2/moderate	Not related	13 Mar 2021 (Study Day 222) - 23 Mar 2021 (Study Day 232)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US340-2284 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	08 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	10 Sep 2020 (Study Day 34)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Nephrolithiasis/Kidney Stone	SAE	Grade 3/ severe	Not related	22 Sep 2020 (Study Day 46) – 23 Sep 2020 (Study Day 47)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2284, a 58-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 08 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 10 Sep 2020 (Study Day 34). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 22 Sep 2020 (Study Day 46), 45 days after the first dose and 12 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of nephrolithiasis. Action taken with the IP was not applicable. The event of kidney stone lasted for 2 days, after which it was considered to be recovered/resolved on 23 Sep 2020 (Study Day 47). The investigator assessed the event of nephrolithiasis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 1/mild	Related	08 Aug 2020 (Study Day 1) - 19 Aug 2020 (Study Day 12)
Fatigue	Grade 1/mild	Related	08 Aug 2020 (Study Day 1) - 21 Aug 2020 (Study Day 14)
Myalgia	Grade 1/mild	Related	08 Aug 2020 (Study Day 1) - 21 Aug 2020 (Study Day 14)
Arthralgia	Grade 1/mild	Related	10 Sep 2020 (Study Day 34) - 27 Sep 2020 (Study Day 51)
Myalgia	Grade 1/mild	Related	11 Sep 2020 (Study Day 35) - 02 Oct 2020 (Study Day 56)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US340-2299 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	08 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	10 Sep 2020 (Study Day 34)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Post Procedural Haemorrhage/Post Operative Bleeding	SAE	Grade 3/severe	Not related	26 Aug 2020 (Study Day 19) – 01 Sep 2020 (Study Day 25)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2299, a 50-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 08 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 10 Sep 2020 (Study Day 34). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 26 Aug 2020 (Study Day 19), 18 days after the first dose and 15 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of post procedural haemorrhage. The IP dose was delayed due to the post operative bleeding. The event of post operative bleeding lasted for 7 days, after which it was considered to be recovered/resolved on 01 Sep 2020 (Study Day 25). The investigator assessed the event of post procedural haemorrhage to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000253	Post procedural haemorrhage

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Constipation	Chronic constipation	2010 - Ongoing
Abdominal fat apron	Abnormal pannus. abdominal fat apron	10 Nov 2010 (Study Day -3559) - 26 Aug 2020 (Study Day 19)
Gastric bypass	Gastric bypass roux-en-y	10 Nov 2010 (Study Day -3559) - 10 Nov 2010 (Study Day -3559)
Anxiety	Anxiety	2018 - Ongoing
Depression	Depression	2018 - Ongoing
Wrist fracture	Right wrist fracture	Jul 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	2008 - Ongoing	Hypothyroidism
Lactulose	2010 - Ongoing	Constipation
Vitamin b12 nos	2010 - Ongoing	Nutritional Supplement
Vitamins nos	2010 - Ongoing	Nutritional Supplement
Ondansetron	10 Nov 2010 (Study Day -3559) – 01 Sep 2020 (Study Day 25)	Idiopathic Abdominal Pannus
Lubiprostone	2011 - Ongoing	Constitpation
Sumatriptan	2016 - Ongoing	Migraines
Trazodone	2016 - Ongoing	Insomnia
Clonazepam	2018 - Ongoing	Anxiety/Depression
Duloxetine	2018 - Ongoing	Depression
Ibuprofen	12 Aug 2020 (Study Day 5) - 15 Aug 2020 (Study Day 8)	Migraine Headaches
Ibuprofen	14 Aug 2020 (Study Day 7) - 15 Aug 2020 (Study Day 8)	Headache After Injection
Metoclopramide hydrochloride	26 Aug 2020 (Study Day 19) - 01 Sep 2020 (Study Day 25)	Pannus Of Abdominal Area
Panniculectomy*	26 Aug 2020 (Study Day 19) - 26 Aug 2020 (Study Day 19)	Other, Planned Procedure

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Chest xray*	27 Aug 2020 (Study Day 20) - 27 Aug 2020 (Study Day 20)	Adverse Event
Complete blood count*	27 Aug 2020 (Study Day 20) - 27 Aug 2020 (Study Day 20)	Adverse Event
Ct abdomen*	27 Aug 2020 (Study Day 20) - 27 Aug 2020 (Study Day 20)	Adverse Event
Ct angrography*	27 Aug 2020 (Study Day 20) - 27 Aug 2020 (Study Day 20)	Adverse Event
Ct pelvis*	27 Aug 2020 (Study Day 20) - 27 Aug 2020 (Study Day 20)	Adverse Event
Post operative bleeding*	28 Aug 2020 (Study Day 21) - 28 Aug 2020 (Study Day 21)	Adverse Event
Red blood cells, concentrated	28 Aug 2020 (Study Day 21) - 29 Aug 2020 (Study Day 22)	Post Operative Bleeding
Influenza vaccine	29 Sep 2020 (Study Day 53) - 29 Sep 2020 (Study Day 53)	Prophylaxis For Influenza

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 3/severe	Related	11 Aug 2020 (Study Day 4) - 16 Aug 2020 (Study Day 9)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US340-2300 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	08 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Herpes Simplex/ Herpes Simplex	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	13 Aug 2020 (Study Day 6) – 25 Aug 2020 (Study Day 18)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2300, a 44-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 08 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was not reported.

Event Details

On 13 Aug 2020 (Study Day 6), 5 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of herpes simplex. On 04 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of herpes simplex lasted for 13 days, after which it was considered to be recovered/resolved on 25 Aug 2020 (Study Day 18). The investigator assessed the event of herpes simplex to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Factor V Leiden mutation	Factor v leiden	2008 - Ongoing
Otosclerosis	Otosclerosis right ear	2008 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	09 Aug 2020 (Study Day 2) - 09 Aug 2020 (Study Day 2)	Pain At Injection Site
Valaciclovir hydrochloride	13 Aug 2020 (Study Day 6) - 28 Aug 2020 (Study Day 21)	Herpes Simplex
Tetanus vaccine	25 Sep 2020 (Study Day 49) - 25 Sep 2020 (Study Day 49)	Tetanus Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Herpes Simplex	Grade 2/moderate	Not related	13 Aug 2020 (Study Day 6) - 25 Aug 2020 (Study Day 18)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US340-2381 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	16 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	14 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Prostate Cancer/Prostate Cancer	SAE	Grade 2/moderate	Not related	20 Sep 2020 (Study Day 36) – 09 Apr 2021 (Study Day 237)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2381, a 67-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 16 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 14 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Sep 2020 (Study Day 36), 35 days after the first dose and 6 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of prostate cancer. Action taken with the IP was not applicable. The event of prostate cancer lasted for 202 days, after which it was considered to be recovered/resolved on 09 Apr 2021 (Study Day 237). The investigator assessed the event of prostate cancer to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000707	Prostate cancer

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Food allergy	Allergy to green peppers	1980 - Ongoing
Food allergy	Raw mushroom allergy	1980 - Ongoing
Abdominal discomfort	Gastric distress	1984 - Ongoing
Back pain	Chronic back pain	1989 - Ongoing
Allergy to arthropod sting	Bee/wasp allergy	1990 - Ongoing
Rubber sensitivity	Latex allergy	2000 - Ongoing
Coronary artery disease	Coronary artery disease	Feb 2009 - Ongoing
Coronary arterial stent insertion	Cardiac stent placement	03 Feb 2009 (Study Day -4212) - 03 Feb 2009 (Study Day -4212)
Myocardial infarction	Myocardial infarction	03 Feb 2009 (Study Day -4212) - 03 Feb 2009 (Study Day -4212)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2009 - Ongoing	Cardiac Prophylaxis
Lisinopril	2009 - Ongoing	Coronary Artery Disease
Metoprolol	2009 - Ongoing	Coronary Artery Disease
Naproxen	2009 - Ongoing	Chronic Back Pain
Atorvastatin	2013 - Ongoing	Coronary Artery Disease
Probiotics nos	2015 - Ongoing	Digestive Distress
Prostate biopsy*	30 Oct 2020 (Study Day 76) - 30 Oct 2020 (Study Day 76)	Adverse Event
Degarelix acetate	05 Nov 2020 (Study Day 82) - 05 Nov 2020 (Study Day 82)	Prostate Cancer
Relugolix	05 Mar 2021 (Study Day 202) - Ongoing	Prostate Cancer

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US340-2382 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	16 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	14 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Atrial Fibrillation/ Atrial Fibrillation	SAE	Grade 3/ severe	Not related	28 Aug 2020 (Study Day 13) – 01 Sep 2020 (Study Day 17)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2382, a 66-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 16 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 14 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Aug 2020 (Study Day 13), 12 days after the first dose and 17 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of atrial fibrillation. The IP dose was not changed due to the atrial fibrillation. The event of atrial fibrillation lasted for 5 days, after which it was considered to be recovered/resolved on 01 Sep 2020 (Study Day 17). The investigator assessed the event of atrial fibrillation to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000243	Atrial fibrillation

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	1995 - Ongoing
Hypertension	Hypertension	2000 - Ongoing
Gout	Gout	2008 - Ongoing
Ligament rupture	Torn acl right leg	2008 - Ongoing
Erectile dysfunction	Erectile dysfunction	25 Aug 2008 (Study Day -4374) - Ongoing
Hyperlipidaemia	Hyperlipidemia	2010 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hypertrophy	01 Sep 2017 (Study Day -1080) - Ongoing
Osteoarthritis	Bilateral hip osteoarthritis	25 Apr 2018 (Study Day -844) - Ongoing
Anxiety	Anxiety	05 Nov 2018 (Study Day -650) - Ongoing
Constipation	Constipation	04 Nov 2019 (Study Day -286) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metoprolol	25 Apr 2008 (Study Day -4496) - Ongoing	Hypertension
Acetylsalicylic acid	25 Aug 2008 (Study Day -4374) - Ongoing	Heart Attack Prevention
Sildenafil	25 Aug 2008 (Study Day -4374) - Ongoing	Erectile Dysfunction
Atorvastatin	10 Feb 2015 (Study Day -2014) - Ongoing	Hyperlipidemia
Empagliflozin	18 Apr 2017 (Study Day -1216) - Ongoing	Diabetes Type 2
Tamsulosin	01 Sep 2017 (Study Day -1080) - Ongoing	Benign Prostatic Hypertrophy
Febuxostat	25 Oct 2017 (Study Day -1026) - Ongoing	Gout
Diclofenac	25 Apr 2018 (Study Day -844) - Ongoing	Osteoarthritis Bilateral Hips
Duloxetine	05 Nov 2018 (Study Day -650) - Ongoing	Anxiety
Semaglutide	05 Nov 2018 (Study Day -650) - Ongoing	Diabetes Type 2
Hydrocodone	31 Oct 2019 (Study Day -290) - Ongoing	Osteoarthritis
Docusate sodium	04 Nov 2019 (Study Day -286) - Ongoing	Constipation
Insulin glargine	04 Nov 2019 (Study Day -286) - Ongoing	Type 2 Diabetes
Glimepiride	21 Jul 2020 (Study Day -26) - Ongoing	Diabetes Type 2
Cefalexin	26 Aug 2020 (Study Day 11) - 06 Sep 2020 (Study Day 22)	Urinary Tract Infection
Apixaban	28 Aug 2020 (Study Day 13) - 01 Sep 2020 (Study Day 17)	Atrial Fibrillation

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Chest xray*	28 Aug 2020 (Study Day 13) - 28 Aug 2020 (Study Day 13)	Adverse Event
Computed tomography head/brain w/o contrast*	28 Aug 2020 (Study Day 13) - 28 Aug 2020 (Study Day 13)	Adverse Event
Levofloxacin	28 Aug 2020 (Study Day 13) - 08 Sep 2020 (Study Day 24)	Urinary Tract Infection Bacteria

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	18 Aug 2020 (Study Day 3) - 24 Aug 2020 (Study Day 9)
Urinary Tract Infection	Grade 2/moderate	Not related	26 Aug 2020 (Study Day 11) - 06 Sep 2020 (Study Day 22)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US340-2425 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	22 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 35)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pulmonary Embolism/ Pulmonary Embolism	SAE	Grade 3/ severe	Not related	17 Nov 2020 (Study Day 88) – 20 Nov 2020 (Study Day 91)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2425, a 36-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 22 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 25 Sep 2020 (Study Day 35). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 17 Nov 2020 (Study Day 88), 87 days after the first dose and 53 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pulmonary embolism. Action taken with the IP was not applicable. The event of pulmonary embolism lasted for 4 days, after which it was considered to be recovered/resolved on 20 Nov 2020 (Study Day 91). The investigator assessed the event of pulmonary embolism to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000855	Pulmonary embolism

Study Completion/Discontinuation

On 08 Jan 2021 (Study Day 140), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Depression	Depression	2012 - Ongoing
Rubber sensitivity	Latex allergy	2013 - Ongoing
Polycystic ovaries	Polycystic ovarian syndrome	2014 - Ongoing
Asthma	Mild asthma	2018 - Ongoing
Contraceptive implant	Nexplanon	Aug 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sertraline hydrochloride	2012 - 25 Sep 2020 (Study Day 35)	Depression
Metformin	2014 - Ongoing	Polycystic Ovarian Syndrome
Fluticasone propionate	2018 - Ongoing	Prevent Allergies
Salbutamol	2018 - Ongoing	Mild Asthma
Etonogestrel	Aug 2019 - Ongoing	Birth Control
Sertraline hydrochloride	Sep 2020 - Ongoing	Depression
Aptt*	17 Nov 2020 (Study Day 88) - 17 Nov 2020 (Study Day 88)	Adverse Event
Butalbital; caffeine; paracetamol	17 Nov 2020 (Study Day 88) - 20 Nov 2020 (Study Day 91)	Pulmonary Embolism
Colecalciferol	17 Nov 2020 (Study Day 88) - Ongoing	Pulmonary Embolism
Complete blood count*	17 Nov 2020 (Study Day 88) - 17 Nov 2020 (Study Day 88)	Adverse Event
Enoxaparin sodium	17 Nov 2020 (Study Day 88) - 20 Nov 2020 (Study Day 91)	Pulmonary Embolism
Fluticasone	17 Nov 2020 (Study Day 88) - Ongoing	Pulmonary Embolism
Glucagon	17 Nov 2020 (Study Day 88) - 20 Nov 2020 (Study Day 91)	Low Blood Sugar Due To Pulmonary Embolism
Glucose	17 Nov 2020 (Study Day 88) - 20 Nov 2020 (Study Day 91)	Pulmonary Embolism
Inr*	17 Nov 2020 (Study Day 88) - 17 Nov 2020 (Study Day 88)	Adverse Event
Loratadine	17 Nov 2020 (Study Day 88) - 20 Nov 2020 (Study Day 91)	Pulmonary Embolism
Magnesium hydroxide	17 Nov 2020 (Study Day 88) - 20 Nov 2020 (Study Day 91)	Pulmonary Embolism

Diphenhydramine hydrochloride	20 Nov 2020 (Study Day 91) - Ongoing	Pulmonary Embolism
Salbutamol sulfate	20 Nov 2020 (Study Day 91) - Ongoing	Pulmonary Embolism
Nortriptyline	05 Dec 2020 (Study Day 106) - 23 Dec 2020 (Study Day 124)	Migraines
Sumatriptan	05 Dec 2020 (Study Day 106) - 23 Dec 2020 (Study Day 124)	Pulmonary Embolism

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US340-2430 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	22 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hypertension/Hypertension	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	14 Sep 2020 (Study Day 24) – Ongoing	Recovering/resolving

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2430, a 57-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 22 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 14 Sep 2020 (Study Day 24), 23 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of hypertension. On 18 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of hypertension was considered to be ongoing. The investigator assessed the event of hypertension to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Gastrooesophageal reflux disease	Gastroesaphegeal reflux disease	2010 - Ongoing
Hysterectomy	Total hysterectomy	Jan 2012 - Jan 2012
Postmenopause	Postmenopausal	Jan 2012 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Osteoarthritis	Osteoarthritis	2013 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrochlorothiazide	17 Sep 2020 (Study Day 27) - Ongoing	Hypertension
Lisinopril	20 Sep 2020 (Study Day 30) - Ongoing	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypertension	Grade 2/moderate	Related	14 Sep 2020 (Study Day 24) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US340-2448 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	21 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	16 Nov 2020 (Study Day 27)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Emphysema/Worsening Of Emphysema	SAE	Grade 3/severe	Not related	09 Nov 2020 (Study Day 20) – 11 Nov 2020 (Study Day 22)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2448, a 66-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 21 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 16 Nov 2020 (Study Day 27). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Nov 2020 (Study Day 20), 19 days after the first dose and 7 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of emphysema. The IP dose was not changed due to the worsening of emphysema. The event of worsening of emphysema lasted for 3 days, after which it was considered to be recovered/resolved with sequelae on 11 Nov 2020 (Study Day 22). The investigator assessed the event of emphysema to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000806	Emphysema

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Depression	Depression	1998 - Ongoing
Hysterectomy	Total hysterectomy (excessive bleeding and cramping)	2001 - 2001
Hypertonic bladder	Overactive bladder	2005 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2006 - Ongoing
Hypercholesterolaemia	Hypercholesterdemia	2006 - Ongoing
Hypertension	Hypertension	2008 - Ongoing
Schizoaffective disorder	Schizoaffective disorder	2010 - Ongoing
Emphysema	Emphysema	2016 - Ongoing
Osteoarthritis	Left knee osteoarthritis	2018 - Ongoing
Arthroscopy	Left knee arthoscopy	Apr 2020 - Apr 2020
Hiatus hernia	Hiatal hernia	May 2020 - 09 Feb 2021 (Study Day 112)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	2006 - Ongoing	Hypercholesterdemia
Losartan potassium	2010 - Ongoing	Hypertension
Oxybutynin	2012 - Ongoing	Overactive Bladder
Topiramate	2012 - Ongoing	Schizoaffective Disorder
Olanzapine	2016 - Ongoing	Schizoaffective Disorder
Sertraline	2016 - Ongoing	Depression
Celecoxib	2018 - Ongoing	Left Knee Osteoarthritis
Pantoprazole	2018 - Ongoing	Gastroesophageal Reflux Disease
Oxygen	09 Nov 2020 (Study Day 20) - Ongoing	Worsening Of Emphysema
Hiatal hernia repair*	09 Feb 2021 (Study Day 112) - 09 Feb 2021 (Study Day 112)	Medical History
Tramadol	09 Feb 2021 (Study Day 112) - Ongoing	Pain Control For After Hiatal Hernia Surgery
Amoxicillin	19 Mar 2021 (Study Day 150) - 29 Mar 2021 (Study Day 160)	Sinusitis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Sinusitis	Grade 1/mild	Not related	18 Mar 2021 (Study Day 149) - 29 Mar 2021 (Study Day 160)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US341-2013 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	29 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	26 Aug 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cellulitis/Cellulitis - Left Hand	SAE	Grade 4	Not related	20 Nov 2020 (Study Day 115) – 12 Dec 2020 (Study Day 137)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2013, a 58-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 29 Jul 2020 (Study Day 1). The second dose was administered in the left arm on 26 Aug 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Nov 2020 (Study Day 115), 114 days after the first dose and 86 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of cellulitis. Action taken with the IP was not applicable. The event of cellulitis - left hand lasted for 23 days, after which it was considered to be recovered/resolved on 12 Dec 2020 (Study Day 137). The investigator assessed the event of cellulitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000875	Cellulitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Oral herpes	Fever blisters	1965 - Ongoing
Eczema	Eczema	1995 - Ongoing
Type 2 diabetes mellitus	Diabetes type ii	2005 - Ongoing
Back pain	Chronic lower back pain	2007 - Ongoing
Autonomic nervous system imbalance	Dysautonomia	2008 - Ongoing
Postmenopause	Post menopausal	2008 - Ongoing
Anxiety	Anxiety	2010 - Ongoing
Gastrooesophageal reflux disease	Gerd	2010 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Vertigo	Vertigo	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Pregabalin	2008 - Ongoing	Dysautonomia
Atorvastatin	2010 - Ongoing	Hld
Estradiol	2010 - Ongoing	Post-Menopause
Glimepiride	2010 - Ongoing	T2dm
Lisinopril	2010 - 29 Dec 2020 (Study Day 154)	Htn
Omeprazole	2010 - Ongoing	Gerd
Clonazepam	2014 - Ongoing	Anxiety
Meclozine	2015 - Ongoing	Vertigo
Midodrine	2015 - Ongoing	Dysautonomia
Fluocinonide	2016 - Ongoing	Eczema
Hyoscine	2017 - Ongoing	Dysautonomia
Diclofenac	2018 - Ongoing	Chronic Low Back Pain

Bamp*	22 Nov 2020 (Study Day 117) - 22 Nov 2020 (Study Day 117)	Adverse Event
Blood culture*	22 Nov 2020 (Study Day 117) - 22 Nov 2020 (Study Day 117)	Adverse Event
C-reactive protein*	22 Nov 2020 (Study Day 117) - 22 Nov 2020 (Study Day 117)	Adverse Event
Cbc*	22 Nov 2020 (Study Day 117) - 22 Nov 2020 (Study Day 117)	Adverse Event
Clindamycin	22 Nov 2020 (Study Day 117) - 22 Nov 2020 (Study Day 117)	Cellulitis Left Hand
Heparin	22 Nov 2020 (Study Day 117) - 24 Nov 2020 (Study Day 119)	Cellulitis Left Hand
Hydromorphone hydrochloride	22 Nov 2020 (Study Day 117) - 23 Nov 2020 (Study Day 118)	Cellulitis Left Hand
Insulin aspart	22 Nov 2020 (Study Day 117) - 24 Nov 2020 (Study Day 119)	Type 2 Diabetes
Lactate*	22 Nov 2020 (Study Day 117) - 22 Nov 2020 (Study Day 117)	Adverse Event
Meropenem	22 Nov 2020 (Study Day 117) - 24 Nov 2020 (Study Day 119)	Cellulitis Left Hand
Oxycodone	22 Nov 2020 (Study Day 117) - 24 Nov 2020 (Study Day 119)	Cellulitis Left Hand
Sennoside a+b	22 Nov 2020 (Study Day 117) - 24 Nov 2020 (Study Day 119)	Prevention Of Constipation As Side Effect To Meds Given In Hospital
Vancomycin	22 Nov 2020 (Study Day 117) - 24 Nov 2020 (Study Day 119)	Cellulitis (L) Hand
Calcium carbonate	23 Nov 2020 (Study Day 118) - 23 Nov 2020 (Study Day 118)	Gerd
Cbc*	23 Nov 2020 (Study Day 118) - 23 Nov 2020 (Study Day 118)	Adverse Event
Levofloxacin	23 Nov 2020 (Study Day 118) - 23 Nov 2020 (Study Day 118)	Cellulitis Left Hand
Lidocaine	23 Nov 2020 (Study Day 118) - 23 Nov 2020 (Study Day 118)	Cellulitis Left Hand
Wound debridement of left hand*	23 Nov 2020 (Study Day 118) - 23 Nov 2020 (Study Day 118)	Adverse Event
Hba1c*	24 Nov 2020 (Study Day 119) - 24 Nov 2020 (Study Day 119)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	24 Nov 2020 (Study Day 119) - 03 Dec 2020 (Study Day 128)	Cellulitis - Left Hand
Levofloxacin	24 Nov 2020 (Study Day 119) - 03 Dec 2020 (Study Day 128)	Cellulitis- Left Hand
Metronidazole	24 Nov 2020 (Study Day 119) - 03 Dec 2020 (Study Day 128)	Cellulitis - Left Hand
Oxycodone	24 Nov 2020 (Study Day 119) - 29 Nov 2020 (Study Day 124)	Cellulitis - Left Hand5
Empagliflozin	30 Dec 2020 (Study Day 155) - Ongoing	Type 2 Diabetes
Amfetamine aspartate; amfetamine sulfate; dexamfetamine saccharate; dexamfetamine sulfate	03 Feb 2021 (Study Day 190) - Ongoing	Attention Deficit Disorder

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Anxiety	Grade 2/moderate	Not related	15 Sep 2020 (Study Day 49) - 15 Jan 2021 (Study Day 171)
Upper Respiratory Tract Infection	Grade 1/mild	Not related	29 Sep 2020 (Study Day 63) - 16 Dec 2020 (Study Day 141)
Attention Deficit Hyperactivity Disorder	Grade 2/moderate	Not related	03 Feb 2021 (Study Day 190) - Ongoing
Stress Urinary Incontinence	Grade 1/mild	Not related	01 Mar 2021 (Study Day 216) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US341-2016 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	29 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	26 Aug 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Chest Pain/Acute Chest Pain	SAE	Grade 4	Not applicable	02 Dec 2020 (Study Day 127) – 04 Dec 2020 (Study Day 129)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2016, a 58-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 29 Jul 2020 (Study Day 1). The second dose was administered in the left arm on 26 Aug 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Dec 2020 (Study Day 127), 126 days after the first dose and 98 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of chest pain. Action taken with the IP was not applicable. The event of acute chest pain lasted for 3 days, after which it was considered to be recovered/resolved on 04 Dec 2020 (Study Day 129). The investigator assessed the event of chest pain to be not applicable to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001141	Chest pain

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Myocardial infarction	Heart attack - myocardial infarction	2000 - 2000
Type 2 diabetes mellitus	Diabetes type 2	2008 - Ongoing
Back pain	Back pain	2010 - Ongoing
Coronary artery disease	Cad	2010 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Insomnia	Insomnia	2012 - Ongoing
Seasonal allergy	Allergic seasonal	2012 - Ongoing
Myocardial infarction	Heart attack - myocardial infarction	2015 - 2015
Stent placement	Stent placement x4	2015 - 2015
Diabetic neuropathy	Diabetic neuropathy	2018 - Ongoing
Essential tremor	Essential tremor	2019 - Ongoing
Rotator cuff repair	Rotator cuff repair	2019 - 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2010 - Ongoing	Heart Attack
Atorvastatin	2010 - Ongoing	Hyperlipidemia
Cyclobenzaprine hydrochloride	2010 - Ongoing	Back Pain
Empagliflozin	2010 - Ongoing	Dm2
Ezetimibe	2010 - Ongoing	Hyperlipidemia
Fenofibrate	2010 - Ongoing	Hyperlipidemia
Glyceryl trinitrate	2010 - Ongoing	Heart Attack
Insulin lispro	2010 - Ongoing	Dm2
Isosorbide dinitrate	2010 - 03 Dec 2020 (Study Day 128)	Heart Attack
Lisinopril	2010 - Ongoing	Hypertension
Metformin	2010 - Ongoing	Dm2
Metoprolol	2010 - Ongoing	Hypertension
Sitagliptin	2010 - 04 Dec 2020 (Study Day 129)	Dm2
Loratadine	2012 - Ongoing	Allergic - Seasonal
Gabapentin	2018 - Ongoing	Diabetic Neuropathy
Primidone	2019 - Ongoing	Essential Tremor
Tramadol	2019 - Ongoing	Back Pain
Olopatadine	Mar 2020 - Ongoing	Seasonal Allergies

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	30 Sep 2020 (Study Day 64) - 30 Sep 2020 (Study Day 64)	General Health
Clopidogrel bisulfate	03 Dec 2020 (Study Day 128) - 03 Dec 2020 (Study Day 128)	Thrombolic Event Prevention
Fentanyl	03 Dec 2020 (Study Day 128) - 03 Dec 2020 (Study Day 128)	Pci

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Laryngeal Oedema	Grade 2/moderate	Not related	04 Dec 2020 (Study Day 129) - Ongoing
Dyspnoea	Grade 2/moderate	Not related	15 Dec 2020 (Study Day 140) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379448

Participant Number:	US341-2067 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	31 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	28 Aug 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Osteoarthritis/Progressive/ Worsening Osteoarthritis - Back	SAE	Grade 4	Not related	01 Nov 2020 (Study Day 94) – Ongoing	Not recovered/not resolved
Post Procedural Infection/Post-Op Infection	SAE	Grade 4	Not related	02 Feb 2021 (Study Day 187) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2067, a 60-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 31 Jul 2020 (Study Day 1). The second dose was administered in the left arm on 28 Aug 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Nov 2020 (Study Day 94), 93 days after the first dose and 65 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of osteoarthritis. Action taken with the IP was not applicable. The event of progressive/worsening osteoarthritis - back was considered to be ongoing. The investigator assessed the event of osteoarthritis to be not related to the IP.

On 02 Feb 2021 (Study Day 187), 186 days after the first dose and 158 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of post procedural infection. Action taken with the IP was not applicable. The event of post-op infection was considered to be ongoing. The investigator assessed the event of post procedural infection to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-011652	Staphylococcal bacteraemia
MOD-2021-011652	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Osteoarthritis	Osteoarthritis - bilateral knees, lower back, neck, hands, feet.	2005 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	2010 - Ongoing
Knee operation	Right knee septic joint surgery	2015 - 2015
Anxiety	Anxiety	2018 - Ongoing
Depression	Depression	2018 - Ongoing
Benign prostatic hyperplasia	Bph	Mar 2020 - Ongoing
Spinal fusion surgery	Neck surgery - cervical fusion	15 Apr 2020 (Study Day -107) - 15 Apr 2020 (Study Day -107)
Sleep apnoea syndrome	Sleep apnea	31 Jul 2020 (Study Day 1) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Docusate sodium; sennoside a+b	Not reported - Ongoing	Post Op Infection
Ferrous sulfate	Not reported - Ongoing	Post Op Infection
Gabapentin	Not reported - Ongoing	Post Op Infection
Loratadine	Not reported - Ongoing	Post Op Infection

Acute Respiratory Failure/Acute Respiratory Failure	SAE	Grade 4	Not related	13 Nov 2020 (Study Day 106) – 26 Nov 2020 (Study Day 119)	Recovered/resolved
Pneumonia Klebsiella/Pneumonia Due To Gram Negative Klebsiella Bacteria	SAE	Grade 4	Not related	13 Nov 2020 (Study Day 106) – 01 Jan 2021 (Study Day 155)	Recovered/resolved
Cholecystitis/Cholecystitis	SAE	Grade 4	Not related	11 Jan 2021 (Study Day 165) – 13 Jan 2021 (Study Day 167)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2081, a 72-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 31 Jul 2020 (Study Day 1). The second dose was administered in the right arm on 31 Aug 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 13 Nov 2020 (Study Day 106), 105 days after the first dose and 74 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of acute respiratory failure. Action taken with the IP was not applicable. The event of acute respiratory failure lasted for 14 days, after which it was considered to be recovered/resolved on 26 Nov 2020 (Study Day 119). The investigator assessed the event of acute respiratory failure to be not related to the IP.

On 13 Nov 2020 (Study Day 106), 105 days after the first dose and 74 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pneumonia klebsiella. Action taken with the IP was not applicable. The event of pneumonia due to gram negative klebsiella bacteria lasted for 50 days, after which it was considered to be recovered/resolved on 01 Jan 2021 (Study Day 155). The investigator assessed the event of pneumonia klebsiella to be not related to the IP.

On 11 Jan 2021 (Study Day 165), 164 days after the first dose and 133 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of cholecystitis. Action taken with the IP was not applicable. The event of cholecystitis lasted for 3 days, after which it was considered to be recovered/resolved on 13 Jan 2021 (Study Day 167). The investigator assessed the event of cholecystitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000831	Cholecystitis
MOD-2020-000831	Pneumonia klebsiella
MOD-2020-000831	Acute respiratory failure

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Ligament operation	Right knee acl repair	1987 - 1987
Ligament operation	Left knee acl repair	1991 - 1991
Inguinal hernia	Left inguinal hernia	1992 - 1992
Inguinal hernia repair	Left inguinal herniorrhaphy	1992 - 1992
Attention deficit hyperactivity disorder	Adhd	2010 - Ongoing
Gastrooesophageal reflux disease	Gerd	2010 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Benign prostatic hyperplasia	Bph	2012 - Ongoing
Osteoarthritis	Osteoarthritis knees, hips, back	2013 - Ongoing
Rotator cuff repair	Right rotator cuff repair	2013 - 2013
Rotator cuff syndrome	Right torn rotator cuff	2013 - 2013
Corneal dystrophy	Fuch's dystrophy	2015 - 2018
Insomnia	Insomnia	2015 - Ongoing
Carpal tunnel syndrome	Carpal tunnel right wrist	2017 - Ongoing
Corneal transplant	Bilateral corneal transplant	2018 - 2018
Type 2 diabetes mellitus	Diabetes - type 2	2019 - Ongoing
Rotator cuff repair	Left rotator cuff repair	Jun 2020 - Jun 2020
Rotator cuff syndrome	Left torn rotator cuff	Jun 2020 - Jun 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin lispro	Not reported - 27 Nov 2020 (Study Day 120)	Diabetes
Omeprazole	2009 - 2018	Gerd
Amfetamine	2010 - Ongoing	Adhd
Hydrochlorothiazide; losartan potassium	2010 - Ongoing	Hypertension
Rosuvastatin	2010 - Ongoing	Hyperlipidemia
Vitamins nos	2010 - Ongoing	General Health
Amlodipine	2012 - Ongoing	Hypertension
Dutasteride	2012 - Ongoing	Bph
Alfuzosin	2013 - Ongoing	Bph
Diclofenac	2013 - Ongoing	Osteoarthritis
Difluprednate	2018 - Ongoing	Post-Op And Corneal Transplant - Anti Rejection. Ocular Inflamation
Omeprazole	2018 - 27 Nov 2020 (Study Day 120)	Gerd
Trazodone	2019 - Ongoing	Insomnia
Hydrocodone bitartrate; paracetamol	18 Aug 2020 (Study Day 19) - 20 Aug 2020 (Study Day 21)	Carpel Tunnel
Influenza vaccine	29 Sep 2020 (Study Day 61) - 29 Sep 2020 (Study Day 61)	General Health Prevention
Influenza vaccine	29 Sep 2020 (Study Day 61) - 29 Sep 2020 (Study Day 61)	Influenza Prophylactic
Ecg*	13 Nov 2020 (Study Day 106) - 13 Nov 2020 (Study Day 106)	Adverse Event
Ctab / pelvis with contrast*	14 Nov 2020 (Study Day 107) - 14 Nov 2020 (Study Day 107)	Adverse Event
Cxr*	14 Nov 2020 (Study Day 107) - 14 Nov 2020 (Study Day 107)	Adverse Event
Ruq ultrasound*	14 Nov 2020 (Study Day 107) - 14 Nov 2020 (Study Day 107)	Adverse Event
Ctab / pelvis w/o contrast*	15 Nov 2020 (Study Day 108) - 15 Nov 2020 (Study Day 108)	Adverse Event
Potassium chloride	17 Nov 2020 (Study Day 110) - Ongoing	Acute Kidney Injury
Ceftriaxone	18 Nov 2020 (Study Day 111) - 19 Nov 2020 (Study Day 112)	Acute Biliary Pacreatitis / Pneumonia / Klebsiella Gram Negative Bacteremia
Metronidazole	18 Nov 2020 (Study Day 111) - 19 Nov 2020 (Study Day 112)	Acute Billary Pacreatitis / Pneumonia / Klebsiella Gram Negative Bacteremia
Mrcp*	18 Nov 2020 (Study Day 111) - 18 Nov 2020 (Study Day 111)	Adverse Event
Ctab with contrast*	19 Nov 2020 (Study Day 112) - 19 Nov 2020 (Study Day 112)	Adverse Event
Cxr*	19 Nov 2020 (Study Day 112) - 19 Nov 2020 (Study Day 112)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fentanyl	19 Nov 2020 (Study Day 112) - 19 Nov 2020 (Study Day 112)	Sedation For Surgical Procedure
Hepatic angio*	19 Nov 2020 (Study Day 112) - 19 Nov 2020 (Study Day 112)	Adverse Event
Hepatic av fistula embolization*	19 Nov 2020 (Study Day 112) - 19 Nov 2020 (Study Day 112)	Adverse Event
Midazolam hydrochloride	19 Nov 2020 (Study Day 112) - 19 Nov 2020 (Study Day 112)	Sedation For Surgical Procedure
Ct guided cholecystostamy drain*	20 Nov 2020 (Study Day 113) - 20 Nov 2020 (Study Day 113)	Adverse Event
Fentanyl	20 Nov 2020 (Study Day 113) - 20 Nov 2020 (Study Day 113)	Sedation For Surgical Procedure
Midazolam hydrochloride	20 Nov 2020 (Study Day 113) - 20 Nov 2020 (Study Day 113)	Sedation For Surgical Procedure
Cta chest*	21 Nov 2020 (Study Day 114) - 21 Nov 2020 (Study Day 114)	Adverse Event
Mri of abd w contrast*	21 Nov 2020 (Study Day 114) - 21 Nov 2020 (Study Day 114)	Adverse Event
Mri of abd w/o contrast*	21 Nov 2020 (Study Day 114) - 21 Nov 2020 (Study Day 114)	Adverse Event
Cardiac echo*	22 Nov 2020 (Study Day 115) - 22 Nov 2020 (Study Day 115)	Adverse Event
Ecg*	22 Nov 2020 (Study Day 115) - 22 Nov 2020 (Study Day 115)	Adverse Event
Ct guided cholecystostamy drain - upsized drain revision*	24 Nov 2020 (Study Day 117) - 24 Nov 2020 (Study Day 117)	Adverse Event
Cta / p / c*	24 Nov 2020 (Study Day 117) - 24 Nov 2020 (Study Day 117)	Adverse Event
Cxr*	24 Nov 2020 (Study Day 117) - 24 Nov 2020 (Study Day 117)	Adverse Event
Magnesium sulfate	25 Nov 2020 (Study Day 118) - 25 Nov 2020 (Study Day 118)	Hypomagnesemia
Piccline*	25 Nov 2020 (Study Day 118) - 25 Nov 2020 (Study Day 118)	Adverse Event
Piperacillin; tazobactam	25 Nov 2020 (Study Day 118) - 26 Nov 2020 (Study Day 119)	Pneumonia / Pancreatitis / Klebsiella Gram Negative Bacteremia
Furosemide	26 Nov 2020 (Study Day 119) - Ongoing	Heart Failure / Hypertension
Oxycodone	26 Nov 2020 (Study Day 119) - 30 Nov 2020 (Study Day 123)	Surgical Pain
Piperacillin sodium; tazobactam sodium	26 Nov 2020 (Study Day 119) - 16 Dec 2020 (Study Day 139)	Acute Billary Pancreatitis
Lidocaine	27 Nov 2020 (Study Day 120) - Ongoing	Surgical Pain
Pantoprazole	27 Nov 2020 (Study Day 120) - Ongoing	Gerd
Bupivacaine; epinephrine	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystitis
Ceftriaxone	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystitis
Cholecytectomy*	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Dexamethasone	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystitis/Cholecystectomy
Diphenhydramine hydrochloride	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Docusate sodium	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Constipation Prophylaxis
Ephedrine	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Epinephrine	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Fentanyl	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Sedation/Cholecystectomy
Glycopyrronium	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Hydralazine hydrochloride	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Hydromorphone hydrochloride	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Hydromorphone hydrochloride	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Pain, Cholecystectomy
Indocyanine green	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Labetalol	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Lidocaine	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Metoclopramide	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Nausea/Cholecystectomy
Metronidazole	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystitis/ Cholecystectomy
Morphine	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Ondansetron	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Nausea/Cholecystectomy
Oxycodone	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Phenylephrine	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Promethazine	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Nausea/ Cholecystectomy
Propofol	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Sedation/Cholecystectomy
Rocuronium bromide	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Cholecystectomy
Sugammadex sodium	13 Jan 2021 (Study Day 167) - 13 Jan 2021 (Study Day 167)	Anethesia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Acute Kidney Injury	Grade 4	Not related	13 Nov 2020 (Study Day 106) - 26 Nov 2020 (Study Day 119)
Cardiac Failure	Grade 4	Not related	13 Nov 2020 (Study Day 106) - Ongoing
Hepatic Haematoma	Grade 4	Not related	13 Nov 2020 (Study Day 106) - Ongoing
Klebsiella Bacteraemia	Grade 4	Not related	13 Nov 2020 (Study Day 106) - Ongoing
Obstructive Pancreatitis	Grade 4	Not related	13 Nov 2020 (Study Day 106) - 10 Dec 2020 (Study Day 133)
Systemic Inflammatory Response Syndrome	Grade 4	Not related	20 Nov 2020 (Study Day 113) - 26 Nov 2020 (Study Day 119)
Hypomagnesaemia	Grade 2/moderate	Not related	25 Nov 2020 (Study Day 118) - 25 Nov 2020 (Study Day 118)
Malignant Melanoma	Grade 2/moderate	Not related	10 Feb 2021 (Study Day 195) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379457

Participant Number:	US341-2118 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	04 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	01 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Peripheral Artery Occlusion/Right Femoral Artery Occlusion	SAE	Grade 4	Not related	30 Oct 2020 (Study Day 88) – 19 Nov 2020 (Study Day 108)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2118, a 56-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 04 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 01 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Oct 2020 (Study Day 88), 87 days after the first dose and 59 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of peripheral artery occlusion. Action taken with the IP was not applicable. The event of right femoral artery occlusion lasted for 21 days, after which it was considered to be recovered/resolved on 19 Nov 2020 (Study Day 108). The investigator assessed the event of peripheral artery occlusion to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000963	Peripheral artery occlusion

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Pain in extremity	Pain in hip and leg	Not reported - Ongoing
Leg amputation	Amputation below right knee	2008 - 2008
Benign prostatic hyperplasia	Bph	2017 - Ongoing
Gastrooesophageal reflux disease	Gerd	2018 - Ongoing
Hypertension	Hypertension	2018 - Ongoing
Muscle spasms	Leg cramps (right)	Apr 2020 - Ongoing
Peripheral vascular disorder	Peripheral vascular disease	Jun 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Gabapentin	2016 - Ongoing	Hip And Leg Pain
Hydrochlorothiazide; losartan potassium	2018 - Ongoing	Htn
Hydrocodone	2018 - 2020	Hip And Leg Pain
Oxycodone hydrochloride; paracetamol	2018 - Ongoing	Hip And Leg Pain
Sodium calcium edetate	2018 - Ongoing	Bone Health
Tamsulosin	2018 - Ongoing	Bph
Temazepam	2018 - Ongoing	Hip And Leg Pain
Pantoprazole	2019 - Ongoing	Gerd
Metoprolol	2020 - Ongoing	Hypertension
Magnesium	Apr 2020 - Ongoing	Leg Cramps
Rosuvastatin calcium	Nov 2020 - Ongoing	Hyperlipidemia
Application of praveena wound vac right groin 13 cm*	19 Nov 2020 (Study Day 108) - 19 Nov 2020 (Study Day 108)	Adverse Event
Colecalciferol	19 Nov 2020 (Study Day 108) - Ongoing	General Health
Pathology report for right femoral lymph node.*	19 Nov 2020 (Study Day 108) - 19 Nov 2020 (Study Day 108)	Diagnostic
Pathology report for right femoral plaque with atheromatous plaque with calcification*	19 Nov 2020 (Study Day 108) - 19 Nov 2020 (Study Day 108)	Diagnostic
Right common femoral endarterectomy with patch angioplasty*	19 Nov 2020 (Study Day 108) - 19 Nov 2020 (Study Day 108)	Adverse Event
Right profunda thrombectomy*	19 Nov 2020 (Study Day 108) - 19 Nov 2020 (Study Day 108)	Adverse Event
Right profundoplasty to the fourth order profunda*	19 Nov 2020 (Study Day 108) - 19 Nov 2020 (Study Day 108)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hyperlipidaemia	Grade 1/mild	Not related	15 Oct 2020 (Study Day 73) - Ongoing
Upper Respiratory Tract Infection	Grade 1/mild	Not related	30 Nov 2020 (Study Day 119) - 04 Dec 2020 (Study Day 123)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US341-2125 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	04 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	01 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Blood Loss Anaemia/Acute Post Hemorrhagic Anemia	SAE	Grade 4	Not related	08 Sep 2020 (Study Day 36) – Ongoing	Recovering/resolving
Road Traffic Accident/Motor Vehicle Accident	SAE	Grade 4	Not related	08 Sep 2020 (Study Day 36) – 08 Sep 2020 (Study Day 36)	Recovered/resolved
Cervical Vertebral Fracture/Cervical 7 Fracture	SAE	Grade 4	Not related	09 Sep 2020 (Study Day 37) – 09 Dec 2020 (Study Day 128)	Recovered/resolved
Embolic Stroke/Multiple Left Hemisphere Embolic Infarct	SAE	Grade 4	Not related	09 Sep 2020 (Study Day 37) – Ongoing	Not recovered/not resolved
Pneumonia Staphylococcal/Mrsa Pneumonia	SAE	Grade 4	Not related	09 Sep 2020 (Study Day 37) – 29 Sep 2020 (Study Day 57)	Recovered/resolved
Traumatic Liver Injury/Grade Iv Liver Laceration	SAE	Grade 4	Not related	09 Sep 2020 (Study Day 37) – 28 Jan 2021 (Study Day 178)	Recovered/resolved
Acute Myocardial Infarction/Non Stemi	SAE	Grade 4	Not related	13 Sep 2020 (Study Day 41) – 13 Sep 2020 (Study Day 41)	Recovered/resolved
Carotid Artery Thrombosis/Left Intercarotid Artery Dissection With Intraluminal Thrombus	SAE	Grade 4	Not related	13 Sep 2020 (Study Day 41) – Not reported	Unknown
Craniocerebral Injury/Traumatic Brain Injury	SAE	Grade 4	Not related	23 Sep 2020 (Study Day 51) – 01 Oct 2020 (Study Day 59)	Recovered/resolved with sequelae
Subarachnoid Haemorrhage/Subarachnoid Hemhorrage	SAE	Grade 4	Not related	23 Sep 2020 (Study Day 51) – 01 Oct 2020 (Study Day 59)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2125, a 71-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 04 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 01 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Sep 2020 (Study Day 36), 35 days after the first dose and 7 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of blood loss anaemia. Action taken with the IP was not applicable. The event of acute post hemorrhagic anemia was considered to be ongoing. The investigator assessed the event of blood loss anaemia to be not related to the IP.

On 08 Sep 2020 (Study Day 36), 35 days after the first dose and 7 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of road traffic accident. Action taken with the IP was not applicable. The event of motor vehicle accident lasted for 1 day, after which it was considered to be recovered/resolved on 08 Sep 2020 (Study Day 36). The investigator assessed the event of road traffic accident to be not related to the IP.

On 09 Sep 2020 (Study Day 37), 36 days after the first dose and 8 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of cervical vertebral fracture. Action taken with the IP was not applicable. The event of cervical 7 fracture lasted for 92 days, after which it was considered to be recovered/resolved on 09 Dec 2020 (Study Day 128). The investigator assessed the event of cervical vertebral fracture to be not related to the IP.

On 09 Sep 2020 (Study Day 37), 36 days after the first dose and 8 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of embolic stroke. Action taken with the IP was not applicable. The event of multiple left hemisphere embolic infarct was considered to be ongoing. The investigator assessed the event of embolic stroke to be not related to the IP.

On 09 Sep 2020 (Study Day 37), 36 days after the first dose and 8 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pneumonia staphylococcal. Action taken with the IP was not applicable. The event of mrsa pneumonia lasted for 21 days, after which it was considered to be recovered/resolved on 29 Sep 2020 (Study Day 57). The investigator assessed the event of pneumonia staphylococcal to be not related to the IP.

On 09 Sep 2020 (Study Day 37), 36 days after the first dose and 8 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of traumatic liver injury. Action taken with the IP was not applicable. The event of grade iv liver laceration lasted for 142 days, after which it was considered to be recovered/resolved on 28 Jan 2021 (Study Day 178). The investigator assessed the event of traumatic liver injury to be not related to the IP.

On 13 Sep 2020 (Study Day 41), 40 days after the first dose and 12 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of acute myocardial infarction. Action taken with the IP was not applicable. The event of non stemi lasted for 1 days, after which

it was considered to be recovered/resolved on 13 Sep 2020 (Study Day 41). The investigator assessed the event of acute myocardial infarction to be not related to the IP.

On 13 Sep 2020 (Study Day 41), 40 days after the first dose and 12 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of carotid artery thrombosis. Action taken with the IP was not applicable. The outcome of the event was unknown. The investigator assessed the event of carotid artery thrombosis to be not related to the IP.

On 23 Sep 2020 (Study Day 51), 50 days after the first dose and 22 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of craniocerebral injury. Action taken with the IP was not applicable. The event of traumatic brain injury lasted for 9 days, after which it was considered to be recovered/resolved with sequelae on 01 Oct 2020 (Study Day 59). The investigator assessed the event of craniocerebral injury to be not related to the IP.

On 23 Sep 2020 (Study Day 51), 50 days after the first dose and 22 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of subarachnoid haemorrhage. Action taken with the IP was not applicable. The event of subarachnoid hemhorrage lasted for 9 days, after which it was considered to be recovered/resolved on 01 Oct 2020 (Study Day 59). The investigator assessed the event of subarachnoid haemorrhage to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000271	Road traffic accident
MOD-2020-000271	Blood loss anaemia
MOD-2020-000271	Pneumonia staphylococcal
MOD-2020-000271	Cervical vertebral fracture
MOD-2020-000271	Traumatic liver injury
MOD-2020-000271	Embolic stroke
MOD-2020-000271	Acute myocardial infarction
MOD-2020-000271	Carotid artery thrombosis
MOD-2020-000271	Craniocerebral injury
MOD-2020-000271	Subarachnoid haemorrhage

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	1963 - 1963
Appendicectomy	Appendectomy	1979 - 1979
Irritable bowel syndrome	Ibs-o	2000 - Ongoing
Otitis media	Non acute serous otitis media (non-infectious) "fluid in ear" (bilateral)	2000 - Ongoing
Postmenopause	Post menopausal	2005 - Ongoing
Back pain	Chronic lower back pain	2009 - Ongoing
Gastrooesophageal reflux disease	Gerd	2009 - Ongoing
Hypothyroidism	Hypothyroid	2009 - Ongoing
Arthralgia	Intermittent joint pain (elbows / ankles, occasional knees / hips)	2010 - Ongoing
Spinal osteoarthritis	Osteoarthritis - back (low back)	2014 - Ongoing
Enterorrhaphy	Ruptured diverticulum repair	2016 - 2016
Ileostomy	Ileostomy	2016 - 2016
Intestinal obstruction	Bowel obstruction	2016 - 2016
Ileostomy	Ileostomy reversal	2017 - 2017
Abdominal hernia repair	Abdominal hernia repair	2018 - 2018
Hypertension	Hypertension	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Enteral nutrition*	Not reported - Not reported	Adverse Event
Head mri*	Not reported - Not reported	Adverse Event
Plantago ovata	Not reported - Ongoing	Ibs
Tte*	Not reported - Not reported	Adverse Event
Dicycloverine hydrochloride	2000 - Ongoing	Irritable Bowel Syndrome-D
Pseudoephedrine	2000 - Ongoing	Serous Otitis Media
Cyclobenzaprine	2009 - Ongoing	Chronic Low Back Pain
Pantoprazole	2009 - 01 Oct 2020 (Study Day 59)	Gerd
Levothyroxine	2010 - 03 Nov 2020 (Study Day 92)	Hypothyroid
Amlodipine	2019 - 19 Nov 2020 (Study Day 108)	Hypertension
Atenolol	2019 - Ongoing	Hypertension
Losartan	2019 - Ongoing	Hypertension
Meloxicam	2019 - Ongoing	Osteoarthritis
Paracetamol	2019 - 01 Oct 2020 (Study Day 59)	Oa

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium	05 Aug 2020 (Study Day 2) - Ongoing	General Health
Vitamin d nos	05 Aug 2020 (Study Day 2) - Ongoing	General Health
Metoprolol	Sep 2020 - Oct 2020	Hypertension
Paracetamol	04 Sep 2020 (Study Day 32) - 04 Sep 2020 (Study Day 32)	Injection Site Pain
Ferrous sulfate	08 Sep 2020 (Study Day 36) - Ongoing	Anemia
Fluticasone furoate; vilanterol trifenatate	08 Sep 2020 (Study Day 36) - Ongoing	Cough
Levetiracetam	08 Sep 2020 (Study Day 36) - 15 Nov 2020 (Study Day 104)	Seizure Prevention
Lorazepam	08 Sep 2020 (Study Day 36) - 08 Sep 2020 (Study Day 36)	Seizure
Modafinil	08 Sep 2020 (Study Day 36) - 01 Oct 2020 (Study Day 59)	Promote Wakefulness
Paracetamol	08 Sep 2020 (Study Day 36) - Ongoing	Pain, Motor Vehicle Accident
Cefepime	09 Sep 2020 (Study Day 37) - 29 Sep 2020 (Study Day 57)	Mrsa Pneumonia
Vancomycin	09 Sep 2020 (Study Day 37) - 29 Sep 2020 (Study Day 57)	Mrsa Pneumonia
Placement of extraventricular drains*	10 Sep 2020 (Study Day 38) - 10 Sep 2020 (Study Day 38)	Adverse Event
Closed right tibia-fibula fracture*	13 Sep 2020 (Study Day 41) - 13 Sep 2020 (Study Day 41)	Adverse Event
Head ct*	14 Sep 2020 (Study Day 42) - 14 Sep 2020 (Study Day 42)	Adverse Event
Bronchoscopy*	18 Sep 2020 (Study Day 46) - 18 Sep 2020 (Study Day 46)	Adverse Event
Percutaneous endoscopic gastrostomy tube placement*	18 Sep 2020 (Study Day 46) - 18 Sep 2020 (Study Day 46)	Adverse Event
Trachestomy*	18 Sep 2020 (Study Day 46) - 18 Sep 2020 (Study Day 46)	Adverse Event
Ventilatory support*	18 Sep 2020 (Study Day 46) - 18 Sep 2020 (Study Day 46)	Adverse Event
Blood transfusion*	23 Sep 2020 (Study Day 51) - 23 Sep 2020 (Study Day 51)	Adverse Event
Amantadine hydrochloride	01 Oct 2020 (Study Day 59) - Ongoing	Traumatic Brain Injury
Apixaban	01 Oct 2020 (Study Day 59) - Ongoing	Left Intercarotid Artery Dissection With Ntraluminal Thrombus
Carvedilol	01 Oct 2020 (Study Day 59) - Ongoing	Hypertension
Diclofenac	01 Oct 2020 (Study Day 59) - 09 Dec 2020 (Study Day 128)	Pain, Motor Vehicle Accident
Esomeprazole	01 Oct 2020 (Study Day 59) - Ongoing	Gerd
Heparin	01 Oct 2020 (Study Day 59) - 01 Oct 2020 (Study Day 59)	Embolic Infarct - Multiple Left Hemispheric
Insulin	01 Oct 2020 (Study Day 59) - 09 Dec 2020 (Study Day 128)	Hyperglycemia
Insulin glargine	01 Oct 2020 (Study Day 59) - 09 Dec 2020 (Study Day 128)	Hyperglycemia
Sodium chloride	01 Oct 2020 (Study Day 59) - Ongoing	Hyponatremia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Apixaban	02 Nov 2020 (Study Day 91) - Ongoing	Thromboembolism Prevention
Bisacodyl	02 Nov 2020 (Study Day 91) - 01 Feb 2021 (Study Day 182)	Constipation Prevention
Clonazepam	02 Nov 2020 (Study Day 91) - Ongoing	Seizures
Glucagon	02 Nov 2020 (Study Day 91) - 09 Dec 2020 (Study Day 128)	Hypoglycemia
Glucose	02 Nov 2020 (Study Day 91) - 09 Dec 2020 (Study Day 128)	Hypoglycemia
Hydralazine hydrochloride	02 Nov 2020 (Study Day 91) - 01 Feb 2021 (Study Day 182)	Hypertension
Hydrocodone bitartrate; paracetamol	02 Nov 2020 (Study Day 91) - Ongoing	Pain, Motor Vehicle Accident
Ipratropium; salbutamol	02 Nov 2020 (Study Day 91) - 09 Dec 2020 (Study Day 128)	Cough
Magnesium oxide	02 Nov 2020 (Study Day 91) - Ongoing	General Health
Melatonin	02 Nov 2020 (Study Day 91) - Ongoing	General Health
Ondansetron hydrochloride	02 Nov 2020 (Study Day 91) - 09 Dec 2020 (Study Day 128)	Nausea
Oxycodone hydrochloride; paracetamol	02 Nov 2020 (Study Day 91) - Ongoing	Pain, Motor Vehicle Accident
Paracetamol	02 Nov 2020 (Study Day 91) - Ongoing	Pain, Motor Vehicle Accident
Paroxetine	02 Nov 2020 (Study Day 91) - 01 Feb 2021 (Study Day 182)	Anxiety
Sodium chloride	02 Nov 2020 (Study Day 91) - Ongoing	Hponatremia
Gabapentin	03 Nov 2020 (Study Day 92) - Ongoing	Motor Vehicle Accident
Levothyroxine	03 Nov 2020 (Study Day 92) - Ongoing	Hypothyroidism
Pantoprazole	03 Nov 2020 (Study Day 92) - Ongoing	Gastroesophageal Reflux Disease
Vitamins nos	03 Nov 2020 (Study Day 92) - Ongoing	Kidney General Health
Ergocalciferol	07 Nov 2020 (Study Day 96) - Ongoing	General Health
Methocarbamol	07 Nov 2020 (Study Day 96) - Ongoing	Muscle Spasms, Motor Vehicle Accident
Diclofenac	13 Nov 2020 (Study Day 102) - Ongoing	Motor Vehicle Accident
Lidocaine	14 Nov 2020 (Study Day 103) - 09 Dec 2020 (Study Day 128)	Pain Due To Motor Vehicle Accident
Amlodipine	20 Nov 2020 (Study Day 109) - 01 Jan 2021 (Study Day 151)	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Seizure	Grade 1/mild	Not related	08 Sep 2020 (Study Day 36) - 08 Sep 2020 (Study Day 36)
Rib Fracture	Grade 2/moderate	Not related	09 Sep 2020 (Study Day 37) - 19 Dec 2020 (Study Day 138)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hyperglycaemia	Grade 2/moderate	Not related	13 Sep 2020 (Study Day 41) - 09 Dec 2020 (Study Day 128)
Hyponatraemia	Grade 2/moderate	Not related	13 Sep 2020 (Study Day 41) - 09 Dec 2020 (Study Day 128)
Lower Limb Fracture	Grade 2/moderate	Not related	13 Sep 2020 (Study Day 41) - 24 Feb 2021 (Study Day 205)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379467

Participant Number:	US341-2126 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	04 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Lung Abscess/Abscess Of Lung	SAE, AE leading to withdrawal from study vaccine	Grade 4	Not related	22 Aug 2020 (Study Day 19) – 20 Jan 2021 (Study Day 170)	Recovered/resolved
Pneumonia/Pneumonia	SAE, AE leading to withdrawal from study vaccine	Grade 4	Not related	22 Aug 2020 (Study Day 19) – 20 Jan 2021 (Study Day 170)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2126, a 60-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 04 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 22 Aug 2020 (Study Day 19), 18 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of lung abscess. On 31 Aug 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of abscess of lung lasted for 152 days, after which it was considered to be recovered/resolved on 20 Jan 2021 (Study Day 170). The investigator assessed the event of lung abscess to be not related to the IP.

On 22 Aug 2020 (Study Day 19), 18 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of pneumonia. On 31 Aug 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of pneumonia lasted for 152 days, after which it was considered to be recovered/resolved on 20 Jan 2021 (Study Day 170). The investigator assessed the event of pneumonia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000228	Lung abscess
MOD-2020-000228	Pneumonia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tobacco user	Smoking	1980 - Ongoing
Bronchitis chronic	Chronic bronchitis	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Osteoarthritis	Osteoarthritis hips and shoulders	2010 - Ongoing
Osteoporosis	Osteoperosis	2010 - Ongoing
Postmenopause	Post menopausal	2010 - Ongoing
Anxiety	Anxiety	Mar 2015 - Ongoing
Periarthritis	Frozen shoulder - bilateral	2017 - Ongoing
Seasonal allergy	Allergic rhinitis - seasonal	2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Tizanidine hydrochloride	2010 - Ongoing	Osteoarthritis
Calcium chloride	2014 - Ongoing	Osteoporosis
Acetylsalicylic acid	2015 - 01 Sep 2020 (Study Day 29)	Hypertension
Citalopram hydrobromide	2015 - Ongoing	Anxiety
Diclofenac	2015 - Ongoing	Osteoarthritis
Furosemide	2015 - Ongoing	Hypertension
Oxycodone hydrochloride; paracetamol	2015 - Ongoing	Osteoarthritis
Potassium chloride	2016 - Ongoing	General Health
Guaifenesin	2017 - Ongoing	Allergic Rhinitis - Seasonal
Denosumab	2018 - Ongoing	Osteoporosis
Mometasone	20 Aug 2019 (Study Day -350) - Ongoing	Seasonal Allergies
Triamcinolone acetonide	08 Oct 2019 (Study Day -301) - Ongoing	Seasonal Allergies
Acetylsalicylic acid	05 Aug 2020 (Study Day 2) - 18 Aug 2020 (Study Day 15)	Uri
Acetylsalicylic acid	08 Aug 2020 (Study Day 5) - 18 Aug 2020 (Study Day 15)	Fever For Uri
Benzonatate	14 Aug 2020 (Study Day 11) - 18 Aug 2020 (Study Day 15)	Uri - Upper Respiratory Infection
Ct pulmonary angiogram*	22 Aug 2020 (Study Day 19) - 22 Aug 2020 (Study Day 19)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication

Morphine	24 Oct 2020 (Study Day 82) - 24 Oct 2020 (Study Day 82)	Rib Pain
Chest ct*	20 Jan 2021 (Study Day 170) - 20 Jan 2021 (Study Day 170)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Upper Respiratory Tract Infection	Grade 1/mild	Not related	05 Aug 2020 (Study Day 2) - 18 Aug 2020 (Study Day 15)
Musculoskeletal Chest Pain	Grade 4	Not related	23 Aug 2020 (Study Day 20) - 22 Sep 2020 (Study Day 50)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US341-2127 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	05 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	03 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Respiratory Failure/Acute Respiratory Failure	SAE	Grade 4	Not related	14 Aug 2020 (Study Day 10) – 20 Aug 2020 (Study Day 16)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2127, a 42-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 05 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 03 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 14 Aug 2020 (Study Day 10), 9 days after the first dose and 20 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of acute respiratory failure. The IP dose was not changed due to the acute respiratory failure. The event of acute respiratory failure lasted for 7 days, after which it was considered to be recovered/resolved on 20 Aug 2020 (Study Day 16). The investigator assessed the event of acute respiratory failure to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000202	Acute respiratory failure

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety	Anxiety	2012 - Ongoing
Depression	Depression	2012 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2012 - Ongoing
Post-traumatic stress disorder	Ptsd	2012 - Ongoing
Back pain	Lumbar pain	Jan 2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	2012 - Ongoing	Hyperlipidemia
Bupropion hydrochloride	2012 - Ongoing	Ptsd
Vortioxetine hydrobromide	2012 - Ongoing	Ptsd
Ibuprofen	06 Aug 2020 (Study Day 2) - 06 Aug 2020 (Study Day 2)	Solicited Pain - Myalgia And Joint Aches
Levofloxacin	16 Aug 2020 (Study Day 12) - 23 Aug 2020 (Study Day 19)	Acute Respiratory Failure
Salbutamol	16 Aug 2020 (Study Day 12) - 19 Aug 2020 (Study Day 15)	Acute Respiratory Failure
Guaifenesin	17 Aug 2020 (Study Day 13) - 24 Aug 2020 (Study Day 20)	Acute Respiratory Failure
Methylprednisolone sodium succinate	17 Aug 2020 (Study Day 13) - 19 Aug 2020 (Study Day 15)	Acute Respiratory Failure
Ondansetron	17 Aug 2020 (Study Day 13) - 19 Aug 2020 (Study Day 15)	Acute Respiratory Failure
Sodium chloride	17 Aug 2020 (Study Day 13) - 19 Aug 2020 (Study Day 15)	Acute Respiratory Failure
Budesonide; formoterol fumarate	20 Aug 2020 (Study Day 16) - 12 Dec 2020 (Study Day 130)	Acute Respiratory Failure
Gabapentin	20 Aug 2020 (Study Day 16) - Ongoing	Lumbar Pain
Prednisone	20 Aug 2020 (Study Day 16) - 24 Aug 2020 (Study Day 20)	Acute Respiratory Failure
Salbutamol	20 Aug 2020 (Study Day 16) - Ongoing	Acute Respiratory Failure

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US341-2184 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	08 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Intraductal Proliferative Breast Lesion/Right Breast Ductal Carcinoma In Situ	SAE	Grade 2/moderate	Not related	12 Aug 2020 (Study Day 3) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2184, a 73-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 10 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 08 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Aug 2020 (Study Day 3), 2 days after the first dose and 27 days before the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of intraductal proliferative breast lesion. The IP dose was not changed due to the right breast ductal carcinoma in situ. The event of right breast ductal carcinoma in situ was considered to be ongoing. The investigator assessed the event of intraductal proliferative breast lesion to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000203	Intraductal proliferative breast lesion

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Postmenopause	Post-menopausal	1996 - Ongoing
Osteoarthritis	Osteoarthritis bi-lateral knees	2010 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Colecalciferol	2000 - Ongoing	General Health
Fish oil	2000 - Ongoing	General Health
Vitamins nos	2000 - Ongoing	General Health
Ibuprofen	2010 - Ongoing	Osteoarthritis Of Knee
Ibuprofen	2020 - Ongoing	Oa

Dx bone density axial skeleton*	16 Sep 2020 (Study Day 38) - 16 Sep 2020 (Study Day 38)	Diagnostic
Mri breast bilateral w wo contrast w cad*	17 Sep 2020 (Study Day 39) - 17 Sep 2020 (Study Day 39)	Diagnostic
Anastrozole	03 Nov 2020 (Study Day 86) - Ongoing	Breast Cancer

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Pain	Grade 1/mild	Related	05 Jan 2021 (Study Day 149) - 07 Jan 2021 (Study Day 151)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US341-2205 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	11 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	09 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Ovarian Cyst/Ovarian Cyst	SAE	Grade 4	Not related	29 Dec 2020 (Study Day 141) – 04 Feb 2021 (Study Day 178)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2205, a 33-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 11 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 09 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 29 Dec 2020 (Study Day 141), 140 days after the first dose and 111 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of ovarian cyst. Action taken with the IP was not applicable. The event of ovarian cyst lasted for 38 days, after which it was considered to be recovered/resolved on 04 Feb 2021 (Study Day 178). The investigator assessed the event of ovarian cyst to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-026543	Ovarian cyst

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Female sterilisation	Tubal ligation	2018 - 2018
Seasonal allergy	Seasonal allergic rhinitis	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Naproxen sodium	01 Oct 2020 (Study Day 52) - 03 Oct 2020 (Study Day 54)	Viral Syndrome
Methylprednisolone	09 Nov 2020 (Study Day 91) - 09 Nov 2020 (Study Day 91)	Uri
Methylprednisolone	10 Nov 2020 (Study Day 92) - 10 Nov 2020 (Study Day 92)	Uri
Methylprednisolone	11 Nov 2020 (Study Day 93) - 11 Nov 2020 (Study Day 93)	Uri
Methylprednisolone	12 Nov 2020 (Study Day 94) - 12 Nov 2020 (Study Day 94)	Uri
Methylprednisolone	13 Nov 2020 (Study Day 95) - 13 Nov 2020 (Study Day 95)	Uri
Methylprednisolone	14 Nov 2020 (Study Day 96) - 14 Nov 2020 (Study Day 96)	Uri
Naproxen	26 Dec 2020 (Study Day 138) - Ongoing	Anti Inflammatory Prophylactic
Hysterectomy*	04 Feb 2021 (Study Day 178) - 04 Feb 2021 (Study Day 178)	Adverse Event
Left oopherectomy*	04 Feb 2021 (Study Day 178) - 04 Feb 2021 (Study Day 178)	Adverse Event
Oxycodone hydrochloride; paracetamol	04 Feb 2021 (Study Day 178) - 08 Feb 2021 (Study Day 182)	Ovarian Cyst, Post-Op Pain Relief

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Viral Infection	Grade 2/moderate	Not related	25 Sep 2020 (Study Day 46) - 24 Oct 2020 (Study Day 75)
Upper Respiratory Tract Infection	Grade 2/moderate	Not related	03 Nov 2020 (Study Day 85) - 22 Nov 2020 (Study Day 104)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US341-2240 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	11 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Intervertebral Disc Protrusion/Cervical Disc Herniation	SAE	Grade 4	Not related	04 Dec 2020 (Study Day 113) – Ongoing	Not recovered/not resolved
Acute Respiratory Failure/Acute Respiratory Failure Due To Hematoma Of Neck	SAE	Grade 4	Not related	07 Dec 2020 (Study Day 116) – 13 Dec 2020 (Study Day 122)	Recovered/resolved
Haematoma/Hematoma Of Neck	SAE	Grade 4	Not related	07 Dec 2020 (Study Day 116) – 08 Dec 2020 (Study Day 117)	Recovered/resolved
Cerebrovascular Accident/Cerebrovascular Accident	SAE	Grade 4	Not related	12 Dec 2020 (Study Day 121) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2240, a 60-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 14 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 11 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Dec 2020 (Study Day 113), 112 days after the first dose and 84 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of intervertebral disc protrusion. Action taken with the IP was not applicable. The event of cervical disc herniation was considered to be ongoing. The investigator assessed the event of intervertebral disc protrusion to be not related to the IP.

On 07 Dec 2020 (Study Day 116), 115 days after the first dose and 87 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of acute respiratory failure. Action taken with the IP was not applicable. The event of acute respiratory failure due to hematoma of neck lasted for 7 days, after which it was considered to be recovered/resolved on 13 Dec 2020 (Study Day 122). The investigator assessed the event of acute respiratory failure to be not related to the IP.

On 07 Dec 2020 (Study Day 116), 115 days after the first dose and 87 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of haematoma. Action taken with the IP was not applicable. The event of hematoma of neck lasted for 2 days, after which it was considered to be recovered/resolved on 08 Dec 2020 (Study Day 117). The investigator assessed the event of haematoma to be not related to the IP.

On 12 Dec 2020 (Study Day 121), 120 days after the first dose and 92 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of cerebrovascular accident. Action taken with the IP was not applicable. The event of cerebrovascular accident was considered to be ongoing. The investigator assessed the event of cerebrovascular accident to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001059	Radiculopathy
MOD-2020-001059	Spinal stenosis
MOD-2020-001059	Cerebrovascular accident
MOD-2020-001059	Acute respiratory failure
MOD-2020-001059	Hematoma

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Headache	Headache	Not reported - Ongoing
Migraine	Migraine	Not reported - Ongoing
Seasonal allergy	Seasonal allergic rhinitis	1969 - Ongoing
Depression	Depression	1974 - Ongoing
Coronary artery disease	Coronary artery disease	1984 - Ongoing
Type 2 diabetes mellitus	Diabetes type 2	1989 - Ongoing
Chronic kidney disease	Ckd	2005 - Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	2005 - Ongoing
Fibromyalgia	Fibromyalgia	2007 - Ongoing
Gastric bypass	Gastric bypass	2007 - Ongoing
Gastrooesophageal reflux disease	Gerd	2007 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2007 - Ongoing
Hypertension	Hypertension	2007 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety	Anxiety	2010 - Ongoing
Narcolepsy	Narcolepsy	2010 - Ongoing
Postmenopause	Post-menapousal	2011 - Ongoing
Osteoarthritis	Osteoarthritis: knees and back	2015 - Ongoing
Muscle spasms	Leg cramps	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Duloxetine hydrochloride	1997 - Ongoing	Depression
Salbutamol	2006 - Ongoing	Chronic Obstructive Pulmonary Disease
Cetirizine hydrochloride	2010 - Ongoing	Seasonal Allergic Rhinitis
Dicycloverine	2010 - Ongoing	Post Gastric Bypass
Diphenhydramine hydrochloride	2010 - Ongoing	Seasonal Allergic Rhinitis
Fluticasone propionate	2010 - Ongoing	Seasonal Allergic Rhinitis
Modafinil	2010 - Ongoing	Narcolepsy
Prochlorperazine	2010 - Ongoing	Nausea Secondary To Gastric Bypass
Simeticone	2010 - Ongoing	Post Gastric Bypass
Vitamin d nos	2010 - Ongoing	General Health
Vitamins nos	2010 - Ongoing	General Health
Pregabalin	2014 - Ongoing	Fibromyalgia
Rosuvastatin	2015 - Ongoing	Hyperlipidemia
Atenolol	2017 - Ongoing	Hypertension
Insulin degludec	2017 - Ongoing	Diabetes Type 2
Baclofen	2019 - Ongoing	Leg Cramps Secondary To Statin
Oxycodone	2020 - Ongoing	Fibromyalgia
Famotidine	28 Nov 2020 (Study Day 107) - 02 Dec 2020 (Study Day 111)	Pruritis
Hydrocortisone	28 Nov 2020 (Study Day 107) - 28 Nov 2020 (Study Day 107)	Puritis
Hydroxyzine	28 Nov 2020 (Study Day 107) - Ongoing	Pruritis
Prednisone	02 Dec 2020 (Study Day 111) - 02 Dec 2020 (Study Day 111)	Pruritis
Anterior cervical disc cystectomy and fusion*	05 Dec 2020 (Study Day 114) - 05 Dec 2020 (Study Day 114)	Adverse Event
Buspirone hydrochloride	05 Dec 2020 (Study Day 114) - 24 Dec 2020 (Study Day 133)	Depression
Dexamethasone	05 Dec 2020 (Study Day 114) - 07 Dec 2020 (Study Day 116)	Cervical Spine Stenosis
Insulin glargine	05 Dec 2020 (Study Day 114) - 08 Dec 2020 (Study Day 117)	In Hospital Management Of Type 2 Diabetes

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Oxycodone	05 Dec 2020 (Study Day 114) - 07 Dec 2020 (Study Day 116)	Pain Management, Cervical Disc Surgery
Sucralfate	05 Dec 2020 (Study Day 114) - 07 Dec 2020 (Study Day 116)	In Hospital Management Of Gerd
Triamcinolone	05 Dec 2020 (Study Day 114) - 24 Dec 2020 (Study Day 133)	Unknown
Ziprasidone	05 Dec 2020 (Study Day 114) - 11 Dec 2020 (Study Day 120)	Depression, Anxiety
Fenofibrate	06 Dec 2020 (Study Day 115) - 24 Dec 2020 (Study Day 133)	Hyperlipidemia
Cefazolin	07 Dec 2020 (Study Day 116) - 13 Dec 2020 (Study Day 122)	Surgical Infection Prevention For Cervical Disc
Epinephrine	07 Dec 2020 (Study Day 116) - 07 Dec 2020 (Study Day 116)	Acute Respiratory Failure
Etomidate	07 Dec 2020 (Study Day 116) - 07 Dec 2020 (Study Day 116)	Cervical Disc Surgery Anesthesia
Fentanyl	07 Dec 2020 (Study Day 116) - 11 Dec 2020 (Study Day 120)	Sedation For Cerebrovascular Accident And Hematoma
Hydromorphone hydrochloride	07 Dec 2020 (Study Day 116) - 07 Dec 2020 (Study Day 116)	Pain, Cerebrovascular Accident, Cervical Disc Surgery
Labetalol	07 Dec 2020 (Study Day 116) - 07 Dec 2020 (Study Day 116)	In Hospital Management Of Hypertension
Propofol	07 Dec 2020 (Study Day 116) - 11 Dec 2020 (Study Day 120)	Sedation (Hospitalization) For Ae Of Acute Respiratory Failure Due To Hematoma Of Neck
Ascorbic acid	08 Dec 2020 (Study Day 117) - 24 Dec 2020 (Study Day 133)	General Health
Budesonide	08 Dec 2020 (Study Day 117) - 15 Dec 2020 (Study Day 124)	Acute Respiratory Failure
Dexamethasone	08 Dec 2020 (Study Day 117) - 08 Dec 2020 (Study Day 117)	Cervical Spinal Stenosis
Diphenhydramine hydrochloride	08 Dec 2020 (Study Day 117) - 08 Dec 2020 (Study Day 117)	Cerebrovascular Accident, Cervical Spinal Stenosis, Hematoma
Drain hematoma*	08 Dec 2020 (Study Day 117) - 08 Dec 2020 (Study Day 117)	Adverse Event
Insulin aspart	08 Dec 2020 (Study Day 117) - 24 Dec 2020 (Study Day 133)	In Hospital Management Of Type 2 Diabetes
Insulin glargine	08 Dec 2020 (Study Day 117) - 08 Dec 2020 (Study Day 117)	In Hospital Management Of Type 2 Diabetes
Ipratropium bromide; salbutamol sulfate	08 Dec 2020 (Study Day 117) - 15 Dec 2020 (Study Day 124)	Acute Respiratory Failure
Pantoprazole	08 Dec 2020 (Study Day 117) - 13 Dec 2020 (Study Day 122)	In Hospital Management Of Gerd
Bisacodyl	09 Dec 2020 (Study Day 118) - 14 Dec 2020 (Study Day 123)	Constipation Prevention, Cerebrovascular Accident, Spinal Stenosis
Diphenhydramine hydrochloride	09 Dec 2020 (Study Day 118) - 18 Dec 2020 (Study Day 127)	Cerebrovascular Accident, Cervical Spinal Stenosis
Magnesium hydroxide	09 Dec 2020 (Study Day 118) - 09 Dec 2020 (Study Day 118)	Constipation Prevention

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Albumin human	10 Dec 2020 (Study Day 119) - 10 Dec 2020 (Study Day 119)	Hypoalbuminemia, Cerebrovascular Accident, Cervical Spine Stenosis
Heparin	10 Dec 2020 (Study Day 119) - 14 Dec 2020 (Study Day 123)	Thromboembolism Prevention
Norepinephrine	10 Dec 2020 (Study Day 119) - 10 Dec 2020 (Study Day 119)	Acute Respiratory Failure
Dexamethasone	11 Dec 2020 (Study Day 120) - 11 Dec 2020 (Study Day 120)	Cervical Spinal Stenosis
Acetylsalicylic acid	12 Dec 2020 (Study Day 121) - 24 Dec 2020 (Study Day 133)	General Health
Clopidogrel bisulfate	12 Dec 2020 (Study Day 121) - 24 Dec 2020 (Study Day 133)	Cerebrovascular Accident Prevention
Morphine	13 Dec 2020 (Study Day 122) - 24 Dec 2020 (Study Day 133)	Pain Management, Cervical Disc Surgery
Paracetamol	13 Dec 2020 (Study Day 122) - 22 Dec 2020 (Study Day 131)	Pain, Cervical Spine Stenosis
Enoxaparin sodium	14 Dec 2020 (Study Day 123) - 23 Dec 2020 (Study Day 132)	Dvt Prophylaxis
Pantoprazole	14 Dec 2020 (Study Day 123) - 24 Dec 2020 (Study Day 133)	In Hospital Management Of Gerd
Promethazine	14 Dec 2020 (Study Day 123) - 14 Dec 2020 (Study Day 123)	Nausea
Lisinopril	15 Dec 2020 (Study Day 124) - 24 Dec 2020 (Study Day 133)	In Hospital Management Of Hypertension
Docusate sodium	19 Dec 2020 (Study Day 128) - 24 Dec 2020 (Study Day 133)	Constipation Prevention
Sennoside a+b	19 Dec 2020 (Study Day 128) - 19 Dec 2020 (Study Day 128)	Constipation Prevention
Macrogol 3350	20 Dec 2020 (Study Day 129) - 20 Dec 2020 (Study Day 129)	Constipation Prevention
Diazepam	21 Dec 2020 (Study Day 130) - 21 Dec 2020 (Study Day 130)	Cerebrovascular Accident, Cervical Spinal Stenosis
Methocarbamol	21 Dec 2020 (Study Day 130) - 22 Dec 2020 (Study Day 131)	In Hospital Management Of Leg Cramps
Tramadol	22 Dec 2020 (Study Day 131) - 23 Dec 2020 (Study Day 132)	Pain Management, Cervical Disc Surgery, Hematoma

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Pruritus	Grade 4	Not related	28 Nov 2020 (Study Day 107) - 29 Nov 2020 (Study Day 108)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US341-2243 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	11 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Osteoarthritis/Worsening Of Osteoarthritis	SAE	Grade 4	Not related	15 Oct 2020 (Study Day 63) – 18 Mar 2021 (Study Day 217)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2243, a 65-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 14 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 11 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Oct 2020 (Study Day 63), 62 days after the first dose and 34 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of osteoarthritis. Action taken with the IP was not applicable. The event of worsening of osteoarthritis lasted for 155 days, after which it was considered to be recovered/resolved on 18 Mar 2021 (Study Day 217). The investigator assessed the event of osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-034167	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Rhinitis perennial	Perennial allergic rhinitis	1960 - Ongoing
Asthma	Asthma	1962 - Ongoing
Postmenopause	Post menopausal	2000 - Ongoing
Osteoarthritis	Osteoarthritis: elbows, knees	2005 - Ongoing
Sleep apnoea syndrome	Sleep apnea	2012 - Ongoing
Hypertension	Hypertension	2013 - Ongoing
Type 2 diabetes mellitus	Diabetes type 2	2014 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2015 - Ongoing
Glaucoma	Glaucoma	2016 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	1975 - Ongoing	Asthma
Cetirizine hydrochloride	2016 - Ongoing	Perennial Allergic Rhinitis
Fluticasone propionate	2016 - Ongoing	Perennial Allergic Rhinitis
Metformin	2016 - Ongoing	Diabetes Type 2
Montelukast sodium	2016 - Ongoing	Asthma
Atorvastatin	2017 - Ongoing	Hyperlipidemia
Omeprazole	2017 - Ongoing	Gastroesophageal Reflux Disease
Left total knee replacement*	13 Jan 2021 (Study Day 153) - 13 Jan 2021 (Study Day 153)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US341-2328 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Chest Pain/Atypical Chest Pain	SAE	Grade 4	Not related	17 Sep 2020 (Study Day 23) – 18 Sep 2020 (Study Day 24)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2328, a 64-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 26 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 17 Sep 2020 (Study Day 23), 22 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of chest pain. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to other (participant decided that they did not want the second dosage). The event of atypical chest pain lasted for 2 days, after which it was considered to be recovered/resolved on 18 Sep 2020 (Study Day 24). The investigator assessed the event of chest pain to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000727	Chest pain

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Allergic rhinitis - seasonal	1981 - Ongoing
Postmenopause	Post menopausal	2004 - Ongoing
Osteoarthritis	Osteoarthrits - bilateral knees, hand, foot, back	2010 - Ongoing
Atrial fibrillation	Afibrillation - (atrial fibrillation) sympton free since ablation	2015 - 2016
Osteopenia	Osteopenia	2015 - Ongoing
Cardiac ablation	Cardiac ablation	2016 - 2016
Gastrooesophageal reflux disease	Gastroesophogeal reflux disease	2016 - Ongoing
Sleep apnoea syndrome	Sleep apnea	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium	2010 - Ongoing	General Health
Fluticasone propionate	2010 - Ongoing	Allergic Rhinitis - Seasonal
Vitamin d nos	2010 - Ongoing	General Health
Anesthetics, local	2017 - Ongoing	Pain For Oa Of Foot
Benzoyl peroxide	2017 - Ongoing	General Skin Care
Ethinylestradiol; norethisterone acetate	May 2020 - Ongoing	Osteopenia
Ecg, echocardigram, nuclear stress test, xcr and blood work*	17 Sep 2020 (Study Day 23) - 17 Sep 2020 (Study Day 23)	Other, See Source Notes Dated 30-Dec-2020 For More Information
Influenza vaccine	09 Oct 2020 (Study Day 45) - 09 Oct 2020 (Study Day 45)	General Health
Famotidine	29 Oct 2020 (Study Day 65) - Ongoing	Gerd
Varicella zoster vaccine	29 Oct 2020 (Study Day 65) - 29 Oct 2020 (Study Day 65)	General Health

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Chest Pain	Grade 3/severe	Not related	05 Sep 2020 (Study Day 11) - 01 Oct 2020 (Study Day 37)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US342-2135 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Spinal Stenosis/Spinal Stenosis	SAE	Grade 3/severe	Not related	06 Oct 2020 (Study Day 40) – 08 Oct 2020 (Study Day 42)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US342-2135, a 67-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 25 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Oct 2020 (Study Day 40), 39 days after the first dose and 11 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of spinal stenosis. Action taken with the IP was not applicable. The event of spinal stenosis lasted for 3 days, after which it was considered to be recovered/resolved on 08 Oct 2020 (Study Day 42). The investigator assessed the event of spinal stenosis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000450	Spinal stenosis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypothyroidism	Hypothyroidism	1984 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	1994 - Ongoing
Hypertension	Hypertension	2003 - Ongoing
Type 2 diabetes mellitus	Diabetes type ii	2006 - Ongoing
Anxiety	General anxiety	2018 - Ongoing
Seasonal allergy	Seasonal allergies	2018 - Ongoing
Sciatica	Sciatica	2019 - Ongoing
Drug hypersensitivity	Allergy alpha-gel	Jun 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	1979 - Ongoing	General Health
Levothyroxine	1984 - Ongoing	Hypothyroidism
Simvastatin	1994 - Ongoing	Hypercholesterolemia
Acetylsalicylic acid	2002 - Ongoing	General Health
Metoprolol	2003 - Ongoing	Hypertension
Metformin	2007 - Ongoing	Type Ii Diabetes
Colecalciferol	2015 - Ongoing	General Health
Dulaglutide	2016 - Ongoing	Type Ii Diabetes
Losartan	2016 - Ongoing	Hypertension
Buspirone	2018 - Ongoing	General Anxiety
Fluticasone propionate	2018 - Ongoing	Seasonal Allergies
Montelukast sodium	2018 - Ongoing	Seasonal Allergies
Naproxen	2019 - Ongoing	Sciatica
Albumin human	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Anesthetics	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Spinal Stenosis Repair
Cefazolin	06 Oct 2020 (Study Day 40) - 07 Oct 2020 (Study Day 41)	Surgical Prophylaxis, Spinal Stenosis Repair
Clonidine	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Cyclobenzaprine	06 Oct 2020 (Study Day 40) - 20 Oct 2020 (Study Day 54)	Post-Operative Care Pain And Muscle Spasm
Dexamethasone	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Famotidine	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Glycopyrronium	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Hydrocodone; paracetamol	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Pain Control, Spinal Stenosis Repair
Hydrocodone; paracetamol	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Post Operative Pain Control
Ibuprofen	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Pain Prevention
Ketamine	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Ketorolac	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Pain Control, Spinal Stenosis Repair
Laminectomy with posterolateral fusion*	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Medical History
Lidocaine	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Meclozine	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Nausea Prevention, Post Operative Care
Methocarbamol	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Midazolam	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Neostigmine	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Ondansetron	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Phenylephrine	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Povidone-iodine	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Post-Operative Care, Spinal Stenosis Repair
Propofol	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Rocuronium	06 Oct 2020 (Study Day 40) - 06 Oct 2020 (Study Day 40)	Surgical Care, Spinal Stenosis Repair
Hydrocodone; paracetamol	08 Oct 2020 (Study Day 42) - Ongoing	Pain Control
Methylprednisolone	08 Oct 2020 (Study Day 42) - 13 Oct 2020 (Study Day 47)	Post-Operative Care, Pain And Inflammation
Paracetamol	08 Oct 2020 (Study Day 42) - 20 Oct 2020 (Study Day 54)	Post Operative Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US342-2281 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	15 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	14 Oct 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Osteoarthritis/Worsening Osteoarthritis	SAE	Grade 3/severe	Not related	27 Oct 2020 (Study Day 43) – 28 Oct 2020 (Study Day 44)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US342-2281, a 65-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 15 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 14 Oct 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 27 Oct 2020 (Study Day 43), 42 days after the first dose and 13 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of osteoarthritis. Action taken with the IP was not applicable. The event of worsening osteoarthritis lasted for 2 days, after which it was considered to be recovered/resolved on 28 Oct 2020 (Study Day 44). The investigator assessed the event of osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000596	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Calcium deficiency	Calcium deficiency	Not reported - Ongoing
Magnesium deficiency	Magnesium deficiency	Not reported - Ongoing
Menopause	Menopause	2000 - Ongoing
Osteoarthritis	Osteoarthritis, generalized	2000 - Ongoing
Gastrooesophageal reflux disease	Gerd	2008 - Ongoing
Deep vein thrombosis	Deep vein thrombosis	2012 - 2012
Pulmonary embolism	Pulmonary embolus	2012 - 2012
Knee arthroplasty	R knee replacement	May 2020 - May 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Omeprazole	2008 - Ongoing	Acid Reflux
Meloxicam	May 2020 - Ongoing	Osteo-Arthritis, Generalized
Biotin	18 May 2020 (Study Day -120) - Ongoing	Health Maintenance
Calcium carbonate	18 May 2020 (Study Day -120) - Ongoing	Gerd (Due To Omeprazole Use), Calcium Deficiency
Magnesium	18 May 2020 (Study Day -120) - Ongoing	Gerd (Due To Omeprazole Use), Magnesium Deficiency
Hydromorphone hydrochloride	27 Oct 2020 (Study Day 43) - 10 Nov 2020 (Study Day 57)	Pain Post Procedure
Primary left total knee arthroplasty*	27 Oct 2020 (Study Day 43) - 27 Oct 2020 (Study Day 43)	Adverse Event
Rivaroxaban	27 Oct 2020 (Study Day 43) - Ongoing	Blood Clot Prevention
Ascorbic acid; bioflavonoids nos	05 Nov 2020 (Study Day 52) - Ongoing	Health Maintenance
Magnesium citrate	05 Nov 2020 (Study Day 52) - 05 Nov 2020 (Study Day 52)	Laxative, (Patient Took For Magnesium Deficiency, But Didn't Mean To Get The Laxative)

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US343-2016 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	05 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	02 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Gastrooesophageal Reflux Disease/Gerd	SAE	Grade 3/ severe	Not related	22 Oct 2020 (Study Day 79) – 24 Oct 2020 (Study Day 81)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US343-2016, a 76-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 05 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 02 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 22 Oct 2020 (Study Day 79), 78 days after the first dose and 50 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of gastrooesophageal reflux disease. Action taken with the IP was not applicable. The event of gerd lasted for 3 days, after which it was considered to be recovered/resolved on 24 Oct 2020 (Study Day 81). The investigator assessed the event of gastrooesophageal reflux disease to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000545	Gastrooesophageal reflux disease

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Candida infection	Candida albicans	Not reported - Ongoing
Otitis externa	Chronic otitis externa	Not reported - Ongoing
Tonsillectomy	Tonsillectomy	1960 - 1960
Thyroidectomy	Partial thyroidectomy	1995 - 1995
Uvulectomy	Uvula removal	1995 - 1995
Rhinitis allergic	Allergic rhinitis	2000 - Ongoing
Asthma	Asthma	2005 - Ongoing
Hysterectomy	Hysterectomy	2005 - 2005
Postmenopause	Post-menopausal	2005 - Ongoing
Cardiac murmur	Heart murmur	2010 - Ongoing
Chronic obstructive pulmonary disease	Copd	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Urinary bladder suspension	Bladder sling	2010 - 2010
Knee arthroplasty	Knee replacement	2011 - 2011
Osteoarthritis	Osteoarthritis	2011 - Ongoing
Bradycardia	Bradycardia	2012 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2012 - Ongoing
Cataract operation	Cataract surgery	2015 - 2015
Carpal tunnel decompression	Carpal tunnel surgery	2017 - 2017
Hip arthroplasty	Hip replacement	2017 - 2017
Pneumonia	Pneumonia	2017 - 2017
Cholecystectomy	Cholecystectomy	2018 - 2018
Gastrooesophageal reflux disease	Gerd	2018 - Ongoing
Tendon sheath incision	Trigger finger surgery	2018 - 2018
Atrial fibrillation	Atrial fibrillation	2019 - Ongoing
Gluten sensitivity	Gluten sensitivity	2019 - Ongoing
Atrial appendage closure	Watchman procedure for atrial fibrillation	Nov 2019 - Nov 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bacillus coagulans; inulin	Not reported - Ongoing	General Health
Hydrocortisone	Not reported - Ongoing	Chronic Otitis Externa
Macrogol 3350	Not reported - Ongoing	Constipation

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid; bromelains; calcium pantothenate; curcuma longa rhizome; cysteine; enzymes nos; magnesium oxide; ruscus aculeatus rhizome; ruscus aculeatus root	2010 - Ongoing	General Health
Ciclosporin	2010 - Ongoing	Dry Eyes
Fluticasone	2010 - Ongoing	Allergic Rhinitis
Fluticasone propionate; salmeterol xinafoate	2010 - 31 Aug 2020 (Study Day 27)	Asthma
Hydrochlorothiazide	2010 - Ongoing	Hypertension
Lisinopril	2010 - Ongoing	Hypertension
Montelukast	2010 - Ongoing	Allergic Rhinitis
Probiotics nos	2010 - Ongoing	General Health
Salbutamol	2010 - Ongoing	Asthma
Unspecified herbal and traditional medicine	2010 - Ongoing	General Health
Vaccinium macrocarpon	2010 - Ongoing	General Health
Amoxicillin	2011 - Ongoing	Dental Prophylaxis
Ibuprofen	2011 - Ongoing	Osteoarthritis
Simvastatin	2012 - Ongoing	Hyperlipidemia
Acetylcysteine	2015 - Ongoing	Mucous Production
Ascorbic acid	2015 - Ongoing	General Health
Vitamins nos	2015 - Ongoing	General Health
Biotin	2017 - Ongoing	General Health
Xantofyl	2018 - Ongoing	General Health
Betamethasone dipropionate; clotrimazole	18 Mar 2018 (Study Day -871) - Ongoing	Chronic Oitis Externa
Acetylsalicylic acid	2019 - Nov 2020	Atrial Fibrillation
Immunotherapy	01 May 2020 (Study Day -96) - Ongoing	Allergic Rhinitis
Ct scan*	24 Aug 2020 (Study Day 20) - 24 Aug 2020 (Study Day 20)	Diagnostic
Breathing test*	27 Aug 2020 (Study Day 23) - 27 Aug 2020 (Study Day 23)	Diagnostic
Fluticasone propionate; salmeterol xinafoate	01 Sep 2020 (Study Day 28) - Ongoing	Asthma
Amoxicillin	09 Sep 2020 (Study Day 36) - 09 Sep 2020 (Study Day 36)	Prophylaxis Dental Procedures
Dental implant*	09 Sep 2020 (Study Day 36) - 09 Sep 2020 (Study Day 36)	Other, Dental Care
Mammogram*	15 Sep 2020 (Study Day 42) - 15 Sep 2020 (Study Day 42)	Diagnostic
Influenza vaccine	17 Sep 2020 (Study Day 44) - 17 Sep 2020 (Study Day 44)	Prophylaxis
Amoxicillin	22 Sep 2020 (Study Day 49) - 22 Sep 2020 (Study Day 49)	Dental Prophylaxis
Dental implant*	22 Sep 2020 (Study Day 49) - 22 Sep 2020 (Study Day 49)	Other, Dental Care

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metoprolol	23 Oct 2020 (Study Day 80) - 23 Oct 2020 (Study Day 80)	A-Fib
Ondansetron	23 Oct 2020 (Study Day 80) - 23 Oct 2020 (Study Day 80)	Nausea (Gerd)
Paracetamol	24 Oct 2020 (Study Day 81) - 24 Oct 2020 (Study Day 81)	Mild Pain (Gerd)
Lidocaine; triamcinolone	17 Feb 2021 (Study Day 197) - 17 Feb 2021 (Study Day 197)	Trigger Finger

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Pyrexia	Grade 1/mild	Related	03 Sep 2020 (Study Day 30) - 04 Sep 2020 (Study Day 31)
Trigger Finger	Grade 1/mild	Not related	10 Feb 2021 (Study Day 190) - 17 Feb 2021 (Study Day 197)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US343-2081 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	08 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Appendicitis/Appendicitis	SAE	Grade 3/severe	Not related	20 Jan 2021 (Study Day 164) – 21 Jan 2021 (Study Day 165)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US343-2081, a 28-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 10 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 08 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Jan 2021 (Study Day 164), 163 days after the first dose and 134 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of appendicitis. Action taken with the IP was not applicable. The event of appendicitis lasted for 2 days, after which it was considered to be recovered/resolved on 21 Jan 2021 (Study Day 165). The investigator assessed the event of appendicitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-006583	Appendicitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	2013 - 2013

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levonorgestrel	2019 - Ongoing	Contraception
Naproxen	09 Sep 2020 (Study Day 31) - 09 Sep 2020 (Study Day 31)	Injection Site Pain And Headache
Paracetamol	09 Sep 2020 (Study Day 31) - 09 Sep 2020 (Study Day 31)	Injection Site Pain And Headache
Influenza vaccine	29 Sep 2020 (Study Day 51) - 29 Sep 2020 (Study Day 51)	Influenza Prophylaxis
Appendectomy*	21 Jan 2021 (Study Day 165) - 21 Jan 2021 (Study Day 165)	Adverse Event
Paracetamol	21 Jan 2021 (Study Day 165) - Ongoing	Post-Appendectomy Pain Management

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US343-2094 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	11 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	10 Sep 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Meningioma/Progression Of Meningioma	SAE	Grade 3/ severe	Not related	28 Oct 2020 (Study Day 79) – Ongoing	Not recovered/not resolved
Procedural Haemorrhage/Intra-Operative Medication Induced Hypertensive Intraparenchymal Hemorrhage	SAE	Grade 3/ severe	Not related	23 Nov 2020 (Study Day 105) – Ongoing	Recovering/resolving
Mental Status Changes/Altered Mental Status	SAE	Grade 3/ severe	Not related	27 Dec 2020 (Study Day 139) – 04 Jan 2021 (Study Day 147)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US343-2094, a 76-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 11 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 10 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Oct 2020 (Study Day 79), 78 days after the first dose and 48 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of meningioma. Action taken with the IP was not applicable. The event of progression of meningioma was considered to be ongoing. The investigator assessed the event of meningioma to be not related to the IP.

On 23 Nov 2020 (Study Day 105), 104 days after the first dose and 74 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of procedural haemorrhage. Action taken with the IP was not applicable. The event of intra-operative medication induced hypertensive intraparenchymal hemorrhage was considered to be ongoing. The investigator assessed the event of procedural haemorrhage to be not related to the IP.

On 27 Dec 2020 (Study Day 139), 138 days after the first dose and 108 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of mental status

changes. Action taken with the IP was not applicable. The event of altered mental status lasted for 9 days, after which it was considered to be recovered/resolved on 04 Jan 2021 (Study Day 147). The investigator assessed the event of mental status changes to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000906	Meningioma
MOD-2020-000906	Procedural haemorrhage
MOD-2020-000906	Mental status changes

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Gastrooesophageal reflux disease	Esophageal reflux	1990 - Ongoing
Hypertension	Hypertension	1990 - Ongoing
Hypothyroidism	Hypothyroidism	1990 - Ongoing
Vitamin D decreased	Low vitamin d	1990 - Ongoing
Depression	Depression	2003 - Ongoing
Prostate cancer	Prostate cancer	2003 - 2003
Coronary arterial stent insertion	Coronary stent	Sep 2007 - Sep 2007
Coronary artery disease	Coronary artery disease	Sep 2007 - Ongoing
Leukaemia	History of leukemia	Nov 2011 - 2012
Meningioma	Meningioma	Nov 2011 - Ongoing
Meningioma surgery	Surgical resection for meningioma	2012 - 2012
Atrioventricular block	Heart block	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	1990 - Ongoing	Cardiovascular Prophylaxis
Irbesartan	1990 - Ongoing	Hypertension
Levothyroxine	1990 - Ongoing	Pre-Existing Hypothyroidism
Omeprazole	1990 - Ongoing	Esophageal Reflux

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Escitalopram	2003 - Ongoing	Depression
Bupropion	2015 - Ongoing	Depression
Atorvastatin	Jul 2020 - Ongoing	Coronary Artery Disease
Paracetamol	10 Sep 2020 (Study Day 31) - 12 Sep 2020 (Study Day 33)	Soreness At Injection Site
Mri brain*	28 Oct 2020 (Study Day 79) - 28 Oct 2020 (Study Day 79)	Adverse Event
Bisacodyl	23 Nov 2020 (Study Day 105) - Ongoing	Constipation
Ceftriaxone	23 Nov 2020 (Study Day 105) - 24 Nov 2020 (Study Day 106)	Bacteremia
Craniectomy*	23 Nov 2020 (Study Day 105) - 23 Nov 2020 (Study Day 105)	Medical History
Cranioplasty*	23 Nov 2020 (Study Day 105) - 23 Nov 2020 (Study Day 105)	Medical History
Docusate sodium	23 Nov 2020 (Study Day 105) - Ongoing	Constipation
Esomeprazole	24 Nov 2020 (Study Day 106) - Ongoing	Gastric Reflux
Furosemide	24 Nov 2020 (Study Day 106) - 24 Nov 2020 (Study Day 106)	Fluid Retention Treatment
Paracetamol	24 Nov 2020 (Study Day 106) - Ongoing	Pain After Cranioplasty And Craniectomy
Atropine	25 Nov 2020 (Study Day 107) - Ongoing	Bradycardia
Paracetamol	25 Nov 2020 (Study Day 107) - Ongoing	Pain After Cranioplasty And Craniectomy
Escitalopram oxalate	27 Nov 2020 (Study Day 109) - Ongoing	Anxiety From Surgery
Furosemide	27 Nov 2020 (Study Day 109) - 27 Nov 2020 (Study Day 109)	Fluid Retention Treatment
Hydromorphone hydrochloride	01 Dec 2020 (Study Day 113) - Ongoing	Severe Pain After Cranioplasty And Craniectomy
Hydralazine	03 Dec 2020 (Study Day 115) - Ongoing	High Blood Pressure
Dexamethasone	04 Dec 2020 (Study Day 116) - Ongoing	Inflammation (General)
Heparin	04 Dec 2020 (Study Day 116) - 04 Dec 2020 (Study Day 116)	Anticoagulant
Vancomycin	06 Dec 2020 (Study Day 118) - 04 Jan 2021 (Study Day 147)	Bacteremia
Cefradine	07 Dec 2020 (Study Day 119) - Ongoing	Bacterial Infection Prevention
Heparin	11 Dec 2020 (Study Day 123) - Ongoing	Anticoagulant
Furosemide	15 Dec 2020 (Study Day 127) - 15 Dec 2020 (Study Day 127)	Fluid Retention Treatment
Furosemide	20 Dec 2020 (Study Day 132) - 20 Dec 2020 (Study Day 132)	Fluid Retention Treatment
Bisacodyl	23 Dec 2020 (Study Day 135) - Ongoing	Constipation
Famotidine	23 Dec 2020 (Study Day 135) - Ongoing	Antiacid
Heparin	23 Dec 2020 (Study Day 135) - Ongoing	Coagulant Prophylaxis
Ipratropium bromide; salbutamol sulfate	23 Dec 2020 (Study Day 135) - Ongoing	Shortness Of Breath
Ct scan head*	29 Dec 2020 (Study Day 141) - 29 Dec 2020 (Study Day 141)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ceftriaxone	02 Jan 2021 (Study Day 145) - 03 Feb 2021 (Study Day 177)	Bacteremia
Hydrocortisone	04 Jan 2021 (Study Day 147) - 11 Jan 2021 (Study Day 154)	Adrenal Insufficiency
Hydrocortisone	05 Jan 2021 (Study Day 148) - 05 Jan 2021 (Study Day 148)	Adrenal Insufficiency
Hydrocortisone	06 Jan 2021 (Study Day 149) - 12 Jan 2021 (Study Day 155)	Adrenal Insufficiency

Macrogol 3350	02 Feb 2021 (Study Day 176) - Ongoing	Constipation
Flexible sigmoidoscopy*	03 Feb 2021 (Study Day 177) - 03 Feb 2021 (Study Day 177)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthropod Bite	Grade 1/mild	Not related	07 Sep 2020 (Study Day 28) - 14 Sep 2020 (Study Day 35)
Lymphadenopathy	Grade 1/mild	Related	10 Sep 2020 (Study Day 31) - 08 Oct 2020 (Study Day 59)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US343-2202 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	16 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hypertensive Urgency/Hypertensive Urgency	SAE	Grade 3/ severe	Not related	25 Sep 2020 (Study Day 38) – 30 Sep 2020 (Study Day 43)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US343-2202, a 77-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 16 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Sep 2020 (Study Day 38), 37 days after the first dose and 9 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of hypertensive urgency. Action taken with the IP was not applicable. The event of hypertensive urgency lasted for 6 days, after which it was considered to be recovered/resolved on 30 Sep 2020 (Study Day 43). The investigator assessed the event of hypertensive urgency to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000356	Hypertensive urgency

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Depression	Depression	Not reported - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Exposure keratitis	Exposure keratoconjunctivitis l eye	Not reported
Anxiety	Anxiety	2005 - Ongoing
Blood cholesterol increased	High cholesterol (hld)	2010 - Ongoing
Diabetes mellitus	Diabetes mellitus	2010 - Ongoing
Eyelid retraction	Eyelid retraction l eye	03 Oct 2016 (Study Day -1416) - 03 Oct 2016 (Study Day -1416)
Chorea	Chorea	2017 - Ongoing
Gait disturbance	Gait instability	2017 - Ongoing
Duodenal ulcer	Duodenal ulcer	2019 - Ongoing
Headache	Daily headaches	2019 - Ongoing
Vertebral artery dissection	L vertebral artery dissection	2019 - 2019
Vertigo	Vertigo	2019 - Ongoing
Acute kidney injury	Acute kidney injury	28 Jan 2019 (Study Day -569) - Not reported
Fatigue	Chronic fatigue (being followed by physician)	Nov 2019 - Ongoing
Hypertension	Hypertension	Jan 2020 - Ongoing
Neck pain	Neck pain { being followed by md}	May 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fluoxetine hydrochloride	Not reported - Ongoing	Anxiety
Glibenclamide	Not reported - Ongoing	Diabetes Mellitus
Glipizide	Not reported - Ongoing	Diabetes Mellitus
Ibuprofen	Not reported - Ongoing	Unknown
Lorazepam	Not reported - Ongoing	Anxeity
Metformin	Not reported - Ongoing	Dm
Mirtazapine	Not reported - Ongoing	Depression
Nsaids	Not reported - Ongoing	Headache
Pantoprazole	Not reported - Ongoing	Duodenal Ulcer
Simvastatin	Not reported - Ongoing	High Cholesterol
Trazodone	Not reported - Ongoing	Anxiety And Depression
Amlodipine	Jan 2020 - 25 Sep 2020 (Study Day 38)	Htn
Foreign body removal from foot*	20 Aug 2020 (Study Day 2) - 20 Aug 2020 (Study Day 2)	Adverse Event
Ibuprofen	21 Aug 2020 (Study Day 3) - 01 Sep 2020 (Study Day 14)	Foreign Body In Foot
Chest x-ray*	25 Sep 2020 (Study Day 38) - 25 Sep 2020 (Study Day 38)	Adverse Event
Ct head and neck*	25 Sep 2020 (Study Day 38) - 25 Sep 2020 (Study Day 38)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ecg*	25 Sep 2020 (Study Day 38) - 25 Sep 2020 (Study Day 38)	Adverse Event
Hydralazine	25 Sep 2020 (Study Day 38) - 25 Sep 2020 (Study Day 38)	Hypertension

Moh’s surgery*	19 Mar 2021 (Study Day 213) - 19 Mar 2021 (Study Day 213)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Foreign Body	Grade 2/moderate	Not related	20 Aug 2020 (Study Day 2) - 02 Sep 2020 (Study Day 15)
Cervical Spinal Stenosis	Grade 3/severe	Not related	02 Oct 2020 (Study Day 45) - 02 Oct 2020 (Study Day 45)
Basal Cell Carcinoma	Grade 2/moderate	Not related	20 Feb 2021 (Study Day 186) - 19 Mar 2021 (Study Day 213)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US343-2208 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	20 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	17 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Spinal Stenosis/Spinal Stenosis	SAE	Grade 3/severe	Not related	07 Sep 2020 (Study Day 19) – 05 Oct 2020 (Study Day 47)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US343-2208, a 54-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 20 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 17 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 07 Sep 2020 (Study Day 19), 18 days after the first dose and 10 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of spinal stenosis. The IP dose was not changed due to the spinal stenosis. The event of spinal stenosis lasted for 29 days, after which it was considered to be recovered/resolved on 05 Oct 2020 (Study Day 47). The investigator assessed the event of spinal stenosis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000467	Spinal stenosis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2000 - Ongoing
Depression	Depression	2015 - Ongoing
Drug eruption	Ciproflox (rash)	2015 - Ongoing
Drug eruption	Clindamycin allergy (rash)	2015 - Ongoing
Dyspepsia	Dyspepsia	2017 - Ongoing
Type 2 diabetes mellitus	Type ii diabetes	2018 - Ongoing
Spinal operation	Spine corrective surgery	17 Jun 2019 (Study Day -430) - 17 Jun 2019 (Study Day -430)
Metabolic surgery	Bariatric surgery	31 Oct 2019 (Study Day -294) - 31 Oct 2019 (Study Day -294)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine besilate	2000 - Ongoing	Hypertension
Sertraline	2015 - Ongoing	Depression
Omeprazole	2017 - Ongoing	Dyspepsia
Metformin	2018 - Ongoing	Type Ii Diabetes
Cervical spine mri*	07 Sep 2020 (Study Day 19) - 07 Sep 2020 (Study Day 19)	Adverse Event
Bisacodyl	02 Oct 2020 (Study Day 44) - 06 Oct 2020 (Study Day 48)	Con Medication Related To Procedure For Ae #1 Spinal Stenosis
Discectomy anterior cervical spine fusion*	02 Oct 2020 (Study Day 44) - 02 Oct 2020 (Study Day 44)	Adverse Event
Docusate sodium	02 Oct 2020 (Study Day 44) - Ongoing	Constipation
Hydromorphone	02 Oct 2020 (Study Day 44) - 02 Oct 2020 (Study Day 44)	Pain From Spine Surgery

Ondansetron	02 Oct 2020 (Study Day 44) - 05 Oct 2020 (Study Day 47)	Nausea
Oxycodone	02 Oct 2020 (Study Day 44) - 04 Oct 2020 (Study Day 46)	Pain From Spine Surgery
Paracetamol	02 Oct 2020 (Study Day 44) - 06 Oct 2020 (Study Day 48)	Con Medication Related To Procedure For Ae #1 Spinal Stenosis
Hydromorphone	04 Oct 2020 (Study Day 46) - 06 Oct 2020 (Study Day 48)	Pain From Spine Surgery
Lidocaine	04 Oct 2020 (Study Day 46) - 06 Oct 2020 (Study Day 48)	Pain From Surgery For Spinal Stenosis
Hydrocodone bitartrate; paracetamol	05 Oct 2020 (Study Day 47) - 14 Oct 2020 (Study Day 56)	Pain From Surgery For Spinal Stenosis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lorazepam	05 Oct 2020 (Study Day 47) - 06 Oct 2020 (Study Day 48)	Anxiety

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Procedural Anxiety	Grade 1/mild	Not related	05 Oct 2020 (Study Day 47) - 06 Oct 2020 (Study Day 48)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US343-2229 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	18 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Intentional Self-Injury/Self- Injurious Behavior	SAE	Grade 3/severe	Not related	17 Oct 2020 (Study Day 58) – 30 Oct 2020 (Study Day 71)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US343-2229, a 24-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 21 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 18 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 17 Oct 2020 (Study Day 58), 57 days after the first dose and 29 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of intentional self-injury. Action taken with the IP was not applicable. The event of self- injurious behavior lasted for 14 days, after which it was considered to be recovered/resolved on 30 Oct 2020 (Study Day 71). The investigator assessed the event of intentional self-injury to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000499	Intentional self-injury

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma	1998 - Ongoing
Dysmenorrhoea	Dysmenorrhea	2008 - Ongoing
Affective disorder	Mood disorder	2009 - Ongoing
Presyncope	Orthostatic pre-syncopy	2009 - Ongoing
Attention deficit hyperactivity disorder	Adhd	2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisdexamfetamine mesilate	2016 - Ongoing	Adhd
Fluticasone propionate	Jun 2019 - Jun 2020	Asthma
Testosterone	Nov 2019 - Ongoing	General Health
Budesonide; formoterol fumarate	Feb 2020 - Ongoing	Asthma
Bupropion hydrochloride	Feb 2020 - Ongoing	Mood Disorder
Salbutamol	21 Aug 2020 (Study Day 1) - Ongoing	Asthma
Meloxicam	22 Aug 2020 (Study Day 2) - 23 Aug 2020 (Study Day 3)	Menstrual Cramps
Sodium chloride	25 Aug 2020 (Study Day 5) - Ongoing	Orthostatic Pre-Syncopy
Meloxicam	27 Aug 2020 (Study Day 7) - 27 Aug 2020 (Study Day 7)	Headache
Meloxicam	28 Aug 2020 (Study Day 8) - 28 Aug 2020 (Study Day 8)	Headache
Ondansetron	04 Sep 2020 (Study Day 15) - 04 Sep 2020 (Study Day 15)	Transient Gastrointestinal Illness
Ibuprofen	19 Sep 2020 (Study Day 30) - 20 Sep 2020 (Study Day 31)	Headaches, Pain At Injection Site, Muscle Aches.
Paracetamol	19 Sep 2020 (Study Day 30) - 20 Sep 2020 (Study Day 31)	Headaches, Pain At Injection Site, Muscle Aches
Rtms (transcranial magnetic stimulation)*	02 Oct 2020 (Study Day 43) - 02 Oct 2020 (Study Day 43)	Medical History

Aripiprazole	27 Oct 2020 (Study Day 68) - 14 Nov 2020 (Study Day 86)	Mood Disorder

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Gastrointestinal Disorder	Grade 1/mild	Not related	04 Sep 2020 (Study Day 15) - 05 Sep 2020 (Study Day 16)
Oropharyngeal Pain	Grade 1/mild	Not related	10 Sep 2020 (Study Day 21) - 10 Sep 2020 (Study Day 21)
Hordeolum	Grade 1/mild	Not related	17 Jan 2021 (Study Day 150) - 20 Jan 2021 (Study Day 153)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US343-2242 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	22 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	21 Sep 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Splenic Marginal Zone Lymphoma/Marginal Zone Splenic B-Cell Lymphoma	SAE	Grade 2/moderate	Not related	08 Oct 2020 (Study Day 48) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US343-2242, a 70-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 22 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 21 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Oct 2020 (Study Day 48), 47 days after the first dose and 17 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of splenic marginal zone lymphoma. Action taken with the IP was not applicable. The event of marginal zone splenic b-cell lymphoma was considered to be ongoing. The investigator assessed the event of splenic marginal zone lymphoma to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000484	Splenic marginal zone lymphoma

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety	Anxiety	2001 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2014 - Ongoing
Hypertension	Hypertension	2019 - Ongoing
Insomnia	Insomnia	Jul 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fluoxetine	2001 - Ongoing	Anxiety
Atorvastatin	2014 - Ongoing	Hypercholesterolemia
Melatonin	Jul 2020 - Ongoing	Insomnia
Paracetamol	21 Sep 2020 (Study Day 31) - 21 Sep 2020 (Study Day 31)	Fever, Headache
Routine cbc*	28 Sep 2020 (Study Day 38) - 28 Sep 2020 (Study Day 38)	Other, General Health
Blood count repeat*	08 Oct 2020 (Study Day 48) - 08 Oct 2020 (Study Day 48)	Diagnostic
Influenza vaccine	08 Oct 2020 (Study Day 48) - 08 Oct 2020 (Study Day 48)	Influenza Prophylaxis
Flow cytometry*	06 Nov 2020 (Study Day 77) - 06 Nov 2020 (Study Day 77)	Diagnostic
Varicella zoster vaccine rge (cho)	08 Nov 2020 (Study Day 79) - 08 Nov 2020 (Study Day 79)	Prophylaxis
Ct scan (neck to pelvis)*	31 Dec 2020 (Study Day 132) - 31 Dec 2020 (Study Day 132)	Diagnostic

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US343-2517 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	17 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	15 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Nephrolithiasis/Kidney Stones	SAE	Grade 3/severe	Not related	02 Feb 2021 (Study Day 139) – 03 Feb 2021 (Study Day 140)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US343-2517, a 55-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 17 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 15 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Feb 2021 (Study Day 139), 138 days after the first dose and 110 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of nephrolithiasis. Action taken with the IP was not applicable. The event of kidney stones lasted for 2 days, after which it was considered to be recovered/resolved on 03 Feb 2021 (Study Day 140). The investigator assessed the event of nephrolithiasis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-012437	Nephrolithiasis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Gastrooesophageal reflux disease	Gerd	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Naproxen	2010 - Ongoing	Generalized Body Aches/Soreness After Running
Calcium carbonate	2015 - Ongoing	Gerd
Colonoscopy*	03 Nov 2020 (Study Day 48) - 03 Nov 2020 (Study Day 48)	Diagnostic
Ct of abdomen/pelvis*	02 Feb 2021 (Study Day 139) - 02 Feb 2021 (Study Day 139)	Adverse Event
Ibuprofen	03 Feb 2021 (Study Day 140) - 07 Feb 2021 (Study Day 144)	Kidney Stones
Tamsulosin hydrochloride	03 Feb 2021 (Study Day 140) - 10 Feb 2021 (Study Day 147)	Kidney Stones

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Dizziness	Grade 1/mild	Related	15 Oct 2020 (Study Day 29) - 15 Oct 2020 (Study Day 29)
Myalgia	Grade 1/mild	Related	15 Oct 2020 (Study Day 29) - 23 Oct 2020 (Study Day 37)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US348-2064 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	17 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Rash Macular/Non-Urticarial Macular Rash With Blanching Erythema On Left Deltoid	AE leading to withdrawal from study vaccine	Grade 3/ severe	Related	25 Aug 2020 (Study Day 9) – 04 Sep 2020 (Study Day 19)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US348-2064, a 71-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 17 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Aug 2020 (Study Day 9), 8 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of rash macular. On 13 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of non-urticarial macular rash with blanching erythema on left deltoid lasted for 11 days, after which it was considered to be recovered/resolved on 04 Sep 2020 (Study Day 19). The investigator assessed the event of rash macular to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Mammoplasty	Breast implants	Not reported

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Basedow's disease	Graves disease	1968 - 1968
Hypothyroidism	Hypothyroidism	1968 - Ongoing
Adenotonsillectomy	Tonsilectomy and adenoidectomy	1980 - 1980
Postmenopause	Post-menopausal	2004 - Ongoing
Osteoarthritis	Osteoarthitis	2015 - Ongoing
Osteopenia	Osteopenia	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	Dec 1968 - Ongoing	Hypothyroidism
Vitamins nos	2010 - Ongoing	Prophylaxis
Calcium; vitamin d nos	2018 - Ongoing	Osteopenia
Vitamin b12 nos	2019 - Ongoing	Prophylaxis
Diphenhydramine hydrochloride	03 Sep 2020 (Study Day 18) - 03 Sep 2020 (Study Day 18)	Injection Site Redness On Left Arm At Vaccine Site (Non-Urticarial Macular Rash With Blanching Erythema On Left Deltoid)
Influenza vaccine	09 Nov 2020 (Study Day 85) - 09 Nov 2020 (Study Day 85)	Seasonal Flu Prevention
Bilateral explant surgery*	14 Jan 2021 (Study Day 151) - 14 Jan 2021 (Study Day 151)	Other, Elective Surgery
Cefadroxil	14 Jan 2021 (Study Day 151) - 28 Jan 2021 (Study Day 165)	Antibiotic
Fentanyl	14 Jan 2021 (Study Day 151) - 14 Jan 2021 (Study Day 151)	Anesthetic
Hyoscine	14 Jan 2021 (Study Day 151) - 14 Jan 2021 (Study Day 151)	Anti-Nausea
Lidocaine	14 Jan 2021 (Study Day 151) - 14 Jan 2021 (Study Day 151)	Anesthetic
Methocarbamol	14 Jan 2021 (Study Day 151) - 24 Jan 2021 (Study Day 161)	Muscle Relaxer
Ondansetron	14 Jan 2021 (Study Day 151) - 24 Jan 2021 (Study Day 161)	Anti-Nausea
Oxycodone hydrochloride; paracetamol	14 Jan 2021 (Study Day 151) - 15 Jan 2021 (Study Day 152)	Pain Management
Propofol	14 Jan 2021 (Study Day 151) - 14 Jan 2021 (Study Day 151)	Anesthetic
Sevoflurane	14 Jan 2021 (Study Day 151) - 14 Jan 2021 (Study Day 151)	Anesthetic
Paracetamol	15 Jan 2021 (Study Day 152) - Ongoing	Pain Management

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Rash Macular	Grade 3/severe	Related	25 Aug 2020 (Study Day 9) - 04 Sep 2020 (Study Day 19)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379516

Participant Number:	US351-2176 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	29 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Headache/Worsening Headache	AE leading to withdrawal from study vaccine	Grade 3/severe	Related	31 Aug 2020 (Study Day 3) – 20 Sep 2020 (Study Day 23)	Recovered/resolved
Urticaria/Intermittent Hives (Face And Neck)	AE leading to withdrawal from study vaccine	Grade 1/mild	Related	31 Aug 2020 (Study Day 3) – 07 Jan 2021 (Study Day 132)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US351-2176, a 71-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 29 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 31 Aug 2020 (Study Day 3), 2 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of headache. On 25 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of worsening headache lasted for 21 days, after which it was considered to be recovered/resolved on 20 Sep 2020 (Study Day 23). The investigator assessed the event of headache to be related to the IP.

On 31 Aug 2020 (Study Day 3), 2 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of urticaria. On 25 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of intermittent hives (face and neck) lasted for 130 days, after which it was considered to be recovered/resolved on 07 Jan 2021 (Study Day 132). The investigator assessed the event of urticaria to be related to the IP.

Additional Information From the Safety Database

No additional details for the events are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	1952 - 1952
Tonsillitis	Tonsilitis	1952 - 1952
Appendicectomy	Appendectomy	1959 - 1959
Appendicitis	Appendicitis	1959 - 1959
Headache	Headaches	1960 - Ongoing
Myopia	Nearsighted	1960 - Ongoing
Overweight	Overweight	1960 - Ongoing
Deafness bilateral	Bilateral hearing loss	1964 - Ongoing
Food allergy	Shellfish allergy	1965 - Ongoing
Hypothyroidism	Hypothyroidism	1978 - Ongoing
Perinatal depression	Post-partum depression	1979 - 1980
Hypertension	Hypertension	1980 - Ongoing
Osteoarthritis	Osteoarthritis	1980 - Ongoing
Uterine leiomyoma	Uterine fibroids	1980 - 2017
Anxiety	Anxiety	1981 - Ongoing
Female sterilisation	Tubal ligation	1982 - 1982
Mammoplasty	Breast reduction	1985 - 1985
Fibromyalgia	Fibromyalgia	1991 - Ongoing
Postmenopause	Post-menopausal	1998 - Ongoing
Upper limb fracture	Shattered left elbow	2002 - 2003
Elbow operation	Shattered left elbow repair	2003 - 2003
Gastric bypass	Gastric bypass	2003 - 2003
Upper limb fracture	Broken left elbow	2003 - 2003
Liposuction	Liposuction with full body lift	2004 - 2004
Knee arthroplasty	Left knee replacement	2005 - 2005
Blood triglycerides increased	High triglycerides	2010 - Ongoing
Knee arthroplasty	Right knee replacement	2012 - 2012
Vitamin D deficiency	Vitamin d deficiency	2015 - Ongoing
Large intestine polyp	Colon polyps	2016 - 2017
Cerebrovascular accident	Stroke	2017 - 2017
Colectomy	Colon resection	2017 - 2017
Hysterectomy	Hysterectomy	2017 - 2017
Nephrolithiasis	Kidney stones	2017 - 2017
Cataract	Cataracts	2018 - Ongoing
Dyspepsia	Heartburn	2018 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	2018 - Ongoing
Peripheral swelling	Swelling in lower extremities	2018 - Ongoing
Vertigo	Vertigo	2018 - Ongoing
Cholecystectomy	Cholecystectomy	2019 - 2019

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cholelithiasis	Gallstones	2019 - 2019
Hip arthroplasty	Left hip replacement	2019 - 2019
Irritable bowel syndrome	Irritable bowl syndrome	Feb 2020 - Ongoing
Allergy to chemicals	Unknown pool chemicals allergy	15 Aug 2020 (Study Day -14) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	1978 - Ongoing	Hypothyroidism
Hydrochlorothiazide	1980 - Ongoing	Hypertension
Sertraline hydrochloride	1981 - Ongoing	Anxiety/Fibromyalgia
Ibuprofen	1990 - Ongoing	Headaches
Ferrous fumarate	2003 - Ongoing	Supplement
Fish oil	2010 - Jun 2020	High Triglycerides
Vitamin d nos	2015 - Ongoing	Vitamin D Deficiency
Omeprazole	2018 - 02 Mar 2021 (Study Day 186)	Acid Reflux
Ibuprofen	31 Aug 2020 (Study Day 3) - 20 Sep 2020 (Study Day 23)	Headache
Influenza vaccine	08 Oct 2020 (Study Day 41) - 08 Oct 2020 (Study Day 41)	Seasonal Influenza
Diphenhydramine hydrochloride; zinc acetate	10 Oct 2020 (Study Day 43) - 07 Jan 2021 (Study Day 132)	Intermittent Hives
Paracetamol	14 Oct 2020 (Study Day 47) - 07 Jan 2021 (Study Day 132)	COVID-Like Illness
Prednisone	06 Jan 2021 (Study Day 131) - 07 Jan 2021 (Study Day 132)	Hives
Paracetamol	26 Jan 2021 (Study Day 151) - 26 Jan 2021 (Study Day 151)	Viral Upper Respiratory Infection
Omeprazole	03 Mar 2021 (Study Day 187) - Ongoing	Worsening Acid Reflux
Paracetamol	05 Mar 2021 (Study Day 189) - 06 Mar 2021 (Study Day 190)	Headaches
Ibuprofen	22 Mar 2021 (Study Day 206) - Ongoing	Worsening Osteoarthritis Right Hip

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 1/mild	Related	30 Aug 2020 (Study Day 2) - 07 Sep 2020 (Study Day 10)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 3/severe	Related	30 Aug 2020 (Study Day 2) - 07 Jan 2021 (Study Day 132)
Myalgia	Grade 1/mild	Related	30 Aug 2020 (Study Day 2) - 09 Sep 2020 (Study Day 12)
Headache	Grade 3/severe	Related	31 Aug 2020 (Study Day 3) - 20 Sep 2020 (Study Day 23)
Urticaria	Grade 1/mild	Related	31 Aug 2020 (Study Day 3) - 07 Jan 2021 (Study Day 132)
Headache	Grade 2/moderate	Related	23 Sep 2020 (Study Day 26) - 23 Nov 2020 (Study Day 87)
Suspected COVID-19	Grade 1/mild	Not related	14 Oct 2020 (Study Day 47) - 07 Jan 2021 (Study Day 132)
Gastrooesophageal Reflux Disease	Grade 2/moderate	Not related	25 Nov 2020 (Study Day 89) - Ongoing
Viral Upper Respiratory Tract Infection	Grade 2/moderate	Related	25 Jan 2021 (Study Day 150) - 28 Jan 2021 (Study Day 153)
Osteoarthritis	Grade 1/mild	Not related	22 Mar 2021 (Study Day 206) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US352-2664 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	11 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Injection Site Macule/ Right Deltoid Macular, Non-Urticarial Redness At Injection Site 120mm By 86mm Oblong	AE leading to withdrawal from study vaccine	Grade 3/ severe	Related	23 Sep 2020 (Study Day 13) – 25 Sep 2020 (Study Day 15)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US352-2664, a 62-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 11 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Sep 2020 (Study Day 13), 12 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of injection site macule. On 08 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of right deltoid macular, non-urticarial redness at injection site 120mm by 86mm oblong lasted for 3 days, after which it was considered to be recovered/resolved on 25 Sep 2020 (Study Day 15 The investigator assessed the event of injection site macule to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Gastrooesophageal reflux disease	Gerd	Not reported - Ongoing
Botulinum toxin injection	Cosmetic facial botox (forehead and brow)	2016 - 2019
Dermal filler injection	Cosmetic dermal filler (below orbs of the eyes and to creases around the mouth)	2018 - 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	25 Sep 2020 (Study Day 15) - 25 Sep 2020 (Study Day 15)	Influenza Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Macule	Grade 3/severe	Related	23 Sep 2020 (Study Day 13) - 25 Sep 2020 (Study Day 15)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US353-2020 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Ulnar Nerve Injury/Ulnar Nerve Irritation	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	16 Aug 2020 (Study Day 4) – 15 Oct 2020 (Study Day 64)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US353-2020, a 67-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 13 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Aug 2020 (Study Day 4), 3 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of ulnar nerve injury. On 09 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of ulnar nerve irritation lasted for 61 days, after which it was considered to be recovered/resolved on 15 Oct 2020 (Study Day 64). The investigator assessed the event of ulnar nerve injury to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Abdominal distension	Abnominal floating gas	Not reported - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine with aura	Visual migraines	Not reported - Ongoing
Caesarean section	Caesarean section	1981 - 1981
Osteoarthritis	Osteoarthritis-knees,back and legs	1988 - Ongoing
Seasonal allergy	Seasonal allergies	1995 - Ongoing
Rhinoplasty	Rhinoplasty	1996 - 1996
Menopause	Menopause	1999 - Ongoing
Hypothyroidism	Hypothyroidism	2003 - Ongoing
Fungal skin infection	Toe (skin) fungal infection	Dec 2009 - Ongoing
Dermal filler injection	Dermal filler injections	2011 - 2011
Glaucoma	Glaucoma-bilateral	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium	Not reported - Ongoing	General Health
Diclofenac	Not reported - Ongoing	Osteoarthritis
Diphenhydramine hydrochloride	Not reported - Ongoing	Seasonal Allergies
Fexofenadine hydrochloride	Not reported - Ongoing	Seasonal Allergies
Steroids	1988 - Ongoing	Osteoarthritis
Levothyroxine	2003 - Ongoing	Hypothyrodism
Calcium carbonate	2005 - Ongoing	Gas
Simeticone	2005 - Ongoing	Gas
Naproxen sodium	2013 - Ongoing	Osteoarthritis
Bimatoprost	2018 - Ongoing	Glaucoma Both Eyes
Magnesium	2019 - Ongoing	General Health
Vitamins nos	2019 - Ongoing	General Health
Antiinflammatory and antirheumatic products	Jun 2020 - Ongoing	Osteoarthritis
Diclofenac	Aug 2020 - 15 Oct 2020 (Study Day 64)	Ulnar Nerve Irritation
Naproxen sodium	13 Aug 2020 (Study Day 1) - 16 Aug 2020 (Study Day 4)	Pain At Injection Site
Mri*	15 Sep 2020 (Study Day 34) - 15 Sep 2020 (Study Day 34)	Adverse Event
Gabapentin	16 Sep 2020 (Study Day 35) - 15 Oct 2020 (Study Day 64)	Ulnar Nerve Irritation
Gabapentin	15 Oct 2020 (Study Day 64) - Ongoing	Osteoarthritis
Influenza vaccine	19 Oct 2020 (Study Day 68) - 19 Oct 2020 (Study Day 68)	Flu Prevention
Corticosteroid nos	11 Mar 2021 (Study Day 211) - 11 Mar 2021 (Study Day 211)	Exacerbation Of Osteoarthritis
Corticosteroids	22 Mar 2021 (Study Day 222) - 22 Mar 2021 (Study Day 222)	Exacerbation Of Osteoarthritis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Terbinafine	25 Mar 2021 (Study Day 225) - Ongoing	Worsening Toe Fungal Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Ulnar Nerve Injury	Grade 2/moderate	Related	16 Aug 2020 (Study Day 4) - 15 Oct 2020 (Study Day 64)
Osteoarthritis	Grade 2/moderate	Not related	25 Feb 2021 (Study Day 197) - Ongoing
Fungal Skin Infection	Grade 2/moderate	Not related	24 Mar 2021 (Study Day 224) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US355-2087 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Atrial Fibrillation/ Worsened Atrial Fibrillation	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	12 Sep 2020 (Study Day 25) – 16 Oct 2020 (Study Day 59)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2087, a 65-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 19 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Sep 2020 (Study Day 25), 24 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of atrial fibrillation. On 15 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of worsened atrial fibrillation lasted for 35 days, after which it was considered to be recovered/resolved on 16 Oct 2020 (Study Day 59). The investigator assessed the event of atrial fibrillation to be related to the IP.

Additional Information From the Safety Database

No additional details for the events are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Transient ischaemic attack	Transient ischemic attack	Not reported
Atrial fibrillation	Atrial fibrillation	2000 - Ongoing
Basal cell carcinoma	Basal cell cancer	2010 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2010 - Ongoing
Retinal tear	Left retinal tear	2018 - 2018
Aortic aneurysm	Aortic aneurysm	Jan 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	2000 - Ongoing	Health
Apixaban	Jul 2019 - Ongoing	Atrial Fibrillation
Atorvastatin	Feb 2020 - Ongoing	Hypercholesterolemia
Influenza vaccine	01 Oct 2020 (Study Day 44) - 01 Oct 2020 (Study Day 44)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Atrial Fibrillation	Grade 2/moderate	Related	12 Sep 2020 (Study Day 25) - 16 Oct 2020 (Study Day 59)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US355-2444 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	16 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Atrial Fibrillation/ Worsening Atrial Fibrillation Arrhythmia	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	01 Oct 2020 (Study Day 16) – 16 Oct 2020 (Study Day 31)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2444, a 74-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 16 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Oct 2020 (Study Day 16), 15 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of atrial fibrillation. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of worsening atrial fibrillation arrhythmia lasted for 16 days, after which it was considered to be recovered/resolved on 16 Oct 2020 (Study Day 31). The investigator assessed the event of atrial fibrillation to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Dental caries	Dental decay	Not reported - 13 Oct 2020 (Study Day 28)

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma	1954 - Ongoing
Chronic sinusitis	Chronic sinusitis	1954 - Ongoing
Seasonal allergy	Seasonal allergies	1954 - Ongoing
Back pain	L4 l5 back pain	1990 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	1990 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hypertrophy	2000 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2010 - Ongoing
Knee arthroplasty	Left total knee replacement	2010 - 2010
Aortic stenosis	Aortic stenosis	2015 - Ongoing
Hypertension	Hypertension	2015 - Ongoing
Inguinal hernia	Right inguinal hernia	2018 - 2018
Atrial fibrillation	Atrial fibrillation	2019 - Ongoing
Insomnia	Insomnia	2019 - Ongoing
Skin cancer	Skin cancer	2019 - 2019
Musculoskeletal pain	Left shoulder pain	Jun 2020 - Aug 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fluticasone propionate; salmeterol xinafoate	1990 - Ongoing	Asthma
Doxazosin	2000 - Ongoing	Benign Prostatic Hypertrophy
Esomeprazole magnesium	2000 - Ongoing	Gastroesophageal Reflux Disease
Finasteride	2000 - Ongoing	Benign Prostatic Hypertrophy
Loratadine	2000 - Ongoing	Seasonal Allergies
Atenolol	2010 - 11 Oct 2020 (Study Day 26)	Atrial Fibrillation
Atorvastatin	2010 - Ongoing	Hypercholesterolemia
Lisinopril	2018 - 07 Oct 2020 (Study Day 22)	Hypertension
Tadalafil	2018 - Ongoing	Benign Prostatic Hypertrophy
Apixaban	2019 - Ongoing	Coagulation Prevention
Melatonin	2019 - Ongoing	Insomnia
Atenolol	12 Oct 2020 (Study Day 27) - Ongoing	Atrial Fibrillation
Cefalexin	13 Oct 2020 (Study Day 28) - Ongoing	Tooth Extraction
Paracetamol	13 Oct 2020 (Study Day 28) - 13 Oct 2020 (Study Day 28)	Tooth Extraction
Tooth extraction*	13 Oct 2020 (Study Day 28) - 13 Oct 2020 (Study Day 28)	Medical History
Influenza vaccine	21 Oct 2020 (Study Day 36) - 21 Oct 2020 (Study Day 36)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Atrial Fibrillation	Grade 2/moderate	Related	01 Oct 2020 (Study Day 16) - 16 Oct 2020 (Study Day 31)
Epistaxis	Grade 2/moderate	Not related	11 Oct 2020 (Study Day 26) - 12 Oct 2020 (Study Day 27)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US355-2497 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	26 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Injection Site Urticaria/ Urticarial Injection Site Rash To Left Arm	AE leading to withdrawal from study vaccine	Grade 1/ mild	Related	03 Oct 2020 (Study Day 8) – 06 Oct 2020 (Study Day 11)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2497, a 22-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 26 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Oct 2020 (Study Day 8), 7 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of injection site urticaria. On 23 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of urticarial injection site rash to left arm lasted for 4 days, after which it was considered to be recovered/resolved on 06 Oct 2020 (Study Day 11). The investigator assessed the event of injection site urticaria to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Childhood asthma	Childhood asthma	2002 - 2006
Autoimmune thyroiditis	Hypothyroidism hashimoto dx	2014 - Mar 2015
Drug hypersensitivity	Allergy to thiamazole	2015 - Ongoing
Thyroidectomy	Thyroidectomy	Mar 2015 - Mar 2015
Hypothyroidism	Hypothyroidism	Aug 2015 - Ongoing
Keloid scar	Keloid lesions on chest	2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamin d nos	2015 - Ongoing	Health Promotion
Levothyroxine	2016 - Ongoing	Hypothyroidism
Levonorgestrel	2017 - Ongoing	Birth Control
Biotin	May 2020 - Ongoing	Health Promotion
Influenza vaccine	13 Oct 2020 (Study Day 18) - 13 Oct 2020 (Study Day 18)	Influenza Prophylaxis
Ibuprofen	21 Jan 2021 (Study Day 118) - 21 Jan 2021 (Study Day 118)	Pain At Injection Site, Fever, Chills, Body Aches

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Urticaria	Grade 1/mild	Related	03 Oct 2020 (Study Day 8) - 06 Oct 2020 (Study Day 11)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US364-2261 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	19 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Paraesthesia/Decrease In Sensation And Paresthesia	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	03 Oct 2020 (Study Day 15) – Ongoing	Recovering/resolving

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US364-2261, a 70-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 19 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Oct 2020 (Study Day 15), 14 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of paraesthesia. On 16 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of decrease in sensation and paresthesia was considered to be ongoing. The investigator assessed the event of paraesthesia to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

On 27 Dec 2020 (Study Day 100), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Postmenopause	Post menopausal	Not reported - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hysterectomy	Hysterectomy	1992 - 1992
Gravitational oedema	Dependent edema	2005 - Ongoing
Back pain	Back pain	2017 - Ongoing
Vitamin D deficiency	Vitamin d deficiency	Jul 2019 - Ongoing
Lumbar spinal stenosis	Spinal stenosis of lumbar region with radiculopathy	23 Sep 2019 (Study Day -362) - Ongoing
Arthropathy	Sacroilial joint dysfunction	28 Oct 2019 (Study Day -327) - 21 Jan 2020 (Study Day -242)
Bursitis	Trochanteric bursitis of both hips	28 Oct 2019 (Study Day -327) - 21 Jan 2020 (Study Day -242)
Osteoporosis	Osteoporosis	28 Oct 2019 (Study Day -327) - Ongoing
Constipation	Constipation	22 Apr 2020 (Study Day -150) - Ongoing
Tobacco user	Cigarette smoker	22 Apr 2020 (Study Day -150) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Naproxen	2017 - Ongoing	Back Pain
Furosemide	23 Feb 2019 (Study Day -574) - Ongoing	Dependent Edema
Colecalciferol	Jul 2019 - Ongoing	Vitamin D Deficiency
Monascus purpureus	Jul 2019 - Ongoing	Supplement For High Cholesterol
Vitamins nos	02 Aug 2019 (Study Day -414) - Ongoing	Supplement
Influenza vaccine	01 Sep 2020 (Study Day -18) - 01 Sep 2020 (Study Day -18)	Prophylaxis For Flu
Varenicline tartrate	17 Oct 2020 (Study Day 29) - 17 Oct 2020 (Study Day 29)	Cigarette Smoker
Methylprednisolone	18 Oct 2020 (Study Day 30) - 23 Oct 2020 (Study Day 35)	Decrease In Sensation And Paresthesia
Other viral vaccines	27 Dec 2020 (Study Day 100) - 27 Dec 2020 (Study Day 100)	COVID-19 Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Paraesthesia	Grade 2/moderate	Related	03 Oct 2020 (Study Day 15) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US364-2268 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Neuropathy Peripheral/Peripheral Neuropathy	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	21 Sep 2020 (Study Day 1) – 04 Nov 2020 (Study Day 45)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US364-2268, a 38-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 21 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 21 Sep 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of neuropathy peripheral. On 18 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of peripheral neuropathy lasted for 45 days, after which it was considered to be recovered/resolved on 04 Nov 2020 (Study Day 45). The investigator assessed the event of neuropathy peripheral to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Palpitations	Heart palpitations	1983 - 1996
Lyme disease	Lyme disease	1994 - 1994
Prostatitis	Prostatitis	2007 - 2007
Vasectomy	Vasectomy	Dec 2017 - Dec 2017
Wrist fracture	Wrist fracture	Oct 2018 - 18 Oct 2018 (Study Day -704)
Wrist surgery	Wrist surgery	18 Oct 2018 (Study Day -704) - 18 Oct 2018 (Study Day -704)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	22 Sep 2020 (Study Day 2) - 22 Sep 2020 (Study Day 2)	Peripheral Neuropathy
Ibuprofen	Oct 2020 - Oct 2020	Neuropathy
Cefalexin	01 Jan 2021 (Study Day 103) - 13 Jan 2021 (Study Day 115)	Infection Of The Toe
Ibuprofen	01 Jan 2021 (Study Day 103) - 02 Jan 2021 (Study Day 104)	Laceration And Dislocation Of Right Toe

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Neuropathy Peripheral	Grade 2/moderate	Related	21 Sep 2020 (Study Day 1) - 04 Nov 2020 (Study Day 45)
Skin Laceration	Grade 2/moderate	Not related	01 Jan 2021 (Study Day 103) - 01 Jan 2021 (Study Day 103)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US367-2092 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Injection Site Erythema/Redness At Injection Site (L)	AE leading to withdrawal from study vaccine	Grade 3/ severe	Related	21 Aug 2020 (Study Day 9) – 27 Aug 2020 (Study Day 15)	Recovered/resolved
Injection Site Swelling/Swelling At Injection Site (L)	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	21 Aug 2020 (Study Day 9) – 27 Aug 2020 (Study Day 15)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2092, a 52-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 13 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 21 Aug 2020 (Study Day 9), 8 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of injection site erythema. On 09 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of redness at injection site (l) lasted for 7 days, after which it was considered to be recovered/resolved on 27 Aug 2020 (Study Day 15). The investigator assessed the event of injection site erythema to be related to the IP.

On 21 Aug 2020 (Study Day 9), 8 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of injection site swelling. On 09 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of swelling at injection site (l) lasted for 7 days, after which it was considered to be recovered/resolved on 27 Aug 2020 (Study Day 15). The investigator assessed the event of injection site swelling to be related to the IP.

Additional Information From the Safety Database

No additional details for the events are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Osteoarthritis	Osteoarthritis joint pain	2014 - Ongoing
Postmenopause	Post-menopausal	2018 - Ongoing
Cholecystectomy	Cholecystectomy	Jul 2019 - Jul 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2014 - Ongoing	Osteoarthritis (Joints)
Prednisone	25 Aug 2020 (Study Day 13) - 27 Aug 2020 (Study Day 15)	Redness And Swelling At Injection Site.

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Erythema	Grade 3/severe	Related	21 Aug 2020 (Study Day 9) - 27 Aug 2020 (Study Day 15)
Injection Site Swelling	Grade 2/moderate	Related	21 Aug 2020 (Study Day 9) - 27 Aug 2020 (Study Day 15)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US367-2151 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	17 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Rash Pruritic/Pruitic Rash Lower Extremities	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	18 Aug 2020 (Study Day 2) – 26 Aug 2020 (Study Day 10)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2151, a 25-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 17 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 18 Aug 2020 (Study Day 2), 1 day after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of rash pruritic. On 13 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of pruitic rash lower extremities lasted for 9 days, after which it was considered to be recovered/resolved on 26 Aug 2020 (Study Day 10). The investigator assessed the event of rash pruritic to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

On 13 Jan 2021 (Study Day 150), the participant discontinued from the study due to other.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine hydrochloride	19 Aug 2020 (Study Day 3) - 21 Aug 2020 (Study Day 5)	Pruritic Rash (Lower Extremities)
Cetirizine hydrochloride	20 Aug 2020 (Study Day 4) - 21 Aug 2020 (Study Day 5)	Pruritic Rash (Lower Extremities)
Influenza vaccine	07 Oct 2020 (Study Day 52) - 07 Oct 2020 (Study Day 52)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Rash Pruritic	Grade 2/moderate	Related	18 Aug 2020 (Study Day 2) - 26 Aug 2020 (Study Day 10)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US367-2163 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	18 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Induration/Right Arm Induration	AE leading to withdrawal from study vaccine, AE leading to study discontinuation	Grade 2/ moderate	Related	26 Aug 2020 (Study Day 9) – 02 Sep 2020 (Study Day 16)	Recovered/resolved
Urticaria/Right Arm Erythema (Urticarial)	AE leading to withdrawal from study vaccine, AE leading to study discontinuation	Grade 2/ moderate	Related	26 Aug 2020 (Study Day 9) – 01 Oct 2020 (Study Day 45)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2163, a 56-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 18 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 26 Aug 2020 (Study Day 9), 8 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of induration. On 14 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of right arm induration lasted for 8 days, after which it was considered to be recovered/resolved on 02 Sep 2020 (Study Day 16). The investigator assessed the event of induration to be related to the IP.

On 26 Aug 2020 (Study Day 9), 8 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of urticaria. On 14 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of right arm erythema (urticarial) lasted for 37 days, after which it was considered to be recovered/resolved on 01 Oct 2020 (Study Day 45). The investigator assessed the event of urticaria to be related to the IP.

Additional Information From the Safety Database

No additional details for the events are available.

Study Completion/Discontinuation

On 01 Mar 2021 (Study Day 196), the participant discontinued from the study due to adverse event.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Postmenopause	Post menopausal	2015 - Ongoing
Seasonal allergy	Seasonal allergies	2016 - Ongoing
Autonomic nervous system imbalance	Vasomotor symptoms	2017 - Ongoing
Cholecystectomy	Cholecystectomy due to gallstones	2018 - 2018
Post procedural diarrhoea	Intermittent post cholecystectomy diarrhea	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine hydrochloride	2016 - Ongoing	Seasonal Allergies
Paroxetine	2017 - Ongoing	Vasomotor Symptoms
Colestyramine	2018 - Ongoing	Interrmittent Post - Cholecysterectomy Diarrhea
Influenza vaccine	15 Dec 2020 (Study Day 120) - 15 Dec 2020 (Study Day 120)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Induration	Grade 2/moderate	Related	26 Aug 2020 (Study Day 9) - 02 Sep 2020 (Study Day 16)
Urticaria	Grade 2/moderate	Related	26 Aug 2020 (Study Day 9) - 01 Oct 2020 (Study Day 45)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US367-2251 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Injection Site Erythema/Redness At Injection Site	AE leading to withdrawal from study vaccine	Grade 1/mild	Related	28 Aug 2020 (Study Day 8) – 30 Aug 2020 (Study Day 10)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2251, a 42-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 21 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Aug 2020 (Study Day 8), 7 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of injection site erythema. On 17 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of redness at injection site lasted for 3 days, after which it was considered to be recovered/resolved on 30 Aug 2020 (Study Day 10). The investigator assessed the event of injection site erythema to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Vitamin B12 deficiency	Vitamin b12 deficient	2016 - Ongoing
Female sterilisation	Tubal ligation	Feb 2016 - Feb 2016
Hypertension	Hypertension	Nov 2019 - Ongoing
Vitamin D deficiency	Vitamin d deficient	Jan 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamin b12 nos	2016 - Ongoing	Vitamin B12 Deficiency
Amlodipine	Nov 2019 - Ongoing	Hypertension
Vitamin d nos	Jan 2020 - Ongoing	Vitamin D Deficiency
Influenza vaccine	10 Oct 2020 (Study Day 51) - 10 Oct 2020 (Study Day 51)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Erythema	Grade 1/mild	Related	28 Aug 2020 (Study Day 8) - 30 Aug 2020 (Study Day 10)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US367-2377 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pruritus/Generalized Pruritis	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	11 Sep 2020 (Study Day 15) – 19 Nov 2020 (Study Day 84)	Recovered/resolved
Angioedema/Angioedema	AE leading to withdrawal from study vaccine	Grade 1/ mild	Related	18 Sep 2020 (Study Day 22) – 19 Sep 2020 (Study Day 23)	Recovered/resolved
Urticaria/Worsening Of Uriticaria	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	21 Sep 2020 (Study Day 25) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2377, a 31-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 28 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 11 Sep 2020 (Study Day 15), 14 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of pruritus. On 24 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of generalized pruritis lasted for 70 days, after which it was considered to be recovered/resolved on 19 Nov 2020 (Study Day 84). The investigator assessed the event of pruritus to be related to the IP.

On 18 Sep 2020 (Study Day 22), 21 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of angioedema. On 24 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of angioedema lasted for 2 days, after which it was considered to be recovered/resolved on 19 Sep 2020 (Study Day 23). The investigator assessed the event of angioedema to be related to the IP.

On 21 Sep 2020 (Study Day 25), 24 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of urticaria. On 24 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of worsening of uriticaria was considered to be ongoing. The investigator assessed the event of urticaria to be related to the IP.

Additional Information From the Safety Database

No additional details for the events are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Temporomandibular joint syndrome	Temporomandibular joint disorder	2006 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2007 - Ongoing
Mechanical urticaria	Dermatographia	2019 - Ongoing
Pruritus	Pruitis	May 2019 - May 2019
Urticaria	Uriticaria	May 2019 - Ongoing
Attention deficit hyperactivity disorder	Attention deficit hyperactivity disorder	Apr 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine hydrochloride	2019 - Ongoing	Dermatographia
Omeprazole	2019 - Ongoing	Gerd
Medroxyprogesterone acetate	Oct 2019 - Ongoing	Birth Control
Amfetamine aspartate; amfetamine sulfate; dexamfetamine saccharate; dexamfetamine sulfate	11 Aug 2020 (Study Day -17) - Ongoing	Adhd
Acetylsalicylic acid; caffeine; paracetamol	28 Aug 2020 (Study Day 1) - 06 Sep 2020 (Study Day 10)	Headaches
Amoxicillin	09 Sep 2020 (Study Day 13) - 19 Sep 2020 (Study Day 23)	Tooth Infection
Hydrocodone bitartrate; paracetamol	09 Sep 2020 (Study Day 13) - 13 Sep 2020 (Study Day 17)	Tooth Infection
Cetirizine hydrochloride	21 Sep 2020 (Study Day 25) - 04 Nov 2020 (Study Day 69)	Worsening Of Dermatographia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Clindamycin	08 Oct 2020 (Study Day 42) - 17 Oct 2020 (Study Day 51)	Tooth Infection
Fexofenadine hydrochloride	19 Oct 2020 (Study Day 53) - Ongoing	Uriticaria
Levocetirizine dihydrochloride	19 Oct 2020 (Study Day 53) - Ongoing	Worsening Of Uriticaria
Hydrocodone bitartrate; paracetamol	16 Mar 2021 (Study Day 201) - 17 Mar 2021 (Study Day 202)	Pain Secondary To Tooth Extraction
Tooth extraction*	16 Mar 2021 (Study Day 201) - 16 Mar 2021 (Study Day 201)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 1/mild	Not related	28 Aug 2020 (Study Day 1) - 06 Sep 2020 (Study Day 10)
Tooth Infection	Grade 1/mild	Not related	09 Sep 2020 (Study Day 13) - 17 Oct 2020 (Study Day 51)
Pruritus	Grade 2/moderate	Related	11 Sep 2020 (Study Day 15) - 19 Nov 2020 (Study Day 84)
Angioedema	Grade 1/mild	Related	18 Sep 2020 (Study Day 22) - 19 Sep 2020 (Study Day 23)
Mechanical Urticaria	Grade 2/moderate	Related	21 Sep 2020 (Study Day 25) - 04 Nov 2020 (Study Day 69)
Urticaria	Grade 2/moderate	Related	21 Sep 2020 (Study Day 25) - Ongoing
Tooth Infection	Grade 2/moderate	Not related	14 Mar 2021 (Study Day 199) - 16 Mar 2021 (Study Day 201)
Procedural Pain	Grade 2/moderate	Not related	16 Mar 2021 (Study Day 201) - 17 Mar 2021 (Study Day 202)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US367-2407 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Ventricular Extrasystoles/ Premature Ventricular Contractions	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	07 Sep 2020 (Study Day 5) – 24 Sep 2020 (Study Day 22)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2407, a 41-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 03 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Sep 2020 (Study Day 5), 4 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of ventricular extrasystoles. On 30 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of premature ventricular contractions lasted for 18 days, after which it was considered to be recovered/resolved on 24 Sep 2020 (Study Day 22). The investigator assessed the event of ventricular extrasystoles to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Augmentin allergy- nausea	1997 - Ongoing
Genital herpes	Herpes genitalis	17 Jun 2014 (Study Day -2270) - Ongoing
Depression	Depression	2016 - Ongoing
Ventricular extrasystoles	Pvc-premature ventricular contractions	2018 - 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Valaciclovir hydrochloride	17 Jun 2014 (Study Day -2270) - Ongoing	Mhx: Herpes Genitalis
Ethinylestradiol; ferrous fumarate; norethisterone acetate	2016 - Ongoing	Contraception
Sertraline hydrochloride	2016 - Ongoing	Depression
Vitamin d nos	2020 - 25 Sep 2020 (Study Day 23)	Health Maintenance
Quercetin	Jul 2020 - 25 Sep 2020 (Study Day 23)	Health Management
Influenza vaccine	22 Oct 2020 (Study Day 50) - 22 Oct 2020 (Study Day 50)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Ventricular Extrasystoles	Grade 2/moderate	Related	07 Sep 2020 (Study Day 5) - 24 Sep 2020 (Study Day 22)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US368-2040 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	01 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Varicella Zoster Virus Infection/Exacerbation Of Varicella Zoster	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	01 Sep 2020 (Study Day 1) – 03 Oct 2020 (Study Day 33)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US368-2040, a 48-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 01 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Sep 2020 (Study Day 1), on the day (12 hours 5 minutes following administration) of the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of varicella zoster virus infection. On 28 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of exacerbation of varicella zoster lasted for 33 days, after which it was considered to be recovered/resolved on 03 Oct 2020 (Study Day 33). The investigator assessed the event of varicella zoster virus infection to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Intervertebral disc protrusion	Lbp, disc herniation, l4 & l5	01 Sep 2015 (Study Day -1827) - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2016 - Ongoing
Varicella zoster virus infection	Varicella zoster	Aug 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Gabapentin	01 Sep 2015 (Study Day -1827) - Ongoing	Lower Back Pain
Methocarbamol	01 Sep 2015 (Study Day -1827) - Ongoing	Lower Back Pain
Nifedipine	2018 - 15 Jan 2021 (Study Day 137)	Hypertension
Paracetamol	15 Sep 2020 (Study Day 15) - 15 Sep 2020 (Study Day 15)	Headache
Paracetamol	22 Nov 2020 (Study Day 83) - 27 Nov 2020 (Study Day 88)	COVID-Like Illness (Body Aches, Headache)
Paracetamol	28 Dec 2020 (Study Day 119) - 31 Dec 2020 (Study Day 122)	Symptomatic COVID19; Headache
Hydrochlorothiazide	15 Jan 2021 (Study Day 137) - 19 Apr 2021 (Study Day 231)	Hypertension
Losartan	15 Jan 2021 (Study Day 137) - 19 Apr 2021 (Study Day 231)	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Varicella Zoster Virus Infection	Grade 2/moderate	Related	01 Sep 2020 (Study Day 1) - 03 Oct 2020 (Study Day 33)
Headache	Grade 2/moderate	Not related	15 Sep 2020 (Study Day 15) - 15 Sep 2020 (Study Day 15)
Suspected COVID-19	Grade 2/moderate	Not related	22 Nov 2020 (Study Day 83) - 26 Nov 2020 (Study Day 87)
COVID-19	Grade 2/moderate	Not related	21 Dec 2020 (Study Day 112) - 01 Jan 2021 (Study Day 123)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US376-2177 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Injection Site Erythema/ Injection Site Redness, Left Arm Non-Urticarial	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	03 Sep 2020 (Study Day 1) – 09 Oct 2020 (Study Day 37)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US376-2177, a 65-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 03 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Sep 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of injection site erythema. On 30 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of injection site redness, left arm non-urticarial lasted for 37 days, after which it was considered to be recovered/resolved on 09 Oct 2020 (Study Day 37). The investigator assessed the event of injection site erythema to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hepatitis A	Hepatitis a	1959 - 1959
Neck pain	Neck pain	1969 - Ongoing
Hypothyroidism	Hypothyroidism	1983 - Ongoing
Depression	Depression	1998 - Ongoing
Postmenopause	Post menopausal	2000 - Ongoing
Carpal tunnel syndrome	Carpal tunnel syndrome	2002 - Ongoing
Diverticulitis	Diverticulitis	2002 - Ongoing
Constipation	Frequent constipation	2010 - Ongoing
Irritable bowel syndrome	Irritable bowel syndrome	2010 - Ongoing
Osteoarthritis	Osteoarthritis	2010 - Ongoing
Osteopenia	Osteopenia	2010 - Ongoing
Back pain	Lower back pain	2012 - Ongoing
Botulinum toxin injection	Botox injection cosmetic face	2013 - 2013
Urinary incontinence	Urinary incontinence	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	01 Sep 1983 (Study Day -13517) - Ongoing	Hypothyroid
Bupropion hydrochloride	2000 - Ongoing	Depression
Liothyronine	05 May 2020 (Study Day -121) - Ongoing	Hypothyroid
Paracetamol	05 Sep 2020 (Study Day 3) - 07 Sep 2020 (Study Day 5)	Intermittent Body Aches
Paracetamol	05 Sep 2020 (Study Day 3) - 05 Sep 2020 (Study Day 3)	Muscle Aches
Paracetamol	07 Sep 2020 (Study Day 5) - 07 Sep 2020 (Study Day 5)	Muscle Aches
Loperamide hydrochloride	13 Sep 2020 (Study Day 11) - 14 Sep 2020 (Study Day 12)	Stomach Ache
Omeprazole	13 Sep 2020 (Study Day 11) - 14 Sep 2020 (Study Day 12)	Stomach Ache
Dicycloverine hydrochloride	13 Nov 2020 (Study Day 72) - Ongoing	Ibs

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Erythema	Grade 2/moderate	Related	03 Sep 2020 (Study Day 1) - 09 Oct 2020 (Study Day 37)
Fatigue	Grade 2/moderate	Related	04 Sep 2020 (Study Day 2) - 20 Sep 2020 (Study Day 18)
Pain	Grade 2/moderate	Related	04 Sep 2020 (Study Day 2) - 04 Nov 2020 (Study Day 63)
Abdominal Pain Upper	Grade 2/moderate	Related	13 Sep 2020 (Study Day 11) - 14 Sep 2020 (Study Day 12)
Abdominal Pain Upper	Grade 2/moderate	Not related	27 Oct 2020 (Study Day 55) - Ongoing
Vomiting	Grade 2/moderate	Not related	27 Oct 2020 (Study Day 55) - 27 Oct 2020 (Study Day 55)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379554

Participant Number:	US382-2006 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	04 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Eye Swelling/ Swelling Under Eye, Bilateral	AE leading to withdrawal from study vaccine	Grade 1/ mild	Related	09 Aug 2020 (Study Day 6) – 21 Sep 2020 (Study Day 49)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US382-2006, a 51-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 04 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Aug 2020 (Study Day 6), 5 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of eye swelling. On 31 Aug 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of swelling under eye, bilateral lasted for 44 days, after which it was considered to be recovered/resolved on 21 Sep 2020 (Study Day 49). The investigator assessed the event of eye swelling to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

On 30 Dec 2020 (Study Day 149), the participant discontinued from the study due to withdrawal of consent by participant.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Psoriasis	Psoriasis	1985 - Ongoing
Oral herpes	Cold sores	1990 - Ongoing
Postmenopause	Post menopausal	2005 - Ongoing
Asthma exercise induced	Exercise induced asthma	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Valaciclovir hydrochloride	2000 - Ongoing	Cold Sores
Vitamins nos	2000 - Ongoing	Supplement
Clobetasol propionate	2010 - Ongoing	Psoriasis
Diphtheria vaccine toxoid; tetanus vaccine toxoid	Jan 2010 - Jan 2010	Vaccine
Influenza vaccine	Sep 2019 - Sep 2019	Vaccine
Salbutamol	2020 - Ongoing	Exercise Induced Asthma
Hyaluronic acid	Jun 2020 - Jun 2020	Cosmetic Enhancement
Doxycycline	14 Aug 2020 (Study Day 11) - 17 Aug 2020 (Study Day 14)	Swelling Under Left Eye
Prednisone	18 Aug 2020 (Study Day 15) - 21 Sep 2020 (Study Day 49)	Inflammation Under Eyes Bilaterally
Hyaluronidase	31 Aug 2020 (Study Day 28) - 03 Sep 2020 (Study Day 31)	Swelling Under Eye, Bilateral

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Eye Swelling	Grade 1/mild	Related	09 Aug 2020 (Study Day 6) - 21 Sep 2020 (Study Day 49)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US386-2175 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	11 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Rash Pruritic/Rash [erythematous And Pruritic] Of Vaccinated Arm	AE leading to withdrawal from study vaccine	Grade 1/ mild	Related	13 Sep 2020 (Study Day 3) – 02 Oct 2020 (Study Day 22)	Recovered/ resolved
Lymphadenopathy/Ipsilateral Axillary Lymphadenopathy	AE leading to withdrawal from study vaccine	Grade 1/ mild	Related	16 Sep 2020 (Study Day 6) – 25 Sep 2020 (Study Day 15)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US386-2175, a 51-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 11 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 13 Sep 2020 (Study Day 3), 2 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of rash pruritic. On 08 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of rash [erythematous and pruritic] of vaccinated arm lasted for 20 days, after which it was considered to be recovered/resolved on 02 Oct 2020 (Study Day 22). The investigator assessed the event of rash pruritic to be related to the IP.

On 16 Sep 2020 (Study Day 6), 5 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of lymphadenopathy. On 08 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of ipsilateral axillary lymphadenopathy lasted for 10 days, after which it was considered to be recovered/resolved on 25 Sep 2020 (Study Day 15). The investigator assessed the event of lymphadenopathy to be related to the IP.

Additional Information From the Safety Database

No additional details for the events are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Endometriosis	Endometriosis	2008 - Ongoing
Seasonal allergy	Seasonal allergies	2015 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	2019 - Ongoing
Cervical radiculopathy	Cervical radiculopathy	Apr 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	2010 - Ongoing	Prophylaxis For General Health
Ethinylestradiol; ferrous fumarate; norethisterone acetate	2011 - Ongoing	Endometriosis
Influenza vaccine	17 Oct 2020 (Study Day 37) - 17 Oct 2020 (Study Day 37)	Influenza Prevention
Diphenhydramine hydrochloride	19 Oct 2020 (Study Day 39) - 24 Oct 2020 (Study Day 44)	Seasonal Allergies
Loratadine	01 Nov 2020 (Study Day 52) - 20 Nov 2020 (Study Day 71)	Seasonal Allergies
Clobetasol	16 Jan 2021 (Study Day 128) - 01 Mar 2021 (Study Day 172)	Chilbains On Index, Middle, Ring Fingers Of Right Hand
Prednisone	16 Jan 2021 (Study Day 128) - 19 Feb 2021 (Study Day 162)	Chilbains On Index, Middle, Ring Fingers Of Right Hand
Prednisone	20 Jan 2021 (Study Day 132) - 25 Jan 2021 (Study Day 137)	Chilbains On Index, Middle, Ring Fingers Of Right Hand
Prednisone	26 Jan 2021 (Study Day 138) - 30 Jan 2021 (Study Day 142)	Chilbains On Index, Middle, Ring Fingers Of Right Hand
Prednisone	31 Jan 2021 (Study Day 143) - 06 Feb 2021 (Study Day 149)	Chilbains On Index, Middle, Ring Fingers Of Right Hand

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Rash Pruritic	Grade 1/mild	Related	13 Sep 2020 (Study Day 3) - 02 Oct 2020 (Study Day 22)
Lymphadenopathy	Grade 1/mild	Related	16 Sep 2020 (Study Day 6) - 25 Sep 2020 (Study Day 15)
Seasonal Allergy	Grade 2/moderate	Not related	27 Oct 2020 (Study Day 47) - 20 Nov 2020 (Study Day 71)
Chillblains	Grade 2/moderate	Not related	10 Jan 2021 (Study Day 122) - 01 Mar 2021 (Study Day 172)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US387-2016 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	03 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	01 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Coronary Artery Occlusion/Left Anterior Descending Artery Heart Blockage	SAE	Grade 3/severe	Not related	30 Dec 2020 (Study Day 150) – 02 Jan 2021 (Study Day 153)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2016, a 69-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 03 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 01 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Dec 2020 (Study Day 150), 149 days after the first dose and 120 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of coronary artery occlusion. Action taken with the IP was not applicable. The event of left anterior descending artery heart blockage lasted for 4 days, after which it was considered to be recovered/resolved on 02 Jan 2021 (Study Day 153). The investigator assessed the event of coronary artery occlusion to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005755	Coronary artery occlusion

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Presbyopia	Presbyopia	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Angioplasty*	30 Dec 2020 (Study Day 150) - 30 Dec 2020 (Study Day 150)	Adverse Event
Cardiac stent placement in lad*	30 Dec 2020 (Study Day 150) - 30 Dec 2020 (Study Day 150)	Adverse Event
Prasugrel	30 Dec 2020 (Study Day 150) - Ongoing	Heart Disease

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US387-2062 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	05 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	02 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Dehydration/Dehydration (Primary Sae)	SAE	Grade 4	Not related	18 Oct 2020 (Study Day 75) – 23 Oct 2020 (Study Day 80)	Recovered/resolved
Pyelonephritis/ Pyelonephritis	SAE	Grade 3/ severe	Not related	18 Oct 2020 (Study Day 75) – 23 Oct 2020 (Study Day 80)	Recovered/resolved
Sepsis/Septicemia	SAE	Grade 4	Not related	18 Oct 2020 (Study Day 75) – 23 Oct 2020 (Study Day 80)	Recovered/resolved
Urinary Tract Infection/ Urinary Tract Infection	SAE	Grade 4	Not related	18 Oct 2020 (Study Day 75) – 23 Oct 2020 (Study Day 80)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2062, a 61-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 05 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 02 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 18 Oct 2020 (Study Day 75), 74 days after the first dose and 46 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of dehydration. Action taken with the IP was not applicable. The event of dehydration (primary sae) lasted for 6 days, after which it was considered to be recovered/resolved on 23 Oct 2020 (Study Day 80). The investigator assessed the event of dehydration to be not related to the IP.

On 18 Oct 2020 (Study Day 75), 74 days after the first dose and 46 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pyelonephritis. Action taken with the IP was not applicable. The event of pyelonephritis lasted for 6 days, after which it was considered to be recovered/resolved on 23 Oct 2020 (Study Day 80). The investigator assessed the event of pyelonephritis to be not related to the IP.

On 18 Oct 2020 (Study Day 75), 74 days after the first dose and 46 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of sepsis. Action taken with the

IP was not applicable. The event of septicemia lasted for 6 days, after which it was considered to be recovered/resolved on 23 Oct 2020 (Study Day 80). The investigator assessed the event of sepsis to be not related to the IP.

On 18 Oct 2020 (Study Day 75), 74 days after the first dose and 46 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of urinary tract infection. Action taken with the IP was not applicable. The event of urinary tract infection lasted for 6 days, after which it was considered to be recovered/resolved on 23 Oct 2020 (Study Day 80). The investigator assessed the event of urinary tract infection to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000496	Dehydration
MOD-2020-000496	Pyelonephritis
MOD-2020-000496	Sepsis
MOD-2020-000496	Urinary tract infection

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	1970 - 1970
Tonsillitis	Tonsillitis	1970 - 1970
Back pain	Back pain (occasional)	1974 - Ongoing
Gastrooesophageal reflux disease	Gerd	1980 - Ongoing
Migraine	Migraines (occasional)	1980 - Ongoing
Appendicectomy	Appendectomy	1984 - 1984
Appendicitis	Appendicitis	1984 - 1984
Cholecystectomy	Cholecystectomy	1984 - 1984
Cholelithiasis	Gall stones	1984 - 1984
Insomnia	Insomnia	1987 - Ongoing
Hyperlipidaemia	Hyperlipidemia	1988 - Ongoing
Hypertension	Hypertension	1988 - Ongoing
Postmenopause	Post menopausal	2009 - Ongoing
Depression	Intermittent depression	2010 - Ongoing
Gastrectomy	Gastric sleeve	2015 - 2015
Seasonal allergy	Seasonal allergies	2017 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypothyroidism	Hypothyroidism	2018 - Ongoing
Type 2 diabetes mellitus	Type ii diabetes	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diclofenac	1974 - Ongoing	Occasional Back Pain
Pantoprazole	1980 - Ongoing	Gerd
Topiramate	1980 - Ongoing	Migraines
Amitriptyline	1987 - Ongoing	Insomnia
Atorvastatin	1988 - Ongoing	Hyperlipidemia
Lisinopril	1988 - Ongoing	Hypertension
Metoprolol succinate	1988 - Ongoing	Hypertension
Cetirizine	2017 - Ongoing	Seasonal Allergies
Acetylsalicylic acid	2018 - Ongoing	Cardiac Prophylaxis
Ascorbic acid	2018 - Ongoing	Health Maintenance
Calcium carbonate	2018 - Ongoing	Health Maintenance
Magnesium	2018 - Ongoing	Health Maintenance
Metformin hydrochloride	2018 - Ongoing	Type Ii Diabetes
Zinc	2018 - Ongoing	Health Maintenance
Ferrous sulfate	Oct 2019 - 01 Sep 2020 (Study Day 28)	Health Maintenance
Ibuprofen	05 Aug 2020 (Study Day 1) - 05 Aug 2020 (Study Day 1)	Injection Site Pain
Chest xray single view*	17 Oct 2020 (Study Day 74) - 17 Oct 2020 (Study Day 74)	Diagnostic
Electrocardiogram*	17 Oct 2020 (Study Day 74) - 17 Oct 2020 (Study Day 74)	Adverse Event
Sars cov-2 np swab*	17 Oct 2020 (Study Day 74) - 17 Oct 2020 (Study Day 74)	Diagnostic
Sodium chloride	17 Oct 2020 (Study Day 74) - 17 Oct 2020 (Study Day 74)	Dehydration
Urine culture*	17 Oct 2020 (Study Day 74) - 17 Oct 2020 (Study Day 74)	Adverse Event
Acetylsalicylic acid	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Cardiac Prophylaxsis
Amitriptyline	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Insomnia
Atorvastatin	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	High Cholesterol
Butalbital; caffeine; paracetamol	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Migraine Prevention
Citalopram	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Intermitant Depression

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Enoxaparin sodium	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Deep Vein Thrombosis Prophalaxis
Gall bladder ultra sound*	18 Oct 2020 (Study Day 75) - 18 Oct 2020 (Study Day 75)	Diagnostic
Hydralazine	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Hypertension
Insulin aspart	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Type Ii Dabetes
Levothyroxine	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Hypothyroidism
Liver ultrasound*	18 Oct 2020 (Study Day 75) - 18 Oct 2020 (Study Day 75)	Diagnostic
Loratadine	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Seasonal Allergies
Morphine	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Pain
Ondansetron	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Nausea - Symptom Associated To Sae Of Dehydration
Paracetamol	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	For General Pain
Sodium chloride	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Dehydration (Sae)
Topiramate	18 Oct 2020 (Study Day 75) - 23 Oct 2020 (Study Day 80)	Migraine Prevention
2 view chest xray*	19 Oct 2020 (Study Day 76) - 19 Oct 2020 (Study Day 76)	Diagnostic
Renal ultrasound*	19 Oct 2020 (Study Day 76) - 19 Oct 2020 (Study Day 76)	Adverse Event
2 d echo / transthorasic echo*	20 Oct 2020 (Study Day 77) - 20 Oct 2020 (Study Day 77)	Adverse Event
Blood culture ard*	20 Oct 2020 (Study Day 77) - 20 Oct 2020 (Study Day 77)	Adverse Event
Cefepime	20 Oct 2020 (Study Day 77) - 20 Oct 2020 (Study Day 77)	Septacemia
Ceftriaxone	20 Oct 2020 (Study Day 77) - 20 Oct 2020 (Study Day 77)	Septacemia
Ciprofloxacin	23 Oct 2020 (Study Day 80) - 01 Nov 2020 (Study Day 89)	Pneumonia, Sepsis, Uti
Fluconazole	23 Oct 2020 (Study Day 80) - 08 Nov 2020 (Study Day 96)	Yeast Infection
Influenza vaccine	23 Oct 2020 (Study Day 80) - 23 Oct 2020 (Study Day 80)	Prevention Of Influenza Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diarrhoea	Grade 2/moderate	Not related	12 Sep 2020 (Study Day 39) - 17 Oct 2020 (Study Day 74)
Injection Site Pain	Grade 1/mild	Related	28 Sep 2020 (Study Day 55) - 01 Oct 2020 (Study Day 58)
Pain	Grade 2/moderate	Not related	10 Oct 2020 (Study Day 67) - 23 Oct 2020 (Study Day 80)
Chills	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 69) - 23 Oct 2020 (Study Day 80)
Cough	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 69) - 23 Oct 2020 (Study Day 80)
Decreased Appetite	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 69) - 30 Oct 2020 (Study Day 87)
Dyspnoea	Grade 1/mild	Not related	12 Oct 2020 (Study Day 69) - 21 Oct 2020 (Study Day 78)
Fatigue	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 69) - 02 Dec 2020 (Study Day 120)
Headache	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 69) - 22 Oct 2020 (Study Day 79)
Nasal Congestion	Grade 1/mild	Not related	12 Oct 2020 (Study Day 69) - 21 Oct 2020 (Study Day 78)
Nausea	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 69) - 14 Oct 2020 (Study Day 71)
Pyrexia	Grade 1/mild	Not related	12 Oct 2020 (Study Day 69) - 23 Oct 2020 (Study Day 80)
Vomiting	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 69) - 14 Oct 2020 (Study Day 71)
Troponin Increased	Grade 1/mild	Not related	17 Oct 2020 (Study Day 74) - 18 Oct 2020 (Study Day 75)
Confusional State	Grade 3/severe	Not related	18 Oct 2020 (Study Day 75) - 19 Oct 2020 (Study Day 76)
Hepatic Steatosis	Grade 2/moderate	Not related	18 Oct 2020 (Study Day 75) - Ongoing
Vulvovaginal Mycotic Infection	Grade 2/moderate	Not related	23 Oct 2020 (Study Day 80) - 08 Nov 2020 (Study Day 96)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379566

Participant Number:	US387-2090 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	07 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	18 Sep 2020 (Study Day 43)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Diarrhoea/Diarrhea Unspecified Type	SAE	Grade 3/ severe	Not related	11 Aug 2020 (Study Day 5) – 14 Sep 2020 (Study Day 39)	Recovered/resolved
Hypoglycaemia/Hypoglycemia (Nondiabetic)	SAE	Grade 4	Not related	25 Nov 2020 (Study Day 111) – 27 Nov 2020 (Study Day 113)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2090, a 63-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 07 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 18 Sep 2020 (Study Day 43). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 11 Aug 2020 (Study Day 5), 4 days after the first dose and 38 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of diarrhoea. The IP dose was not changed due to the diarrhea unspecified type. The event of diarrhea unspecified type lasted for 35 days, after which it was considered to be recovered/resolved on 14 Sep 2020 (Study Day 39). The investigator assessed the event of diarrhoea to be not related to the IP.

On 25 Nov 2020 (Study Day 111), 110 days after the first dose and 68 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of hypoglycaemia. Action taken with the IP was not applicable. The event of hypoglycemia (nondiabetic) lasted for 3 days, after which it was considered to be recovered/resolved on 27 Nov 2020 (Study Day 113). The investigator assessed the event of hypoglycaemia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000208	Diarrhoea
MOD-2020-000909	Hypoglycaemia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Nicotine dependence	Nicotine addiction	1987 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amoxicillin; clavulanic acid	16 Aug 2020 (Study Day 10) - 26 Aug 2020 (Study Day 20)	Diarrhea
Ct abd with contrast*	16 Aug 2020 (Study Day 10) - 16 Aug 2020 (Study Day 10)	Adverse Event
Gall bladder ultrasound*	16 Aug 2020 (Study Day 10) - 16 Aug 2020 (Study Day 10)	Adverse Event
Hydrocodone bitartrate; paracetamol	16 Aug 2020 (Study Day 10) - 22 Aug 2020 (Study Day 16)	Abdominal Pain
Metoclopramide	16 Aug 2020 (Study Day 10) - 29 Sep 2020 (Study Day 54)	Nausea
Ondansetron	16 Aug 2020 (Study Day 10) - 29 Sep 2020 (Study Day 54)	Nausea
Paracetamol	16 Aug 2020 (Study Day 10) - 17 Aug 2020 (Study Day 11)	Headache
Aluminium hydroxide; magnesium hydroxide; simeticone	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Gastric Upset
Ciprofloxacin	18 Aug 2020 (Study Day 12) - 21 Aug 2020 (Study Day 15)	Abdominal Pain And Diarrhea
Hydralazine	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Elevated Blood Pressure
Ipratropium; salbutamol	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Copd
Magnesium sulfate	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Unknown
Metoclopramide	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Nausea
Metronidazole	18 Aug 2020 (Study Day 12) - 21 Aug 2020 (Study Day 15)	Abdominal Pain / Diarrhea
Naproxen	18 Aug 2020 (Study Day 12) - 29 Sep 2020 (Study Day 54)	Abdominal Pain
Nicotine	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Nicotine Addiction

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ondansetron	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Nausea
Paracetamol	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Abdominal Pain
Paracetamol	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Fever Or Pain
Potassium chloride	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Dehydration
Sodium chloride	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Hydration
Sodium phosphate	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Unknown
Sodium polystyrene sulfonate	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Dehydration
Temazepam	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)	Insomnia
Colonoscopy*	21 Aug 2020 (Study Day 15) - 21 Aug 2020 (Study Day 15)	Adverse Event
Ibuprofen	22 Aug 2020 (Study Day 16) - 29 Aug 2020 (Study Day 23)	Abdominal Pain
Trazodone	29 Aug 2020 (Study Day 23) - 15 Oct 2020 (Study Day 70)	Insomnia
Ciprofloxacin	22 Sep 2020 (Study Day 47) - 28 Sep 2020 (Study Day 53)	Abdominal Pain
Alprazolam	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown Not Indicated
Aluminium hydroxide; magnesium hydroxide; simeticone	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown Not Indicated
Blood sugar checks (frequent)*	25 Nov 2020 (Study Day 111) - 25 Nov 2020 (Study Day 111)	Adverse Event
Blood work up*	25 Nov 2020 (Study Day 111) - 25 Nov 2020 (Study Day 111)	Adverse Event
Calcium gluconate; sodium chloride	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Chest xray 1 view*	25 Nov 2020 (Study Day 111) - 25 Nov 2020 (Study Day 111)	Adverse Event
Clonidine	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Dextromethorphan; guaifenesin	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Diphenhydramine	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Docusate sodium	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Glucose	25 Nov 2020 (Study Day 111) - 25 Nov 2020 (Study Day 111)	Hypoglycemeia
Hydralazine	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Ipratropium; salbutamol	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Copd

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Magnesium sulfate	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Metoclopramide	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Morphine	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Ondansetron	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Oxycodone hydrochloride; paracetamol	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Paracetamol	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Potassium chloride	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Potassium phosphate monobasic	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Simeticone	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Sodium chloride	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Hydration
Sodium phosphate	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Sodium polystyrene sulfonate	25 Nov 2020 (Study Day 111) - 27 Nov 2020 (Study Day 113)	Unknown
Temazepam	25 Nov 2020 (Study Day 111) - 26 Nov 2020 (Study Day 112)	Insomnia
Urine tox screen*	25 Nov 2020 (Study Day 111) - 25 Nov 2020 (Study Day 111)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Not related	09 Aug 2020 (Study Day 3) - 08 Sep 2020 (Study Day 33)
Enteritis	Grade 3/severe	Not related	11 Aug 2020 (Study Day 5) - 14 Sep 2020 (Study Day 39)
Chills	Grade 2/moderate	Not related	12 Aug 2020 (Study Day 6) - 23 Aug 2020 (Study Day 17)
Nausea	Grade 2/moderate	Not related	12 Aug 2020 (Study Day 6) - 21 Aug 2020 (Study Day 15)
Vomiting	Grade 2/moderate	Not related	12 Aug 2020 (Study Day 6) - 21 Aug 2020 (Study Day 15)
Headache	Grade 2/moderate	Not related	13 Aug 2020 (Study Day 7) - 21 Aug 2020 (Study Day 15)
Chronic Obstructive Pulmonary Disease	Grade 1/mild	Not related	18 Aug 2020 (Study Day 12) - Ongoing

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Dehydration	Grade 2/moderate	Not related	18 Aug 2020 (Study Day 12) - 22 Aug 2020 (Study Day 16)
Haemangioma Of Liver	Grade 1/mild	Not related	18 Aug 2020 (Study Day 12) - Ongoing
Haemorrhoids	Grade 1/mild	Not related	21 Aug 2020 (Study Day 15) - Ongoing
Insomnia	Grade 2/moderate	Not related	26 Aug 2020 (Study Day 20) - 15 Oct 2020 (Study Day 70)
Insomnia	Grade 2/moderate	Not related	29 Aug 2020 (Study Day 23) - 15 Oct 2020 (Study Day 70)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US387-2118 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	08 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cholecystitis/Choleystitis	SAE	Grade 3/ severe	Not related	15 Nov 2020 (Study Day 98) – 15 Nov 2020 (Study Day 98)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2118, a 36-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 10 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 08 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Nov 2020 (Study Day 98), 97 days after the first dose and 68 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of cholecystitis. Action taken with the IP was not applicable. The event of choleystitis lasted for 1 days, after which it was considered to be recovered/resolved on 15 Nov 2020 (Study Day 98). The investigator assessed the event of cholecystitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000799	Cholecystitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	Not reported - Ongoing
Eczema	Eczema bilateral forearms	1989 - Ongoing
Attention deficit hyperactivity disorder	Attention deficit hyperactivity disorder (adhd)	1990 - Ongoing
Post-traumatic stress disorder	Post traumatic stress disorder (ptsd)	1996 - Ongoing
Anxiety	Anxiety	1999 - Ongoing
Migraine	Migraines	1999 - Ongoing
Gestational diabetes	Gestational diabetes	2002 - 2002
Gastric banding	Lap band surgery	2007 - 2007
Gastrooesophageal reflux disease	Acid reflux	2009 - 01 Apr 2019 (Study Day -497)
Depression	Depression	2013 - Ongoing
Arthritis	Bilateral knee arthritis	2016 - Ongoing
Hypertension	High blood pressure	2018 - 2018
Cholelithiasis	Gall stones	2019 - Ongoing
Gastric banding reversal	Lap band removal	2019 - 2019
Seasonal allergy	Seasonal allergies	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Triamcinolone acetonide	2017 - Ongoing	Eczema
Amfetamine aspartate; amfetamine sulfate; dexamfetamine saccharate; dexamfetamine sulfate	2018 - Ongoing	Adhd
Cetirizine	2019 - Ongoing	Seasonal Allergies
Fluticasone propionate	2020 - Ongoing	Seasonal Allergies
Ibuprofen	11 Aug 2020 (Study Day 2) - 11 Aug 2020 (Study Day 2)	Pain At Injection Site
Acetylsalicylic acid; caffeine; paracetamol	09 Sep 2020 (Study Day 31) - 10 Sep 2020 (Study Day 32)	Headache
Guaifenesin	09 Sep 2020 (Study Day 31) - 11 Sep 2020 (Study Day 33)	Fever / Chills
Paracetamol	09 Sep 2020 (Study Day 31) - 10 Sep 2020 (Study Day 32)	Fever And Pain At Injection Site
Aluminium hydroxide; magnesium hydroxide; simeticone	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	Indigestion
Amfetamine; dexamfetamine	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	Adhd

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium chloride; potassium chloride; sodium lactate	15 Nov 2020 (Study Day 98) - 15 Nov 2020 (Study Day 98)	Fluid Replacement
Cefotetan	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	Bacterial Infection (Urine(
Docusate sodium	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	Constipation
Ergocalciferol	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	Hypercalcemia
Hydralazine	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	High Blood Pressure
Ibuprofen	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	Unknown
Indocyanine green cholangiography*	15 Nov 2020 (Study Day 98) - 15 Nov 2020 (Study Day 98)	Adverse Event
Ipratropium bromide; salbutamol sulfate	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	Shortness Of Breath
Labetalol	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	High Blood Pressure
Laparoscopic cholecystectomy*	15 Nov 2020 (Study Day 98) - 15 Nov 2020 (Study Day 98)	Adverse Event
Magnesium sulfate	15 Nov 2020 (Study Day 98) - 15 Nov 2020 (Study Day 98)	Unknown
Morphine sulfate	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	Mild Abdominal Pain 1-3 Pain Scale
Morphine sulfate	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	Severe Abdominal Pain 7-10 Pain Scale
Naloxone	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	Opiate Reversal Post Procedure
Ondansetron	15 Nov 2020 (Study Day 98) - 17 Nov 2020 (Study Day 100)	Nausea / Vomiting
Pantoprazole	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)	Acid Reflux
Potassium chloride	15 Nov 2020 (Study Day 98) - 15 Nov 2020 (Study Day 98)	Unknown
Right upper quadrant ultrasound*	15 Nov 2020 (Study Day 98) - 15 Nov 2020 (Study Day 98)	Adverse Event
Sars-cov2-pcr swab*	15 Nov 2020 (Study Day 98) - 15 Nov 2020 (Study Day 98)	Diagnostic
Urine culture*	15 Nov 2020 (Study Day 98) - 15 Nov 2020 (Study Day 98)	Adverse Event
Hydrocodone; paracetamol	16 Nov 2020 (Study Day 99) - 20 Nov 2020 (Study Day 103)	Status Post Surgery Pain / Worsening Of Cholelithiasis
Vitamin d nos	16 Nov 2020 (Study Day 99) - Ongoing	Health Maintenace
Guaifenesin	22 Dec 2020 (Study Day 135) - 25 Dec 2020 (Study Day 138)	Nasal Congestion And Cough
Escitalopram oxalate	10 Feb 2021 (Study Day 185) - Ongoing	Depression And Anxiety

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Pain	Grade 2/moderate	Related	11 Aug 2020 (Study Day 2) - 27 Aug 2020 (Study Day 18)
Fatigue	Grade 1/mild	Related	12 Aug 2020 (Study Day 3) - 22 Aug 2020 (Study Day 13)
Lymphadenopathy	Grade 1/mild	Related	14 Aug 2020 (Study Day 5) - 19 Aug 2020 (Study Day 10)
Myalgia	Grade 1/mild	Related	15 Aug 2020 (Study Day 6) - 18 Aug 2020 (Study Day 9)
Nausea	Grade 1/mild	Related	16 Aug 2020 (Study Day 7) - 19 Aug 2020 (Study Day 10)
Vomiting	Grade 1/mild	Related	16 Aug 2020 (Study Day 7) - 19 Aug 2020 (Study Day 10)
Fatigue	Grade 2/moderate	Not related	08 Sep 2020 (Study Day 30) - 22 Sep 2020 (Study Day 44)
Pain	Grade 1/mild	Not related	08 Sep 2020 (Study Day 30) - 22 Sep 2020 (Study Day 44)
Cough	Grade 1/mild	Not related	09 Sep 2020 (Study Day 31) - 22 Sep 2020 (Study Day 44)
Dyspnoea	Grade 1/mild	Not related	09 Sep 2020 (Study Day 31) - 25 Sep 2020 (Study Day 47)
Headache	Grade 1/mild	Not related	09 Sep 2020 (Study Day 31) - 22 Sep 2020 (Study Day 44)
Nasal Congestion	Grade 1/mild	Not related	09 Sep 2020 (Study Day 31) - 22 Sep 2020 (Study Day 44)
Rhinorrhoea	Grade 1/mild	Not related	09 Sep 2020 (Study Day 31) - 22 Sep 2020 (Study Day 44)
Nausea	Grade 1/mild	Related	12 Sep 2020 (Study Day 34) - 22 Sep 2020 (Study Day 44)
Vomiting	Grade 1/mild	Related	12 Sep 2020 (Study Day 34) - 22 Sep 2020 (Study Day 44)
Diarrhoea	Grade 1/mild	Not related	14 Sep 2020 (Study Day 36) - 22 Sep 2020 (Study Day 44)
Cholelithiasis	Grade 3/severe	Not related	15 Nov 2020 (Study Day 98) - 15 Nov 2020 (Study Day 98)
Hypercalcaemia	Grade 2/moderate	Not related	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)
Hyperglycaemia	Grade 1/mild	Not related	15 Nov 2020 (Study Day 98) - 17 Nov 2020 (Study Day 100)
Hypertension	Grade 2/moderate	Not related	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)
Thrombocytosis	Grade 1/mild	Not related	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)
Urinary Tract Infection Bacterial	Grade 2/moderate	Not related	15 Nov 2020 (Study Day 98) - 16 Nov 2020 (Study Day 99)
Fatigue	Grade 1/mild	Not related	22 Dec 2020 (Study Day 135) - 27 Dec 2020 (Study Day 140)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 2/moderate	Not related	22 Dec 2020 (Study Day 135) - 25 Dec 2020 (Study Day 138)
Nasal Congestion	Grade 1/mild	Not related	22 Dec 2020 (Study Day 135) - 29 Dec 2020 (Study Day 142)
Pyrexia	Grade 1/mild	Not related	22 Dec 2020 (Study Day 135) - 23 Dec 2020 (Study Day 136)
Cough	Grade 1/mild	Not related	23 Dec 2020 (Study Day 136) - 26 Dec 2020 (Study Day 139)
Myalgia	Grade 1/mild	Not related	23 Dec 2020 (Study Day 136) - 25 Dec 2020 (Study Day 138)
Depression	Grade 2/moderate	Not related	10 Jan 2021 (Study Day 154) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379576

Participant Number:	US387-2173 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	15 Sep 2020 (Study Day 34)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Transaminases Increased/Transaminitis	SAE	Grade 3/ severe	Not related	28 Dec 2020 (Study Day 138) – Ongoing	Recovering/resolving
Pyelonephritis/Pyelonephritis	SAE	Grade 3/ severe	Not related	13 Jan 2021 (Study Day 154) – 22 Jan 2021 (Study Day 163)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2173, a 74-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 13 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 15 Sep 2020 (Study Day 34). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Dec 2020 (Study Day 138), 137 days after the first dose and 104 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of transaminases increased. Action taken with the IP was not applicable. The event of transaminitis was considered to be ongoing. The investigator assessed the event of transaminases increased to be not related to the IP.

On 13 Jan 2021 (Study Day 154), 153 days after the first dose and 120 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pyelonephritis. Action taken with the IP was not applicable. The event of pyelonephritis lasted for 10 days, after which it was considered to be recovered/resolved on 22 Jan 2021 (Study Day 163). The investigator assessed the event of pyelonephritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-009631	Transaminases increased
MOD-2021-009631	Pyelonephritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Alcohol use	Occasional etoh (alcohol) use	1960 - Ongoing
Anxiety	Anxiety	1960 - Ongoing
Back pain	Chronic lumbago	1960 - Ongoing
Depression	Depression	1960 - Ongoing
Migraine	Migraines	1960 - Ongoing
Osteoarthritis	Osteoarthritis	1960 - Ongoing
Allergy to arthropod bite	Allergy to mosquito	1961 - Ongoing
Allergy to arthropod sting	Allergy to bee stings	1961 - Ongoing
Food allergy	Allergy to mint	1963 - Ongoing
Asthma	Asthma	1978 - Ongoing
Substance use	Crack cocaine user (2x per month)	1980 - Ongoing
Tobacco user	Cigarette smoker	1980 - Ongoing
Arthralgia	Left knee pain	1985 - 2000
Hysterectomy	Complete hysterectomy	1995 - 1995
Insomnia	Intermittent insomnia	1997 - Ongoing
Hypertension	Hypertension	2000 - Ongoing
Knee arthroplasty	Left knee total replacement	2000 - 2000
Drug hypersensitivity	Allergy to bactrim	2010 - Ongoing
Dyspepsia	Heartburn	Feb 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	1990 - Ongoing	Cardiac Prophylaxis
Echinacea purpurea	1990 - Ongoing	Health Maintenance
Epinephrine	2010 - Ongoing	Allergies To Mosquito Bites Or Bee Stings
Cyclobenzaprine hydrochloride	2018 - 10 Jan 2021 (Study Day 151)	Osteoarthritis
Salbutamol	2019 - Ongoing	Asthma
Paracetamol	Jan 2020 - Ongoing	Osteoarthritis
Acetylsalicylic acid; citric acid; sodium bicarbonate	Feb 2020 - Ongoing	Heartburn

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sertraline	12 Oct 2020 (Study Day 61) - 01 Nov 2020 (Study Day 81)	Depression
Trazodone	12 Oct 2020 (Study Day 61) - 01 Nov 2020 (Study Day 81)	Insomnia Intermittent
Influenza vaccine	01 Dec 2020 (Study Day 111) - 01 Dec 2020 (Study Day 111)	Prophylactic Influenza
Tizanidine	01 Dec 2020 (Study Day 111) - 01 Jan 2021 (Study Day 142)	Chronic Lumbago
Nitrofurantoin	28 Dec 2020 (Study Day 138) - 05 Jan 2021 (Study Day 146)	Urinary Tract Infection
Amoxicillin	06 Jan 2021 (Study Day 147) - 13 Jan 2021 (Study Day 154)	Urinary Tract Infection
Ceftriaxone	13 Jan 2021 (Study Day 154) - 13 Jan 2021 (Study Day 154)	Urinary Tract Infection
Ct scan abdomen and pelvis with iv contrast*	13 Jan 2021 (Study Day 154) - 13 Jan 2021 (Study Day 154)	Adverse Event
Fluconazole	13 Jan 2021 (Study Day 154) - 17 Jan 2021 (Study Day 158)	Urinary Tract Infection
Hydrocodone bitartrate; paracetamol	13 Jan 2021 (Study Day 154) - 13 Jan 2021 (Study Day 154)	Flank Pain
Iopamidol	13 Jan 2021 (Study Day 154) - 13 Jan 2021 (Study Day 154)	Flank Pain (Ct Scan Procedure)
Morphine	13 Jan 2021 (Study Day 154) - 17 Jan 2021 (Study Day 158)	Flank Pain
Ondansetron	13 Jan 2021 (Study Day 154) - 15 Jan 2021 (Study Day 156)	Nausea
Paracetamol	13 Jan 2021 (Study Day 154) - 17 Jan 2021 (Study Day 158)	Flank Pain
Trazodone	13 Jan 2021 (Study Day 154) - 17 Jan 2021 (Study Day 158)	Insomnia
Ultrasound abdomen*	13 Jan 2021 (Study Day 154) - 13 Jan 2021 (Study Day 154)	Adverse Event
Potassium chloride	14 Jan 2021 (Study Day 155) - 17 Jan 2021 (Study Day 158)	Hypokalemia
Bisacodyl	15 Jan 2021 (Study Day 156) - 16 Jan 2021 (Study Day 157)	Constipation
Macrogol 3350	15 Jan 2021 (Study Day 156) - 17 Jan 2021 (Study Day 158)	Constipation
Magnesium oxide	15 Jan 2021 (Study Day 156) - 17 Jan 2021 (Study Day 158)	Constipation
Ciprofloxacin	18 Jan 2021 (Study Day 159) - 22 Jan 2021 (Study Day 163)	Pylonephritis
Oxybutynin	17 Mar 2021 (Study Day 217) - Ongoing	Bladder Hyperactivity
Tramadol	17 Mar 2021 (Study Day 217) - Ongoing	Left Knee Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Proteus Infection	Grade 2/moderate	Not related	28 Dec 2020 (Study Day 138) - 22 Jan 2021 (Study Day 163)
Abdominal Wall Cyst	Grade 1/mild	Not related	13 Jan 2021 (Study Day 154) - Ongoing
Diverticulum	Grade 1/mild	Not related	13 Jan 2021 (Study Day 154) - Ongoing
Flank Pain	Grade 3/severe	Not related	13 Jan 2021 (Study Day 154) - 15 Jan 2021 (Study Day 156)
Hyperbilirubinaemia	Grade 2/moderate	Not related	13 Jan 2021 (Study Day 154) - 15 Jan 2021 (Study Day 156)
Hypokalaemia	Grade 2/moderate	Not related	13 Jan 2021 (Study Day 154) - 15 Jan 2021 (Study Day 156)
Nausea	Grade 2/moderate	Not related	13 Jan 2021 (Study Day 154) - 15 Jan 2021 (Study Day 156)
Renal Cyst	Grade 1/mild	Not related	13 Jan 2021 (Study Day 154) - Ongoing
Vomiting	Grade 2/moderate	Not related	13 Jan 2021 (Study Day 154) - 15 Jan 2021 (Study Day 156)
Constipation	Grade 2/moderate	Not related	15 Jan 2021 (Study Day 156) - 18 Jan 2021 (Study Day 159)
Hyperbilirubinaemia	Grade 1/mild	Not related	11 Mar 2021 (Study Day 211) - Ongoing
Hypertonic Bladder	Grade 2/moderate	Not related	11 Mar 2021 (Study Day 211) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Alcohol Withdrawal Syndrome/Etoh Withdrawl	SAE	Grade 4	Not related	04 Nov 2020 (Study Day 65) – 06 Nov 2020 (Study Day 67)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2402, a 67-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 01 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 29 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Nov 2020 (Study Day 65), 64 days after the first dose and 36 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of alcohol withdrawal syndrome. Action taken with the IP was not applicable. The event of etoh withdrawl lasted for 3 days, after which it was considered to be recovered/resolved on 06 Nov 2020 (Study Day 67). The investigator assessed the event of alcohol withdrawal syndrome to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000717	Alcohol withdrawal syndrome

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Organ donor	Right kidney donation	1993 - 1993
Depression	Depression	1999 - Ongoing
Postmenopause	Postmenopausal	2001 - Ongoing
Hypertension	Hypertension	2015 - Ongoing
Malignant melanoma	Melanoma on face	Mar 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Citalopram hydrobromide	2000 - Ongoing	Depression
Botulinum toxin type a	2008 - 2008	Glabellar Lines - Cosmetic Forehead
Amlodipine	2015 - 11 Jan 2021 (Study Day 133)	Hypertension
Olmesartan medoxomil	2015 - 11 Jan 2021 (Study Day 133)	Hypertension
Influenza vaccine	14 Oct 2020 (Study Day 44) - 14 Oct 2020 (Study Day 44)	Flu Prevention
Hydrocodone bitartrate; paracetamol	Nov 2020 - 31 Dec 2020 (Study Day 122)	Right Foot Fracture
Ct head no contrast*	03 Nov 2020 (Study Day 64) - 03 Nov 2020 (Study Day 64)	Adverse Event
X-ray chest*	03 Nov 2020 (Study Day 64) - 03 Nov 2020 (Study Day 64)	Adverse Event
X-ray fibula*	03 Nov 2020 (Study Day 64) - 03 Nov 2020 (Study Day 64)	Adverse Event
X-ray right ankle*	03 Nov 2020 (Study Day 64) - 03 Nov 2020 (Study Day 64)	Adverse Event
X-ray tibia*	03 Nov 2020 (Study Day 64) - 03 Nov 2020 (Study Day 64)	Adverse Event
Clonidine	04 Nov 2020 (Study Day 65) - 04 Nov 2020 (Study Day 65)	Relax Blood Vessels
Cyanocobalamin	04 Nov 2020 (Study Day 65) - 04 Nov 2020 (Study Day 65)	Vitamin B Deficiancy
Folic acid	04 Nov 2020 (Study Day 65) - 04 Nov 2020 (Study Day 65)	Vitamin B Defiancy
Hydrocodone bitartrate; paracetamol	04 Nov 2020 (Study Day 65) - 06 Nov 2020 (Study Day 67)	Pain
Lorazepam	04 Nov 2020 (Study Day 65) - 04 Nov 2020 (Study Day 65)	Alcohol Withdrawal
Lorazepam	04 Nov 2020 (Study Day 65) - 06 Nov 2020 (Study Day 67)	Alcohol Withdrawal

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Meclozine	04 Nov 2020 (Study Day 65) - 04 Nov 2020 (Study Day 65)	Dizziness
Morphine	04 Nov 2020 (Study Day 65) - 04 Nov 2020 (Study Day 65)	Pain
Ondansetron	04 Nov 2020 (Study Day 65) - 04 Nov 2020 (Study Day 65)	Nausea
Sodium chloride	04 Nov 2020 (Study Day 65) - 04 Nov 2020 (Study Day 65)	Dehydration / Hyponatremia
Splinting of right foot*	04 Nov 2020 (Study Day 65) - 04 Nov 2020 (Study Day 65)	Adverse Event
Gramicidin; neomycin sulfate; polymyxin b sulfate	06 Nov 2020 (Study Day 67) - 12 Nov 2020 (Study Day 73)	Knee Laceration
Right foot surgery*	16 Nov 2020 (Study Day 77) - 16 Nov 2020 (Study Day 77)	Adverse Event
Hydroxyzine	Dec 2020 - 10 Jan 2021 (Study Day 132)	Insomnia
Olmesartan medoxomil	13 Jan 2021 (Study Day 135) - Ongoing	Hypertension
Trazodone	13 Jan 2021 (Study Day 135) - Ongoing	Insomnia
Mirabegron	15 Feb 2021 (Study Day 168) - Ongoing	Overactive Bladder

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	30 Sep 2020 (Study Day 30) - 09 Oct 2020 (Study Day 39)
Foot Fracture	Grade 3/severe	Not related	03 Nov 2020 (Study Day 64) - 06 Jan 2021 (Study Day 128)
Skin Laceration	Grade 1/mild	Not related	03 Nov 2020 (Study Day 64) - 15 Feb 2021 (Study Day 168)
Dizziness	Grade 2/moderate	Not related	04 Nov 2020 (Study Day 65) - 04 Nov 2020 (Study Day 65)
Dyspnoea	Grade 1/mild	Not related	04 Nov 2020 (Study Day 65) - 04 Nov 2020 (Study Day 65)
Hyponatraemia	Grade 2/moderate	Not related	04 Nov 2020 (Study Day 65) - 06 Nov 2020 (Study Day 67)
Liver Function Test Increased	Grade 1/mild	Not related	04 Nov 2020 (Study Day 65) - Ongoing
Vitamin B12 Deficiency	Grade 1/mild	Not related	04 Nov 2020 (Study Day 65) - Ongoing
Insomnia	Grade 2/moderate	Not related	01 Dec 2020 (Study Day 92) - Ongoing
Hypertonic Bladder	Grade 2/moderate	Not related	15 Feb 2021 (Study Day 168) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US389-2059 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	08 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	05 Oct 2020 (Study Day 28)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19 Pneumonia/ COVID - 19 Pneumonia	COVID-19	Grade 3/ severe	Not related	27 Nov 2020 (Study Day 81) – 03 Jan 2021 (Study Day 118)	Recovered/ resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US389-2059, a 39-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 08 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 05 Oct 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 27 Nov 2020 (Study Day 81), 80 days after the first dose and 53 days after the second dose of the IP, the participant experienced a Grade 3/Severe non-serious adverse event of COVID - 19 pneumonia.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 28, 05 Oct 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 30 Nov 2020 (Study Day 84), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
28 Nov 2020 (Study Day 82)	Body Aches	Moderate
28 Nov 2020 (Study Day 82)	Chills	Moderate
28 Nov 2020 (Study Day 82)	Cough	Moderate
28 Nov 2020 (Study Day 82)	Difficulty Breathing	Mild
28 Nov 2020 (Study Day 82)	Fatigue	Moderate

Symptom Date	Symptom	Result
28 Nov 2020 (Study Day 82)	Headache	Moderate
28 Nov 2020 (Study Day 82)	Muscle Aches (Myalgia)	Moderate
28 Nov 2020 (Study Day 82)	Nasal Congestion	Mild
28 Nov 2020 (Study Day 82)	Shortness of Breath	Moderate
30 Nov 2020 (Study Day 84)	Body Aches	Mild
30 Nov 2020 (Study Day 84)	Chills	Moderate
30 Nov 2020 (Study Day 84)	Cough	Mild
30 Nov 2020 (Study Day 84)	Fatigue	Mild
30 Nov 2020 (Study Day 84)	Headache	Mild
30 Nov 2020 (Study Day 84)	Nasal Congestion	Mild
30 Nov 2020 (Study Day 84)	Shortness of Breath	Mild
01 Dec 2020 (Study Day 85)	Body Aches	Moderate
01 Dec 2020 (Study Day 85)	Chills	Mild
01 Dec 2020 (Study Day 85)	Cough	Moderate
01 Dec 2020 (Study Day 85)	Difficulty Breathing	Moderate
01 Dec 2020 (Study Day 85)	Fatigue	Moderate
01 Dec 2020 (Study Day 85)	Headache	Severe
01 Dec 2020 (Study Day 85)	Muscle Aches (Myalgia)	Moderate
01 Dec 2020 (Study Day 85)	Nasal Congestion	Moderate
01 Dec 2020 (Study Day 85)	Nausea	Moderate
01 Dec 2020 (Study Day 85)	Runny Nose (Rhinorrhea)	Mild
01 Dec 2020 (Study Day 85)	Shortness of Breath	Moderate
01 Dec 2020 (Study Day 85)	Sore Throat	Mild
02 Dec 2020 (Study Day 86)	Body Aches	Severe
02 Dec 2020 (Study Day 86)	Chills	Moderate
02 Dec 2020 (Study Day 86)	Cough	Moderate
02 Dec 2020 (Study Day 86)	Difficulty Breathing	Moderate
02 Dec 2020 (Study Day 86)	Fatigue	Severe
02 Dec 2020 (Study Day 86)	Headache	Mild
02 Dec 2020 (Study Day 86)	Muscle Aches (Myalgia)	Moderate
02 Dec 2020 (Study Day 86)	Nasal Congestion	Moderate
02 Dec 2020 (Study Day 86)	Nausea	Moderate
02 Dec 2020 (Study Day 86)	Shortness of Breath	Moderate

27 Dec 2020 (Study Day 111)	Chills	Mild
27 Dec 2020 (Study Day 111)	Cough	Mild
27 Dec 2020 (Study Day 111)	Fatigue	Moderate
27 Dec 2020 (Study Day 111)	Nausea	Moderate
27 Dec 2020 (Study Day 111)	O2 Saturation (%)	92
27 Dec 2020 (Study Day 111)	Shortness of Breath	Mild
28 Dec 2020 (Study Day 112)	Cough	Mild
28 Dec 2020 (Study Day 112)	Diarrhea	Mild
28 Dec 2020 (Study Day 112)	Fatigue	Moderate
28 Dec 2020 (Study Day 112)	Headache	Mild
28 Dec 2020 (Study Day 112)	Nausea	Moderate
28 Dec 2020 (Study Day 112)	Shortness of Breath	Moderate
28 Dec 2020 (Study Day 112)	Vomiting	Mild
28 Feb 2021 (Study Day 174)	Sore Throat	Mild
01 Mar 2021 (Study Day 175)	Sore Throat	Mild
02 Mar 2021 (Study Day 176)	Chills	Mild
02 Mar 2021 (Study Day 176)	Cough	Mild
02 Mar 2021 (Study Day 176)	Sore Throat	Mild
03 Mar 2021 (Study Day 177)	Chills	Mild
03 Mar 2021 (Study Day 177)	Sore Throat	Mild
04 Mar 2021 (Study Day 178)	Chills	Mild
04 Mar 2021 (Study Day 178)	Sore Throat	Mild
06 Mar 2021 (Study Day 180)	O2 Saturation (%)	93
08 Mar 2021 (Study Day 182)	O2 Saturation (%)	93

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
02 Dec 2020 (Study Day 86)	Heart Rate	125 beats/min
03 Dec 2020 (Study Day 87)	Oxygen Saturation	90%
02 Dec 2020 - 09 Dec 2020 (Study Day 86-93)	Heart Rate ≥ 125 per Minute	Yes
03 Dec 2020 - 27 Dec 2020 (Study Day 87-111)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes
07 Dec 2020 - 07 Dec 2020 (Study Day 91-91)	Radiographical Evidence of Pneumonia	Yes
08 Dec 2020 - 08 Dec 2020 (Study Day 92-92)	Clinical Evidence of Pneumonia	Yes

Action taken with the IP was not applicable. The event of COVID - 19 pneumonia lasted for 38 days, after which it was considered to be recovered/resolved with sequelae on 03 Jan 2021 (Study Day 118). The investigator assessed the event of COVID-19 pneumonia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001067	COVID-19 pneumonia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	2015 - Ongoing
Pain in extremity	Left foot pain	2017 - Ongoing
Dyslipidaemia	Dyslipidemia	08 Sep 2018 (Study Day -731) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2017 - Ongoing	Left Foot Pain
Codeine phosphate; promethazine hydrochloride	29 Nov 2020 (Study Day 83) - 05 Dec 2020 (Study Day 89)	COVID - 19 Pneumonia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Dextromethorphan hydrobromide; paracetamol; phenylephrine hydrochloride	29 Nov 2020 (Study Day 83) - 07 Dec 2020 (Study Day 91)	COVID - 19 Pneumonia
Chest x-ray*	07 Dec 2020 (Study Day 91) - 07 Dec 2020 (Study Day 91)	Adverse Event
Doxycycline	07 Dec 2020 (Study Day 91) - 13 Dec 2020 (Study Day 97)	COVID - 19 Pneumonia
Dextromethorphan hydrobromide	08 Dec 2020 (Study Day 92) - 25 Dec 2020 (Study Day 109)	COVID-19 Pneumonia
Benzonatate	14 Dec 2020 (Study Day 98) - 02 Jan 2021 (Study Day 117)	COVID-19 Pneumonia
Dexamethasone	14 Dec 2020 (Study Day 98) - 24 Dec 2020 (Study Day 108)	COVID-19 Pneumonia
Ibuprofen	04 Jan 2021 (Study Day 119) - Ongoing	Post-COVID Syndrome
Ibuprofen	02 Mar 2021 (Study Day 176) - 03 Mar 2021 (Study Day 177)	Acute Pharyngitis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19 Pneumonia	Grade 3/severe	Not related	27 Nov 2020 (Study Day 81) - 03 Jan 2021 (Study Day 118)
Infection	Grade 1/mild	Not related	04 Jan 2021 (Study Day 119) - Ongoing
Conjunctivitis Viral	Grade 2/moderate	Not related	27 Jan 2021 (Study Day 142) - 30 Jan 2021 (Study Day 145)
Pharyngitis	Grade 1/mild	Not related	27 Feb 2021 (Study Day 173) - 05 Mar 2021 (Study Day 179)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US390-2015 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	08 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	06 Oct 2020 (Study Day 29)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	COVID-19	Grade 2/ moderate	Not related	26 Oct 2020 (Study Day 49) – 10 Nov 2020 (Study Day 64)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US390-2015, a 53-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 08 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 06 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 26 Oct 2020 (Study Day 49), 48 days after the first dose and 20 days after the second dose of the IP, the participant experienced a Grade 2/Moderate non-serious adverse event of COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 06 Oct 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 28 Oct 2020 (Study Day 51), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
26 Oct 2020 (Study Day 49)	Body Aches	Mild
26 Oct 2020 (Study Day 49)	Chills	Mild
26 Oct 2020 (Study Day 49)	Cough	Mild
26 Oct 2020 (Study Day 49)	Fatigue	Mild
26 Oct 2020 (Study Day 49)	Nasal Congestion	Mild
27 Oct 2020 (Study Day 50)	Body Aches	Mild

Symptom Date	Symptom	Result
27 Oct 2020 (Study Day 50)	Chills	Mild
27 Oct 2020 (Study Day 50)	Cough	Mild
27 Oct 2020 (Study Day 50)	Fatigue	Mild
27 Oct 2020 (Study Day 50)	Nasal Congestion	Mild
28 Oct 2020 (Study Day 51)	Body Aches	Mild
28 Oct 2020 (Study Day 51)	Chills	Mild
28 Oct 2020 (Study Day 51)	Fatigue	Mild
28 Oct 2020 (Study Day 51)	Headache	Mild
28 Oct 2020 (Study Day 51)	Muscle Aches (Myalgia)	Mild
28 Oct 2020 (Study Day 51)	Nasal Congestion	Mild
28 Oct 2020 (Study Day 51)	Runny Nose (Rhinorrhea)	Mild
28 Oct 2020 (Study Day 51)	Sore Throat	Mild
29 Oct 2020 (Study Day 52)	Body Aches	Moderate
29 Oct 2020 (Study Day 52)	Chills	Moderate
29 Oct 2020 (Study Day 52)	Cough	Moderate
29 Oct 2020 (Study Day 52)	Difficulty Breathing	Moderate
29 Oct 2020 (Study Day 52)	Fatigue	Moderate
29 Oct 2020 (Study Day 52)	Headache	Mild
29 Oct 2020 (Study Day 52)	Muscle Aches (Myalgia)	Moderate
29 Oct 2020 (Study Day 52)	Nasal Congestion	Mild
29 Oct 2020 (Study Day 52)	Shortness of Breath	Mild
29 Oct 2020 (Study Day 52)	Temperature (°F)	102.4
30 Oct 2020 (Study Day 53)	Body Aches	Mild

06 Nov 2020 (Study Day 60)	Body Aches	Moderate
06 Nov 2020 (Study Day 60)	Cough	Mild
06 Nov 2020 (Study Day 60)	Difficulty Breathing	Mild
06 Nov 2020 (Study Day 60)	Fatigue	Mild
06 Nov 2020 (Study Day 60)	Headache	Mild
06 Nov 2020 (Study Day 60)	Muscle Aches (Myalgia)	Moderate
06 Nov 2020 (Study Day 60)	O2 Saturation (%)	92
06 Nov 2020 (Study Day 60)	Shortness of Breath	Moderate
07 Nov 2020 (Study Day 61)	Body Aches	Mild
07 Nov 2020 (Study Day 61)	Cough	Mild
07 Nov 2020 (Study Day 61)	Fatigue	Mild
07 Nov 2020 (Study Day 61)	Muscle Aches (Myalgia)	Mild
07 Nov 2020 (Study Day 61)	Shortness of Breath	Mild
08 Nov 2020 (Study Day 62)	Body Aches	Mild
08 Nov 2020 (Study Day 62)	Cough	Mild
08 Nov 2020 (Study Day 62)	Fatigue	Mild

Symptom Date	Symptom	Result
08 Nov 2020 (Study Day 62)	Muscle Aches (Myalgia)	Mild
08 Nov 2020 (Study Day 62)	Shortness of Breath	Mild
09 Nov 2020 (Study Day 63)	Body Aches	Mild
09 Nov 2020 (Study Day 63)	Difficulty Breathing	Mild
09 Nov 2020 (Study Day 63)	Fatigue	Mild
09 Nov 2020 (Study Day 63)	Muscle Aches (Myalgia)	Mild
09 Nov 2020 (Study Day 63)	Shortness of Breath	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
06 Nov 2020 (Study Day 60)	Oxygen Saturation	92%
06 Nov 2020 - 06 Nov 2020 (Study Day 60-60)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID-19 lasted for 16 days, after which it was considered to be recovered/resolved on 10 Nov 2020 (Study Day 64). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000627	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Morbid obesity	1996 - Ongoing
Back pain	Generalized back pain	2009 - Ongoing
Muscle spasms	Muscle spasms - back	2016 - Ongoing
Peripheral swelling	Bilateral lower leg swelling	2018 - Ongoing
Postmenopause	Postmenopausal	10 Aug 2019 (Study Day -395) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cyclobenzaprine	2016 - 02 Oct 2020 (Study Day 25)	Muscle Spasms In Back
Meloxicam	2018 - Ongoing	Back Pain
Hydrochlorothiazide	2019 - Ongoing	Bilateral Lower Leg Swelling
Baclofen	03 Oct 2020 (Study Day 26) - Ongoing	Muscle Spasms In Back
Naproxen sodium	27 Oct 2020 (Study Day 50) - 10 Nov 2020 (Study Day 64)	Symptomatic COVID-19
Diphenhydramine hydrochloride; paracetamol; phenylephrine hydrochloride	02 Nov 2020 (Study Day 56) - 10 Nov 2020 (Study Day 64)	Symptomatic COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	26 Oct 2020 (Study Day 49) - 10 Nov 2020 (Study Day 64)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US390-2019 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Urticaria/Urticarial Rash On Buttocks And Bilateral Axilla	AE leading to withdrawal from study vaccine	Grade 2/moderate	Related	05 Sep 2020 (Study Day 4) – 11 Sep 2020 (Study Day 10)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US390-2019, a 61-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 02 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 05 Sep 2020 (Study Day 4), 3 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of urticaria. On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of urticarial rash on buttocks and bilateral axilla lasted for 7 days, after which it was considered to be recovered/resolved on 11 Sep 2020 (Study Day 10). The investigator assessed the event of urticaria to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Gastric bypass	Gastric bypass	2003 - 2003

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Postmenopause	Postmenopausal	2003 - Ongoing
Cholecystectomy	Cholecystectomy	2004 - 2004
Cholecystitis	Cholecystitis	2004 - 2004
Intestinal resection	Twisted bowel resection	2004 - 2004
Volvulus	Twisted bowel	2004 - 2004
Botulinum toxin injection	Botox	2014 - 2014
Migraine	Migraines	2014 - 2014
Humerus fracture	Humerus fracture - left	Dec 2015 - Dec 2015
Humerus fracture	Humerus fracture left	Dec 2015 - Dec 2015
Shoulder operation	Left shoulder surgery	Dec 2015 - Dec 2015
Shoulder operation	Left shoulder surgery	Jun 2016 - Jun 2016
Shoulder arthroplasty	Left shoulder replacement	Sep 2016 - Sep 2016
Intestinal perforation	Perforated bowel	Mar 2018 - Mar 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydroxyzine	08 Sep 2020 (Study Day 7) - 11 Sep 2020 (Study Day 10)	Urticarial Rash On Buttocks And Bilateral Axilla
Naproxen	10 Oct 2020 (Study Day 39) - Ongoing	Soreness In Joints - Bilateral Hips
Ascorbic acid; echinacea purpurea; zinc citrate; zinc gluconate	20 Nov 2020 (Study Day 80) - 07 Dec 2020 (Study Day 97)	COVID-19 Symptoms
Paracetamol	20 Nov 2020 (Study Day 80) - 07 Dec 2020 (Study Day 97)	COVID-Like Symptoms
Ibuprofen	23 Nov 2020 (Study Day 83) - 07 Dec 2020 (Study Day 97)	COVID-Like Symptoms
Dextromethorphan hydrobromide; paracetamol; phenylephrine hydrochloride	24 Nov 2020 (Study Day 84) - 07 Dec 2020 (Study Day 97)	Covd-Like Symptoms
Diphenhydramine hydrochloride	04 Dec 2020 (Study Day 94) - 07 Dec 2020 (Study Day 97)	COVID-Like Symptoms

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Urticaria	Grade 2/moderate	Related	05 Sep 2020 (Study Day 4) - 11 Sep 2020 (Study Day 10)
Arthralgia	Grade 1/mild	Related	05 Oct 2020 (Study Day 34) - Ongoing

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Suspected COVID-19	Grade 2/moderate	Not related	20 Nov 2020 (Study Day 80) - 07 Dec 2020 (Study Day 97)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379601

Participant Number:	US390-2030 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Urticaria/Hives	AE leading to withdrawal from study vaccine	Grade 1/ mild	Related	05 Sep 2020 (Study Day 3) – 21 Sep 2020 (Study Day 19)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US390-2030, a 66-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 03 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 05 Sep 2020 (Study Day 3), 2 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of urticaria. On 30 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of hives lasted for 17 days, after which it was considered to be recovered/resolved on 21 Sep 2020 (Study Day 19). The investigator assessed the event of urticaria to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Inguinal hernia	Inguinal hernia	1972 - 1972
Hypertension	Hypertension	2014 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 2 diabetes mellitus	Diabetes type 2	2014 - Ongoing
Osteoarthritis	Osteoarthritis of knees	2015 - Ongoing
Hiatus hernia	Hiatal hernia	2016 - 2019
Cholecystectomy	Cholecystectomy	2017 - 2017
Cholecystitis	Cholecystitis	2017 - 2017
Gastrooesophageal reflux disease	Gastroesophogeal reflux disease	2018 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2018 - Ongoing
Knee arthroplasty	Left knee replacement	16 Jan 2020 (Study Day -231) - 16 Jan 2020 (Study Day -231)
Knee arthroplasty	Right knee replacement	16 Jan 2020 (Study Day -231) - 16 Jan 2020 (Study Day -231)
Neuropathy peripheral	Peripheral neuropathy	Mar 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine	2014 - Sep 2020	Hypertension
Metformin hydrochloride	2014 - Ongoing	Diabetes Type Ii
Hydrochlorothiazide	2015 - Ongoing	Hypertension
Lisinopril	2015 - 20 Oct 2020 (Study Day 48)	Hypertension
Empagliflozin	2016 - Ongoing	Diabetes Type Ii
Lovastatin	2018 - Ongoing	Hypercholestrolemia
Insulin human; insulin human injection, isophane	2019 - 20 Oct 2020 (Study Day 48)	Diabetes Type Ii
Omeprazole	Mar 2020 - Ongoing	Gerd
Pregabalin	Mar 2020 - Ongoing	Peripheral Neuropathy
Paracetamol	06 Sep 2020 (Study Day 4) - 08 Sep 2020 (Study Day 6)	Injection Site Pain
Diphenhydramine hydrochloride	09 Sep 2020 (Study Day 7) - 18 Sep 2020 (Study Day 16)	Hives
Insulin human; insulin human injection, isophane	20 Oct 2020 (Study Day 48) - Ongoing	Diabetes Ii
Lisinopril	20 Oct 2020 (Study Day 48) - Ongoing	Hypertension
Hiatal hernia repair*	24 Nov 2020 (Study Day 83) - 24 Nov 2020 (Study Day 83)	Medical History
Amoxicillin	13 Jan 2021 (Study Day 133) - 20 Jan 2021 (Study Day 140)	Ae #4: Upper Respiratory Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Lip Swelling	Grade 2/moderate	Related	05 Sep 2020 (Study Day 3) - 08 Sep 2020 (Study Day 6)
Pain In Extremity	Grade 1/mild	Related	05 Sep 2020 (Study Day 3) - 23 Sep 2020 (Study Day 21)
Urticaria	Grade 1/mild	Related	05 Sep 2020 (Study Day 3) - 21 Sep 2020 (Study Day 19)
Arthralgia	Grade 1/mild	Related	11 Sep 2020 (Study Day 9) - 14 Sep 2020 (Study Day 12)
Fatigue	Grade 1/mild	Related	11 Sep 2020 (Study Day 9) - 14 Sep 2020 (Study Day 12)
Injection Site Erythema	Grade 1/mild	Related	11 Sep 2020 (Study Day 9) - 14 Sep 2020 (Study Day 12)
Myalgia	Grade 1/mild	Related	11 Sep 2020 (Study Day 9) - 11 Sep 2020 (Study Day 9)
Upper Respiratory Tract Infection	Grade 2/moderate	Not related	13 Jan 2021 (Study Day 133) - 20 Jan 2021 (Study Day 140)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US391-2114 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	04 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Humerus Fracture/ Broken Right Humerus	SAE	Grade 4	Not related	30 Oct 2020 (Study Day 57) – 10 Nov 2020 (Study Day 68)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US391-2114, a 74-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 04 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Oct 2020 (Study Day 57), 56 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of humerus fracture. On 01 Oct 2020 (Study Day 28), the IP dose was discontinued due to protocol deviation. The event of broken right humerus lasted for 12 days, after which it was considered to be recovered/resolved on 10 Nov 2020 (Study Day 68). The investigator assessed the event of humerus fracture to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000734	Humerus fracture

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug eruption	Penicillin allergy (rash)	1960 - Ongoing
Seasonal allergy	Seasonal allergies (cough, runny nose)	1966 - Ongoing
Drug eruption	Feldene allergy (rash)	1978 - Ongoing
Drug eruption	Lipitor allergy (rash)	1990 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2000 - Ongoing
Postmenopause	Post menopausal	2001 - Ongoing
Drug eruption	Gadolinium derivatives (rash)	2003 - Ongoing
Hypothyroidism	Hypothyroidism	2005 - Ongoing
Cataract	Bilateral cataracts	2011 - Aug 2018
Triple negative breast cancer	Triple negative breast cancer left breast	Apr 2011 - Nov 2011
Breast conserving surgery	Lumpectomy left breast	02 May 2011 (Study Day -3413) - 02 May 2020 (Study Day -125)
Cataract operation	Bilateral cataract surgery	Aug 2018 - Aug 2018
Hypertension	Hypertension	Aug 2020 - Ongoing
Pain	Body aches	31 Aug 2020 (Study Day -4) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	2005 - Ongoing	Hypothyroidism
Acetylsalicylic acid	2010 - Ongoing	Cardiac
Chondroitin sulfate sodium; glucosamine hydrochloride	2010 - Ongoing	Supplement
Vitamins nos	2010 - Ongoing	Supplement
Calcium; colecalciferol	2011 - Ongoing	Supplement
Vitamin d nos	2011 - Ongoing	Supplement
Fish oil	2017 - Ongoing	Supplement
Rosuvastatin calcium	2018 - Ongoing	Hypercholesterolemia
Biotin	2019 - Ongoing	Supplement
Minoxidil	2019 - Ongoing	Hair Loss
Lisinopril	17 Aug 2020 (Study Day -18) - Ongoing	Hypertension
Ibuprofen	31 Aug 2020 (Study Day -4) - 31 Aug 2020 (Study Day -4)	Body Aches
Acetylsalicylic acid; caffeine; paracetamol	05 Sep 2020 (Study Day 2) - 05 Sep 2020 (Study Day 2)	Headache
Diphenhydramine hydrochloride	13 Sep 2020 (Study Day 10) - 13 Sep 2020 (Study Day 10)	Injection Site Reaction Left Deltoid

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine hydrochloride	13 Sep 2020 (Study Day 10) - 14 Sep 2020 (Study Day 11)	Injection Site Reaction Left Deltoid
Influenza vaccine	09 Oct 2020 (Study Day 36) - 09 Oct 2020 (Study Day 36)	Flu Prevention
Hydrocodone bitartrate; paracetamol	30 Oct 2020 (Study Day 57) - 10 Nov 2020 (Study Day 68)	Broken Right Humerus (Related To Fall)
Ibuprofen	30 Oct 2020 (Study Day 57) - 01 Jan 2021 (Study Day 120)	Right Shoulder Pain
Oxycodone	30 Oct 2020 (Study Day 57) - 01 Jan 2021 (Study Day 120)	Right Shoulder Pain
Open reduction internal fixation right humerus*	10 Nov 2020 (Study Day 68) - 10 Nov 2020 (Study Day 68)	Adverse Event
Dexamethasone; tobramycin	20 Feb 2021 (Study Day 170) - 06 Mar 2021 (Study Day 184)	Stye
Doxycycline	20 Feb 2021 (Study Day 170) - 06 Mar 2021 (Study Day 184)	Stye

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypertension	Grade 3/severe	Not related	04 Sep 2020 (Study Day 1) - 05 Sep 2020 (Study Day 2)
Injection Site Pruritus	Grade 1/mild	Related	13 Sep 2020 (Study Day 10) - 18 Sep 2020 (Study Day 15)
Seasonal Allergy	Grade 1/mild	Not related	16 Oct 2020 (Study Day 43) - 31 Oct 2020 (Study Day 58)
Hypertension	Grade 3/severe	Not related	30 Oct 2020 (Study Day 57) - 04 Nov 2020 (Study Day 62)
Musculoskeletal Pain	Grade 2/moderate	Not related	30 Oct 2020 (Study Day 57) - 01 Jan 2021 (Study Day 120)
Respiratory Disorder	Grade 1/mild	Not related	30 Oct 2020 (Study Day 57) - 04 Nov 2020 (Study Day 62)
Hordeolum	Grade 2/moderate	Not related	15 Feb 2021 (Study Day 165) - 07 Mar 2021 (Study Day 185)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US391-2163 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	15 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	13 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Myocardial Infarction/Nstemi-Non St-Elevation Myocardial Infarction	SAE	Grade 3/severe	Not related	01 Feb 2021 (Study Day 140) – 02 Feb 2021 (Study Day 141)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US391-2163, a 43-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 15 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 13 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Feb 2021 (Study Day 140), 139 days after the first dose and 111 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of acute myocardial infarction. Action taken with the IP was not applicable. The event of nstemi-non st-elevation myocardial infarction lasted for 2 days, after which it was considered to be recovered/resolved on 02 Feb 2021 (Study Day 141). The investigator assessed the event of acute myocardial infarction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-010952	Acute myocardial infarction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	Sep 2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metoprolol tartrate	Sep 2018 - Ongoing	Hypertension
Ascorbic acid	07 Dec 2020 (Study Day 84) - Ongoing	Health Supplement
Azelastine hydrochloride	07 Dec 2020 (Study Day 84) - 21 Dec 2020 (Study Day 98)	Nasal Congestion
Calcium; magnesium; zinc	07 Dec 2020 (Study Day 84) - Ongoing	Health Supplement
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	07 Dec 2020 (Study Day 84) - 21 Dec 2020 (Study Day 98)	Nasal Congestion
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	07 Dec 2020 (Study Day 84) - 08 Dec 2020 (Study Day 85)	Nasal Congestion
Guaifenesin	07 Dec 2020 (Study Day 84) - 10 Dec 2020 (Study Day 87)	Cough
Ibuprofen	07 Dec 2020 (Study Day 84) - 21 Dec 2020 (Study Day 98)	Body Aches
Zinc	07 Dec 2020 (Study Day 84) - Ongoing	Health Supplement
Bismuth subsalicylate	16 Dec 2020 (Study Day 93) - 16 Dec 2020 (Study Day 93)	Diarrhea
Acetylsalicylic acid	01 Feb 2021 (Study Day 140) - Ongoing	Myocardial Infarction
Angioplasty*	01 Feb 2021 (Study Day 140) - 01 Feb 2021 (Study Day 140)	Adverse Event
Glyceryl trinitrate	01 Feb 2021 (Study Day 140) - Ongoing	Myocardial Infarction
Rosuvastatin	01 Feb 2021 (Study Day 140) - Ongoing	Hyperlipidemia
Stent placement*	01 Feb 2021 (Study Day 140) - 01 Feb 2021 (Study Day 140)	Adverse Event
Ticagrelor	01 Feb 2021 (Study Day 140) - Ongoing	Myocardial Infarction

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diarrhoea	Grade 2/moderate	Related	15 Sep 2020 (Study Day 1) - 16 Sep 2020 (Study Day 2)
Hypertension	Grade 3/severe	Not related	13 Oct 2020 (Study Day 29) - 13 Oct 2020 (Study Day 29)
COVID-19	Grade 1/mild	Not related	04 Dec 2020 (Study Day 81) - 22 Dec 2020 (Study Day 99)
Diarrhoea	Grade 1/mild	Not related	08 Dec 2020 (Study Day 85) - 08 Dec 2020 (Study Day 85)
Hyperlipidaemia	Grade 2/moderate	Not related	01 Feb 2021 (Study Day 140) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2066 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 27)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Confirmed COVID 19	COVID-19	Grade 3/severe	Not related	20 Nov 2020 (Study Day 80) – 06 Dec 2020 (Study Day 96)	Recovered/ resolved
Osteoarthritis/Worsening Left Knee Osteoarthritis	SAE	Grade 3/severe	Not related	28 Dec 2020 (Study Day 118) – 16 Feb 2021 (Study Day 168)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US393-2066, a 78-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 02 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 28 Sep 2020 (Study Day 27). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Dec 2020 (Study Day 118), 117 days after the first dose and 91 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of osteoarthritis. Action taken with the IP was not applicable. The event of worsening left knee osteoarthritis lasted for 51 days, after which it was considered to be recovered/resolved on 16 Feb 2021 (Study Day 168). The investigator assessed the event of osteoarthritis to be not related to the IP.

Severe COVID-19 Details

On 20 Nov 2020 (Study Day 80), 79 days after the first dose and 53 days after the second dose of the IP, the participant experienced a Grade 3/Severe non-serious adverse event of confirmed COVID 19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 27, 28 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 23 Nov 2020 (Study Day 83), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
20 Nov 2020 (Study Day 80)	Body Aches	Mild
20 Nov 2020 (Study Day 80)	Chills	Mild
20 Nov 2020 (Study Day 80)	Fatigue	Mild
20 Nov 2020 (Study Day 80)	Temperature (°F)	102.1
21 Nov 2020 (Study Day 81)	Body Aches	Mild
21 Nov 2020 (Study Day 81)	Chills	Mild
21 Nov 2020 (Study Day 81)	Fatigue	Mild
22 Nov 2020 (Study Day 82)	Fatigue	Mild
23 Nov 2020 (Study Day 83)	Fatigue	Mild
24 Nov 2020 (Study Day 84)	Fatigue	Moderate
24 Nov 2020 (Study Day 84)	Nasal Congestion	Mild
24 Nov 2020 (Study Day 84)	New Loss of Smell	Mild
25 Nov 2020 (Study Day 85)	Fatigue	Moderate
25 Nov 2020 (Study Day 85)	Nasal Congestion	Mild
25 Nov 2020 (Study Day 85)	New Loss of Smell	Mild
27 Nov 2020 (Study Day 87)	Fatigue	Mild
27 Nov 2020 (Study Day 87)	Nasal Congestion	Mild
27 Nov 2020 (Study Day 87)	New Loss of Smell	Mild
28 Nov 2020 (Study Day 88)	Fatigue	Mild
28 Nov 2020 (Study Day 88)	New Loss of Smell	Mild
29 Nov 2020 (Study Day 89)	Fatigue	Mild
29 Nov 2020 (Study Day 89)	New Loss of Smell	Mild
30 Nov 2020 (Study Day 90)	Fatigue	Mild
30 Nov 2020 (Study Day 90)	New Loss of Smell	Mild
01 Dec 2020 (Study Day 91)	Fatigue	Mild
01 Dec 2020 (Study Day 91)	New Loss of Smell	Mild
01 Dec 2020 (Study Day 91)	O2 Saturation (%)	93
02 Dec 2020 (Study Day 92)	Fatigue	Mild
02 Dec 2020 (Study Day 92)	New Loss of Smell	Mild
03 Dec 2020 (Study Day 93)	Fatigue	Mild
03 Dec 2020 (Study Day 93)	New Loss of Smell	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
01 Dec 2020 (Study Day 91)	Oxygen Saturation	93%
01 Dec 2020 - 01 Dec 2020 (Study Day 91-91)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of confirmed COVID 19 lasted for 17 days, after which it was considered to be recovered/resolved on 06 Dec 2020 (Study Day 96). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious and nonserious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001244	COVID-19
MOD-2021-014088	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Deafness bilateral	Bilateral hearing loss	Not reported - Ongoing
Drug hypersensitivity	Scopolamine allergy	Not reported - Ongoing
Drug hypersensitivity	Steroid allergy	Not reported - Ongoing
Dry eye	Dry eye	Not reported - Ongoing
Osteoarthritis	Osteoarthritis	Not reported - Ongoing
Neck pain	Neck pain	1959 - Ongoing
Headache	Headache	1965 - Ongoing
Back pain	Back pain	1995 - Ongoing
Upper limb fracture	Rt arm fracture	1995 - 1995
Prostatomegaly	Enlarged prostate	2000 - Ongoing
Pollakiuria	Frequent urination	2010 - Ongoing
Seasonal allergy	Seasonal allergies	2015 - Ongoing
Herpes zoster	Shingles	2016 - 2016
Erectile dysfunction	Erectile dysfunction	2018 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2018 - Ongoing
Osteoarthritis	Osteoarthritis right hip	2018 - Ongoing
Anxiety	Anxiety	2020 - Ongoing
Depression	Depression	2020 - Ongoing
Asthma	Asthma	Apr 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Naproxen sodium	2000 - Ongoing	Neck And Back Pain
Montelukast	2015 - Ongoing	Seasonal Allergies
Esomeprazole magnesium	2018 - Ongoing	Gastroesophageal Reflux Disease
Fluticasone furoate; vilanterol trifenatate	Jul 2020 - Ongoing	Asthma
Sertraline	Jul 2020 - Ongoing	Depression
Tamsulosin	Jul 2020 - Ongoing	Enlarged Prostate
Finasteride	Aug 2020 - Ongoing	Enlarged Prostate
Acetylsalicylic acid	12 Oct 2020 (Study Day 41) - 14 Oct 2020 (Study Day 43)	Right Hip Osteoarthritis - Post Surgery
Cefazolin	12 Oct 2020 (Study Day 41) - 13 Oct 2020 (Study Day 42)	Right Hip Osteoarthritis - Post Surgery
Oxycodone	12 Oct 2020 (Study Day 41) - 14 Oct 2020 (Study Day 43)	Right Hip Osteoarthritis - Post Surgery
Paracetamol	12 Oct 2020 (Study Day 41) - 14 Oct 2020 (Study Day 43)	Pain Control -Post Hip Surgery
Pregabalin	12 Oct 2020 (Study Day 41) - 12 Oct 2020 (Study Day 41)	Right Hip Osteoarthritis - Post Surgery
Right hip arthroplasty*	12 Oct 2020 (Study Day 41) - 12 Oct 2020 (Study Day 41)	Adverse Event
Sodium chloride	12 Oct 2020 (Study Day 41) - 12 Oct 2020 (Study Day 41)	Orthostatic Hypotensive Episode
Tramadol	12 Oct 2020 (Study Day 41) - 14 Oct 2020 (Study Day 43)	Right Hip Osteoarthritis - Post Surgery
Pantoprazole sodium sesquihydrate	13 Oct 2020 (Study Day 42) - 14 Oct 2020 (Study Day 43)	Gi Prophylaxis
Zolpidem tartrate	13 Oct 2020 (Study Day 42) - 14 Oct 2020 (Study Day 43)	Right Hip Osteoarthritis - Post Surgery
Docusate	14 Oct 2020 (Study Day 43) - 14 Oct 2020 (Study Day 43)	Constipation Prophylaxis
Sennoside a+b	14 Oct 2020 (Study Day 43) - 14 Oct 2020 (Study Day 43)	Constipation Prophylaxis
Influenza vaccine	20 Oct 2020 (Study Day 49) - 20 Oct 2020 (Study Day 49)	Prophylaxis To Influenza
Tamsulosin hydrochloride	21 Dec 2020 (Study Day 111) - Ongoing	Frequent Urination
Elective total left knee replacement*	10 Feb 2021 (Study Day 162) - 10 Feb 2021 (Study Day 162)	Adverse Event
Acetylsalicylic acid	12 Feb 2021 (Study Day 164) - 09 Mar 2021 (Study Day 189)	Worsening Of Lt Knee Osteoarthritis
Oxycodone	12 Feb 2021 (Study Day 164) - 16 Feb 2021 (Study Day 168)	Worsening Of Lt Knee Osteoarthritis
Paracetamol	12 Feb 2021 (Study Day 164) - 16 Feb 2021 (Study Day 168)	Worsening Of Lt Knee Osteoarthritis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Tramadol	12 Feb 2021 (Study Day 164) - 19 Feb 2021 (Study Day 171)	Worsening Of Lt Knee Osteoarthritis
Lidocaine	14 Feb 2021 (Study Day 166) - 14 Feb 2021 (Study Day 166)	Worsening Of Neck Pain
Macrogol 3350	14 Feb 2021 (Study Day 166) - Ongoing	Constipation
Sennoside a+b	14 Feb 2021 (Study Day 166) - 15 Feb 2021 (Study Day 167)	Constipation
Physical therapy*	24 Feb 2021 (Study Day 176) - 24 Feb 2021 (Study Day 176)	Other, Follow-Up From Con-Procedure Of Right Hip Arthroplasty

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Orthostatic Hypotension	Grade 1/mild	Not related	12 Oct 2020 (Study Day 41) - 13 Oct 2020 (Study Day 42)
Osteoarthritis	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 41) - 14 Oct 2020 (Study Day 43)
COVID-19	Grade 3/severe	Not related	20 Nov 2020 (Study Day 80) - 06 Dec 2020 (Study Day 96)
Constipation	Grade 2/moderate	Not related	14 Feb 2021 (Study Day 166) - Ongoing
Neck Pain	Grade 2/moderate	Not related	14 Feb 2021 (Study Day 166) - 18 Feb 2021 (Study Day 170)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2083 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	08 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	SAE, COVID-19	Grade 4	Not related	14 Nov 2020 (Study Day 66) – 11 Jan 2021 (Study Day 124)	Recovered/ resolved
COVID-19 Pneumonia/Pneumonia Due To COVID 19 Positive	SAE	Grade 3/ severe	Not related	14 Nov 2020 (Study Day 66) – 09 Dec 2020 (Study Day 91)	Recovered/ resolved
Renal Impairment/ Decrease In Kidney Function In Relation To COVID-19	SAE	Grade 3/ severe	Not related	18 Nov 2020 (Study Day 70) – 20 Nov 2020 (Study Day 72)	Recovered/ resolved
Coronary Artery Disease/Worsening Coronary Artery Disease	SAE	Grade 3/ severe	Not related	15 Feb 2021 (Study Day 159) – 11 Mar 2021 (Study Day 183)	Recovered/ resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US393-2083, a 66-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 10 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 08 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Feb 2021 (Study Day 159), 158 days after the first dose and 130 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of coronary artery disease. Action taken with the IP was not applicable. The event of worsening coronary artery disease lasted for 25 days, after which it was considered to be recovered/resolved with sequelae on 11 Mar 2021 (Study Day 183). The investigator assessed the event of coronary artery disease to be not related to the IP.

Severe COVID-19 Details

On 14 Nov 2020 (Study Day 66), 65 days after the first dose and 37 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of COVID-19.

On 14 Nov 2020 (Study Day 66), 65 days after the first dose and 37 days after the second dose of the IP, the participant experienced a Grade 3/Severe serious adverse event of pneumonia due to COVID 19 positive.

On 18 Nov 2020 (Study Day 70), 69 days after the first dose and 41 days after the second dose of the IP, the participant experienced a Grade 3/Severe serious adverse event of decrease in kidney function in relation to COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 08 Oct 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 14 Dec 2020 (Study Day 96), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
03 Jan 2020 (Study Day -251)	Difficulty Breathing	Mild
03 Jan 2020 (Study Day -251)	O2 Saturation (%)	93
03 Jan 2020 (Study Day -251)	Shortness of Breath	Mild
18 Nov 2020 (Study Day 70)	Body Aches	Mild
18 Nov 2020 (Study Day 70)	Chills	Mild
18 Nov 2020 (Study Day 70)	Cough	Severe
18 Nov 2020 (Study Day 70)	Difficulty Breathing	Severe
18 Nov 2020 (Study Day 70)	Fatigue	Moderate
18 Nov 2020 (Study Day 70)	Muscle Aches (Myalgia)	Mild
18 Nov 2020 (Study Day 70)	Nasal Congestion	Moderate
18 Nov 2020 (Study Day 70)	New Loss of Smell	Moderate
18 Nov 2020 (Study Day 70)	New Loss of Taste	Moderate
18 Nov 2020 (Study Day 70)	Shortness of Breath	Severe
19 Nov 2020 (Study Day 71)	Body Aches	Mild
19 Nov 2020 (Study Day 71)	Cough	Severe
19 Nov 2020 (Study Day 71)	Difficulty Breathing	Severe
19 Nov 2020 (Study Day 71)	Fatigue	Severe
19 Nov 2020 (Study Day 71)	Muscle Aches (Myalgia)	Mild
19 Nov 2020 (Study Day 71)	New Loss of Smell	Severe
19 Nov 2020 (Study Day 71)	New Loss of Taste	Severe
19 Nov 2020 (Study Day 71)	O2 Saturation (%)	91
19 Nov 2020 (Study Day 71)	Shortness of Breath	Severe

Symptom Date	Symptom	Result
20 Nov 2020 (Study Day 72)	Body Aches	Mild
20 Nov 2020 (Study Day 72)	Cough	Moderate
20 Nov 2020 (Study Day 72)	Difficulty Breathing	Severe
20 Nov 2020 (Study Day 72)	Fatigue	Severe
20 Nov 2020 (Study Day 72)	Muscle Aches (Myalgia)	Mild
20 Nov 2020 (Study Day 72)	New Loss of Smell	Severe
20 Nov 2020 (Study Day 72)	New Loss of Taste	Severe
20 Nov 2020 (Study Day 72)	O2 Saturation (%)	89
20 Nov 2020 (Study Day 72)	Shortness of Breath	Severe
22 Nov 2020 (Study Day 74)	Body Aches	Moderate
22 Nov 2020 (Study Day 74)	Cough	Moderate
22 Nov 2020 (Study Day 74)	Difficulty Breathing	Severe
22 Nov 2020 (Study Day 74)	Fatigue	Severe
22 Nov 2020 (Study Day 74)	Muscle Aches (Myalgia)	Moderate
22 Nov 2020 (Study Day 74)	New Loss of Smell	Severe
22 Nov 2020 (Study Day 74)	New Loss of Taste	Severe
22 Nov 2020 (Study Day 74)	O2 Saturation (%)	83
22 Nov 2020 (Study Day 74)	Shortness of Breath	Severe
29 Nov 2020 (Study Day 81)	Body Aches	Severe
29 Nov 2020 (Study Day 81)	Chills	Severe
29 Nov 2020 (Study Day 81)	Cough	Severe
29 Nov 2020 (Study Day 81)	Difficulty Breathing	Severe
29 Nov 2020 (Study Day 81)	Fatigue	Severe
29 Nov 2020 (Study Day 81)	Muscle Aches (Myalgia)	Severe
29 Nov 2020 (Study Day 81)	New Loss of Smell	Severe
29 Nov 2020 (Study Day 81)	New Loss of Taste	Severe
29 Nov 2020 (Study Day 81)	O2 Saturation (%)	90
29 Nov 2020 (Study Day 81)	Shortness of Breath	Severe
30 Nov 2020 (Study Day 82)	Body Aches	Severe
30 Nov 2020 (Study Day 82)	Chills	Severe
30 Nov 2020 (Study Day 82)	Cough	Severe
30 Nov 2020 (Study Day 82)	Difficulty Breathing	Severe
30 Nov 2020 (Study Day 82)	Fatigue	Severe
30 Nov 2020 (Study Day 82)	Muscle Aches (Myalgia)	Severe
30 Nov 2020 (Study Day 82)	New Loss of Smell	Severe
30 Nov 2020 (Study Day 82)	New Loss of Taste	Severe
30 Nov 2020 (Study Day 82)	Shortness of Breath	Severe
01 Dec 2020 (Study Day 83)	Body Aches	Severe
01 Dec 2020 (Study Day 83)	Chills	Severe
01 Dec 2020 (Study Day 83)	Cough	Severe
01 Dec 2020 (Study Day 83)	Difficulty Breathing	Severe
01 Dec 2020 (Study Day 83)	Fatigue	Severe
01 Dec 2020 (Study Day 83)	Muscle Aches (Myalgia)	Severe

Symptom Date	Symptom	Result
01 Dec 2020 (Study Day 83)	New Loss of Smell	Severe
01 Dec 2020 (Study Day 83)	New Loss of Taste	Severe
01 Dec 2020 (Study Day 83)	Shortness of Breath	Severe
02 Dec 2020 (Study Day 84)	Body Aches	Severe
02 Dec 2020 (Study Day 84)	Cough	Severe
02 Dec 2020 (Study Day 84)	Difficulty Breathing	Severe

13 Dec 2020 (Study Day 95)	New Loss of Taste	Severe
13 Dec 2020 (Study Day 95)	O2 Saturation (%)	93
13 Dec 2020 (Study Day 95)	Shortness of Breath	Mild
14 Dec 2020 (Study Day 96)	Difficulty Breathing	Mild
14 Dec 2020 (Study Day 96)	Fatigue	Moderate

Symptom Date	Symptom	Result
14 Dec 2020 (Study Day 96)	Shortness of Breath	Mild
15 Dec 2020 (Study Day 97)	Difficulty Breathing	Mild
15 Dec 2020 (Study Day 97)	Fatigue	Mild
15 Dec 2020 (Study Day 97)	O2 Saturation (%)	92
15 Dec 2020 (Study Day 97)	Shortness of Breath	Mild
16 Dec 2020 (Study Day 98)	Difficulty Breathing	Mild
16 Dec 2020 (Study Day 98)	Fatigue	Moderate
16 Dec 2020 (Study Day 98)	Shortness of Breath	Mild
19 Dec 2020 (Study Day 101)	Difficulty Breathing	Moderate
19 Dec 2020 (Study Day 101)	Fatigue	Moderate
19 Dec 2020 (Study Day 101)	O2 Saturation (%)	92
19 Dec 2020 (Study Day 101)	Shortness of Breath	Moderate
20 Dec 2020 (Study Day 102)	Difficulty Breathing	Mild
20 Dec 2020 (Study Day 102)	Fatigue	Moderate
20 Dec 2020 (Study Day 102)	O2 Saturation (%)	92
20 Dec 2020 (Study Day 102)	Shortness of Breath	Mild
21 Dec 2020 (Study Day 103)	Difficulty Breathing	Mild
21 Dec 2020 (Study Day 103)	O2 Saturation (%)	92
21 Dec 2020 (Study Day 103)	Shortness of Breath	Mild
22 Dec 2020 (Study Day 104)	Difficulty Breathing	Mild
22 Dec 2020 (Study Day 104)	O2 Saturation (%)	93
22 Dec 2020 (Study Day 104)	Shortness of Breath	Mild
23 Dec 2020 (Study Day 105)	Difficulty Breathing	Mild
23 Dec 2020 (Study Day 105)	Shortness of Breath	Mild
25 Dec 2020 (Study Day 107)	Difficulty Breathing	Mild
25 Dec 2020 (Study Day 107)	Shortness of Breath	Mild
27 Dec 2020 (Study Day 109)	Difficulty Breathing	Mild
27 Dec 2020 (Study Day 109)	O2 Saturation (%)	93
27 Dec 2020 (Study Day 109)	Shortness of Breath	Mild
28 Dec 2020 (Study Day 110)	Difficulty Breathing	Mild
28 Dec 2020 (Study Day 110)	O2 Saturation (%)	93
28 Dec 2020 (Study Day 110)	Shortness of Breath	Mild
30 Dec 2020 (Study Day 112)	Difficulty Breathing	Mild
30 Dec 2020 (Study Day 112)	Shortness of Breath	Mild
01 Jan 2021 (Study Day 114)	Difficulty Breathing	Mild
01 Jan 2021 (Study Day 114)	Shortness of Breath	Mild
05 Jan 2021 (Study Day 118)	Difficulty Breathing	Mild
05 Jan 2021 (Study Day 118)	O2 Saturation (%)	93
05 Jan 2021 (Study Day 118)	Shortness of Breath	Mild
06 Jan 2021 (Study Day 119)	Difficulty Breathing	Mild
06 Jan 2021 (Study Day 119)	Shortness of Breath	Mild
07 Jan 2021 (Study Day 120)	Difficulty Breathing	Mild
07 Jan 2021 (Study Day 120)	Shortness of Breath	Mild

Symptom Date	Symptom	Result
08 Jan 2021 (Study Day 121)	Difficulty Breathing	Mild
08 Jan 2021 (Study Day 121)	Shortness of Breath	Mild
09 Jan 2021 (Study Day 122)	Difficulty Breathing	Mild
09 Jan 2021 (Study Day 122)	Shortness of Breath	Mild
10 Jan 2021 (Study Day 123)	Difficulty Breathing	Mild
10 Jan 2021 (Study Day 123)	Shortness of Breath	Mild
11 Jan 2021 (Study Day 124)	Difficulty Breathing	Mild
11 Jan 2021 (Study Day 124)	Shortness of Breath	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
16 Nov 2020 (Study Day 68)	Oxygen Saturation	83%
16 Nov 2020 (Study Day 68)	Respiratory Rate	33 breaths/min
16 Nov 2020 - 16 Nov 2020 (Study Day 68-68)	Clinical Evidence of Pneumonia	Yes
16 Nov 2020 - 16 Nov 2020 (Study Day 68-68)	High-Flow Oxygen	Yes
16 Nov 2020 - 06 Jan 2021 (Study Day 68-119)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes
16 Nov 2020 - 16 Nov 2020 (Study Day 68-68)	Radiographical Evidence of Pneumonia	Yes
16 Nov 2020 - 16 Nov 2020 (Study Day 68-68)	Respiratory Rates ≥ 30 per Minute	Yes
21 Nov 2020 - 29 Nov 2020 (Study Day 73-81)	Admission to an intensive care unit due to SARS-CoV-2	Yes

The IP dose was not changed due to the covid-19. The event of COVID-19 lasted for 59 days, after which it was considered to be recovered/resolved on 11 Jan 2021 (Study Day 124). The investigator assessed the event of COVID-19 to be not related to the IP.

Action taken with the IP was not applicable. The event of pneumonia due to COVID 19 positive lasted for 26 days, after which it was considered to be recovered/resolved on 09 Dec 2020 (Study Day 91). The investigator assessed the event of COVID-19 pneumonia to be not related to the IP.

Action taken with the IP was not applicable. The event of decrease in kidney function in relation to COVID-19 lasted for 3 days, after which it was considered to be recovered/resolved on 20 Nov 2020 (Study Day 72). The investigator assessed the event of renal impairment to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000821	COVID-19
MOD-2020-000821	COVID-19 pneumonia
MOD-2020-000821	Renal impairment
MOD-2021-040201	Coronary artery disease

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypothyroidism	Hypothyroidism	1983 - Ongoing
Large intestine polyp	Colon polyps - benign	1983 - Ongoing
Benign lung neoplasm	Pulmonary nodules - benign	1990 - Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	1990 - Ongoing
Emphysema	Emphysema	1990 - Ongoing
Fibromyalgia	Fibromyalgia	1990 - Ongoing
Prostatomegaly	Enlarged prostate	2005 - Ongoing
Gastrooesophageal reflux disease	Gerd	2010 - Ongoing
Retinal detachment	Bilateral detached retinas	2013 - Ongoing
Basal cell carcinoma	Basal cell skin cancer	2014 - 2014
Herpes virus infection	Herpes	2016 - Ongoing
Gallbladder polyp	Gallbladder polyps - benign	2018 - Ongoing
Hepatic enzyme increased	Liver enzyme elevation	Aug 2020 - Ongoing
Basal cell carcinoma	Basal cell skin cancer	16 Aug 2020 (Study Day -25) - Ongoing
Coronary artery disease	Coronary artery disease	04 Sep 2020 (Study Day -6) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	1985 - Ongoing	Hypothyroidism
Amitriptyline	1990 - Ongoing	Fibromyalgia
Ascorbic acid	2000 - Ongoing	Supplement

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Biotin; calcium pantothenate; cyanocobalamin; folic acid; nicotinamide; pyridoxine hydrochloride; riboflavin; thiamine mononitrate	2000 - Ongoing	Supplement
Fish oil	2000 - Ongoing	Supplement
Omeprazole	2010 - Ongoing	Gerd
Salbutamol	2015 - Ongoing	Copd
Valaciclovir hydrochloride	2016 - Ongoing	Herpes
Ipratropium bromide; salbutamol sulfate	2018 - Oct 2020	Copd
Umeclidinium; vilanterol	Oct 2020 - Ongoing	Copd
Diclofenac	07 Oct 2020 (Study Day 28) - 07 Oct 2020 (Study Day 28)	Fibromyalgia
Influenza vaccine	29 Oct 2020 (Study Day 50) - 29 Oct 2020 (Study Day 50)	Flu Prophylaxsis
Pneumococcal vaccine polysacch 23v	29 Oct 2020 (Study Day 50) - 29 Oct 2020 (Study Day 50)	Pneumonia Prophylaxsis
Ibuprofen	14 Nov 2020 (Study Day 66) - 16 Nov 2020 (Study Day 68)	COVID Related Pain
Paracetamol	14 Nov 2020 (Study Day 66) - 16 Nov 2020 (Study Day 68)	COVID Related Pain
Prednisone	15 Nov 2020 (Study Day 67) - 16 Nov 2020 (Study Day 68)	COVID Related Muscle Pain
Dexamethasone	16 Nov 2020 (Study Day 68) - 27 Nov 2020 (Study Day 79)	Antibiotics For COVID
Enoxaparin sodium	16 Nov 2020 (Study Day 68) - 18 Nov 2020 (Study Day 70)	Blood Thinner To Prevent Clots Caused By COVID
Plasma	17 Nov 2020 (Study Day 69) - 17 Nov 2020 (Study Day 69)	Treatment Of COVID
Remdesivir	17 Nov 2020 (Study Day 69) - 27 Nov 2020 (Study Day 79)	Anti-Viral For COVID
Heparin	18 Nov 2020 (Study Day 70) - 01 Dec 2020 (Study Day 83)	Prevention Of Blood Clots Due To COVID
Salbutamol	18 Nov 2020 (Study Day 70) - 27 Nov 2020 (Study Day 79)	Treatment Of COVID
Abdominal ultrasound*	19 Nov 2020 (Study Day 71) - 19 Nov 2020 (Study Day 71)	Adverse Event
Echo-cardiogram*	19 Nov 2020 (Study Day 71) - 19 Nov 2020 (Study Day 71)	Adverse Event
Furosemide	19 Nov 2020 (Study Day 71) - 21 Nov 2020 (Study Day 73)	Edema Of Lower Extremities
Ipratropium bromide	19 Nov 2020 (Study Day 71) - 21 Nov 2020 (Study Day 73)	Pneumonia Due To COVID
Levofloxacin	19 Nov 2020 (Study Day 71) - 28 Nov 2020 (Study Day 80)	Pneumonia Due To COVID
Acetylsalicylic acid	20 Nov 2020 (Study Day 72) - Ongoing	Prevention For Heart Conditions
Atovaquone	21 Nov 2020 (Study Day 73) - 26 Dec 2020 (Study Day 108)	Pneumonia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Methylprednisolone	27 Nov 2020 (Study Day 79) - 09 Dec 2020 (Study Day 91)	Treatment Of COVID
Clotrimazole	28 Nov 2020 (Study Day 80) - 09 Dec 2020 (Study Day 91)	Thrush
Enoxaparin sodium	01 Dec 2020 (Study Day 83) - 09 Dec 2020 (Study Day 91)	Blood Thinner For The Treatment Of COVID
Prednisone	01 Dec 2020 (Study Day 83) - 09 Dec 2020 (Study Day 91)	Thrush
Oxygen	05 Dec 2020 (Study Day 87) - Ongoing	Copd
Clotrimazole	09 Dec 2020 (Study Day 91) - 30 Dec 2020 (Study Day 112)	Thrush
Prednisone	09 Dec 2020 (Study Day 91) - 02 Jan 2021 (Study Day 115)	Pneumonia
Apixaban	10 Dec 2020 (Study Day 92) - 26 Dec 2020 (Study Day 108)	Blood Clot Prevention
Prednisone	03 Jan 2021 (Study Day 116) - 08 Jan 2021 (Study Day 121)	Pneumonia
Occupational therapy*	05 Jan 2021 (Study Day 118) - 05 Jan 2021 (Study Day 118)	Adverse Event
Physical therapy*	05 Jan 2021 (Study Day 118) - 05 Jan 2021 (Study Day 118)	Other, Lung Inflammation
Prednisone	15 Jan 2021 (Study Day 128) - 21 Jan 2021 (Study Day 134)	Pneumonia
Prednisone	22 Jan 2021 (Study Day 135) - 28 Feb 2021 (Study Day 172)	Pneumonia
Angiogram*	15 Feb 2021 (Study Day 159) - 15 Feb 2021 (Study Day 159)	Adverse Event
Carvedilol	15 Feb 2021 (Study Day 159) - 04 Mar 2021 (Study Day 176)	Coronary Artery Disease
Echocardiogram*	15 Feb 2021 (Study Day 159) - 15 Feb 2021 (Study Day 159)	Adverse Event
Prednisone	28 Feb 2021 (Study Day 172) - Ongoing	Lung Inflammation
Carvedilol	05 Mar 2021 (Study Day 177) - Ongoing	Coronary Artery Disease

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Not related	11 Sep 2020 (Study Day 2) - 18 Sep 2020 (Study Day 9)
Arthralgia	Grade 1/mild	Not related	12 Oct 2020 (Study Day 33) - 19 Oct 2020 (Study Day 40)
Fatigue	Grade 1/mild	Not related	12 Oct 2020 (Study Day 33) - 19 Oct 2020 (Study Day 40)
Myalgia	Grade 1/mild	Not related	12 Oct 2020 (Study Day 33) - 19 Oct 2020 (Study Day 40)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Oedema Peripheral	Grade 2/moderate	Not related	19 Nov 2020 (Study Day 71) - 21 Nov 2020 (Study Day 73)
Oral Candidiasis	Grade 2/moderate	Not related	01 Dec 2020 (Study Day 83) - 19 Jan 2021 (Study Day 132)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2118 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	12 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	07 Oct 2020 (Study Day 26)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	COVID-19	Grade 2/ moderate	Not related	01 Jan 2021 (Study Day 112) – 01 Mar 2021 (Study Day 171)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US393-2118, a 49-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 12 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 07 Oct 2020 (Study Day 26). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 01 Jan 2021 (Study Day 112), 111 days after the first dose and 86 days after the second dose of the IP, the participant experienced a Grade 2/Moderate non-serious adverse event of COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 26, 07 Oct 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 05 Jan 2021 (Study Day 116), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
01 Jan 2021 (Study Day 112)	Cough	Mild
01 Jan 2021 (Study Day 112)	Fatigue	Mild
01 Jan 2021 (Study Day 112)	Runny Nose (Rhinorrhea)	Mild
02 Jan 2021 (Study Day 113)	Cough	Mild
02 Jan 2021 (Study Day 113)	Fatigue	Mild

Symptom Date	Symptom	Result
02 Jan 2021 (Study Day 113)	Runny Nose (Rhinorrhea)	Mild
03 Jan 2021 (Study Day 114)	Cough	Mild
03 Jan 2021 (Study Day 114)	Fatigue	Mild
03 Jan 2021 (Study Day 114)	Runny Nose (Rhinorrhea)	Mild
05 Jan 2021 (Study Day 116)	Cough	Mild
05 Jan 2021 (Study Day 116)	Fatigue	Mild
05 Jan 2021 (Study Day 116)	Runny Nose (Rhinorrhea)	Mild
06 Jan 2021 (Study Day 117)	Cough	Mild
06 Jan 2021 (Study Day 117)	Fatigue	Moderate
06 Jan 2021 (Study Day 117)	Headache	Mild
06 Jan 2021 (Study Day 117)	Runny Nose (Rhinorrhea)	Mild
07 Jan 2021 (Study Day 118)	Cough	Mild
07 Jan 2021 (Study Day 118)	Runny Nose (Rhinorrhea)	Mild
07 Jan 2021 (Study Day 118)	Temperature (°F)	101.0
08 Jan 2021 (Study Day 119)	Cough	Mild
09 Jan 2021 (Study Day 120)	Chills	Moderate
09 Jan 2021 (Study Day 120)	Cough	Mild
09 Jan 2021 (Study Day 120)	Fatigue	Mild
09 Jan 2021 (Study Day 120)	Nasal Congestion	Mild
09 Jan 2021 (Study Day 120)	New Loss of Smell	Moderate
09 Jan 2021 (Study Day 120)	New Loss of Taste	Moderate
09 Jan 2021 (Study Day 120)	Temperature (°F)	100.9
10 Jan 2021 (Study Day 121)	Cough	Moderate
10 Jan 2021 (Study Day 121)	Fatigue	Moderate
10 Jan 2021 (Study Day 121)	Nasal Congestion	Mild
10 Jan 2021 (Study Day 121)	Nausea	Mild
10 Jan 2021 (Study Day 121)	New Loss of Smell	Moderate
10 Jan 2021 (Study Day 121)	New Loss of Taste	Moderate
10 Jan 2021 (Study Day 121)	Vomiting	Moderate
11 Jan 2021 (Study Day 122)	Cough	Moderate
11 Jan 2021 (Study Day 122)	Fatigue	Severe
11 Jan 2021 (Study Day 122)	Nasal Congestion	Mild
11 Jan 2021 (Study Day 122)	New Loss of Smell	Severe
11 Jan 2021 (Study Day 122)	New Loss of Taste	Severe
11 Jan 2021 (Study Day 122)	Vomiting	Moderate
13 Jan 2021 (Study Day 124)	Cough	Severe
13 Jan 2021 (Study Day 124)	Fatigue	Severe
13 Jan 2021 (Study Day 124)	Nasal Congestion	Mild
13 Jan 2021 (Study Day 124)	New Loss of Smell	Severe
13 Jan 2021 (Study Day 124)	New Loss of Taste	Severe
13 Jan 2021 (Study Day 124)	Vomiting	Severe
14 Jan 2021 (Study Day 125)	Cough	Severe
14 Jan 2021 (Study Day 125)	Fatigue	Severe

Symptom Date	Symptom	Result
14 Jan 2021 (Study Day 125)	Nasal Congestion	Mild
14 Jan 2021 (Study Day 125)	New Loss of Smell	Severe
14 Jan 2021 (Study Day 125)	New Loss of Taste	Severe
14 Jan 2021 (Study Day 125)	Vomiting	Moderate
16 Jan 2021 (Study Day 127)	Cough	Moderate
16 Jan 2021 (Study Day 127)	Fatigue	Severe
16 Jan 2021 (Study Day 127)	New Loss of Smell	Severe
16 Jan 2021 (Study Day 127)	New Loss of Taste	Severe
16 Jan 2021 (Study Day 127)	O2 Saturation (%)	93
16 Jan 2021 (Study Day 127)	Vomiting	Mild

21 Apr 2021 (Study Day 222)	Diarrhea	Moderate
21 Apr 2021 (Study Day 222)	Temperature (°F)	101
22 Apr 2021 (Study Day 223)	Diarrhea	Moderate
23 Apr 2021 (Study Day 224)	Diarrhea	Moderate

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
16 Jan 2021 (Study Day 127)	Oxygen Saturation	91%
16 Jan 2021 - 31 Jan 2021 (Study Day 127-142)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID-19 lasted for 60 days, after which it was considered to be recovered/resolved on 01 Mar 2021 (Study Day 171). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005706	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Headache	Headaches	1990 - Ongoing
Migraine	Migraines	1990 - 2017
Depression	Depression	1992 - 2004
Female sterilisation	Bilateral tubal ligation	2005 - 2005
Obesity	Obesity	2010 - Ongoing
Fibromyalgia	Fibromyalgia	2013 - Ongoing
Systemic lupus erythematosus	Systemic lupus erythematosus	2013 - Ongoing
Hypothyroidism	Hypothyroidsm	Aug 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid	2010 - Ongoing	Supplement
Colecalciferol	2010 - Ongoing	Supplement
Acetylsalicylic acid	2014 - Ongoing	Headaches
Vitamin b12 nos	2014 - Ongoing	Supplement
Borago officinalis oil; fish oil; linum usitatissimum oil	2015 - Ongoing	Supplement
Potassium	2015 - Ongoing	Supplement
Botulinum toxin type a	2017 - 2017	Migraines
Hyaluronic acid	2019 - 2019	Anti-Aging Lips
Magnesium	Mar 2020 - Ongoing	Supplement
Zinc	Mar 2020 - Ongoing	Supplement
Phentermine	Jul 2020 - 01 Sep 2020 (Study Day -11)	Obesity
Ibuprofen	Aug 2020 - Ongoing	Headaches
Levothyroxine	Aug 2020 - Ongoing	Hypothyroism

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	07 Oct 2020 (Study Day 26) - 07 Oct 2020 (Study Day 26)	Injection Site Pain
Influenza vaccine	21 Nov 2020 (Study Day 71) - 21 Nov 2020 (Study Day 71)	Flu Prophylaxsis
Anilides	07 Jan 2021 (Study Day 118) - 07 Jan 2021 (Study Day 118)	COVID-19
Paracetamol	07 Jan 2021 (Study Day 118) - 07 Jan 2021 (Study Day 118)	COVID-19 Diagnosis
Paracetamol	09 Jan 2021 (Study Day 120) - 07 Feb 2021 (Study Day 149)	COVID-19
Ibuprofen	11 Jan 2021 (Study Day 122) - 01 Feb 2021 (Study Day 143)	Low Back Pain
Benzonatate	12 Jan 2021 (Study Day 123) - 28 Jan 2021 (Study Day 139)	COVID-19
Salbutamol	12 Jan 2021 (Study Day 123) - 01 Mar 2021 (Study Day 171)	COVID-19
Promethazine	18 Jan 2021 (Study Day 129) - 19 Jan 2021 (Study Day 130)	COVID-19
Dextromethorphan hydrobromide; paracetamol	28 Jan 2021 (Study Day 139) - 27 Feb 2021 (Study Day 169)	COVID- 19 Cough
Amitriptyline	30 Jan 2021 (Study Day 141) - 05 Mar 2021 (Study Day 175)	Panic Attacks
Prednisone	30 Jan 2021 (Study Day 141) - 03 Feb 2021 (Study Day 145)	COVID-19 Diagnosis
Promethazine	30 Jan 2021 (Study Day 141) - 12 Feb 2021 (Study Day 154)	COVID-19 Cough
Mometasone furoate	01 Feb 2021 (Study Day 143) - 01 Mar 2021 (Study Day 171)	COVID -19 Cough
Guaifenesin	11 Feb 2021 (Study Day 153) - 12 Feb 2021 (Study Day 154)	COVID - 19 Cough
Paracetamol	13 Feb 2021 (Study Day 155) - 14 Feb 2021 (Study Day 156)	Headache
Benzonatate	17 Feb 2021 (Study Day 159) - 27 Feb 2021 (Study Day 169)	COVID-19 Cough
Ibuprofen	26 Feb 2021 (Study Day 168) - 26 Feb 2021 (Study Day 168)	Right Ankle Sprain
Paracetamol	26 Feb 2021 (Study Day 168) - 26 Feb 2021 (Study Day 168)	Right Ankle Sprain
Zolpidem	12 Mar 2021 (Study Day 182) - 13 Mar 2021 (Study Day 183)	Panick Attacks
Buspirone	15 Mar 2021 (Study Day 185) - Ongoing	Panic Attacks

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Dyspnoea	Grade 1/mild	Not related	17 Oct 2020 (Study Day 36) - 20 Oct 2020 (Study Day 39)
Headache	Grade 1/mild	Not related	17 Oct 2020 (Study Day 36) - 20 Oct 2020 (Study Day 39)
Myalgia	Grade 1/mild	Not related	17 Oct 2020 (Study Day 36) - 20 Oct 2020 (Study Day 39)
COVID-19	Grade 2/moderate	Not related	01 Jan 2021 (Study Day 112) - 01 Mar 2021 (Study Day 171)
Back Pain	Grade 2/moderate	Not related	09 Jan 2021 (Study Day 120) - 01 Feb 2021 (Study Day 143)
Panic Attack	Grade 2/moderate	Not related	10 Jan 2021 (Study Day 121) - Ongoing
Dizziness	Grade 1/mild	Not related	17 Jan 2021 (Study Day 128) - 26 Jan 2021 (Study Day 137)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2286 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	17 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	18 Nov 2020 (Study Day 33)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID 19	SAE, COVID-19	Grade 3/ severe	Not related	20 Nov 2020 (Study Day 35) – 07 Dec 2020 (Study Day 52)	Recovered/resolved
COVID-19 Pneumonia/ Pneumonia Caused By COVID 19	SAE	Grade 4	Not related	20 Nov 2020 (Study Day 35) – 07 Jan 2021 (Study Day 83)	Recovered/resolved
Acute Respiratory Failure/Acute Respiratory Failure	SAE	Grade 3/ severe	Not related	03 Dec 2020 (Study Day 48) – 05 Dec 2020 (Study Day 50)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US393-2286, a 52-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 17 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 18 Nov 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Dec 2020 (Study Day 48), 47 days after the first dose and 15 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of acute respiratory failure. Action taken with the IP was not applicable. The event of acute respiratory failure lasted for 3 days, after which it was considered to be recovered/resolved on 05 Dec 2020 (Study Day 50). The investigator assessed the event of acute respiratory failure to be not related to the IP.

Severe COVID-19 Details

On 20 Nov 2020 (Study Day 35), 34 days after the first dose and 2 days after the second dose of the IP, the participant experienced a Grade 3/Severe serious adverse event of COVID 19.

On 20 Nov 2020 (Study Day 35), 34 days after the first dose and 2 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pneumonia caused by COVID 19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 33, 18 Nov 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 01 Dec 2020 (Study Day 46), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
26 Nov 2020 (Study Day 41)	Body Aches	Mild
26 Nov 2020 (Study Day 41)	Chills	Mild
26 Nov 2020 (Study Day 41)	Cough	Mild
26 Nov 2020 (Study Day 41)	Fatigue	Mild
27 Nov 2020 (Study Day 42)	Body Aches	Mild
27 Nov 2020 (Study Day 42)	Chills	Mild
27 Nov 2020 (Study Day 42)	Cough	Mild
27 Nov 2020 (Study Day 42)	Fatigue	Mild
28 Nov 2020 (Study Day 43)	Body Aches	Mild
28 Nov 2020 (Study Day 43)	Chills	Mild
28 Nov 2020 (Study Day 43)	Cough	Mild
28 Nov 2020 (Study Day 43)	Fatigue	Mild
29 Nov 2020 (Study Day 44)	Body Aches	Mild
29 Nov 2020 (Study Day 44)	Chills	Mild
29 Nov 2020 (Study Day 44)	Cough	Mild
29 Nov 2020 (Study Day 44)	Fatigue	Mild
30 Nov 2020 (Study Day 45)	Body Aches	Mild
30 Nov 2020 (Study Day 45)	Chills	Mild
30 Nov 2020 (Study Day 45)	Cough	Mild
30 Nov 2020 (Study Day 45)	Fatigue	Mild
01 Dec 2020 (Study Day 46)	Body Aches	Mild
01 Dec 2020 (Study Day 46)	Cough	Mild
01 Dec 2020 (Study Day 46)	Fatigue	Mild
02 Dec 2020 (Study Day 47)	Body Aches	Mild
02 Dec 2020 (Study Day 47)	Cough	Mild
02 Dec 2020 (Study Day 47)	Fatigue	Mild
03 Dec 2020 (Study Day 48)	Chills	Mild
03 Dec 2020 (Study Day 48)	Cough	Mild
03 Dec 2020 (Study Day 48)	Diarrhea	Mild
03 Dec 2020 (Study Day 48)	Fatigue	Mild
03 Dec 2020 (Study Day 48)	Headache	Mild

Symptom Date	Symptom	Result
03 Dec 2020 (Study Day 48)	Muscle Aches (Myalgia)	Mild
03 Dec 2020 (Study Day 48)	O2 Saturation (%)	90
03 Dec 2020 (Study Day 48)	Shortness of Breath	Mild
05 Dec 2020 (Study Day 50)	Cough	Mild
05 Dec 2020 (Study Day 50)	Diarrhea	Mild
05 Dec 2020 (Study Day 50)	Fatigue	Mild
05 Dec 2020 (Study Day 50)	Shortness of Breath	Mild
06 Dec 2020 (Study Day 51)	Cough	Mild
06 Dec 2020 (Study Day 51)	Shortness of Breath	Mild
07 Dec 2020 (Study Day 52)	Cough	Mild
08 Dec 2020 (Study Day 53)	Cough	Mild
09 Dec 2020 (Study Day 54)	Cough	Mild
10 Dec 2020 (Study Day 55)	Cough	Mild
11 Dec 2020 (Study Day 56)	Cough	Mild
16 Dec 2020 (Study Day 61)	Cough	Mild
17 Dec 2020 (Study Day 62)	Cough	Mild
18 Dec 2020 (Study Day 63)	Cough	Mild
19 Dec 2020 (Study Day 64)	Cough	Mild
20 Dec 2020 (Study Day 65)	Cough	Mild
21 Dec 2020 (Study Day 66)	Cough	Mild
22 Dec 2020 (Study Day 67)	Cough	Mild
23 Dec 2020 (Study Day 68)	Cough	Mild
24 Dec 2020 (Study Day 69)	Cough	Mild
25 Dec 2020 (Study Day 70)	Cough	Mild
26 Dec 2020 (Study Day 71)	Cough	Mild
27 Dec 2020 (Study Day 72)	Cough	Mild
28 Dec 2020 (Study Day 73)	Cough	Mild
29 Dec 2020 (Study Day 74)	Cough	Mild
30 Dec 2020 (Study Day 75)	Cough	Mild
31 Dec 2020 (Study Day 76)	Cough	Mild
01 Jan 2021 (Study Day 77)	Cough	Mild
02 Jan 2021 (Study Day 78)	Cough	Mild
03 Jan 2021 (Study Day 79)	Cough	Mild
04 Jan 2021 (Study Day 80)	Cough	Mild
05 Jan 2021 (Study Day 81)	Cough	Mild
06 Jan 2021 (Study Day 82)	Cough	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
03 Dec 2020 (Study Day 48)	Oxygen Saturation	90%

Dates	Severity Indication	Result
03 Dec 2020 - 06 Dec 2020 (Study Day 48-51)	Admission to an intensive care unit due to SARS-CoV-2	Yes
03 Dec 2020 - 03 Dec 2020 (Study Day 48-48)	Clinical Evidence of Pneumonia	Yes
03 Dec 2020 - 06 Dec 2020 (Study Day 48-51)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes
03 Dec 2020 - 03 Dec 2020 (Study Day 48-48)	Radiographical Evidence of Pneumonia	Yes
06 Dec 2020 - 06 Dec 2020 (Study Day 51-51)	Respiratory Failure	Yes

Action taken with the IP was not applicable. The event of COVID 19 lasted for 18 days, after which it was considered to be recovered/resolved on 07 Dec 2020 (Study Day 52). The investigator assessed the event of COVID-19 to be not related to the IP.

Action taken with the IP was not applicable. The event of pneumonia caused by COVID 19 lasted for 49 days, after which it was considered to be recovered/resolved on 07 Jan 2021 (Study Day 83). The investigator assessed the event of COVID-19 pneumonia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001063	COVID-19
MOD-2020-001063	COVID-19 pneumonia
MOD-2020-001063	Acute respiratory failure

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hyperlipidaemia	Hyperlipidemia	2017 - Ongoing
Large intestine polyp	Colon polyps benign	2018 - 2018
Obesity	Obesity	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	2017 - Ongoing	Hyperlipidemia
Liraglutide	Aug 2019 - Ongoing	Obesity
Ibuprofen	20 Nov 2020 (Study Day 35) - 03 Dec 2020 (Study Day 48)	COVID 19
Paracetamol	20 Nov 2020 (Study Day 35) - 03 Dec 2020 (Study Day 48)	COVID 19
Azithromycin	01 Dec 2020 (Study Day 46) - 01 Dec 2020 (Study Day 46)	Pneumonia
Dextromethorphan hydrobromide; guaifenesin	01 Dec 2020 (Study Day 46) - 05 Dec 2020 (Study Day 50)	Pneumonia Caused By COVID
Salbutamol	01 Dec 2020 (Study Day 46) - 06 Dec 2020 (Study Day 51)	Pneumonia Caused By COVID
Azithromycin	02 Dec 2020 (Study Day 47) - 05 Dec 2020 (Study Day 50)	Pneumonia Secondary To COVID 19
Benzonatate	03 Dec 2020 (Study Day 48) - 05 Dec 2020 (Study Day 50)	Pneumonia Secondary To COVID 19
Cefdinir	03 Dec 2020 (Study Day 48) - 13 Dec 2020 (Study Day 58)	Pneumonia Caused By COVID
Chest x ray*	03 Dec 2020 (Study Day 48) - 03 Dec 2020 (Study Day 48)	Adverse Event
Codeine; promethazine	03 Dec 2020 (Study Day 48) - 05 Dec 2020 (Study Day 50)	Pneumonia Caused By COVID
Dexamethasone	03 Dec 2020 (Study Day 48) - 05 Dec 2020 (Study Day 50)	Pneumonia Caused By COVID
Electrocardiogram*	03 Dec 2020 (Study Day 48) - 03 Dec 2020 (Study Day 48)	Adverse Event
Famotidine	03 Dec 2020 (Study Day 48) - 05 Dec 2020 (Study Day 50)	Pneumonia Caused By COVID
Ondansetron	03 Dec 2020 (Study Day 48) - 05 Dec 2020 (Study Day 50)	Pneumonia Secondary To COVID 19
Oxygen	03 Dec 2020 (Study Day 48) - 05 Dec 2020 (Study Day 50)	Acute Respiratory Failure
Dexamethasone	07 Dec 2020 (Study Day 52) - 03 Jan 2021 (Study Day 79)	Pneumonia Caused By COVID
Acetylsalicylic acid	15 Jan 2021 (Study Day 91) - Ongoing	Prophylaxis For Thrombosis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US394-2079 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	08 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Severe COVID-19, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19 Infection	COVID-19, AE leading to withdrawal from study vaccine	Grade 1/mild	Not related	22 Sep 2020 (Study Day 15) – 16 Oct 2020 (Study Day 39)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US394-2079, a 42-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 08 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 22 Sep 2020 (Study Day 15), 14 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/Mild non-serious adverse event of COVID-19 infection.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 24 Sep 2020 (Study Day 17), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
24 Sep 2020 (Study Day 17)	Cough	Moderate
24 Sep 2020 (Study Day 17)	Headache	Moderate
24 Sep 2020 (Study Day 17)	Nasal Congestion	Moderate
25 Sep 2020 (Study Day 18)	Cough	Mild
28 Sep 2020 (Study Day 21)	Cough	Mild
28 Sep 2020 (Study Day 21)	Nasal Congestion	Mild

Symptom Date	Symptom	Result
29 Sep 2020 (Study Day 22)	Body Aches	Moderate
29 Sep 2020 (Study Day 22)	Cough	Mild
29 Sep 2020 (Study Day 22)	Diarrhea	Mild
29 Sep 2020 (Study Day 22)	Difficulty Breathing	Moderate
29 Sep 2020 (Study Day 22)	Fatigue	Moderate
29 Sep 2020 (Study Day 22)	Muscle Aches (Myalgia)	Moderate
29 Sep 2020 (Study Day 22)	Nasal Congestion	Moderate
29 Sep 2020 (Study Day 22)	New Loss of Smell	Severe
29 Sep 2020 (Study Day 22)	New Loss of Taste	Severe
29 Sep 2020 (Study Day 22)	O2 Saturation (%)	85
29 Sep 2020 (Study Day 22)	Runny Nose (Rhinorrhea)	Moderate
29 Sep 2020 (Study Day 22)	Shortness of Breath	Moderate
30 Sep 2020 (Study Day 23)	Cough	Mild
30 Sep 2020 (Study Day 23)	Diarrhea	Mild
30 Sep 2020 (Study Day 23)	Difficulty Breathing	Moderate
30 Sep 2020 (Study Day 23)	Fatigue	Severe
30 Sep 2020 (Study Day 23)	Nasal Congestion	Mild
30 Sep 2020 (Study Day 23)	New Loss of Smell	Severe
30 Sep 2020 (Study Day 23)	New Loss of Taste	Severe
30 Sep 2020 (Study Day 23)	Shortness of Breath	Moderate
01 Oct 2020 (Study Day 24)	Body Aches	Mild
01 Oct 2020 (Study Day 24)	Cough	Mild
01 Oct 2020 (Study Day 24)	Diarrhea	Mild
01 Oct 2020 (Study Day 24)	Difficulty Breathing	Moderate
01 Oct 2020 (Study Day 24)	Fatigue	Severe
01 Oct 2020 (Study Day 24)	Nasal Congestion	Moderate
01 Oct 2020 (Study Day 24)	New Loss of Smell	Severe
01 Oct 2020 (Study Day 24)	New Loss of Taste	Severe
01 Oct 2020 (Study Day 24)	Shortness of Breath	Moderate
02 Oct 2020 (Study Day 25)	Body Aches	Mild
02 Oct 2020 (Study Day 25)	Cough	Moderate
02 Oct 2020 (Study Day 25)	Difficulty Breathing	Moderate
02 Oct 2020 (Study Day 25)	Fatigue	Moderate
02 Oct 2020 (Study Day 25)	Nasal Congestion	Moderate
02 Oct 2020 (Study Day 25)	Nausea	Mild
02 Oct 2020 (Study Day 25)	New Loss of Smell	Severe
02 Oct 2020 (Study Day 25)	New Loss of Taste	Severe
02 Oct 2020 (Study Day 25)	Shortness of Breath	Moderate
04 Oct 2020 (Study Day 27)	Cough	Mild
04 Oct 2020 (Study Day 27)	Nasal Congestion	Mild
05 Oct 2020 (Study Day 28)	Cough	Mild
05 Oct 2020 (Study Day 28)	Nasal Congestion	Mild
06 Oct 2020 (Study Day 29)	Cough	Mild

Symptom Date	Symptom	Result
06 Oct 2020 (Study Day 29)	Nasal Congestion	Mild
07 Oct 2020 (Study Day 30)	Cough	Mild
07 Oct 2020 (Study Day 30)	Nasal Congestion	Mild
08 Oct 2020 (Study Day 31)	Cough	Mild
08 Oct 2020 (Study Day 31)	Nasal Congestion	Mild
11 Oct 2020 (Study Day 34)	Cough	Mild
12 Oct 2020 (Study Day 35)	Cough	Mild
13 Oct 2020 (Study Day 36)	Cough	Mild
14 Oct 2020 (Study Day 37)	Cough	Mild
15 Oct 2020 (Study Day 38)	Cough	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
29 Sep 2020 (Study Day 22)	Oxygen Saturation	85%
29 Sep 2020 - 29 Sep 2020 (Study Day 22-22)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

On 05 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 infection lasted for 25 days, after which it was considered to be recovered/resolved on 16 Oct 2020 (Study Day 39). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000376	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Allergy to animal	Pet dander allergy	1981 - Ongoing
Back pain	Chronic back pain	1998 - Ongoing
Headache	Chronic headaches	1998 - Ongoing
Ligament operation	Left acl repair	2001 - 2001

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Ligament rupture	Left acl tear	2001 - 2001
Obesity	Morbid obesity	2001 - Ongoing
Intervertebral disc operation	L3-l5 discectomy	2012 - 2012
Laparotomy	L2-l5 laporotomy	2018 - 2018
Factor V Leiden mutation	Factor v leiden	2019 - Ongoing
Hypertension	Hypertension	2019 - Ongoing
Laparotomy	L3-l4 laporotomy	2019 - 2019
Pulmonary embolism	Pulmonary embolism	2019 - Sep 2019
Deep vein thrombosis	Left leg deep vein thrombosis	Sep 2019 - Sep 2019
Thrombosis	Hospitalization for multiple blood clots	Sep 2019 - Sep 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Carisoprodol	1998 - Ongoing	Back Pain
Ibuprofen	1998 - Ongoing	Headaches
Apixaban	2019 - Ongoing	Factor IV Ligen
Metoprolol	2019 - Ongoing	Hypertension
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	22 Sep 2020 (Study Day 15) - 09 Oct 2020 (Study Day 32)	COVID-19 Infection
Salbutamol	01 Oct 2020 (Study Day 24) - 06 Oct 2020 (Study Day 29)	COVID-19 Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	22 Sep 2020 (Study Day 15) - 16 Oct 2020 (Study Day 39)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US396-2016 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 35)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	COVID-19	Grade 1/mild	Not related	10 Dec 2020 (Study Day 112) – 12 Jan 2021 (Study Day 145)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US396-2016, a 52-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 21 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 24 Sep 2020 (Study Day 35). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 10 Dec 2020 (Study Day 112), 111 days after the first dose and 77 days after the second dose of the IP, the participant experienced a Grade 1/Mild non-serious adverse event of COVID -19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 35, 24 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 11 Dec 2020 (Study Day 113), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
10 Dec 2020 (Study Day 112)	Cough	Mild
10 Dec 2020 (Study Day 112)	Headache	Mild
10 Dec 2020 (Study Day 112)	Muscle Aches (Myalgia)	Mild
10 Dec 2020 (Study Day 112)	Nasal Congestion	Mild
10 Dec 2020 (Study Day 112)	Runny Nose (Rhinorrhea)	Mild
10 Dec 2020 (Study Day 112)	Sore Throat	Mild

Symptom Date	Symptom	Result
11 Dec 2020 (Study Day 113)	Chills	Moderate
11 Dec 2020 (Study Day 113)	Cough	Mild
11 Dec 2020 (Study Day 113)	Headache	Mild
11 Dec 2020 (Study Day 113)	Nasal Congestion	Mild
11 Dec 2020 (Study Day 113)	Runny Nose (Rhinorrhea)	Mild
11 Dec 2020 (Study Day 113)	Sore Throat	Mild
11 Dec 2020 (Study Day 113)	Temperature (°F)	100.8
12 Dec 2020 (Study Day 114)	Cough	Mild
12 Dec 2020 (Study Day 114)	Headache	Mild
12 Dec 2020 (Study Day 114)	Nasal Congestion	Mild
12 Dec 2020 (Study Day 114)	Nausea	Mild
12 Dec 2020 (Study Day 114)	New Loss of Smell	Mild
12 Dec 2020 (Study Day 114)	Runny Nose (Rhinorrhea)	Mild
12 Dec 2020 (Study Day 114)	Sore Throat	Mild
13 Dec 2020 (Study Day 115)	Cough	Mild
13 Dec 2020 (Study Day 115)	Headache	Mild
13 Dec 2020 (Study Day 115)	Muscle Aches (Myalgia)	Mild
13 Dec 2020 (Study Day 115)	Nasal Congestion	Mild
13 Dec 2020 (Study Day 115)	New Loss of Smell	Severe
13 Dec 2020 (Study Day 115)	Runny Nose (Rhinorrhea)	Mild
14 Dec 2020 (Study Day 116)	Cough	Mild
14 Dec 2020 (Study Day 116)	Headache	Mild
14 Dec 2020 (Study Day 116)	Muscle Aches (Myalgia)	Mild
14 Dec 2020 (Study Day 116)	Nasal Congestion	Mild
14 Dec 2020 (Study Day 116)	New Loss of Smell	Severe
15 Dec 2020 (Study Day 117)	Cough	Mild
15 Dec 2020 (Study Day 117)	Fatigue	Mild
15 Dec 2020 (Study Day 117)	Headache	Mild
15 Dec 2020 (Study Day 117)	Nasal Congestion	Mild
15 Dec 2020 (Study Day 117)	New Loss of Smell	Severe
15 Dec 2020 (Study Day 117)	New Loss of Taste	Moderate
16 Dec 2020 (Study Day 118)	Fatigue	Moderate
16 Dec 2020 (Study Day 118)	Nasal Congestion	Mild
16 Dec 2020 (Study Day 118)	New Loss of Smell	Severe
16 Dec 2020 (Study Day 118)	New Loss of Taste	Moderate
17 Dec 2020 (Study Day 119)	Cough	Mild
17 Dec 2020 (Study Day 119)	Fatigue	Mild
17 Dec 2020 (Study Day 119)	Headache	Mild
17 Dec 2020 (Study Day 119)	Nasal Congestion	Mild
17 Dec 2020 (Study Day 119)	New Loss of Smell	Moderate
17 Dec 2020 (Study Day 119)	New Loss of Taste	Moderate
17 Dec 2020 (Study Day 119)	Runny Nose (Rhinorrhea)	Mild
18 Dec 2020 (Study Day 120)	Cough	Mild

Symptom Date	Symptom	Result
18 Dec 2020 (Study Day 120)	Fatigue	Mild
18 Dec 2020 (Study Day 120)	Headache	Mild
18 Dec 2020 (Study Day 120)	Nasal Congestion	Mild
18 Dec 2020 (Study Day 120)	New Loss of Smell	Moderate
18 Dec 2020 (Study Day 120)	New Loss of Taste	Moderate
19 Dec 2020 (Study Day 121)	Body Aches	Moderate
19 Dec 2020 (Study Day 121)	Cough	Mild
19 Dec 2020 (Study Day 121)	Fatigue	Mild
19 Dec 2020 (Study Day 121)	Headache	Mild
19 Dec 2020 (Study Day 121)	New Loss of Smell	Moderate
19 Dec 2020 (Study Day 121)	New Loss of Taste	Moderate
20 Dec 2020 (Study Day 122)	Cough	Mild
20 Dec 2020 (Study Day 122)	Fatigue	Mild
20 Dec 2020 (Study Day 122)	Nasal Congestion	Mild
20 Dec 2020 (Study Day 122)	New Loss of Smell	Moderate
20 Dec 2020 (Study Day 122)	New Loss of Taste	Moderate
20 Dec 2020 (Study Day 122)	Runny Nose (Rhinorrhea)	Mild
21 Dec 2020 (Study Day 123)	Cough	Mild
21 Dec 2020 (Study Day 123)	Fatigue	Mild
21 Dec 2020 (Study Day 123)	Nasal Congestion	Mild
21 Dec 2020 (Study Day 123)	New Loss of Smell	Severe
21 Dec 2020 (Study Day 123)	New Loss of Taste	Severe
21 Dec 2020 (Study Day 123)	O2 Saturation (%)	93
22 Dec 2020 (Study Day 124)	Fatigue	Mild
22 Dec 2020 (Study Day 124)	New Loss of Smell	Moderate
22 Dec 2020 (Study Day 124)	New Loss of Taste	Moderate
23 Dec 2020 (Study Day 125)	Fatigue	Mild
23 Dec 2020 (Study Day 125)	New Loss of Smell	Moderate
23 Dec 2020 (Study Day 125)	Runny Nose (Rhinorrhea)	Mild
24 Dec 2020 (Study Day 126)	Fatigue	Mild
24 Dec 2020 (Study Day 126)	Nasal Congestion	Mild
24 Dec 2020 (Study Day 126)	New Loss of Smell	Moderate
24 Dec 2020 (Study Day 126)	Runny Nose (Rhinorrhea)	Mild
25 Dec 2020 (Study Day 127)	Fatigue	Mild
25 Dec 2020 (Study Day 127)	Nasal Congestion	Mild
25 Dec 2020 (Study Day 127)	New Loss of Smell	Moderate
26 Dec 2020 (Study Day 128)	Fatigue	Mild
26 Dec 2020 (Study Day 128)	Nasal Congestion	Mild
26 Dec 2020 (Study Day 128)	New Loss of Smell	Moderate
27 Dec 2020 (Study Day 129)	Fatigue	Mild
27 Dec 2020 (Study Day 129)	New Loss of Smell	Moderate
27 Dec 2020 (Study Day 129)	Runny Nose (Rhinorrhea)	Mild
28 Dec 2020 (Study Day 130)	Fatigue	Mild

Symptom Date	Symptom	Result
28 Dec 2020 (Study Day 130)	New Loss of Smell	Moderate
28 Dec 2020 (Study Day 130)	Runny Nose (Rhinorrhea)	Mild
29 Dec 2020 (Study Day 131)	Fatigue	Mild
29 Dec 2020 (Study Day 131)	New Loss of Smell	Moderate
30 Dec 2020 (Study Day 132)	Fatigue	Mild
30 Dec 2020 (Study Day 132)	New Loss of Smell	Moderate
31 Dec 2020 (Study Day 133)	New Loss of Smell	Moderate
01 Jan 2021 (Study Day 134)	New Loss of Smell	Moderate
02 Jan 2021 (Study Day 135)	Fatigue	Mild
02 Jan 2021 (Study Day 135)	New Loss of Smell	Mild
03 Jan 2021 (Study Day 136)	Fatigue	Mild
03 Jan 2021 (Study Day 136)	New Loss of Smell	Mild
04 Jan 2021 (Study Day 137)	Fatigue	Mild
04 Jan 2021 (Study Day 137)	New Loss of Smell	Mild
05 Jan 2021 (Study Day 138)	Fatigue	Mild
05 Jan 2021 (Study Day 138)	New Loss of Smell	Mild
05 Jan 2021 (Study Day 138)	Runny Nose (Rhinorrhea)	Mild
06 Jan 2021 (Study Day 139)	Fatigue	Mild
06 Jan 2021 (Study Day 139)	New Loss of Smell	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
21 Dec 2020 (Study Day 123)	Oxygen Saturation	93%
21 Dec 2020 - 21 Dec 2020 (Study Day 123-123)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID -19 lasted for 34 days, after which it was considered to be recovered/resolved on 12 Jan 2021 (Study Day 145). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001249	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Depression	Depression	1988 - Ongoing
Osteoarthritis	Left knee osteoarthritis	2010 - Ongoing
Seasonal allergy	Seasonal allergies	2010 - Ongoing
Hysterectomy	Total hysterectomy	Sep 2017 - Sep 2017
Uterine leiomyoma	Uterine fibroids	Sep 2017 - Sep 2017
Anxiety	Anxiety	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Doxepin	1995 - Ongoing	Depression
Ibuprofen	2010 - Ongoing	Left Knee Osteoarthritis
Alprazolam	2018 - Ongoing	Anxiety
Ibuprofen	24 Aug 2020 (Study Day 4) - 24 Aug 2020 (Study Day 4)	Headache
Ibuprofen	30 Sep 2020 (Study Day 41) - 02 Oct 2020 (Study Day 43)	Headache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	24 Sep 2020 (Study Day 35) - 02 Oct 2020 (Study Day 43)
Headache	Grade 1/mild	Related	24 Sep 2020 (Study Day 35) - 02 Oct 2020 (Study Day 43)
Nausea	Grade 1/mild	Related	30 Sep 2020 (Study Day 41) - 02 Oct 2020 (Study Day 43)
Vomiting	Grade 1/mild	Not related	30 Sep 2020 (Study Day 41) - 02 Oct 2020 (Study Day 43)
COVID-19	Grade 1/mild	Not related	10 Dec 2020 (Study Day 112) - 12 Jan 2021 (Study Day 145)
Haematuria	Grade 1/mild	Not related	11 Jan 2021 (Study Day 144) - 12 Jan 2021 (Study Day 145)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US396-2063 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	01 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Tendon Rupture/Torn Tendon Left Ankle	SAE	Grade 4	Not related	02 Oct 2020 (Study Day 30) – 31 Oct 2020 (Study Day 59)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US396-2063, a 57-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 03 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 01 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Oct 2020 (Study Day 30), 29 days after the first dose and 1 day after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of tendon rupture. Action taken with the IP was not applicable. The event of torn tendon left ankle lasted for 30 days, after which it was considered to be recovered/resolved on 31 Oct 2020 (Study Day 59). The investigator assessed the event of tendon rupture to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious and nonserious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000621	Tendon rupture

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	1968 - Ongoing
Anxiety	Anxiety	1972 - Ongoing
Female sterilisation	Bilateral tubal ligation	1990 - 1990
Fibromyalgia	Fibromyalgia	2000 - Ongoing
Spinal fracture	Broken vertebra l5/s1	2000 - 2005
Back pain	Back pain	2004 - Ongoing
Neuropathy peripheral	Peripheral neuropathy	2004 - Ongoing
Hepatitis C	Hepatitis c	2005 - 2006
Blood cholesterol increased	High cholesterol	2010 - Ongoing
Rubber sensitivity	Allergy to latex	2013 - Ongoing
Bipolar disorder	Bipolar disorder	2015 - Ongoing
Dry skin	Dry rough skin (legs)	2015 - Ongoing
Dry skin	Dry rough skin (arms)	2015 - Ongoing
Type 2 diabetes mellitus	Type ii diabetes	2015 - Ongoing
Hypothyroidism	Hypothyroidism	2017 - Ongoing
Parkinson's disease	Parkinson disease	2017 - Ongoing
Insomnia	Insomnia	2018 - Ongoing
Arthralgia	Left ankle pain	May 2020 - Ongoing
Pain in extremity	Left foot pain	May 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Gabapentin	2000 - Ongoing	Fibromyalgia
Ibuprofen	2004 - Ongoing	Back Pain
Loratadine	2004 - Ongoing	Seasonal Allergies
Ammonium lactate	2015 - Ongoing	Barnicles (Rough Dry Skin, Arms And Legs)
Lithium	2015 - 01 Mar 2021 (Study Day 180)	Bi-Polar
Lithium	2015 - 01 Mar 2021 (Study Day 180)	Bipolar
Metformin	2015 - Ongoing	Type Ii Diabetes
Carbidopa	2017 - Ongoing	Parkinson's Disease
Levodopa	2017 - Ongoing	Parkinson's Disease
Levothyroxine	2017 - Ongoing	Hypothyroidism
Lovastatin	2018 - Ongoing	High Cholesterol
Methylphenidate	2018 - Ongoing	Bipolar

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Trazodone	2018 - Ongoing	Insomnia
Ibuprofen	May 2020 - Ongoing	Left Foot And Ankle Pain
Mri left ankle*	26 Sep 2020 (Study Day 24) - 26 Sep 2020 (Study Day 24)	Medical History
Ekg*	26 Oct 2020 (Study Day 54) - 26 Oct 2020 (Study Day 54)	Other, Pre-Surgery Exam
Acetylsalicylic acid	30 Oct 2020 (Study Day 58) - Ongoing	Blood Thinning Following Surgery
Cyclobenzaprine	30 Oct 2020 (Study Day 58) - 06 Nov 2020 (Study Day 65)	Left Ankle Pain
Ondansetron	30 Oct 2020 (Study Day 58) - 06 Nov 2020 (Study Day 65)	Nausea
Oxycodone hydrochloride; paracetamol	30 Oct 2020 (Study Day 58) - 06 Nov 2020 (Study Day 65)	Left Ankle Pain
Surgery to repair torn tendon left ankle*	30 Oct 2020 (Study Day 58) - 30 Oct 2020 (Study Day 58)	Adverse Event
Paracetamol; pseudoephedrine hydrochloride	04 Feb 2021 (Study Day 155) - 07 Feb 2021 (Study Day 158)	Post Nasal Drip - COVID-19 Symptoms
Ibuprofen	16 Feb 2021 (Study Day 167) - 19 Feb 2021 (Study Day 170)	Exacerbation Of Back Pain
Dextromethorphan hydrobromide; guaifenesin	26 Feb 2021 (Study Day 177) - 01 Mar 2021 (Study Day 180)	Post Nasal Drip
Lithium	02 Mar 2021 (Study Day 181) - Ongoing	Elevated Lithium Level - Bipolar

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Nausea	Grade 1/mild	Not related	30 Oct 2020 (Study Day 58) - 06 Nov 2020 (Study Day 65)
Upper-Airway Cough Syndrome	Grade 1/mild	Not related	15 Jan 2021 (Study Day 135) - 03 Mar 2021 (Study Day 182)
COVID-19	Grade 1/mild	Not related	02 Feb 2021 (Study Day 153) - 03 Mar 2021 (Study Day 182)
Back Pain	Grade 1/mild	Not related	16 Feb 2021 (Study Day 167) - 19 Feb 2021 (Study Day 170)
Antipsychotic Drug Level Increased	Grade 2/moderate	Not related	02 Mar 2021 (Study Day 181) - Ongoing
Neuropathy Peripheral	Grade 2/moderate	Not related	26 Mar 2021 (Study Day 205) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US396-2066 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	01 Oct 2020 (Study Day 29)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID - 19	COVID-19	Grade 2/moderate	Not related	16 Jan 2021 (Study Day 136) – 25 Feb 2021 (Study Day 176)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US396-2066, a 60-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 03 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 01 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 16 Jan 2021 (Study Day 136), 135 days after the first dose and 107 days after the second dose of the IP, the participant experienced a Grade 2/Moderate non-serious adverse event of COVID - 19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 01 Oct 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 19 Jan 2021 (Study Day 139), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
16 Jan 2021 (Study Day 136)	Body Aches	Mild
16 Jan 2021 (Study Day 136)	Cough	Moderate
16 Jan 2021 (Study Day 136)	Diarrhea	Mild

Symptom Date	Symptom	Result
16 Jan 2021 (Study Day 136)	Headache	Severe
16 Jan 2021 (Study Day 136)	Nasal Congestion	Mild
16 Jan 2021 (Study Day 136)	New Loss of Smell	Severe
16 Jan 2021 (Study Day 136)	New Loss of Taste	Severe
18 Jan 2021 (Study Day 138)	Body Aches	Mild
18 Jan 2021 (Study Day 138)	Fatigue	Mild
18 Jan 2021 (Study Day 138)	Headache	Mild
18 Jan 2021 (Study Day 138)	Muscle Aches (Myalgia)	Mild
18 Jan 2021 (Study Day 138)	Sore Throat	Mild
19 Jan 2021 (Study Day 139)	Fatigue	Mild
19 Jan 2021 (Study Day 139)	Headache	Mild
19 Jan 2021 (Study Day 139)	New Loss of Smell	Mild
19 Jan 2021 (Study Day 139)	New Loss of Taste	Mild
19 Jan 2021 (Study Day 139)	Runny Nose (Rhinorrhea)	Mild
20 Jan 2021 (Study Day 140)	Body Aches	Mild
20 Jan 2021 (Study Day 140)	Cough	Mild
20 Jan 2021 (Study Day 140)	Diarrhea	Severe
20 Jan 2021 (Study Day 140)	Fatigue	Mild
20 Jan 2021 (Study Day 140)	Headache	Mild
20 Jan 2021 (Study Day 140)	Muscle Aches (Myalgia)	Mild
20 Jan 2021 (Study Day 140)	Nasal Congestion	Severe

26 Jan 2021 (Study Day 146)	Fatigue	Mild
26 Jan 2021 (Study Day 146)	Headache	Mild
26 Jan 2021 (Study Day 146)	Muscle Aches (Myalgia)	Mild
27 Jan 2021 (Study Day 147)	Nausea	Mild
27 Jan 2021 (Study Day 147)	O2 Saturation (%)	90
28 Jan 2021 (Study Day 148)	Headache	Mild
29 Jan 2021 (Study Day 149)	Body Aches	Mild
29 Jan 2021 (Study Day 149)	Fatigue	Mild
29 Jan 2021 (Study Day 149)	Muscle Aches (Myalgia)	Mild
30 Jan 2021 (Study Day 150)	Body Aches	Mild
30 Jan 2021 (Study Day 150)	Fatigue	Mild
30 Jan 2021 (Study Day 150)	Muscle Aches (Myalgia)	Mild
31 Jan 2021 (Study Day 151)	Headache	Mild
02 Feb 2021 (Study Day 153)	Fatigue	Mild
02 Feb 2021 (Study Day 153)	Headache	Moderate
14 Feb 2021 (Study Day 165)	Cough	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
20 Jan 2021 (Study Day 140)	Oxygen Saturation	82%
20 Jan 2021 - 27 Jan 2021 (Study Day 140-147)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID - 19 lasted for 41 days, after which it was considered to be recovered/resolved on 25 Feb 2021 (Study Day 176). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-008884	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hysterectomy	Hysterectomy	1982 - 1982
Menorrhagia	Heavy menstrual bleeding	1982 - 1982
Back pain	Back pain	2000 - Ongoing
Anxiety	Anxiety	2010 - Ongoing
Asthma	Mild asthma	2010 - Ongoing
Restless legs syndrome	Restless leg syndrome	2010 - Ongoing
Myocardial infarction	Heart attack	2013 - 2013
Hypertension	Hypertension	2014 - Ongoing
Gastrooesophageal reflux disease	Gastro esophageal reflux disease	2015 - Ongoing
Depression	Depression	2018 - Ongoing
Osteoarthritis	Left hip pain - osteroarthritis	2018 - Ongoing
Osteoarthritis	Osteoarthritis left hip	2018 - Ongoing
Osteoarthritis	Osteoarthritis right hip	2018 - Ongoing
Osteoarthritis	Right hip pain - osteroarthritis	2018 - Ongoing
Blood cholesterol increased	High cholesterol	2019 - Ongoing
Migraine	Migraine headaches	2020 - Ongoing
Dizziness	Dizziness	May 2020 - Ongoing
Vision blurred	Blurred vision	May 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Topiramate	2005 - Ongoing	Migraine Prevention
Amitriptyline	2010 - Ongoing	Anxiety
Hydroxyzine	2010 - Ongoing	Anxiety

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ipratropium bromide; salbutamol sulfate	2010 - Ongoing	Mild Asthma
Ropinirole	2010 - Ongoing	Restless Leg Syndrome
Metoprolol succinate	2014 - Ongoing	Hypertension
Folic acid	2015 - Ongoing	Dietary Supplement
Tizanidine	2015 - Ongoing	Anxiety
Hydrocodone bitartrate; paracetamol	2017 - Ongoing	Back Pain
Mirtazapine	2018 - Ongoing	Depression
Omeprazole	2018 - Ongoing	Gastro Esophageal Reflux Disease
Atorvastatin	2019 - Ongoing	High Cholesterol
Famotidine	2019 - Ongoing	Gastro Esophageal Reflux Disease
Venlafaxine	2019 - 13 Sep 2020 (Study Day 11)	Depression
Venlafaxine	14 Sep 2020 (Study Day 12) - Ongoing	Depression
Bumetanide	30 Sep 2020 (Study Day 28) - Ongoing	Fluid (Edema) Retention Legs
Butalbital; caffeine; paracetamol	28 Oct 2020 (Study Day 56) - Ongoing	Migraine Headaches
Steroids	Nov 2020 - Nov 2020	Right Hip Pain
Influenza vaccine	19 Nov 2020 (Study Day 78) - 19 Nov 2020 (Study Day 78)	Prevention Of Flu
Ondansetron	22 Jan 2021 (Study Day 142) - 27 Jan 2021 (Study Day 147)	Prevent Nausea From COVID - 19
Paracetamol	28 Jan 2021 (Study Day 148) - 28 Jan 2021 (Study Day 148)	Headache
Steroids	23 Feb 2021 (Study Day 174) - 23 Feb 2021 (Study Day 174)	Exacerbation Left Hip Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Oedema Peripheral	Grade 1/mild	Not related	30 Sep 2020 (Study Day 28) - Ongoing
Arthralgia	Grade 2/moderate	Not related	28 Oct 2020 (Study Day 56) - 04 Nov 2020 (Study Day 63)
Musculoskeletal Chest Pain	Grade 1/mild	Not related	29 Oct 2020 (Study Day 57) - 30 Oct 2020 (Study Day 58)
Diarrhoea	Grade 1/mild	Not related	21 Dec 2020 (Study Day 110) - 23 Dec 2020 (Study Day 112)
COVID-19	Grade 2/moderate	Not related	16 Jan 2021 (Study Day 136) - 25 Feb 2021 (Study Day 176)
Pain	Grade 2/moderate	Not related	23 Jan 2021 (Study Day 143) - 23 Feb 2021 (Study Day 174)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2213 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Injection Site Swelling/Left Deltoid Injection Site Swelling	AE leading to withdrawal from study vaccine	Grade 1/ mild	Related	21 Sep 2020 (Study Day 1) – 06 Oct 2020 (Study Day 16)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2213, a 40-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 21 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 21 Sep 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of injection site swelling. On 18 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of left deltoid injection site swelling lasted for 16 days, after which it was considered to be recovered/resolved on 06 Oct 2020 (Study Day 16). The investigator assessed the event of injection site swelling to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Caesarean section	Cesarean section	25 Oct 1999 (Study Day -7637) - 25 Oct 1999 (Study Day -7637)
Headache	Intermittent headaches	2008 - Ongoing
Caesarean section	Cesarean section	07 Nov 2011 (Study Day -3241) - 07 Nov 2011 (Study Day -3241)
Caesarean section	Cesarean section	11 Mar 2014 (Study Day -2386) - 11 Mar 2014 (Study Day -2386)
Myalgia	Myalgias	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2008 - Ongoing	Headaches
Ibuprofen	26 Sep 2020 (Study Day 6) - 27 Sep 2020 (Study Day 7)	Viral Respiratory Syndrome
Oxycodone hydrochloride; paracetamol	09 Dec 2020 (Study Day 80) - Ongoing	Generalized Body Aches (Back Neck And Legs)
Paracetamol	09 Dec 2020 (Study Day 80) - 09 Dec 2020 (Study Day 80)	Muscle Pain
Physical therapy*	08 Jan 2021 (Study Day 110) - 08 Jan 2021 (Study Day 110)	Adverse Event
Penicillin nos	10 Feb 2021 (Study Day 143) - 10 Feb 2021 (Study Day 143)	COVID Like Symptoms
Penicillin nos	11 Feb 2021 (Study Day 144) - 11 Feb 2021 (Study Day 144)	COVID Like Symptoms

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Erythema	Grade 1/mild	Related	21 Sep 2020 (Study Day 1) - 06 Oct 2020 (Study Day 16)
Injection Site Swelling	Grade 1/mild	Related	21 Sep 2020 (Study Day 1) - 06 Oct 2020 (Study Day 16)
Viral Upper Respiratory Tract Infection	Grade 1/mild	Related	24 Sep 2020 (Study Day 4) - 13 Oct 2020 (Study Day 23)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Nausea	Grade 1/mild	Not related	27 Oct 2020 (Study Day 37) - Ongoing
Pain	Grade 1/mild	Not related	16 Nov 2020 (Study Day 57) - Ongoing
Viral Upper Respiratory Tract Infection	Grade 2/moderate	Not related	10 Feb 2021 (Study Day 143) - 25 Feb 2021 (Study Day 158)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379660

Participant Number:	US303-2187 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	11 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	08 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID 19	SAE, COVID-19	Grade 3/severe	Not related	30 Nov 2020 (Study Day 112) – 09 Dec 2020 (Study Day 121)	Recovered/ resolved
Type 2 Diabetes Mellitus/Diabetes Mellitus Type 2	SAE	Grade 3/severe	Not related	03 Dec 2020 (Study Day 115) – 10 Feb 2021 (Study Day 184)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US303-2187, a 49-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 11 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 08 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Dec 2020 (Study Day 115), 114 days after the first dose and 86 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of type 2 diabetes mellitus. Action taken with the IP was not applicable. The event of diabetes mellitus type 2 lasted for 70 days, after which it was considered to be recovered/resolved on 10 Feb 2021 (Study Day 184). The investigator assessed the event of type 2 diabetes mellitus to be not related to the IP.

Severe COVID-19 Details

On 30 Nov 2020 (Study Day 112), 111 days after the first dose and 83 days after the second dose of the IP, the participant experienced a Grade 3/Severe serious adverse event of COVID 19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 08 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 10 Dec 2020 (Study Day 122), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
07 Dec 2020 (Study Day 119)	Body Aches	Moderate
07 Dec 2020 (Study Day 119)	Cough	Mild
07 Dec 2020 (Study Day 119)	Fatigue	Moderate
07 Dec 2020 (Study Day 119)	Headache	Moderate
07 Dec 2020 (Study Day 119)	Muscle Aches (Myalgia)	Moderate
11 Dec 2020 (Study Day 123)	O2 Saturation (%)	93

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
11 Dec 2020 (Study Day 123)	Oxygen Saturation	93%
11 Dec 2020 - 11 Dec 2020 (Study Day 123-123)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID 19 lasted for 10 days, after which it was considered to be recovered/resolved on 09 Dec 2020 (Study Day 121). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001056	COVID-19
MOD-2020-001056	Type 2 diabetes mellitus

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Loratadine	2018 - Ongoing	Seasonal Allergies
Influenza vaccine	25 Oct 2020 (Study Day 76) - 25 Oct 2020 (Study Day 76)	Prophylaxis For Seasonal Influenza
Covid-19 pcr nasal swab*	30 Nov 2020 (Study Day 112) - 30 Nov 2020 (Study Day 112)	Adverse Event
Blood work*	03 Dec 2020 (Study Day 115) - 03 Dec 2020 (Study Day 115)	Adverse Event
Chest x-ray*	03 Dec 2020 (Study Day 115) - 03 Dec 2020 (Study Day 115)	Adverse Event
Ct head without contrast*	03 Dec 2020 (Study Day 115) - 03 Dec 2020 (Study Day 115)	Adverse Event
Dexamethasone	04 Dec 2020 (Study Day 116) - 06 Dec 2020 (Study Day 118)	COVID-19
Insulin aspart	04 Dec 2020 (Study Day 116) - Ongoing	Diabetes Mellitus Type 2
Insulin detemir	04 Dec 2020 (Study Day 116) - Ongoing	Diabetes Mellitus Type 2
Oxygen	04 Dec 2020 (Study Day 116) - 05 Dec 2020 (Study Day 117)	COVID-19
Remdesivir	04 Dec 2020 (Study Day 116) - 04 Dec 2020 (Study Day 116)	COVID-19
Remdesivir	05 Dec 2020 (Study Day 117) - 06 Dec 2020 (Study Day 118)	COVID-19
Acetylsalicylic acid	07 Dec 2020 (Study Day 119) - 09 Dec 2020 (Study Day 121)	COVID-19
Dexamethasone	07 Dec 2020 (Study Day 119) - 17 Dec 2020 (Study Day 129)	COVID-19
Lisinopril	07 Dec 2020 (Study Day 119) - Ongoing	Hypertension
Simvastatin	07 Dec 2020 (Study Day 119) - Ongoing	Hyperlipidemia
Amoxicillin; clavulanate potassium	23 Feb 2021 (Study Day 197) - 01 Mar 2021 (Study Day 203)	Acute Sinusitis
Prednisone	19 Mar 2021 (Study Day 221) - 21 Mar 2021 (Study Day 223)	Sore Throat

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 1/mild	Related	14 Aug 2020 (Study Day 4) - 23 Aug 2020 (Study Day 13)
Arthralgia	Grade 1/mild	Related	11 Sep 2020 (Study Day 32) - 24 Sep 2020 (Study Day 45)
Fatigue	Grade 1/mild	Related	11 Sep 2020 (Study Day 32) - 24 Sep 2020 (Study Day 45)
Myalgia	Grade 1/mild	Related	11 Sep 2020 (Study Day 32) - 24 Sep 2020 (Study Day 45)
Metabolic Encephalopathy	Grade 2/moderate	Not related	03 Dec 2020 (Study Day 115) - 05 Dec 2020 (Study Day 117)
Hyperlipidaemia	Grade 1/mild	Not related	07 Dec 2020 (Study Day 119) - 06 Apr 2021 (Study Day 239)
Hypertension	Grade 1/mild	Not related	07 Dec 2020 (Study Day 119) - 06 Apr 2021 (Study Day 239)
Acute Sinusitis	Grade 1/mild	Not related	23 Feb 2021 (Study Day 197) - 03 Mar 2021 (Study Day 205)
Oropharyngeal Pain	Grade 1/mild	Not related	19 Mar 2021 (Study Day 221) - 21 Mar 2021 (Study Day 223)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US324-2003 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	06 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	04 Sep 2020 (Study Day 30)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	COVID-19	Grade 2/ moderate	Not related	09 Jan 2021 (Study Day 157) – 20 Jan 2021 (Study Day 168)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US324-2003, a 67-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 06 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 04 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 09 Jan 2021 (Study Day 157), 156 days after the first dose and 127 days after the second dose of the IP, the participant experienced a Grade 2/Moderate non-serious adverse event of COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 30, 04 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 23 Jan 2021 (Study Day 171), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
09 Jan 2021 (Study Day 157)	Body Aches	Moderate
09 Jan 2021 (Study Day 157)	Chills	Moderate
09 Jan 2021 (Study Day 157)	Cough	Moderate
09 Jan 2021 (Study Day 157)	Diarrhea	Mild
09 Jan 2021 (Study Day 157)	Difficulty Breathing	Moderate
09 Jan 2021 (Study Day 157)	Fatigue	Moderate

Symptom Date	Symptom	Result
09 Jan 2021 (Study Day 157)	Nausea	Mild
09 Jan 2021 (Study Day 157)	New Loss of Taste	Moderate
09 Jan 2021 (Study Day 157)	Shortness of Breath	Moderate
10 Jan 2021 (Study Day 158)	Body Aches	Moderate
10 Jan 2021 (Study Day 158)	Chills	Moderate
10 Jan 2021 (Study Day 158)	Cough	Moderate
10 Jan 2021 (Study Day 158)	Diarrhea	Mild
10 Jan 2021 (Study Day 158)	Difficulty Breathing	Moderate
10 Jan 2021 (Study Day 158)	Fatigue	Moderate
10 Jan 2021 (Study Day 158)	Headache	Moderate
10 Jan 2021 (Study Day 158)	Muscle Aches (Myalgia)	Moderate

16 Jan 2021 (Study Day 164)	Shortness of Breath	Mild
17 Jan 2021 (Study Day 165)	Difficulty Breathing	Mild
17 Jan 2021 (Study Day 165)	Fatigue	Mild
17 Jan 2021 (Study Day 165)	Headache	Mild
17 Jan 2021 (Study Day 165)	Nausea	Mild
17 Jan 2021 (Study Day 165)	Shortness of Breath	Mild
18 Jan 2021 (Study Day 166)	Difficulty Breathing	Mild
18 Jan 2021 (Study Day 166)	Fatigue	Mild
18 Jan 2021 (Study Day 166)	Headache	Mild
18 Jan 2021 (Study Day 166)	Nausea	Mild
18 Jan 2021 (Study Day 166)	Shortness of Breath	Mild
19 Jan 2021 (Study Day 167)	Difficulty Breathing	Mild
19 Jan 2021 (Study Day 167)	Fatigue	Mild
19 Jan 2021 (Study Day 167)	Headache	Mild
19 Jan 2021 (Study Day 167)	Nausea	Mild
19 Jan 2021 (Study Day 167)	Shortness of Breath	Mild
28 Jan 2021 (Study Day 176)	O2 Saturation (%)	93

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
28 Jan 2021 (Study Day 176)	Oxygen Saturation	93%
28 Jan 2021 (Study Day 176)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID-19 lasted for 12 days, after which it was considered to be recovered/resolved on 20 Jan 2021 (Study Day 168). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-010845	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Postmenopause	Postmenopausal	01 Jan 1999 (Study Day -7888) - Ongoing
Obesity	Obesity	01 Jan 2000 (Study Day -7523) - Ongoing
Deep vein thrombosis	Deep vein thrombosis	01 Jan 2014 (Study Day -2409) - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	01 Jan 2014 (Study Day -2409) - Ongoing
Hypertension	Hypertension	01 Jan 2014 (Study Day -2409) - Ongoing
Osteoporosis	Osteoporosis	01 Jan 2014 (Study Day -2409) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium	2014 - Ongoing	Osteoporosis
Fish oil	2014 - Ongoing	Hypercholesterolemia
Lisinopril	01 Jan 2014 (Study Day -2409) - Ongoing	Hypertension
Rivaroxaban	01 Jan 2014 (Study Day -2409) - Ongoing	Deep Vein Thrombosis
Vitamins nos	01 Jan 2014 (Study Day -2409) - Ongoing	Diet Supplement
Paracetamol	09 Jan 2021 (Study Day 157) - 18 Jan 2021 (Study Day 166)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	09 Jan 2021 (Study Day 157) - 20 Jan 2021 (Study Day 168)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379669

Participant Number:	US324-2397 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	29 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	27 Oct 2020 (Study Day 29)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	COVID-19	Grade 3/severe	Not related	31 Oct 2020 (Study Day 33) – 26 Nov 2020 (Study Day 59)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US324-2397, a 48-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 29 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 27 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 31 Oct 2020 (Study Day 33), 32 days after the first dose and 4 days after the second dose of the IP, the participant experienced a Grade 3/Severe non-serious adverse event of COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 27 Oct 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 01 Nov 2020 (Study Day 34), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
03 Oct 2020 (Study Day 5)	Cough	Mild
04 Oct 2020 (Study Day 6)	Cough	Mild
05 Oct 2020 (Study Day 7)	Cough	Mild

15 Nov 2020 (Study Day 48)	Nasal Congestion	Mild
15 Nov 2020 (Study Day 48)	Runny Nose (Rhinorrhea)	Mild
17 Nov 2020 (Study Day 50)	Cough	Mild
17 Nov 2020 (Study Day 50)	Nasal Congestion	Mild
17 Nov 2020 (Study Day 50)	Runny Nose (Rhinorrhea)	Mild
18 Nov 2020 (Study Day 51)	Cough	Mild
18 Nov 2020 (Study Day 51)	Nasal Congestion	Mild
18 Nov 2020 (Study Day 51)	Runny Nose (Rhinorrhea)	Mild
19 Nov 2020 (Study Day 52)	Cough	Mild
21 Nov 2020 (Study Day 54)	Cough	Mild
22 Nov 2020 (Study Day 55)	Cough	Mild
23 Nov 2020 (Study Day 56)	Cough	Mild
24 Nov 2020 (Study Day 57)	Cough	Mild
25 Nov 2020 (Study Day 58)	Cough	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
06 Nov 2020 (Study Day 39)	Oxygen Saturation	68%
06 Nov 2020 - 06 Nov 2020 (Study Day 39-39)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID-19 lasted for 27 days, after which it was considered to be recovered/resolved on 26 Nov 2020 (Study Day 59). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000608	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Uterine leiomyoma	Uterine fibroids	2011 - 2018
Asthma	Bronchial asthma	2012 - Ongoing
Hysterectomy	Hysterectomy	2018 - 2018
Intervertebral disc protrusion	Herniated disc	2018 - Ongoing
Sciatica	Scatica	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	2014 - Ongoing	Bronchial Asthma
Pregabalin	21 Sep 2020 (Study Day -8) - Ongoing	Sciatica
Ibuprofen	06 Oct 2020 (Study Day 8) - Ongoing	Muscle Aches
Ammonium chloride; dextromethorphan hydrobromide; sodium citrate	01 Nov 2020 (Study Day 34) - 24 Nov 2020 (Study Day 57)	COVID-19
Benzonatate	02 Nov 2020 (Study Day 35) - 24 Nov 2020 (Study Day 57)	COVID-19
Dexamethasone	02 Nov 2020 (Study Day 35) - 11 Nov 2020 (Study Day 44)	COVID-19
Salbutamol	02 Nov 2020 (Study Day 35) - 20 Nov 2020 (Study Day 53)	COVID-19
Ibuprofen	09 Nov 2020 (Study Day 42) - 20 Nov 2020 (Study Day 53)	COVID-19
Nitrofurantoin	14 Jan 2021 (Study Day 108) - 18 Jan 2021 (Study Day 112)	Urinary Tract Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Upper Respiratory Tract Infection	Grade 3/severe	Not related	03 Oct 2020 (Study Day 5) - 25 Oct 2020 (Study Day 27)
COVID-19	Grade 3/severe	Not related	31 Oct 2020 (Study Day 33) - 26 Nov 2020 (Study Day 59)
Urinary Tract Infection	Grade 1/mild	Not related	14 Jan 2021 (Study Day 108) - 18 Jan 2021 (Study Day 112)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US326-2007 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	27 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	25 Aug 2020 (Study Day 30)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ Symptomatic Rt-Pcr Confirmed COVID Infection	COVID-19	Grade 2/ moderate	Not related	30 Nov 2020 (Study Day 127) – 13 Dec 2020 (Study Day 140)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US326-2007, a 62-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 27 Jul 2020 (Study Day 1). The second dose was administered in the left arm on 25 Aug 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 30 Nov 2020 (Study Day 127), 126 days after the first dose and 97 days after the second dose of the IP, the participant experienced a Grade 2/Moderate non-serious adverse event of symptomatic rt-pcr confirmed COVID infection.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 30, 25 Aug 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 30 Nov 2020 (Study Day 127), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
30 Nov 2020 (Study Day 127)	Body Aches	Moderate
30 Nov 2020 (Study Day 127)	Chills	Moderate
30 Nov 2020 (Study Day 127)	Cough	Mild
30 Nov 2020 (Study Day 127)	Fatigue	Moderate
30 Nov 2020 (Study Day 127)	Headache	Mild

Symptom Date	Symptom	Result
30 Nov 2020 (Study Day 127)	Muscle Aches (Myalgia)	Moderate
30 Nov 2020 (Study Day 127)	Nausea	Mild
30 Nov 2020 (Study Day 127)	Temperature (°F)	102.0
01 Dec 2020 (Study Day 128)	Body Aches	Mild
01 Dec 2020 (Study Day 128)	Cough	Mild
01 Dec 2020 (Study Day 128)	Fatigue	Mild
01 Dec 2020 (Study Day 128)	Muscle Aches (Myalgia)	Mild
02 Dec 2020 (Study Day 129)	Cough	Mild
03 Dec 2020 (Study Day 130)	Cough	Mild
03 Dec 2020 (Study Day 130)	O2 Saturation (%)	93
03 Dec 2020 (Study Day 130)	Shortness of Breath	Mild
04 Dec 2020 (Study Day 131)	O2 Saturation (%)	93
04 Dec 2020 (Study Day 131)	Shortness of Breath	Mild
05 Dec 2020 (Study Day 132)	O2 Saturation (%)	93
05 Dec 2020 (Study Day 132)	Shortness of Breath	Mild
06 Dec 2020 (Study Day 133)	Shortness of Breath	Mild
07 Dec 2020 (Study Day 134)	Shortness of Breath	Mild
08 Dec 2020 (Study Day 135)	Shortness of Breath	Mild
09 Dec 2020 (Study Day 136)	Shortness of Breath	Mild
10 Dec 2020 (Study Day 137)	Shortness of Breath	Mild
11 Dec 2020 (Study Day 138)	Shortness of Breath	Mild
12 Dec 2020 (Study Day 139)	Shortness of Breath	Mild
13 Dec 2020 (Study Day 140)	Shortness of Breath	Mild
14 Dec 2020 (Study Day 141)	Shortness of Breath	Mild
15 Dec 2020 (Study Day 142)	Shortness of Breath	Mild
16 Dec 2020 (Study Day 143)	Shortness of Breath	Mild
17 Dec 2020 (Study Day 144)	Shortness of Breath	Mild
18 Dec 2020 (Study Day 145)	Shortness of Breath	Mild
19 Dec 2020 (Study Day 146)	Shortness of Breath	Mild
20 Dec 2020 (Study Day 147)	Shortness of Breath	Mild
21 Dec 2020 (Study Day 148)	Shortness of Breath	Mild
22 Dec 2020 (Study Day 149)	Shortness of Breath	Mild
23 Dec 2020 (Study Day 150)	Shortness of Breath	Mild
24 Dec 2020 (Study Day 151)	Shortness of Breath	Mild
25 Dec 2020 (Study Day 152)	Shortness of Breath	Mild
26 Dec 2020 (Study Day 153)	Shortness of Breath	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
03 Dec 2020 (Study Day 130)	Oxygen Saturation	93%

Dates	Severity Indication	Result
03 Dec 2020 - 05 Dec 2020 (Study Day 130-132)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of symptomatic rt-pcr confirmed COVID infection lasted for 14 days, after which it was considered to be recovered/resolved on 13 Dec 2020 (Study Day 140). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000999	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type 2	2007 - Ongoing
Hypertension	Hypertension	2010 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metformin	2007 - Ongoing	Type 2 Diabetes
Lisinopril	2014 - Ongoing	Hypertension
Dulaglutide	Feb 2020 - 20 Feb 2021 (Study Day 209)	Type 2 Diabetes
Amoxicillin	13 Jan 2021 (Study Day 171) - 20 Jan 2021 (Study Day 178)	Pneumonia
Azithromycin	13 Jan 2021 (Study Day 171) - 18 Jan 2021 (Study Day 176)	Pneumonia
Atorvastatin	Feb 2021 - Ongoing	High Cholesterol Prophylaxis
Dulaglutide	21 Feb 2021 (Study Day 210) - Ongoing	Type Two Diabetes

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	30 Nov 2020 (Study Day 127) - 13 Dec 2020 (Study Day 140)
Pneumonia	Grade 2/moderate	Not related	13 Jan 2021 (Study Day 171) - 20 Jan 2021 (Study Day 178)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US326-2099 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	05 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	03 Sep 2020 (Study Day 30)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ Symptomatic Confirmed COVID Positive Infection	COVID-19	Grade 2/ moderate	Not related	12 Oct 2020 (Study Day 69) – 18 Nov 2020 (Study Day 106)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US326-2099, a 61-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 05 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 03 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 12 Oct 2020 (Study Day 69), 68 days after the first dose and 39 days after the second dose of the IP, the participant experienced a Grade 2/Moderate non-serious adverse event of symptomatic confirmed COVID positive infection.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 30, 03 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 12 Oct 2020 (Study Day 69), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

On 09 Nov 2020 (Study Day 97), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
12 Oct 2020 (Study Day 69)	Body Aches	Moderate

Symptom Date	Symptom	Result
12 Oct 2020 (Study Day 69)	Cough	Moderate
12 Oct 2020 (Study Day 69)	Fatigue	Moderate
12 Oct 2020 (Study Day 69)	Muscle Aches (Myalgia)	Moderate
13 Oct 2020 (Study Day 70)	Body Aches	Moderate
13 Oct 2020 (Study Day 70)	Cough	Moderate
13 Oct 2020 (Study Day 70)	Fatigue	Moderate
13 Oct 2020 (Study Day 70)	Muscle Aches (Myalgia)	Moderate
16 Oct 2020 (Study Day 73)	Body Aches	Moderate
16 Oct 2020 (Study Day 73)	Cough	Moderate

29 Oct 2020 (Study Day 86)	Muscle Aches (Myalgia)	Mild
30 Oct 2020 (Study Day 87)	Body Aches	Mild
30 Oct 2020 (Study Day 87)	Cough	Moderate
30 Oct 2020 (Study Day 87)	Fatigue	Mild
30 Oct 2020 (Study Day 87)	Muscle Aches (Myalgia)	Mild
31 Oct 2020 (Study Day 88)	Body Aches	Mild
31 Oct 2020 (Study Day 88)	Cough	Moderate
31 Oct 2020 (Study Day 88)	Fatigue	Mild
31 Oct 2020 (Study Day 88)	Muscle Aches (Myalgia)	Mild
01 Nov 2020 (Study Day 89)	Body Aches	Mild
01 Nov 2020 (Study Day 89)	Cough	Moderate
01 Nov 2020 (Study Day 89)	Fatigue	Mild
01 Nov 2020 (Study Day 89)	Muscle Aches (Myalgia)	Mild
02 Nov 2020 (Study Day 90)	Body Aches	Mild
02 Nov 2020 (Study Day 90)	Cough	Moderate
02 Nov 2020 (Study Day 90)	Fatigue	Mild
02 Nov 2020 (Study Day 90)	Muscle Aches (Myalgia)	Mild
03 Nov 2020 (Study Day 91)	Cough	Moderate
03 Nov 2020 (Study Day 91)	Fatigue	Mild
04 Nov 2020 (Study Day 92)	Cough	Moderate
04 Nov 2020 (Study Day 92)	Fatigue	Mild
05 Nov 2020 (Study Day 93)	Cough	Moderate

Symptom Date	Symptom	Result
05 Nov 2020 (Study Day 93)	Fatigue	Mild
06 Nov 2020 (Study Day 94)	Cough	Moderate
06 Nov 2020 (Study Day 94)	Fatigue	Mild
07 Nov 2020 (Study Day 95)	Cough	Moderate
07 Nov 2020 (Study Day 95)	Fatigue	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
16 Oct 2020 (Study Day 73)	Oxygen Saturation	93%
16 Oct 2020 - 23 Oct 2020 (Study Day 73-80)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of symptomatic confirmed COVID positive infection lasted for 38 days, after which it was considered to be recovered/resolved on 18 Nov 2020 (Study Day 106). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000482	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Attention deficit hyperactivity disorder	Attention deficit hyperactivity disorder	1999 - Ongoing
Hypertension	Hypertension	2015 - Ongoing
Cough	Chronic intermittent cough	2018 - Ongoing
Obesity	Obesity	Mar 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Methylphenidate hydrochloride	1999 - Ongoing	Attention Deficit Hyperactivity Disorder
Losartan	2015 - Ongoing	Hypertension
Nebivolol	2015 - Ongoing	Hypertension
Metformin	2018 - Ongoing	Type Ii Diabetes Prophylaxis
Amlodipine	2019 - Ongoing	Hypertension
Methylprednisolone	20 Oct 2020 (Study Day 77) - 20 Oct 2020 (Study Day 77)	Symptomatic Confirmed COVID Positive Infection
Methylprednisolone	21 Oct 2020 (Study Day 78) - 21 Oct 2020 (Study Day 78)	Symptomatic Confirmed COVID Positive Infection
Methylprednisolone	22 Oct 2020 (Study Day 79) - 22 Oct 2020 (Study Day 79)	Symptomatic Confirmed COVID Positive Infection
Methylprednisolone	23 Oct 2020 (Study Day 80) - 23 Oct 2020 (Study Day 80)	Symptomatic Confirmed COVID Positive Infection
Methylprednisolone	24 Oct 2020 (Study Day 81) - 24 Oct 2020 (Study Day 81)	Symptomatic Confirmed COVID Positive Infection
Methylprednisolone	25 Oct 2020 (Study Day 82) - 25 Oct 2020 (Study Day 82)	Symptomatic Confirmed COVID Positive Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 69) - 18 Nov 2020 (Study Day 106)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US326-2145 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	08 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	05 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ Symptomatic Rt-Pcr Conformed COVID19 Infection	SAE, COVID-19	Grade 3/severe	Not related	14 Dec 2020 (Study Day 129) – 29 Dec 2020 (Study Day 144)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US326-2145, a 56-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 08 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 05 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 14 Dec 2020 (Study Day 129), 128 days after the first dose and 100 days after the second dose of the IP, the participant experienced a Grade 3/Severe serious adverse event of symptomatic rt-pcr conformed COVID19 infection.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 05 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 14 Dec 2020 (Study Day 129), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
14 Dec 2020 (Study Day 129)	Chills	Moderate
14 Dec 2020 (Study Day 129)	Cough	Mild
14 Dec 2020 (Study Day 129)	Headache	Mild

Symptom Date	Symptom	Result
14 Dec 2020 (Study Day 129)	Temperature (°F)	38.9
15 Dec 2020 (Study Day 130)	Cough	Mild
15 Dec 2020 (Study Day 130)	Headache	Mild
15 Dec 2020 (Study Day 130)	O2 Saturation (%)	93
15 Dec 2020 (Study Day 130)	Temperature (°F)	102.2
16 Dec 2020 (Study Day 131)	Cough	Mild
16 Dec 2020 (Study Day 131)	Headache	Mild
16 Dec 2020 (Study Day 131)	O2 Saturation (%)	93
17 Dec 2020 (Study Day 132)	Cough	Moderate
17 Dec 2020 (Study Day 132)	O2 Saturation (%)	93
17 Dec 2020 (Study Day 132)	Temperature (°F)	100.6
18 Dec 2020 (Study Day 133)	Cough	Moderate
18 Dec 2020 (Study Day 133)	O2 Saturation (%)	93
19 Dec 2020 (Study Day 134)	Cough	Moderate
19 Dec 2020 (Study Day 134)	Difficulty Breathing	Severe
19 Dec 2020 (Study Day 134)	O2 Saturation (%)	91
19 Dec 2020 (Study Day 134)	Shortness of Breath	Severe
19 Dec 2020 (Study Day 134)	Temperature (°F)	101
20 Dec 2020 (Study Day 135)	Cough	Moderate
20 Dec 2020 (Study Day 135)	O2 Saturation (%)	93
20 Dec 2020 (Study Day 135)	Shortness of Breath	Moderate
21 Dec 2020 (Study Day 136)	Cough	Moderate
21 Dec 2020 (Study Day 136)	O2 Saturation (%)	93
21 Dec 2020 (Study Day 136)	Shortness of Breath	Mild
22 Dec 2020 (Study Day 137)	Cough	Moderate
22 Dec 2020 (Study Day 137)	O2 Saturation (%)	92
22 Dec 2020 (Study Day 137)	Shortness of Breath	Mild
23 Dec 2020 (Study Day 138)	Cough	Moderate
23 Dec 2020 (Study Day 138)	O2 Saturation (%)	93
23 Dec 2020 (Study Day 138)	Shortness of Breath	Mild
24 Dec 2020 (Study Day 139)	Cough	Moderate
24 Dec 2020 (Study Day 139)	O2 Saturation (%)	92
25 Dec 2020 (Study Day 140)	Cough	Moderate
25 Dec 2020 (Study Day 140)	O2 Saturation (%)	93
26 Dec 2020 (Study Day 141)	Cough	Moderate
26 Dec 2020 (Study Day 141)	O2 Saturation (%)	93
27 Dec 2020 (Study Day 142)	Cough	Mild
28 Dec 2020 (Study Day 143)	Cough	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
15 Dec 2020 (Study Day 130)	Oxygen Saturation	91%
15 Dec 2020 - 26 Dec 2020 (Study Day 130-141)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes
19 Dec 2020 - 25 Dec 2020 (Study Day 134-140)	High-Flow Oxygen	Yes

Action taken with the IP was not applicable. The event of symptomatic rt-pcr conformed COVID-19 infection lasted for 16 days, after which it was considered to be recovered/resolved on 29 Dec 2020 (Study Day 144). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001221	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Dyslipidaemia	Dyslipidemia	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Anxiety	Anxiety	2015 - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2010 - Ongoing	Cardio Protective
Atorvastatin	2010 - Ongoing	Dyslipidemia
Bupropion	2015 - Ongoing	Anxiety
Metoprolol	2015 - Ongoing	Hypertension
Metformin	2018 - Ongoing	Type 2 Diabetes

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Azithromycin	19 Dec 2019 (Study Day -233) - 24 Dec 2020 (Study Day 139)	Symptomatic Rt Pcr Confirmed COVID 19 Infection
Ceftriaxone	19 Dec 2020 (Study Day 134) - 24 Dec 2020 (Study Day 139)	Symptomatic Rt Pcr Confirmed COVID 19 Infection
Chest ap portable*	19 Dec 2020 (Study Day 134) - 19 Dec 2020 (Study Day 134)	Adverse Event
Oxygen	19 Dec 2020 (Study Day 134) - 24 Dec 2020 (Study Day 139)	Symptomatic Rt Pcr Confirmed COVID19 Infection
Remdesivir	20 Dec 2020 (Study Day 135) - 24 Dec 2020 (Study Day 139)	Severe Symptomatic COVID19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Induration	Grade 1/mild	Related	15 Aug 2020 (Study Day 8) - 16 Aug 2020 (Study Day 9)
Myalgia	Grade 2/moderate	Related	07 Sep 2020 (Study Day 31) - 13 Sep 2020 (Study Day 37)
Fatigue	Grade 1/mild	Not related	12 Sep 2020 (Study Day 36) - 13 Sep 2020 (Study Day 37)
Headache	Grade 1/mild	Not related	12 Sep 2020 (Study Day 36) - 13 Sep 2020 (Study Day 37)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US326-2275 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	09 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	10 Nov 2020 (Study Day 33)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ Symptomatic Pcr Confirmed COVID Infection	COVID-19	Grade 2/ moderate	Not related	28 Jan 2021 (Study Day 112) – 09 Feb 2021 (Study Day 124)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US326-2275, a 24-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 09 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 10 Nov 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 28 Jan 2021 (Study Day 112), 111 days after the first dose and 79 days after the second dose of the IP, the participant experienced a Grade 2/Moderate non-serious adverse event of symptomatic pcr confirmed COVID infection.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 33, 10 Nov 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 28 Jan 2021 (Study Day 112), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
28 Jan 2021 (Study Day 112)	Body Aches	Moderate
28 Jan 2021 (Study Day 112)	Cough	Moderate
28 Jan 2021 (Study Day 112)	Fatigue	Moderate
28 Jan 2021 (Study Day 112)	Headache	Moderate
28 Jan 2021 (Study Day 112)	Muscle Aches (Myalgia)	Moderate

Symptom Date	Symptom	Result
28 Jan 2021 (Study Day 112)	Temperature (°F)	100.7
29 Jan 2021 (Study Day 113)	Cough	Mild
29 Jan 2021 (Study Day 113)	Fatigue	Moderate
29 Jan 2021 (Study Day 113)	Headache	Mild
29 Jan 2021 (Study Day 113)	New Loss of Taste	Moderate
30 Jan 2021 (Study Day 114)	Cough	Mild
30 Jan 2021 (Study Day 114)	Fatigue	Mild
30 Jan 2021 (Study Day 114)	New Loss of Taste	Moderate
31 Jan 2021 (Study Day 115)	Cough	Mild
31 Jan 2021 (Study Day 115)	Fatigue	Mild
31 Jan 2021 (Study Day 115)	New Loss of Taste	Moderate
31 Jan 2021 (Study Day 115)	O2 Saturation (%)	93
01 Feb 2021 (Study Day 116)	Cough	Mild
01 Feb 2021 (Study Day 116)	Fatigue	Mild
01 Feb 2021 (Study Day 116)	New Loss of Taste	Moderate
02 Feb 2021 (Study Day 117)	Body Aches	Moderate
02 Feb 2021 (Study Day 117)	Muscle Aches (Myalgia)	Moderate
02 Feb 2021 (Study Day 117)	New Loss of Taste	Moderate
03 Feb 2021 (Study Day 118)	Body Aches	Moderate
03 Feb 2021 (Study Day 118)	Muscle Aches (Myalgia)	Moderate
03 Feb 2021 (Study Day 118)	New Loss of Taste	Moderate
04 Feb 2021 (Study Day 119)	Body Aches	Moderate
04 Feb 2021 (Study Day 119)	Muscle Aches (Myalgia)	Moderate
04 Feb 2021 (Study Day 119)	New Loss of Taste	Moderate
05 Feb 2021 (Study Day 120)	New Loss of Taste	Moderate
06 Feb 2021 (Study Day 121)	New Loss of Taste	Moderate
07 Feb 2021 (Study Day 122)	New Loss of Taste	Moderate
08 Feb 2021 (Study Day 123)	New Loss of Taste	Moderate
09 Feb 2021 (Study Day 124)	New Loss of Taste	Moderate
10 Feb 2021 (Study Day 125)	New Loss of Taste	Moderate
11 Feb 2021 (Study Day 126)	New Loss of Taste	Moderate
12 Feb 2021 (Study Day 127)	New Loss of Taste	Moderate
13 Feb 2021 (Study Day 128)	New Loss of Taste	Moderate
14 Feb 2021 (Study Day 129)	New Loss of Taste	Moderate
15 Feb 2021 (Study Day 130)	New Loss of Taste	Moderate
16 Feb 2021 (Study Day 131)	New Loss of Taste	Moderate
17 Feb 2021 (Study Day 132)	New Loss of Taste	Moderate
18 Feb 2021 (Study Day 133)	New Loss of Taste	Moderate
19 Feb 2021 (Study Day 134)	New Loss of Taste	Moderate
20 Feb 2021 (Study Day 135)	New Loss of Taste	Moderate
21 Feb 2021 (Study Day 136)	New Loss of Taste	Mild
22 Feb 2021 (Study Day 137)	New Loss of Taste	Mild
23 Feb 2021 (Study Day 138)	New Loss of Taste	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
31 Jan 2021 (Study Day 115)	Oxygen Saturation	93%
31 Jan 2021 - 31 Jan 2021 (Study Day 115-115)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of symptomatic pcr confirmed COVID infection lasted for 13 days, after which it was considered to be recovered/resolved on 09 Feb 2021 (Study Day 124). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-027069	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Emtricitabine; tenofovir disoproxil	2018 - Ongoing	Prophylaxis For Hiv
Lisinopril	2019 - Ongoing	Hypertension
Ibuprofen	11 Mar 2021 (Study Day 154) - 12 Mar 2021 (Study Day 155)	Headache Body Ache
Ibuprofen	12 Mar 2021 (Study Day 155) - 13 Mar 2021 (Study Day 156)	Headache Body Ache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	28 Jan 2021 (Study Day 112) - 09 Feb 2021 (Study Day 124)
Chills	Grade 2/moderate	Related	10 Mar 2021 (Study Day 153) - 12 Mar 2021 (Study Day 155)
Fatigue	Grade 2/moderate	Related	10 Mar 2021 (Study Day 153) - 12 Mar 2021 (Study Day 155)
Headache	Grade 2/moderate	Related	10 Mar 2021 (Study Day 153) - 12 Mar 2021 (Study Day 155)
Pain	Grade 1/mild	Related	10 Mar 2021 (Study Day 153) - 12 Mar 2021 (Study Day 155)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US327-2026 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	01 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	08 Sep 2020 (Study Day 39)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID19	SAE, COVID-19	Grade 4	Not related	08 Nov 2020 (Study Day 100) – 29 Dec 2020 (Study Day 151)	Recovered/ resolved with sequelae
Acute Respiratory Distress Syndrome/ Adult Respiratory Distress Syndrome	SAE	Grade 4	Not related	16 Nov 2020 (Study Day 108) – 20 Jan 2021 (Study Day 173)	Recovered/ resolved with sequelae
Acute Respiratory Failure/ Acute Respiratory Failure	SAE	Grade 4	Not related	16 Nov 2020 (Study Day 108) – 20 Jan 2021 (Study Day 173)	Recovered/ resolved with sequelae
Pneumonia/Multifocal Pneumonia	SAE	Grade 4	Not related	16 Nov 2020 (Study Day 108) – 11 Feb 2021 (Study Day 195)	Recovered/ resolved with sequelae
Cytokine Storm/Cytokine Storm	SAE	Grade 4	Not related	28 Nov 2020 (Study Day 120) – 20 Jan 2021 (Study Day 173)	Recovered/ resolved
Pneumonia Bacterial/ Pseudomonas Aeruginosa, Pneumonia, Bilateral, Ventilator-Associated Pneumonia	SAE	Grade 4	Not related	04 Dec 2020 (Study Day 126) – 23 Dec 2020 (Study Day 145)	Recovered/ resolved
Thrombocytopenia/ Thrombocytopenia	SAE	Grade 4	Not related	09 Dec 2020 (Study Day 131) – 01 Jan 2021 (Study Day 154)	Recovered/ resolved
Enterococcal Bacteraemia/Vancomycin Resistant Enterococcus Bacteremia	SAE	Grade 4	Not related	01 Jan 2021 (Study Day 154) – 19 Jan 2021 (Study Day 172)	Recovered/ resolved
Tracheal Haemorrhage/Tracheal Hemorrhage	SAE	Grade 4	Not related	20 Jan 2021 (Study Day 173) – 21 Jan 2021 (Study Day 174)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US327-2026, a 46-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 01 Aug 2020 (Study Day 1). The second dose was administered in the

FDA-CBER-2022-1614-3379693

left arm on 08 Sep 2020 (Study Day 39). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Nov 2020 (Study Day 108), 107 days after the first dose and 69 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of acute respiratory distress syndrome. Action taken with the IP was not applicable. The event of adult respiratory distress syndrome lasted for 66 days, after which it was considered to be recovered/resolved with sequelae on 20 Jan 2021 (Study Day 173). The investigator assessed the event of acute respiratory distress syndrome to be not related to the IP.

On 16 Nov 2020 (Study Day 108), 107 days after the first dose and 69 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of acute respiratory failure. Action taken with the IP was not applicable. The event of acute respiratory failure lasted for 66 days, after which it was considered to be recovered/resolved with sequelae on 20 Jan 2021 (Study Day 173). The investigator assessed the event of acute respiratory failure to be not related to the IP.

On 16 Nov 2020 (Study Day 108), 107 days after the first dose and 69 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pneumonia. Action taken with the IP was not applicable. The event of multifocal pneumonia lasted for 88 days, after which it was considered to be recovered/resolved with sequelae on 11 Feb 2021 (Study Day 195). The investigator assessed the event of pneumonia to be not related to the IP.

On 28 Nov 2020 (Study Day 120), 119 days after the first dose and 81 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of cytokine storm. Action taken with the IP was not applicable. The event of cytokine storm lasted for 54 days, after which it was considered to be recovered/resolved on 20 Jan 2021 (Study Day 173). The investigator assessed the event of cytokine storm to be not related to the IP.

On 04 Dec 2020 (Study Day 126), 125 days after the first dose and 87 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pneumonia bacterial. Action taken with the IP was not applicable. The event of pseudomonas aeruginosa, pneumonia, bilateral, ventilator-associated pneumonia lasted for 20 days, after which it was considered to be recovered/resolved on 23 Dec 2020 (Study Day 145). The investigator assessed the event of pneumonia bacterial to be not related to the IP.

On 09 Dec 2020 (Study Day 131), 130 days after the first dose and 92 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of thrombocytopenia. Action taken with the IP was not applicable. The event of thrombocytopenia lasted for 24 days, after which

it was considered to be recovered/resolved on 01 Jan 2021 (Study Day 154). The investigator assessed the event of thrombocytopenia to be not related to the IP.

On 01 Jan 2021 (Study Day 154), 153 days after the first dose and 115 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of enterococcal bacteraemia. Action taken with the IP was not applicable. The event of vancomycin resistant enterococcus bacteremia lasted for 19 days, after which it was considered to be recovered/resolved on 19 Jan 2021 (Study Day 172). The investigator assessed the event of enterococcal bacteraemia to be not related to the IP.

On 20 Jan 2021 (Study Day 173), 172 days after the first dose and 134 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of tracheal haemorrhage. Action taken with the IP was not applicable. The event of tracheal hemorrhage lasted for 2 days, after which it was considered to be recovered/resolved on 21 Jan 2021 (Study Day 174). The investigator assessed the event of tracheal haemorrhage to be not related to the IP.

Severe COVID-19 Details

On 08 Nov 2020 (Study Day 100), 99 days after the first dose and 61 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of COVID19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 39, 08 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 12 Nov 2020 (Study Day 104), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
08 Nov 2020 (Study Day 100)	Body Aches	Mild
08 Nov 2020 (Study Day 100)	Chills	Mild
08 Nov 2020 (Study Day 100)	Cough	Mild
08 Nov 2020 (Study Day 100)	Difficulty Breathing	Mild
08 Nov 2020 (Study Day 100)	Headache	Mild

27 Nov 2020 (Study Day 119)	Nasal Congestion	Mild
27 Nov 2020 (Study Day 119)	O2 Saturation (%)	77
27 Nov 2020 (Study Day 119)	Shortness of Breath	Mild
01 Dec 2020 (Study Day 123)	Body Aches	Mild

Symptom Date	Symptom	Result
01 Dec 2020 (Study Day 123)	Cough	Mild
01 Dec 2020 (Study Day 123)	Difficulty Breathing	Moderate
01 Dec 2020 (Study Day 123)	Fatigue	Mild
01 Dec 2020 (Study Day 123)	Muscle Aches (Myalgia)	Mild
01 Dec 2020 (Study Day 123)	Shortness of Breath	Moderate

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
16 Nov 2020 (Study Day 108)	Oxygen Saturation	64%
16 Nov 2020 - 16 Nov 2020 (Study Day 108-108)	Acute Renal Dysfunction	Yes
16 Nov 2020 - 16 Nov 2020 (Study Day 108-108)	Acute Respiratory Distress Syndrome (ARDS)	Yes
16 Nov 2020 - 12 Feb 2021 (Study Day 108-196)	Admission to an intensive care unit due to SARS-CoV-2	Yes
16 Nov 2020 - 16 Nov 2020 (Study Day 108-108)	Clinical Evidence of Pneumonia	Yes
16 Nov 2020 - 16 Nov 2020 (Study Day 108-108)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes
16 Nov 2020 - 16 Nov 2020 (Study Day 108-108)	Radiographical Evidence of Pneumonia	Yes
16 Nov 2020 - 16 Nov 2020 (Study Day 108-108)	Respiratory Failure	Yes
28 Nov 2020 - 25 Jan 2021 (Study Day 120-178)	Mechanical Ventilation	Yes
30 Nov 2020 - 30 Nov 2020 (Study Day 122-122)	Neurologic Dysfunction	Yes
01 Dec 2020 - 01 Jan 2021 (Study Day 123-154)	ECMO	Yes

Action taken with the IP was not applicable. The event of COVID19 lasted for 52 days, after which it was considered to be recovered/resolved with sequelae on 29 Dec 2020 (Study Day 151). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000812	COVID-19
MOD-2020-000812	Acute respiratory distress syndrome
MOD-2020-000812	Acute respiratory failure
MOD-2020-000812	Pneumonia
MOD-2020-000812	Cytokine storm
MOD-2020-000812	Pneumonia bacterial

CIOMS Number	MedDRA Preferred Term
MOD-2020-000812	Thrombocytopenia
MOD-2020-000812	Enterococcal bacteraemia
MOD-2020-000812	Tracheal haemorrhage

Study Completion/Discontinuation

On 25 Mar 2021 (Study Day 237), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Vasectomy	Vasectomy	2002 - 2002
Acrochordon	Bilateral axillary skin tags	2010 - Ongoing
Seasonal allergy	Seasonal allergies	2013 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fexofenadine	2013 - Ongoing	Seasonal Allergies
Azithromycin	16 Nov 2020 (Study Day 108) - 24 Nov 2020 (Study Day 116)	Multifocal Pneumonia
Benzonatate	16 Nov 2020 (Study Day 108) - 20 Jan 2021 (Study Day 173)	COVID-19
Bipap initiated*	16 Nov 2020 (Study Day 108) - 16 Nov 2020 (Study Day 108)	Adverse Event
Codeine; promethazine	16 Nov 2020 (Study Day 108) - 01 Dec 2020 (Study Day 123)	COVID-19
Dexamethasone	16 Nov 2020 (Study Day 108) - 20 Jan 2021 (Study Day 173)	Acute Respiratory Failure
Dexamethasone	16 Nov 2020 (Study Day 108) - Ongoing	COVID-19
Guaifenesin	16 Nov 2020 (Study Day 108) - Ongoing	COVID-19
Ipratropium bromide; salbutamol sulfate	16 Nov 2020 (Study Day 108) - 24 Nov 2020 (Study Day 116)	COVID-19, Acute Respiratory Failure With Hypoxia, Ards, Acute Encephalopathy
Paracetamol	16 Nov 2020 (Study Day 108) - 20 Jan 2021 (Study Day 173)	COVID-19
Piperacillin; tazobactam	16 Nov 2020 (Study Day 108) - 16 Nov 2020 (Study Day 108)	Multifocal Pneumonia
Prednisone	16 Nov 2020 (Study Day 108) - 16 Nov 2020 (Study Day 108)	Multifocal Pneumonia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Remdesivir	16 Nov 2020 (Study Day 108) - 21 Nov 2020 (Study Day 113)	COVID 19
Salbutamol sulfate	16 Nov 2020 (Study Day 108) - Ongoing	COVID-19
Salbutamol sulfate	16 Nov 2020 (Study Day 108) - 20 Jan 2021 (Study Day 173)	COVID-19
Sodium chloride	16 Nov 2020 (Study Day 108) - 17 Nov 2020 (Study Day 109)	Acute Kidney Injury
Specific immunoglobulins	16 Nov 2020 (Study Day 108) - 16 Nov 2020 (Study Day 108)	COVID-19
Ceftriaxone	17 Nov 2020 (Study Day 109) - 24 Nov 2020 (Study Day 116)	Multifocal Pneumonia
Enoxaparin	17 Nov 2020 (Study Day 109) - 01 Dec 2020 (Study Day 123)	Dvt Prophylaxis
Furosemide	17 Nov 2020 (Study Day 109) - 18 Nov 2020 (Study Day 110)	Acute Hypoxic Respiratory Failure Secondary To Ards From COVID 19
Lorazepam	17 Nov 2020 (Study Day 109) - 20 Jan 2021 (Study Day 173)	COVID-19
Midline placement, single lumen*	17 Nov 2020 (Study Day 109) - 17 Nov 2020 (Study Day 109)	Adverse Event
Furosemide	18 Nov 2020 (Study Day 110) - 20 Jan 2021 (Study Day 173)	Extracorporeal Membrane Oxygenation Secondary To Adult Respiratory Distress Syndrome, COVID-19
Macrogol	20 Nov 2020 (Study Day 112) - Ongoing	Constipation
Dextromethorphan hydrobromide; guaifenesin	22 Nov 2020 (Study Day 114) - 01 Dec 2020 (Study Day 123)	COVID-19
Fluticasone propionate	22 Nov 2020 (Study Day 114) - 01 Dec 2020 (Study Day 123)	COVID-19
Ruxolitinib phosphate	24 Nov 2020 (Study Day 116) - 01 Dec 2020 (Study Day 123)	COVID 19
Cefepime	25 Nov 2020 (Study Day 117) - 27 Nov 2020 (Study Day 119)	Multifocal Pneumonia
Dexmedetomidine	26 Nov 2020 (Study Day 118) - 13 Jan 2021 (Study Day 166)	COVID-19
Meropenem	26 Nov 2020 (Study Day 118) - 03 Dec 2020 (Study Day 125)	Superimposed Bacterial Infection Secondary To COVID-19
Ascorbic acid	27 Nov 2020 (Study Day 119) - Ongoing	COVID-19
Thiamine	27 Nov 2020 (Study Day 119) - 01 Dec 2020 (Study Day 123)	COVID-19
Vitamin d nos	27 Nov 2020 (Study Day 119) - Ongoing	COVID-19
Zinc sulfate	27 Nov 2020 (Study Day 119) - Ongoing	COVID-19
Arterial line, right arm*	28 Nov 2020 (Study Day 120) - 28 Nov 2020 (Study Day 120)	Adverse Event
Foley catheter placed*	28 Nov 2020 (Study Day 120) - 28 Nov 2020 (Study Day 120)	Adverse Event
Intubated*	28 Nov 2020 (Study Day 120) - 28 Nov 2020 (Study Day 120)	Adverse Event
Meropenem trihydrate	28 Nov 2020 (Study Day 120) - 03 Dec 2020 (Study Day 125)	Adult Respiratory Distress Syndrome
Morphine sulfate	28 Nov 2020 (Study Day 120) - 28 Nov 2020 (Study Day 120)	COVID-19

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Orogastric tube insertion*	28 Nov 2020 (Study Day 120) - 28 Nov 2020 (Study Day 120)	Adverse Event
Paraffin	28 Nov 2020 (Study Day 120) - 20 Jan 2021 (Study Day 173)	COVID-19
Propofol	28 Nov 2020 (Study Day 120) - 20 Jan 2021 (Study Day 173)	COVID-19
Tube feeding*	28 Nov 2020 (Study Day 120) - 28 Nov 2020 (Study Day 120)	Adverse Event
Vancomycin	28 Nov 2020 (Study Day 120) - 29 Dec 2020 (Study Day 151)	Superimposed Bacterial Infection Secondary To COVID-19 Illness
Cisatracurium besilate	29 Nov 2020 (Study Day 121) - 20 Jan 2021 (Study Day 173)	COVID-19
Epoprostenol	29 Nov 2020 (Study Day 121) - 29 Nov 2020 (Study Day 121)	COVID-19
Fentanyl	29 Nov 2020 (Study Day 121) - 20 Jan 2021 (Study Day 173)	COVID-19
Midazolam	29 Nov 2020 (Study Day 121) - 20 Jan 2021 (Study Day 173)	COVID-19
Norepinephrine	29 Nov 2020 (Study Day 121) - 29 Nov 2020 (Study Day 121)	COVID-19
Famotidine	30 Nov 2020 (Study Day 122) - 20 Jan 2021 (Study Day 173)	Gastroesophageal Reflux Disease
Bisacodyl	01 Dec 2020 (Study Day 123) - 20 Jan 2021 (Study Day 173)	Constipation
Chlorhexidine	01 Dec 2020 (Study Day 123) - 28 Jan 2021 (Study Day 181)	Prophylaxis For Prevention Of Oral Candidiasis
Dexamethasone	01 Dec 2020 (Study Day 123) - 11 Dec 2020 (Study Day 133)	Adult Respiratory Distress Syndrome
Docusate	01 Dec 2020 (Study Day 123) - Ongoing	Constipation
Heparin	01 Dec 2020 (Study Day 123) - Ongoing	Dvt Prophylaxis Secondary To Hospitalization Secondary To COVID-19
Hydralazine	01 Dec 2020 (Study Day 123) - 21 Jan 2021 (Study Day 174)	Hypertension
Ipratropium bromide; salbutamol sulfate	01 Dec 2020 (Study Day 123) - 20 Jan 2021 (Study Day 173)	Adult Respiratory Distress Syndrome
Ipratropium bromide; salbutamol sulfate	01 Dec 2020 (Study Day 123) - Ongoing	COVID-19, Adult Respiratory Distress Syndrome
Paracetamol	01 Dec 2020 (Study Day 123) - Ongoing	COVID-19
Albumin human	02 Dec 2020 (Study Day 124) - 31 Dec 2020 (Study Day 153)	Altered Fluid Status Secondary To Extracorporeal Membrane Oxygenation Secondary To Adult Respiratory Distress Syndrome
Femoral-femoral veno-venous extracorporeal membrane machine catheterization.*	02 Dec 2020 (Study Day 124) - 02 Dec 2020 (Study Day 124)	Adverse Event
Insulin lispro	02 Dec 2020 (Study Day 124) - 28 Dec 2020 (Study Day 150)	Steroid-Induced Hyperglycemia
Nicardipine	02 Dec 2020 (Study Day 124) - 02 Dec 2020 (Study Day 124)	COVID-19

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bronchoscopy*	04 Dec 2020 (Study Day 126) - 04 Dec 2020 (Study Day 126)	Adverse Event
Fentanyl	05 Dec 2020 (Study Day 127) - 28 Dec 2020 (Study Day 150)	Extracorporeal Membranous Oxygenation
Potassium chloride	05 Dec 2020 (Study Day 127) - 20 Jan 2021 (Study Day 173)	Secondary To Diuretic Usage Secondary To Extracorporeal Membranous Oxygenation Secondary To Adult Respiratory Distress Syndrome
Esmolol	06 Dec 2020 (Study Day 128) - 07 Dec 2020 (Study Day 129)	Extracorporeal Membrane Oxygenation Secondary To Adult Respiratory Distress Syndrome
Bronchoscopy*	08 Dec 2020 (Study Day 130) - 08 Dec 2020 (Study Day 130)	Adverse Event
Trazodone	08 Dec 2020 (Study Day 130) - Ongoing	Delirium, Insomnia
Tracheotomy/tracheostomy*	10 Dec 2020 (Study Day 132) - 10 Dec 2020 (Study Day 132)	Adverse Event
Amoxicillin	11 Dec 2020 (Study Day 133) - 13 Dec 2020 (Study Day 135)	Rhino Rocket Packing Prophylaxis
Quetiapine	12 Dec 2020 (Study Day 134) - 20 Jan 2021 (Study Day 173)	Delirium
Quetiapine	12 Dec 2020 (Study Day 134) - 20 Jan 2021 (Study Day 173)	Delirium/Insomnia
Silver nitrate	12 Dec 2020 (Study Day 134) - 12 Dec 2020 (Study Day 134)	Right-Sided Epistaxis
Bronchoscopy*	13 Dec 2020 (Study Day 135) - 13 Dec 2020 (Study Day 135)	Adverse Event
Bronchoscopy*	14 Dec 2020 (Study Day 136) - 14 Dec 2020 (Study Day 136)	Adverse Event
Enema, smog*	14 Dec 2020 (Study Day 136) - 14 Dec 2020 (Study Day 136)	Adverse Event
Extracorporeal membrane oxygenation circuit exchange*	14 Dec 2020 (Study Day 136) - 14 Dec 2020 (Study Day 136)	Adverse Event
Vancomycin	14 Dec 2020 (Study Day 136) - 14 Dec 2020 (Study Day 136)	Multifocal Pneumonia
Cefepime	16 Dec 2020 (Study Day 138) - 22 Dec 2020 (Study Day 144)	Multifocal Pneumonia
Extracorporeal membrane oxygenation circuit exchange*	17 Dec 2020 (Study Day 139) - 17 Dec 2020 (Study Day 139)	Adverse Event
Metronidazole	18 Dec 2020 (Study Day 140) - 22 Dec 2020 (Study Day 144)	Ventilator-Associated Pneumonia, Pseudomonas Bilateral
Prednisolone	18 Dec 2020 (Study Day 140) - 21 Dec 2020 (Study Day 143)	Acute Respiratory Failure
Argatroban	20 Dec 2020 (Study Day 142) - 25 Dec 2020 (Study Day 147)	Extracorporeal Membranous Oxygenation
Hydromorphone hydrochloride	20 Dec 2020 (Study Day 142) - 20 Jan 2021 (Study Day 173)	Extracorporeal Membrane Oxygenation Secondary To Adult Respiratory Distress Syndrome
Docusate	21 Dec 2020 (Study Day 143) - 28 Jan 2021 (Study Day 181)	Constipation

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Rhino rocket procedure*	21 Dec 2020 (Study Day 143) - 21 Dec 2020 (Study Day 143)	Adverse Event
Cefazolin	22 Dec 2020 (Study Day 144) - 23 Dec 2020 (Study Day 145)	Bronchoscopy Prophylaxis
Acetazolamide	23 Dec 2020 (Study Day 145) - 23 Dec 2020 (Study Day 145)	Extracorporeal Membrane Oxygenation Secondary To Adult Respiratory Distress Syndrome
Bronchoscopy*	23 Dec 2020 (Study Day 145) - 23 Dec 2020 (Study Day 145)	Adverse Event
Petrolatum	24 Dec 2020 (Study Day 146) - 10 Feb 2021 (Study Day 194)	Pressure Sores, Nose, Bilateral Cheeks, Coccyx
Bacitracin	25 Dec 2020 (Study Day 147) - 09 Feb 2021 (Study Day 193)	Left Posterior Shoulder, Non-Pruritic, Circular Rash
Fentanyl	25 Dec 2020 (Study Day 147) - 17 Jan 2021 (Study Day 170)	Pain, Generalized
Ketamine	25 Dec 2020 (Study Day 147) - 20 Jan 2021 (Study Day 173)	Extracorporeal Membrane Oxygenation Secondary To Adult Respiratory Syndrome, Delirium Secondary To Sedation Secondary To Adult Respiratory Syndrome
Melatonin	25 Dec 2020 (Study Day 147) - Ongoing	Insomnia, Delirium
Methylprednisolone	25 Dec 2020 (Study Day 147) - 03 Jan 2021 (Study Day 156)	Multifocal Pneumonia, Adult Respiratory Distress Syndrome
Metronidazole	25 Dec 2020 (Study Day 147) - 15 Jan 2021 (Study Day 168)	Multifocal Pneumonia
Oxycodone	25 Dec 2020 (Study Day 147) - 09 Jan 2021 (Study Day 162)	Pain, Generalized
Extracorporeal membrane oxygenation circuit exchange*	26 Dec 2020 (Study Day 148) - 26 Dec 2020 (Study Day 148)	Adverse Event
Ampicillin; sulbactam	28 Dec 2020 (Study Day 150) - 29 Dec 2020 (Study Day 151)	Extracorporeal Membrane Oxygenation Circuit Exchange Prophylaxis
Morphine sulfate	28 Dec 2020 (Study Day 150) - 28 Jan 2021 (Study Day 181)	Pain, Generalized
Oxycodone	30 Dec 2020 (Study Day 152) - 28 Jan 2021 (Study Day 181)	Pain, Generalized
Bronchoscopy*	31 Dec 2020 (Study Day 153) - 31 Dec 2020 (Study Day 153)	Adverse Event
Methylprednisolone	31 Dec 2020 (Study Day 153) - 01 Jan 2021 (Study Day 154)	Adult Respiratory Distress Syndrome
Metoprolol tartrate	31 Dec 2020 (Study Day 153) - 20 Jan 2021 (Study Day 173)	Tachycardia
Other viral vaccines	2021 - 2021	COVID Prevention
Femoral-femoral ven-venous extracorporeal membrane machine de-cannulation*	01 Jan 2021 (Study Day 154) - 01 Jan 2021 (Study Day 154)	Adverse Event
Fondaparinux	01 Jan 2021 (Study Day 154) - 07 Jan 2021 (Study Day 160)	Left Lower Leg, Deep Vein Thrombosis
Furosemide	01 Jan 2021 (Study Day 154) - 01 Jan 2021 (Study Day 154)	Extracorporeal Membrane Oxygenation Secondary To Adult Respiratory Distress Syndrome

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin glargine	01 Jan 2021 (Study Day 154) - 28 Jan 2021 (Study Day 181)	Steroid-Induced Hyperglycemia
Insulin lispro	01 Jan 2021 (Study Day 154) - 28 Jan 2021 (Study Day 181)	Steroid-Induced Hyperglycemia
Other nasal preparations	01 Jan 2021 (Study Day 154) - 21 Jan 2021 (Study Day 174)	Right-Sided Epistaxis
Sulfamethoxazole; trimethoprim	01 Jan 2021 (Study Day 154) - 06 Feb 2021 (Study Day 190)	Pneumonia Prophylaxis Secondary To Steroids
Linezolid	02 Jan 2021 (Study Day 155) - 02 Jan 2021 (Study Day 155)	Vancomycin-Resistant Enterococcus Septicemia, Ventilator Associated Pneumonia, Pseudomonas Bilateral
Methylprednisolone	02 Jan 2021 (Study Day 155) - 02 Jan 2021 (Study Day 155)	Adult Respiratory Distress Syndrome
Metoprolol tartrate	02 Jan 2021 (Study Day 155) - 20 Jan 2021 (Study Day 173)	Tachycardia
Potassium chloride	02 Jan 2021 (Study Day 155) - 28 Jan 2021 (Study Day 181)	Extracorporeal Membrane Oxygenation Secondary To Adult Respiratory Distress Syndrome
Metronidazole	03 Jan 2021 (Study Day 156) - 08 Jan 2021 (Study Day 161)	Ventilator-Associated Pneumonia, Pseudomonas Bilateral
Tobramycin	04 Jan 2021 (Study Day 157) - 12 Jan 2021 (Study Day 165)	Adult Respiratory Distress Syndrome, Vancomycin-Resistant Enterococcus Septicemia
Inferior vena cava filter placement*	06 Jan 2021 (Study Day 159) - 06 Jan 2021 (Study Day 159)	Adverse Event
Acetylsalicylic acid	08 Jan 2021 (Study Day 161) - 12 Jan 2021 (Study Day 165)	Left Lower Leg Deep Vein Thrombosis, Extracorporeal Membrane Oxygenation
Fondaparinux	08 Jan 2021 (Study Day 161) - Ongoing	Left Lower Leg Deep Vein Thrombosis
Prednisone	10 Jan 2021 (Study Day 163) - 16 Jan 2021 (Study Day 169)	Adult Respiratory Distress Syndrome
Acetazolamide	12 Jan 2021 (Study Day 165) - 12 Jan 2021 (Study Day 165)	Extracorporeal Membrane Oxygenation Secondary To Adult Respiratory Distress Syndrome
Hyoscine	12 Jan 2021 (Study Day 165) - 12 Jan 2021 (Study Day 165)	Postoperative Nausea/Vomiting
Fentanyl	17 Jan 2021 (Study Day 170) - 28 Jan 2021 (Study Day 181)	Pain, Generalized
Prednisone	17 Jan 2021 (Study Day 170) - 23 Jan 2021 (Study Day 176)	Adult Respiratory Distress Syndrome
Bronchoscopy*	18 Jan 2021 (Study Day 171) - 18 Jan 2021 (Study Day 171)	Adverse Event
Famotidine	20 Jan 2021 (Study Day 173) - 20 Jan 2021 (Study Day 173)	Gastroesophageal Reflux Disease
Lactobacillus rhamnosus	20 Jan 2021 (Study Day 173) - Ongoing	Multifocal Pneumonia
Miconazole	20 Jan 2021 (Study Day 173) - 05 Feb 2021 (Study Day 189)	Left Posterior Shoulder Non-Pruritic, Non-Urticarial, Circular Rash
Morphine	20 Jan 2021 (Study Day 173) - 28 Jan 2021 (Study Day 181)	Pain, Generalized
Omeprazole	20 Jan 2021 (Study Day 173) - Ongoing	Gastroesophageal Reflux Disease Without Esophagitis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Quetiapine	20 Jan 2021 (Study Day 173) - 30 Jan 2021 (Study Day 183)	Delirium
Tramadol	20 Jan 2021 (Study Day 173) - 10 Feb 2021 (Study Day 194)	Pain, Generalized
Amlodipine	21 Jan 2021 (Study Day 174) - Ongoing	Hypertension
Escitalopram oxalate	21 Jan 2021 (Study Day 174) - Ongoing	Anxiety
Metoprolol	21 Jan 2021 (Study Day 174) - Ongoing	Tachycardia
Prednisone	24 Jan 2021 (Study Day 177) - 30 Jan 2021 (Study Day 183)	Adult Respiratory Distress Syndrome
Trachea decannulation*	25 Jan 2021 (Study Day 178) - 25 Jan 2021 (Study Day 178)	Adverse Event
Sodium fluorophosphate	26 Jan 2021 (Study Day 179) - Ongoing	Oral Ulcerations
Influenza vaccine	28 Jan 2021 (Study Day 181) - 28 Jan 2021 (Study Day 181)	Influenza Prophylaxis
Influenza vaccine	28 Jan 2021 (Study Day 181) - 28 Jan 2021 (Study Day 181)	Prophylaxis
Pneumococcal vaccine polysacch 23v	28 Jan 2021 (Study Day 181) - 28 Jan 2021 (Study Day 181)	Prophylaxis
Prednisone	31 Jan 2021 (Study Day 184) - 07 Feb 2021 (Study Day 191)	Adult Respiratory Distress Syndrome
Gabapentin	01 Feb 2021 (Study Day 185) - 05 Feb 2021 (Study Day 189)	Left Lower Leg Parasthesia
Furosemide	03 Feb 2021 (Study Day 187) - 08 Feb 2021 (Study Day 192)	Edema, Bilateral Lower Extremities
Gabapentin	06 Feb 2021 (Study Day 190) - Ongoing	Left Lower Extremity Paresthesia
Potassium chloride	09 Feb 2021 (Study Day 193) - 11 Feb 2021 (Study Day 195)	Hypokalemia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Acute Kidney Injury	Grade 2/moderate	Not related	16 Nov 2020 (Study Day 108) - 30 Nov 2020 (Study Day 122)
Gastrooesophageal Reflux Disease	Grade 1/mild	Not related	18 Nov 2020 (Study Day 110) - 10 Feb 2021 (Study Day 194)
Anxiety	Grade 3/severe	Not related	19 Nov 2020 (Study Day 111) - 11 Feb 2021 (Study Day 195)
Constipation	Grade 2/moderate	Not related	20 Nov 2020 (Study Day 112) - 28 Jan 2021 (Study Day 181)
Pain	Grade 3/severe	Not related	20 Nov 2020 (Study Day 112) - 11 Feb 2021 (Study Day 195)
Hyperglycaemia	Grade 2/moderate	Not related	28 Nov 2020 (Study Day 120) - 28 Jan 2021 (Study Day 181)
Decubitus Ulcer	Grade 1/mild	Not related	01 Dec 2020 (Study Day 123) - 13 Feb 2021 (Study Day 197)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Epistaxis	Grade 3/severe	Not related	02 Dec 2020 (Study Day 124) - 23 Dec 2020 (Study Day 145)
Hypertension	Grade 3/severe	Not related	02 Dec 2020 (Study Day 124) - Ongoing
Deep Vein Thrombosis	Grade 2/moderate	Not related	01 Jan 2021 (Study Day 154) - Ongoing
Tachycardia	Grade 2/moderate	Not related	01 Jan 2021 (Study Day 154) - Ongoing
Mouth Ulceration	Grade 2/moderate	Not related	02 Jan 2021 (Study Day 155) - 10 Feb 2021 (Study Day 194)
Paraesthesia	Grade 3/severe	Not related	10 Jan 2021 (Study Day 163) - Ongoing
Paraesthesia	Grade 3/severe	Not related	10 Jan 2021 (Study Day 163) - Ongoing
Delirium	Grade 2/moderate	Not related	15 Jan 2021 (Study Day 168) - 28 Jan 2021 (Study Day 181)
Insomnia	Grade 2/moderate	Not related	15 Jan 2021 (Study Day 168) - Ongoing
Rash	Grade 1/mild	Not related	17 Jan 2021 (Study Day 170) - 24 Jan 2021 (Study Day 177)
Hypokalaemia	Grade 1/mild	Not related	20 Jan 2021 (Study Day 173) - 16 Feb 2021 (Study Day 200)
Essential Tremor	Grade 1/mild	Not related	28 Jan 2021 (Study Day 181) - 15 Mar 2021 (Study Day 227)
Oedema Peripheral	Grade 1/mild	Not related	03 Feb 2021 (Study Day 187) - 08 Feb 2021 (Study Day 192)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379706

Participant Number:	US327-2104 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	11 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	08 Sep 2020 (Study Day 29)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Suspected COVID-19/ Suspected COVID-19	COVID-19	Grade 1/mild	Not related	20 Oct 2020 (Study Day 71) – 23 Oct 2020 (Study Day 74)	Recovered/ resolved
COVID-19/COVID-19	COVID-19	Grade 2/ moderate	Not related	27 Dec 2020 (Study Day 139) – 24 Jan 2021 (Study Day 167)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US327-2104, a 68-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 11 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 08 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 20 Oct 2020 (Study Day 71), 70 days after the first dose and 42 days after the second dose of the IP, the participant experienced a Grade 1/Mild non-serious adverse event of suspected COVID-19.

On 27 Dec 2020 (Study Day 139), 138 days after the first dose and 110 days after the second dose of the IP, the participant experienced a Grade 2/Moderate non-serious adverse event of COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 08 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 04 Jan 2021 (Study Day 147), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
20 Oct 2020 (Study Day 71)	Body Aches	Mild
20 Oct 2020 (Study Day 71)	Chills	Mild
20 Oct 2020 (Study Day 71)	Cough	Mild
20 Oct 2020 (Study Day 71)	Fatigue	Mild
20 Oct 2020 (Study Day 71)	Headache	Mild
20 Oct 2020 (Study Day 71)	Muscle Aches (Myalgia)	Mild
20 Oct 2020 (Study Day 71)	Sore Throat	Mild
21 Oct 2020 (Study Day 72)	Body Aches	Mild
21 Oct 2020 (Study Day 72)	Chills	Mild
21 Oct 2020 (Study Day 72)	Cough	Mild
21 Oct 2020 (Study Day 72)	Fatigue	Mild
21 Oct 2020 (Study Day 72)	Headache	Mild
21 Oct 2020 (Study Day 72)	Muscle Aches (Myalgia)	Mild
21 Oct 2020 (Study Day 72)	Sore Throat	Mild
21 Oct 2020 (Study Day 72)	Temperature (°F)	38.0
22 Oct 2020 (Study Day 73)	Body Aches	Mild
22 Oct 2020 (Study Day 73)	Chills	Mild
22 Oct 2020 (Study Day 73)	Fatigue	Mild
22 Oct 2020 (Study Day 73)	Headache	Mild
22 Oct 2020 (Study Day 73)	Muscle Aches (Myalgia)	Mild
22 Oct 2020 (Study Day 73)	New Loss of Smell	Mild
22 Oct 2020 (Study Day 73)	New Loss of Taste	Mild
22 Oct 2020 (Study Day 73)	Sore Throat	Mild
23 Oct 2020 (Study Day 74)	Chills	Mild
23 Oct 2020 (Study Day 74)	Diarrhea	Mild
23 Oct 2020 (Study Day 74)	Fatigue	Mild
23 Oct 2020 (Study Day 74)	Sore Throat	Mild
27 Dec 2020 (Study Day 139)	Body Aches	Moderate
27 Dec 2020 (Study Day 139)	Chills	Moderate
27 Dec 2020 (Study Day 139)	Cough	Mild
27 Dec 2020 (Study Day 139)	Diarrhea	Mild
27 Dec 2020 (Study Day 139)	Difficulty Breathing	Mild
27 Dec 2020 (Study Day 139)	Fatigue	Moderate
27 Dec 2020 (Study Day 139)	Headache	Moderate
27 Dec 2020 (Study Day 139)	Muscle Aches (Myalgia)	Moderate
27 Dec 2020 (Study Day 139)	Nasal Congestion	Moderate
27 Dec 2020 (Study Day 139)	Nausea	Moderate
27 Dec 2020 (Study Day 139)	New Loss of Smell	Moderate
27 Dec 2020 (Study Day 139)	New Loss of Taste	Moderate
27 Dec 2020 (Study Day 139)	Runny Nose (Rhinorrhea)	Moderate
27 Dec 2020 (Study Day 139)	Shortness of Breath	Mild
27 Dec 2020 (Study Day 139)	Sore Throat	Mild

Symptom Date	Symptom	Result
28 Dec 2020 (Study Day 140)	Body Aches	Moderate
28 Dec 2020 (Study Day 140)	Chills	Moderate
28 Dec 2020 (Study Day 140)	Cough	Mild
28 Dec 2020 (Study Day 140)	Diarrhea	Mild
28 Dec 2020 (Study Day 140)	Difficulty Breathing	Mild
28 Dec 2020 (Study Day 140)	Fatigue	Moderate
28 Dec 2020 (Study Day 140)	Headache	Moderate
28 Dec 2020 (Study Day 140)	Muscle Aches (Myalgia)	Moderate

09 Jan 2021 (Study Day 152)	Nasal Congestion	Mild
09 Jan 2021 (Study Day 152)	O2 Saturation (%)	91
09 Jan 2021 (Study Day 152)	Temperature (°F)	100.7

Symptom Date	Symptom	Result
10 Jan 2021 (Study Day 153)	Body Aches	Mild
10 Jan 2021 (Study Day 153)	Cough	Mild
10 Jan 2021 (Study Day 153)	Difficulty Breathing	Mild
10 Jan 2021 (Study Day 153)	Fatigue	Moderate
10 Jan 2021 (Study Day 153)	Headache	Mild
10 Jan 2021 (Study Day 153)	Muscle Aches (Myalgia)	Mild
10 Jan 2021 (Study Day 153)	Nasal Congestion	Mild
10 Jan 2021 (Study Day 153)	Nausea	Mild
10 Jan 2021 (Study Day 153)	Runny Nose (Rhinorrhea)	Mild
10 Jan 2021 (Study Day 153)	Shortness of Breath	Mild
10 Jan 2021 (Study Day 153)	Sore Throat	Mild
11 Jan 2021 (Study Day 154)	Fatigue	Mild
14 Jan 2021 (Study Day 157)	Cough	Mild
14 Jan 2021 (Study Day 157)	Nasal Congestion	Mild
15 Jan 2021 (Study Day 158)	Cough	Mild
15 Jan 2021 (Study Day 158)	Nasal Congestion	Mild
17 Jan 2021 (Study Day 160)	New Loss of Smell	Moderate
17 Jan 2021 (Study Day 160)	New Loss of Taste	Moderate
17 Jan 2021 (Study Day 160)	Runny Nose (Rhinorrhea)	Mild
18 Jan 2021 (Study Day 161)	New Loss of Smell	Moderate
18 Jan 2021 (Study Day 161)	New Loss of Taste	Moderate
19 Jan 2021 (Study Day 162)	New Loss of Smell	Moderate
19 Jan 2021 (Study Day 162)	New Loss of Taste	Moderate
20 Jan 2021 (Study Day 163)	New Loss of Smell	Moderate
20 Jan 2021 (Study Day 163)	New Loss of Taste	Moderate
21 Jan 2021 (Study Day 164)	New Loss of Smell	Moderate
21 Jan 2021 (Study Day 164)	New Loss of Taste	Moderate
23 Jan 2021 (Study Day 166)	Nasal Congestion	Mild
23 Jan 2021 (Study Day 166)	New Loss of Smell	Severe
23 Jan 2021 (Study Day 166)	New Loss of Taste	Severe
24 Jan 2021 (Study Day 167)	Nasal Congestion	Mild
24 Jan 2021 (Study Day 167)	New Loss of Smell	Moderate
24 Jan 2021 (Study Day 167)	New Loss of Taste	Moderate
27 Jan 2021 (Study Day 170)	Headache	Mild
01 Feb 2021 (Study Day 175)	Fatigue	Mild
01 Feb 2021 (Study Day 175)	Nasal Congestion	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
09 Jan 2021 (Study Day 152)	Oxygen Saturation	91%

Dates	Severity Indication	Result
09 Jan 2021 - 09 Jan 2021 (Study Day 152-152)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

The IP dose was not changed due to the suspected covid-19. The event of suspected COVID-19 lasted for 4 days, after which it was considered to be recovered/resolved on 23 Oct 2020 (Study Day 74). The investigator assessed the event of suspected COVID-19 to be not related to the IP.

Action taken with the IP was not applicable. The event of COVID-19 lasted for 29 days, after which it was considered to be recovered/resolved on 24 Jan 2021 (Study Day 167). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002944	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Allergy to animal	Allergy to cats	1960 - Ongoing
Angioplasty	Angioplasty	1996 - 1996
Coronary artery disease	Coronary artery disease	1996 - Ongoing
Hypertension	Hypertension	1996 - Ongoing
Asthma	Moderate asthma	2000 - Ongoing
Gout	Bilateral gout in ankles	2000 - Ongoing
Seasonal allergy	Hay fever	2000 - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes mellitus	2000 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2015 - Ongoing
Hypothyroidism	Hypothyroidism	2015 - Ongoing
Depression	Depression	May 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	1996 - Ongoing	Cardiac Prophylaxis
Allopurinol	2000 - Ongoing	Gout In Bilateral Ankles
Glyceryl trinitrate	2000 - Ongoing	Angina
Lisinopril	2000 - Ongoing	Hypertension
Metformin	2000 - Ongoing	Type 2 Diabetes Mellitus
Fluticasone propionate	2005 - Ongoing	Asthma
Amlodipine	2010 - Ongoing	Hypertension
Fluticasone propionate	2010 - Ongoing	Hay Fever
Levothyroxine sodium	2015 - Ongoing	Hypothyroidism
Rosuvastatin calcium	2015 - Ongoing	Hypercholesterolemia
Colecalciferol	2017 - Ongoing	Nutritional Supplement
Insulin glargine	2017 - Ongoing	Type 2 Diabetes Mellitus
Insulin lispro	2017 - Ongoing	Type 2 Diabetes Mellitus
Fenofibrate	2019 - Ongoing	Hypercholesterolemia
Montelukast sodium	2019 - Ongoing	Hay Fever
Carvedilol	Jan 2019 - Ongoing	Hypertension
Empagliflozin	Jun 2019 - Ongoing	Type 2 Diabetes Mellitus
Sertraline	May 2020 - Ongoing	Depression
Paracetamol	20 Oct 2020 (Study Day 71) - Ongoing	Fever
Influenza vaccine	30 Oct 2020 (Study Day 81) - 30 Oct 2020 (Study Day 81)	Influenza
Ibuprofen	27 Dec 2020 (Study Day 139) - 24 Jan 2021 (Study Day 167)	COVID-19
Pseudoephedrine hydrochloride	13 Jan 2021 (Study Day 156) - 24 Jan 2021 (Study Day 167)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Suspected COVID-19	Grade 1/mild	Not related	20 Oct 2020 (Study Day 71) - 23 Oct 2020 (Study Day 74)
COVID-19	Grade 2/moderate	Not related	27 Dec 2020 (Study Day 139) - 24 Jan 2021 (Study Day 167)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US327-2144 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	11 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID 19	SAE, COVID-19	Grade 4	Not related	02 Nov 2020 (Study Day 81) – 29 Nov 2020 (Study Day 108)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US327-2144, a 29-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 14 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 11 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 02 Nov 2020 (Study Day 81), 80 days after the first dose and 52 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of COVID 19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 11 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 04 Nov 2020 (Study Day 83), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
02 Nov 2020 (Study Day 81)	Body Aches	Mild
02 Nov 2020 (Study Day 81)	Chills	Mild
02 Nov 2020 (Study Day 81)	Diarrhea	Mild
02 Nov 2020 (Study Day 81)	Difficulty Breathing	Mild
02 Nov 2020 (Study Day 81)	Fatigue	Moderate
02 Nov 2020 (Study Day 81)	Headache	Moderate

Symptom Date	Symptom	Result
02 Nov 2020 (Study Day 81)	Muscle Aches (Myalgia)	Moderate
02 Nov 2020 (Study Day 81)	Nasal Congestion	Moderate
02 Nov 2020 (Study Day 81)	Nausea	Mild
02 Nov 2020 (Study Day 81)	New Loss of Smell	Mild
02 Nov 2020 (Study Day 81)	New Loss of Taste	Mild
02 Nov 2020 (Study Day 81)	Shortness of Breath	Mild
03 Nov 2020 (Study Day 82)	Body Aches	Mild
03 Nov 2020 (Study Day 82)	Chills	Mild
03 Nov 2020 (Study Day 82)	Diarrhea	Mild
03 Nov 2020 (Study Day 82)	Difficulty Breathing	Mild

15 Nov 2020 (Study Day 94)	New Loss of Smell	Mild
15 Nov 2020 (Study Day 94)	New Loss of Taste	Mild
15 Nov 2020 (Study Day 94)	Runny Nose (Rhinorrhea)	Mild
15 Nov 2020 (Study Day 94)	Shortness of Breath	Moderate
16 Nov 2020 (Study Day 95)	Cough	Moderate

Symptom Date	Symptom	Result
16 Nov 2020 (Study Day 95)	Diarrhea	Moderate
16 Nov 2020 (Study Day 95)	Difficulty Breathing	Severe
16 Nov 2020 (Study Day 95)	Fatigue	Moderate
16 Nov 2020 (Study Day 95)	Headache	Moderate
16 Nov 2020 (Study Day 95)	Nasal Congestion	Mild
16 Nov 2020 (Study Day 95)	Nausea	Mild
16 Nov 2020 (Study Day 95)	New Loss of Smell	Mild
16 Nov 2020 (Study Day 95)	New Loss of Taste	Mild
16 Nov 2020 (Study Day 95)	O2 Saturation (%)	91
16 Nov 2020 (Study Day 95)	Runny Nose (Rhinorrhea)	Moderate
16 Nov 2020 (Study Day 95)	Shortness of Breath	Moderate
16 Nov 2020 (Study Day 95)	Sore Throat	Mild
17 Nov 2020 (Study Day 96)	Cough	Mild
17 Nov 2020 (Study Day 96)	Headache	Mild
17 Nov 2020 (Study Day 96)	O2 Saturation (%)	93
18 Nov 2020 (Study Day 97)	Chills	Mild
18 Nov 2020 (Study Day 97)	Cough	Moderate
18 Nov 2020 (Study Day 97)	Diarrhea	Mild
19 Nov 2020 (Study Day 98)	Cough	Mild
19 Nov 2020 (Study Day 98)	Nasal Congestion	Mild
21 Nov 2020 (Study Day 100)	Cough	Mild
21 Nov 2020 (Study Day 100)	Diarrhea	Mild
21 Nov 2020 (Study Day 100)	Headache	Mild
22 Nov 2020 (Study Day 101)	Cough	Mild
22 Nov 2020 (Study Day 101)	Diarrhea	Mild
22 Nov 2020 (Study Day 101)	Headache	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
11 Nov 2020 (Study Day 90)	Oxygen Saturation	92%
11 Nov 2020 - 18 Nov 2020 (Study Day 90-97)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes
16 Nov 2020 - 16 Nov 2020 (Study Day 95-95)	Clinical Evidence of Pneumonia	Yes
16 Nov 2020 - 16 Nov 2020 (Study Day 95-95)	Radiographical Evidence of Pneumonia	Yes

Action taken with the IP was not applicable. The event of COVID 19 lasted for 28 days, after which it was considered to be recovered/resolved on 29 Nov 2020 (Study Day 108). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000759	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	1995 - Ongoing
Seasonal allergy	Seasonal allergies	1995 - Ongoing
Haemorrhoids	Hemorrhoids	2013 - 2016
Insomnia	Insomnia	2015 - Ongoing
Allergy to animal	Cat allergy	2016 - Ongoing
Haemorrhoid operation	Hemorrhoidectomy	2016 - 2016
Obesity	Severe obesity	2017 - Ongoing
Food allergy	Wheat allergy	2019 - Ongoing
Vasectomy	Vasectomy	2019 - 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cetirizine	2015 - Ongoing	Seasonal Allergies
Clonazepam	2017 - Ongoing	Insomnia
Vitamins nos	2017 - Ongoing	Nutritional Health
Omeprazole	2019 - Ongoing	Gastroesophageal Reflux Disease
Influenza vaccine	18 Sep 2020 (Study Day 36) - 18 Sep 2020 (Study Day 36)	Influenza Prophylaxis
Paracetamol	02 Nov 2020 (Study Day 81) - Ongoing	COVID 19 Illness
Cetirizine hydrochloride	04 Nov 2020 (Study Day 83) - Ongoing	Cat Allergy
Pseudoephedrine	07 Nov 2020 (Study Day 86) - Ongoing	COVID 19 Illness
Enoxaparin	12 Nov 2020 (Study Day 91) - 13 Nov 2020 (Study Day 92)	Deep Vein Thrombosis 2nd To COVID 19 Illness
Eucalyptus globulus oil; menthol	13 Nov 2020 (Study Day 92) - 29 Jan 2021 (Study Day 169)	COVID 19 Illness

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Chest x-ray*	16 Nov 2020 (Study Day 95) - 16 Nov 2020 (Study Day 95)	Adverse Event
Dexamethasone	16 Nov 2020 (Study Day 95) - 18 Nov 2020 (Study Day 97)	COVID 19
Remdesivir	16 Nov 2020 (Study Day 95) - 16 Nov 2020 (Study Day 95)	COVID 19
Chest x-ray*	17 Nov 2020 (Study Day 96) - 17 Nov 2020 (Study Day 96)	Adverse Event
Dexamethasone	17 Nov 2020 (Study Day 96) - 29 Nov 2020 (Study Day 108)	COVID 19
Lactobacillus acidophilus	17 Nov 2020 (Study Day 96) - 17 Nov 2020 (Study Day 96)	COVID-19
Levofloxacin	17 Nov 2020 (Study Day 96) - 25 Nov 2020 (Study Day 104)	COVID 19, Prevention Of Secondary Pneumonia
Oxygen	17 Nov 2020 (Study Day 96) - 19 Nov 2020 (Study Day 98)	COVID-19
Remdesivir	17 Nov 2020 (Study Day 96) - 18 Nov 2020 (Study Day 97)	COVID 19
Tramadol	17 Nov 2020 (Study Day 96) - 17 Nov 2020 (Study Day 96)	COVID 19
Ascorbic acid	18 Nov 2020 (Study Day 97) - Ongoing	Immune Supplement
Chest x-ray*	18 Nov 2020 (Study Day 97) - 18 Nov 2020 (Study Day 97)	Adverse Event
Colecalciferol	18 Nov 2020 (Study Day 97) - Ongoing	Immune Supplement
Salbutamol	18 Nov 2020 (Study Day 97) - 29 Nov 2020 (Study Day 108)	COVID-19
Zinc sulfate	18 Nov 2020 (Study Day 97) - Ongoing	Immune Supplement
Escitalopram oxalate	25 Nov 2020 (Study Day 104) - Ongoing	Depression

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Depression	Grade 1/mild	Not related	20 Nov 2020 (Study Day 99) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US327-2195 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	17 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	SAE, COVID-19	Grade 4	Not related	30 Oct 2020 (Study Day 73) – 08 Dec 2020 (Study Day 112)	Recovered/resolved
COVID-19 Pneumonia/ Pneumonia Due To COVID-19 Virus	SAE, COVID-19	Grade 4	Not related	07 Nov 2020 (Study Day 81) – 30 Nov 2020 (Study Day 104)	Recovered/resolved
Hypoxia/Hypoxia	SAE	Grade 3/severe	Not related	07 Nov 2020 (Study Day 81) – 12 Nov 2020 (Study Day 86)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US327-2195, a 44-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 17 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Nov 2020 (Study Day 81), 80 days after the first dose and 51 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of hypoxia. Action taken with the IP was not applicable. The event of hypoxia lasted for 6 days, after which it was considered to be recovered/resolved on 12 Nov 2020 (Study Day 86). The investigator assessed the event of hypoxia to be not related to the IP.

Severe COVID-19 Details

On 30 Oct 2020 (Study Day 73), 72 days after the first dose and 43 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of COVID-19.

On 07 Nov 2020 (Study Day 81), 80 days after the first dose and 51 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pneumonia due to COVID-19 virus.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 30, 17 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 02 Nov 2020 (Study Day 76), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
30 Oct 2020 (Study Day 73)	Body Aches	Severe
30 Oct 2020 (Study Day 73)	Fatigue	Severe
31 Oct 2020 (Study Day 74)	Body Aches	Severe
31 Oct 2020 (Study Day 74)	Chills	Severe
31 Oct 2020 (Study Day 74)	Fatigue	Severe
01 Nov 2020 (Study Day 75)	Body Aches	Severe
01 Nov 2020 (Study Day 75)	Chills	Severe
01 Nov 2020 (Study Day 75)	Cough	Mild
01 Nov 2020 (Study Day 75)	Fatigue	Severe
01 Nov 2020 (Study Day 75)	Nasal Congestion	Mild
01 Nov 2020 (Study Day 75)	New Loss of Taste	Mild
01 Nov 2020 (Study Day 75)	Shortness of Breath	Mild
02 Nov 2020 (Study Day 76)	Body Aches	Severe
02 Nov 2020 (Study Day 76)	Chills	Moderate
02 Nov 2020 (Study Day 76)	Cough	Moderate
02 Nov 2020 (Study Day 76)	Fatigue	Severe
02 Nov 2020 (Study Day 76)	Headache	Severe
02 Nov 2020 (Study Day 76)	Nasal Congestion	Moderate
02 Nov 2020 (Study Day 76)	New Loss of Smell	Severe
02 Nov 2020 (Study Day 76)	New Loss of Taste	Severe
03 Nov 2020 (Study Day 77)	Body Aches	Moderate
03 Nov 2020 (Study Day 77)	Chills	Moderate
03 Nov 2020 (Study Day 77)	Cough	Mild
03 Nov 2020 (Study Day 77)	Difficulty Breathing	Mild
03 Nov 2020 (Study Day 77)	Fatigue	Moderate
03 Nov 2020 (Study Day 77)	Muscle Aches (Myalgia)	Moderate
03 Nov 2020 (Study Day 77)	Nasal Congestion	Moderate
03 Nov 2020 (Study Day 77)	New Loss of Smell	Severe
03 Nov 2020 (Study Day 77)	New Loss of Taste	Severe
03 Nov 2020 (Study Day 77)	Temperature (°F)	101.2
04 Nov 2020 (Study Day 78)	Body Aches	Mild

Symptom Date	Symptom	Result
04 Nov 2020 (Study Day 78)	Chills	Moderate
04 Nov 2020 (Study Day 78)	Cough	Moderate

23 Nov 2020 (Study Day 97)	Shortness of Breath	Mild
24 Nov 2020 (Study Day 98)	Cough	Mild
24 Nov 2020 (Study Day 98)	Nasal Congestion	Mild
24 Nov 2020 (Study Day 98)	Shortness of Breath	Mild
25 Nov 2020 (Study Day 99)	Cough	Mild
25 Nov 2020 (Study Day 99)	Nasal Congestion	Mild
25 Nov 2020 (Study Day 99)	Shortness of Breath	Mild
26 Nov 2020 (Study Day 100)	Cough	Mild
26 Nov 2020 (Study Day 100)	Nasal Congestion	Mild
27 Nov 2020 (Study Day 101)	Cough	Mild
27 Nov 2020 (Study Day 101)	Nasal Congestion	Mild
28 Nov 2020 (Study Day 102)	Cough	Mild
28 Nov 2020 (Study Day 102)	Nasal Congestion	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
05 Nov 2020 (Study Day 79)	Oxygen Saturation	85%
05 Nov 2020 - 15 Nov 2020 (Study Day 79-89)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID-19 lasted for 40 days, after which it was considered to be recovered/resolved on 08 Dec 2020 (Study Day 112). The investigator assessed the event of COVID-19 to be not related to the IP.

Action taken with the IP was not applicable. The event of pneumonia due to COVID-19 virus lasted for 24 days, after which it was considered to be recovered/resolved on 30 Nov 2020 (Study Day 104). The investigator assessed the event of COVID-19 pneumonia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000683	COVID-19
MOD-2020-000683	Hypoxia
MOD-2020-000683	COVID-19 pneumonia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Dyspepsia	Acid indigestion	1992 - Ongoing
Gestational diabetes	Gestational diabetes	2007 - 2007
Seasonal allergy	Seasonal allergies	2007 - Ongoing
Gestational diabetes	Gestational diabetes	2008 - 2008
Sciatica	Sciatica	2017 - Ongoing
Back pain	Generalized lumbar backache	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium carbonate	1992 - Ongoing	Acid Indigestion
Fexofenadine hydrochloride; pseudoephedrine hydrochloride	Apr 2016 - 15 Oct 2020 (Study Day 58)	Seasonal Allergies
Ibuprofen	2019 - Ongoing	Generalized Lumbar Backache
Fluticasone propionate	11 Oct 2020 (Study Day 54) - Ongoing	Seasonal Allergies
Influenza vaccine	15 Oct 2020 (Study Day 58) - 15 Oct 2020 (Study Day 58)	Influenza
Ascorbic acid	30 Oct 2020 (Study Day 73) - Ongoing	Nutritional Supplement
Guaifenesin	30 Oct 2020 (Study Day 73) - 08 Dec 2020 (Study Day 112)	COVID 19

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sambucus nigra; zinc gluconate	30 Oct 2020 (Study Day 73) - 08 Dec 2020 (Study Day 112)	COVID 19
Vitamin d nos	30 Oct 2020 (Study Day 73) - Ongoing	Nutritional Supplement
Melatonin	02 Nov 2020 (Study Day 76) - Ongoing	COVID 19
Paracetamol	02 Nov 2020 (Study Day 76) - Ongoing	COVID 19
Azithromycin	07 Nov 2020 (Study Day 81) - 11 Nov 2020 (Study Day 85)	Pneumonia Secondary To COVID 19 Positive Illness
Ceftriaxone	07 Nov 2020 (Study Day 81) - Ongoing	Secondary Pneumonia Due To COVID 19 Positive Illness
Chest x-ray*	07 Nov 2020 (Study Day 81) - 07 Nov 2020 (Study Day 81)	Adverse Event
Dexamethasone	07 Nov 2020 (Study Day 81) - 08 Dec 2020 (Study Day 112)	COVID 19
Enoxaparin sodium	07 Nov 2020 (Study Day 81) - 08 Dec 2020 (Study Day 112)	COVID-19
Oxygen	07 Nov 2020 (Study Day 81) - 20 Nov 2020 (Study Day 94)	Hypoxia
Remdesivir	07 Nov 2020 (Study Day 81) - 07 Nov 2020 (Study Day 81)	COVID 19
Remdesivir	08 Nov 2020 (Study Day 82) - 11 Nov 2020 (Study Day 85)	COVID 19
Plasma	09 Nov 2020 (Study Day 83) - 09 Nov 2020 (Study Day 83)	COVID 19
Azithromycin	12 Nov 2020 (Study Day 86) - Ongoing	Pneumonia Secondary To COVID 19 Illness.
Potassium	12 Nov 2020 (Study Day 86) - Ongoing	Hypokalemia
Cetirizine	15 Nov 2020 (Study Day 89) - Ongoing	Nasal Congestion, Allergies - COVID 19
Fluconazole	16 Nov 2020 (Study Day 90) - 16 Nov 2020 (Study Day 90)	Vaginal Candidiasis
Omeprazole	16 Nov 2020 (Study Day 90) - Ongoing	Acid Indigestion
Salbutamol	18 Nov 2020 (Study Day 92) - 08 Dec 2020 (Study Day 112)	COVID 19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypokalaemia	Grade 2/moderate	Not related	07 Nov 2020 (Study Day 81) - 20 Nov 2020 (Study Day 94)
Vulvovaginal Candidiasis	Grade 1/mild	Not related	15 Nov 2020 (Study Day 89) - 20 Nov 2020 (Study Day 94)
Dyspepsia	Grade 2/moderate	Not related	16 Nov 2020 (Study Day 90) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US327-2196 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	16 Sep 2020 (Study Day 29)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID 19	COVID-19	Grade 1/mild	Not related	05 Nov 2020 (Study Day 79) – 19 Nov 2020 (Study Day 93)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US327-2196, a 59-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 16 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 05 Nov 2020 (Study Day 79), 78 days after the first dose and 50 days after the second dose of the IP, the participant experienced a Grade 1/Mild non-serious adverse event of COVID 19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 16 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 09 Nov 2020 (Study Day 83), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
05 Nov 2020 (Study Day 79)	Body Aches	Moderate
05 Nov 2020 (Study Day 79)	Diarrhea	Moderate
05 Nov 2020 (Study Day 79)	Fatigue	Moderate
05 Nov 2020 (Study Day 79)	Headache	Mild
05 Nov 2020 (Study Day 79)	Muscle Aches (Myalgia)	Moderate
05 Nov 2020 (Study Day 79)	Nausea	Mild

Symptom Date	Symptom	Result
06 Nov 2020 (Study Day 80)	Body Aches	Moderate
06 Nov 2020 (Study Day 80)	Chills	Mild
06 Nov 2020 (Study Day 80)	Diarrhea	Moderate
06 Nov 2020 (Study Day 80)	Fatigue	Moderate
06 Nov 2020 (Study Day 80)	Headache	Mild
06 Nov 2020 (Study Day 80)	Muscle Aches (Myalgia)	Moderate
06 Nov 2020 (Study Day 80)	Nausea	Mild
07 Nov 2020 (Study Day 81)	Body Aches	Moderate
07 Nov 2020 (Study Day 81)	Chills	Mild

16 Nov 2020 (Study Day 90)	O2 Saturation (%)	92
16 Nov 2020 (Study Day 90)	Shortness of Breath	Mild
17 Nov 2020 (Study Day 91)	Diarrhea	Mild
17 Nov 2020 (Study Day 91)	Fatigue	Mild
17 Nov 2020 (Study Day 91)	Shortness of Breath	Mild
18 Nov 2020 (Study Day 92)	Diarrhea	Mild
18 Nov 2020 (Study Day 92)	Fatigue	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
10 Nov 2020 (Study Day 84)	Oxygen Saturation	92%
10 Nov 2020 - 16 Nov 2020 (Study Day 84-90)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID 19 lasted for 15 days, after which it was considered to be recovered/resolved on 19 Nov 2020 (Study Day 93). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000854	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2008 - 2013
Menopause	Menopause	2011 - 2012
Endometrial ablation	Endometrial ablation	2012 - 2016
Postmenopause	Post menopause	2012 - Ongoing
Obesity	Sever obesity	2014 - Ongoing
Knee arthroplasty	Bilateral knee replacement	2016 - 2016

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	09 Nov 2020 (Study Day 83) - 18 Nov 2020 (Study Day 92)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	05 Nov 2020 (Study Day 79) - 19 Nov 2020 (Study Day 93)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US327-2342 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	23 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 33)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Suspected COVID-19/ Suspected COVID-19	COVID-19	Grade 1/mild	Not related	01 Oct 2020 (Study Day 40) – 10 Oct 2020 (Study Day 49)	Recovered /resolved
COVID-19/ COVID-19	COVID-19	Grade 3/severe	Not related	29 Nov 2020 (Study Day 99) – 13 Jan 2021 (Study Day 144)	Recovered /resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US327-2342, a 57-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 23 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 24 Sep 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 01 Oct 2020 (Study Day 40), 39 days after the first dose and 7 days after the second dose of the IP, the participant experienced a Grade 1/Mild non-serious adverse event of suspected COVID-19.

On 29 Nov 2020 (Study Day 99), 98 days after the first dose and 66 days after the second dose of the IP, the participant experienced a Grade 3/Severe non-serious adverse event of COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 33, 24 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 02 Dec 2020 (Study Day 102), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
01 Oct 2020 (Study Day 40)	Body Aches	Mild
01 Oct 2020 (Study Day 40)	Cough	Mild
01 Oct 2020 (Study Day 40)	Difficulty Breathing	Mild
01 Oct 2020 (Study Day 40)	Fatigue	Severe
01 Oct 2020 (Study Day 40)	Headache	Mild

22 Dec 2020 (Study Day 122)	Headache	Moderate
22 Dec 2020 (Study Day 122)	Muscle Aches (Myalgia)	Mild
22 Dec 2020 (Study Day 122)	Nasal Congestion	Moderate
23 Dec 2020 (Study Day 123)	Headache	Mild
24 Dec 2020 (Study Day 124)	Headache	Mild
24 Dec 2020 (Study Day 124)	O2 Saturation (%)	87
25 Dec 2020 (Study Day 125)	Chills	Mild
25 Dec 2020 (Study Day 125)	Fatigue	Severe
25 Dec 2020 (Study Day 125)	Headache	Severe
25 Dec 2020 (Study Day 125)	Nasal Congestion	Severe
25 Dec 2020 (Study Day 125)	Nausea	Severe
25 Dec 2020 (Study Day 125)	New Loss of Smell	Severe
25 Dec 2020 (Study Day 125)	New Loss of Taste	Severe
26 Dec 2020 (Study Day 126)	Headache	Mild
27 Dec 2020 (Study Day 127)	Headache	Mild
28 Dec 2020 (Study Day 128)	Headache	Mild
19 Jan 2021 (Study Day 150)	Nasal Congestion	Moderate
19 Jan 2021 (Study Day 150)	Runny Nose (Rhinorrhea)	Moderate
20 Jan 2021 (Study Day 151)	Nasal Congestion	Moderate
20 Jan 2021 (Study Day 151)	Runny Nose (Rhinorrhea)	Moderate

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
06 Dec 2020 (Study Day 106)	Oxygen Saturation	87%
06 Dec 2020 - 24 Dec 2020 (Study Day 106-124)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

The IP dose was not changed due to the suspected covid-19. The event of suspected COVID-19 lasted for 10 days, after which it was considered to be recovered/resolved on 10 Oct 2020 (Study Day 49). The investigator assessed the event of suspected COVID-19 to be not related to the IP.

Action taken with the IP was not applicable. The event of COVID-19 lasted for 46 days, after which it was considered to be recovered/resolved on 13 Jan 2021 (Study Day 144). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001181	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Sulfa allergy	1990 - Ongoing
Type 1 diabetes mellitus	Diabetes mellitus type 1	2000 - Ongoing
Depression	Depression	2005 - Ongoing
Menopause	Menopause	2012 - 2013
Postmenopause	Post-menopausal	2013 - Ongoing
Hypothyroidism	Hypothyroidism	2015 - Ongoing
Seasonal allergy	Seasonal allergies	2015 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2019 - Ongoing
Hypertension	Hypertension	2019 - Ongoing
Myalgia	Myalgia (lower back)	Apr 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin aspart	2000 - Ongoing	Diabetes Mellitus Type 1
Insulin degludec	2000 - Ongoing	Diabetes Mellitus Type 1
Metformin	2000 - Ongoing	Diabetes Mellitus Type 1
Levothyroxine	2015 - Ongoing	Hypothyroidism
Acetylsalicylic acid	2019 - Ongoing	Cardiac Prophylaxis
Atorvastatin	2019 - Ongoing	Hypercholesterolemia
Cetirizine	2019 - Ongoing	Seasonal Allergies
Citalopram	2019 - Ongoing	Depression
Lisinopril	2019 - Ongoing	Hypertension
Vitamins nos	2019 - Ongoing	Nutritional Supplement
Gabapentin	Apr 2020 - Ongoing	Myalgia (Lower Back)
Levothyroxine	Jun 2020 - Ongoing	Hypothyroidism
Ubidecarenone	Jun 2020 - Ongoing	Nutritional Supplement
Paracetamol	03 Dec 2020 (Study Day 103) - Ongoing	Headache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Suspected COVID-19	Grade 1/mild	Not related	01 Oct 2020 (Study Day 40) - 10 Oct 2020 (Study Day 49)
COVID-19	Grade 3/severe	Not related	29 Nov 2020 (Study Day 99) - 13 Jan 2021 (Study Day 144)
Viral Sinusitis	Grade 2/moderate	Not related	15 Jan 2021 (Study Day 146) - 23 Jan 2021 (Study Day 154)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US327-2357 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	25 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	22 Sep 2020 (Study Day 29)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID 19	COVID-19	Grade 1/mild	Not related	09 Nov 2020 (Study Day 77) – 08 Dec 2020 (Study Day 106)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US327-2357, a 41-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 25 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 22 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 09 Nov 2020 (Study Day 77), 76 days after the first dose and 48 days after the second dose of the IP, the participant experienced a Grade 1/Mild non-serious adverse event of COVID 19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 22 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 10 Nov 2020 (Study Day 78), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
09 Nov 2020 (Study Day 77)	Body Aches	Moderate
09 Nov 2020 (Study Day 77)	Cough	Mild
09 Nov 2020 (Study Day 77)	Fatigue	Moderate

25 Nov 2020 (Study Day 93)	Body Aches	Mild
25 Nov 2020 (Study Day 93)	Cough	Mild
25 Nov 2020 (Study Day 93)	Fatigue	Mild
25 Nov 2020 (Study Day 93)	Muscle Aches (Myalgia)	Mild
25 Nov 2020 (Study Day 93)	New Loss of Smell	Mild
25 Nov 2020 (Study Day 93)	Runny Nose (Rhinorrhea)	Mild
26 Nov 2020 (Study Day 94)	Cough	Mild
26 Nov 2020 (Study Day 94)	Fatigue	Mild
26 Nov 2020 (Study Day 94)	Muscle Aches (Myalgia)	Mild
26 Nov 2020 (Study Day 94)	New Loss of Smell	Mild
27 Nov 2020 (Study Day 95)	Cough	Mild
27 Nov 2020 (Study Day 95)	Fatigue	Mild
27 Nov 2020 (Study Day 95)	Muscle Aches (Myalgia)	Mild
27 Nov 2020 (Study Day 95)	New Loss of Smell	Mild

Symptom Date	Symptom	Result
28 Nov 2020 (Study Day 96)	Muscle Aches (Myalgia)	Mild
28 Nov 2020 (Study Day 96)	New Loss of Smell	Mild
29 Nov 2020 (Study Day 97)	Cough	Mild
29 Nov 2020 (Study Day 97)	Muscle Aches (Myalgia)	Mild
29 Nov 2020 (Study Day 97)	Nasal Congestion	Moderate
30 Nov 2020 (Study Day 98)	Cough	Mild
30 Nov 2020 (Study Day 98)	Fatigue	Mild
30 Nov 2020 (Study Day 98)	Muscle Aches (Myalgia)	Mild
01 Dec 2020 (Study Day 99)	Cough	Moderate
01 Dec 2020 (Study Day 99)	Fatigue	Moderate
01 Dec 2020 (Study Day 99)	Muscle Aches (Myalgia)	Mild
02 Dec 2020 (Study Day 100)	Cough	Mild
02 Dec 2020 (Study Day 100)	Fatigue	Moderate
03 Dec 2020 (Study Day 101)	Cough	Mild
04 Dec 2020 (Study Day 102)	Cough	Mild
05 Dec 2020 (Study Day 103)	Cough	Mild
06 Dec 2020 (Study Day 104)	Cough	Mild
07 Dec 2020 (Study Day 105)	Cough	Mild
08 Dec 2020 (Study Day 106)	Cough	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
17 Nov 2020 (Study Day 85)	Oxygen Saturation	89%
10 Nov 2020 - 10 Nov 2020 (Study Day 78-78)	Systolic Blood Pressure < 90 mm Hg, Diastolic Blood Pressure < 60 mm Hg	Yes
17 Nov 2020 - 17 Nov 2020 (Study Day 85-85)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID 19 lasted for 30 days, after which it was considered to be recovered/resolved on 08 Dec 2020 (Study Day 106). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000896	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 1 diabetes mellitus	Diabetes mellitus (type 1)	2009 - Ongoing
Herpes simplex	Herpes simplex virus 1 (lips/mouth)	2017 - Ongoing
Foot deformity	Left foot bunion	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Empagliflozin	2012 - 13 Nov 2020 (Study Day 81)	Type 1 Diabetes Mellitus
Valaciclovir	2017 - Ongoing	Herpes Simplex Virus 1 (Mouth)
Etonogestrel	2019 - Ongoing	Contraception
Insulin lispro	Jan 2020 - Ongoing	Type 1 Diabetes Mellitus
Insulin lispro	Jan 2020 - Ongoing	Type1 Diabetes Mellitus
Paracetamol	28 Aug 2020 (Study Day 4) - 28 Aug 2020 (Study Day 4)	Pain At Injection Site.
Influenza vaccine	17 Oct 2020 (Study Day 54) - 17 Oct 2020 (Study Day 54)	Influenza Prophylaxis
Acetylsalicylic acid	23 Oct 2020 (Study Day 60) - Ongoing	Post-Surgical Prophylaxis
Left foot bunionectomy*	23 Oct 2020 (Study Day 60) - 23 Oct 2020 (Study Day 60)	Medical History
Empagliflozin	19 Nov 2020 (Study Day 87) - Ongoing	Type 1 Diabetes Mellitus
Canagliflozin	01 Feb 2021 (Study Day 161) - Ongoing	Type 1 Diabetes Mellitus

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 1/mild	Related	01 Sep 2020 (Study Day 8) - 06 Sep 2020 (Study Day 13)
Myalgia	Grade 1/mild	Related	01 Sep 2020 (Study Day 8) - 02 Sep 2020 (Study Day 9)
COVID-19	Grade 1/mild	Not related	09 Nov 2020 (Study Day 77) - 08 Dec 2020 (Study Day 106)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US330-2379 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	23 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID 19	SAE, COVID-19	Grade 3/severe	Not related	18 Jan 2021 (Study Day 146) – 07 Feb 2021 (Study Day 166)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US330-2379, a 42-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 26 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 23 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 18 Jan 2021 (Study Day 146), 145 days after the first dose and 117 days after the second dose of the IP, the participant experienced a Grade 3/Severe serious adverse event of COVID 19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 23 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 23 Jan 2021 (Study Day 151), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
18 Jan 2021 (Study Day 146)	Chills	Moderate
18 Jan 2021 (Study Day 146)	Shortness of Breath	Severe
19 Jan 2021 (Study Day 147)	Chills	Moderate
19 Jan 2021 (Study Day 147)	Shortness of Breath	Severe
20 Jan 2021 (Study Day 148)	Chills	Moderate
20 Jan 2021 (Study Day 148)	Shortness of Breath	Severe

Symptom Date	Symptom	Result
21 Jan 2021 (Study Day 149)	Chills	Moderate
21 Jan 2021 (Study Day 149)	Shortness of Breath	Severe
22 Jan 2021 (Study Day 150)	Chills	Moderate
22 Jan 2021 (Study Day 150)	O2 Saturation (%)	91
22 Jan 2021 (Study Day 150)	Shortness of Breath	Severe
23 Jan 2021 (Study Day 151)	Chills	Mild
23 Jan 2021 (Study Day 151)	O2 Saturation (%)	91
23 Jan 2021 (Study Day 151)	Shortness of Breath	Mild
25 Jan 2021 (Study Day 153)	Shortness of Breath	Moderate
26 Jan 2021 (Study Day 154)	Shortness of Breath	Mild
27 Jan 2021 (Study Day 155)	O2 Saturation (%)	91
27 Jan 2021 (Study Day 155)	Shortness of Breath	Moderate
28 Jan 2021 (Study Day 156)	O2 Saturation (%)	91
29 Jan 2021 (Study Day 157)	Cough	Mild
29 Jan 2021 (Study Day 157)	Shortness of Breath	Mild
30 Jan 2021 (Study Day 158)	Cough	Mild
31 Jan 2021 (Study Day 159)	Cough	Mild
01 Feb 2021 (Study Day 160)	Cough	Mild
02 Feb 2021 (Study Day 161)	Cough	Mild
03 Feb 2021 (Study Day 162)	Cough	Mild
06 Feb 2021 (Study Day 165)	Shortness of Breath	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
21 Jan 2021 (Study Day 149)	Oxygen Saturation	91%
21 Jan 2021 - 28 Jan 2021 (Study Day 149-156)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID 19 lasted for 21 days, after which it was considered to be recovered/resolved on 07 Feb 2021 (Study Day 166). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-007613	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hyperlipidaemia	Hyperlipidemia	2009 - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type 2	2009 - Ongoing
Hypertension	Hypertension	2013 - Ongoing
Anxiety	Anxiety	2016 - Ongoing
Insomnia	Insomnia	2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Glipizide	2013 - Ongoing	Diabetes Mellitus Type 2
Lisinopril	2013 - 21 Jan 2021 (Study Day 149)	Hypertension
Metformin	2013 - Ongoing	Diabetes Mellitus Type 2
Atorvastatin	2015 - Ongoing	Hyperlipidemia
Fluoxetine hydrochloride	2017 - Ongoing	Anxiety
Levonorgestrel	2017 - Ongoing	Birth Control
Lorazepam	2017 - Ongoing	Anxiety
Zolpidem tartrate	2017 - Ongoing	Insomnia
Liraglutide	2019 - Ongoing	Diabetes Mellitus Type 2
Azithromycin	18 Jan 2021 (Study Day 146) - 19 Jan 2021 (Study Day 147)	COVID-19
Ascorbic acid	21 Jan 2021 (Study Day 149) - 29 Jan 2021 (Study Day 157)	COVID-19
Ct scan*	21 Jan 2021 (Study Day 149) - 21 Jan 2021 (Study Day 149)	Adverse Event
Dexamethasone	21 Jan 2021 (Study Day 149) - 21 Jan 2021 (Study Day 149)	COVID-19
Enoxaparin sodium	21 Jan 2021 (Study Day 149) - 29 Jan 2021 (Study Day 157)	Dvt Prophylaxis
Famotidine	21 Jan 2021 (Study Day 149) - 22 Jan 2021 (Study Day 150)	Gerd Prophylaxis
Guaifenesin	21 Jan 2021 (Study Day 149) - 29 Jan 2021 (Study Day 157)	COVID-19
Insulin lispro	21 Jan 2021 (Study Day 149) - 29 Jan 2021 (Study Day 157)	Diabetes Type II
Iopamidol	21 Jan 2021 (Study Day 149) - 21 Jan 2021 (Study Day 149)	Contrast For Ct Scan
Melatonin	21 Jan 2021 (Study Day 149) - 29 Jan 2021 (Study Day 157)	Insomnia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Oxygen	21 Jan 2021 (Study Day 149) - 03 Feb 2021 (Study Day 162)	COVID-19
Paracetamol	21 Jan 2021 (Study Day 149) - 29 Jan 2021 (Study Day 157)	COVID-19
Potassium chloride	21 Jan 2021 (Study Day 149) - 21 Jan 2021 (Study Day 149)	Supplement
Remdesivir	21 Jan 2021 (Study Day 149) - 21 Jan 2021 (Study Day 149)	COVID-19
Sodium chloride	21 Jan 2021 (Study Day 149) - 21 Jan 2021 (Study Day 149)	COVID-19
Colecalciferol	22 Jan 2021 (Study Day 150) - 29 Jan 2021 (Study Day 157)	COVID-19
Dexamethasone	22 Jan 2021 (Study Day 150) - 22 Jan 2021 (Study Day 150)	COVID-19
Fluoxetine	22 Jan 2021 (Study Day 150) - Ongoing	Anxiety
Fluticasone furoate; vilanterol	22 Jan 2021 (Study Day 150) - 29 Jan 2021 (Study Day 157)	COVID-19
Remdesivir	22 Jan 2021 (Study Day 150) - 29 Jan 2021 (Study Day 157)	COVID-19
Zinc sulfate	22 Jan 2021 (Study Day 150) - 29 Jan 2021 (Study Day 157)	COVID-19
Ascorbic acid	29 Jan 2021 (Study Day 157) - 03 Feb 2021 (Study Day 162)	COVID-19
Insulin glargine	29 Jan 2021 (Study Day 157) - Ongoing	Diabetes Type II
Insulin lispro	29 Jan 2021 (Study Day 157) - Ongoing	Diabetes Type II
Salbutamol	29 Jan 2021 (Study Day 157) - 03 Feb 2021 (Study Day 162)	COVID-19
Thiamine	29 Jan 2021 (Study Day 157) - 03 Feb 2021 (Study Day 162)	COVID-19
Dexamethasone	30 Jan 2021 (Study Day 158) - 03 Feb 2021 (Study Day 162)	COVID-19
Zinc sulfate	30 Jan 2021 (Study Day 158) - 03 Feb 2021 (Study Day 162)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Acute Respiratory Failure	Grade 2/moderate	Not related	21 Jan 2021 (Study Day 149) - 07 Feb 2021 (Study Day 166)
Hypoxia	Grade 2/moderate	Not related	21 Jan 2021 (Study Day 149) - 07 Feb 2021 (Study Day 166)
Lung Opacity	Grade 2/moderate	Not related	21 Jan 2021 (Study Day 149) - Ongoing
Pneumonia	Grade 2/moderate	Not related	21 Jan 2021 (Study Day 149) - 07 Feb 2021 (Study Day 166)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Tachycardia	Grade 2/moderate	Not related	21 Jan 2021 (Study Day 149) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US331-2330 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	23 Sep 2020 (Study Day 28)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ Symptomatic COVID-19	COVID-19	Grade 1/mild	Not related	24 Dec 2020 (Study Day 120) – 25 Dec 2020 (Study Day 121)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US331-2330, a 53-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 23 Sep 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 24 Dec 2020 (Study Day 120), 119 days after the first dose and 92 days after the second dose of the IP, the participant experienced a Grade 1/Mild non-serious adverse event of symptomatic COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 28, 23 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 28 Dec 2020 (Study Day 124), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
24 Dec 2020 (Study Day 120)	Body Aches	Mild
24 Dec 2020 (Study Day 120)	Cough	Mild
24 Dec 2020 (Study Day 120)	Fatigue	Mild
24 Dec 2020 (Study Day 120)	Headache	Moderate

Symptom Date	Symptom	Result
24 Dec 2020 (Study Day 120)	Nausea	Mild

09 Feb 2021 (Study Day 167)	New Loss of Taste	Severe
10 Feb 2021 (Study Day 168)	Cough	Mild
10 Feb 2021 (Study Day 168)	New Loss of Smell	Severe
10 Feb 2021 (Study Day 168)	New Loss of Taste	Moderate
11 Feb 2021 (Study Day 169)	Cough	Mild
12 Feb 2021 (Study Day 170)	Cough	Mild
12 Feb 2021 (Study Day 170)	Nausea	Mild
13 Feb 2021 (Study Day 171)	Cough	Mild
14 Feb 2021 (Study Day 172)	Cough	Mild
15 Feb 2021 (Study Day 173)	Cough	Mild

Symptom Date	Symptom	Result
16 Feb 2021 (Study Day 174)	Cough	Mild

The participant had no reported indications of Severe COVID-19 infection.

Action taken with the IP was not applicable. The event of symptomatic COVID-19 lasted for 2 days, after which it was considered to be recovered/resolved on 25 Dec 2020 (Study Day 121). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001632	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Vertigo	Vertigo	2001 - 2001
Female sterilisation	Bilateral tubal ligation	28 Apr 2004 (Study Day -5965) - 28 Apr 2004 (Study Day -5965)
Hypothyroidism	Hypothyroidism	2010 - Ongoing
Postmenopause	Post menopausal	Apr 2016 - Ongoing
Back pain	Occasional low back pain	Apr 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	2010 - Ongoing	Hypothyroidism
Ibuprofen	Apr 2020 - Ongoing	Occasional Low Back Pain
Ibuprofen	24 Dec 2020 (Study Day 120) - 24 Dec 2020 (Study Day 120)	Symptomatic COVID-19
Guaifenesin	04 Feb 2021 (Study Day 162) - 09 Feb 2021 (Study Day 167)	Upper Respiratory Infection

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Meclozine	04 Feb 2021 (Study Day 162) - 04 Feb 2021 (Study Day 162)	Vertigo
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	06 Feb 2021 (Study Day 164) - 07 Feb 2021 (Study Day 165)	Upper Respiratory Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	24 Dec 2020 (Study Day 120) - 25 Dec 2020 (Study Day 121)
Rhinovirus Infection	Grade 3/severe	Not related	04 Feb 2021 (Study Day 162) - 16 Feb 2021 (Study Day 174)
Vertigo	Grade 2/moderate	Not related	04 Feb 2021 (Study Day 162) - 04 Feb 2021 (Study Day 162)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US331-2605 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	08 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ Symptomatic COVID 19	SAE, COVID-19	Grade 3/severe	Not related	19 Oct 2020 (Study Day 40) – 02 Nov 2020 (Study Day 54)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US331-2605, a 24-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 10 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 08 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 19 Oct 2020 (Study Day 40), 39 days after the first dose and 11 days after the second dose of the IP, the participant experienced a Grade 3/Severe serious adverse event of symptomatic COVID 19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 08 Oct 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 22 Oct 2020 (Study Day 43), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
19 Oct 2020 (Study Day 40)	Body Aches	Severe
19 Oct 2020 (Study Day 40)	Cough	Moderate
19 Oct 2020 (Study Day 40)	Diarrhea	Severe

29 Oct 2020 (Study Day 50)	Sore Throat	Severe
30 Oct 2020 (Study Day 51)	Body Aches	Severe
30 Oct 2020 (Study Day 51)	Chills	Moderate
30 Oct 2020 (Study Day 51)	Cough	Moderate

FDA-CBER-2022-1614-3379761

Symptom Date	Symptom	Result
30 Oct 2020 (Study Day 51)	Fatigue	Severe
30 Oct 2020 (Study Day 51)	Headache	Moderate
30 Oct 2020 (Study Day 51)	Muscle Aches (Myalgia)	Severe
30 Oct 2020 (Study Day 51)	New Loss of Smell	Severe
30 Oct 2020 (Study Day 51)	New Loss of Taste	Severe
30 Oct 2020 (Study Day 51)	Sore Throat	Severe
01 Nov 2020 (Study Day 53)	New Loss of Smell	Severe
01 Nov 2020 (Study Day 53)	New Loss of Taste	Severe

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
27 Oct 2020 (Study Day 48)	Oxygen Saturation	85%
27 Oct 2020 - 27 Oct 2020 (Study Day 48-48)	Clinical Evidence of Pneumonia	Yes
27 Oct 2020 - 27 Oct 2020 (Study Day 48-48)	Radiographical Evidence of Pneumonia	Yes

Action taken with the IP was not applicable. The event of symptomatic COVID 19 lasted for 15 days, after which it was considered to be recovered/resolved on 02 Nov 2020 (Study Day 54). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000648	COVID-19

Study Completion/Discontinuation

On 16 Nov 2020 (Study Day 68), the participant discontinued from the study due to withdrawal of consent by participant.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillitis	Recurrent tonsillitis	2000 - 2001
Tonsillectomy	Tonsillectomy	2001 - 2001
Facial bones fracture	Nose fracture	2010 - 2010
Headache	Mild occasional headaches	2010 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Nasal operation	Reconstructive nasal surgery	2010 - 2010
Seasonal allergy	Seasonal allergies	2010 - Ongoing
Attention deficit hyperactivity disorder	Attention deficit hyperactivity disorder	2011 - Ongoing
Anxiety	Anxiety	2016 - Ongoing
Depression	Depression	2016 - Ongoing
Nephrolithiasis	Recurrent nephrolithiasis	2016 - Ongoing
Alopecia	Excessive hair loss	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cetirizine	2010 - Ongoing	Seasonal Allergies
Paracetamol	2010 - Ongoing	Mild Occasional Headaches
Amfetamine; dexamfetamine	2011 - Ongoing	Attention Deficit Hyperactivity Disorder
Escitalopram	2016 - Ongoing	Depression And Anxiety
Potassium citrate	2016 - Ongoing	Nephrolithiasis
Finasteride	2019 - Ongoing	Excessive Hair Loss
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	19 Oct 2020 (Study Day 40) - 30 Oct 2020 (Study Day 51)	Symptomatic COVID-19
Dextromethorphan hydrobromide; paracetamol; phenylephrine hydrochloride	19 Oct 2020 (Study Day 40) - 30 Oct 2020 (Study Day 51)	Symptomatic COVID-19
Ibuprofen	19 Oct 2020 (Study Day 40) - 19 Oct 2020 (Study Day 40)	Symptomatic COVID-19
Paracetamol	19 Oct 2020 (Study Day 40) - 30 Oct 2020 (Study Day 51)	Symptomatic COVID-19
Ascorbic acid	22 Oct 2020 (Study Day 43) - Ongoing	Symptomatic COVID-19
Famotidine	22 Oct 2020 (Study Day 43) - Ongoing	Symptomatic COVID-19
Melatonin	22 Oct 2020 (Study Day 43) - Ongoing	Symptomatic COVID-19
Zinc	22 Oct 2020 (Study Day 43) - Ongoing	Symptomatic COVID-19
Salbutamol	25 Oct 2020 (Study Day 46) - Ongoing	Symptomatic COVID-19
Benzonatate	27 Oct 2020 (Study Day 48) - 29 Oct 2020 (Study Day 50)	Symptomatic COVID-19
Salbutamol	27 Oct 2020 (Study Day 48) - 29 Oct 2020 (Study Day 50)	Symptomatic COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US332-2006 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	17 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Severe COVID-19, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ Symptomatic COVID -19	COVID-19, AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	09 Sep 2020 (Study Day 24) – 20 Sep 2020 (Study Day 35)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0. The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US332-2006, a 50-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 17 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 09 Sep 2020 (Study Day 24), 23 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/Moderate non-serious adverse event of symptomatic COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 14 Sep 2020 (Study Day 29), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

On 08 Oct 2020 (Study Day 53), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
14 Sep 2020 (Study Day 29)	Fatigue	Moderate
14 Sep 2020 (Study Day 29)	Nasal Congestion	Mild

Symptom Date	Symptom	Result
14 Sep 2020 (Study Day 29)	New Loss of Taste	Moderate

19 Sep 2020 (Study Day 34)	Cough	Mild
20 Sep 2020 (Study Day 35)	Cough	Mild
24 Sep 2020 (Study Day 39)	Headache	Mild
25 Sep 2020 (Study Day 40)	Headache	Mild
26 Sep 2020 (Study Day 41)	Headache	Mild
27 Sep 2020 (Study Day 42)	Headache	Mild
28 Sep 2020 (Study Day 43)	Headache	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
17 Sep 2020 (Study Day 32)	Oxygen Saturation	92%
17 Sep 2020 - 18 Sep 2020 (Study Day 32-33)	Oxygen Saturation of SpO2 ≤93% on room air at sea level	Yes

On 13 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID -19 lasted for 12 days, after which it was considered to be recovered/resolved on 20 Sep 2020 (Study Day 35). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000310	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1972 - Ongoing
Tension headache	Intermittent tension headaches	1980 - Ongoing
Migraine	Migraine headaches	1986 - Ongoing
Haemorrhoids	Hemorrhoids	2010 - Ongoing
Asthma	Asthma	2012 - Ongoing
Back pain	Recurrent back pain	2015 - Ongoing
Drug hypersensitivity	Vicodin allergy	2015 - Ongoing
Paraesthesia	Numbness/tingling of hands/feet	2015 - Ongoing
Uterine leiomyoma	Uterine myomas	Jul 2017 - Dec 2017
Hysterectomy	Hysterectomy	Dec 2017 - Dec 2017

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol sulfate	2012 - Ongoing	Asthma
Acetylsalicylic acid; caffeine	2019 - Ongoing	Migraine Headaches
Acetylsalicylic acid; caffeine	Jan 2019 - Ongoing	Intermittent Tension Headaches
Acetylsalicylic acid; caffeine	22 Aug 2020 (Study Day 6) - 23 Aug 2020 (Study Day 7)	Headache
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol; phenylephrine hydrochloride	09 Sep 2020 (Study Day 24) - 18 Sep 2020 (Study Day 33)	Symptomatic COVID-19
Loratadine	28 Sep 2020 (Study Day 43) - Ongoing	Seasonal Allergies
Other ophthalmologicals	28 Sep 2020 (Study Day 43) - Ongoing	Seasonal Allergies
Acetylsalicylic acid; caffeine	06 Feb 2021 (Study Day 174) - 06 Feb 2021 (Study Day 174)	Headache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	09 Sep 2020 (Study Day 24) - 20 Sep 2020 (Study Day 35)
Haematochezia	Grade 2/moderate	Not related	28 Sep 2020 (Study Day 43) - Ongoing
Hypertension	Grade 3/severe	Not related	08 Oct 2020 (Study Day 53) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US332-2388 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	28 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	26 Oct 2020 (Study Day 29)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	COVID-19	Grade 2/ moderate	Not related	14 Dec 2020 (Study Day 78) – 02 Jan 2021 (Study Day 97)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0. The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US332-2388, a 60-year-old Hispanic or Latino female, received the first dose of placebo in the right arm on 28 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 26 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 14 Dec 2020 (Study Day 78), 77 days after the first dose and 49 days after the second dose of the IP, the participant experienced a Grade 2/Moderate non-serious adverse event of symptomatic COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 26 Oct 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 21 Dec 2020 (Study Day 85), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
23 Nov 2020 (Study Day 57)	Muscle Aches (Myalgia)	Mild
23 Nov 2020 (Study Day 57)	Nasal Congestion	Moderate
23 Nov 2020 (Study Day 57)	New Loss of Smell	Mild
23 Nov 2020 (Study Day 57)	Sore Throat	Mild

Symptom Date	Symptom	Result
24 Nov 2020 (Study Day 58)	Muscle Aches (Myalgia)	Mild
24 Nov 2020 (Study Day 58)	Nasal Congestion	Moderate
24 Nov 2020 (Study Day 58)	New Loss of Smell	Mild
24 Nov 2020 (Study Day 58)	Sore Throat	Mild
25 Nov 2020 (Study Day 59)	Muscle Aches (Myalgia)	Mild
25 Nov 2020 (Study Day 59)	Nasal Congestion	Moderate
25 Nov 2020 (Study Day 59)	Sore Throat	Mild
26 Nov 2020 (Study Day 60)	Nasal Congestion	Moderate
27 Nov 2020 (Study Day 61)	Nasal Congestion	Moderate
14 Dec 2020 (Study Day 78)	Body Aches	Moderate
14 Dec 2020 (Study Day 78)	Cough	Moderate
14 Dec 2020 (Study Day 78)	Diarrhea	Mild
14 Dec 2020 (Study Day 78)	Fatigue	Moderate
14 Dec 2020 (Study Day 78)	Headache	Mild
14 Dec 2020 (Study Day 78)	Muscle Aches (Myalgia)	Moderate
14 Dec 2020 (Study Day 78)	Nausea	Mild
14 Dec 2020 (Study Day 78)	Runny Nose (Rhinorrhea)	Mild
15 Dec 2020 (Study Day 79)	Body Aches	Moderate
15 Dec 2020 (Study Day 79)	Cough	Moderate
15 Dec 2020 (Study Day 79)	Diarrhea	Mild
15 Dec 2020 (Study Day 79)	Fatigue	Moderate
15 Dec 2020 (Study Day 79)	Headache	Mild
15 Dec 2020 (Study Day 79)	Muscle Aches (Myalgia)	Moderate
15 Dec 2020 (Study Day 79)	Nausea	Mild
15 Dec 2020 (Study Day 79)	Runny Nose (Rhinorrhea)	Mild
16 Dec 2020 (Study Day 80)	Body Aches	Moderate
16 Dec 2020 (Study Day 80)	Cough	Moderate
16 Dec 2020 (Study Day 80)	Diarrhea	Mild
16 Dec 2020 (Study Day 80)	Fatigue	Moderate
16 Dec 2020 (Study Day 80)	Headache	Mild
16 Dec 2020 (Study Day 80)	Muscle Aches (Myalgia)	Moderate
16 Dec 2020 (Study Day 80)	Nausea	Mild
16 Dec 2020 (Study Day 80)	Runny Nose (Rhinorrhea)	Mild
17 Dec 2020 (Study Day 81)	Body Aches	Moderate
17 Dec 2020 (Study Day 81)	Cough	Moderate
17 Dec 2020 (Study Day 81)	Diarrhea	Mild
17 Dec 2020 (Study Day 81)	Fatigue	Moderate
17 Dec 2020 (Study Day 81)	Headache	Mild
17 Dec 2020 (Study Day 81)	Muscle Aches (Myalgia)	Moderate
17 Dec 2020 (Study Day 81)	Nausea	Mild
17 Dec 2020 (Study Day 81)	Runny Nose (Rhinorrhea)	Mild
18 Dec 2020 (Study Day 82)	Body Aches	Moderate
18 Dec 2020 (Study Day 82)	Cough	Moderate

Symptom Date	Symptom	Result
18 Dec 2020 (Study Day 82)	Diarrhea	Mild
18 Dec 2020 (Study Day 82)	Fatigue	Moderate
18 Dec 2020 (Study Day 82)	Headache	Mild
18 Dec 2020 (Study Day 82)	Muscle Aches (Myalgia)	Moderate
18 Dec 2020 (Study Day 82)	Nausea	Mild
18 Dec 2020 (Study Day 82)	Runny Nose (Rhinorrhea)	Mild
19 Dec 2020 (Study Day 83)	Body Aches	Moderate
19 Dec 2020 (Study Day 83)	Cough	Moderate
19 Dec 2020 (Study Day 83)	Diarrhea	Mild
19 Dec 2020 (Study Day 83)	Fatigue	Moderate
19 Dec 2020 (Study Day 83)	Headache	Mild
19 Dec 2020 (Study Day 83)	Muscle Aches (Myalgia)	Moderate
19 Dec 2020 (Study Day 83)	Nausea	Mild
19 Dec 2020 (Study Day 83)	Runny Nose (Rhinorrhea)	Mild
20 Dec 2020 (Study Day 84)	Body Aches	Moderate
20 Dec 2020 (Study Day 84)	Cough	Moderate
20 Dec 2020 (Study Day 84)	Diarrhea	Mild
20 Dec 2020 (Study Day 84)	Fatigue	Moderate
20 Dec 2020 (Study Day 84)	Headache	Mild
20 Dec 2020 (Study Day 84)	Muscle Aches (Myalgia)	Moderate
20 Dec 2020 (Study Day 84)	Nausea	Mild
20 Dec 2020 (Study Day 84)	Runny Nose (Rhinorrhea)	Mild
21 Dec 2020 (Study Day 85)	Body Aches	Moderate
21 Dec 2020 (Study Day 85)	Cough	Moderate
21 Dec 2020 (Study Day 85)	Diarrhea	Mild
21 Dec 2020 (Study Day 85)	Fatigue	Moderate
21 Dec 2020 (Study Day 85)	Headache	Mild
21 Dec 2020 (Study Day 85)	Muscle Aches (Myalgia)	Moderate
21 Dec 2020 (Study Day 85)	Nausea	Mild
21 Dec 2020 (Study Day 85)	Runny Nose (Rhinorrhea)	Mild
22 Dec 2020 (Study Day 86)	Body Aches	Moderate
22 Dec 2020 (Study Day 86)	Cough	Moderate
22 Dec 2020 (Study Day 86)	Diarrhea	Mild
22 Dec 2020 (Study Day 86)	Fatigue	Moderate
22 Dec 2020 (Study Day 86)	Headache	Mild
22 Dec 2020 (Study Day 86)	Muscle Aches (Myalgia)	Moderate
22 Dec 2020 (Study Day 86)	Nausea	Mild
22 Dec 2020 (Study Day 86)	O2 Saturation (%)	93
22 Dec 2020 (Study Day 86)	Runny Nose (Rhinorrhea)	Mild
22 Dec 2020 (Study Day 86)	Temperature (°F)	102
23 Dec 2020 (Study Day 87)	Cough	Mild
23 Dec 2020 (Study Day 87)	Headache	Mild
23 Dec 2020 (Study Day 87)	Nausea	Mild

Symptom Date	Symptom	Result
23 Dec 2020 (Study Day 87)	Vomiting	Mild
24 Dec 2020 (Study Day 88)	Cough	Moderate
24 Dec 2020 (Study Day 88)	Headache	Mild
25 Dec 2020 (Study Day 89)	Cough	Moderate
26 Dec 2020 (Study Day 90)	Cough	Mild
26 Dec 2020 (Study Day 90)	Headache	Mild
26 Dec 2020 (Study Day 90)	Shortness of Breath	Moderate
26 Dec 2020 (Study Day 90)	Temperature (°F)	100.4
27 Dec 2020 (Study Day 91)	Cough	Mild
27 Dec 2020 (Study Day 91)	Headache	Mild
27 Dec 2020 (Study Day 91)	Shortness of Breath	Mild
28 Dec 2020 (Study Day 92)	Cough	Mild
29 Dec 2020 (Study Day 93)	Cough	Mild
30 Dec 2020 (Study Day 94)	Cough	Mild
31 Dec 2020 (Study Day 95)	Cough	Mild
31 Dec 2020 (Study Day 95)	Fatigue	Mild
31 Dec 2020 (Study Day 95)	Shortness of Breath	Mild
01 Jan 2021 (Study Day 96)	Fatigue	Mild
01 Jan 2021 (Study Day 96)	Shortness of Breath	Mild
01 Jan 2021 (Study Day 96)	Sore Throat	Moderate

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
22 Dec 2020 (Study Day 86)	Oxygen Saturation	93%
22 Dec 2020 - 22 Dec 2020 (Study Day 86-86)	Oxygen Saturation of SpO2 ≤93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of symptomatic COVID-19 lasted for 20 days, after which it was considered to be recovered/resolved on 02 Jan 2021 (Study Day 97). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001406	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Caesarean section	Cesarean section	24 Mar 1982 (Study Day -14068) - 24 Mar 1982 (Study Day -14068)
Caesarean section	Cesarean section	11 Jul 1984 (Study Day -13228) - 11 Jul 1984 (Study Day -13228)
Urticaria	Codeine (hives)	1990 - Ongoing
Caesarean section	Cesarean section	21 Sep 1990 (Study Day -10965) - 21 Sep 1990 (Study Day -10965)
Insomnia	Insomnia	2010 - Ongoing
Back pain	Upper and lower back pain	2012 - Ongoing
Hysterectomy	Total hysterectomy due to fibroids	2012 - 2012
Menopause	Menopause	2012 - Ongoing
Obesity	Obesity	2012 - Ongoing
Abdominal hernia repair	Ventral hernia repair	2013 - 2013
Abdominal hernia repair	Ventral hernia repair	2013 - 2013
Anxiety	Anxiety	2015 - Ongoing
Osteoarthritis	Osteoarthritis, bilateral hands and hips	2015 - Ongoing
Urticaria	Naproxen (hives)	2017 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	Jan 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid	2000 - Ongoing	General Health
Calcium; magnesium; zinc	2000 - Ongoing	General Health
Colecalciferol	2000 - Ongoing	General Health
Magnesium	2000 - Ongoing	General Health
Probiotics nos	2000 - Ongoing	General Health
Vitamins nos	2000 - Ongoing	General Health
Trazodone	2010 - Ongoing	Insomnia
Cyclobenzaprine	2012 - Ongoing	Upper And Lower Back Pain
Estrogens esterified; methyltestosterone	2012 - Ongoing	Postmenopause
Hydroxyzine hydrochloride	2015 - Ongoing	Anxiety
Tramadol	2015 - Ongoing	Osteoarthritis
Topiramate	2018 - Ongoing	Obesity
Famotidine	Jan 2020 - Ongoing	Acid Reflux

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	09 Nov 2020 (Study Day 43) - 09 Nov 2020 (Study Day 43)	Preventative Healthcare
Amoxicillin; clavulanic acid	23 Nov 2020 (Study Day 57) - Ongoing	Human Rhinovirus/Enterovirus Sinusitis
Covid-19 nasal swab (negative result)*	23 Nov 2020 (Study Day 57) - 23 Nov 2020 (Study Day 57)	Diagnostic
Guaifenesin	23 Nov 2020 (Study Day 57) - 28 Nov 2020 (Study Day 62)	Human Rhinovirus/Enterovirus Sinusitis
Covid-19 nasal swab (negative result)*	24 Nov 2020 (Study Day 58) - 24 Nov 2020 (Study Day 58)	Diagnostic
Botulinum toxin type a	13 Dec 2020 (Study Day 77) - 13 Dec 2020 (Study Day 77)	Cosmetic
Loperamide	14 Dec 2020 (Study Day 78) - 14 Dec 2020 (Study Day 78)	Symptomatic COVID-19
Paracetamol	14 Dec 2020 (Study Day 78) - 02 Jan 2021 (Study Day 97)	Symptomatic COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diarrhoea	Grade 2/moderate	Related	29 Sep 2020 (Study Day 2) - 01 Oct 2020 (Study Day 4)
Rhinovirus Infection	Grade 2/moderate	Not related	20 Nov 2020 (Study Day 54) - 03 Dec 2020 (Study Day 67)
Myalgia	Grade 1/mild	Not related	23 Nov 2020 (Study Day 57) - 25 Nov 2020 (Study Day 59)
COVID-19	Grade 2/moderate	Not related	14 Dec 2020 (Study Day 78) - 02 Jan 2021 (Study Day 97)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US333-2001 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	03 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	28 Aug 2020 (Study Day 26)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	COVID-19	Grade 3/severe	Not related	30 Sep 2020 (Study Day 59) – 02 Oct 2020 (Study Day 61)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0. The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US333-2001, a 68-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 03 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 28 Aug 2020 (Study Day 26). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 30 Sep 2020 (Study Day 59), 58 days after the first dose and 33 days after the second dose of the IP, the participant experienced a Grade 3/Severe non-serious adverse event of COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 26, 28 Aug 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 30 Sep 2020 (Study Day 59), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
28 Sep 2020 (Study Day 57)	Cough	Moderate
28 Sep 2020 (Study Day 57)	Vomiting	Moderate
29 Sep 2020 (Study Day 58)	Body Aches	Moderate
29 Sep 2020 (Study Day 58)	Cough	Moderate
29 Sep 2020 (Study Day 58)	Fatigue	Severe
29 Sep 2020 (Study Day 58)	Headache	Moderate

Symptom Date	Symptom	Result
29 Sep 2020 (Study Day 58)	Muscle Aches (Myalgia)	Moderate
29 Sep 2020 (Study Day 58)	Sore Throat	Moderate
29 Sep 2020 (Study Day 58)	Temperature (°F)	100.8
01 Oct 2020 (Study Day 60)	Muscle Aches (Myalgia)	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
30 Sep 2020 - 30 Sep 2020 (Study Day 59-59)	Systolic Blood Pressure < 90 mm Hg, Diastolic Blood Pressure < 60 mm Hg	Yes

Action taken with the IP was not applicable. The event of COVID-19 lasted for 3 days, after which it was considered to be recovered/resolved on 02 Oct 2020 (Study Day 61). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000398	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Alcoholism	Alcoholism	1970 - 2018
Actinic keratosis	Actinic keratosis (facial and bilateral upper extremities)	2000 - Ongoing
Hypothyroidism	Acquired hypothyroidism	2000 - Ongoing
Thyroid cancer	Thyroid cancer	2000 - 2000
Thyroidectomy	Thyroid removal	2000 - 2000
Blood testosterone decreased	Low testosterone	29 Nov 2017 (Study Day -978) - Ongoing
Hypertension	Hypertension	2018 - Ongoing
Insomnia	Insomnia	2018 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Sleep apnoea syndrome	Sleep apnea	31 Oct 2018 (Study Day -642) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diclofenac sodium	2000 - Ongoing	Actinic Keratosis
Levothyroxine sodium	2000 - Ongoing	Acquired Hypothyroidism
Alprostadil; papaverine; phentolamine	2017 - Ongoing	Low Testosterone
Testosterone	2017 - Ongoing	Low Testosterone
Enalapril maleate	21 Mar 2018 (Study Day -866) - Ongoing	Hypertension
Alprazolam	26 Nov 2018 (Study Day -616) - Ongoing	Insomnia
Trazodone	26 Nov 2018 (Study Day -616) - Ongoing	Insomnia
Ibuprofen	29 Sep 2020 (Study Day 58) - 29 Sep 2020 (Study Day 58)	Symptomatic COVID-19
Influenza vaccine	10 Oct 2020 (Study Day 69) - 10 Oct 2020 (Study Day 69)	Influenza Prophylaxis
Chest x-ray*	13 Oct 2020 (Study Day 72) - 13 Oct 2020 (Study Day 72)	Adverse Event
Root canal*	17 Nov 2020 (Study Day 107) - 17 Nov 2020 (Study Day 107)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 3/severe	Not related	30 Sep 2020 (Study Day 59) - 02 Oct 2020 (Study Day 61)
Chest Discomfort	Grade 2/moderate	Not related	02 Oct 2020 (Study Day 61) - 20 Oct 2020 (Study Day 79)
Tooth Infection	Grade 2/moderate	Not related	17 Nov 2020 (Study Day 107) - 17 Nov 2020 (Study Day 107)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US333-2101 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	16 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	13 Nov 2020 (Study Day 29)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	COVID-19	Grade 2/ moderate	Not related	31 Dec 2020 (Study Day 77) – 28 Jan 2021 (Study Day 105)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0. The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US333-2101, a 57-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 16 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 13 Nov 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 31 Dec 2020 (Study Day 77), 76 days after the first dose and 48 days after the second dose of the IP, the participant experienced a Grade 2/Moderate non-serious adverse event of COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 13 Nov 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 07 Jan 2021 (Study Day 84), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
31 Dec 2020 (Study Day 77)	Cough	Moderate
31 Dec 2020 (Study Day 77)	Nasal Congestion	Moderate
31 Dec 2020 (Study Day 77)	Runny Nose (Rhinorrhea)	Mild
01 Jan 2021 (Study Day 78)	Cough	Moderate
01 Jan 2021 (Study Day 78)	Nasal Congestion	Moderate
01 Jan 2021 (Study Day 78)	Runny Nose (Rhinorrhea)	Mild
02 Jan 2021 (Study Day 79)	Cough	Moderate

Symptom Date	Symptom	Result
02 Jan 2021 (Study Day 79)	Nasal Congestion	Moderate
02 Jan 2021 (Study Day 79)	Runny Nose (Rhinorrhea)	Mild
03 Jan 2021 (Study Day 80)	Cough	Moderate
03 Jan 2021 (Study Day 80)	Nasal Congestion	Moderate
03 Jan 2021 (Study Day 80)	Runny Nose (Rhinorrhea)	Mild
04 Jan 2021 (Study Day 81)	Cough	Moderate
04 Jan 2021 (Study Day 81)	Nasal Congestion	Moderate
04 Jan 2021 (Study Day 81)	Runny Nose (Rhinorrhea)	Mild
05 Jan 2021 (Study Day 82)	Cough	Moderate
05 Jan 2021 (Study Day 82)	Nasal Congestion	Mild
05 Jan 2021 (Study Day 82)	Runny Nose (Rhinorrhea)	Mild
06 Jan 2021 (Study Day 83)	Cough	Mild
06 Jan 2021 (Study Day 83)	Nasal Congestion	Mild
06 Jan 2021 (Study Day 83)	Runny Nose (Rhinorrhea)	Mild
07 Jan 2021 (Study Day 84)	Runny Nose (Rhinorrhea)	Mild
08 Jan 2021 (Study Day 85)	Nasal Congestion	Mild
09 Jan 2021 (Study Day 86)	Headache	Mild
09 Jan 2021 (Study Day 86)	Nasal Congestion	Mild
10 Jan 2021 (Study Day 87)	Fatigue	Moderate
10 Jan 2021 (Study Day 87)	Headache	Mild
10 Jan 2021 (Study Day 87)	Nasal Congestion	Mild
11 Jan 2021 (Study Day 88)	Fatigue	Moderate
11 Jan 2021 (Study Day 88)	Nasal Congestion	Mild
12 Jan 2021 (Study Day 89)	Fatigue	Moderate
12 Jan 2021 (Study Day 89)	Nasal Congestion	Mild
13 Jan 2021 (Study Day 90)	Fatigue	Moderate
13 Jan 2021 (Study Day 90)	Nasal Congestion	Moderate
14 Jan 2021 (Study Day 91)	Nasal Congestion	Moderate
14 Jan 2021 (Study Day 91)	Runny Nose (Rhinorrhea)	Mild
16 Jan 2021 (Study Day 93)	Nasal Congestion	Moderate
18 Jan 2021 (Study Day 95)	Runny Nose (Rhinorrhea)	Mild
19 Jan 2021 (Study Day 96)	Nasal Congestion	Mild
19 Jan 2021 (Study Day 96)	Runny Nose (Rhinorrhea)	Mild
21 Jan 2021 (Study Day 98)	Nasal Congestion	Mild
22 Jan 2021 (Study Day 99)	Nasal Congestion	Mild
23 Jan 2021 (Study Day 100)	Runny Nose (Rhinorrhea)	Mild
26 Jan 2021 (Study Day 103)	Nasal Congestion	Mild
26 Jan 2021 (Study Day 103)	O2 Saturation (%)	93
27 Jan 2021 (Study Day 104)	Nasal Congestion	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
26 Jan 2021 (Study Day 103)	Oxygen Saturation	93%
26 Jan 2021 - 26 Jan 2021 (Study Day 103-103)	Oxygen Saturation of SpO2 ≤93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID-19 lasted for 29 days, after which it was considered to be recovered/resolved on 28 Jan 2021 (Study Day 105). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002822	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	2005 - Ongoing
Erectile dysfunction	Impotence	04 Feb 2010 (Study Day -3907) - Ongoing
Arthralgia	Generalized joint pain	2016 - Ongoing
Acrochordon	Skin tag right eye	2018 - Ongoing
Hypothyroidism	Sub-clinical hypothyroidism	06 Oct 2018 (Study Day -741) - Ongoing
Anxiety	Anxiety	May 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Loratadine	2005 - Ongoing	Seasonal Allergies
Tadalafil	26 Apr 2010 (Study Day -3826) - Ongoing	Impotence

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	23 May 2016 (Study Day -1607) - Ongoing	Supplement
Glucosamine	09 Oct 2018 (Study Day -738) - Ongoing	Generalized Joint Pain
Herbal preparation	Apr 2020 - Ongoing	Supplement
Naproxen sodium	May 2020 - Ongoing	Generalized Joint Pain
Propranolol	27 Oct 2020 (Study Day 12) - Ongoing	Anxiety
Ramipril	27 Oct 2020 (Study Day 12) - Ongoing	Elevated Blood Pressure
Oxymetazoline	02 Jan 2021 (Study Day 79) - 06 Jan 2021 (Study Day 83)	COVID-19
Diphenhydramine hydrochloride	04 Jan 2021 (Study Day 81) - 05 Jan 2021 (Study Day 82)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Blood Pressure Increased	Grade 1/mild	Not related	16 Oct 2020 (Study Day 1) - Ongoing
Chills	Grade 2/moderate	Not related	01 Nov 2020 (Study Day 17) - 02 Nov 2020 (Study Day 18)
COVID-19	Grade 2/moderate	Not related	31 Dec 2020 (Study Day 77) - 28 Jan 2021 (Study Day 105)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US334-2046 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	16 Sep 2020 (Study Day 35)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19 Infection	COVID-19	Grade 2/ moderate	Not related	17 Nov 2020 (Study Day 97) – 26 Dec 2020 (Study Day 136)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0. The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US334-2046, a 41-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 13 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 16 Sep 2020 (Study Day 35). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 17 Nov 2020 (Study Day 97), 96 days after the first dose and 62 days after the second dose of the IP, the participant experienced a Grade 2/Moderate non-serious adverse event of symptomatic COVID-19 infection.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 35, 16 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 20 Nov 2020 (Study Day 100), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
17 Nov 2020 (Study Day 97)	Cough	Mild
17 Nov 2020 (Study Day 97)	Fatigue	Severe
17 Nov 2020 (Study Day 97)	Nasal Congestion	Mild
17 Nov 2020 (Study Day 97)	Runny Nose (Rhinorrhea)	Mild

Symptom Date	Symptom	Result
18 Nov 2020 (Study Day 98)	Cough	Mild
18 Nov 2020 (Study Day 98)	Fatigue	Severe
18 Nov 2020 (Study Day 98)	Nasal Congestion	Mild
18 Nov 2020 (Study Day 98)	Runny Nose (Rhinorrhea)	Mild
19 Nov 2020 (Study Day 99)	Body Aches	Moderate
19 Nov 2020 (Study Day 99)	Chills	Moderate
19 Nov 2020 (Study Day 99)	Cough	Mild
19 Nov 2020 (Study Day 99)	Difficulty Breathing	Moderate
19 Nov 2020 (Study Day 99)	Fatigue	Severe
19 Nov 2020 (Study Day 99)	Headache	Moderate
19 Nov 2020 (Study Day 99)	Nasal Congestion	Mild
19 Nov 2020 (Study Day 99)	Runny Nose (Rhinorrhea)	Mild
19 Nov 2020 (Study Day 99)	Shortness of Breath	Moderate
19 Nov 2020 (Study Day 99)	Sore Throat	Mild
20 Nov 2020 (Study Day 100)	Body Aches	Moderate
20 Nov 2020 (Study Day 100)	Chills	Moderate
20 Nov 2020 (Study Day 100)	Cough	Mild
20 Nov 2020 (Study Day 100)	Difficulty Breathing	Moderate
20 Nov 2020 (Study Day 100)	Fatigue	Severe
20 Nov 2020 (Study Day 100)	Headache	Moderate
20 Nov 2020 (Study Day 100)	Nasal Congestion	Mild
20 Nov 2020 (Study Day 100)	Runny Nose (Rhinorrhea)	Mild
20 Nov 2020 (Study Day 100)	Shortness of Breath	Moderate
20 Nov 2020 (Study Day 100)	Sore Throat	Mild
21 Nov 2020 (Study Day 101)	Headache	Mild
21 Nov 2020 (Study Day 101)	Muscle Aches (Myalgia)	Mild
21 Nov 2020 (Study Day 101)	O2 Saturation (%)	93
21 Nov 2020 (Study Day 101)	Shortness of Breath	Moderate
21 Nov 2020 (Study Day 101)	Sore Throat	Mild
22 Nov 2020 (Study Day 102)	Headache	Mild
22 Nov 2020 (Study Day 102)	Muscle Aches (Myalgia)	Mild
22 Nov 2020 (Study Day 102)	Shortness of Breath	Mild
23 Nov 2020 (Study Day 103)	Fatigue	Mild
23 Nov 2020 (Study Day 103)	Headache	Mild
23 Nov 2020 (Study Day 103)	Muscle Aches (Myalgia)	Mild
23 Nov 2020 (Study Day 103)	Shortness of Breath	Mild
24 Nov 2020 (Study Day 104)	Fatigue	Mild
24 Nov 2020 (Study Day 104)	Headache	Mild
24 Nov 2020 (Study Day 104)	Muscle Aches (Myalgia)	Mild
24 Nov 2020 (Study Day 104)	Shortness of Breath	Mild
25 Nov 2020 (Study Day 105)	Body Aches	Moderate
26 Nov 2020 (Study Day 106)	Fatigue	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
21 Nov 2020 (Study Day 101)	Oxygen Saturation	93%
21 Nov 2020 - 21 Nov 2020 (Study Day 101-101)	Oxygen Saturation of SpO2 ≤93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of symptomatic COVID-19 infection lasted for 40 days, after which it was considered to be recovered/resolved on 26 Dec 2020 (Study Day 136). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000940	COVID-19

Study Completion/Discontinuation

On 04 Jan 2021 (Study Day 145), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1980 - Ongoing
Intervertebral disc protrusion	Cervical disk herniation	2013 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Loratadine	2010 - Ongoing	Seasonal Allergies
Fish oil	2015 - Ongoing	Wellness
Vitamins nos	2015 - Ongoing	Wellness
Gabapentin	Feb 2020 - Ongoing	Cervical Disk Herniation
Meloxicam	Feb 2020 - Ongoing	Cervical Disk Herniation
Oxycodone hydrochloride; paracetamol	Feb 2020 - Ongoing	Cervical Disk Herniation

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Tizanidine	Feb 2020 - Ongoing	Cervical Disc Herniation
Ibuprofen	20 Sep 2020 (Study Day 39) - 20 Sep 2020 (Study Day 39)	Headache (Solicited Ar - Vaccine #2)
Paracetamol	19 Nov 2020 (Study Day 99) - 26 Nov 2020 (Study Day 106)	Symptomatic COVID-19 Infection
Acetylsalicylic acid	21 Nov 2020 (Study Day 101) - Ongoing	Cardiac Prophylaxis
Other viral vaccines	28 Dec 2020 (Study Day 138) - 28 Dec 2020 (Study Day 138)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 1/mild	Related	19 Sep 2020 (Study Day 38) - 24 Sep 2020 (Study Day 43)
Myalgia	Grade 1/mild	Related	19 Sep 2020 (Study Day 38) - 24 Sep 2020 (Study Day 43)
COVID-19	Grade 2/moderate	Not related	17 Nov 2020 (Study Day 97) - 26 Dec 2020 (Study Day 136)
Blood Pressure Increased	Grade 3/severe	Not related	17 Dec 2020 (Study Day 127) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US334-2182 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	15 Oct 2020 (Study Day 43)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19 Infection	COVID-19	Grade 1/mild	Not related	19 Dec 2020 (Study Day 108) – 05 Feb 2021 (Study Day 156)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0. The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US334-2182, a 70-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 03 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 15 Oct 2020 (Study Day 43). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 19 Dec 2020 (Study Day 108), 107 days after the first dose and 65 days after the second dose of the IP, the participant experienced a Grade 1/Mild non-serious adverse event of COVID-19 infection.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 43, 15 Oct 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 12 Jan 2021 (Study Day 132), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
19 Dec 2020 (Study Day 108)	Headache	Moderate
20 Dec 2020 (Study Day 109)	Headache	Moderate
21 Dec 2020 (Study Day 110)	Headache	Moderate
22 Dec 2020 (Study Day 111)	Headache	Moderate

Symptom Date	Symptom	Result
23 Dec 2020 (Study Day 112)	Diarrhea	Moderate
23 Dec 2020 (Study Day 112)	Headache	Moderate
24 Dec 2020 (Study Day 113)	Diarrhea	Mild
24 Dec 2020 (Study Day 113)	Headache	Mild
04 Jan 2021 (Study Day 124)	Headache	Mild
05 Jan 2021 (Study Day 125)	Cough	Moderate
05 Jan 2021 (Study Day 125)	Headache	Mild
05 Jan 2021 (Study Day 125)	Shortness of Breath	Mild
06 Jan 2021 (Study Day 126)	Body Aches	Moderate
06 Jan 2021 (Study Day 126)	Cough	Moderate
06 Jan 2021 (Study Day 126)	Headache	Mild
06 Jan 2021 (Study Day 126)	Muscle Aches (Myalgia)	Moderate
06 Jan 2021 (Study Day 126)	Shortness of Breath	Mild
06 Jan 2021 (Study Day 126)	Temperature (°F)	100.9
07 Jan 2021 (Study Day 127)	Body Aches	Moderate
07 Jan 2021 (Study Day 127)	Cough	Moderate
07 Jan 2021 (Study Day 127)	Diarrhea	Mild
08 Jan 2021 (Study Day 128)	Body Aches	Mild
08 Jan 2021 (Study Day 128)	Muscle Aches (Myalgia)	Mild
08 Jan 2021 (Study Day 128)	Shortness of Breath	Mild
09 Jan 2021 (Study Day 129)	Cough	Mild
09 Jan 2021 (Study Day 129)	Fatigue	Mild
10 Jan 2021 (Study Day 130)	Body Aches	Moderate
10 Jan 2021 (Study Day 130)	Chills	Moderate
10 Jan 2021 (Study Day 130)	Cough	Moderate
10 Jan 2021 (Study Day 130)	Fatigue	Moderate
10 Jan 2021 (Study Day 130)	Temperature (°F)	101.3
11 Jan 2021 (Study Day 131)	Cough	Moderate
11 Jan 2021 (Study Day 131)	Temperature (°F)	101
12 Jan 2021 (Study Day 132)	Muscle Aches (Myalgia)	Moderate
12 Jan 2021 (Study Day 132)	Temperature (°F)	100.6
15 Jan 2021 (Study Day 135)	Body Aches	Moderate
15 Jan 2021 (Study Day 135)	Chills	Severe
15 Jan 2021 (Study Day 135)	Diarrhea	Moderate
15 Jan 2021 (Study Day 135)	Fatigue	Moderate
15 Jan 2021 (Study Day 135)	Nausea	Mild
15 Jan 2021 (Study Day 135)	New Loss of Taste	Mild
15 Jan 2021 (Study Day 135)	Shortness of Breath	Moderate
15 Jan 2021 (Study Day 135)	Temperature (°F)	100.7
15 Jan 2021 (Study Day 135)	Vomiting	Mild
16 Jan 2021 (Study Day 136)	Body Aches	Moderate
16 Jan 2021 (Study Day 136)	Diarrhea	Moderate
16 Jan 2021 (Study Day 136)	Nausea	Moderate

Symptom Date	Symptom	Result
16 Jan 2021 (Study Day 136)	O2 Saturation (%)	93
17 Jan 2021 (Study Day 137)	Nausea	Mild
17 Jan 2021 (Study Day 137)	Shortness of Breath	Moderate
18 Jan 2021 (Study Day 138)	Cough	Moderate
18 Jan 2021 (Study Day 138)	Fatigue	Mild
18 Jan 2021 (Study Day 138)	Nausea	Moderate
18 Jan 2021 (Study Day 138)	Shortness of Breath	Moderate

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
23 Dec 2020 (Study Day 112)	Oxygen Saturation of SpO2 ≤93% on room air at sea level	Yes
17 Jan 2021 - 17 Jan 2021 (Study Day 137-137)	Clinical Evidence of Pneumonia	Yes
17 Jan 2021 - 17 Jan 2021 (Study Day 137-137)	Radiographical Evidence of Pneumonia	Yes

Action taken with the IP was not applicable. The event of COVID-19 infection lasted for 49 days, after which it was considered to be recovered/resolved on 05 Feb 2021 (Study Day 156). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-004629	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	1990 - Ongoing
Ovarian cyst	Recurrent bilateral ovarian cysts (benign)	1992 - 1995
Hyperlipidaemia	Hyperlipidemia	1995 - Ongoing
Hysterectomy	Total abdominal hysterectomy	1995 - 1995
Seasonal allergy	Seasonal allergies	1995 - Ongoing
Sinusitis	Recurrent sinus infections	1995 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Depression	Depression	2000 - Ongoing
Headache	Headaches	2000 - Ongoing
Hypothyroidism	Hypothyroidism	2000 - Ongoing
Bronchial hyperreactivity	Reactive airway disease	2010 - Ongoing
Vitamin D deficiency	Vitamin d deficiency	2010 - Ongoing
Biopsy thyroid gland	Thyroid biopsy benign	27 Aug 2020 (Study Day -7) - 27 Aug 2020 (Study Day -7)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2000 - Ongoing	Headaches
Paracetamol	2000 - Ongoing	Headaches
Citalopram	2010 - 17 Sep 2020 (Study Day 15)	Depression
Guaifenesin	2010 - Ongoing	Seasonal Allergies
Montelukast	2010 - Ongoing	Seasonal Allergies
Vitamin d nos	2010 - Ongoing	Vitamin D Deficiency
Amlodipine	2019 - Ongoing	Hypertension
Fexofenadine hydrochloride	2019 - Ongoing	Seasonal Allergies
Hydrochlorothiazide; triamterene	2019 - Ongoing	Hypertension
Levothyroxine sodium	01 Jun 2020 (Study Day -94) - Ongoing	Hypothyroidisim
Levothyroxine sodium	01 Jun 2020 (Study Day -94) - Ongoing	Hypothyroidism
Escitalopram	18 Sep 2020 (Study Day 16) - 15 Oct 2020 (Study Day 43)	Depression
Citalopram	14 Oct 2020 (Study Day 42) - Ongoing	Depression
Hydrocortisone	21 Oct 2020 (Study Day 49) - 21 Oct 2020 (Study Day 49)	Headache Ae
Alprazolam	26 Oct 2020 (Study Day 54) - Ongoing	Generalized Anxiety Ae
Influenza vaccine	03 Nov 2020 (Study Day 62) - 03 Nov 2020 (Study Day 62)	Influenza Prophylaxis
Ibuprofen	04 Jan 2021 (Study Day 124) - 11 Jan 2021 (Study Day 131)	COVID-19 Infection Ae
Salbutamol	06 Jan 2021 (Study Day 126) - 05 Feb 2021 (Study Day 156)	COVID-19 Infection Ae
Ondansetron	16 Jan 2021 (Study Day 136) - 18 Jan 2021 (Study Day 138)	COVID-19 Infection
Prednisone	16 Jan 2021 (Study Day 136) - 17 Jan 2021 (Study Day 137)	COVID-19 Infection Ae
Azithromycin	17 Jan 2021 (Study Day 137) - 21 Jan 2021 (Study Day 141)	COVID-19 Infection Ae
Prednisone	18 Jan 2021 (Study Day 138) - 20 Jan 2021 (Study Day 140)	COVID-19 Infection Ae

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cyclobenzaprine hydrochloride	05 Feb 2021 (Study Day 156) - Ongoing	Tension Headaches Ae
Meloxicam	05 Feb 2021 (Study Day 156) - Ongoing	Tension Headaches Ae

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 1/mild	Related	03 Sep 2020 (Study Day 1) - 17 Sep 2020 (Study Day 15)
Headache	Grade 1/mild	Not related	18 Sep 2020 (Study Day 16) - 28 Oct 2020 (Study Day 56)
Generalised Anxiety Disorder	Grade 2/moderate	Not related	26 Oct 2020 (Study Day 54) - Ongoing
COVID-19	Grade 1/mild	Not related	19 Dec 2020 (Study Day 108) - 05 Feb 2021 (Study Day 156)
Tension Headache	Grade 2/moderate	Not related	05 Feb 2021 (Study Day 156) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US337-2059 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	07 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	08 Sep 2020 (Study Day 33)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	SAE, COVID-19	Grade 2/ moderate	Not related	10 Dec 2020 (Study Day 126) – 16 Jan 2021 (Study Day 163)	Recovered/resolved
COVID-19 Pneumonia/COVID 19 Pneumonia	SAE, COVID-19	Grade 3/ severe	Not related	18 Dec 2020 (Study Day 134) – 22 Dec 2020 (Study Day 138)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0. The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US337-2059, a 75-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 07 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 08 Sep 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 10 Dec 2020 (Study Day 126), 125 days after the first dose and 93 days after the second dose of the IP, the participant experienced a Grade 2/Moderate serious adverse event of COVID-19.

On 18 Dec 2020 (Study Day 134), 133 days after the first dose and 101 days after the second dose of the IP, the participant experienced a Grade 3/Severe serious adverse event of COVID-19 pneumonia.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 33, 08 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 23 Dec 2020 (Study Day 139), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
11 Dec 2020 (Study Day 127)	Chills	Mild
11 Dec 2020 (Study Day 127)	Cough	Mild
11 Dec 2020 (Study Day 127)	Shortness of Breath	Mild
12 Dec 2020 (Study Day 128)	Cough	Mild
12 Dec 2020 (Study Day 128)	Shortness of Breath	Mild
13 Dec 2020 (Study Day 129)	Cough	Mild
13 Dec 2020 (Study Day 129)	Shortness of Breath	Mild
14 Dec 2020 (Study Day 130)	Cough	Mild
14 Dec 2020 (Study Day 130)	Shortness of Breath	Mild
15 Dec 2020 (Study Day 131)	Cough	Mild
15 Dec 2020 (Study Day 131)	Difficulty Breathing	Mild
15 Dec 2020 (Study Day 131)	Shortness of Breath	Mild
16 Dec 2020 (Study Day 132)	Cough	Mild
16 Dec 2020 (Study Day 132)	Difficulty Breathing	Mild
17 Dec 2020 (Study Day 133)	Cough	Mild
17 Dec 2020 (Study Day 133)	Difficulty Breathing	Mild
18 Dec 2020 (Study Day 134)	Cough	Mild
18 Dec 2020 (Study Day 134)	Difficulty Breathing	Mild
18 Dec 2020 (Study Day 134)	O2 Saturation (%)	89
18 Dec 2020 (Study Day 134)	Shortness of Breath	Mild
19 Dec 2020 (Study Day 135)	Cough	Mild
19 Dec 2020 (Study Day 135)	O2 Saturation (%)	93
22 Dec 2020 (Study Day 138)	Cough	Mild
23 Dec 2020 (Study Day 139)	Chills	Mild
23 Dec 2020 (Study Day 139)	Cough	Mild
24 Dec 2020 (Study Day 140)	Cough	Mild
24 Dec 2020 (Study Day 140)	O2 Saturation (%)	92
24 Dec 2020 (Study Day 140)	Shortness of Breath	Mild
25 Dec 2020 (Study Day 141)	Cough	Mild
25 Dec 2020 (Study Day 141)	Shortness of Breath	Mild
26 Dec 2020 (Study Day 142)	Cough	Mild
26 Dec 2020 (Study Day 142)	Shortness of Breath	Mild
27 Dec 2020 (Study Day 143)	Cough	Mild
28 Dec 2020 (Study Day 144)	Cough	Mild
29 Dec 2020 (Study Day 145)	Cough	Mild
30 Dec 2020 (Study Day 146)	Cough	Mild
31 Dec 2020 (Study Day 147)	Cough	Mild
01 Jan 2021 (Study Day 148)	Cough	Mild
02 Jan 2021 (Study Day 149)	Cough	Moderate
02 Jan 2021 (Study Day 149)	Shortness of Breath	Mild

Symptom Date	Symptom	Result
03 Jan 2021 (Study Day 150)	Cough	Moderate
04 Jan 2021 (Study Day 151)	Cough	Moderate
05 Jan 2021 (Study Day 152)	Cough	Moderate
06 Jan 2021 (Study Day 153)	Cough	Moderate
07 Jan 2021 (Study Day 154)	Cough	Mild
08 Jan 2021 (Study Day 155)	Cough	Mild
09 Jan 2021 (Study Day 156)	Cough	Mild
11 Jan 2021 (Study Day 158)	Cough	Mild
12 Jan 2021 (Study Day 159)	Cough	Mild
13 Jan 2021 (Study Day 160)	Cough	Mild
14 Jan 2021 (Study Day 161)	Cough	Mild
15 Jan 2021 (Study Day 162)	Cough	Mild
16 Jan 2021 (Study Day 163)	Cough	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
24 Dec 2020 (Study Day 140)	Oxygen Saturation	92%
19 Dec 2020 - 27 Dec 2020 (Study Day 135-143)	Non-Invasive Ventilation	Yes
24 Dec 2020 - 25 Dec 2020 (Study Day 140-141)	Oxygen Saturation of SpO2 ≤93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID-19 lasted for 38 days, after which it was considered to be recovered/resolved on 16 Jan 2021 (Study Day 163). The investigator assessed the event of COVID-19 to be not related to the IP.

Action taken with the IP was not applicable. The event of COVID-19 pneumonia lasted for 5 days, after which it was considered to be recovered/resolved on 22 Dec 2020 (Study Day 138). The investigator assessed the event of COVID-19 pneumonia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001187	COVID-19
MOD-2020-001187	COVID-19 pneumonia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2003 - Ongoing
Type V hyperlipidaemia	Hyperlipidemia - mixed	2005 - Ongoing
Coronary angioplasty	Coronary artery angioplasty	2008 - 2008
Coronary artery disease	Coronary artery disease	2008 - Ongoing
Inguinal hernia	Inguinal hernia - left	2015 - 2015
Inguinal hernia repair	Inguinal hernia repair left	2015 - 2015

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrochlorothiazide; losartan potassium	2003 - Ongoing	Hypertension
Atorvastatin	2005 - Ongoing	Hyperlipidemia - Mixed
Metoprolol	2005 - Ongoing	Hypertension
Clopidogrel bisulfate	2008 - Ongoing	Cardiac Prophylaxis
Ezetimibe	2015 - Ongoing	Hyperlipidemia - Mixed
Colecalciferol	Jan 2019 - Ongoing	Nutritional Supplement
Folic acid	Jan 2019 - Ongoing	Nutritional Supplement
Ubidecarenone	Jan 2019 - Ongoing	Nutritional Supplement
Varicella zoster vaccine	Feb 2019 - Feb 2019	Shingles Prophylaxis/Prevention
Influenza vaccine	Jun 2019 - Jun 2019	Influenza Prophylaxis/Prevention
Influenza vaccine	18 Oct 2020 (Study Day 73) - 18 Oct 2020 (Study Day 73)	Influenza Prophylaxis/Prevention
Prednisone	12 Dec 2020 (Study Day 128) - 16 Dec 2020 (Study Day 132)	Generalized Erythematous Macules
Azithromycin	18 Dec 2020 (Study Day 134) - 18 Dec 2020 (Study Day 134)	COVID 19 Pneumonia
Ceftriaxone	18 Dec 2020 (Study Day 134) - 18 Dec 2020 (Study Day 134)	COVID 19 Pneumonia
Chest x-ray*	18 Dec 2020 (Study Day 134) - 18 Dec 2020 (Study Day 134)	Adverse Event
Dexamethasone	18 Dec 2020 (Study Day 134) - 18 Dec 2020 (Study Day 134)	COVID 19 Pneumonia
Dexamethasone	18 Dec 2020 (Study Day 134) - 22 Dec 2020 (Study Day 138)	COVID 19 Pneumonia
Electrocardiogram*	18 Dec 2020 (Study Day 134) - 18 Dec 2020 (Study Day 134)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Plasma	18 Dec 2020 (Study Day 134) - 18 Dec 2020 (Study Day 134)	COVID 19 Pneumonia
Remdesivir	18 Dec 2020 (Study Day 134) - 18 Dec 2020 (Study Day 134)	COVID 19 Pneumonia
Salbutamol	18 Dec 2020 (Study Day 134) - 22 Dec 2020 (Study Day 138)	COVID 19 Pneumonia
Remdesivir	19 Dec 2020 (Study Day 135) - 22 Dec 2020 (Study Day 138)	COVID 19 Pneumonia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious event is presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Macule	Grade 2/moderate	Not related	04 Dec 2020 (Study Day 120) - 14 Dec 2020 (Study Day 130)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US337-2284 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 32)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	SAE	Grade 1/mild	Not related	30 Nov 2020 (Study Day 95) – 18 Dec 2020 (Study Day 113)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US337-2284, a 55-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 28 Sep 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Nov 2020 (Study Day 95), 94 days after the first dose and 63 days after the second dose of the IP, the participant experienced a Grade 1/mild serious adverse event of covid-19. Action taken with the IP was not applicable. The event of COVID-19 lasted for 19 days, after which it was considered to be recovered/resolved on 18 Dec 2020 (Study Day 113). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001112	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Vesicoureteric reflux	Vesicoureteral reflux disease	(b) (6) 1965 (Study Day (b) (6) - 1968
Vesicoureteral reflux surgery	Vesicoureteral reflux disease correction surgery	1968 - 1968
Synovial cyst	Ganglion cyst left wrist	1982 - 1982
Synovial cyst removal	Excision of ganglion cyst of left wrist	1982 - 1982
Myomectomy	Uterine myomectomy	2005 - 2005
Uterine leiomyoma	Uterine fibroids	2005 - 2005
Obesity	Obesity - morbid	2008 - Ongoing
Osteoarthritis	Generalized osteoarthritis	2008 - Ongoing
Postmenopause	Postmenopause	2010 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	2008 - Ongoing	Generalized Osteoarthritis
Influenza vaccine	Dec 2019 - Dec 2019	Influenza Prophylaxis/Prevention
Influenza vaccine	27 Oct 2020 (Study Day 61) - 27 Oct 2020 (Study Day 61)	Influenza Prevention
Influenza vaccine	08 Nov 2020 (Study Day 73) - 08 Nov 2020 (Study Day 73)	Influenza Prevention
Paracetamol	06 Dec 2020 (Study Day 101) - 10 Dec 2020 (Study Day 105)	Pyrexia
Dextromethorphan hydrobromide; guaifenesin; phenylpropanolamine hydrochloride	10 Dec 2020 (Study Day 105) - 17 Dec 2020 (Study Day 112)	Cough

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Cough	Grade 1/mild	Not related	14 Nov 2020 (Study Day 79) - 18 Dec 2020 (Study Day 113)
Oropharyngeal Pain	Grade 1/mild	Not related	15 Nov 2020 (Study Day 80) - 17 Nov 2020 (Study Day 82)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US340-2029 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	27 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	24 Aug 2020 (Study Day 29)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	SAE, COVID-19	Grade 4	Not related	29 Sep 2020 (Study Day 65) – 12 Oct 2020 (Study Day 78)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0. The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US340-2029, a 34-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 27 Jul 2020 (Study Day 1). The second dose was administered in the right arm on 24 Aug 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 29 Sep 2020 (Study Day 65), 64 days after the first dose and 36 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 24 Aug 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 30 Sep 2020 (Study Day 66), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
29 Sep 2020 (Study Day 65)	Chills	Mild
29 Sep 2020 (Study Day 65)	Cough	Mild
29 Sep 2020 (Study Day 65)	Fatigue	Mild
29 Sep 2020 (Study Day 65)	Headache	Mild
29 Sep 2020 (Study Day 65)	Muscle Aches (Myalgia)	Mild
29 Sep 2020 (Study Day 65)	Nasal Congestion	Mild

Symptom Date	Symptom	Result
29 Sep 2020 (Study Day 65)	New Loss of Taste	Mild
29 Sep 2020 (Study Day 65)	Sore Throat	Mild
30 Sep 2020 (Study Day 66)	Chills	Mild
30 Sep 2020 (Study Day 66)	Cough	Mild
30 Sep 2020 (Study Day 66)	Fatigue	Mild
30 Sep 2020 (Study Day 66)	Headache	Mild
30 Sep 2020 (Study Day 66)	Muscle Aches (Myalgia)	Mild
30 Sep 2020 (Study Day 66)	New Loss of Taste	Mild
30 Sep 2020 (Study Day 66)	Sore Throat	Mild
01 Oct 2020 (Study Day 67)	Chills	Mild
01 Oct 2020 (Study Day 67)	Cough	Mild
01 Oct 2020 (Study Day 67)	Fatigue	Mild
01 Oct 2020 (Study Day 67)	Headache	Mild
01 Oct 2020 (Study Day 67)	Nasal Congestion	Mild
01 Oct 2020 (Study Day 67)	New Loss of Smell	Mild
01 Oct 2020 (Study Day 67)	New Loss of Taste	Mild
01 Oct 2020 (Study Day 67)	Temperature (°F)	100.5
02 Oct 2020 (Study Day 68)	Chills	Mild
02 Oct 2020 (Study Day 68)	Cough	Mild
02 Oct 2020 (Study Day 68)	Fatigue	Mild
02 Oct 2020 (Study Day 68)	Headache	Mild
02 Oct 2020 (Study Day 68)	Nasal Congestion	Mild
02 Oct 2020 (Study Day 68)	New Loss of Smell	Mild
02 Oct 2020 (Study Day 68)	New Loss of Taste	Mild
02 Oct 2020 (Study Day 68)	Temperature (°F)	101.0
03 Oct 2020 (Study Day 69)	Chills	Mild
03 Oct 2020 (Study Day 69)	Cough	Mild
03 Oct 2020 (Study Day 69)	Fatigue	Moderate
03 Oct 2020 (Study Day 69)	Headache	Mild
03 Oct 2020 (Study Day 69)	New Loss of Smell	Mild
03 Oct 2020 (Study Day 69)	New Loss of Taste	Mild
03 Oct 2020 (Study Day 69)	Temperature (°F)	102.0
04 Oct 2020 (Study Day 70)	Chills	Mild
04 Oct 2020 (Study Day 70)	Cough	Mild
04 Oct 2020 (Study Day 70)	Diarrhea	Mild
04 Oct 2020 (Study Day 70)	Fatigue	Mild
04 Oct 2020 (Study Day 70)	New Loss of Smell	Mild
04 Oct 2020 (Study Day 70)	New Loss of Taste	Mild
05 Oct 2020 (Study Day 71)	Cough	Mild
05 Oct 2020 (Study Day 71)	Fatigue	Mild
05 Oct 2020 (Study Day 71)	New Loss of Smell	Mild
05 Oct 2020 (Study Day 71)	O2 Saturation (%)	93
06 Oct 2020 (Study Day 72)	Cough	Mild

Symptom Date	Symptom	Result
06 Oct 2020 (Study Day 72)	Fatigue	Mild
06 Oct 2020 (Study Day 72)	New Loss of Smell	Mild
06 Oct 2020 (Study Day 72)	O2 Saturation (%)	92
07 Oct 2020 (Study Day 73)	Cough	Moderate
07 Oct 2020 (Study Day 73)	Fatigue	Mild
07 Oct 2020 (Study Day 73)	New Loss of Smell	Mild
07 Oct 2020 (Study Day 73)	O2 Saturation (%)	88
07 Oct 2020 (Study Day 73)	Shortness of Breath	Moderate
07 Oct 2020 (Study Day 73)	Temperature (°F)	101.0
08 Oct 2020 (Study Day 74)	Cough	Moderate
08 Oct 2020 (Study Day 74)	Fatigue	Moderate
08 Oct 2020 (Study Day 74)	New Loss of Smell	Moderate
08 Oct 2020 (Study Day 74)	O2 Saturation (%)	83
08 Oct 2020 (Study Day 74)	Shortness of Breath	Moderate
08 Oct 2020 (Study Day 74)	Temperature (°F)	101.4
09 Oct 2020 (Study Day 75)	Cough	Mild
09 Oct 2020 (Study Day 75)	O2 Saturation (%)	88
09 Oct 2020 (Study Day 75)	Shortness of Breath	Mild
10 Oct 2020 (Study Day 76)	Cough	Mild
10 Oct 2020 (Study Day 76)	O2 Saturation (%)	92
10 Oct 2020 (Study Day 76)	Shortness of Breath	Mild
11 Oct 2020 (Study Day 77)	Cough	Mild
12 Oct 2020 (Study Day 78)	Fatigue	Mild
12 Oct 2020 (Study Day 78)	O2 Saturation (%)	93
13 Oct 2020 (Study Day 79)	Fatigue	Mild
14 Oct 2020 (Study Day 80)	Fatigue	Mild
16 Oct 2020 (Study Day 82)	Fatigue	Mild
17 Oct 2020 (Study Day 83)	Fatigue	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
05 Oct 2020 (Study Day 71)	Oxygen Saturation	83%
05 Oct 2020 - 13 Oct 2020 (Study Day 71-79)	Oxygen Saturation of SpO2 ≤93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID-19 lasted for 14 days, after which it was considered to be recovered/resolved on 12 Oct 2020 (Study Day 78). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000405	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Severe obesity	2004 - Ongoing
Hypothyroidism	Hypothyroidism	Jul 2004 - Ongoing
Headache	Chronic headaches	2010 - Ongoing
Anxiety	Anxiety	Feb 2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	Jul 2004 - Ongoing	Hypothyroidism
Escitalopram oxalate	Feb 2016 - Ongoing	Anxiety
Paracetamol	01 Oct 2020 (Study Day 67) - 01 Oct 2020 (Study Day 67)	COVID
Guaifenesin	03 Oct 2020 (Study Day 69) - 06 Oct 2020 (Study Day 72)	COVID
Dexamethasone	05 Oct 2020 (Study Day 71) - 17 Oct 2020 (Study Day 83)	COVID
Chest x-ray*	07 Oct 2020 (Study Day 73) - 07 Oct 2020 (Study Day 73)	Adverse Event
Doxycycline	07 Oct 2020 (Study Day 73) - 17 Oct 2020 (Study Day 83)	COVID
Oxygen	07 Oct 2020 (Study Day 73) - 11 Oct 2020 (Study Day 77)	COVID-19
Plasma	07 Oct 2020 (Study Day 73) - 08 Oct 2020 (Study Day 74)	COVID
Remdesivir	07 Oct 2020 (Study Day 73) - 07 Oct 2020 (Study Day 73)	COVID

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Remdesivir	08 Oct 2020 (Study Day 74) - 12 Oct 2020 (Study Day 78)	Sars COVID 19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US340-2194 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	02 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	02 Sep 2020 (Study Day 32)
Reason for Narrative:	SAE, Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Sars COVID-19	SAE, COVID-19	Grade 3/severe	Not related	06 Nov 2020 (Study Day 97) – 26 Nov 2020 (Study Day 117)	Recovered/ resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0. The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US340-2194, a 57-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 02 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 02 Sep 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 06 Nov 2020 (Study Day 97), 96 days after the first dose and 65 days after the second dose of the IP, the participant experienced a Grade 3/Severe serious adverse event of sars COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 13 Nov 2020 (Study Day 104), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
06 Nov 2020 (Study Day 97)	Chills	Mild
06 Nov 2020 (Study Day 97)	Fatigue	Moderate
06 Nov 2020 (Study Day 97)	Headache	Mild
07 Nov 2020 (Study Day 98)	Chills	Mild
07 Nov 2020 (Study Day 98)	Fatigue	Mild
07 Nov 2020 (Study Day 98)	Headache	Mild
08 Nov 2020 (Study Day 99)	Chills	Mild

Symptom Date	Symptom	Result
08 Nov 2020 (Study Day 99)	Fatigue	Mild
08 Nov 2020 (Study Day 99)	Headache	Mild
09 Nov 2020 (Study Day 100)	Chills	Mild
09 Nov 2020 (Study Day 100)	Fatigue	Mild
09 Nov 2020 (Study Day 100)	Headache	Mild
10 Nov 2020 (Study Day 101)	Chills	Mild
10 Nov 2020 (Study Day 101)	Cough	Mild
10 Nov 2020 (Study Day 101)	Diarrhea	Moderate
10 Nov 2020 (Study Day 101)	Fatigue	Mild
10 Nov 2020 (Study Day 101)	Headache	Mild
10 Nov 2020 (Study Day 101)	Nausea	Moderate
10 Nov 2020 (Study Day 101)	Vomiting	Moderate
11 Nov 2020 (Study Day 102)	Chills	Mild
11 Nov 2020 (Study Day 102)	Cough	Mild

13 Nov 2020 (Study Day 104)	Nausea	Moderate
13 Nov 2020 (Study Day 104)	Vomiting	Moderate
14 Nov 2020 (Study Day 105)	Chills	Mild
14 Nov 2020 (Study Day 105)	Cough	Mild
14 Nov 2020 (Study Day 105)	Diarrhea	Moderate
14 Nov 2020 (Study Day 105)	Fatigue	Mild
14 Nov 2020 (Study Day 105)	Headache	Mild
14 Nov 2020 (Study Day 105)	Nausea	Moderate
14 Nov 2020 (Study Day 105)	Vomiting	Moderate
15 Nov 2020 (Study Day 106)	Body Aches	Mild
15 Nov 2020 (Study Day 106)	Cough	Mild
15 Nov 2020 (Study Day 106)	Diarrhea	Mild

Symptom Date	Symptom	Result
15 Nov 2020 (Study Day 106)	Fatigue	Mild
15 Nov 2020 (Study Day 106)	Muscle Aches (Myalgia)	Mild
15 Nov 2020 (Study Day 106)	Nausea	Mild
15 Nov 2020 (Study Day 106)	New Loss of Smell	Mild
15 Nov 2020 (Study Day 106)	New Loss of Taste	Mild
15 Nov 2020 (Study Day 106)	Shortness of Breath	Mild
15 Nov 2020 (Study Day 106)	Sore Throat	Mild
15 Nov 2020 (Study Day 106)	Vomiting	Mild
16 Nov 2020 (Study Day 107)	Body Aches	Mild
16 Nov 2020 (Study Day 107)	Cough	Mild
16 Nov 2020 (Study Day 107)	Diarrhea	Mild
16 Nov 2020 (Study Day 107)	Fatigue	Mild
16 Nov 2020 (Study Day 107)	Muscle Aches (Myalgia)	Mild
16 Nov 2020 (Study Day 107)	Nausea	Mild
16 Nov 2020 (Study Day 107)	New Loss of Smell	Mild
16 Nov 2020 (Study Day 107)	New Loss of Taste	Mild
16 Nov 2020 (Study Day 107)	O2 Saturation (%)	83
16 Nov 2020 (Study Day 107)	Shortness of Breath	Mild
16 Nov 2020 (Study Day 107)	Sore Throat	Mild
17 Nov 2020 (Study Day 108)	Body Aches	Mild
17 Nov 2020 (Study Day 108)	Cough	Mild
17 Nov 2020 (Study Day 108)	Diarrhea	Mild
17 Nov 2020 (Study Day 108)	Fatigue	Mild
17 Nov 2020 (Study Day 108)	Muscle Aches (Myalgia)	Mild
17 Nov 2020 (Study Day 108)	Nausea	Mild
17 Nov 2020 (Study Day 108)	New Loss of Smell	Mild
17 Nov 2020 (Study Day 108)	New Loss of Taste	Mild
17 Nov 2020 (Study Day 108)	O2 Saturation (%)	92
17 Nov 2020 (Study Day 108)	Shortness of Breath	Mild
17 Nov 2020 (Study Day 108)	Sore Throat	Mild
22 Nov 2020 (Study Day 113)	O2 Saturation (%)	92
23 Nov 2020 (Study Day 114)	O2 Saturation (%)	92
26 Nov 2020 (Study Day 117)	O2 Saturation (%)	93
30 Nov 2020 (Study Day 121)	Sore Throat	Mild
01 Dec 2020 (Study Day 122)	Cough	Mild
01 Dec 2020 (Study Day 122)	O2 Saturation (%)	90
02 Dec 2020 (Study Day 123)	Cough	Mild
02 Dec 2020 (Study Day 123)	O2 Saturation (%)	91
03 Dec 2020 (Study Day 124)	Fatigue	Mild
03 Dec 2020 (Study Day 124)	O2 Saturation (%)	93
04 Dec 2020 (Study Day 125)	Fatigue	Mild
04 Dec 2020 (Study Day 125)	O2 Saturation (%)	93
05 Dec 2020 (Study Day 126)	Cough	Mild

Symptom Date	Symptom	Result
05 Dec 2020 (Study Day 126)	Fatigue	Mild
06 Dec 2020 (Study Day 127)	Cough	Mild
06 Dec 2020 (Study Day 127)	Fatigue	Mild
07 Dec 2020 (Study Day 128)	Cough	Mild
07 Dec 2020 (Study Day 128)	Fatigue	Mild
08 Dec 2020 (Study Day 129)	Cough	Mild
08 Dec 2020 (Study Day 129)	Fatigue	Mild
09 Dec 2020 (Study Day 130)	Cough	Mild
09 Dec 2020 (Study Day 130)	Fatigue	Mild
11 Dec 2020 (Study Day 132)	Fatigue	Mild
11 Dec 2020 (Study Day 132)	O2 Saturation (%)	92
12 Dec 2020 (Study Day 133)	Fatigue	Mild
13 Dec 2020 (Study Day 134)	Fatigue	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
16 Nov 2020 (Study Day 107)	Oxygen Saturation	83%
16 Oct 2020 - 16 Oct 2020 (Study Day 76-76)	High-Flow Oxygen	Yes
16 Nov 2020 - 14 Dec 2020 (Study Day 107-135)	Oxygen Saturation of SpO2 ≤93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of sars COVID-19 lasted for 21 days, after which it was considered to be recovered/resolved with sequelae on 26 Nov 2020 (Study Day 117). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000815	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 1 diabetes mellitus	Type 1 diabetes	1979 - Ongoing
Coronary artery disease	Coronary artery disease	May 2017 - Ongoing
Peripheral vascular disorder	Peripheral vascular disease	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin lispro	1979 - Ongoing	Type 1 Diabetes
Atorvastatin	May 2017 - Ongoing	Coronary Artery Disease
Lisinopril	May 2017 - Ongoing	Coronary Artery Disease
Ticagrelor	2018 - Ongoing	Peripheral Vascular Disease
Acetylsalicylic acid	16 Nov 2020 (Study Day 107) - 26 Nov 2020 (Study Day 117)	Sars-Cov-2
Ascorbic acid	16 Nov 2020 (Study Day 107) - 17 Nov 2020 (Study Day 108)	Sars-Cov-2
Dexamethasone	16 Nov 2020 (Study Day 107) - 16 Nov 2020 (Study Day 107)	Sars-Cov-2
Furosemide	16 Nov 2020 (Study Day 107) - 26 Nov 2020 (Study Day 117)	Fluid Retension Due To Sars-Cov-2
Glucose	16 Nov 2020 (Study Day 107) - 16 Nov 2020 (Study Day 107)	Fluid Loss Due To Sars-Cov-2
Glucose	16 Nov 2020 (Study Day 107) - 16 Nov 2020 (Study Day 107)	Sars-Cov-2
Glucose	16 Nov 2020 (Study Day 107) - 26 Nov 2020 (Study Day 117)	Type 2 Diabetis With Sars-Cov-2
Heparin	16 Nov 2020 (Study Day 107) - 17 Nov 2020 (Study Day 108)	Sars-Cov-2
Insulin glargine	16 Nov 2020 (Study Day 107) - Ongoing	Diabetes Type 1
Insulin lispro	16 Nov 2020 (Study Day 107) - Ongoing	Diabetes Type 1
Oxygen	16 Nov 2020 (Study Day 107) - 26 Nov 2020 (Study Day 117)	Sars COVID 19
Paracetamol	16 Nov 2020 (Study Day 107) - 16 Nov 2020 (Study Day 107)	Sars-Cov-2
Salbutamol	16 Nov 2020 (Study Day 107) - Ongoing	Sars-Cov-2
Sodium chloride	16 Nov 2020 (Study Day 107) - 26 Nov 2020 (Study Day 117)	Sars-Cov-2
Enoxaparin sodium	17 Nov 2020 (Study Day 108) - 26 Nov 2020 (Study Day 117)	Sars COVID-19

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Thiamine	17 Nov 2020 (Study Day 108) - 26 Nov 2020 (Study Day 117)	Sars-Cov-2
Remdesivir	18 Nov 2020 (Study Day 109) - 18 Nov 2020 (Study Day 109)	Sars-Cov-2

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US340-2196 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	03 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	31 Aug 2020 (Study Day 29)
Reason for Narrative:	Severe COVID-19

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID 19	COVID-19	Grade 2/ moderate	Not related	17 Dec 2020 (Study Day 137) – 25 Jan 2021 (Study Day 176)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0. The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US340-2196, a 72-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 03 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 31 Aug 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 17 Dec 2020 (Study Day 137), 136 days after the first dose and 108 days after the second dose of the IP, the participant experienced a Grade 2/Moderate non-serious adverse event of COVID 19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 31 Aug 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 29 Dec 2020 (Study Day 149), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
17 Dec 2020 (Study Day 137)	Diarrhea	Mild
18 Dec 2020 (Study Day 138)	Diarrhea	Mild
19 Dec 2020 (Study Day 139)	Diarrhea	Mild
20 Dec 2020 (Study Day 140)	Diarrhea	Mild

Symptom Date	Symptom	Result
20 Jan 2021 (Study Day 171)	Cough	Mild
20 Jan 2021 (Study Day 171)	Shortness of Breath	Mild
21 Jan 2021 (Study Day 172)	Cough	Mild
21 Jan 2021 (Study Day 172)	Shortness of Breath	Mild
22 Jan 2021 (Study Day 173)	Cough	Mild
22 Jan 2021 (Study Day 173)	Shortness of Breath	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
30 Dec 2020 (Study Day 150)	Oxygen Saturation	93%
30 Dec 2020 - 02 Jan 2021 (Study Day 150-153)	Oxygen Saturation of SpO2 ≤93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of COVID 19 lasted for 40 days, after which it was considered to be recovered/resolved on 25 Jan 2021 (Study Day 176). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001910	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hyperlipidaemia	Hyperlipidemia	1990 - Ongoing
Hypertension	Hypertension	1990 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrochlorothiazide	2017 - Ongoing	Hypertension
Valsartan	2017 - Ongoing	Hypertension
Amoxicillin	26 Dec 2020 (Study Day 146) - 05 Jan 2021 (Study Day 156)	Abcessed Tooth
Prednisone	30 Dec 2020 (Study Day 150) - 08 Jan 2021 (Study Day 159)	Sars COVID 19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	17 Dec 2020 (Study Day 137) - 25 Jan 2021 (Study Day 176)
Tooth Abscess	Grade 2/moderate	Not related	26 Dec 2020 (Study Day 146) - 06 Jan 2021 (Study Day 157)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379812

Participant Number:	US344-2024 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	18 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	17 Sep 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Osteoarthritis/Worsening Of Right Hip Osteoarthritis	SAE	Grade 3/ severe	Not related	07 Dec 2020 (Study Day 112) – 08 Dec 2020 (Study Day 113)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US344-2024, a 69-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 18 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 17 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Dec 2020 (Study Day 112), 111 days after the first dose and 81 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of osteoarthritis. Action taken with the IP was not applicable. The event of worsening of right hip osteoarthritis lasted for 2 days, after which it was considered to be recovered/resolved on 08 Dec 2020 (Study Day 113). The investigator assessed the event of osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001123	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	1956 - 1956
Tonsillitis	Tonsillitis	1956 - 1956
Rhinitis allergic	Allergic rhinitis	1970 - Ongoing
Panic attack	Panic attacks	1978 - Ongoing
Anxiety	Anxiety	1980 - Ongoing
Dyspepsia	Heartburn	1990 - Ongoing
Gastrooesophageal reflux disease	Gerd	1990 - Ongoing
Diabetes mellitus	Diabetes mellitus	1998 - Ongoing
Depression	Mild depression	2000 - Ongoing
Blood cholesterol increased	High cholesterol	2005 - Ongoing
Hypertension	Hypertension	2005 - Ongoing
Erectile dysfunction	Erectile dysfunction	2010 - Ongoing
Insomnia	Insomnia	2012 - Ongoing
Sleep apnoea syndrome	Sleep apnea	2012 - Ongoing
Osteoarthritis	Osteoarthritis: back, right hip, right knee	2015 - Ongoing
Back pain	Lumbar back pain	2016 - Ongoing
Post-traumatic stress disorder	Post traumatic stress disorder	Aug 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metformin	1998 - Ongoing	Dm 2
Lisinopril	2005 - Ongoing	Hypertension
Simvastatin	2005 - 07 Dec 2020 (Study Day 112)	High Cholesterol
Insulin detemir	2008 - 07 Dec 2020 (Study Day 112)	Dm 2
Glipizide	2012 - Ongoing	Dm 2
Pioglitazone	2016 - Ongoing	Dm 2
Empagliflozin	2018 - Ongoing	Dm 2
Naproxen sodium	Feb 2019 - 30 Jan 2021 (Study Day 166)	Osteoarthritis
Meloxicam	10 Sep 2020 (Study Day 24) - 07 Dec 2020 (Study Day 112)	Osteoarthritis
Paracetamol	10 Sep 2020 (Study Day 24) - 07 Dec 2020 (Study Day 112)	Osteoarthritis
Influenza vaccine inact split 4v	17 Oct 2020 (Study Day 61) - 17 Oct 2020 (Study Day 61)	Influenza
Acetylsalicylic acid	07 Dec 2020 (Study Day 112) - Ongoing	Dvt

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium chloride; potassium chloride; sodium lactate	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip For Surgery
Dexamethasone	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip For Surgery
Diazepam	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip For Surgery
Famotidine	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip For Surgery
Fentanyl	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip For Surgery
Glycopyrronium bromide	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip For Surgery
Hydromorphone hydrochloride	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Pain During Hip Surgery
Insulin detemir	07 Dec 2020 (Study Day 112) - Ongoing	Type 2 Diabetes (Dm Ii)
Lidocaine	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip For Surgery
Lidocaine	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Pain During Hip Surgery
Macrogol	07 Dec 2020 (Study Day 112) - Ongoing	Stool Softener
Morphine	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip Surgery
Neostigmine	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip For Surgery
Ondansetron	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip For Surgery
Oxycodone hydrochloride; paracetamol	07 Dec 2020 (Study Day 112) - 06 Jan 2021 (Study Day 142)	Pain In Right Hip Due To Hip Replacement Surgery
Propofol	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip For Surgery
Rocuronium	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip For Surgery
Simvastatin	07 Dec 2020 (Study Day 112) - Ongoing	Hypercholesterolemia
Sodium chloride	07 Dec 2020 (Study Day 112) - 08 Dec 2020 (Study Day 113)	Right Hip Replacement
Total hip arthroplasty on the right*	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Adverse Event
Tranexamic acid	07 Dec 2020 (Study Day 112) - 07 Dec 2020 (Study Day 112)	Iv Drip For Surgery

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Procedural Pain	Grade 2/moderate	Not related	07 Dec 2020 (Study Day 112) - 28 Feb 2021 (Study Day 195)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US344-2031 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	18 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	21 Sep 2020 (Study Day 35)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Deep Vein Thrombosis/Deep Vein Thrombosis (Left Leg)	SAE	Grade 3/ severe	Not related	03 Nov 2020 (Study Day 78) – 04 Nov 2020 (Study Day 79)	Recovered/resolved
Pulmonary Embolism/Pulmonary Embolism	SAE	Grade 3/ severe	Not related	03 Nov 2020 (Study Day 78) – 04 Nov 2020 (Study Day 79)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US344-2031, a 55-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 18 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 21 Sep 2020 (Study Day 35). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Nov 2020 (Study Day 78), 77 days after the first dose and 43 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of deep vein thrombosis. Action taken with the IP was not applicable. The event of deep vein thrombosis (left leg) lasted for 2 days, after which it was considered to be recovered/resolved on 04 Nov 2020 (Study Day 79). The investigator assessed the event of deep vein thrombosis to be not related to the IP.

On 03 Nov 2020 (Study Day 78), 77 days after the first dose and 43 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pulmonary embolism. Action taken with the IP was not applicable. The event of pulmonary embolism lasted for 2 days, after which it was considered to be recovered/resolved on 04 Nov 2020 (Study Day 79). The investigator assessed the event of pulmonary embolism to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000687	Deep vein thrombosis
MOD-2020-000687	Pulmonary embolism

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Nephrolithiasis	Recurrent kidney stones	1982 - Ongoing
Obesity	Obesity	1990 - 2012
Drug hypersensitivity	Morphine allergy (itching and crawling feeling)	1992 - Ongoing
Pulmonary embolism	Multiple pulmonary embolisms	2007 - 2007
Thrombosis	Thrombus	Nov 2007 - Nov 2008
Hypercoagulation	Thrombophillia	21 Nov 2008 (Study Day -4288) - Ongoing
Appendicectomy	Appendectomy	2010 - 2010
Appendicitis	Appendicitis	2010 - 2010
Postmenopause	Post-menopausal	2010 - Ongoing
Gastrectomy	Gastric sleeve	2012 - 2012
Cholecystectomy	Cholecystectomy	2013 - 2013
Cholelithiasis	Cholelithiasis	2013 - 2013
Abdominoplasty	Abdominoplasty	2015 - 2015
Mammoplasty	Breast augmentation	2015 - 2015
Anxiety	Anxiety	2016 - Ongoing
Dyspepsia	Heartburn	2016 - Ongoing
Hypothyroidism	Hypothyroidism	2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2010 - Ongoing	Cardiac Prophylaxis
Amitriptyline	2016 - Ongoing	Anxiety
Pantoprazole sodium sesquihydrate	2016 - Ongoing	Acid Reflux
Levothyroxine	2017 - Ongoing	Hypothyroidism
Sertraline	2017 - Ongoing	Anxiety
Paracetamol	19 Aug 2020 (Study Day 2) - 20 Aug 2020 (Study Day 3)	Injection Site Pain
Ondansetron	26 Aug 2020 (Study Day 9) - 27 Aug 2020 (Study Day 10)	Nausea

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	22 Sep 2020 (Study Day 36) - 24 Sep 2020 (Study Day 38)	Elevated Temperature, Body Aches, Fatigue
Acetylsalicylic acid	03 Nov 2020 (Study Day 78) - 03 Nov 2020 (Study Day 78)	Pulmonary Embolism
Acetylsalicylic acid	03 Nov 2020 (Study Day 78) - 04 Nov 2020 (Study Day 79)	Pulmonary Embolism
Chest x-ray*	03 Nov 2020 (Study Day 78) - 03 Nov 2020 (Study Day 78)	Diagnostic
Ct scan - angio chest w&wo cont*	03 Nov 2020 (Study Day 78) - 03 Nov 2020 (Study Day 78)	Diagnostic
Ecg*	03 Nov 2020 (Study Day 78) - 03 Nov 2020 (Study Day 78)	Diagnostic
Ketorolac tromethamine	03 Nov 2020 (Study Day 78) - 04 Nov 2020 (Study Day 79)	Pulmonary Embolism
Sodium chloride	03 Nov 2020 (Study Day 78) - 04 Nov 2020 (Study Day 79)	Deep Venous Thrombosis (Prophylaxis)
Ultra sound*	03 Nov 2020 (Study Day 78) - 03 Nov 2020 (Study Day 78)	Diagnostic
Aluminium hydroxide; magnesium hydroxide; simeticone	04 Nov 2020 (Study Day 79) - 04 Dec 2020 (Study Day 109)	Gastrointestinal Prophylaxis
Apixaban	04 Nov 2020 (Study Day 79) - 11 Nov 2020 (Study Day 86)	Pulmonary Embolism
Enoxaparin sodium	04 Nov 2020 (Study Day 79) - 04 Nov 2020 (Study Day 79)	Pulmonary Embolism
Magnesium hydroxide	04 Nov 2020 (Study Day 79) - 04 Dec 2020 (Study Day 109)	Gastrointestinal Prophylaxis
Ondansetron hydrochloride	04 Nov 2020 (Study Day 79) - 04 Nov 2020 (Study Day 79)	Gastrointestinal Prophylaxis
Paracetamol	04 Nov 2020 (Study Day 79) - 04 Nov 2020 (Study Day 79)	Pulmonary Embolism
Tramadol	04 Nov 2020 (Study Day 79) - 12 Nov 2020 (Study Day 87)	Left Calf Pain (Secondary To Deep Vein Thrombosis)
Apixaban	12 Nov 2020 (Study Day 87) - Ongoing	Pulmonary Embolism

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Warmth	Grade 1/mild	Related	26 Aug 2020 (Study Day 9) - 29 Aug 2020 (Study Day 12)
Lymphadenopathy	Grade 1/mild	Related	26 Aug 2020 (Study Day 9) - 29 Aug 2020 (Study Day 12)
Nausea	Grade 1/mild	Related	26 Aug 2020 (Study Day 9) - 27 Aug 2020 (Study Day 10)
Dyspnoea	Grade 3/severe	Not related	04 Nov 2020 (Study Day 79) - 12 Nov 2020 (Study Day 87)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US344-2051 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	20 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	17 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	SAE	Grade 3/severe	Not related	09 Jan 2021 (Study Day 143) – 29 Jan 2021 (Study Day 163)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US344-2051, a 42-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 20 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 17 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Jan 2021 (Study Day 143), 142 days after the first dose and 114 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of covid-19. Action taken with the IP was not applicable. The event of COVID-19 lasted for 21 days, after which it was considered to be recovered/resolved on 29 Jan 2021 (Study Day 163). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious and nonserious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-004672	COVID-19
MOD-2020-000723	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	1988 - 1988
Tonsillitis	Tonsillitis	1988 - 1988
Gastrooesophageal reflux disease	Gerd	1990 - Ongoing
Oesophagogastric fundoplasty	Fundoplication of stomach	2013 - 2015
Hiatus hernia	Hiatal hernia	2015 - 2015

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	23 Sep 2020 (Study Day 35) - 23 Sep 2020 (Study Day 35)	Left Periobital Soreness
Paracetamol	23 Sep 2020 (Study Day 35) - 23 Sep 2020 (Study Day 35)	Left Periobital Soreness
Paracetamol	09 Jan 2021 (Study Day 143) - 12 Feb 2021 (Study Day 177)	COVID-19
Azithromycin	17 Jan 2021 (Study Day 151) - 19 Jan 2021 (Study Day 153)	COVID - 19
Benzonatate	17 Jan 2021 (Study Day 151) - 19 Jan 2021 (Study Day 153)	COVID - 19
Dexamethasone	17 Jan 2021 (Study Day 151) - 19 Jan 2021 (Study Day 153)	COVID - 19
Promethazine	17 Jan 2021 (Study Day 151) - 19 Jan 2021 (Study Day 153)	COVID - 19
Azithromycin	19 Jan 2021 (Study Day 153) - 19 Jan 2021 (Study Day 153)	COVID - 19
Ceftriaxone	19 Jan 2021 (Study Day 153) - 19 Jan 2021 (Study Day 153)	COVID - 19
Ct chest w/o contrast*	19 Jan 2021 (Study Day 153) - 19 Jan 2021 (Study Day 153)	Adverse Event
Dexamethasone sodium phosphate	19 Jan 2021 (Study Day 153) - 19 Jan 2021 (Study Day 153)	COVID - 19
Enoxaparin	19 Jan 2021 (Study Day 153) - 19 Jan 2021 (Study Day 153)	COVID-19
Famotidine	19 Jan 2021 (Study Day 153) - 19 Jan 2021 (Study Day 153)	COVID - 19
Ondansetron hydrochloride	19 Jan 2021 (Study Day 153) - 19 Jan 2021 (Study Day 153)	COVID - 19
Salbutamol	19 Jan 2021 (Study Day 153) - 19 Jan 2021 (Study Day 153)	COVID - 19

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sodium chloride	19 Jan 2021 (Study Day 153) - 19 Jan 2021 (Study Day 153)	COVID - 19
Ekg*	20 Jan 2021 (Study Day 154) - 20 Jan 2021 (Study Day 154)	Adverse Event
Brompheniramine maleate; dextromethorphan hydrobromide; pseudoephedrine hydrochloride	21 Jan 2021 (Study Day 155) - 28 Jan 2021 (Study Day 162)	COVID - 19
Doxycycline monohydrate	21 Jan 2021 (Study Day 155) - 28 Jan 2021 (Study Day 162)	COVID - 19
Montelukast sodium	21 Jan 2021 (Study Day 155) - 28 Jan 2021 (Study Day 162)	COVID - 19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Periorbital Pain	Grade 1/mild	Related	22 Sep 2020 (Study Day 34) - 24 Sep 2020 (Study Day 36)
COVID-19	Grade 2/moderate	Not related	21 Oct 2020 (Study Day 63) - 25 Oct 2020 (Study Day 67)
Rash	Grade 1/mild	Not related	17 Jan 2021 (Study Day 151) - 21 Jan 2021 (Study Day 155)
Headache	Grade 2/moderate	Not related	09 Mar 2021 (Study Day 202) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US344-2060 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	21 Sep 2020 (Study Day 32)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Osteoarthritis/Worsening Of Left Knee Osteoarthritis	SAE	Grade 3/ severe	Not related	18 Nov 2020 (Study Day 90) – 11 Feb 2021 (Study Day 175)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US344-2060, a 75-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 21 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 21 Sep 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 18 Nov 2020 (Study Day 90), 89 days after the first dose and 58 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of osteoarthritis. Action taken with the IP was not applicable. The event of worsening of left knee osteoarthritis lasted for 86 days, after which it was considered to be recovered/resolved on 11 Feb 2021 (Study Day 175). The investigator assessed the event of osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-028061	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Postmenopause	Post menopausal	1994 - Ongoing
Neck surgery	Neck surgery	1998 - 1998
Spinal osteoarthritis	Osteoarthritis: neck	1998 - Ongoing
Neck surgery	Neck surgey	2006 - 2006
Blood cholesterol increased	High cholesterol	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Neck surgery	Neck surgery	2013 - 2013
Osteoarthritis	Osteoarthritis: left knee	2013 - Ongoing
Anaemia	Anemia	2016 - Ongoing
Bone density decreased	Low bone density	Aug 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine besilate	2010 - Ongoing	Hypertension
Losartan	2010 - Dec 2020	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Retinopathy Hypertensive	Grade 1/mild	Not related	14 Dec 2020 (Study Day 116) - Ongoing
Hypertension	Grade 2/moderate	Not related	17 Dec 2020 (Study Day 119) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US344-2068 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	22 Sep 2020 (Study Day 33)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Spinal Osteoarthritis/ Cervical Spondylosis With Radiculopathy	SAE	Grade 3/ severe	Not related	30 Dec 2020 (Study Day 132) – 30 Dec 2020 (Study Day 132)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US344-2068, a 59-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 21 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 22 Sep 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Dec 2020 (Study Day 132), 131 days after the first dose and 99 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of spinal osteoarthritis. Action taken with the IP was not applicable. The event of cervical spondylosis with radiculopathy lasted for 1 day, after which it was considered to be recovered/resolved on 30 Dec 2020 (Study Day 132). The investigator assessed the event of spinal osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005524	Spinal osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Intervertebral disc degeneration	Two degenerative cervical discs	2004 - 30 Dec 2020 (Study Day 132)
Neuropathy peripheral	Neuropathy in the left arm	2009 - Ongoing
Osteoarthritis	Osteoathritis (bilateral knees and shoulders, neck)	2010 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2012 - Ongoing
Hypertension	Hypertension	2012 - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	2015 - Ongoing
Anxiety	Anxiety	2019 - Ongoing
Depression	Mild depression	2019 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	2019 - Ongoing
Migraine	Migraines	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	2015 - Ongoing	Hypercholesterolemia
Empagliflozin	2015 - Ongoing	Type 2 Diabetes
Citalopram	2019 - Ongoing	Depression/Anxiety
Colecalciferol	2019 - Ongoing	Supplement
Fenofibrate	2019 - Ongoing	Hypercholesterolemia
Gabapentin	2019 - Ongoing	Neuropathy: Left Arm
Hydrochlorothiazide	2019 - Ongoing	Hypertension
Ibuprofen	2019 - 23 Dec 2020 (Study Day 125)	Osteoarthritis: Neck, Bilaterally Shoulders And Knees
Metformin	2019 - Ongoing	Type 2 Diabetes
Pantoprazole	2019 - Ongoing	Acid Reflux
Sumatriptan	2019 - Ongoing	Migraines
Topiramate	2019 - Ongoing	Migraines
Cervical replacement and fusion two degenerative cervical disc*	30 Dec 2020 (Study Day 132) - 30 Dec 2020 (Study Day 132)	Adverse Event
Codeine; paracetamol	30 Dec 2020 (Study Day 132) - Ongoing	Appendicitis
Cyclobenzaprine	30 Dec 2020 (Study Day 132) - Ongoing	Cervical Replacement And Fusion
Methylprednisolone	30 Dec 2020 (Study Day 132) - Ongoing	Appendicitis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US344-2113 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	01 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	29 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Appendicitis/Acute Appendicitis	SAE	Grade 3/severe	Not related	02 Sep 2020 (Study Day 2) – 04 Sep 2020 (Study Day 4)	Recovered/resolved
Peritonitis/Localized Peritonitis	SAE	Grade 3/severe	Not related	02 Sep 2020 (Study Day 2) – 03 Sep 2020 (Study Day 3)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US344-2113, a 71-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 01 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 29 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Sep 2020 (Study Day 2), 1 day after the first dose and 27 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of appendicitis. The IP dose was not changed due to the acute appendicitis. The event of acute appendicitis lasted for 3 days, after which it was considered to be recovered/resolved on 04 Sep 2020 (Study Day 4). The investigator assessed the event of appendicitis to be not related to the IP.

On 02 Sep 2020 (Study Day 2), 1 day after the first dose and 27 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of peritonitis. The IP dose was not changed due to the localized peritonitis. The event of localized peritonitis lasted for 2 days, after which it was considered to be recovered/resolved on 03 Sep 2020 (Study Day 3). The investigator assessed the event of peritonitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000261	Peritonitis
MOD-2020-000261	Appendicitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Nasal polypectomy	Nasal polyp surgery	1995 - 1995
Neck injury	Neck injury c6 c7	1998 - 1998
Spinal fusion surgery	C6,c7 fusion	1998 - 1998
Basedow's disease	Graves disease	2002 - Ongoing
Endocrine ophthalmopathy	Graves ophthalmopathy	2002 - Ongoing
Nasal polypectomy	Nasal polyp surgery	2003 - 2003
Nasal polypectomy	Nasal polyp surgery	2007 - 2007
Foot deformity	Hammertoe: right foot 2nd and 3rd toes	2009 - 2014
Hypothyroidism	Hypothyroidism	2009 - Ongoing
Seasonal allergy	Seasonal allergies	2010 - Ongoing
Erectile dysfunction	Erectile dysfunction	2011 - Ongoing
Meniscus injury	Torn meniscus bl	2011 - 2011
Meniscus operation	Bl meniscus repair	2011 - 2011
Asthma	Asthma	2012 - Ongoing
Nasal polyps	Benign nasal polyps	2014 - 2014
Toe operation	Hammertoe surgery: right foot 2nd and 3rd toe	2014 - 2014
Gastrooesophageal reflux disease	Gerd	2015 - Ongoing
Sleep apnoea syndrome	Sleep apnea	Feb 2015 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	2018 - Ongoing
Diplopia	Diplopia	2019 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2019 - Ongoing
Hypertension	Hypertension	2019 - Ongoing
Insomnia	Insomnia	2019 - Ongoing
Myalgia	General myalgias	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	2010 - Ongoing	Hypothyroidism
Montelukast sodium	2010 - Ongoing	Seasonal Allergies
Budesonide; formoterol fumarate	2012 - Ongoing	Asthma
Fluticasone propionate	2012 - Ongoing	Seasonal Allergies
Omeprazole	2015 - Ongoing	Gerd
Omeprazole	2015 - Ongoing	Seasonal Allergies
Tamsulosin	2018 - Ongoing	Benign Prostatic Hyperplasia
Amlodipine	2019 - Ongoing	Hypertension
Atorvastatin	2019 - Ongoing	Hypercholesterolemia
Benralizumab	2019 - Ongoing	Seasonal Allergies
Naproxen	2019 - Ongoing	General Myalgias
Ramipril	2019 - Ongoing	Hypertension
Selenium	2019 - Ongoing	Diplopia
Trazodone	2019 - Ongoing	Insomnia
Zolpidem tartrate	2019 - Ongoing	Insomnia
Cetirizine hydrochloride	Mar 2020 - Ongoing	Seasonal Allergies
Calcium chloride; potassium chloride; sodium lactate	03 Sep 2020 (Study Day 3) - 03 Sep 2020 (Study Day 3)	Hydration
Ct scan abdominal*	03 Sep 2020 (Study Day 3) - 03 Sep 2020 (Study Day 3)	Diagnostic
Hydrocodone bitartrate; paracetamol	03 Sep 2020 (Study Day 3) - 04 Sep 2020 (Study Day 4)	Mild Pain / Appendicitis
Hydromorphone	03 Sep 2020 (Study Day 3) - 03 Sep 2020 (Study Day 3)	Severe Pain / Appendicitis
Iopamidol	03 Sep 2020 (Study Day 3) - 03 Sep 2020 (Study Day 3)	Ct Scan Prep
Laparoscopic appendectomy*	03 Sep 2020 (Study Day 3) - 03 Sep 2020 (Study Day 3)	Adverse Event
Morphine	03 Sep 2020 (Study Day 3) - 03 Sep 2020 (Study Day 3)	Appendicitis
Ondansetron	03 Sep 2020 (Study Day 3) - 03 Sep 2020 (Study Day 3)	Appendicitis
Piperacillin; tazobactam	03 Sep 2020 (Study Day 3) - 03 Sep 2020 (Study Day 3)	Appendicitis
Piperacillin; tazobactam	03 Sep 2020 (Study Day 3) - 04 Sep 2020 (Study Day 4)	Appendicitis
Sodium chloride	03 Sep 2020 (Study Day 3) - 03 Sep 2020 (Study Day 3)	Hydration
Sodium chloride	03 Sep 2020 (Study Day 3) - 04 Sep 2020 (Study Day 4)	Iv Flush
Hydrocodone bitartrate; paracetamol	04 Sep 2020 (Study Day 4) - 09 Sep 2020 (Study Day 9)	Pain (Secondary 2 Appendectomy)

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	04 Sep 2020 (Study Day 4) - 10 Sep 2020 (Study Day 10)	Appendectomy
Zolpidem tartrate	04 Sep 2020 (Study Day 4) - 04 Sep 2020 (Study Day 4)	Insomnia
Influenza vaccine inact sag 3v	15 Oct 2020 (Study Day 45) - 15 Oct 2020 (Study Day 45)	Flu Vaccine

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	04 Sep 2020 (Study Day 4) - 09 Sep 2020 (Study Day 9)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US346-2091 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	08 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Neck Pain/Neck Pain	SAE	Grade 4	Not related	09 Oct 2020 (Study Day 61) – 29 Dec 2020 (Study Day 142)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US346-2091, a 66-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 10 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 08 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Oct 2020 (Study Day 61), 60 days after the first dose and 31 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of neck pain. Action taken with the IP was not applicable. The event of neck pain lasted for 82 days, after which it was considered to be recovered/resolved on 29 Dec 2020 (Study Day 142). The investigator assessed the event of neck pain to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000493	Neck pain

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cataract	Right eye cataract	(b) (6) 1953 - Ongoing
Intervertebral disc protrusion	Lower back ruptured discs	2004 - Ongoing
Joint injury	Bilateral knee damage	2007 - Ongoing
Cardiac failure congestive	Congestive heart failure	2008 - Ongoing
Cholelithiasis	Gall bladder stones	2008 - Ongoing
Oedema peripheral	Bilateral leg edema	2008 - Ongoing
Cataract	Left eye cataract	2010 - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	2010 - Ongoing

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hyperlipidaemia	Grade 1/mild	Not related	26 Sep 2020 (Study Day 48) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379837

Participant Number:	US346-2111 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	11 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	15 Sep 2020 (Study Day 36)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Laryngeal Oedema/Laryngeal Edema	SAE	Grade 4	Not related	19 Sep 2020 (Study Day 40) – 24 Sep 2020 (Study Day 45)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US346-2111, a 57-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 11 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 15 Sep 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 19 Sep 2020 (Study Day 40), 39 days after the first dose and 4 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of laryngeal oedema. Action taken with the IP was not applicable. The event of laryngeal edema lasted for 6 days, after which it was considered to be recovered/resolved on 24 Sep 2020 (Study Day 45). The investigator assessed the event of laryngeal oedema to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000350	Laryngeal oedema

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma	(b) (6) 1962 - Ongoing
Headache	Occasional headaches	1985 - Ongoing
Urticaria	Sulfa allergy (hives)	1985 - Ongoing
Oophorectomy	Oophorectomy left	2009 - 2009
Ovarian cyst	Left ovarian cyst	2009 - 2009
Rib fracture	Right fractured ribs	2011 - 2011
Hypertension	Hypertension	2015 - Ongoing
Postmenopause	Post menopausal	Feb 2017 - Feb 2017
Cyst removal	Cyst removal (back) benign	28 Feb 2020 (Study Day -165) - 28 Feb 2020 (Study Day -165)
Insomnia	Occasional insomnia	Apr 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	1982 - Ongoing	Asthma
Biotin	2011 - Ongoing	Supplement
Colecalciferol	2011 - Ongoing	Supplement
Magnesium	2011 - Ongoing	Supplement
Vitamin b12 nos	2011 - Ongoing	Supplement
Ibuprofen	2012 - Ongoing	Occasional Headaches
Lisinopril	Sep 2018 - 19 Sep 2020 (Study Day 40)	Hypertension
Fluticasone propionate; salmeterol xinafoate	27 Nov 2018 (Study Day -623) - Ongoing	Asthma
Cimicifuga racemosa	11 Apr 2019 (Study Day -488) - Ongoing	Supplement
Diphenhydramine hydrochloride; paracetamol	Apr 2020 - Ongoing	Occasional Insomnia
Prednisone	19 Sep 2020 (Study Day 40) - 24 Sep 2020 (Study Day 45)	Laryngeal Edema
Olmesartan	22 Sep 2020 (Study Day 43) - Ongoing	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US346-2116 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	11 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	14 Sep 2020 (Study Day 35)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cardiac Failure Congestive/Congestive Heart Failure	SAE	Grade 4	Not related	03 Sep 2020 (Study Day 24) – 09 Sep 2020 (Study Day 30)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US346-2116, a 43-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 11 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 14 Sep 2020 (Study Day 35). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Sep 2020 (Study Day 24), 23 days after the first dose and 11 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of cardiac failure congestive. The IP dose was not changed due to the congestive heart failure. The event of congestive heart failure lasted for 7 days, after which it was considered to be recovered/resolved on 09 Sep 2020 (Study Day 30). The investigator assessed the event of cardiac failure congestive to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000281	Cardiac failure congestive

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	1981 - 1981
Tonsillitis	Tonsillitis	1981 - 1981
Intervertebral disc operation	Lumbar discectomy	1991 - 1991
Intervertebral disc protrusion	Ruptured l5	1991 - 1991
Drug abuse	Methamphetamine abuse 1993-2003	1993 - 2003
Osteoarthritis	Right ankle arthritis	1997 - 2006
Headache	Occasional headaches	2000 - Ongoing
Hodgkin's disease	Hodgkins lymphoma	2003 - 2004
Bronchospasm	Exertional bronchospasm	2004 - Ongoing
Hypothyroidism	Hypothyroidism	2004 - Ongoing
Female sterilisation	Tubal ligation	Nov 2005 - Nov 2005
Intervertebral disc operation	Lumbar disectomy	2006 - 2006
Intervertebral disc protrusion	Ruptured l6	2006 - 2006
Restless legs syndrome	Restless leg syndrome	2006 - Ongoing
Ankle operation	Right ankle joint fusion	2016 - 2016
Pain in extremity	Chronic foot pain bilateral	2016 - Ongoing
Diabetic neuropathy	Sensory diabetic neuropathy bilateral feet	2019 - Ongoing
Type 2 diabetes mellitus	Type ii diabetes	2019 - Ongoing
Cardiomyopathy	Familial cardiomyopathy	2020 - Ongoing
Diabetic ulcer	Diabetic ulcers	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2000 - Ongoing	Occasional Headache
Levothyroxine sodium	2005 - Ongoing	Hypothyroidism
Ropinirole hydrochloride	2007 - Ongoing	Restless Leg Syndrome
Salbutamol	2018 - Ongoing	Exertional Bronchospasm
Insulin glargine	2019 - Ongoing	Type Ii Diabetes
Insulin lispro	2019 - Ongoing	Type Ii Diabetes
Chest x-ray*	04 Sep 2020 (Study Day 25) - 04 Sep 2020 (Study Day 25)	Adverse Event
Cat scan*	05 Sep 2020 (Study Day 26) - 05 Sep 2020 (Study Day 26)	Adverse Event
Echocardiogram*	05 Sep 2020 (Study Day 26) - 05 Sep 2020 (Study Day 26)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Angiogram*	08 Sep 2020 (Study Day 29) - 08 Sep 2020 (Study Day 29)	Adverse Event
Atorvastatin	08 Sep 2020 (Study Day 29) - Ongoing	Familial Cardiomyopathy/ Congestive Heart Failure
Acetylsalicylic acid	09 Sep 2020 (Study Day 30) - Ongoing	Cardiac Prophylaxis
Carvedilol	09 Sep 2020 (Study Day 30) - Ongoing	Familial Cardiomyopathy/ Congestive Heart Failure
Furosemide	10 Sep 2020 (Study Day 31) - Ongoing	Familial Cardiomyopathy/ Congestive Heart Failure
Lisinopril	10 Sep 2020 (Study Day 31) - Ongoing	Familial Cardiomyopathy/ Congestive Heart Failure
Spironolactone	10 Sep 2020 (Study Day 31) - Ongoing	Familial Cardiomyopathy/ Congestive Heart Failure
Hydrocodone bitartrate; paracetamol	01 Mar 2021 (Study Day 203) - 14 Mar 2021 (Study Day 216)	Bilateral Chronic Foot Pain
Methocarbamol	01 Mar 2021 (Study Day 203) - 14 Mar 2021 (Study Day 216)	Bilateral Chronic Foot Pain
Anesthetics, general	15 Mar 2021 (Study Day 217) - 15 Mar 2021 (Study Day 217)	L Below The Knee Amputation
Enoxaparin sodium	15 Mar 2021 (Study Day 217) - 07 Apr 2021 (Study Day 240)	Cardiac Prophylaxis
Hydrocodone bitartrate; paracetamol	15 Mar 2021 (Study Day 217) - Ongoing	Post-Surgical Pain
L below the knee amputation*	15 Mar 2021 (Study Day 217) - 15 Mar 2021 (Study Day 217)	Medical History
Methocarbamol	15 Mar 2021 (Study Day 217) - Ongoing	Post-Surgical Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Cardiomyopathy	Grade 2/moderate	Not related	05 Sep 2020 (Study Day 26) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379842

Participant Number:	US346-2133 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	12 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Seizure/Generalized Seizures	SAE	Grade 4	Not related	23 Aug 2020 (Study Day 12) – 26 Aug 2020 (Study Day 15)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US346-2133, a 61-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 12 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Aug 2020 (Study Day 12), 11 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of seizure. On 08 Sep 2020 (Study Day 28), the IP dose was discontinued due to withdrawal of consent by participant. The event of generalized seizures lasted for 4 days, after which it was considered to be recovered/resolved on 26 Aug 2020 (Study Day 15). The investigator assessed the event of seizure to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000238	Seizure

Study Completion/Discontinuation

On 14 Sep 2020 (Study Day 34), the participant discontinued from the study due to withdrawal of consent by participant.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Rhinitis perennial	Perennial allergic rhinitis	1978 - Ongoing
Seasonal allergy	Seasonal allergic rhinitis	1978 - Ongoing
Back pain	Back pain	2000 - Ongoing
Drug hypersensitivity	Morphine allergy	2000 - Ongoing
Headache	Occasional headaches	2000 - Ongoing
Hypertension	Hypertension	2000 - Ongoing
Neck pain	Neck pain	2000 - Ongoing
Intervertebral disc degeneration	Degenerative disc disease	2006 - Ongoing
Postmenopause	Post-menopausal	2010 - Ongoing
Seizure	Occasional seizures	Oct 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2000 - Ongoing	Back Pain
Atenolol	2015 - 23 Aug 2020 (Study Day 12)	Hypertension
Vitamins nos	2019 - Ongoing	Supplement
Atorvastatin	23 Aug 2020 (Study Day 12) - Ongoing	Heart Failure
Ct head without contrast*	23 Aug 2020 (Study Day 12) - 23 Aug 2020 (Study Day 12)	Adverse Event
Labs*	23 Aug 2020 (Study Day 12) - 23 Aug 2020 (Study Day 12)	Adverse Event
Levetiracetam	23 Aug 2020 (Study Day 12) - 26 Aug 2020 (Study Day 15)	Generalized Seizures
Lisinopril	23 Aug 2020 (Study Day 12) - 26 Aug 2020 (Study Day 15)	Hypertension
Metoprolol	23 Aug 2020 (Study Day 12) - Ongoing	Hypertension
Ct angiogram head*	24 Aug 2020 (Study Day 13) - 24 Aug 2020 (Study Day 13)	Adverse Event
Ct angiogram neck*	24 Aug 2020 (Study Day 13) - 24 Aug 2020 (Study Day 13)	Adverse Event

Acetylsalicylic acid	27 Aug 2020 (Study Day 16) - Ongoing	Cardiac Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Cardiac Failure	Grade 2/moderate	Not related	23 Aug 2020 (Study Day 12) - Ongoing
Cerebrovascular Accident	Grade 2/moderate	Not related	23 Aug 2020 (Study Day 12) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US346-2213 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	17 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	30 Sep 2020 (Study Day 45)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Optic Neuritis/Nonarteritic Ischemic Optic Nerve Neuritis (Right Eye)	SAE	Grade 4	Not related	15 Dec 2020 (Study Day 121) – 27 Jan 2021 (Study Day 164)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US346-2213, a 66-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 17 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 30 Sep 2020 (Study Day 45). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Dec 2020 (Study Day 121), 120 days after the first dose and 76 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of optic neuritis. Action taken with the IP was not applicable. The event of nonarteritic ischemic optic nerve neuritis (right eye) lasted for 44 days, after which it was considered to be recovered/resolved with sequelae on 27 Jan 2021 (Study Day 164). The investigator assessed the event of optic neuritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002167	Optic neuritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Headache	Occasional headaches	1980 - Ongoing
Appendicectomy	Appendectomy	1986 - 1986
Appendicitis	Appendicitis	1986 - 1986
Iodine allergy	Injected iodine allergy	1986 - Ongoing
Urticaria	Sulfa allergy (hives)	1987 - Ongoing
Back pain	Occasional back pain	1989 - Ongoing
Anxiety	Anxiety	1994 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	1995 - Ongoing
Asthma	Asthma (moderate)	1998 - Ongoing
Female sterilisation	Tubal ligation	1998 - 1998
Rhinitis perennial	Perennial allergic rhinitis	1998 - Ongoing
Seasonal allergy	Seasonal allergic rhinitis	1998 - Ongoing
Constipation	Occasional constipation	1999 - Ongoing
Depression	Depression	2003 - 2007
Uterine leiomyoma	Uterine fibroids	2005 - 2010
Irritable bowel syndrome	Irritable bowel syndrome	2007 - Ongoing
Intervertebral disc degeneration	Degenerative disc disease	Oct 2007 - Ongoing
Intervertebral disc protrusion	Lumbar disc bulge	2008 - Ongoing
Osteoporosis	Osteoporosis	2008 - Ongoing
Cholelithiasis	Gallstones	2009 - 2009
Type 2 diabetes mellitus	Diabetes ii (diet controlled)	Apr 2009 - Ongoing
Benign abdominal neoplasm	Benign fatty abdominal tumor	2010 - 2012
Cholecystectomy	Cholecystectomy	Dec 2010 - Dec 2010
Hysterectomy	Hysterectomy	Dec 2010 - Dec 2010
Postmenopause	Post menopausal	Dec 2010 - Dec 2010
Arthralgia	Left knee pain	2012 - Ongoing
Lipoma excision	Abdominial fatty tumor removed	2012 - 2012
Goitre	Hyperplastic thyroid nodule	Jan 2012 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2015 - Ongoing
Breast mass	Left breast nodule	Jan 2016 - Oct 2019
Hypertension	Hypertension	Nov 2017 - Ongoing
Herpes zoster	Shingles	29 May 2019 (Study Day -446) - 04 Jun 2019 (Study Day -440)
Breast conserving surgery	Right breast lumpectomy	Oct 2019 - Oct 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	1998 - Ongoing	Asthma
Naproxen sodium	2002 - Ongoing	Occasional Headaches
Omeprazole	2005 - Ongoing	Gastroesophageal Reflux Disease
Cetirizine hydrochloride	2006 - Ongoing	Seasonal And Perennial Allergic Rhinitis
Colecalciferol	2006 - Ongoing	Supplement
Macrogol 3350	2006 - Ongoing	Occasional Constipation
Calcium	Jun 2006 - Ongoing	Supplemen T
Montelukast sodium	2010 - Ongoing	Asthma
Lidocaine	2011 - Ongoing	Occasional Back Pain
Budesonide; formoterol fumarate	2012 - Ongoing	Asthma
Algeldrate; sodium alginate	Nov 2017 - Ongoing	Gastroesophageal Reflux Disease
Amlodipine besilate	Nov 2017 - Ongoing	Hypertension
Hydrochlorothiazide; triamterene	Nov 2017 - Ongoing	Hypertension
Meloxicam	Nov 2017 - Ongoing	Occasional Back Pain
Fluticasone propionate	Dec 2017 - Ongoing	Seasonal And Perennial Allergic Rhinitis
Influenza vaccine	17 Sep 2020 (Study Day 32) - 17 Sep 2020 (Study Day 32)	Flu Prophylaxis
Influenza vaccine	17 Sep 2020 (Study Day 32) - 17 Sep 2020 (Study Day 32)	Influenza Prophylaxis
Prednisolone	15 Dec 2020 (Study Day 121) - 28 Dec 2020 (Study Day 134)	Right Eye Swollen Optic Nerve
Brain magnetic resonance imaging*	04 Jan 2021 (Study Day 141) - 04 Jan 2021 (Study Day 141)	Adverse Event
Computed tomography of head*	04 Jan 2021 (Study Day 141) - 04 Jan 2021 (Study Day 141)	Adverse Event
Methylprednisolone sodium succinate	04 Jan 2021 (Study Day 141) - 04 Jan 2021 (Study Day 141)	Right Eye Nonarteritic Ischemic Optic Nerve Neuritis
Methylprednisolone sodium succinate	04 Jan 2021 (Study Day 141) - 09 Jan 2021 (Study Day 146)	Right Eye Nonarteritic Ischemic Optic Nerve Neuritis
Complete echocardiagram*	05 Jan 2021 (Study Day 142) - 05 Jan 2021 (Study Day 142)	Adverse Event
Visual analog scale: carotid duplex bilateral*	05 Jan 2021 (Study Day 142) - 05 Jan 2021 (Study Day 142)	Adverse Event
Visual analog scale: temporal arteries*	05 Jan 2021 (Study Day 142) - 05 Jan 2021 (Study Day 142)	Adverse Event
Cerebral angiogram*	07 Jan 2021 (Study Day 144) - 07 Jan 2021 (Study Day 144)	Adverse Event
Atorvastatin	09 Jan 2021 (Study Day 146) - Ongoing	Hypercholesterolemia
Prednisone	09 Jan 2021 (Study Day 146) - 12 Jan 2021 (Study Day 149)	Right Eye Nonarteritic Ischemic Optic Nerve Neuritis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Prednisone	13 Jan 2021 (Study Day 150) - 17 Jan 2021 (Study Day 154)	Right Eye Nonarteritic Ischemic Optic Nerve Neuritis
Prednisone	18 Jan 2021 (Study Day 155) - 22 Jan 2021 (Study Day 159)	Right Eye Nonarteritic Ischemic Optic Nerve Neuritis
Prednisone	23 Jan 2021 (Study Day 160) - 27 Jan 2021 (Study Day 164)	Right Eye Nonarteritic Ischemic Optic Nerve Neuritis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Laryngitis	Grade 1/mild	Not related	10 Sep 2020 (Study Day 25) - 25 Oct 2020 (Study Day 70)
Papilloedema	Grade 2/moderate	Not related	15 Dec 2020 (Study Day 121) - 04 Jan 2021 (Study Day 141)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US346-2255 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	16 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Anaemia/Anemia	SAE	Grade 4	Not related	09 Oct 2020 (Study Day 52) – Ongoing	Recovering/resolving
Dehydration/Dehydration	SAE	Grade 4	Not related	09 Oct 2020 (Study Day 52) – 17 Oct 2020 (Study Day 60)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US346-2255, a 57-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 16 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Oct 2020 (Study Day 52), 51 days after the first dose and 23 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of anaemia. Action taken with the IP was not applicable. The event of anaemia was considered to be ongoing. The investigator assessed the event of anaemia to be not related to the IP.

On 09 Oct 2020 (Study Day 52), 51 days after the first dose and 23 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of dehydration. Action taken with the IP was not applicable. The event of dehydration lasted for 9 days, after which it was considered to be recovered/resolved on 17 Oct 2020 (Study Day 60). The investigator assessed the event of dehydration to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000510	Dehydration
MOD-2020-000510	Anaemia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergic rhinitis / perennial allergic rhinitis	1980 - Ongoing
Caesarean section	Cesarean section	1982 - 1982
Carpal tunnel syndrome	Bilateral carpel tunnel	1985 - 1988
Caesarean section	Cesarean section	1988 - 1988
Carpal tunnel decompression	Bilateral carpel tunnel repair	1988 - 1988
Gastrooesophageal reflux disease	Gastroesophogeal reflux disease	1995 - Ongoing
Hypertension	Hypertension	1995 - Ongoing
Anxiety	Anxiety	2000 - Ongoing
Tachycardia	Occasional tachycardia	2000 - Ongoing
Osteoarthritis	Osteoarthritis (bilateral knees)	2005 - Ongoing
Meniscus injury	Torn right lateral meniscus	2008 - 2009
Meniscus operation	Right lateral meniscus repair	2009 - 2009
Hypercholesterolaemia	Hypercholesterolemia	2010 - Ongoing
Obesity	Mild obestiy	2010 - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus (type 2)	2011 - Ongoing
Back pain	Lower back pain	Jul 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	1995 - Ongoing	Cardiac Risk
Omeprazole	1995 - Ongoing	Gerd
Duloxetine	2000 - Ongoing	Anxiety
Hydrochlorothiazide	2000 - Ongoing	Hypertension
Metoprolol	2000 - Ongoing	Occasional Tachycardia
Atorvastatin	2010 - Ongoing	Hypercholesterolemia
Cetirizine hydrochloride	2015 - Ongoing	Seasonal Allergic Rhinitis / Perennial Allergic Rhinitis
Metformin	2017 - Ongoing	Type Ii Diabetes
Other dermatologicals	2018 - 2018	Cosmetic
Meloxicam	2019 - Ongoing	Osteoarthritis
Glipizide	Jan 2020 - Ongoing	Type Ii Diabetes

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metformin	Feb 2020 - Ongoing	Type 2 Diabetes
Gabapentin	May 2020 - Ongoing	Bilateral Knee Arthritis
Cyclobenzaprine	29 Jul 2020 (Study Day -21) - Ongoing	Lower Back Pain
Gastric bypass surgery*	02 Oct 2020 (Study Day 45) - 02 Oct 2020 (Study Day 45)	Medical History
Hydrocodone bitartrate; paracetamol	02 Oct 2020 (Study Day 45) - 03 Oct 2020 (Study Day 46)	Post Gastric Bypass Surgery Pain
Iron	16 Oct 2020 (Study Day 59) - Ongoing	Anemia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US346-2388 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	12 Oct 2020 (Study Day 43)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Joint Stiffness/Severe Arthrosclerosis	SAE	Grade 4	Not related	25 Sep 2020 (Study Day 26) – 11 Dec 2020 (Study Day 103)	Recovered/resolved
Myocardial Infarction/Myocardial Infarction	SAE	Grade 4	Not related	25 Sep 2020 (Study Day 26) – 25 Sep 2020 (Study Day 26)	Recovered/resolved
Pneumonia Aspiration/Aspiration Pneumonia	SAE	Grade 4	Not related	25 Sep 2020 (Study Day 26) – 04 Oct 2020 (Study Day 35)	Recovered/resolved
Pericarditis/Post Surgical Pericarditis Secondary To Coronary Bypass Surgery	SAE	Grade 4	Not related	28 Dec 2020 (Study Day 120) – 30 Dec 2020 (Study Day 122)	Recovered/resolved
Pleural Effusion/Post Surgical Pleural Effusion	SAE	Grade 4	Not related	28 Dec 2020 (Study Day 120) – 30 Dec 2020 (Study Day 122)	Recovered/resolved
Pericarditis/Post-Surgical Pericarditis Secondary To Coronary Bypass Surgery	SAE	Grade 4	Not related	14 Jan 2021 (Study Day 137) – 20 Jan 2021 (Study Day 143)	Recovered/resolved
Pericarditis/Post Surgical Pericarditis Secondary To Coronary Bypass Surgery	SAE	Grade 4	Not related	26 Jan 2021 (Study Day 149) – 30 Jan 2021 (Study Day 153)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US346-2388, a 46-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 12 Oct 2020 (Study Day 43). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Sep 2020 (Study Day 26), 25 days after the first dose and 17 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of joint stiffness. The IP dose

was not changed due to the severe arthrosclerosis. The event of severe arthrosclerosis lasted for 78 days, after which it was considered to be recovered/resolved on 11 Dec 2020 (Study Day 103). The investigator assessed the event of joint stiffness to be not related to the IP.

On 25 Sep 2020 (Study Day 26), 25 days after the first dose and 17 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of myocardial infarction. The IP dose was not changed due to the myocardial infarction. The event of myocardial infarction lasted for 1 day, after which it was considered to be recovered/resolved on 25 Sep 2020 (Study Day 26). The investigator assessed the event of myocardial infarction to be not related to the IP.

On 25 Sep 2020 (Study Day 26), 25 days after the first dose and 17 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pneumonia aspiration. The IP dose was not changed due to the aspiration pneumonia. The event of aspiration pneumonia lasted for 10 days, after which it was considered to be recovered/resolved on 04 Oct 2020 (Study Day 35). The investigator assessed the event of pneumonia aspiration to be not related to the IP.

On 28 Dec 2020 (Study Day 120), 119 days after the first dose and 77 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pericarditis. Action taken with the IP was not applicable. The event of post surgical pericarditis secondary to coronary bypass surgery lasted for 3 days, after which it was considered to be recovered/resolved on 30 Dec 2020 (Study Day 122). The investigator assessed the event of pericarditis to be not related to the IP.

On 28 Dec 2020 (Study Day 120), 119 days after the first dose and 77 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pleural effusion. Action taken with the IP was not applicable. The event of post surgical pleural effusion lasted for 3 days, after which it was considered to be recovered/resolved on 30 Dec 2020 (Study Day 122). The investigator assessed the event of pleural effusion to be not related to the IP.

On 14 Jan 2021 (Study Day 137), 136 days after the first dose and 94 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pericarditis. Action taken with the IP was not applicable. The event of post surgical pericarditis secondary to coronary bypass surgery lasted for 7 days, after which it was considered to be recovered/resolved on 20 Jan 2021 (Study Day 143). The investigator assessed the event of pericarditis to be not related to the IP.

On 26 Jan 2021 (Study Day 149), 148 days after the first dose and 106 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pericarditis. Action taken with the IP was not applicable. The event of post surgical pericarditis secondary to coronary bypass surgery lasted for 5 days, after which it was considered to be recovered/resolved on 30 Jan 2021 (Study Day 153). The investigator assessed the event of pericarditis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000429	Pneumonia aspiration
MOD-2020-000429	Myocardial infarction
MOD-2020-000429	Joint stiffness
MOD-2020-000429	Pericarditis
MOD-2020-000429	Pleural effusion
MOD-2020-000429	Pericarditis
MOD-2020-000429	Pericarditis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tourette's disorder	Touretts syndrome	1990 - Ongoing
Constipation	Occasional constipation	2005 - Ongoing
Drug hypersensitivity	Antiinflamatory allergy (stomach ache)	2005 - Ongoing
Gastrooesophageal reflux disease	Occasional acid reflux	2005 - Ongoing
Psoriasis	Psoriasis (feet)	2005 - Ongoing
Ankle fracture	Right ankle break with surgical repair	2011 - 2011
Back pain	Lower back pain	2015 - Ongoing
Depression	Depression	2015 - Ongoing
Spinal fusion surgery	Low back fusion	2017 - 2017
Spinal fusion surgery	Neck fusion	2018 - 2018
Hypercholesterolaemia	Hypercholesterolemia	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sertraline hydrochloride	2015 - Ongoing	Depression
Gabapentin	2017 - Ongoing	Touretts Syndrome
Atorvastatin	2019 - Ongoing	Hypercholesterolemia
Esomeprazole magnesium	2019 - Ongoing	Occasional Acid Reflux
Diazepam	Mar 2020 - Ongoing	Tourettes Syndrome

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrocodone bitartrate; paracetamol	Mar 2020 - Ongoing	Lower Back Pain
Angiogram*	02 Dec 2020 (Study Day 94) - 02 Dec 2020 (Study Day 94)	Adverse Event
Single bypass surgery*	11 Dec 2020 (Study Day 103) - 11 Dec 2020 (Study Day 103)	Adverse Event
Fluid draining from heart and lungs*	26 Jan 2021 (Study Day 149) - 26 Jan 2021 (Study Day 149)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US347-2013 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 27)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Atelectasis/Atelectasis	SAE	Grade 4	Not related	21 Sep 2020 (Study Day 20) – 24 Sep 2020 (Study Day 23)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US347-2013, a 59-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 02 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 28 Sep 2020 (Study Day 27). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 21 Sep 2020 (Study Day 20), 19 days after the first dose and 7 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of atelectasis. The IP dose was not changed due to the atelectasis. The event of atelectasis lasted for 4 days, after which it was considered to be recovered/resolved on 24 Sep 2020 (Study Day 23). The investigator assessed the event of atelectasis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000346	Atelectasis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Moderate asthma	1968 - Ongoing
Depression	Depression	1996 - Ongoing
Sleep disorder	Sleep disorder	2002 - Ongoing
Obesity	Morbid obesity	31 May 2006 (Study Day -5208) - Ongoing
Dermal filler injection	Dermal injection, unknown type, forehead	2015 - 2015
Renal cell carcinoma	Renal cell cancer	07 Aug 2017 (Study Day -1122) - 14 Aug 2017 (Study Day -1115)
Bursitis	Mild left greater trochanter bursitis	18 Oct 2018 (Study Day -685) - Ongoing
Tendon rupture	Interstitial tearing of the left gluteus medius and minimus tendons	18 Oct 2018 (Study Day -685) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Escitalopram oxalate	1996 - Ongoing	Depression
Methylphenidate hydrochloride	1998 - Ongoing	Depression
Trazodone	2002 - Ongoing	Sleep Disturbance
Omalizumab	10 Feb 2020 (Study Day -205) - Ongoing	Asthma
Paracetamol	02 Sep 2020 (Study Day 1) - 05 Sep 2020 (Study Day 4)	Injection Site Pain
Codeine; paracetamol	21 Sep 2020 (Study Day 20) - 25 Sep 2020 (Study Day 24)	Postoperative Pain
Gastric band surgery*	21 Sep 2020 (Study Day 20) - 21 Sep 2020 (Study Day 20)	Medical History
Omeprazole	21 Sep 2020 (Study Day 20) - 21 Oct 2020 (Study Day 50)	Prophylaxis For Gerd Following Gastric Band
Paracetamol	21 Sep 2020 (Study Day 20) - 25 Sep 2020 (Study Day 24)	Postoperative Pain
Enoxaparin	24 Sep 2020 (Study Day 23) - 24 Sep 2020 (Study Day 23)	Postoperative Prophylaxis For Dvt
Left gluteus medius tendon repair and reconstruction*	01 Oct 2020 (Study Day 30) - 01 Oct 2020 (Study Day 30)	Medical History
Oxycodone	01 Oct 2020 (Study Day 30) - 04 Oct 2020 (Study Day 33)	Postoperative Pain
Apixaban	02 Oct 2020 (Study Day 31) - Ongoing	Postoperative Prophylaxis For Dvt
Influenza vaccine	16 Oct 2020 (Study Day 45) - 16 Oct 2020 (Study Day 45)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Oesophagitis	Grade 1/mild	Not related	21 Sep 2020 (Study Day 20) - 01 Oct 2020 (Study Day 30)
Meniscus Injury	Grade 2/moderate	Not related	12 Mar 2021 (Study Day 192) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US348-2023 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	24 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 32)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Abdominal Pain Upper/Epigastric Pain	SAE	Grade 4	Not related	04 Nov 2020 (Study Day 73) – 05 Nov 2020 (Study Day 74)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US348-2023, a 70-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 24 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 24 Sep 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Nov 2020 (Study Day 73), 72 days after the first dose and 41 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of abdominal pain upper. Action taken with the IP was not applicable. The event of epigastric pain lasted for 2 days, after which it was considered to be recovered/resolved on 05 Nov 2020 (Study Day 74). The investigator assessed the event of abdominal pain upper to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000785	Abdominal pain upper

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Endometriosis	Endometriosis	1970 - 1994
Hysterectomy	Hysterectomy	1994 - 1994
Botulinum toxin injection	Botox for cosmetic reasons	2000 - 2000
Hypertension	Hypertension	Jan 2008 - Ongoing
Iliotibial band syndrome	Lateral iliotibial band syndrome	Jan 2015 - Ongoing
Cataract operation	R and l cataract surgery	Jul 2020 - Jul 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	Not reported - Ongoing	Nutritional Supplement
Vitamin d nos	Jan 2009 - Ongoing	Supplement
Duloxetine hydrochloride	Jan 2015 - Ongoing	Lateral Iliotibial Band Syndrome
Curcuma longa	Jan 2019 - Ongoing	Nutritional Supplement
Probiotics nos	2020 - Ongoing	Nutritional Supplment
Losartan	Feb 2020 - Ongoing	Hypertension
Zinc	Mar 2020 - Ongoing	Nutritional Supplement
Phentermine hydrochloride	Jun 2020 - 06 Jul 2020 (Study Day -49)	Weight Control
Unspecified herbal and traditional medicine	Jun 2020 - Ongoing	Nutritional Supplement
Besifloxacin hydrochloride	06 Jul 2020 (Study Day -49) - 12 Aug 2020 (Study Day -12)	Cataract Surgery
Bromfenac sodium	16 Jul 2020 (Study Day -39) - 12 Aug 2020 (Study Day -12)	Cataract Surgery
Loteprednol etabonate	30 Jul 2020 (Study Day -25) - 12 Aug 2020 (Study Day -12)	Post Cataract Surgery
Influenza vaccine	11 Oct 2020 (Study Day 49) - 11 Oct 2020 (Study Day 49)	Health Maintenance
Enoxaparin	04 Nov 2020 (Study Day 73) - 05 Nov 2020 (Study Day 74)	Dvt Prophylaxis
Hydromorphone hydrochloride	04 Nov 2020 (Study Day 73) - 05 Nov 2020 (Study Day 74)	Epigastric Pain Management
Pantoprazole sodium sesquihydrate	04 Nov 2020 (Study Day 73) - 05 Nov 2020 (Study Day 74)	Epigastric Pain Management
Gallbladder removal*	09 Feb 2021 (Study Day 170) - 09 Feb 2021 (Study Day 170)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

FDA-CBER-2022-1614-3379862

Participant Number:	US348-2145 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cardiac Failure/Acute Cardiac Heart Failure Exacerbation	SAE	Grade 4	Not related	02 Sep 2020 (Study Day 8) – 13 Sep 2020 (Study Day 19)	Recovered/resolved
Streptococcal Sepsis/Sepsis Related To Streptococcus Bacteremia	SAE	Grade 4	Not related	02 Sep 2020 (Study Day 8) – 13 Sep 2020 (Study Day 19)	Recovered/resolved
Chronic Kidney Disease/Acute Exacerbation Of Chronic Kidney Disease Stage Iii	SAE	Grade 3/severe	Not related	26 Sep 2020 (Study Day 32) – 30 Sep 2020 (Study Day 36)	Recovered/resolved
Gout/Gout Exacerbation In Right Knee	SAE	Grade 3/severe	Not related	26 Sep 2020 (Study Day 32) – 30 Sep 2020 (Study Day 36)	Recovered/resolved
Anaemia/Exacerbation Of Anemia	SAE	Grade 3/severe	Not related	21 Oct 2020 (Study Day 57) – 26 Oct 2020 (Study Day 62)	Recovered/resolved
Cardiac Failure Acute/Worsening Of Acute Decompensated Heart Failure	SAE	Grade 4	Not related	09 Nov 2020 (Study Day 76) – 10 Nov 2020 (Study Day 77)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US348-2145, a 66-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 26 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Sep 2020 (Study Day 8), 7 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of cardiac failure. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of acute cardiac heart failure exacerbation lasted for 12 days, after which it was considered to be recovered/resolved on 13 Sep 2020 (Study Day 19). The investigator assessed the event of cardiac failure to be not related to the IP.

On 02 Sep 2020 (Study Day 8), 7 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of streptococcal sepsis. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of sepsis related to streptococcus bacteremia lasted for 12 days, after which it was considered to be recovered/resolved on 13 Sep 2020 (Study Day 19). The investigator assessed the event of streptococcal sepsis to be not related to the IP.

On 26 Sep 2020 (Study Day 32), 31 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of chronic kidney disease. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of acute exacerbation of chronic kidney disease stage iii lasted for 5 days, after which it was considered to be recovered/resolved on 30 Sep 2020 (Study Day 36). The investigator assessed the event of chronic kidney disease to be not related to the IP.

On 26 Sep 2020 (Study Day 32), 31 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of gout. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of gout exacerbation in right knee lasted for 5 days, after which it was considered to be recovered/resolved on 30 Sep 2020 (Study Day 36). The investigator assessed the event of gout to be not related to the IP.

On 21 Oct 2020 (Study Day 57), 56 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of anaemia. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of exacerbation of anemia lasted for 6 days, after which it was considered to be recovered/resolved on 26 Oct 2020 (Study Day 62). The investigator assessed the event of anaemia to be not related to the IP.

On 09 Nov 2020 (Study Day 76), 75 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of cardiac failure acute. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of worsening of acute decompensated heart failure lasted for 2 days, after which it was considered to be recovered/resolved on 10 Nov 2020 (Study Day 77). The investigator assessed the event of cardiac failure acute to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000288	Cardiac failure
MOD-2020-000288	Streptococcal sepsis
MOD-2021-166152	Anemia
MOD-2020-000805	Cardiac failure acute
MOD-2020-000808	Gout

CIOMS Number	MedDRA Preferred Term
MOD-2020-000808	Chronic kidney disease

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anaemia macrocytic	Macrocytic anemia	Not reported - Ongoing
Chronic kidney disease	Chronic kidney disease stage iii	Not reported - Ongoing
Chronic left ventricular failure	Chronic systolic heart failure.	Not reported - Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	Not reported - Ongoing
Coronary artery disease	Coronary artery disease	Not reported - Ongoing
Heart valve replacement	Metallic prosthetic heart valve placement	Not reported
Thrombocytopenia	Mild thrombocytopenia	Not reported
Rheumatic fever	Rheumatic fever atrial fibrillation. details: hospitalized at engleston- 1964	1964 - Ongoing
Fluid retention	Water retention in feet related to gout.	2015 - Ongoing
Gout	Gout in bilateral knees	2015 - Ongoing
Hypertension	Hypertension	2015 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2019 - Ongoing
Joint injury	Right knee injury. details: wears a knee brace at home and uses a cane while walking.	Feb 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	Not reported - Ongoing	Health Maintenance
Carvedilol	Not reported - Ongoing	Chronic Systolic Heart Failure
Ceftriaxone	Not reported - 13 Sep 2020 (Study Day 19)	Sepsis Due To Beta Hemolytic Streptoccocus Bacteremia
Ferrous sulfate	Not reported - Ongoing	Macrocytic Anemia
Fluticasone; salmeterol	Not reported - Ongoing	Chronic Obstructive Pulmonary Disease
Heparin	Not reported - Ongoing	Deep Vein Thrombosis Prophylaxis
Paracetamol	Not reported - Ongoing	Analgesia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	Not reported - Ongoing	Chronic Obstructive Pulmonary Disease
Colchicine	2015 - Ongoing	Gout In Both Knees
Furosemide	2015 - Ongoing	Water Retention In Feet Related To Gout
Lisinopril	2015 - 2020	Hypertention
Atorvastatin calcium	2019 - Ongoing	Hyperlipidemia
Vitamins nos	26 Aug 2020 (Study Day 1) - Ongoing	Health Maintenance
Blood culture*	02 Sep 2020 (Study Day 8) - 02 Sep 2020 (Study Day 8)	Adverse Event
Blood workup*	02 Sep 2020 (Study Day 8) - 02 Sep 2020 (Study Day 8)	Adverse Event
Urine culture*	02 Sep 2020 (Study Day 8) - 02 Sep 2020 (Study Day 8)	Adverse Event
Ampicillin; sulbactam	03 Sep 2020 (Study Day 9) - 04 Sep 2020 (Study Day 10)	Sepsis Due To Beta Hemolytic Streptococcus Bacteremia
Furosemide	03 Sep 2020 (Study Day 9) - 04 Sep 2020 (Study Day 10)	Chronic Systolic Heart Failure
Thiamine	03 Sep 2020 (Study Day 9) - 03 Sep 2020 (Study Day 9)	Chronic Systolic Heart Failure
Pantoprazole	05 Sep 2020 (Study Day 11) - Ongoing	Ulcer Prophylaxis
Potassium chloride	05 Sep 2020 (Study Day 11) - 06 Sep 2020 (Study Day 12)	Electrolyte Replacement Related To Chronic Systolic Heart Failure
Echocardiogrophay*	11 Sep 2020 (Study Day 17) - 11 Sep 2020 (Study Day 17)	Diagnostic
Levofloxacin	13 Sep 2020 (Study Day 19) - 16 Sep 2020 (Study Day 22)	Sepsis Due To Beta Hemolytic Streptoccocus Bactermeia
Calcium gluconate	26 Sep 2020 (Study Day 32) - 26 Sep 2020 (Study Day 32)	Acute Exacerbation Of Chronic Kidney Disease Stage Iii
Glucose	26 Sep 2020 (Study Day 32) - 26 Sep 2020 (Study Day 32)	Hyperkalemia Related To Acute Exacerbation Of Chronic Kidney Disease Stage Iii
Insulin	26 Sep 2020 (Study Day 32) - 26 Sep 2020 (Study Day 32)	Hyperkalemia Related To Acute Exacerbation Of Chronic Kidney Disease Stage Iii
Lidocaine	26 Sep 2020 (Study Day 32) - 30 Sep 2020 (Study Day 36)	Gout Exacerbation In Right Knee
Prednisone	26 Sep 2020 (Study Day 32) - 02 Oct 2020 (Study Day 38)	Gout Exacerbation In Right Knee
Sodium polystyrene sulfonate	27 Sep 2020 (Study Day 33) - 27 Sep 2020 (Study Day 33)	Hyperkalemia Related To Acute Exacerbation Of Chronic Kidney Disease Stage Iii
Sodium bicarbonate	29 Sep 2020 (Study Day 35) - 30 Sep 2020 (Study Day 36)	Acidosis Related To Acute Exacerbation Of Chronic Kidney Disease Stage Iii
Influenza vaccine	30 Sep 2020 (Study Day 36) - 30 Sep 2020 (Study Day 36)	Influenza Prophylaxis
Blood workup*	21 Oct 2020 (Study Day 57) - 21 Oct 2020 (Study Day 57)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Chest x-ray*	21 Oct 2020 (Study Day 57) - 21 Oct 2020 (Study Day 57)	Adverse Event
Ekg*	21 Oct 2020 (Study Day 57) - 21 Oct 2020 (Study Day 57)	Adverse Event
Omeprazole	21 Oct 2020 (Study Day 57) - 21 Oct 2020 (Study Day 57)	Ae#3: Exacerbation Of Anemia
Blood workup*	22 Oct 2020 (Study Day 58) - 22 Oct 2020 (Study Day 58)	Adverse Event
Red blood cells, concentrated	22 Oct 2020 (Study Day 58) - 22 Oct 2020 (Study Day 58)	Sae: Exacerbation Of Anemia
Diagnostic colonoscopy*	23 Oct 2020 (Study Day 59) - 23 Oct 2020 (Study Day 59)	Adverse Event
Furosemide	09 Nov 2020 (Study Day 76) - 10 Nov 2020 (Study Day 77)	Shortness Of Breath Due To Acute Decompensated Heart Failure
Iron	09 Nov 2020 (Study Day 76) - 09 Nov 2020 (Study Day 76)	Acute Decompensated Heart Failure

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US348-2267 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	08 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pulmonary Embolism/Acute Pulmonary Emboli	SAE	Grade 4	Not related	18 Dec 2020 (Study Day 100) – 13 Jan 2021 (Study Day 126)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US348-2267, a 78-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 10 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 08 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 18 Dec 2020 (Study Day 100), 99 days after the first dose and 71 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pulmonary embolism. Action taken with the IP was not applicable. The event of acute pulmonary emboli lasted for 27 days, after which it was considered to be recovered/resolved on 13 Jan 2021 (Study Day 126). The investigator assessed the event of pulmonary embolism to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001222	Pulmonary embolism

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Osteoarthritis	Osteoarthrosis involving lower legs	Not reported - Ongoing
Seasonal allergy	Seasonal allergies	Not reported - Ongoing
Postmenopause	Post-menopausal	1998 - Ongoing
Glucose tolerance impaired	Pre diabetes	1999 - Ongoing
Hypertension	Hypertension	2000 - Ongoing
Depression	Depression	2005 - Ongoing
Restless legs syndrome	Restless leg syndrome	2009 - Ongoing
Glaucoma	Glaucoma	2010 - Ongoing
Cough	Dry chronic cough, unknown etiology	2015 - Ongoing
Asthma	Moderate asthma	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cetirizine hydrochloride	Not reported - Ongoing	Seasonal Allergies
Terbinafine hydrochloride	Not reported - Ongoing	Rash On Bilateral Hands (Ae #4)
Simvastatin	2001 - Ongoing	Heart Health
Clonazepam	2006 - Ongoing	Anxiety
Acetylsalicylic acid	2010 - Ongoing	Coronary Artery Disease Prevention
Pramipexole	2010 - Ongoing	Restless Leg Syndrome
Alendronate sodium	2015 - Ongoing	Osteoporosis
Brinzolamide	2015 - Ongoing	Glaucoma
Diclofenac	2015 - Ongoing	Bilateral Knee Pain Associated With Osteoarthrosis
Fluticasone propionate	2015 - Ongoing	Seasonal Allergies
Latanoprost	2015 - Ongoing	Glaucoma
Budesonide; formoterol fumarate	2016 - Ongoing	Asthma
Salbutamol	2016 - Ongoing	Asthma
Escitalopram	2018 - Ongoing	Depression
Lisinopril	2018 - 20 Dec 2020 (Study Day 102)	Hypertension
Cardiac stress test*	23 Sep 2020 (Study Day 14) - 23 Sep 2020 (Study Day 14)	Medical History
Loratadine	01 Oct 2020 (Study Day 22) - Ongoing	Seasonal Allergies
Influenza vaccine	02 Nov 2020 (Study Day 54) - 02 Nov 2020 (Study Day 54)	Influenza Prevention
Diphenhydramine hydrochloride	10 Dec 2020 (Study Day 92) - Ongoing	Itching In Hands Related To Rash (Ae #4)

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	13 Dec 2020 (Study Day 95) - 13 Dec 2020 (Study Day 95)	Common Cold
Naproxen sodium	13 Dec 2020 (Study Day 95) - 13 Dec 2020 (Study Day 95)	Headache Associated With Ae #6
Chest ct*	18 Dec 2020 (Study Day 100) - 18 Dec 2020 (Study Day 100)	Adverse Event
Heparin	18 Dec 2020 (Study Day 100) - 18 Dec 2020 (Study Day 100)	Pulmonary Emboli
Heparin	18 Dec 2020 (Study Day 100) - 20 Dec 2020 (Study Day 102)	Pulmonary Emboli
Paracetamol	19 Dec 2020 (Study Day 101) - 20 Dec 2020 (Study Day 102)	Pain During Hospital Admission (Ae #5)
Apixaban	20 Dec 2020 (Study Day 102) - 26 Dec 2020 (Study Day 108)	Acute Pulmonary Embolism
Lisinopril	21 Dec 2020 (Study Day 103) - Ongoing	Hyypertension
Potassium chloride	21 Dec 2020 (Study Day 103) - 21 Dec 2020 (Study Day 103)	Supplementation (Associated With Ae #5)
Paracetamol	22 Dec 2020 (Study Day 104) - Ongoing	Knee Pain
Apixaban	27 Dec 2020 (Study Day 109) - Ongoing	Acute Pulmonary Embolism
Fluocinonide	15 Feb 2021 (Study Day 159) - 20 Feb 2021 (Study Day 164)	Ae #4 Rash

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Bruising	Grade 1/mild	Not related	10 Sep 2020 (Study Day 1) - 10 Sep 2020 (Study Day 1)
Presyncope	Grade 3/severe	Not related	08 Oct 2020 (Study Day 29) - 08 Oct 2020 (Study Day 29)
Tremor	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 33) - Ongoing
Rash Macular	Grade 2/moderate	Not related	30 Nov 2020 (Study Day 82) - 20 Feb 2021 (Study Day 164)
Nasopharyngitis	Grade 2/moderate	Not related	10 Dec 2020 (Study Day 92) - 13 Jan 2021 (Study Day 126)
Osteoarthritis	Grade 2/moderate	Not related	15 Dec 2020 (Study Day 97) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US348-2284 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	16 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Dyspnoea/Shortness Of Breath, Worsening	SAE	Grade 4	Not related	28 Oct 2020 (Study Day 13) – 20 Dec 2020 (Study Day 66)	Recovered/resolved
Myocardial Infarction/Myocardial Infarction	SAE, AE leading to withdrawal from study vaccine	Grade 4	Not related	28 Oct 2020 (Study Day 13) – 31 Oct 2020 (Study Day 16)	Recovered/resolved with sequelae
Acute Left Ventricular Failure/Acute On Chronic Systolic Heart Failure	SAE	Grade 4	Not related	05 Nov 2020 (Study Day 21) – 04 Jan 2021 (Study Day 81)	Recovered/resolved with sequelae
Atrial Flutter/Paroxysmal Atrial Flutter	SAE	Grade 3/severe	Not related	05 Nov 2020 (Study Day 21) – 14 Jan 2021 (Study Day 91)	Recovered/resolved with sequelae
Acute Coronary Syndrome/Acute Coronary Syndrome, Exacerbation	SAE	Grade 4	Not related	16 Nov 2020 (Study Day 32) – 20 Nov 2020 (Study Day 36)	Recovered/resolved
Atrial Fibrillation/Atrial Fibrillation With Rapid Ventricular Response	SAE	Grade 4	Not related	16 Nov 2020 (Study Day 32) – 14 Jan 2021 (Study Day 91)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US348-2284, a 62-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 16 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Oct 2020 (Study Day 13), 12 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of dyspnoea. On 12 Nov 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of shortness of breath, worsening lasted for 54 days, after which it was considered to be recovered/resolved on

20 Dec 2020 (Study Day 66). The investigator assessed the event of dyspnoea to be not related to the IP.

On 28 Oct 2020 (Study Day 13), 12 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of myocardial infarction. On 12 Nov 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of myocardial infarction lasted for 4 days, after which it was considered to be recovered/resolved with sequelae on 31 Oct 2020 (Study Day 16). The investigator assessed the event of myocardial infarction to be not related to the IP.

On 05 Nov 2020 (Study Day 21), 20 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of acute left ventricular failure. On 12 Nov 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of acute on chronic systolic heart failure lasted for 61 days, after which it was considered to be recovered/resolved with sequelae on 04 Jan 2021 (Study Day 81). The investigator assessed the event of acute left ventricular failure to be not related to the IP.

On 05 Nov 2020 (Study Day 21), 20 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of atrial flutter. On 12 Nov 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of paroxysmal atrial flutter lasted for 71 days, after which it was considered to be recovered/resolved with sequelae on 14 Jan 2021 (Study Day 91). The investigator assessed the event of atrial flutter to be not related to the IP.

On 16 Nov 2020 (Study Day 32), 31 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of acute coronary syndrome. On 12 Nov 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of acute coronary syndrome, exacerbation lasted for 5 days, after which it was considered to be recovered/resolved on 20 Nov 2020 (Study Day 36). The investigator assessed the event of acute coronary syndrome to be not related to the IP.

On 16 Nov 2020 (Study Day 32), 31 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of atrial fibrillation. On 12 Nov 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of atrial fibrillation with rapid ventricular response lasted for 60 days, after which it was considered to be recovered/resolved with sequelae on 14 Jan 2021 (Study Day 91). The investigator assessed the event of atrial fibrillation to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000597	Myocardial infarction
MOD-2020-000597	Acute left ventricular failure
MOD-2020-000597	Atrial fibrillation
MOD-2020-000597	Acute coronary syndrome
MOD-2020-000597	Atrial flutter
MOD-2020-000597	Dyspnoea

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Atrial septal defect repair	Atrial septal defect, with repairs in 1986 & 1997	Not reported - 1998
Chronic kidney disease	Chronic kidney disease stage iiia	Not reported - Ongoing
Osteoarthritis	Osteoarthritis (multiple joints, multiple surgeries)	Not reported - Ongoing
Cardiac murmur	Heart murmur	1988 - Ongoing
Heart rate irregular	Irregular heart rhythm	1995 - Ongoing
Herpes simplex	Herpes simplex 2 infection	2002 - Ongoing
Bipolar disorder	Bipolar disorder	2006 - Ongoing
Erectile dysfunction	Erectile dysfunction	2008 - Ongoing
Prostate cancer	Prostate cancer	2008 - 2008
Drug hypersensitivity	Ace inhibitor allergy	2009 - Ongoing
Elbow operation	Orthopedic repair, left elbow	2010 - 2010
Hip arthroplasty	Dvt left leg (post l hip arthroplasty)	2012 - 2012
Hip arthroplasty	Hip arthroplasty, left	2012 - 2012
Hip arthroplasty	Hip arthroplasty, right	2014 - 2014
Hypertension	Hypertension	2014 - Ongoing
Elbow operation	Orthopedic repair, r elbow	2016 - 2016
Prophylaxis against HIV infection	Hiv prophylaxis	2016 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2018 - Ongoing
Insomnia	Insomnia	2019 - Ongoing
Vitamin D deficiency	Vitamin d deficiency	Jan 2019 - Ongoing
Gout	Gout, l toe	Dec 2019 - Ongoing
Arteriosclerosis coronary artery	Coronary artery disease with calcified lesion	Jan 2020 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Rotator cuff repair	Rotator cuff surgery, left	20 Feb 2020 (Study Day -239) - 20 Feb 2020 (Study Day -239)
Tendon rupture	Torn tendon, left shoulder	20 Feb 2020 (Study Day -239) - 20 Feb 2020 (Study Day -239)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Quetiapine fumarate	Not reported - 30 Oct 2020 (Study Day 15)	Insomnia And Bipolar Disorder
Amlodipine	2015 - 05 Nov 2020 (Study Day 21)	Hypertension
Hydrochlorothiazide; triamterene	2015 - 05 Nov 2020 (Study Day 21)	Hypertension
Losartan	2015 - Ongoing	Hypertension
Metoprolol	2015 - Ongoing	Hypertension
Botulinum toxin type a	May 2017 - May 2017	Cosmetic
Acetylsalicylic acid	2018 - Ongoing	Heart Health
Atorvastatin	2018 - 30 Oct 2020 (Study Day 15)	Hyperlipidemia
Emtricitabine; tenofovir alafenamide fumarate	2018 - Ongoing	Hiv Prophylaxis
Quetiapine	2018 - Nov 2020	Bipoloar Disorder
Zolpidem	2019 - Ongoing	Insomnia
Andrographis paniculata; echinacea purpurea root; olea europaea leaf	Mar 2020 - Ongoing	Health Maintenance
Herbal antiobesity preparations	Mar 2020 - 10 Oct 2020 (Study Day -6)	Weight Loss
Acetylsalicylic acid	29 Oct 2020 (Study Day 14) - 29 Oct 2020 (Study Day 14)	Ae#1 (Myocardial Infarction)
Cardiac catheterization with angiography and percutaneous coronary intervention*	29 Oct 2020 (Study Day 14) - 29 Oct 2020 (Study Day 14)	Adverse Event
Chest xray*	29 Oct 2020 (Study Day 14) - 29 Oct 2020 (Study Day 14)	Adverse Event
Electrocardiogram*	29 Oct 2020 (Study Day 14) - 29 Oct 2020 (Study Day 14)	Adverse Event
Eptifibatide	29 Oct 2020 (Study Day 14) - 31 Oct 2020 (Study Day 16)	Myocardial Infarction
Glyceryl trinitrate	29 Oct 2020 (Study Day 14) - 29 Oct 2020 (Study Day 14)	Chest Pain - Associated With Ae #1
Heparin	29 Oct 2020 (Study Day 14) - 29 Oct 2020 (Study Day 14)	Treatment Of Clot - Associated With Ae #1
Standard of care blood work for chest pain protocol*	29 Oct 2020 (Study Day 14) - 29 Oct 2020 (Study Day 14)	Adverse Event
Atorvastatin	30 Oct 2020 (Study Day 15) - Ongoing	Hyperlipidemia - Associated With Ae #1
Clopidogrel	30 Oct 2020 (Study Day 15) - Ongoing	Ae#1 (Myocardial Infarction)

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Glyceryl trinitrate	31 Oct 2020 (Study Day 16) - Ongoing	Chest Pain - Associated With Ae #1
Quetiapine fumarate	31 Oct 2020 (Study Day 16) - Ongoing	Insomnia
Acetylsalicylic acid	05 Nov 2020 (Study Day 21) - 05 Nov 2020 (Study Day 21)	Shortness Of Breath, Worsening
Ceftriaxone	05 Nov 2020 (Study Day 21) - 07 Nov 2020 (Study Day 23)	Suspected Pneumonia - Associated With Ae #3
Doxycycline	05 Nov 2020 (Study Day 21) - 07 Nov 2020 (Study Day 23)	Suspected Pneumonia - Associated With Ae #3
Electrocardiogram*	05 Nov 2020 (Study Day 21) - 05 Nov 2020 (Study Day 21)	Adverse Event
Furosemide	05 Nov 2020 (Study Day 21) - 06 Nov 2020 (Study Day 22)	Shortness Of Breath, Worsening
Heparin	05 Nov 2020 (Study Day 21) - 05 Nov 2020 (Study Day 21)	Shortness Of Breath, Worsening
Echocardiogram*	06 Nov 2020 (Study Day 22) - 06 Nov 2020 (Study Day 22)	Adverse Event
Heparin	06 Nov 2020 (Study Day 22) - 06 Nov 2020 (Study Day 22)	Clot Prevention - Associated With Ae #3
Rivaroxaban	06 Nov 2020 (Study Day 22) - Ongoing	Clot Prevention - Associated With Ae #3
Acetylsalicylic acid	16 Nov 2020 (Study Day 32) - 16 Nov 2020 (Study Day 32)	Chest Pain Protocol - Associated With Ae #4
Blood cultures*	16 Nov 2020 (Study Day 32) - 16 Nov 2020 (Study Day 32)	Adverse Event
Digoxin	16 Nov 2020 (Study Day 32) - 16 Nov 2020 (Study Day 32)	Atrial Flutter/Fibrillation Associated With Ae #5
Furosemide	16 Nov 2020 (Study Day 32) - 19 Nov 2020 (Study Day 35)	Diuretic - Associated With Ae #4
Glyceryl trinitrate	16 Nov 2020 (Study Day 32) - 17 Nov 2020 (Study Day 33)	Chest Pain Related To Acs Associated With Ae #4
Heparin	16 Nov 2020 (Study Day 32) - 19 Nov 2020 (Study Day 35)	Clot Prevention Associated With Ae #5
Magnesium sulfate	16 Nov 2020 (Study Day 32) - 18 Nov 2020 (Study Day 34)	Hypertension Associated With Ae #4
Metoprolol	16 Nov 2020 (Study Day 32) - 16 Nov 2020 (Study Day 32)	Hypertension Associated With Ae #4
Ceftriaxone sodium	17 Nov 2020 (Study Day 33) - 18 Nov 2020 (Study Day 34)	Suspected Pneumonia Associated With Ae #4
Echocardiogram*	17 Nov 2020 (Study Day 33) - 17 Nov 2020 (Study Day 33)	Adverse Event
Famotidine	17 Nov 2020 (Study Day 33) - 20 Nov 2020 (Study Day 36)	To Prevent Gi Upset Related To Medication Administration - Associated With Ae #4
Hydralazine	17 Nov 2020 (Study Day 33) - 20 Nov 2020 (Study Day 36)	Hypertension Associated With Ae #4
Metoprolol	17 Nov 2020 (Study Day 33) - 17 Nov 2020 (Study Day 33)	Hypertension Associated With Ae #4
Potassium chloride	18 Nov 2020 (Study Day 34) - 20 Nov 2020 (Study Day 36)	Hypokalemia Related To Lasix Administration Associated With Ae #4

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Adenosine	19 Nov 2020 (Study Day 35) - 19 Nov 2020 (Study Day 35)	Atrial Flutter/Fibrillation - Associated With Ae #5
Amiodarone	19 Nov 2020 (Study Day 35) - 08 Dec 2020 (Study Day 54)	Atrial Flutter/Fibrillation - Associated With Ae #5
Cardiovascular mri*	19 Nov 2020 (Study Day 35) - 19 Nov 2020 (Study Day 35)	Adverse Event
Furosemide	20 Nov 2020 (Study Day 36) - 29 Nov 2020 (Study Day 45)	Diuretic - Associated With Ae #4
Ondansetron	20 Nov 2020 (Study Day 36) - 20 Nov 2020 (Study Day 36)	Nausea - Associated With Ae #4
Furosemide	29 Nov 2020 (Study Day 45) - 14 Dec 2020 (Study Day 60)	Diuretic - Associated With Ae #3
Amiodarone	08 Dec 2020 (Study Day 54) - Ongoing	Atrial Flutter
Furosemide	03 Feb 2021 (Study Day 111) - Ongoing	Acute On Chronic Systolic Heart Failure

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US349-2064 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	04 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	02 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cerebrovascular Accident/Cerebrovascular Accident	SAE	Grade 3/severe	Not related	30 Oct 2020 (Study Day 57) – 11 Nov 2020 (Study Day 69)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US349-2064, a 59-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 04 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 02 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Oct 2020 (Study Day 57), 56 days after the first dose and 28 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of cerebrovascular accident. Action taken with the IP was not applicable. The event of cerebrovascular accident lasted for 13 days, after which it was considered to be recovered/resolved with sequelae on 11 Nov 2020 (Study Day 69). The investigator assessed the event of cerebrovascular accident to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000615	Cerebrovascular accident

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Muscular weakness	Right lower extremity weakness	2017 - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	2018 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2020 - Ongoing
Corneal abrasion	Corneal abrasion	May 2020 - Ongoing
Benign prostatic hyperplasia	Bph	Jun 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid	2017 - Ongoing	Supplement
Vitamin b12 nos	2017 - Ongoing	Supplement
Metformin	02 Oct 2019 (Study Day -338) - Ongoing	Diabetes
Erythromycin	12 Aug 2020 (Study Day -23) - 31 Oct 2020 (Study Day 58)	Runny Eye Issue Due To Corneal Abrasion
Tamsulosin	Sep 2020 - Ongoing	Bph
Atorvastatin	03 Sep 2020 (Study Day -1) - 31 Oct 2020 (Study Day 58)	Cholesterol - Hyperlipidemia
Influenza vaccine	29 Oct 2020 (Study Day 56) - 29 Oct 2020 (Study Day 56)	Prevent Influenza
Varicella zoster vaccine	29 Oct 2020 (Study Day 56) - 29 Oct 2020 (Study Day 56)	Prevent Shingles
Acetylsalicylic acid	31 Oct 2020 (Study Day 58) - Ongoing	Ascvd Prophylaxis
Atorvastatin	31 Oct 2020 (Study Day 58) - Ongoing	Hyperlipidemia
Heparin	31 Oct 2020 (Study Day 58) - 11 Nov 2020 (Study Day 69)	Thrombus Prophylaxis
Macrogol 3350	31 Oct 2020 (Study Day 58) - 11 Nov 2020 (Study Day 69)	Prevent Constipation
Sennoside a+b	31 Oct 2020 (Study Day 58) - 11 Nov 2020 (Study Day 69)	Prevent Constipation
Clopidogrel	20 Nov 2020 (Study Day 78) - 29 Nov 2020 (Study Day 87)	Ascvd Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

FDA-CBER-2022-1614-3379878

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 2/moderate	Not related	05 Sep 2020 (Study Day 2) - Ongoing
Myalgia	Grade 1/mild	Related	05 Sep 2020 (Study Day 2) - 23 Sep 2020 (Study Day 20)
Myalgia	Grade 1/mild	Not related	03 Oct 2020 (Study Day 30) - 17 Oct 2020 (Study Day 44)
Asymptomatic COVID-19	Grade 1/mild	Not related	31 Oct 2020 (Study Day 58) - 11 Nov 2020 (Study Day 69)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US349-2078 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	05 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	02 Oct 2020 (Study Day 28)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Haematoma/Hematoma Of The R Leg	SAE	Grade 3/severe	Not related	03 Nov 2020 (Study Day 60) – 13 Nov 2020 (Study Day 70)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US349-2078, a 93-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 05 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 02 Oct 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Nov 2020 (Study Day 60), 59 days after the first dose and 32 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of haematoma. Action taken with the IP was not applicable. The event of hematoma of the r leg lasted for 11 days, after which it was considered to be recovered/resolved on 13 Nov 2020 (Study Day 70). The investigator assessed the event of haematoma to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000868	Haematoma

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	1932 - 1932
Tonsillitis	Tonsillitis	1932 - 1932
Cardiac arrest	S/p cardiac arrest with resuscitation	1973 - 1973
Prostate cancer	Prostate cancer	1998 - 1998
Prostatectomy	Prostatectomy	1998 - 1998
Coronary artery bypass	Coronary artery bypass graft	2003 - 2003
Coronary artery disease	Coronary artery disease	2003 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2003 - Ongoing
Oedema peripheral	Right lower extremity edema	2003 - Ongoing
Nephrectomy	Left nephrectomy for kidney cancer	2013 - 2013
Atrial fibrillation	Atrial fibrillation	2015 - Ongoing
Cardiac failure congestive	Congestive heart failure	2015 - Ongoing
Cerebrovascular accident	S/p cva	2015 - 2015
Cerebrovascular accident	S/p cva	2017 - 2017
Depression	Depression	2017 - Ongoing
Skin neoplasm excision	S/p resection of basal cell cancer	2018 - 2018
Cerebrovascular accident	S/p cva with residual right lower extremity weakness and ataxia	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	2003 - Ongoing	Hyperlipidemia
Metoprolol	2016 - 17 Nov 2020 (Study Day 74)	Atrial Fibrillation
Sertraline	2017 - Ongoing	Depression
Apixaban	2018 - 10 Nov 2020 (Study Day 67)	S/P History Of Multiple Cva's
Furosemide	2018 - Ongoing	Congestive Heart Failure
Acetylsalicylic acid	2019 - 10 Nov 2020 (Study Day 67)	Coronary Artery Disease
3 units of prbc infusion*	10 Nov 2020 (Study Day 67) - 10 Nov 2020 (Study Day 67)	Adverse Event
Colonoscopy*	11 Nov 2020 (Study Day 68) - 11 Nov 2020 (Study Day 68)	Adverse Event
Ct right lower extremity*	11 Nov 2020 (Study Day 68) - 11 Nov 2020 (Study Day 68)	Adverse Event
Iron	11 Nov 2020 (Study Day 68) - Ongoing	Low Hemogloblin
Arterial angiogram with embolization*	13 Nov 2020 (Study Day 70) - 13 Nov 2020 (Study Day 70)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Apixaban	16 Nov 2020 (Study Day 73) - Ongoing	Cerebrovascular Disease And Atrial Fibrillation
Metoprolol	18 Nov 2020 (Study Day 75) - 01 Mar 2021 (Study Day 178)	Atrial Fibrillation

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Pain	Grade 1/mild	Related	05 Sep 2020 (Study Day 1) - 07 Sep 2020 (Study Day 3)
Diarrhoea	Grade 1/mild	Not related	07 Nov 2020 (Study Day 64) - 18 Nov 2020 (Study Day 75)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US349-2085 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	08 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	05 Oct 2020 (Study Day 28)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Abdominal Pain Lower/Right Lower Quadrant Pain	SAE	Grade 2/ moderate	Not related	26 Nov 2020 (Study Day 80) – 25 Dec 2020 (Study Day 109)	Recovered/resolved
Ovarian Cyst/Benign Right Ovarian Cyst	SAE	Grade 4	Not related	26 Nov 2020 (Study Day 80) – 25 Dec 2020 (Study Day 109)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US349-2085, a 29-year-old Hispanic or Latino female, received the first dose of placebo in the right arm on 08 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 05 Oct 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 26 Nov 2020 (Study Day 80), 79 days after the first dose and 52 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of abdominal pain lower. Action taken with the IP was not applicable. The event of right lower quadrant pain lasted for 30 days, after which it was considered to be recovered/resolved on 25 Dec 2020 (Study Day 109). The investigator assessed the event of abdominal pain lower to be not related to the IP.

On 26 Nov 2020 (Study Day 80), 79 days after the first dose and 52 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of ovarian cyst. Action taken with the IP was not applicable. The event of benign right ovarian cyst lasted for 30 days, after which it was considered to be recovered/resolved on 25 Dec 2020 (Study Day 109). The investigator assessed the event of ovarian cyst to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001007	Ovarian cyst
MOD-2020-001007	Abdominal pain lower

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Fibromyalgia	Fibromyalgia	2008 - Ongoing
Anxiety	Anxiety	2009 - Ongoing
Depression	Depression	2009 - Ongoing
Migraine	History of migraines	2009 - 2013
Gastrooesophageal reflux disease	Gerd	2012 - Ongoing
Cholecystectomy	Cholecystectomy	2013 - 2013
Coeliac disease	Celiac disease	2013 - Ongoing
Asthma	Asthma - mild, intermittent	2014 - Ongoing
Seasonal allergy	Seasonal allergies	2018 - Ongoing
Eczema	Eczema	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Famotidine	2012 - Ongoing	Gerd
Salbutamol	2014 - Ongoing	Mild Asthma
Biotin	2015 - Ongoing	General Health
Vitamin d nos	2015 - Ongoing	General Health
Vitamins nos	2015 - Ongoing	General Health
Levonorgestrel	2018 - Ongoing	Contraception
Loratadine	2018 - Ongoing	Seasonal Allergies
Emtricitabine; tenofovir disoproxil fumarate	2019 - Oct 2020	Prep
Methocarbamol	2020 - Ongoing	Fibromyalgia
Ibuprofen	20 Sep 2020 (Study Day 13) - 22 Sep 2020 (Study Day 15)	Generalized Muscle Soreness From Exercising

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amoxicillin	26 Sep 2020 (Study Day 19) - 02 Oct 2020 (Study Day 25)	Strep Throat
Lidocaine	26 Sep 2020 (Study Day 19) - 28 Sep 2020 (Study Day 21)	Pain Relief Of Sore Throat
Amoxicillin; clavulanic acid	03 Oct 2020 (Study Day 26) - 09 Oct 2020 (Study Day 32)	Strep Throat
Clindamycin	12 Oct 2020 (Study Day 35) - 17 Oct 2020 (Study Day 40)	Strep Throat
Vancomycin	17 Oct 2020 (Study Day 40) - 27 Oct 2020 (Study Day 50)	Strep Throat
Influenza vaccine	27 Oct 2020 (Study Day 50) - 27 Oct 2020 (Study Day 50)	Influenza Prevention
Ibuprofen	28 Nov 2020 (Study Day 82) - 25 Dec 2020 (Study Day 109)	Benign Right Ovarian Cyst Pain
Hydrocodone; paracetamol	02 Dec 2020 (Study Day 86) - 25 Dec 2020 (Study Day 109)	Right Ovarian Cyst Pain
Ultrasound*	02 Dec 2020 (Study Day 86) - 02 Dec 2020 (Study Day 86)	Adverse Event
Right ovarian cyst removal*	10 Dec 2020 (Study Day 94) - 10 Dec 2020 (Study Day 94)	Adverse Event
Cefdinir	24 Mar 2021 (Study Day 198) - Ongoing	Tonsilitis
Probiotics nos	24 Mar 2021 (Study Day 198) - Ongoing	Prevent Diarrhea From Antibiotic

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Myalgia	Grade 1/mild	Not related	20 Sep 2020 (Study Day 13) - 22 Sep 2020 (Study Day 15)
Fibromyalgia	Grade 2/moderate	Not related	24 Sep 2020 (Study Day 17) - 28 Sep 2020 (Study Day 21)
Pharyngitis Streptococcal	Grade 3/severe	Not related	24 Sep 2020 (Study Day 17) - 25 Oct 2020 (Study Day 48)
Diarrhoea	Grade 1/mild	Not related	11 Oct 2020 (Study Day 34) - 24 Oct 2020 (Study Day 47)
Myalgia	Grade 1/mild	Related	11 Oct 2020 (Study Day 34) - 13 Oct 2020 (Study Day 36)
Tonsillitis	Grade 3/severe	Not related	14 Mar 2021 (Study Day 188) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379885

Participant Number:	US349-2178 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	17 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	15 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Appendicitis Perforated/ Appendicitis/Perforated Appendix, S/P Appendectomy	SAE	Grade 3/ severe	Not related	04 Jan 2021 (Study Day 110) – 11 Jan 2021 (Study Day 117)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US349-2178, a 68-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 17 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 15 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Jan 2021 (Study Day 110), 109 days after the first dose and 81 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of appendicitis perforated. Action taken with the IP was not applicable. The event of appendicitis/perforated appendix, s/p appendectomy lasted for 8 days, after which it was considered to be recovered/resolved on 11 Jan 2021 (Study Day 117). The investigator assessed the event of appendicitis perforated to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002636	Appendicitis perforated

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

FDA-CBER-2022-1614-3379886

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	2000 - Ongoing
Postmenopause	Post-menopausal	2001 - Ongoing
Hepatic steatosis	Fatty liver	2015 - 2018
Hyperlipidaemia	Hyperlipidemia	2015 - Ongoing
Restless legs syndrome	Restless legs syndrome	2017 - Ongoing
Osteoarthritis	Osteoarthritis of the foot	2018 - Ongoing
Vitamin D deficiency	Vitamin d3 deficiency	2019 - Ongoing
Foot deformity	Right foot bunion	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Gabapentin	2017 - Ongoing	Restless Leg Syndrome
Magnesium	2018 - Ongoing	Restless Leg Syndrome
Paracetamol	2018 - Ongoing	Osteoarthritis Of The Foot
Vitamins nos	2018 - 15 Jan 2021 (Study Day 121)	Health Maintenance
Fexofenadine hydrochloride	2019 - Ongoing	Seasonal Allergies
Colecalciferol	2020 - Ongoing	Vitamin D3 Deficiency
Collagen	2020 - Ongoing	Health Maintenance
Monascus purpureus	2020 - 24 Sep 2020 (Study Day 8)	Hyperlipidemia
Naproxen	2020 - Ongoing	Right Foot Bunion
Melatonin	01 Oct 2020 (Study Day 15) - Ongoing	General Restlessness
Cannabidiol	Nov 2020 - Ongoing	Osteoarthritis Of The Foot
Ct of abdomen*	07 Jan 2021 (Study Day 113) - 07 Jan 2021 (Study Day 113)	Adverse Event
Laparoscopic appendectomy*	07 Jan 2021 (Study Day 113) - 07 Jan 2021 (Study Day 113)	Adverse Event
Hydrocodone	11 Jan 2021 (Study Day 117) - 21 Jan 2021 (Study Day 127)	Post Surgical Pain Appendectomy
Amoxicillin; clavulanic acid	12 Jan 2021 (Study Day 118) - 21 Jan 2021 (Study Day 127)	Post Appendicitis (Perforated Appendix), S/P Appendectomy
Ibuprofen	15 Jan 2021 (Study Day 121) - 15 Jan 2021 (Study Day 121)	Pain In Side Post Appendectomy

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Foot Deformity	Grade 3/severe	Not related	17 Sep 2020 (Study Day 1) - 18 Sep 2020 (Study Day 2)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3379888

Participant Number:	US349-2243 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	23 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	21 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	SAE	Grade 1/mild	Not related	07 Nov 2020 (Study Day 46) – 19 Nov 2020 (Study Day 58)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US349-2243, a 50-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 23 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 21 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Nov 2020 (Study Day 46), 45 days after the first dose and 17 days after the second dose of the IP, the participant experienced a Grade 1/mild serious adverse event of covid-19. Action taken with the IP was not applicable. The event of COVID-19 lasted for 13 days, after which it was considered to be recovered/resolved on 19 Nov 2020 (Study Day 58). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000839	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	21 Oct 2020 (Study Day 29) - 22 Oct 2020 (Study Day 30)	Headache And Injection Site Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Myalgia	Grade 1/mild	Not related	09 Oct 2020 (Study Day 17) - 14 Oct 2020 (Study Day 22)
Fatigue	Grade 1/mild	Related	22 Oct 2020 (Study Day 30) - 06 Nov 2020 (Study Day 45)
Fatigue	Grade 2/moderate	Not related	01 Nov 2020 (Study Day 40) - 03 Nov 2020 (Study Day 42)
Myalgia	Grade 2/moderate	Not related	01 Nov 2020 (Study Day 40) - 03 Nov 2020 (Study Day 42)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US349-2273 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	30 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	28 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Ventricular Extrasystoles/ Chest Pressure - Respiratory/ Shortness Of Breath - Cardiac Related From Pvcs	SAE	Grade 4	Not related	30 Dec 2020 (Study Day 92) – 30 Dec 2020 (Study Day 92)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US349-2273, a 65-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 30 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 28 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Dec 2020 (Study Day 92), 91 days after the first dose and 63 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of ventricular extrasystoles. Action taken with the IP was not applicable. The event of chest pressure - respiratory/shortness of breath - cardiac related from pvcs lasted for 1 days, after which it was considered to be recovered/resolved on 30 Dec 2020 (Study Day 92). The investigator assessed the event of ventricular extrasystoles to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001710	Angina pectoris

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Coronary artery disease	Coronary artery disease	Not reported
Hyperlipidaemia	Hyperlipidemia	Not reported - Ongoing
Intervertebral disc protrusion	Lumbar spine bulging disc	Not reported - Ongoing
Pituitary tumour benign	Benign pituitary gland tumor	Not reported - 1978
Nephrolithiasis	Kidney stones	1989 - Ongoing
Arthritis	Arthritis of the right knee	2010 - Ongoing
Pollakiuria	Urinary frequency of unknown origin	2014 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	2017 - Ongoing
Myocardial infarction	Myocardial infarction	Mar 2019 - Mar 2019
Hypertension	Hypertension	Aug 2020 - Ongoing
Rotator cuff syndrome	Left shoulder rotator tear	12 Aug 2020 (Study Day -49) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2019 - Ongoing	Health Maintenance
Cyclobenzaprine	2020 - Ongoing	Pain From Left Shoulder Rotator Tear
Diclofenac	2020 - Ongoing	Pain From Arthritis To Right Knee
Lisinopril	2020 - Ongoing	Hypertension
Pneumococcal vaccine polysacch 23v	01 Sep 2020 (Study Day -29) - 01 Sep 2020 (Study Day -29)	Preventative Care
Varicella zoster vaccine rge (cho)	01 Sep 2020 (Study Day -29) - 01 Sep 2020 (Study Day -29)	Preventative Care
Amoxicillin	09 Oct 2020 (Study Day 10) - 09 Oct 2020 (Study Day 10)	Prior To Dental Work
Tamsulosin	14 Nov 2020 (Study Day 46) - Ongoing	Benign Prostatic Hyperplasia
Influenza vaccine	23 Nov 2020 (Study Day 55) - 23 Nov 2020 (Study Day 55)	Prevent Influenza
Varicella zoster vaccine	23 Nov 2020 (Study Day 55) - 23 Nov 2020 (Study Day 55)	Prevent Shingles
Tamsulosin hydrochloride	25 Nov 2020 (Study Day 57) - Ongoing	Urinary Frequecny Of Unknown Origin
Acs rule out with troponin negative x3*	30 Dec 2020 (Study Day 92) - 30 Dec 2020 (Study Day 92)	Adverse Event
Chest x-ray 1 view*	30 Dec 2020 (Study Day 92) - 30 Dec 2020 (Study Day 92)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ekg*	30 Dec 2020 (Study Day 92) - 30 Dec 2020 (Study Day 92)	Adverse Event
Exercise stress echo*	30 Dec 2020 (Study Day 92) - 30 Dec 2020 (Study Day 92)	Adverse Event
Metoprolol succinate	31 Dec 2020 (Study Day 93) - Ongoing	Premature Ventricular Contractions - In Relation To Chest Pressure Ae
Angiogram with stent placement*	18 Jan 2021 (Study Day 111) - 18 Jan 2021 (Study Day 111)	Medical History
Clopidogrel bisulfate	18 Jan 2021 (Study Day 111) - Ongoing	Post-Procedure Stent
Rosuvastatin calcium	18 Jan 2021 (Study Day 111) - Ongoing	Hyperlipidemia
Blood cultures*	30 Jan 2021 (Study Day 123) - 30 Jan 2021 (Study Day 123)	Adverse Event
Appendectomy*	01 Feb 2021 (Study Day 125) - 01 Feb 2021 (Study Day 125)	Adverse Event
Piperacillin; tazobactam	01 Feb 2021 (Study Day 125) - 05 Feb 2021 (Study Day 129)	Streptococcal Anginosus Blood Stream Infection
Amoxicillin; clavulanic acid	05 Feb 2021 (Study Day 129) - 13 Feb 2021 (Study Day 137)	Post-Appendectomy Antibiotic Coverage
Docusate sodium	05 Feb 2021 (Study Day 129) - Ongoing	Stool Softener
Paracetamol	05 Feb 2021 (Study Day 129) - Ongoing	Post-Operative Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Post-Traumatic Pain	Grade 1/mild	Not related	06 Oct 2020 (Study Day 7) - 07 Oct 2020 (Study Day 8)
Road Traffic Accident	Grade 1/mild	Not related	06 Oct 2020 (Study Day 7) - 06 Oct 2020 (Study Day 7)
Nocturia	Grade 1/mild	Not related	13 Nov 2020 (Study Day 45) - 18 Nov 2020 (Study Day 50)
Nocturia	Grade 1/mild	Not related	13 Nov 2020 (Study Day 45) - 18 Nov 2020 (Study Day 50)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US349-2281 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	01 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	29 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Tendon Rupture/Torn Tendon In Left Wrist	SAE	Grade 2/ moderate	Not related	21 Dec 2020 (Study Day 82) – Ongoing	Recovering/ resolving

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US349-2281, a 42-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 01 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 29 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 21 Dec 2020 (Study Day 82), 81 days after the first dose and 53 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of tendon rupture. Action taken with the IP was not applicable. The event of torn tendon in left wrist was considered to be ongoing. The investigator assessed the event of tendon rupture to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-012366	Tendon rupture

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Muscle operation	Major pectoralis surgical repair	2008 - 2008
Muscle rupture	Major pectoralis tear	2008 - 2008

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hordeolum	Recurrent bilateral styes	2014 - Jun 2020
Alopecia	Hair loss	2017 - Ongoing
Fracture treatment	Left ulnar fracture with surgical repair	2017 - 2017
Dermal filler injection	Cosmetic skin procedure to bilateral cheeks with juvederm	2018 - 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Doxycycline	2014 - Jun 2020	Bilateral Recurrent Styes
Finasteride	2017 - Ongoing	Hair Loss
Emtricitabine; tenofovir disoproxil fumarate	2020 - Ongoing	Prep
Cyclobenzaprine	23 Dec 2020 (Study Day 84) - Ongoing	Torn Tendon Left Wrist
Diclofenac	23 Dec 2020 (Study Day 84) - Ongoing	Torn Tendon Left Wrist
Lidocaine	23 Dec 2020 (Study Day 84) - Ongoing	Torn Tendon Left Wrist
Menthol; methyl salicylate	23 Dec 2020 (Study Day 84) - Ongoing	Torn Tendon Left Wrist
Naproxen	23 Dec 2020 (Study Day 84) - Ongoing	Torn Tendon Left Wrist
Physical therapy for torn tendon in left wrist*	04 Jan 2021 (Study Day 96) - 04 Jan 2021 (Study Day 96)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Oropharyngeal Pain	Grade 1/mild	Not related	03 Oct 2020 (Study Day 3) - 04 Oct 2020 (Study Day 4)
Rhinorrhoea	Grade 1/mild	Not related	03 Oct 2020 (Study Day 3) - 04 Oct 2020 (Study Day 4)
Nasal Congestion	Grade 2/moderate	Not related	11 Feb 2021 (Study Day 134) - 15 Feb 2021 (Study Day 138)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US350-2045 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Migraine/Migraine Exacerbation	SAE	Grade 3/ severe	Not related	16 Sep 2020 (Study Day 20) – 23 Sep 2020 (Study Day 27)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US350-2045, a 55-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 25 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Sep 2020 (Study Day 20), 19 days after the first dose and 9 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of migraine. The IP dose was not changed due to the migraine exacerbation. The event of migraine exacerbation lasted for 8 days, after which it was considered to be recovered/resolved on 23 Sep 2020 (Study Day 27). The investigator assessed the event of migraine to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000345	Migraine

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1970 - Ongoing
Blood cholesterol increased	High cholesterol	1998 - Ongoing
Migraine	Migraines	2006 - Ongoing
Asthma	Asthma	2010 - Ongoing
Postmenopause	Post-menopausal	2018 - Ongoing
Osteoarthritis	Arthritis (osteoarthritis) - bilateral hands and feet	Apr 2018 - Ongoing
Muscle spasms	Muscle spasms - low back	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Magnesium	2005 - Ongoing	General Wellness
Naltrexone	2005 - Ongoing	Migraine Prevention
Ubidecarenone	2005 - Ongoing	General Wellness
Topiramate	2007 - Ongoing	Migraine Prevention
Cetirizine hydrochloride	2010 - Ongoing	Seasonal Allergies
Biotin	2017 - Ongoing	General Wellness
Fluticasone propionate	2017 - Ongoing	Asthma
Rosuvastatin	2017 - Ongoing	High Cholesterol
Salbutamol	2017 - Ongoing	Asthma
Sertraline	2017 - Ongoing	Migraine Prevention
Promethazine	2019 - Ongoing	Migraine Related Nausea Prevention
Lasmiditan succinate	2020 - Ongoing	Migraine Prevention
Dexamethasone	16 Sep 2020 (Study Day 20) - 16 Sep 2020 (Study Day 20)	Treatment Of Acute Migraine
Diphenhydramine	16 Sep 2020 (Study Day 20) - 16 Sep 2020 (Study Day 20)	Treatment Of Acute Migraine
Magnesium sulfate	16 Sep 2020 (Study Day 20) - 16 Sep 2020 (Study Day 20)	Treatment Of Acute Migraine
Prochlorperazine	16 Sep 2020 (Study Day 20) - 16 Sep 2020 (Study Day 20)	Treatment Of Acute Migraine
Promethazine	16 Sep 2020 (Study Day 20) - 16 Sep 2020 (Study Day 20)	Treatment Of Acute Migraine
Sodium chloride	16 Sep 2020 (Study Day 20) - 16 Sep 2020 (Study Day 20)	Treatment Of Acute Migraine
Valproate sodium	16 Sep 2020 (Study Day 20) - 16 Sep 2020 (Study Day 20)	Treatment Of Acute Migraine

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine hydrochloride	22 Sep 2020 (Study Day 26) - 22 Sep 2020 (Study Day 26)	Treatment Of Migraine
Ketorolac tromethamine	22 Sep 2020 (Study Day 26) - 23 Sep 2020 (Study Day 27)	Treatment Of Migraine
Lorazepam	22 Sep 2020 (Study Day 26) - 22 Sep 2020 (Study Day 26)	Treatment Of Migraine
Magnesium sulfate	22 Sep 2020 (Study Day 26) - 22 Sep 2020 (Study Day 26)	Treatment Of Migraine
Mri of brain*	22 Sep 2020 (Study Day 26) - 22 Sep 2020 (Study Day 26)	Adverse Event
Paracetamol	22 Sep 2020 (Study Day 26) - 23 Sep 2020 (Study Day 27)	Treatment Of Migraine
Prochlorperazine	22 Sep 2020 (Study Day 26) - 22 Sep 2020 (Study Day 26)	Treatment Of Migraine
Sodium chloride	22 Sep 2020 (Study Day 26) - 22 Sep 2020 (Study Day 26)	Treatment Of Migraine
Cyclobenzaprine	23 Sep 2020 (Study Day 27) - 23 Sep 2020 (Study Day 27)	Muscle Spasms - Low Back
Influenza vaccine	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Flu Prophylaxis
Fluticasone propionate	15 Oct 2020 (Study Day 49) - Ongoing	Seasonal Allergy Exacerbation
Ketotifen	15 Oct 2020 (Study Day 49) - Ongoing	Seasonal Allergy Exacerbation

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Nausea	Grade 1/mild	Related	01 Sep 2020 (Study Day 5) - 05 Sep 2020 (Study Day 9)
Fatigue	Grade 1/mild	Related	02 Sep 2020 (Study Day 6) - 06 Sep 2020 (Study Day 10)
Milk Allergy	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 46) - 21 Nov 2020 (Study Day 86)
Seasonal Allergy	Grade 1/mild	Not related	15 Oct 2020 (Study Day 49) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US350-2142 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	11 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	06 Oct 2020 (Study Day 26)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Multiple Sclerosis/Multiple Sclerosis	SAE	Grade 4	Not related	12 Nov 2020 (Study Day 63) – 23 Nov 2020 (Study Day 74)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US350-2142, a 45-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 11 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 06 Oct 2020 (Study Day 26). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Nov 2020 (Study Day 63), 62 days after the first dose and 37 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of multiple sclerosis. Action taken with the IP was not applicable. The event of multiple sclerosis lasted for 12 days, after which it was considered to be recovered/resolved with sequelae on 23 Nov 2020 (Study Day 74). The investigator assessed the event of multiple sclerosis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000751	Multiple sclerosis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Penicillin allergy	1980 - Ongoing
Endometriosis	Endometriosis	2010 - 2010
Oophorectomy	Oophorectemy	2010 - 2010
Hot flush	Hot flashes	2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Venlafaxine	2016 - Ongoing	Hot Flashes
Influenza vaccine	26 Oct 2020 (Study Day 46) - 26 Oct 2020 (Study Day 46)	Flu Prevention
Ergocalciferol	12 Nov 2020 (Study Day 63) - Ongoing	Vitamin D Deficiency
Methylprednisolone sodium succinate	12 Nov 2020 (Study Day 63) - 13 Nov 2020 (Study Day 64)	Multiple Sclerosis
Mri on brain*	12 Nov 2020 (Study Day 63) - 12 Nov 2020 (Study Day 63)	Adverse Event
Omeprazole	12 Nov 2020 (Study Day 63) - Ongoing	Prevent Steroid Induced Ulcers
Calcium	14 Nov 2020 (Study Day 65) - Ongoing	Vitamin D Deficiency
Methylprednisolone sodium succinate	14 Nov 2020 (Study Day 65) - 16 Nov 2020 (Study Day 67)	Multiple Sclerosis
Vitamin d nos	14 Nov 2020 (Study Day 65) - Ongoing	Vitamin D Deficiency
Lumbar puncture*	23 Nov 2020 (Study Day 74) - 23 Nov 2020 (Study Day 74)	Adverse Event
Varicella zoster vaccine rge (cho)	14 Dec 2020 (Study Day 95) - 14 Dec 2020 (Study Day 95)	Shingles Prevention
Varicella zoster vaccine rge (cho)	09 Mar 2021 (Study Day 180) - 09 Mar 2021 (Study Day 180)	Shingles Prevention
Diroximel fumarate	23 Mar 2021 (Study Day 194) - Ongoing	Multiple Sclerosis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Vitamin D Deficiency	Grade 2/moderate	Not related	12 Nov 2020 (Study Day 63) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US351-2036 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	12 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	09 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Venous Thrombosis Limb/Venous Thrombosis Of Right Lower Extremity	SAE	Grade 4	Not related	02 Dec 2020 (Study Day 113) – 13 Dec 2020 (Study Day 124)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US351-2036, a 43-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 12 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 09 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Dec 2020 (Study Day 113), 112 days after the first dose and 84 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of venous thrombosis limb. Action taken with the IP was not applicable. The event of venous thrombosis of right lower extremity lasted for 12 days, after which it was considered to be recovered/resolved with sequelae on 13 Dec 2020 (Study Day 124). The investigator assessed the event of venous thrombosis limb to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001158	Venous thrombosis limb

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Substance use	Former recreational drug use	Not reported - 2017
Fallot's tetralogy	Tetarology of fallout	(b) (6) 1976 (Study Day (b) (6) - 1978
Nasal septum deviation	Deviated septum	(b) (6) 1976 (Study Day (b) (6)) - Ongoing
Seasonal allergy	Ragweed allergy	1977 - Ongoing
Tetralogy of Fallot repair	Tetarology of fallout repair	1978 - 1978
Seasonal allergy	Seasonal allergies	1986 - Ongoing
Acne	Acne face and back	1988 - 1999
Folliculitis	Folliculitis of face	1988 - 1999
Myopia	Nearsighted bilateral	1988 - Ongoing
Nasal septal operation	Sinus surgery deviated septum	1991 - 1991
Tympanic membrane perforation	Perforated left eardrum	1991 - 1996
Tympanoplasty	Perforated left eardrum repair	1991 - 1991
Nasal septal operation	Sinus surgery deviated septum	1994 - 1994
Nasal septal operation	Sinus surgery deviated septum	1995 - 1995
Tinnitus	Left ear tinnitus	1996 - Ongoing
Peripheral swelling	Swelling in bilateral legs and feet	2000 - Ongoing
Poor peripheral circulation	Poor circulation in bilateral legs	2000 - Ongoing
Hypothyroidism	Hypothyroidism	2001 - Ongoing
Overweight	Overweight	2001 - Ongoing
Restless legs syndrome	Restless leg syndrome	2001 - Ongoing
Spinal osteoarthritis	Osteoarthritis lower back	2001 - Ongoing
Spinal osteoarthritis	Osteoarthritis of the neck	2001 - Ongoing
Thyroid cancer	Thyroid cancer	2001 - 2001
Thyroidectomy	Thyroidectomy	2001 - 2001
Hypertension	Hypertension	2002 - Ongoing
Sleep apnoea syndrome	Sleep apnea	2002 - Ongoing
Intermittent explosive disorder	Intermittent explosive disorder	2003 - Ongoing
Back pain	Back pain	2005 - Ongoing
Intervertebral disc operation	L4-l5 discectomy	2008 - 2008
Atrial fibrillation	Atrial fibrillation	2010 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	2010 - Ongoing
Deep vein thrombosis	Deep vein thrombosis of lower extremity	2012 - 2012
Gastric ulcer	Gastric ulcer	2012 - 2012
Pulmonary valve replacement	Pulmonary valve replacement	Sep 2012 - Sep 2012
Clostridium difficile infection	C. diff infection	2015 - 2015
Gout	Gout bilateral feet	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	2001 - Ongoing	Hypothyroidism
Fluticasone propionate	2010 - Ongoing	Seasonal Allergies
Omeprazole	2011 - 26 Jan 2021 (Study Day 168)	Acid Reflux
Benazepril	2012 - Ongoing	Hypertension
Hydrochlorothiazide	2012 - Ongoing	Hypertension
Cetirizine hydrochloride	2014 - Ongoing	Seasonal Allergies
Allopurinol	2016 - Ongoing	Gout Bilateral Feet
Gabapentin	2016 - Ongoing	Osteoarthritis Neck/Back Pain/Restless Leg Syndrome
Aripiprazole	2017 - Ongoing	Intermittent Explosive Disorder
Ibuprofen	2018 - 14 Dec 2020 (Study Day 125)	Back Pain
Ibuprofen	07 Sep 2020 (Study Day 27) - 10 Sep 2020 (Study Day 30)	Left Shoulder Nerve Impingement
Glucose; heparin sodium	11 Dec 2020 (Study Day 122) - 13 Dec 2020 (Study Day 124)	Venous Thrombosis Of Right Lower Extremity
Heparin	11 Dec 2020 (Study Day 122) - 11 Dec 2020 (Study Day 122)	Venous Thrombosis Of Right Lower Extremity
Paracetamol	11 Dec 2020 (Study Day 122) - 13 Dec 2020 (Study Day 124)	Venous Thrombosis Of Right Lower Extremity
Potassium chloride	11 Dec 2020 (Study Day 122) - 11 Dec 2020 (Study Day 122)	Hypokalemia
Apixaban	14 Dec 2020 (Study Day 125) - 20 Dec 2020 (Study Day 131)	Venous Thrombosis Of Right Lower Extremity
Apixaban	21 Dec 2020 (Study Day 132) - Ongoing	Venous Thrombosis Of Right Lower Extremity
Omeprazole	27 Jan 2021 (Study Day 169) - Ongoing	Worsening Acid Reflux

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Rotator Cuff Syndrome	Grade 2/moderate	Not related	27 Aug 2020 (Study Day 16) - Ongoing
Hypokalaemia	Grade 2/moderate	Not related	11 Dec 2020 (Study Day 122) - Ongoing
Cholelithiasis	Grade 1/mild	Not related	13 Dec 2020 (Study Day 124) - Ongoing
Diverticulum Intestinal	Grade 1/mild	Not related	13 Dec 2020 (Study Day 124) - Ongoing
Deep Vein Thrombosis	Grade 2/moderate	Not related	13 Jan 2021 (Study Day 155) - Ongoing
Gastrooesophageal Reflux Disease	Grade 2/moderate	Not related	27 Jan 2021 (Study Day 169) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US351-2193 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	02 Oct 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Atrial Fibrillation/Atrial Fibrillation	SAE	Grade 3/severe	Not related	27 Oct 2020 (Study Day 56) – 06 Nov 2020 (Study Day 66)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US351-2193, a 77-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 02 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 02 Oct 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 27 Oct 2020 (Study Day 56), 55 days after the first dose and 25 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of atrial fibrillation. Action taken with the IP was not applicable. The event of atrial fibrillation lasted for 11 days, after which it was considered to be recovered/resolved with sequelae on 06 Nov 2020 (Study Day 66). The investigator assessed the event of atrial fibrillation to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000580	Atrial fibrillation

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Constipation	Constipation	1950 - Ongoing
Hypermetropia	Farsighted	1953 - Ongoing
Myopia	Nearsighted	1953 - Ongoing
Acne	Acne	1960 - Ongoing
Ex-tobacco user	Former tobacco use	1960 - 1964
Bipolar disorder	Bipolar disorder	1969 - 2015
Depression	Depression	1969 - Ongoing
Migraine	Migraines	1973 - Ongoing
Breast cancer	Cancer of the left breast	1990 - 1990
Female sterilisation	Bilateral tubal ligation	1990 - 1990
Hypothyroidism	Hypothyroidism	1990 - Ongoing
Lymphadenectomy	Left underarm lymph node removal	1990 - 1990
Mastectomy	Bilateral mastectomy	1990 - 1990
Peripheral vascular disorder	Bilateral peripheral vascular disease	1993 - Ongoing
Retinal operation	Bilateral retinal repair	1998 - 1998
Retinal tear	Bilateral retinal tears	1998 - 1998
Dupuytren's contracture	Duputren's contracture bilateral hands	2000 - Ongoing
Cataract	Bilateral cataracts	2002 - 2002
Cataract operation	Bilateral cataracts removal	2002 - 2002
Back pain	Back pain	2010 - 2016
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2010 - Ongoing
Haemorrhoids	Hemorrhoids	2010 - Ongoing
Insomnia	Insomnia	2010 - Ongoing
Asthma exercise induced	Exercise induced asthma	2013 - Ongoing
Osteoarthritis	Osteoarthritis of bilateral hands and knees	2013 - Ongoing
Osteoporosis	Osteoporosis	2013 - Ongoing
Basal cell carcinoma	Basal cell skin cancer face	2014 - 2014
Glaucoma	Glaucoma	2014 - Ongoing
Hypertension	Hypertension	2014 - Ongoing
Sinusitis	Sinusitis	2015 - Ongoing
Urinary tract infection	Intermittent urinary tract infections	2015 - Ongoing
Spinal fusion surgery	Spinal fusion	2016 - 2016
Spinal laminectomy	Spinal laminectomy	2016 - 2016
Squamous cell carcinoma of skin	Squamous cell skin cancer	2016 - 2016
Varicose vein operation	Varicose vein ablation x3	2016 - 2016
Macular degeneration	Macular degeneration	2017 - Ongoing
Gastritis	Gastritis	2018 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Oesophagitis	Esophagitis	2018 - Ongoing
Muscle operation	Left bicep repair	18 Dec 2018 (Study Day -624) - 18 Dec 2018 (Study Day -624)
Rotator cuff repair	Left rotator cuff repair	18 Dec 2018 (Study Day -624) - 18 Dec 2018 (Study Day -624)
Hyponatraemia	Hyponatremia	Jan 2020 - Ongoing
Botulinum toxin injection	Botox facial injection	Mar 2020 - Mar 2020
Dermatitis contact	Contact dermatitis bilateral arms	Mar 2020 - Ongoing
Eczema	Eczema	May 2020 - Ongoing
Perichondritis	Chondrodermatitis nodularis helicis	25 Aug 2020 (Study Day -8) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	1990 - Ongoing	Hypothyroidism
Sumatriptan	2000 - Ongoing	Migraines
Naproxen sodium	2013 - Ongoing	Osteoarthritis
Lisinopril	2014 - Ongoing	Hypertension
Calcium; vitamin d nos	2015 - Ongoing	Supplement
Colecalciferol	2015 - Ongoing	Supplement
Fluticasone	2015 - Ongoing	Sinusitis
Guaifenesin	2015 - Ongoing	Sinusitis
Macrogol 3350	2015 - Ongoing	Constipation
Omega-3 nos	2015 - Ongoing	Supplement
Other ophthalmologicals	2015 - Ongoing	Glaucoma/Macular Degeneration
Resveratrol	2015 - Ongoing	Supplement
Vitamin b complex	2015 - Ongoing	Supplement
Vitamins nos	2015 - Ongoing	Supplement
Liothyronine	2017 - Ongoing	Hypothyroidism
Triamcinolone	02 Mar 2020 (Study Day -184) - Ongoing	Contact Dermatitis Bilateral Arm
Ascorbic acid	15 Aug 2020 (Study Day -18) - Ongoing	Supplement
Ciprofloxacin	Sep 2020 - 04 Oct 2020 (Study Day 33)	Intermittent Urinary Tract Infection
Influenza vaccine	19 Oct 2020 (Study Day 48) - 19 Oct 2020 (Study Day 48)	Prophylaxis For Seasonal Influenza
Naproxen sodium	22 Oct 2020 (Study Day 51) - 28 Oct 2020 (Study Day 57)	Upper Respiratory Infection
Echocardiogram*	28 Oct 2020 (Study Day 57) - 28 Oct 2020 (Study Day 57)	Adverse Event
Cardioversion*	29 Oct 2020 (Study Day 58) - 29 Oct 2020 (Study Day 58)	Adverse Event
Apixaban	30 Oct 2020 (Study Day 59) - Ongoing	Atrial Fibrillation

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metoprolol	30 Oct 2020 (Study Day 59) - 06 Nov 2020 (Study Day 66)	Atrial Fibrillation
Doxycycline	02 Nov 2020 (Study Day 62) - 11 Nov 2020 (Study Day 71)	Sinusitis
Prednisone	02 Nov 2020 (Study Day 62) - 06 Nov 2020 (Study Day 66)	Sinusitis
Sotalol	06 Nov 2020 (Study Day 66) - 03 Dec 2020 (Study Day 93)	Atrial Fibrillation
Cardioversion*	13 Nov 2020 (Study Day 73) - 13 Nov 2020 (Study Day 73)	Adverse Event
Cryoballoon ablation*	09 Dec 2020 (Study Day 99) - 09 Dec 2020 (Study Day 99)	Adverse Event
Cryotherapy*	23 Feb 2021 (Study Day 175) - 23 Feb 2021 (Study Day 175)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Upper Respiratory Tract Infection	Grade 2/moderate	Not related	21 Oct 2020 (Study Day 50) - 05 Nov 2020 (Study Day 65)
Fatigue	Grade 2/moderate	Not related	23 Oct 2020 (Study Day 52) - Ongoing
Sinusitis	Grade 2/moderate	Not related	02 Nov 2020 (Study Day 62) - 05 Nov 2020 (Study Day 65)
Atrial Fibrillation	Grade 3/severe	Not related	07 Nov 2020 (Study Day 67) - 09 Dec 2020 (Study Day 99)
Foot Fracture	Grade 2/moderate	Not related	26 Nov 2020 (Study Day 86) - 26 Dec 2020 (Study Day 116)
Actinic Keratosis	Grade 1/mild	Not related	23 Feb 2021 (Study Day 175) - 23 Feb 2021 (Study Day 175)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US351-2217 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	04 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	02 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Syncope/Syncopal Episode	SAE	Grade 4	Not related	31 Dec 2020 (Study Day 119) – 31 Dec 2020 (Study Day 119)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US351-2217, a 64-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 04 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 02 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 31 Dec 2020 (Study Day 119), 118 days after the first dose and 90 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of syncope. Action taken with the IP was not applicable. The event of syncopal episode lasted for 1 day, after which it was considered to be recovered/resolved on 31 Dec 2020 (Study Day 119). The investigator assessed the event of syncope to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001875	Syncope

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Congenital aortic valve incompetence	Congenital aortic valve insufficiency	(b) (6) 1956 (Study Day (b) (6) - Ongoing
Medical device implantation	Titanium screw inserted left arm	1985 - 1985
Upper limb fracture	Broken left arm	1985 - 1985
Gastrooesophageal reflux disease	Acid reflux	1990 - Ongoing
Myocardial infarction	Myocardial infarction	2005 - 2005
Coronary artery disease	Coronary artery disease	2008 - Ongoing
Hypertension	Hypertension	2009 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2010 - Ongoing
Myopia	Nearsighted	2013 - Ongoing
Hepatitis C	Hepatitis c	2014 - 2016
Porphyria non-acute	Porphyria cutanae tarda	2014 - Ongoing
Aortic valve stenosis	Moderate aortic valve stenosis	24 Jul 2019 (Study Day -408) - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	Jul 2020 - Ongoing
Peripheral swelling	Bilateral lower leg swelling	Jul 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	2009 - Ongoing	Hypertension
Nifedipine	2009 - 04 Jan 2021 (Study Day 123)	Hypertension
Atorvastatin	2010 - Ongoing	Hypercholesterolemia
Finasteride	Jul 2020 - 18 Feb 2021 (Study Day 168)	Benign Prostatic Hyperplasia
Furosemide	Jul 2020 - 18 Feb 2021 (Study Day 168)	Bilateral Lower Leg Swelling
Ibuprofen	16 Sep 2020 (Study Day 13) - 26 Sep 2020 (Study Day 23)	Low Back Pain
Hydrocodone bitartrate; paracetamol	31 Dec 2020 (Study Day 119) - 31 Dec 2020 (Study Day 119)	Neck And Right Shoulder Injury
Sodium chloride	31 Dec 2020 (Study Day 119) - 31 Dec 2020 (Study Day 119)	Syncopal Episode
Heparin sodium	01 Jan 2021 (Study Day 120) - 01 Jan 2021 (Study Day 120)	Dvt Prophylaxis
Heparin sodium	01 Jan 2021 (Study Day 120) - 01 Jan 2021 (Study Day 120)	Prophylaxis Deep Vein Thrombosis
Influenza vaccine	04 Jan 2021 (Study Day 123) - 04 Jan 2021 (Study Day 123)	Seasonal Flu Prophylaxis
Bupropion	07 Jan 2021 (Study Day 126) - 15 Mar 2021 (Study Day 193)	Smoking Cessation
Ergocalciferol	18 Feb 2021 (Study Day 168) - Ongoing	Low Vitamin D Prophylaxis
Varenicline tartrate	19 Mar 2021 (Study Day 197) - 25 Mar 2021 (Study Day 203)	Smoking Cessation
Varenicline tartrate	26 Mar 2021 (Study Day 204) - Ongoing	Smoking Cessation

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Back Pain	Grade 2/moderate	Not related	16 Sep 2020 (Study Day 13) - 26 Sep 2020 (Study Day 23)
Limb Injury	Grade 2/moderate	Not related	31 Dec 2020 (Study Day 119) - 04 Feb 2021 (Study Day 154)
Neck Injury	Grade 2/moderate	Not related	31 Dec 2020 (Study Day 119) - 04 Feb 2021 (Study Day 154)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US352-2077 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	11 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	10 Sep 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pulmonary Embolism/Pulmonary Embolisms (Right Main Pulmonary Artery, Lefts Lower Lobar Branch)	SAE	Grade 4	Not related	15 Oct 2020 (Study Day 66) – 19 Oct 2020 (Study Day 70)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US352-2077, a 62-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 11 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 10 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Oct 2020 (Study Day 66), 65 days after the first dose and 35 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pulmonary embolism. Action taken with the IP was not applicable. The event of pulmonary embolisms (right main pulmonary artery, lefts lower lobar branch) lasted for 5 days, after which it was considered to be recovered/resolved on 19 Oct 2020 (Study Day 70). The investigator assessed the event of pulmonary embolism to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000560	Pulmonary embolism

Study Completion/Discontinuation

On 29 Dec 2020 (Study Day 141), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hyperlipidaemia	Hyperlipidemia	Not reported - Ongoing
Migraine	Migraines	Not reported - Ongoing
Nephrolithiasis	Nephrolithiasis	Not reported - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Evolocumab	Not reported - Ongoing	Hyperlipidemia
Gabapentin	Not reported - 17 Oct 2020 (Study Day 68)	Migraines
Verapamil	Not reported - Ongoing	Migraines
Ct chest with iv contrast-pe*	17 Oct 2020 (Study Day 68) - 17 Oct 2020 (Study Day 68)	Diagnostic
Enoxaparin	17 Oct 2020 (Study Day 68) - 19 Oct 2020 (Study Day 70)	Pulmonary Embolisms
Gabapentin	17 Oct 2020 (Study Day 68) - 18 Oct 2020 (Study Day 69)	Pulmonary Embolism
Heparin	17 Oct 2020 (Study Day 68) - 17 Oct 2020 (Study Day 68)	Pulmonary Embolism
Morphine	17 Oct 2020 (Study Day 68) - 18 Oct 2020 (Study Day 69)	Pulmonary Embolism
Moxifloxacin hydrochloride	17 Oct 2020 (Study Day 68) - 17 Oct 2020 (Study Day 68)	Pulmonary Embolism
Bilateral venous doppler (lower extremities)*	18 Oct 2020 (Study Day 69) - 18 Oct 2020 (Study Day 69)	Diagnostic
Influenza vaccine rha 3v (baculovirus)	18 Oct 2020 (Study Day 69) - 18 Oct 2020 (Study Day 69)	Prevention Of Influenza
Paracetamol	18 Oct 2020 (Study Day 69) - 19 Oct 2020 (Study Day 70)	Pulmonary Embolisms
Apixaban	19 Oct 2020 (Study Day 70) - Ongoing	Pulmonary Embolisms
Gabapentin	19 Oct 2020 (Study Day 70) - Ongoing	Migraine
Other viral vaccines	29 Dec 2020 (Study Day 141) - 29 Dec 2020 (Study Day 141)	Prevention Of COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US352-2128 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	11 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Atrial Flutter/Atrial Flutter With Rapid Ventricular Response	SAE	Grade 4	Not related	25 Sep 2020 (Study Day 43) – 27 Sep 2020 (Study Day 45)	Recovered/ resolved
Pneumonia/Multifocal Pneumonia In Both Lungs	SAE	Grade 4	Not related	08 Oct 2020 (Study Day 56) – 18 Oct 2020 (Study Day 66)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US352-2128, a 70-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 14 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 11 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Sep 2020 (Study Day 43), 42 days after the first dose and 14 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of atrial flutter. Action taken with the IP was not applicable. The event of atrial flutter with rapid ventricular response lasted for 3 days, after which it was considered to be recovered/resolved on 27 Sep 2020 (Study Day 45). The investigator assessed the event of atrial flutter to be not related to the IP.

On 08 Oct 2020 (Study Day 56), 55 days after the first dose and 27 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pneumonia. Action taken with the IP was not applicable. The event of multifocal pneumonia in both lungs lasted for 11 days, after which it was considered to be recovered/resolved on 18 Oct 2020 (Study Day 66). The investigator assessed the event of pneumonia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000400	Atrial flutter

CIOMS Number	MedDRA Preferred Term
MOD-2020-000400	Pneumonia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Atrial fibrillation	Afib	Not reported - Ongoing
Cardiac failure congestive	Chf	Not reported - Ongoing
Cardiomyopathy	Cardiomyopathy	Not reported - Ongoing
Cerebrovascular accident	Past of stroke	Not reported
Chronic kidney disease	Ckd stage 3	Not reported - Ongoing
Coronary artery disease	Cad	Not reported - Ongoing
Diabetic autonomic neuropathy	Diabetic autonomic neuropathy associated with type 2 diabetes mellitus- generalized peripheral pain and numbness	Not reported - Ongoing
Gout	Gout (flairs in left knee and right elbow)	Not reported - Ongoing
Hyperlipidaemia	Hyperlipidemia	Not reported - Ongoing
Hyperparathyroidism	Hyperparathyroidism	Not reported - Ongoing
Hypertension	Hypertension	Not reported - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	Not reported - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	Not reported - Ongoing	Hyperlipidemia
Diltiazem	Not reported - Ongoing	Afib
Furosemide	Not reported - 26 Sep 2020 (Study Day 44)	Chf
Gabapentin	Not reported - 14 Oct 2020 (Study Day 62)	Neuropothy
Metformin	Not reported - Ongoing	Type Two Diabetes
Metoprolol	Not reported - 26 Sep 2017 (Study Day -1053)	Hypertension / Afib
Warfarin	Not reported - 11 Oct 2020 (Study Day 59)	Afib
Potassium chloride	24 Apr 2020 (Study Day -112) - 07 Apr 2021 (Study Day 237)	Chronic Systolic Heart Failure

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cardioversion*	29 Aug 2020 (Study Day 16) - 29 Aug 2020 (Study Day 16)	Medical History
Digoxin	25 Sep 2020 (Study Day 43) - 25 Sep 2020 (Study Day 43)	Atrial Flutter With Rvr
Metoprolol	26 Sep 2020 (Study Day 44) - Ongoing	Hypertension/Afib
Furosemide	27 Sep 2020 (Study Day 45) - 07 Apr 2021 (Study Day 237)	Chf
Digoxin	28 Sep 2020 (Study Day 46) - 12 Oct 2020 (Study Day 60)	Atrial Fibrillation
Cardiac profile (blood draw)*	08 Oct 2020 (Study Day 56) - 08 Oct 2020 (Study Day 56)	Adverse Event
Ct chest*	08 Oct 2020 (Study Day 56) - 08 Oct 2020 (Study Day 56)	Adverse Event
Electrophysiology study*	08 Oct 2020 (Study Day 56) - 08 Oct 2020 (Study Day 56)	Adverse Event
Emergency department ultrasound cardiac*	08 Oct 2020 (Study Day 56) - 08 Oct 2020 (Study Day 56)	Adverse Event
Piperacillin sodium; tazobactam sodium	08 Oct 2020 (Study Day 56) - 11 Oct 2020 (Study Day 59)	Multifocal Pneumonia In Both Lungs
Protime with inr (blood draw)*	08 Oct 2020 (Study Day 56) - 08 Oct 2020 (Study Day 56)	Adverse Event
Vancomycin	08 Oct 2020 (Study Day 56) - 09 Oct 2020 (Study Day 57)	Multifocal Pneumonia In Both Lungs
Xray chest portable 1 view*	08 Oct 2020 (Study Day 56) - 08 Oct 2020 (Study Day 56)	Adverse Event
Blood culture*	09 Oct 2020 (Study Day 57) - 09 Oct 2020 (Study Day 57)	Adverse Event
Heated high flow nasal cannula*	09 Oct 2020 (Study Day 57) - 09 Oct 2020 (Study Day 57)	Adverse Event
Sputum culture*	09 Oct 2020 (Study Day 57) - 09 Oct 2020 (Study Day 57)	Adverse Event
Vancomycin	09 Oct 2020 (Study Day 57) - 11 Oct 2020 (Study Day 59)	Multifocal Pneumonia In Both Lungs
Anakinra	10 Oct 2020 (Study Day 58) - 12 Oct 2020 (Study Day 60)	Gout Flair
Levofloxacin	11 Oct 2020 (Study Day 59) - 14 Oct 2020 (Study Day 62)	Multifocal Pneumonia In Both Lungs
Metronidazole	11 Oct 2020 (Study Day 59) - 14 Oct 2020 (Study Day 62)	Multifocal Pneumonia In Both Lungs
Ekg 12 lead*	12 Oct 2020 (Study Day 60) - 12 Oct 2020 (Study Day 60)	Adverse Event
Elective ablation in heart for afib*	12 Oct 2020 (Study Day 60) - 12 Oct 2020 (Study Day 60)	Medical History
Prednisone	12 Oct 2020 (Study Day 60) - Ongoing	Gout / Gout Flair
Apixaban	13 Oct 2020 (Study Day 61) - 16 Oct 2020 (Study Day 64)	Atrial Fibrillation
Apixaban	18 Oct 2020 (Study Day 66) - Ongoing	A-Fib

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 1/mild	Related	14 Aug 2020 (Study Day 1) - 15 Aug 2020 (Study Day 2)
Atrial Fibrillation	Grade 2/moderate	Not related	27 Aug 2020 (Study Day 14) - 27 Aug 2020 (Study Day 14)
Gout	Grade 2/moderate	Not related	10 Oct 2020 (Study Day 58) - 11 Oct 2020 (Study Day 59)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US352-2200 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	18 Sep 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Papillary Thyroid Cancer/Papillary Thyroid Cancer	SAE	Grade 3/severe	Not related	01 Dec 2020 (Study Day 105) – Ongoing	Recovering/ resolving

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US352-2200, a 29-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 18 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Dec 2020 (Study Day 105), 104 days after the first dose and 74 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of papillary thyroid cancer. Action taken with the IP was not applicable. The event of papillary thyroid cancer was considered to be ongoing. The investigator assessed the event of papillary thyroid cancer to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001028	Papillary thyroid cancer

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Adjustment disorder with anxiety	Adjustment disorder with anxiety	Not reported - Ongoing
Hypothyroidism	Hypothyroidism	Not reported - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ethinylestradiol; norethisterone acetate	Apr 2019 - Ongoing	Birth Control
Naproxen sodium	19 Aug 2020 (Study Day 1) - 19 Aug 2020 (Study Day 1)	Pain At Injection/Blood Draw Site
Influenza vaccine	02 Oct 2020 (Study Day 45) - 02 Oct 2020 (Study Day 45)	14 Days Post 2nd Ip
Paroxetine hydrochloride	19 Oct 2020 (Study Day 62) - Ongoing	Adjustment Disorder With Anxiety
Thyroid fna biopsy*	24 Nov 2020 (Study Day 98) - 24 Nov 2020 (Study Day 98)	Diagnostic
Thyroid ultrasound*	24 Nov 2020 (Study Day 98) - 24 Nov 2020 (Study Day 98)	Diagnostic
Topiramate	04 Dec 2020 (Study Day 108) - 05 Dec 2020 (Study Day 109)	Not Clearly Known By Participant
Propranolol	05 Dec 2020 (Study Day 109) - Ongoing	Papillary Thyroid Cancer
Thyroidectomy*	15 Jan 2021 (Study Day 150) - 15 Jan 2021 (Study Day 150)	Adverse Event
Liothyronine	18 Jan 2021 (Study Day 153) - 13 Feb 2021 (Study Day 179)	Hypo-Thyroid
Radioactive iodine treatment*	11 Feb 2021 (Study Day 177) - 11 Feb 2021 (Study Day 177)	Adverse Event
Liothyronine	13 Feb 2021 (Study Day 179) - Ongoing	Hypothyroidism Post Thyroidectomy
Central compartment lymph node dissection*	16 Feb 2021 (Study Day 182) - 16 Feb 2021 (Study Day 182)	Adverse Event
Left modified radical neck dissection.*	16 Feb 2021 (Study Day 182) - 16 Feb 2021 (Study Day 182)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US352-2227 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	17 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Atrial Fibrillation/Atrial Fibrillation Exacerbation	SAE	Grade 2/ moderate	Not related	06 Jan 2021 (Study Day 141) – 07 Jan 2021 (Study Day 142)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US352-2227, a 67-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 17 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Jan 2021 (Study Day 141), 140 days after the first dose and 111 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of atrial fibrillation. Action taken with the IP was not applicable. The event of atrial fibrillation exacerbation lasted for 2 days, after which it was considered to be recovered/resolved on 07 Jan 2021 (Study Day 142). The investigator assessed the event of atrial fibrillation to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002625	Atrial fibrillation

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Atrial fibrillation	Atrial fibrillation	Not reported - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	Not reported - Ongoing
Cardiomyopathy	Cardiomyopathy	Not reported - Ongoing
Chronic obstructive pulmonary disease	Copd	Not reported - Ongoing
Depression	Depression	Not reported - Ongoing
Gastrooesophageal reflux disease	Gerd	Not reported - Ongoing
Hyperlipidaemia	Hyperlipidemia	Not reported - Ongoing
Hypertension	Hypertension	Not reported - Ongoing
Hypertonic bladder	Overactive bladder	Not reported - Ongoing
Hypothyroidism	Hypothyroidism	Not reported - Ongoing
Implantable defibrillator insertion	Implantable cardioverter-defibrillator	Not reported
Migraine	Migraines	Not reported - Ongoing
Obesity	Morbid obesity	Not reported - Ongoing
Sleep apnoea syndrome	Obstructive sleep apnea	Not reported - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Budesonide; formoterol fumarate	Not reported - Ongoing	Copd
Butalbital; caffeine; paracetamol	Not reported - Ongoing	Migraines
Diazepam	Not reported - Ongoing	Migraines
Dofetilide	Not reported - Ongoing	Atrial Fibrillation
Finasteride	Not reported - Ongoing	Bph
Hydrocodone bitartrate; paracetamol	Not reported - Ongoing	Migraines
Levothyroxine sodium	Not reported - Ongoing	Hypothyroidism
Metformin	Not reported - Aug 2020	Morbid Obesity/Weight Loss
Metoprolol tartrate	Not reported - Ongoing	High Blood Pressure
Oxybutynin hydrochloride	Not reported - Ongoing	Overactive Bladder
Pantoprazole	Not reported - Ongoing	Gerd
Rivaroxaban	Not reported - Ongoing	Atrial Fibrillation
Salbutamol	Not reported - Ongoing	Copd
Simvastatin	Not reported - Ongoing	Hyperlipidemia
Tamsulosin hydrochloride	Not reported - Ongoing	Bph
Tiotropium bromide	Not reported - Ongoing	Copd
Influenza vaccine	07 Oct 2020 (Study Day 50) - 07 Oct 2020 (Study Day 50)	Annual Vaccine

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	08 Oct 2020 (Study Day 51) - 08 Oct 2020 (Study Day 51)	Flu
Ct heart*	06 Jan 2021 (Study Day 141) - 06 Jan 2021 (Study Day 141)	Adverse Event
Electrocardiography*	06 Jan 2021 (Study Day 141) - 06 Jan 2021 (Study Day 141)	Adverse Event
Nuclear stress test*	06 Jan 2021 (Study Day 141) - 06 Jan 2021 (Study Day 141)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US352-2269 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	22 Sep 2020 (Study Day 33)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Nausea/Nausea	SAE	Grade 4	Not related	07 Sep 2020 (Study Day 18) – 15 Sep 2020 (Study Day 26)	Recovered/resolved
Abdominal Pain/Abdominal Pain	SAE	Grade 4	Not related	08 Sep 2020 (Study Day 19) – 15 Sep 2020 (Study Day 26)	Recovered/resolved
Vomiting/Vomiting	SAE	Grade 4	Not related	08 Sep 2020 (Study Day 19) – 15 Sep 2020 (Study Day 26)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US352-2269, a 44-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 21 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 22 Sep 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Sep 2020 (Study Day 18), 17 days after the first dose and 15 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of nausea. The IP dose was not changed due to the nausea. The event of nausea lasted for 9 days, after which it was considered to be recovered/resolved on 15 Sep 2020 (Study Day 26). The investigator assessed the event of nausea to be not related to the IP.

On 08 Sep 2020 (Study Day 19), 18 days after the first dose and 14 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of abdominal pain. The IP dose was not changed due to the abdominal pain. The event of abdominal pain lasted for 8 days, after which it was considered to be recovered/resolved on 15 Sep 2020 (Study Day 26). The investigator assessed the event of abdominal pain to be not related to the IP.

On 08 Sep 2020 (Study Day 19), 18 days after the first dose and 14 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of vomiting. The IP dose was not changed due to the vomiting. The event of vomiting lasted for 8 days, after which it was

considered to be recovered/resolved on 15 Sep 2020 (Study Day 26). The investigator assessed the event of vomiting to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000328	Nausea
MOD-2020-000328	Abdominal pain
MOD-2020-000328	Vomiting

Study Completion/Discontinuation

On 13 Oct 2020 (Study Day 54), the participant discontinued from the study due to lost to follow-up.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Abdomina ultrasound*	11 Sep 2020 (Study Day 22) - 11 Sep 2020 (Study Day 22)	Adverse Event
Magnesium	12 Sep 2020 (Study Day 23) - 13 Sep 2020 (Study Day 24)	Electrolyte Replacement For Vomiting
Morphine	12 Sep 2020 (Study Day 23) - 13 Sep 2020 (Study Day 24)	Abdominal Pain
Ondansetron	12 Sep 2020 (Study Day 23) - 14 Sep 2020 (Study Day 25)	Nausea
Pantoprazole	12 Sep 2020 (Study Day 23) - 16 Sep 2020 (Study Day 27)	Nausea
Potassium	12 Sep 2020 (Study Day 23) - 13 Sep 2020 (Study Day 24)	Electrolyte Replacement For Vomiting
Calcium	14 Sep 2020 (Study Day 25) - 16 Sep 2020 (Study Day 27)	Electrolyte Replacement For Vomiting
Influenza vaccine	05 Oct 2020 (Study Day 46) - 05 Oct 2020 (Study Day 46)	Flu Vaccination

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US352-2513 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 27)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Joint Injury/Right Knee Injury	SAE	Grade 3/severe	Not related	11 Dec 2020 (Study Day 101) – Ongoing	Recovering/resolving

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US352-2513, a 46-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 02 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 28 Sep 2020 (Study Day 27). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 11 Dec 2020 (Study Day 101), 100 days after the first dose and 74 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of joint injury. Action taken with the IP was not applicable. The event of right knee injury was considered to be ongoing. The investigator assessed the event of joint injury to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-097263	Joint injury

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Benign neoplasm of thyroid gland	Benign right-sided thyroid nodule	Not reported - Ongoing
Genital herpes	Genital herpes	Not reported - Ongoing
Hyperlipidaemia	Hyperlipidemia	Not reported - Ongoing
Spondylitis	Cervical arthritis	Not reported - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type 2	Not reported - Ongoing
Hysterectomy	Hysterectomy	01 May 2002 (Study Day -6699) - 01 May 2002 (Study Day -6699)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	Not reported - Ongoing	Hyperlipidemia
Methocarbamol	Not reported - Ongoing	Cervical Arthritis
Valaciclovir	Not reported - Ongoing	Genital Herpes
Paracetamol	03 Sep 2020 (Study Day 2) - 04 Sep 2020 (Study Day 3)	Pain At Injection Site
Right-sided thyroid nodule fna biopsy*	30 Nov 2020 (Study Day 90) - 30 Nov 2020 (Study Day 90)	Medical History
Hydrocodone bitartrate; paracetamol	24 Dec 2020 (Study Day 114) - 30 Dec 2020 (Study Day 120)	Right Knee Injury
Right knee brace*	24 Dec 2020 (Study Day 114) - 24 Dec 2020 (Study Day 114)	Adverse Event
Right-sided thyroid nodule fna biopsy*	05 Jan 2021 (Study Day 126) - 05 Jan 2021 (Study Day 126)	Medical History
Hydrocodone bitartrate; paracetamol	05 Feb 2021 (Study Day 157) - 09 Feb 2021 (Study Day 161)	Right Knee Injury
Acetylsalicylic acid	24 Mar 2021 (Study Day 204) - 21 Apr 2021 (Study Day 232)	Prevention Of Blood Clots Post-Right Total Knee Replacement
Arthroplasty robot-assisted right total knee*	24 Mar 2021 (Study Day 204) - 24 Mar 2021 (Study Day 204)	Adverse Event
Celecoxib	24 Mar 2021 (Study Day 204) - 31 Mar 2021 (Study Day 211)	Pain Post Right Total Knee Replacement
Gabapentin	24 Mar 2021 (Study Day 204) - Ongoing	Pain Post Total Right Knee Replacement
Oxycodone	24 Mar 2021 (Study Day 204) - Ongoing	Pain Post Right Total Knee Replacement
Paracetamol	24 Mar 2021 (Study Day 204) - Ongoing	Pain Post- Right Total Knee Replacement

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US352-2529 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	07 Oct 2020 (Study Day 36)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Intervertebral Disc Protrusion/Herniated Disc	SAE	Grade 4	Not related	21 Sep 2020 (Study Day 20) – 23 Sep 2020 (Study Day 22)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US352-2529, a 44-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 02 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 07 Oct 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 21 Sep 2020 (Study Day 20), 19 days after the first dose and 16 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of intervertebral disc protrusion. The IP dose was not changed due to the herniated disc. The event of herniated disc lasted for 3 days, after which it was considered to be recovered/resolved on 23 Sep 2020 (Study Day 22). The investigator assessed the event of intervertebral disc protrusion to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000340	Intervertebral disc protrusion

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraines	Not reported - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	Not reported - Ongoing	Migraines/Headaches/ Generalized Pain
Zolmitriptan	Not reported - Ongoing	Migraines
Botulinum toxin type a	24 Jan 2019 (Study Day -587) - Ongoing	Migraines
Calcium gluconate	21 Sep 2020 (Study Day 20) - 21 Sep 2020 (Study Day 20)	Presumed Electrolyte Imbalance
Lab work including phlebotomy.*	21 Sep 2020 (Study Day 20) - 21 Sep 2020 (Study Day 20)	Diagnostic
Magnesium sulfate	21 Sep 2020 (Study Day 20) - 21 Sep 2020 (Study Day 20)	Presumed Electrolyte Imbalance
Potassium chloride	21 Sep 2020 (Study Day 20) - 21 Sep 2020 (Study Day 20)	Presumed Electrolyte Imbalance
Potassium chloride	21 Sep 2020 (Study Day 20) - 22 Sep 2020 (Study Day 21)	Presumed Electrolyte Imbalance
Methocarbamol	23 Sep 2020 (Study Day 22) - 25 Sep 2020 (Study Day 24)	Herniated Disc
Prednisone	23 Sep 2020 (Study Day 22) - 27 Sep 2020 (Study Day 26)	Herniated Disc
Tramadol	23 Sep 2020 (Study Day 22) - 25 Sep 2020 (Study Day 24)	Herniated Disc
Ibuprofen	07 Oct 2020 (Study Day 36) - 12 Oct 2020 (Study Day 41)	Headache, Muscle Ache, Joint Pain
Influenza vaccine	04 Nov 2020 (Study Day 64) - 04 Nov 2020 (Study Day 64)	Influenza
Tizanidine hydrochloride	10 Mar 2021 (Study Day 190) - Ongoing	Migraines

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	08 Sep 2020 (Study Day 7) - 10 Sep 2020 (Study Day 9)
Headache	Grade 2/moderate	Related	09 Sep 2020 (Study Day 8) - 10 Sep 2020 (Study Day 9)
Headache	Grade 1/mild	Related	10 Sep 2020 (Study Day 9) - 10 Sep 2020 (Study Day 9)
Electrolyte Imbalance	Grade 2/moderate	Not related	21 Sep 2020 (Study Day 20) - 21 Sep 2020 (Study Day 20)
Fatigue	Grade 1/mild	Related	13 Oct 2020 (Study Day 42) - 16 Oct 2020 (Study Day 45)
Myalgia	Grade 1/mild	Related	14 Oct 2020 (Study Day 43) - 28 Oct 2020 (Study Day 57)
Headache	Grade 1/mild	Related	15 Oct 2020 (Study Day 44) - 15 Oct 2020 (Study Day 44)
Fatigue	Grade 1/mild	Not related	15 Nov 2020 (Study Day 75) - 16 Nov 2020 (Study Day 76)
Nasal Congestion	Grade 1/mild	Not related	15 Nov 2020 (Study Day 75) - 16 Nov 2020 (Study Day 76)
Oropharyngeal Pain	Grade 1/mild	Not related	15 Nov 2020 (Study Day 75) - 17 Nov 2020 (Study Day 77)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US353-2002 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	11 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	08 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Back Pain/Worsening Back Pain	SAE	Grade 4	Not related	08 Sep 2020 (Study Day 29) – 14 Oct 2020 (Study Day 65)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US353-2002, a 63-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 11 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 08 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Sep 2020 (Study Day 29), 28 days after the first dose and on the day of the second dose of the IP, the participant experienced a Grade 4 serious adverse event of back pain. Action taken with the IP was not applicable. The event of worsening back pain lasted for 37 days, after which it was considered to be recovered/resolved on 14 Oct 2020 (Study Day 65). The investigator assessed the event of back pain to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000335	Back pain

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cartilage injury	Torn cartilage in right knee	Not reported - 1984
Hypothyroidism	Hypothyroidism	Not reported - Ongoing
Femur fracture	Right broken femur	1976 - Not reported
Glaucoma	Bilateral glaucoma	1977 - Ongoing
Gout	Gout	1980 - Ongoing
Arthroscopy	Right knee scope	1984 - 1984
Blood cholesterol increased	Elevated cholesterol	1990 - Ongoing
Hypertension	Hypertension	1990 - Ongoing
Vasectomy	Vasectomy	1996 - 1996
Bone operation	Right femur lengthening surgery	1997 - 1997
Rotator cuff syndrome	Right rotator cuff tear	2004 - 2005
Rotator cuff repair	Right rotator cuff repair	2005 - 2005
Rosacea	Rosacea	2010 - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	2012 - Ongoing
Cataract	Bilateral cataracts	2018 - Sep 2018
Cataract operation	Bilateral cataract surgeries	Sep 2018 - Sep 2018
Intervertebral disc degeneration	Degenerative disk disease of back	Nov 2019 - Ongoing
Spinal laminectomy	Back surgery lumbar laminectomy	Dec 2019 - Dec 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine	Not reported - Ongoing	Hypertension
Carvedilol	Not reported - 12 Feb 2021 (Study Day 186)	Hypertension
Fenofibrate	Not reported - Ongoing	Elevated Cholesterol
Losartan	Not reported - Ongoing	Hypertension
Rosuvastatin	Not reported - Ongoing	Elevated Cholesterol
Levothyroxine	1985 - 12 Feb 2021 (Study Day 186)	Hypothyroidism
Acetylsalicylic acid	2016 - Ongoing	General Heart Health
Metformin	2016 - Ongoing	Type 2 Diabetes
Semaglutide	2019 - Ongoing	Type 2 Diabetes
Methocarbamol	Aug 2020 - 14 Oct 2020 (Study Day 65)	Worsening Back Pain
Ibuprofen	10 Sep 2020 (Study Day 31) - 10 Sep 2020 (Study Day 31)	Headache
Transforaminal lumbar interbody fusion*	16 Sep 2020 (Study Day 37) - 16 Sep 2020 (Study Day 37)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Oxycodone; paracetamol	17 Sep 2020 (Study Day 38) - 29 Sep 2020 (Study Day 50)	Worsening Back Pain
Influenza vaccine	10 Nov 2020 (Study Day 92) - 10 Nov 2020 (Study Day 92)	Annual Vaccine
Reoccurring physical therapy*	10 Nov 2020 (Study Day 92) - 10 Nov 2020 (Study Day 92)	Other, Related To Recent Back Surgery
Doxycycline	08 Dec 2020 (Study Day 120) - 07 Jan 2021 (Study Day 150)	Worsening Rosacea
Squamous cell removal*	29 Dec 2020 (Study Day 141) - 29 Dec 2020 (Study Day 141)	Adverse Event
Carvedilol	12 Feb 2021 (Study Day 186) - Ongoing	Worsening Hypertension
Levothyroxine	12 Feb 2021 (Study Day 186) - Ongoing	Worsening Hypothyroidism

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Back Pain	Grade 2/moderate	Not related	20 Aug 2020 (Study Day 10) - 05 Sep 2020 (Study Day 26)
Rosacea	Grade 2/moderate	Not related	15 Nov 2020 (Study Day 97) - 15 Dec 2020 (Study Day 127)
Squamous Cell Carcinoma	Grade 2/moderate	Not related	08 Dec 2020 (Study Day 120) - 29 Dec 2020 (Study Day 141)
Hypertension	Grade 2/moderate	Not related	12 Feb 2021 (Study Day 186) - Ongoing
Hypothyroidism	Grade 2/moderate	Not related	12 Feb 2021 (Study Day 186) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US353-2063 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	18 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	16 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Femur Fracture/Fractured Left Femur	SAE	Grade 4	Not related	28 Oct 2020 (Study Day 72) – 27 Jan 2021 (Study Day 163)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US353-2063, a 70-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 18 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 16 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Oct 2020 (Study Day 72), 71 days after the first dose and 42 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of femur fracture. Action taken with the IP was not applicable. The event of fractured left femur lasted for 92 days, after which it was considered to be recovered/resolved on 27 Jan 2021 (Study Day 163). The investigator assessed the event of femur fracture to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000631	Femur fracture

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	Not reported - Ongoing
Synovial cyst	Ganglion cyst	Not reported - 1978
Menopause	Menopause	2000 - Ongoing
Osteoarthritis	Osteoarthritis neck and legs	2000 - Ongoing
Rubber sensitivity	Latex allergy	2000 - Ongoing
Benign breast neoplasm	Breast node - benign	2010 - 2010
Cyst	Cyst on neck benign	2017 - 2017

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium	Not reported - Ongoing	Health
Chondroitin; glucosamine	Not reported - 30 Nov 2020 (Study Day 105)	Health
Colecalciferol	Not reported - Ongoing	Health
Curcuma longa	Not reported - 30 Nov 2020 (Study Day 105)	Health
Omega-3 nos	Not reported - 30 Nov 2020 (Study Day 105)	Health
Vitamin b complex	Not reported - Ongoing	Health
Vitamin e nos	Not reported - 30 Nov 2020 (Study Day 105)	Health
Vitamins nos	Not reported - 30 Nov 2020 (Study Day 105)	Health
Influenza vaccine	07 Oct 2020 (Study Day 51) - 07 Oct 2020 (Study Day 51)	Annual Flu Vaccine
Xray of hips and pelvis*	28 Oct 2020 (Study Day 72) - 28 Oct 2020 (Study Day 72)	Adverse Event
Calcium chloride; potassium chloride; sodium lactate	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture
Cefradine	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture
Dexamethasone	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture
Ephedrine	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture
Fentanyl	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lidocaine	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture
Midazolam	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture
Morphine	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture
Ondansetron	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture
Propofol	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture
Rocuronium	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture
Sodium chloride	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture
Sugammadex sodium	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Concomitant Procedure # 1. Surgical Repair Of L Femoral Fracture
Surgical repair of left fractured femur*	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Adverse Event
Xray of hip and pelvis*	29 Oct 2020 (Study Day 73) - 29 Oct 2020 (Study Day 73)	Adverse Event
Apixaban	01 Nov 2020 (Study Day 76) - 16 Dec 2020 (Study Day 121)	Post Surgical Dvt Prophylaxis
Cyclobenzaprine hydrochloride	01 Nov 2020 (Study Day 76) - 16 Dec 2020 (Study Day 121)	Post Surgical Muscle Leg Spasms Following Repair Of Fractured Femur
Docusate sodium	01 Nov 2020 (Study Day 76) - 16 Dec 2020 (Study Day 121)	Post Surgical Constipation
Ondansetron	01 Nov 2020 (Study Day 76) - 11 Nov 2020 (Study Day 86)	Post Surgical Nausea
Oxycodone hydrochloride; paracetamol	01 Nov 2020 (Study Day 76) - 11 Nov 2020 (Study Day 86)	Postsurgical Leg Pain - Following Repair Of Fractured Femur
Physical therapy*	01 Dec 2020 (Study Day 106) - 01 Dec 2020 (Study Day 106)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Procedural Pain	Grade 3/severe	Not related	29 Oct 2020 (Study Day 73) - 11 Nov 2020 (Study Day 86)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US353-2170 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Myocardial Infarction/Acute Myocardial Infartion	SAE, AE leading to withdrawal from study vaccine	Grade 4	Not related	07 Sep 2020 (Study Day 12) – 06 Oct 2020 (Study Day 41)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US353-2170, a 66-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 27 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Sep 2020 (Study Day 12), 11 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of acute myocardial infarction. On 23 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of acute myocardial infartion lasted for 30 days, after which it was considered to be recovered/resolved with sequelae on 06 Oct 2020 (Study Day 41). The investigator assessed the event of acute myocardial infarction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000299	Acute myocardial infarction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Myalgia	Generalized muscle aches	Not reported - Ongoing
Seasonal allergy	Seasonal allergies	Not reported - Ongoing
Encephalitis viral	Viral encephalitis	1975 - Ongoing
Hypothyroidism	Hypothyroidism	1985 - Ongoing
Gastrooesophageal reflux disease	Gerd	1995 - Ongoing
Cataract operation	Bilateral cataract surgery	2002 - 2002
Menopause	Menopause	2008 - Ongoing
Hypertension	Hypertension	2015 - Ongoing
Osteoarthritis	Basillar thrumb osteoarthritis	2016 - Ongoing
Type 2 diabetes mellitus	Type ii diabetes	2016 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2017 - Ongoing
Plantar fasciitis	Plantar fasciitis	2018 - Ongoing
Limb operation	Thumb surgery	25 Nov 2019 (Study Day -276) - 25 Nov 2019 (Study Day -276)
Vitamin D decreased	Low vitamin d level	18 Feb 2020 (Study Day -191) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	Not reported - Ongoing	Generalized Muscle Aches
Levothyroxine	1985 - Ongoing	Hypothyroidism
Vitamins nos	1985 - Sep 2020	General Health
Lisinopril	2015 - 30 Sep 2020 (Study Day 35)	Hypertension
Metformin	2016 - Ongoing	Type Ii Diabetes
Insulin glargine	16 Feb 2020 (Study Day -193) - 12 Oct 2020 (Study Day 47)	Type Ii Diabetes
Vitamin d nos	18 Feb 2020 (Study Day -191) - Ongoing	General Health
Paracetamol	28 Aug 2020 (Study Day 2) - 28 Aug 2020 (Study Day 2)	Headache
Guaifenesin	Sep 2020 - 29 Sep 2020 (Study Day 34)	Myocardial Infarction Post Cabg Treatment Protocol
Cabg x 2*	08 Sep 2020 (Study Day 13) - 08 Sep 2020 (Study Day 13)	Adverse Event
Amiodarone	12 Sep 2020 (Study Day 17) - 01 Jan 2021 (Study Day 128)	Myocardial Infarction Post Cabg Treatment Protocol
Ferrous sulfate	12 Sep 2020 (Study Day 17) - 12 Oct 2020 (Study Day 47)	Myocardial Infarction Post Cabg Treatment Protocol
Hydrocodone; paracetamol	12 Sep 2020 (Study Day 17) - 19 Sep 2020 (Study Day 24)	Myocardial Infarction- Post Cabg Treatment Protocol
Insulin lispro	12 Sep 2020 (Study Day 17) - Ongoing	Type Ii Diabetes
Metoprolol tartrate	12 Sep 2020 (Study Day 17) - 14 Jan 2021 (Study Day 141)	Myocardial Infarction Post Cabg Treatment Protocol

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Milrinone	12 Sep 2020 (Study Day 17) - 14 Sep 2020 (Study Day 19)	Myocardial Infarction
Morphine	12 Sep 2020 (Study Day 17) - 13 Sep 2020 (Study Day 18)	Myocardial Infarction
Ondansetron	12 Sep 2020 (Study Day 17) - 09 Oct 2020 (Study Day 44)	Nausea

Blood culture*	21 Feb 2021 (Study Day 179) - 21 Feb 2021 (Study Day 179)	Adverse Event
Vancomycin	21 Feb 2021 (Study Day 179) - 24 Feb 2021 (Study Day 182)	Sepsis/Wound Infection Left Buttock
Amoxicillin; clavulanic acid	24 Feb 2021 (Study Day 182) - 10 Mar 2021 (Study Day 196)	Wound Infection- Left Buttock

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Ventricular Fibrillation	Grade 3/severe	Not related	08 Sep 2020 (Study Day 13) - Ongoing
Nausea	Grade 3/severe	Not related	12 Sep 2020 (Study Day 17) - 09 Oct 2020 (Study Day 44)
Wheezing	Grade 2/moderate	Not related	14 Sep 2020 (Study Day 19) - 18 Sep 2020 (Study Day 23)
Procedural Anxiety	Grade 2/moderate	Not related	06 Oct 2020 (Study Day 41) - Ongoing
Decubitus Ulcer	Grade 2/moderate	Not related	13 Nov 2020 (Study Day 79) - Ongoing

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Dyspnoea	Grade 2/moderate	Not related	01 Dec 2020 (Study Day 97) - 01 Dec 2020 (Study Day 97)
Peripheral Swelling	Grade 2/moderate	Not related	14 Jan 2021 (Study Day 141) - Ongoing
Syncope	Grade 3/severe	Not related	14 Jan 2021 (Study Day 141) - 14 Jan 2021 (Study Day 141)
Intention Tremor	Grade 1/mild	Not related	28 Jan 2021 (Study Day 155) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US353-2192 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	06 Oct 2020 (Study Day 37)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Clear Cell Renal Cell Carcinoma/Kidney Cancer, Right Kidney Clear Cell Renal Cell Carcinoma, Who/Isup Grade 3	SAE	Grade 3/severe	Not related	09 Nov 2020 (Study Day 71) – 23 Nov 2020 (Study Day 85)	Recovered/resolved
Retroperitoneal Haemorrhage/Retroperitoneal Bleed	SAE	Grade 4	Not related	18 Nov 2020 (Study Day 80) – 20 Nov 2020 (Study Day 82)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US353-2192, a 38-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 06 Oct 2020 (Study Day 37). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Nov 2020 (Study Day 71), 70 days after the first dose and 34 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of clear cell renal cell carcinoma. Action taken with the IP was not applicable. The event of kidney cancer, right kidney clear cell renal cell carcinoma, who/isup grade 3 lasted for 15 days, after which it was considered to be recovered/resolved on 23 Nov 2020 (Study Day 85). The investigator assessed the event of clear cell renal cell carcinoma to be not related to the IP.

On 18 Nov 2020 (Study Day 80), 79 days after the first dose and 43 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of retroperitoneal haemorrhage. Action taken with the IP was not applicable. The event of retroperitoneal bleed lasted for 3 days, after which it was considered to be recovered/resolved on 20 Nov 2020 (Study Day 82). The investigator assessed the event of retroperitoneal haemorrhage to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000756	Clear cell renal cell carcinoma
MOD-2020-000756	Retroperitoneal haemorrhage

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Chronic kidney disease	Chronic kidney failure	2014 - Ongoing
Epistaxis	Intermittent nosebleeds	2014 - Ongoing
Hypertension	Hypertension	2014 - Ongoing
Dialysis	Dialysis	2018 - Ongoing
Hypokalaemia	Hypokalemia	2018 - Ongoing
Cardiac failure congestive	Congestive heart failure	2019 - 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine	2014 - Ongoing	Hypertension
Carvedilol	2014 - 23 Nov 2020 (Study Day 85)	Hypertension
Hydralazine	2014 - Ongoing	Hypertension
Isosorbide	2014 - Ongoing	Hypertension

Potassium	23 Nov 2020 (Study Day 85) - Ongoing	Hypokalemia
Colecalciferol	05 Jan 2021 (Study Day 128) - Ongoing	General Health

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Epistaxis	Grade 1/mild	Not related	19 Oct 2020 (Study Day 50) - 20 Oct 2020 (Study Day 51)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US353-2212 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Back Pain/Worsening Back Pain	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	25 Sep 2020 (Study Day 24) – 17 Nov 2020 (Study Day 77)	Not recovered/not resolved
Spinal Stenosis/Spinal Stenosis	SAE	Grade 4	Not related	17 Nov 2020 (Study Day 77) – 19 Nov 2020 (Study Day 79)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US353-2212, a 61-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 02 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Sep 2020 (Study Day 24), 23 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of back pain. On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of worsening back pain lasted for 54 days, after which it was considered to be not recovered/not resolved on 17 Nov 2020 (Study Day 77). The investigator assessed the event of back pain to be not related to the IP.

On 17 Nov 2020 (Study Day 77), 76 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of spinal stenosis. On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of spinal stenosis lasted for 3 days, after which it was considered to be recovered/resolved on 19 Nov 2020 (Study Day 79). The investigator assessed the event of spinal stenosis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-009184	Spinal stenosis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Arthralgia	Knee pain -obesity	Not reported - 2018
Drug hypersensitivity	Allergy to penicillin	1960 - Ongoing
Drug hypersensitivity	Allergy to sulfa drugs	1960 - Ongoing
Seasonal allergy	Seasonal allergies	1980 - Ongoing
Brachial plexus injury	Brachial plexus injury	1982 - 1982
Joint dislocation	Dislocated ball joint -left shoulder	1982 - 2009
Peripheral nerve operation	Brachial plexus surgery	1982 - 1982
Deafness	Hearing loss	1985 - Ongoing
Back pain	Lower back pain	1990 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	1995 - Ongoing
Carpal tunnel syndrome	Carpal tunnel	2005 - Ongoing
Osteoarthritis	Osteoarthritis	2005 - Ongoing
Sciatica	Sciatica	2005 - Ongoing
Shoulder arthroplasty	Left shoulder ball joint replacement	2009 - 2009
Anxiety	Anxiety	2010 - Ongoing
Depression	Depression	2010 - Ongoing
Benign prostatic hyperplasia	Bph	2018 - Ongoing
Erectile dysfunction	Erectile dysfunction	2018 - Ongoing
Knee arthroplasty	Knee replacement	2018 - 2018
Hypothyroidism	Hypothyroidism	Jan 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	2005 - Ongoing	Osteo Arthritis
Alprazolam	2010 - Ongoing	Anxiety
Bupropion	2010 - Ongoing	Depression
Diclofenac	2010 - Dec 2020	Osteoarthritis
Ibuprofen	2010 - Ongoing	Seasonal Allergies
Cyanocobalamin	Jan 2010 - Ongoing	General Health
Famotidine	2012 - Ongoing	Acid Reflux
Gabapentin	2017 - 25 Sep 2020 (Study Day 24)	Sciatica

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Finasteride	2018 - Ongoing	Bph
Tadalafil	2018 - Ongoing	Erectile Dysfunction
Levothyroxine	Jan 2020 - Ongoing	Hypothyroidism
Mri spine*	02 Sep 2020 (Study Day 1) - 02 Sep 2020 (Study Day 1)	Medical History
Gabapentin	25 Sep 2020 (Study Day 24) - Jan 2021	Worsening Back Pain - Ae# 1 And 4
Corticosteroid nos	01 Oct 2020 (Study Day 30) - 01 Oct 2020 (Study Day 30)	Ae 4 Worsening Back Pain
Epidural-back*	01 Oct 2020 (Study Day 30) - 01 Oct 2020 (Study Day 30)	Adverse Event
X-ray (spinal)*	02 Nov 2020 (Study Day 62) - 02 Nov 2020 (Study Day 62)	Adverse Event
L1-l5 decompression surgery*	17 Nov 2020 (Study Day 77) - 17 Nov 2020 (Study Day 77)	Adverse Event
Tramadol	17 Nov 2020 (Study Day 77) - 20 Nov 2020 (Study Day 80)	Pain After Spinal Stenosis Surgery
Paracetamol	19 Nov 2020 (Study Day 79) - Ongoing	Back Surgery Pain Ae 1
Diclofenac	Dec 2020 - Ongoing	Osteoarthritis
Carpal tunnel surgery*	18 Dec 2020 (Study Day 108) - 18 Dec 2020 (Study Day 108)	Adverse Event
Trigger finger surgery*	18 Dec 2020 (Study Day 108) - 18 Dec 2020 (Study Day 108)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Back Pain	Grade 2/moderate	Not related	25 Sep 2020 (Study Day 24) - 17 Nov 2020 (Study Day 77)
Carpal Tunnel Syndrome	Grade 2/moderate	Not related	18 Dec 2020 (Study Day 108) - 18 Dec 2020 (Study Day 108)
Trigger Finger	Grade 2/moderate	Not related	18 Dec 2020 (Study Day 108) - 18 Dec 2020 (Study Day 108)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US353-2231 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	01 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pneumonia/Community Acquired Pneumonia	SAE	Grade 4	Not related	10 Oct 2020 (Study Day 38) – 16 Oct 2020 (Study Day 44)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US353-2231, a 76-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 03 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 01 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Oct 2020 (Study Day 38), 37 days after the first dose and 9 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pneumonia. Action taken with the IP was not applicable. The event of community acquired pneumonia lasted for 7 days, after which it was considered to be recovered/resolved on 16 Oct 2020 (Study Day 44). The investigator assessed the event of pneumonia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000447	Pneumonia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	Not reported - Ongoing
Sinusitis	Frequent sinus infections	Not reported - 1988
Anxiety	Anxiety	1952 - Ongoing
Osteoarthritis	Osteoarthritis	1968 - Ongoing
Haemorrhoids	Hemorrhoids	1986 - Ongoing
Sinus operation	Sinus surgery (to correct frequent sinus infections)	1988 - 1988
Prostatomegaly	Enlarged prostate	1990 - Ongoing
Bundle branch block left	Left bundle branch block	1995 - Ongoing
Hernia repair	Hernia repair	1995 - 1995
Gastrooesophageal reflux disease	Gerd	2005 - Ongoing
Hypertension	Hypertension	2005 - Ongoing
Sciatica	Sciatica	2005 - Ongoing
Trigeminal neuralgia	Trigeminal neuralgia	2005 - Ongoing
Depression	Depression	2010 - Ongoing
Blood cholesterol increased	High cholesterol	2013 - Ongoing
Rotator cuff syndrome	Torn rotator cuff	2014 - Ongoing
Deafness	Hearing loss	2015 - Ongoing
Erectile dysfunction	Erectile dysfunction	2015 - Ongoing
Cardiac ablation	Cardiac ablation	2016 - 2016
Supraventricular tachycardia	Av nodal re-entry tachycardia	2016 - Ongoing
Supraventricular tachycardia	Paroxysmal svt	2016 - Ongoing
Ventricular extrasystoles	Premature ventricular contractions	2016 - Ongoing
Sleep apnoea syndrome	Obstructive sleep apnea	2017 - Ongoing
Cataract	Cataracts	2018 - 2018
Cataract operation	Cataract surgery-both eyes	2018 - 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	Not reported - Ongoing	Muscle Aches And General Pain
Paracetamol	Not reported - Ongoing	Muscle Aches And General Pains
Fluvoxamine	2010 - Ongoing	Heart Arrythmia Depression
Atorvastatin	2013 - 16 Oct 2020 (Study Day 44)	High Cholesterol
Famotidine	2013 - Ongoing	Gerd
Losartan	2013 - Ongoing	Hypertension

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2015 - Ongoing	Heart Health
Nebivolol hydrochloride	2016 - Ongoing	Heart Arrythmia
Bupropion hydrochloride	2019 - Ongoing	Depression
Colecalciferol	2019 - Ongoing	General Health
Fluticasone propionate	25 Sep 2020 (Study Day 23) - Ongoing	Seasonal Allergies
Ceftriaxone	Oct 2020 - Oct 2020	Pneumonia
Ibuprofen	08 Oct 2020 (Study Day 36) - 08 Oct 2020 (Study Day 36)	Joint Pain/Fever
Paracetamol	08 Oct 2020 (Study Day 36) - 08 Oct 2020 (Study Day 36)	Joint Pain/Fever

Bacterial study*	10 Oct 2020 (Study Day 38) - 10 Oct 2020 (Study Day 38)	Adverse Event
Chest x-ray*	10 Oct 2020 (Study Day 38) - 10 Oct 2020 (Study Day 38)	Adverse Event
Enoxaparin	10 Oct 2020 (Study Day 38) - 16 Oct 2020 (Study Day 44)	Prevention Of Dvt
Metoprolol	10 Oct 2020 (Study Day 38) - 16 Oct 2020 (Study Day 44)	Hypertension
Ondansetron	10 Oct 2020 (Study Day 38) - 16 Oct 2020 (Study Day 44)	Nausea And Vomiting
Paracetamol	10 Oct 2020 (Study Day 38) - 16 Oct 2020 (Study Day 44)	General Pain
Viral studies*	10 Oct 2020 (Study Day 38) - 10 Oct 2020 (Study Day 38)	Adverse Event
Valsartan	11 Oct 2020 (Study Day 39) - 16 Oct 2020 (Study Day 44)	Hypertension
Vitamin b12 nos	11 Oct 2020 (Study Day 39) - 11 Oct 2020 (Study Day 39)	General Health
Cefdinir	12 Oct 2020 (Study Day 40) - Oct 2020	Community Acquired Pneumonia
Abdominal ultrasound*	14 Oct 2020 (Study Day 42) - 14 Oct 2020 (Study Day 42)	Adverse Event
Ipratropium	16 Oct 2020 (Study Day 44) - Ongoing	Seasonal Allergies
Vitamin b12 nos	16 Oct 2020 (Study Day 44) - Ongoing	General Health
Varicella zoster vaccine rge (cho)	18 Jan 2021 (Study Day 138) - 18 Jan 2021 (Study Day 138)	Prevent Shingles

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	17 Sep 2020 (Study Day 15) - 19 Sep 2020 (Study Day 17)
Hepatic Steatosis	Grade 2/moderate	Not related	10 Oct 2020 (Study Day 38) - 16 Oct 2020 (Study Day 44)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Toxic Encephalopathy	Grade 4	Not related	10 Oct 2020 (Study Day 38) - 16 Oct 2020 (Study Day 44)
Respiratory Disorder	Grade 2/moderate	Not related	04 Nov 2020 (Study Day 63) - 09 Nov 2020 (Study Day 68)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US353-2279 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	04 Oct 2020 (Study Day 25) – 26 Oct 2020 (Study Day 47)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US353-2279, a 66-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 10 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Oct 2020 (Study Day 25), 24 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of covid-19. On 07 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of COVID-19 lasted for 23 days, after which it was considered to be recovered/resolved on 26 Oct 2020 (Study Day 47). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000461	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	Not reported - Ongoing
Menopause	Menopause	2003 - Ongoing
Dermal filler injection	Dermal filler injection	2014 - 2014
Basal cell carcinoma	Basal cell carcinoma	2016 - 2016
Skin neoplasm excision	Basal cell carcinoma removal	2016 - 2016

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamin d nos	Not reported - Ongoing	General Health
Ibuprofen; pseudoephedrine hydrochloride	2015 - Ongoing	Seasonal Allergies
Ibuprofen; pseudoephedrine hydrochloride	08 Oct 2020 (Study Day 29) - 15 Oct 2020 (Study Day 36)	COVID Symptoms: Sore Throat, Cough, Nasal Congestion
Ibuprofen	03 Mar 2021 (Study Day 175) - 25 Mar 2021 (Study Day 197)	Rib Chest Pain And Foot Pain
X-ray of neck and r foot*	04 Mar 2021 (Study Day 176) - 04 Mar 2021 (Study Day 176)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	04 Oct 2020 (Study Day 25) - 26 Oct 2020 (Study Day 47)
Musculoskeletal Chest Pain	Grade 2/moderate	Not related	03 Mar 2021 (Study Day 175) - 25 Mar 2021 (Study Day 197)
Pain In Extremity	Grade 2/moderate	Not related	03 Mar 2021 (Study Day 175) - 25 Mar 2021 (Study Day 197)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US353-2281 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	06 Oct 2020 (Study Day 27)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Osteoarthritis/Worsening Of Osteoarthritis	SAE	Grade 4	Not related	23 Oct 2020 (Study Day 44) – 25 Oct 2020 (Study Day 46)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US353-2281, a 69-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 10 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 06 Oct 2020 (Study Day 27). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Oct 2020 (Study Day 44), 43 days after the first dose and 17 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of osteoarthritis. Action taken with the IP was not applicable. The event of worsening of osteoarthritis lasted for 3 days, after which it was considered to be recovered/resolved on 25 Oct 2020 (Study Day 46). The investigator assessed the event of osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000561	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Knee arthroplasty	Meniscus transplant	1994 - 1994
Osteotomy	Femoral osteotomy	1994 - 1994
Depression	Depression	2005 - Ongoing
Osteoarthritis	Osteoarthritis	2005 - Ongoing
Blood testosterone decreased	Low testosterone	2010 - Ongoing
Knee arthroplasty	Knee replacement - right knee	2010 - 2010
Attention deficit hyperactivity disorder	Attention deficit hyperactivity disorder	2012 - Ongoing
Hypertension	Hypertension	2013 - Ongoing
Deafness	Hearing loss	2014 - Ongoing
Dermal filler injection	Dermal filler injection	2015 - 2015
Erectile dysfunction	Erectile dysfunction	2017 - Ongoing
Spinal operation	Revision surgery (back surgery)	01 Jan 2018 (Study Day -983) - 01 Jan 2018 (Study Day -983)
Seasonal allergy	Season allergies	2019 - Ongoing
Spinal fusion surgery	Back fusion surgery	2019 - 2019
Foot fracture	Fifth meditarsal break	31 Aug 2020 (Study Day -10) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	Not reported - Ongoing	Osteoarthritis
Venlafaxine	2005 - Ongoing	Depression
Testosterone cipionate	2010 - Ongoing	Low Testosterone
Amfetamine aspartate; amfetamine sulfate; dexamfetamine saccharate; dexamfetamine sulfate	2012 - Ongoing	Adhd
Spironolactone	2016 - Ongoing	Hypertension
Telmisartan	2016 - Ongoing	Hypertension
Tadalafil	2017 - Ongoing	Erectile Dysfunction
Fluticasone propionate	2019 - Ongoing	Seasonal Allergies
Vitamins nos	2019 - Ongoing	General Health
Ibuprofen	07 Oct 2020 (Study Day 28) - 07 Oct 2020 (Study Day 28)	Body Aches
Paracetamol	07 Oct 2020 (Study Day 28) - 08 Oct 2020 (Study Day 29)	Fever (Documented In Ediary Post 2nd Dose

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	23 Oct 2020 (Study Day 44) - Ongoing	Dvt Prevention After Ankle Surgery
Left total ankle arthroplasty*	23 Oct 2020 (Study Day 44) - 23 Oct 2020 (Study Day 44)	Medical History
Oxycodone	23 Oct 2020 (Study Day 44) - 29 Oct 2020 (Study Day 50)	Pain From Ankle Surgery
Paracetamol	23 Oct 2020 (Study Day 44) - 03 Nov 2020 (Study Day 55)	Pain From Ankle Surgery
Macrogol	25 Oct 2020 (Study Day 46) - 28 Oct 2020 (Study Day 49)	Bowel Management -Prevention Of Constipation Caused By Pain Medication

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Epistaxis	Grade 1/mild	Not related	10 Oct 2020 (Study Day 31) - 10 Oct 2020 (Study Day 31)
Procedural Pain	Grade 2/moderate	Not related	23 Oct 2020 (Study Day 44) - 03 Nov 2020 (Study Day 55)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US354-2090 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Arthralgia/Polyarthralgias	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	03 Sep 2020 (Study Day 7) – 15 Jan 2021 (Study Day 141)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US354-2090, a 65-year-old Hispanic or Latino male, received the first dose of placebo in the right arm on 28 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Sep 2020 (Study Day 7), 6 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of arthralgia. On 24 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of polyarthralgias lasted for 135 days, after which it was considered to be recovered/resolved on 15 Jan 2021 (Study Day 141). The investigator assessed the event of arthralgia to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

On 10 Mar 2021 (Study Day 195), the participant discontinued from the study due to withdrawal of consent by participant.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Prostatectomy	Prostatectomy (secondary to prostate cancer)	Aug 2011 - Aug 2011
Erectile dysfunction	Erectile dysfunction	2012 - Ongoing
Spinal fusion surgery	Spinal surgery (l5-s1 fusion)	Nov 2015 - Nov 2015
Sleep apnoea syndrome	Sleep apnea	Aug 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sildenafil	Jul 2012 - Ongoing	Erectile Dysfunction
Allium sativum	Aug 2019 - Ongoing	General Health Prophylaxis
Ascorbic acid	Aug 2019 - Ongoing	General Health Prophylaxis
Fish oil	Aug 2019 - Ongoing	General Health Prophylaxis
Vitamin d nos	Aug 2019 - Ongoing	General Health Prophylaxis
Vitamins nos	Aug 2019 - Ongoing	General Health Prophylaxis
Cyclobenzaprine	13 Oct 2020 (Study Day 47) - 15 Jan 2021 (Study Day 141)	Polyarthralgias
Naproxen	13 Oct 2020 (Study Day 47) - 15 Jan 2021 (Study Day 141)	Polyarthralgias
Ibuprofen	17 Oct 2020 (Study Day 51) - 17 Oct 2020 (Study Day 51)	Polyarthralgia
Influenza vaccine	02 Nov 2020 (Study Day 67) - 02 Nov 2020 (Study Day 67)	Flu Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 2/moderate	Not related	03 Sep 2020 (Study Day 7) - 15 Jan 2021 (Study Day 141)
Groin Pain	Grade 1/mild	Not related	04 Sep 2020 (Study Day 8) - 04 Sep 2020 (Study Day 8)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US354-2168 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	04 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Anxiety/Anxiety Exacerbation	SAE	Grade 4	Not related	10 Sep 2020 (Study Day 7) – 18 Sep 2020 (Study Day 15)	Recovered/resolved
Anxiety/Anxiety Exacerbation	SAE, AE leading to withdrawal from study vaccine	Grade 3/severe	Not related	19 Sep 2020 (Study Day 16) – 23 Sep 2020 (Study Day 20)	Recovered/resolved
Depression/Depression Exacerbation	SAE	Grade 3/severe	Not related	19 Sep 2020 (Study Day 16) – 23 Sep 2020 (Study Day 20)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US354-2168, a 54-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 04 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Sep 2020 (Study Day 7), 6 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of anxiety. On 01 Oct 2020 (Study Day 28), the IP dose was discontinued due to physician decision. The event of anxiety exacerbation lasted for 9 days, after which it was considered to be recovered/resolved on 18 Sep 2020 (Study Day 15). The investigator assessed the event of anxiety to be not related to the IP.

On 19 Sep 2020 (Study Day 16), 15 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of anxiety. On 01 Oct 2020 (Study Day 28), the IP dose was discontinued due to physician decision. The event of anxiety exacerbation lasted for 5 days, after which it was considered to be recovered/resolved on 23 Sep 2020 (Study Day 20). The investigator assessed the event of anxiety to be not related to the IP.

On 19 Sep 2020 (Study Day 16), 15 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of depression. On 01 Oct 2020

(Study Day 28), the IP dose was discontinued due to physician decision. The event of depression exacerbation lasted for 5 days, after which it was considered to be recovered/resolved on 23 Sep 2020 (Study Day 20). The investigator assessed the event of depression to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000312	Anxiety
MOD-2020-000312	Anxiety
MOD-2020-000312	Depression

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Sickle cell disease	Sickle cell disease	(b) (6) 1966 - Ongoing
Skin graft	Skin grafts for burn	1992 - 1992
Anxiety disorder	Anxiety disorder	2000 - Ongoing
Borderline personality disorder	Borderline personality disorder	2000 - Ongoing
Depression	Depression	2000 - Ongoing
Generalised anxiety disorder	Generalized anxiety disorder	2000 - Ongoing
Post-traumatic stress disorder	Ptsd	2000 - Ongoing
Hypertension	Hypertension	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	2018 - Ongoing	Hypertension
Mirtazapine	2019 - 10 Sep 2020 (Study Day 7)	Generalized Anxiety Disorder
Hydroxycarbamide	May 2020 - Ongoing	Sickle Cell Disease
Oxycodone	Aug 2020 - Ongoing	Sickle Cell Disease
Mirtazapine	10 Sep 2020 (Study Day 7) - Ongoing	Generalized Anxiety Disorder Exacerbation
Diphenhydramine hydrochloride	19 Sep 2020 (Study Day 16) - 19 Sep 2020 (Study Day 16)	Lower Leg Pain

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydromorphone hydrochloride	19 Sep 2020 (Study Day 16) - 19 Sep 2020 (Study Day 16)	Lower Leg Pain
Morphine	19 Sep 2020 (Study Day 16) - 19 Sep 2020 (Study Day 16)	Lower Leg Pain
Lithium	20 Sep 2020 (Study Day 17) - Ongoing	Depression And Anxiety Exacerbation
Mirtazapine	20 Sep 2020 (Study Day 17) - Ongoing	Depression Exacerbation
Prazosin	20 Sep 2020 (Study Day 17) - Ongoing	Ptsd
Acetylsalicylic acid	23 Oct 2020 (Study Day 50) - 25 Oct 2020 (Study Day 52)	Headache
Ibuprofen	10 Nov 2020 (Study Day 68) - Ongoing	Right Trapezius Strain.

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Pain In Extremity	Grade 2/moderate	Not related	18 Sep 2020 (Study Day 15) - 19 Sep 2020 (Study Day 16)
Headache	Grade 1/mild	Not related	21 Oct 2020 (Study Day 48) - 23 Oct 2020 (Study Day 50)
Rhinorrhoea	Grade 1/mild	Not related	21 Oct 2020 (Study Day 48) - 23 Oct 2020 (Study Day 50)
Muscle Strain	Grade 1/mild	Not related	10 Nov 2020 (Study Day 68) - 22 Dec 2020 (Study Day 110)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US354-2199 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	08 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Renal Cell Carcinoma/Renal Cell Carcinoma	SAE	Grade 2/ moderate	Not related	02 Oct 2020 (Study Day 23) – 29 Oct 2020 (Study Day 50)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US354-2199, a 66-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 10 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 08 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Oct 2020 (Study Day 23), 22 days after the first dose and 6 days before the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of renal cell carcinoma. The IP dose was not changed due to the renal cell carcinoma. The event of renal cell carcinoma lasted for 28 days, after which it was considered to be recovered/resolved on 29 Oct 2020 (Study Day 50). The investigator assessed the event of renal cell carcinoma to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-037763	Renal cell carcinoma

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1960 - Ongoing
Hypertrophic cardiomyopathy	Hypertrophic cardiomyopathy	2004 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2004 - 20 Oct 2020 (Study Day 41)	Cardiomyopathy
Atenolol	2004 - Ongoing	Cardiomyopathy
Rosuvastatin	2004 - Ongoing	Cardiomyopathy
Azelastine	2015 - Ongoing	Seasonal Allergies
Fexofenadine	2015 - Ongoing	Seasonal Allergies
Olopatadine	2015 - Ongoing	Seasonal Allergies
Vitamin d nos	2015 - Ongoing	General Health
Influenza vaccine inact sag 3v	22 Oct 2020 (Study Day 43) - 22 Oct 2020 (Study Day 43)	Influenza Prophylaxis
Cefazolin	27 Oct 2020 (Study Day 48) - 29 Oct 2020 (Study Day 50)	Partial Nephrectomy
Docusate	27 Oct 2020 (Study Day 48) - 01 Nov 2020 (Study Day 53)	Left Partial Nephrectomy
Heparin	27 Oct 2020 (Study Day 48) - 29 Oct 2020 (Study Day 50)	Partial Nephrectomy
Hydromorphone hydrochloride	27 Oct 2020 (Study Day 48) - 28 Oct 2020 (Study Day 49)	Partial Nephrectomy
Ketorolac tromethamine	27 Oct 2020 (Study Day 48) - 29 Oct 2020 (Study Day 50)	Partial Nephrectomy
Left partial nephrectomy*	27 Oct 2020 (Study Day 48) - 27 Oct 2020 (Study Day 48)	Adverse Event
Left ureteral catheter placement*	27 Oct 2020 (Study Day 48) - 27 Oct 2020 (Study Day 48)	Adverse Event
Ondansetron	27 Oct 2020 (Study Day 48) - 27 Oct 2020 (Study Day 48)	Left Partial Nephrectomy
Paracetamol	27 Oct 2020 (Study Day 48) - 01 Nov 2020 (Study Day 53)	Left Partial Nephrectomy
Acetylsalicylic acid	31 Oct 2020 (Study Day 52) - Ongoing	Cardiomyopathy

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US354-2309 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	01 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	28 Oct 2020 (Study Day 28)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Subarachnoid Haemorrhage/Subarachnoid Hemorrhage	SAE	Grade 3/ severe	Not related	13 Nov 2020 (Study Day 44) – 11 Dec 2020 (Study Day 72)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US354-2309, a 57-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 01 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 28 Oct 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 13 Nov 2020 (Study Day 44), 43 days after the first dose and 16 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of subarachnoid haemorrhage. Action taken with the IP was not applicable. The event of subarachnoid hemorrhage lasted for 29 days, after which it was considered to be recovered/resolved on 11 Dec 2020 (Study Day 72). The investigator assessed the event of subarachnoid haemorrhage to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000833	Subarachnoid haemorrhage

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Umbilical hernia repair	Umbilical hernia repair	1966 - 1966
Iron deficiency anaemia	Anemia (iron deficiency)	1970 - Ongoing
Brain neoplasm benign	Benign brain tumor	1999 - 1999
Hypersensitivity	Allergies (environmental)	2018 - Ongoing
Hysterectomy	Hysterectomy	2018 - 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Loratadine	2018 - Ongoing	Allergies (Environmental)
Paracetamol	29 Oct 2020 (Study Day 29) - 29 Oct 2020 (Study Day 29)	Headache
Ct head & cervical spine*	13 Nov 2020 (Study Day 44) - 13 Nov 2020 (Study Day 44)	Adverse Event
Diphtheria vaccine toxoid; pertussis vaccine acellular; tetanus vaccine toxoid	13 Nov 2020 (Study Day 44) - 13 Nov 2020 (Study Day 44)	Tetanus Prophylaxis
Enoxaparin	13 Nov 2020 (Study Day 44) - 15 Nov 2020 (Study Day 46)	Dvt Prohylaxis
Lidocaine	13 Nov 2020 (Study Day 44) - 13 Nov 2020 (Study Day 44)	Posterior Scalp Laceration
Ocrilate	13 Nov 2020 (Study Day 44) - 13 Nov 2020 (Study Day 44)	Posterior Scalp Laceration
Posterior scalp laceration repair*	13 Nov 2020 (Study Day 44) - 13 Nov 2020 (Study Day 44)	Adverse Event
Carotid ultrasound, bilateral*	14 Nov 2020 (Study Day 45) - 14 Nov 2020 (Study Day 45)	Adverse Event
Ibuprofen	14 Nov 2020 (Study Day 45) - Ongoing	Subarachnoid Hemorrhage
Levetiracetam	14 Nov 2020 (Study Day 45) - Ongoing	Subarachnoid Hemorrhage
Paracetamol	14 Nov 2020 (Study Day 45) - Ongoing	Subarachnoid Hemorrhage
Transthoracic echocardiogram with doppler*	15 Nov 2020 (Study Day 46) - 15 Nov 2020 (Study Day 46)	Adverse Event
Mri brain*	11 Dec 2020 (Study Day 72) - 11 Dec 2020 (Study Day 72)	Adverse Event
Trazodone	20 Feb 2021 (Study Day 143) - Ongoing	Insomnia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 1/mild	Related	29 Oct 2020 (Study Day 29) - 29 Oct 2020 (Study Day 29)
Arnold-Chiari Malformation	Grade 1/mild	Not related	13 Nov 2020 (Study Day 44) - Ongoing
Skin Laceration	Grade 2/moderate	Not related	13 Nov 2020 (Study Day 44) - 17 Dec 2020 (Study Day 78)
Syncope	Grade 3/severe	Not related	13 Nov 2020 (Study Day 44) - 13 Nov 2020 (Study Day 44)
Insomnia	Grade 1/mild	Not related	15 Feb 2021 (Study Day 138) - Ongoing
Herpes Zoster	Grade 2/moderate	Not related	25 Feb 2021 (Study Day 148) - 07 Mar 2021 (Study Day 158)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US354-2332 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	09 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Seizure/Exacerbation Of Seizure Disorder	SAE, AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	07 Nov 2020 (Study Day 30) – 09 Nov 2020 (Study Day 32)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US354-2332, a 56-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 09 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Nov 2020 (Study Day 30), 29 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of seizure. On 05 Nov 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of exacerbation of seizure disorder lasted for 3 days, after which it was considered to be recovered/resolved on 09 Nov 2020 (Study Day 32). The investigator assessed the event of seizure to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000714	Seizure

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seizure	Seizure disorder	Feb 1998 - Ongoing
Hypertension	Hypertension	2012 - Ongoing
Blood cholesterol increased	High cholesterol	2015 - Ongoing
Osteoarthritis	Righ hand osteoarthritis	2015 - Ongoing
Cerebrovascular accident	Cva	Jan 2019 - Jan 2019
Hemiparesis	L sided weakness secondary to cva	Jan 2019 - Ongoing
Implantable cardiac monitor insertion	Implanted cardiac monitor to detect arrhythmias	Jan 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Gabapentin	2014 - Ongoing	Seizure Disorder
Levetiracetam	2014 - 06 Nov 2020 (Study Day 29)	Seizure Disorder
Lisinopril	2014 - Ongoing	Hypertension
Acetylsalicylic acid	2018 - Ongoing	Stroke Prevention
Simvastatin	2018 - Ongoing	High Cholesterol
Apixaban	Jan 2020 - Ongoing	Stroke Prevention
Zonisamide	Feb 2020 - Ongoing	Seizure Disorder
Influenza vaccine	04 Nov 2020 (Study Day 27) - 04 Nov 2020 (Study Day 27)	Influenza Prevention
Levetiracetam	07 Nov 2020 (Study Day 30) - 09 Nov 2020 (Study Day 32)	Seizure Disorder
Levetiracetam	07 Nov 2020 (Study Day 30) - 07 Nov 2020 (Study Day 30)	Worsening Seizure Disorder (Loading Dose)
Lorazepam	07 Nov 2020 (Study Day 30) - 07 Nov 2020 (Study Day 30)	Worsening Seizure Disorder
Paracetamol	07 Nov 2020 (Study Day 30) - 09 Nov 2020 (Study Day 32)	Right Hand Osteoarthritis
Vitamins nos	07 Nov 2020 (Study Day 30) - 09 Nov 2020 (Study Day 32)	Health Maintenance
Carbamazepine	08 Nov 2020 (Study Day 31) - Ongoing	Seizure Disorder
Carbamazepine	09 Nov 2020 (Study Day 32) - 09 Nov 2020 (Study Day 32)	Worsening Seizure Disorder
Ibuprofen	09 Nov 2020 (Study Day 32) - Ongoing	Right Hand Osteoarthritis
Levetiracetam	09 Nov 2020 (Study Day 32) - Ongoing	Seizure Disorder
Levetiracetam	21 Jan 2021 (Study Day 105) - 21 Jan 2021 (Study Day 105)	Breakthrough Seizure

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ct head*	02 Mar 2021 (Study Day 145) - 02 Mar 2021 (Study Day 145)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Seizure	Grade 2/moderate	Not related	21 Jan 2021 (Study Day 105) - 21 Jan 2021 (Study Day 105)
Dizziness	Grade 2/moderate	Not related	02 Mar 2021 (Study Day 145) - 02 Mar 2021 (Study Day 145)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US355-2024 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Non-Cardiac Chest Pain/Non-Cardiac Chest Pain, Non-Specified	SAE	Grade 3/severe	Not related	24 Aug 2020 (Study Day 12) – 11 Sep 2020 (Study Day 30)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2024, a 62-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 13 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Aug 2020 (Study Day 12), 11 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of non-cardiac chest pain. On 09 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of non-cardiac chest pain, non-specified lasted for 19 days, after which it was considered to be recovered/resolved on 11 Sep 2020 (Study Day 30). The investigator assessed the event of non-cardiac chest pain to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000252	Non-cardiac chest pain

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Glaucoma	Bilateral glaucoma	1999 - Ongoing
Hypertension	Hypertension	Jun 1999 - Ongoing
Hyperlipidaemia	Hyperlipidemia	11 Jun 2009 (Study Day -4081) - Ongoing
Cataract	Cataract right eye	Dec 2017 - Dec 2017
Eye laser surgery	R eye laser surgery for cataract	Dec 2017 - Dec 2017
Intraocular lens implant	Cataract lens implant in right eye	Dec 2017 - Dec 2017

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Timolol maleate	2009 - Ongoing	Glaucoma
Losartan	Jun 2009 - Ongoing	Hypertension
Amlodipine	2015 - Jul 2020	Hypertension
Amlodipine	Jul 2020 - Ongoing	Hypertension
Influenza vaccine	08 Oct 2020 (Study Day 57) - 08 Oct 2020 (Study Day 57)	Influenza Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Seasonal Allergy	Grade 1/mild	Not related	18 Aug 2020 (Study Day 6) - 21 Sep 2020 (Study Day 40)
Vaccination Site Pain	Grade 1/mild	Related	21 Jan 2021 (Study Day 162) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US355-2035 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Herpes Zoster/Shingles	AE leading to withdrawal from study vaccine	Grade 1/mild	Not related	04 Sep 2020 (Study Day 22) – 21 Sep 2020 (Study Day 39)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2035, a 55-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 14 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Sep 2020 (Study Day 22), 21 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of herpes zoster. On 10 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of shingles lasted for 18 days, after which it was considered to be recovered/resolved on 21 Sep 2020 (Study Day 39). The investigator assessed the event of herpes zoster to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Depression	Depression	1998 - 1999
Intervertebral disc degeneration	L4-l5 degenerative disk	2001 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety	Anxiety	2004 - Ongoing
Attention deficit hyperactivity disorder	Attention deficit disorder	2005 - Ongoing
Seasonal allergy	Seasonal allergies	2006 - Ongoing
Barrett's oesophagus	Barretts esophagust	2010 - Ongoing
Gastrooesophageal reflux disease	Reflux disease	2010 - Ongoing
Insomnia	Insomnia	2010 - Ongoing
Back pain	Back pain	Oct 2017 - Ongoing
Herpes zoster	Shingles	Oct 2017 - Nov 2017

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sertraline	2004 - Ongoing	Anxiety
Methylphenidate	2005 - Ongoing	Attention Deficit Disorder
Omeprazole	2010 - Ongoing	Reflux Disease
Naproxen	11 Aug 2020 (Study Day -3) - Ongoing	Back Pain
Eszopiclone	13 Aug 2020 (Study Day -1) - Ongoing	Insomnia
Prednisone	04 Sep 2020 (Study Day 22) - 09 Sep 2020 (Study Day 27)	Shingles
Valaciclovir	04 Sep 2020 (Study Day 22) - 14 Sep 2020 (Study Day 32)	Shingles

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Herpes Zoster	Grade 1/mild	Not related	04 Sep 2020 (Study Day 22) - 21 Sep 2020 (Study Day 39)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US355-2103 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	20 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Depression/Worsening Depression	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	03 Sep 2020 (Study Day 15) – 12 Oct 2020 (Study Day 54)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2103, a 51-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 20 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Sep 2020 (Study Day 15), 14 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of depression. On 16 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of worsening depression lasted for 40 days, after which it was considered to be recovered/resolved on 12 Oct 2020 (Study Day 54). The investigator assessed the event of depression to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypothyroidism	Hypothyroidism	Not reported - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Intervertebral disc degeneration	Degenerative disc disease	Not reported - Ongoing
Headache	Headaches	1980 - Ongoing
Female sterilisation	Tubal ligation	Dec 1994 - Dec 1994
Depression	Depression	2001 - Ongoing
Drug hypersensitivity	Allergy to morphine	2003 - Ongoing
Attention deficit hyperactivity disorder	Attention deficit hyperactivity disorder	2006 - Ongoing
Hysterectomy	Hysterectomy	Aug 2008 - Aug 2008
Seasonal allergy	Seasonal allergies	2012 - Ongoing
Anxiety	Anxiety with heights	2017 - Ongoing
Gastrooesophageal reflux disease	Bile reflux	2017 - Ongoing
Intervertebral disc operation	Cervical discs replaced	2018 - May 2019
Irritable bowel syndrome	Irritable bowel syndrome	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bupropion hydrochloride	2004 - Ongoing	Depression
Salbutamol	2012 - Ongoing	Seasonal Allergies
Triamcinolone acetonide	2012 - Ongoing	Seasonal Allergies
Vitamin b nos	2016 - Ongoing	Health Promotion
Lorazepam	2017 - Ongoing	Anxiety With Heights
Dicycloverine	2018 - Ongoing	Irritable Bowel Syndrome
Paracetamol	19 Aug 2020 (Study Day -1) - Ongoing	Headaches And Degenerative Disc Disease
Sertraline hydrochloride	28 Sep 2020 (Study Day 40) - Ongoing	Depression
Famotidine	05 Oct 2020 (Study Day 47) - Ongoing	Bile Reflux
Levothyroxine	27 Oct 2020 (Study Day 69) - Ongoing	Hypothyroidism
Influenza vaccine	28 Oct 2020 (Study Day 70) - 28 Oct 2020 (Study Day 70)	Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Depression	Grade 2/moderate	Not related	03 Sep 2020 (Study Day 15) - 12 Oct 2020 (Study Day 54)
Vitreous Floaters	Grade 2/moderate	Not related	08 Jan 2021 (Study Day 142) - 12 Feb 2021 (Study Day 177)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US355-2140 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	22 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Retinal Detachment/Retinal Detachment Of Left Eye	SAE, AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	08 Sep 2020 (Study Day 18) – 12 Sep 2020 (Study Day 22)	Recovered/resolved
Retinal Tear/Horseshoe Tear Of Right Eye	SAE	Grade 3/ severe	Not related	01 Oct 2020 (Study Day 41) – 06 Oct 2020 (Study Day 46)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2140, a 59-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 22 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Sep 2020 (Study Day 18), 17 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of retinal detachment. On 18 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of retinal detachment of left eye lasted for 5 days, after which it was considered to be recovered/resolved on 12 Sep 2020 (Study Day 22). The investigator assessed the event of retinal detachment to be not related to the IP.

On 01 Oct 2020 (Study Day 41), 40 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of retinal tear. On 18 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of horseshoe tear of right eye lasted for 6 days, after which it was considered to be recovered/resolved on 06 Oct 2020 (Study Day 46). The investigator assessed the event of retinal tear to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000277	Retinal detachment
MOD-2020-000407	Retinal tear

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cataract	Left eye cataract	Not reported - Ongoing
Cholelithiasis	Cholelithiasis	Not reported - 1999
Intervertebral disc protrusion	Herniated discs l3-l5	Not reported - Jan 2019
Anaemia	Borderline anemia	1979 - Ongoing
Corneal implant	Bilateral corneal intacs	1994 - Ongoing
Cholecystectomy	Cholestectomy	1999 - 1999
Gastric bypass	Elective gastric bypass surgery	2000 - 2000
Seasonal allergy	Seasonal allergies	2000 - Ongoing
Sjogren's syndrome	Sjogren's syndrome	2004 - Ongoing
Mixed connective tissue disease	Mixed connective disease	Sep 2004 - Ongoing
Raynaud's phenomenon	Raynaud's disease	Sep 2004 - Ongoing
Fibromyalgia	Fibromyelgia	2008 - Ongoing
Hypertension	Hypertension	2012 - Ongoing
Oedema	Bilateral pitting edema	2012 - Ongoing
Menopause	Menopause	2013 - 2013
Insomnia	Insomnia	2015 - Ongoing
Rheumatoid arthritis	Generalized rheumatoid arthritis	2015 - Ongoing
Knee arthroplasty	Left knee replacement secondary to rheumatoid arthritis	2018 - 2018
Thrombophlebitis	Thrombophlebitis	2018 - 2019
Spinal fusion surgery	Spinal fusion	Jan 2019 - Jan 2019
Anxiety	Anxiety	Apr 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrochlorothiazide	Not reported - Ongoing	Hypertension
Diphenhydramine hydrochloride	2000 - Ongoing	Seasonal Allergies
Vitamins nos	2000 - Ongoing	Health Promotion
Pilocarpine	2004 - Ongoing	Sjogren's Syndome
Milnacipran hydrochloride	2008 - Ongoing	Fibromyalgia
Cyclobenzaprine	2010 - Ongoing	Muscle Pain Due To Fibromyalgia
Bumetanide	2012 - Ongoing	Hypertension
Nifedipine	2013 - Ongoing	Hypertension
Celecoxib	2015 - Ongoing	Rheumatoid
Zolpidem	2015 - Ongoing	Insomnia
Bupropion hydrochloride	09 Sep 2020 (Study Day 19) - Ongoing	Anxiety
Left eye vitrectomy membranectomy [retinal detachment repair]*	11 Sep 2020 (Study Day 21) - 11 Sep 2020 (Study Day 21)	Adverse Event
Moxifloxacin	11 Sep 2020 (Study Day 21) - 18 Sep 2020 (Study Day 28)	Retinal Detachment
Prednisolone acetate	11 Sep 2020 (Study Day 21) - Ongoing	Retinal Detachment
Cyclopentolate	12 Sep 2020 (Study Day 22) - Ongoing	Retinal Detachment
Ibuprofen	01 Oct 2020 (Study Day 41) - 02 Oct 2020 (Study Day 42)	Eye Pain Related To Eye Procedure
Laser photocoagulation repair of right retinal horseshoe tear*	01 Oct 2020 (Study Day 41) - 01 Oct 2020 (Study Day 41)	Adverse Event
Cryotherapy of right eye*	06 Oct 2020 (Study Day 46) - 06 Oct 2020 (Study Day 46)	Adverse Event
Cyclopentolate	06 Oct 2020 (Study Day 46) - 06 Oct 2020 (Study Day 46)	Cryotherapy Of Right Eye
Phenylephrine	06 Oct 2020 (Study Day 46) - 06 Oct 2020 (Study Day 46)	Cryotherapy Of Right Eye
Tropicamide	06 Oct 2020 (Study Day 46) - 06 Oct 2020 (Study Day 46)	Cryotherapy Of Right Eye
Influenza vaccine	17 Nov 2020 (Study Day 88) - 17 Nov 2020 (Study Day 88)	Influenza Prophylaxis
Leflunomide	19 Nov 2020 (Study Day 90) - Ongoing	Rheumatoid Arthritis
Prednisone	26 Nov 2020 (Study Day 97) - 02 Dec 2020 (Study Day 103)	Fibromyalgia
Prednisone	04 Dec 2020 (Study Day 105) - 09 Dec 2020 (Study Day 110)	Fibromyalgia
Prednisone	10 Dec 2020 (Study Day 111) - 16 Dec 2020 (Study Day 117)	Fibromyalgia
Prednisone	17 Dec 2020 (Study Day 118) - 23 Dec 2020 (Study Day 124)	Fibromyalgia
Diclofenac	24 Dec 2020 (Study Day 125) - 12 Jan 2021 (Study Day 144)	Lower Back Pain

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Oxycodone hydrochloride; paracetamol	24 Dec 2020 (Study Day 125) - 27 Dec 2020 (Study Day 128)	Lower Back Pain
Codeine phosphate; paracetamol	26 Jan 2021 (Study Day 158) - 27 Jan 2021 (Study Day 159)	Intraocular Silicone Implant Removal - Left Eye
Intraocular silicone implant removal - left eye*	26 Jan 2021 (Study Day 158) - 26 Jan 2021 (Study Day 158)	Adverse Event
Left eye cataract implant*	26 Mar 2021 (Study Day 217) - 26 Mar 2021 (Study Day 217)	Medical History
Meloxicam	26 Mar 2021 (Study Day 217) - Ongoing	Left Eye Cataract Implant
Nepafenac	26 Mar 2021 (Study Day 217) - Ongoing	Left Eye Cataract Implant
Prednisone	26 Mar 2021 (Study Day 217) - Ongoing	Left Eye Cataract Implant

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fibromyalgia	Grade 2/moderate	Not related	26 Nov 2020 (Study Day 97) - 04 Jan 2021 (Study Day 136)
Back Pain	Grade 2/moderate	Not related	24 Dec 2020 (Study Day 125) - 04 Jan 2021 (Study Day 136)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US355-2189 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cauda Equina Syndrome/ Cauda Equina Syndrome	SAE	Grade 4	Not related	20 Dec 2020 (Study Day 117) – 24 Dec 2020 (Study Day 121)	Recovered/resolved
Wound Dehiscence/ Laminectomy Wound Dehiscence	SAE	Grade 4	Not related	26 Jan 2021 (Study Day 154) – 27 Jan 2021 (Study Day 155)	Recovered/resolved
Spinal Cord Compression/ Spinal Compression L5/S1	SAE	Grade 4	Not related	04 Feb 2021 (Study Day 163) – Ongoing	Recovering/resolving

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2189, a 21-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 26 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Dec 2020 (Study Day 117), 116 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of cauda equina syndrome. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to physician decision. The event of cauda equina syndrome lasted for 5 days, after which it was considered to be recovered/resolved on 24 Dec 2020 (Study Day 121). The investigator assessed the event of cauda equina syndrome to be not related to the IP.

On 26 Jan 2021 (Study Day 154), 153 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of wound dehiscence. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to physician decision. The event of laminectomy wound dehiscence lasted for 2 days, after which it was considered to be recovered/resolved on 27 Jan 2021 (Study Day 155). The investigator assessed the event of wound dehiscence to be not related to the IP.

On 04 Feb 2021 (Study Day 163), 162 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of spinal cord

compression. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to physician decision. The event of spinal compression l5/s1 was considered to be ongoing. The investigator assessed the event of spinal cord compression to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001247	Cauda equina syndrome
MOD-2021-010325	Spinal cord compression
MOD-2021-010325	Wound dehiscence
MOD-2021-010325	Urinary incontinence

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Dysmenorrhoea	Dysmenorrhea	Not reported - Ongoing
Rubber sensitivity	Latex allergy	(b) (6) 1999 (Study Day(b) (6) - Ongoing
Asthma	Asthma	2002 - Ongoing
Migraine	Migraines	2004 - Ongoing
Eczema	Eczema	2007 - 2015
Depression	Depression	2010 - Ongoing
Cholecystitis	Cholecystitis	2017 - 2019
Anaemia	Anemia	2018 - Ongoing
Anxiety	Anxiety	2018 - Ongoing
Sinus operation	Sinus surgery	2018 - 2018
Concussion	Concussion	Jul 2018 - Jul 2018
Kidney infection	Kidney infection	Oct 2019 - Oct 2019
Obesity	Severe obesity	2020 - Ongoing
Cholecystectomy	Cholecystectomy	Mar 2020 - Mar 2020
Drug hypersensitivity	Nsaids allergy	Mar 2020 - Ongoing
Gastric bypass	Gastric bypass surgery	Mar 2020 - Mar 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ipratropium bromide; salbutamol sulfate	Not reported - Ongoing	Asthma
Loratadine	Not reported - Ongoing	Asthma
Salbutamol sulfate	2002 - Ongoing	Asthma
Colecalciferol	2013 - 26 Jan 2021 (Study Day 154)	Health
Bupropion hydrochloride	2016 - Ongoing	Depression
Fremanezumab	2018 - 26 Jan 2021 (Study Day 154)	Migraines
Lorazepam	2018 - Ongoing	Anxiety
Topiramate	2018 - 26 Jan 2021 (Study Day 154)	Migraines
Iron	2019 - 26 Jan 2021 (Study Day 154)	Anemia
Calcium	Mar 2020 - 26 Jan 2021 (Study Day 154)	Health
Vitamins nos	Mar 2020 - 26 Jan 2021 (Study Day 154)	Health
Ethinylestradiol; norgestimate	May 2020 - Ongoing	Birth Control Pills
Paracetamol	27 Aug 2020 (Study Day 2) - 01 Sep 2020 (Study Day 7)	Temperature Of 99.1-99.9, Pain At Injection Site, Headache
Paracetamol	02 Sep 2020 (Study Day 8) - 02 Oct 2020 (Study Day 38)	Headache, Ipsilateral Axillary Lymphadenopathy, Body Aches
Levofloxacin	09 Sep 2020 (Study Day 15) - 15 Sep 2020 (Study Day 21)	Sinus Infection
Guaifenesin	01 Oct 2020 (Study Day 37) - 02 Oct 2020 (Study Day 38)	Nasal Congestion
Prednisone	02 Oct 2020 (Study Day 38) - 04 Oct 2020 (Study Day 40)	Nasal Congestion
Bisacodyl	06 Oct 2020 (Study Day 42) - 07 Oct 2020 (Study Day 43)	Constirpation
Macrogol 3350	06 Oct 2020 (Study Day 42) - 07 Oct 2020 (Study Day 43)	Constipation
Ondansetron	07 Oct 2020 (Study Day 43) - 24 Dec 2020 (Study Day 121)	Nausea
Nitrofurantoin	19 Oct 2020 (Study Day 55) - 28 Oct 2020 (Study Day 64)	Urinary Tract Infection
Hydrocodone bitartrate; paracetamol	05 Nov 2020 (Study Day 72) - 26 Jan 2021 (Study Day 154)	Left Meniscus Tear Repair
Left knee meniscus tear repair*	05 Nov 2020 (Study Day 72) - 05 Nov 2020 (Study Day 72)	Adverse Event
Tramadol	05 Nov 2020 (Study Day 72) - 26 Jan 2021 (Study Day 154)	Left Meniscus Tear Repair
Gabapentin	15 Nov 2020 (Study Day 82) - Ongoing	Left Meniscus Tear Repair And Back Injury L5, Laminectomy Wound Dehiscence, Spinal Decompression L5/S1
Influenza vaccine	19 Nov 2020 (Study Day 86) - 19 Nov 2020 (Study Day 86)	Influenza Prophylaxis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrocortisone	23 Nov 2020 (Study Day 90) - 23 Nov 2020 (Study Day 90)	L5 Back Injury
Dextromethorphan hydrobromide; paracetamol; phenylephrine hydrochloride	27 Nov 2020 (Study Day 94) - 13 Dec 2020 (Study Day 110)	Rhinorrhea, Headache
Guaifenesin	27 Nov 2020 (Study Day 94) - 12 Dec 2020 (Study Day 109)	Cough
Hydrocortisone	07 Dec 2020 (Study Day 104) - 07 Dec 2020 (Study Day 104)	L5 Back Injury
Laminectomy (l5, s1, partial s2)*	21 Dec 2020 (Study Day 118) - 21 Dec 2020 (Study Day 118)	Adverse Event
Amitriptyline	24 Dec 2020 (Study Day 121) - 27 Jan 2021 (Study Day 155)	Laminectomy, Laminectomy Wound Dehiscence
Benzoyl peroxide; clindamycin	24 Dec 2020 (Study Day 121) - Ongoing	Laminectomy, Laminectomy Wound Dehiscence, Spinal Decompression L5/S1
Bisacodyl	24 Dec 2020 (Study Day 121) - Ongoing	Laminectomy, Laminectomy Wound Dehiscence, Spinal Decompression L5/S1
Clindamycin	24 Dec 2020 (Study Day 121) - 31 Dec 2020 (Study Day 128)	Laminectomy, Bacterial Vaginosis
Cyclobenzaprine	24 Dec 2020 (Study Day 121) - Ongoing	Laminectomy, Laminectomy Wound Dehiscence, Spinal Decompression L5/S1
Dicycloverine	24 Dec 2020 (Study Day 121) - Ongoing	Laminectomy, Laminectomy Wound Dehiscence, Spinal Decompression L5/S1
Docusate; senna alexandrina	24 Dec 2020 (Study Day 121) - Ongoing	Laminectomy, Laminectomy Wound Dehiscence, Spinal Decompression L5/S1
Enoxaparin sodium	24 Dec 2020 (Study Day 121) - 22 Feb 2021 (Study Day 181)	Thrombosis Prophylaxis
Ondansetron	24 Dec 2020 (Study Day 121) - Ongoing	Laminectomy, Laminectomy Wound Dehiscence, Spinal Decompression L5/S1
Oxycodone hydrochloride	24 Dec 2020 (Study Day 121) - 26 Jan 2021 (Study Day 154)	Laminectomy
Paracetamol	24 Dec 2020 (Study Day 121) - 26 Jan 2021 (Study Day 154)	Laminectomy
Sucralfate	24 Dec 2020 (Study Day 121) - Ongoing	Ulcer Prophylaxis
Laminectomy wound debridement and irrigation*	27 Jan 2021 (Study Day 155) - 27 Jan 2021 (Study Day 155)	Adverse Event
Laminectomy wound vacuum*	27 Jan 2021 (Study Day 155) - 27 Jan 2021 (Study Day 155)	Adverse Event
Picc [peripherally inserted central catheter] line*	27 Jan 2021 (Study Day 155) - 27 Jan 2021 (Study Day 155)	Adverse Event
Vancomycin	27 Jan 2021 (Study Day 155) - 04 Feb 2021 (Study Day 163)	Laminectomy Wound Dehiscence
Baclofen	01 Feb 2021 (Study Day 160) - 12 Feb 2021 (Study Day 171)	Laminectomy Wound Dehiscence, Spinal Decompression L5/S1

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bethanechol	01 Feb 2021 (Study Day 160) - 08 Feb 2021 (Study Day 167)	Laminectomy Wound Dehiscence
Calcium carbonate	01 Feb 2021 (Study Day 160) - Ongoing	Health
Ferrous sulfate	01 Feb 2021 (Study Day 160) - Ongoing	Health
Fremanezumab	01 Feb 2021 (Study Day 160) - Ongoing	Migraines
Heparin	01 Feb 2021 (Study Day 160) - 23 Feb 2021 (Study Day 182)	Picc [peripherally Inserted Central Catheter] Line
Iron; vitamins nos	01 Feb 2021 (Study Day 160) - Ongoing	Health
Macrogol 3350	01 Feb 2021 (Study Day 160) - Ongoing	Laminectomy Wound Dehiscence, Spinal Decompression L5/S1
Pantoprazole sodium sesquihydrate	01 Feb 2021 (Study Day 160) - Ongoing	Ulcer Prophylaxis
Paracetamol	01 Feb 2021 (Study Day 160) - Ongoing	Laminectomy Wound Dehiscence, Spinal Decompression L5/S1
Sodium chloride	01 Feb 2021 (Study Day 160) - 23 Feb 2021 (Study Day 182)	Picc [peripherally Inserted Central Catheter] Line
Tamsulosin	01 Feb 2021 (Study Day 160) - 08 Feb 2021 (Study Day 167)	Laminectomy Wound Dehiscence
Topiramate	01 Feb 2021 (Study Day 160) - Ongoing	Migraines
Triamcinolone acetonide	01 Feb 2021 (Study Day 160) - Ongoing	Laminectomy Wound Dehiscence, Spinal Decompression L5/S1
Vitamin d nos	01 Feb 2021 (Study Day 160) - Ongoing	Health
Cyanocobalamin	02 Feb 2021 (Study Day 161) - Ongoing	Health
Hemovac placement*	05 Feb 2021 (Study Day 164) - 05 Feb 2021 (Study Day 164)	Adverse Event
L5/s1 wound vacuum*	05 Feb 2021 (Study Day 164) - 05 Feb 2021 (Study Day 164)	Adverse Event
Spinal decompression l5/s1*	05 Feb 2021 (Study Day 164) - 05 Feb 2021 (Study Day 164)	Adverse Event
Bethanechol	09 Feb 2021 (Study Day 168) - 15 Feb 2021 (Study Day 174)	Spinal Compression L5/S1
Iron; vitamins nos	09 Feb 2021 (Study Day 168) - Ongoing	Health
Tamsulosin	09 Feb 2021 (Study Day 168) - 15 Feb 2021 (Study Day 174)	Spinal Compression L5/S1
Tramadol	09 Feb 2021 (Study Day 168) - Ongoing	Spinal Decompression L5/S1
Vancomycin	09 Feb 2021 (Study Day 168) - 23 Feb 2021 (Study Day 182)	Spinal Decompression L5/S1
Doxycycline	23 Feb 2021 (Study Day 182) - 31 Mar 2021 (Study Day 218)	Spinal Decompression L5/S1
Picc [peripherally inserted central catheter] removal*	23 Feb 2021 (Study Day 182) - 23 Feb 2021 (Study Day 182)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 2/moderate	Related	27 Aug 2020 (Study Day 2) - 15 Sep 2020 (Study Day 21)
Headache	Grade 2/moderate	Related	27 Aug 2020 (Study Day 2) - 17 Sep 2020 (Study Day 23)
Myalgia	Grade 1/mild	Related	27 Aug 2020 (Study Day 2) - 15 Sep 2020 (Study Day 21)
Lymphadenopathy	Grade 1/mild	Related	28 Aug 2020 (Study Day 3) - 05 Sep 2020 (Study Day 11)
Chills	Grade 1/mild	Related	01 Sep 2020 (Study Day 7) - 06 Sep 2020 (Study Day 12)
Chest Discomfort	Grade 2/moderate	Not related	03 Sep 2020 (Study Day 9) - 07 Sep 2020 (Study Day 13)
Dyspnoea	Grade 2/moderate	Not related	03 Sep 2020 (Study Day 9) - 07 Sep 2020 (Study Day 13)
Sinusitis	Grade 2/moderate	Not related	05 Sep 2020 (Study Day 11) - 15 Sep 2020 (Study Day 21)
Cough	Grade 1/mild	Not related	07 Sep 2020 (Study Day 13) - 07 Sep 2020 (Study Day 13)
Pain	Grade 1/mild	Not related	07 Sep 2020 (Study Day 13) - 07 Sep 2020 (Study Day 13)
Constipation	Grade 2/moderate	Not related	22 Sep 2020 (Study Day 28) - 07 Oct 2020 (Study Day 43)
Cough	Grade 1/mild	Not related	25 Sep 2020 (Study Day 31) - 01 Oct 2020 (Study Day 37)
Headache	Grade 2/moderate	Not related	25 Sep 2020 (Study Day 31) - 06 Oct 2020 (Study Day 42)
Nasal Congestion	Grade 2/moderate	Not related	25 Sep 2020 (Study Day 31) - 07 Oct 2020 (Study Day 43)
Oropharyngeal Pain	Grade 2/moderate	Not related	25 Sep 2020 (Study Day 31) - 02 Oct 2020 (Study Day 38)
Pain	Grade 2/moderate	Not related	25 Sep 2020 (Study Day 31) - 10 Oct 2020 (Study Day 46)
Rhinorrhoea	Grade 2/moderate	Not related	25 Sep 2020 (Study Day 31) - 07 Oct 2020 (Study Day 43)
Concussion	Grade 2/moderate	Not related	07 Oct 2020 (Study Day 43) - 01 Apr 2021 (Study Day 219)
Dizziness	Grade 1/mild	Not related	07 Oct 2020 (Study Day 43) - 01 Apr 2021 (Study Day 219)
Nausea	Grade 2/moderate	Not related	07 Oct 2020 (Study Day 43) - 01 Apr 2021 (Study Day 219)
Urinary Tract Infection	Grade 2/moderate	Not related	16 Oct 2020 (Study Day 52) - 28 Oct 2020 (Study Day 64)
Meniscus Injury	Grade 3/severe	Not related	27 Oct 2020 (Study Day 63) - 05 Nov 2020 (Study Day 72)
Spinal Column Injury	Grade 2/moderate	Not related	05 Nov 2020 (Study Day 72) - Ongoing

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Cough	Grade 2/moderate	Not related	27 Nov 2020 (Study Day 94) - 13 Dec 2020 (Study Day 110)
Fatigue	Grade 1/mild	Not related	27 Nov 2020 (Study Day 94) - 29 Dec 2020 (Study Day 126)
Headache	Grade 2/moderate	Not related	27 Nov 2020 (Study Day 94) - 13 Dec 2020 (Study Day 110)
Rhinorrhoea	Grade 1/mild	Not related	27 Nov 2020 (Study Day 94) - 29 Dec 2020 (Study Day 126)
Myalgia	Grade 1/mild	Not related	06 Dec 2020 (Study Day 103) - 15 Dec 2020 (Study Day 112)
Pain	Grade 1/mild	Not related	06 Dec 2020 (Study Day 103) - 15 Dec 2020 (Study Day 112)
Urinary Incontinence	Grade 3/severe	Not applicable	19 Dec 2020 (Study Day 116) - 24 Dec 2020 (Study Day 121)
Bacterial Vaginosis	Grade 2/moderate	Not applicable	20 Dec 2020 (Study Day 117) - 24 Dec 2020 (Study Day 121)
Urinary Retention	Grade 3/severe	Not related	04 Feb 2021 (Study Day 163) - 09 Feb 2021 (Study Day 168)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US355-2273 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	01 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hypertension/Worsening Hypertension	AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	01 Sep 2020 (Study Day 1) – Ongoing	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2273, a 52-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 01 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Sep 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of hypertension. On 28 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of worsening hypertension was considered to be ongoing. The investigator assessed the event of hypertension to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

On 01 Mar 2021 (Study Day 182), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	1990 - Ongoing
Bronchitis	Bronchitis	2000 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Generalised anxiety disorder	General anxiety disorder	2000 - Ongoing
Lithotripsy	Lithotripsy	2003 - 2003
Nephrolithiasis	Renal calculi	2003 - 2003
Sleep apnoea syndrome	Sleep apnea	Apr 2009 - Apr 2009
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrochlorothiazide; lisinopril	1990 - Ongoing	Hypertension
Alprazolam	2000 - Ongoing	Anxiety And Tachycardia And Worsening Hypertension
Emtricitabine; tenofovir alafenamide fumarate	2019 - Ongoing	Hiv Prophylaxis
Omeprazole	2019 - Ongoing	Gastroesophageal Reflux Disease
Vitamins nos	Mar 2020 - Ongoing	Health Promotion
Influenza vaccine	16 Oct 2020 (Study Day 46) - 16 Oct 2020 (Study Day 46)	Influenza Prophylaxis
Metronidazole	10 Feb 2021 (Study Day 163) - 14 Feb 2021 (Study Day 167)	Diarrhea
Other viral vaccines	01 Mar 2021 (Study Day 182) - 01 Mar 2021 (Study Day 182)	COVID-19 Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypertension	Grade 3/severe	Not related	01 Sep 2020 (Study Day 1) - Ongoing
Tachycardia	Grade 1/mild	Not related	01 Sep 2020 (Study Day 1) - Ongoing
Diarrhoea	Grade 2/moderate	Not related	08 Feb 2021 (Study Day 161) - 14 Feb 2021 (Study Day 167)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US355-2331 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	04 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Depression/Worsening Depression	SAE, AE leading to withdrawal from study vaccine	Grade 4	Not related	14 Sep 2020 (Study Day 11) – 01 Oct 2020 (Study Day 28)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2331, a 44-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 04 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 14 Sep 2020 (Study Day 11), 10 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of depression. On 01 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of worsening depression lasted for 18 days, after which it was considered to be recovered/resolved on 01 Oct 2020 (Study Day 28). The investigator assessed the event of depression to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000318	Depression

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Eczema	Eczema	1981 - Ongoing
Drug hypersensitivity	Augmentin allergy	1989 - Ongoing
Headache	Headache	1996 - Ongoing
Seasonal allergy	Seasonal allergy	2001 - Ongoing
Anxiety	Airplane flight anxiety	2006 - Ongoing
Depression	Depression	2008 - Ongoing
Obesity	Obesity	2008 - 2009
Gastrectomy	Gastric sleeve	2009 - 2009
Menorrhagia	Menorrhagia	Jan 2018 - Jun 2019
Endometrial ablation	Uterine ablation	Jun 2019 - Jun 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid	01 Jun 2018 (Study Day -826) - Ongoing	Health Promotion
Magnesium	01 Jun 2018 (Study Day -826) - Ongoing	Health Promotion
Potassium	01 Jun 2018 (Study Day -826) - Ongoing	Health Promotion
Vitamins nos	01 Jun 2018 (Study Day -826) - Ongoing	Health Promotion
Drospirenone; ethinylestradiol	01 Jun 2019 (Study Day -461) - Ongoing	Birth Control
Trazodone	14 Sep 2020 (Study Day 11) - 14 Sep 2020 (Study Day 11)	Worsening Depression
Escitalopram oxalate	16 Sep 2020 (Study Day 13) - 21 Sep 2020 (Study Day 18)	Worsening Depression
Venlafaxine hydrochloride	24 Sep 2020 (Study Day 21) - Ongoing	Worsening Depression

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US355-2371 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	08 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hepatic Enzyme Increased/ Elevated Liver Enzymes	AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	16 Sep 2020 (Study Day 9) – 17 Dec 2020 (Study Day 101)	Recovered/resolved
Renal Cell Carcinoma/ Right Kidney Renal Cell Carcinoma	SAE	Grade 4	Not related	08 Oct 2020 (Study Day 31) – 13 Nov 2020 (Study Day 67)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2371, a 56-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 08 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Sep 2020 (Study Day 9), 8 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of hepatic enzyme increased. On 05 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of elevated liver enzymes lasted for 93 days, after which it was considered to be recovered/resolved on 17 Dec 2020 (Study Day 101). The investigator assessed the event of hepatic enzyme increased to be not related to the IP.

On 08 Oct 2020 (Study Day 31), 30 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of renal cell carcinoma. On 05 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of right kidney renal cell carcinoma lasted for 37 days, after which it was considered to be recovered/resolved on 13 Nov 2020 (Study Day 67). The investigator assessed the event of renal cell carcinoma to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000842	Renal cell carcinoma

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Pain in jaw	Temporomandipular jaw pain, left jaw	1982 - Ongoing
Mitral valve incompetence	Mitral regurgitation	1995 - Apr 1995
Mitral valve repair	Mitral valve repair	Apr 1995 - Apr 1995
Autoimmune thyroiditis	Hypothyroid/hashimotos	May 1995 - Ongoing
Drug hypersensitivity	Sulfa allergy	2001 - Ongoing
Myalgia	Generalized muscle soreness	2012 - Ongoing
Seasonal allergy	Seasonal allergies	2012 - Ongoing
Menopause	Menopause	2018 - Ongoing
Hyperlipidaemia	Hyperlipidemia	Oct 2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	1995 - 05 Sep 2020 (Study Day -3)	Muscle Soreness
Levothyroxine	May 1995 - Ongoing	Hypothyroid
Colecalciferol	Sep 2017 - Ongoing	Health Promotion
Magnesium	Sep 2017 - Ongoing	Health Promotion
Zinc	Sep 2017 - Ongoing	Health Promotion
Calcium	2018 - 21 Sep 2020 (Study Day 14)	Health
Atorvastatin	Oct 2018 - 24 Sep 2020 (Study Day 17)	Hyperlipidemia
Gabapentin	16 Sep 2020 (Study Day 9) - 21 Sep 2020 (Study Day 14)	Fractured Ankle
Oxycodone hydrochloride; paracetamol	16 Sep 2020 (Study Day 9) - 21 Sep 2020 (Study Day 14)	Fractured Ankle
Abdominal ultrasound*	08 Oct 2020 (Study Day 31) - 08 Oct 2020 (Study Day 31)	Adverse Event
Escitalopram oxalate	22 Oct 2020 (Study Day 45) - Ongoing	Anxiety

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	22 Oct 2020 (Study Day 45) - 22 Oct 2020 (Study Day 45)	Influenza Prophylaxis
Electrolytes nos	12 Nov 2020 (Study Day 66) - 13 Nov 2020 (Study Day 67)	Partial Nephrectomy
Morphine	12 Nov 2020 (Study Day 66) - 13 Nov 2020 (Study Day 67)	Partial Nephrectomy Pain
Partial nephrectomy of right kidney*	12 Nov 2020 (Study Day 66) - 12 Nov 2020 (Study Day 66)	Adverse Event
Oxycodone hydrochloride; paracetamol	13 Nov 2020 (Study Day 67) - 17 Nov 2020 (Study Day 71)	Partial Nephrectomy
Amoxicillin	11 Jan 2021 (Study Day 126) - 11 Jan 2021 (Study Day 126)	Dental Procedure Prophylaxis
Dental procedure*	11 Jan 2021 (Study Day 126) - 11 Jan 2021 (Study Day 126)	Other, Routine Dental Cleaning

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Ankle Fracture	Grade 3/severe	Not related	16 Sep 2020 (Study Day 9) - 19 Nov 2020 (Study Day 73)
Hepatic Enzyme Increased	Grade 3/severe	Not related	16 Sep 2020 (Study Day 9) - 17 Dec 2020 (Study Day 101)
Anxiety	Grade 1/mild	Not related	22 Oct 2020 (Study Day 45) - 29 Oct 2020 (Study Day 52)

Preferred terms are coded using MedDRA version 23.0.

vParticipant Number:	US355-2473 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	19 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	14 Oct 2020 (Study Day 26)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Perirectal Abscess/Perirectal Abscess	SAE	Grade 4	Not related	22 Nov 2020 (Study Day 65) – 01 Dec 2020 (Study Day 74)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2473, a 53-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 19 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 14 Oct 2020 (Study Day 26). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 22 Nov 2020 (Study Day 65), 64 days after the first dose and 39 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of perirectal abscess. Action taken with the IP was not applicable. The event of perirectal abscess lasted for 10 days, after which it was considered to be recovered/resolved on 01 Dec 2020 (Study Day 74). The investigator assessed the event of perirectal abscess to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001030	Perirectal abscess

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	Not reported - Ongoing
Gonorrhoea	Gonorrhea	Not reported
Syphilis	Syphillis	Not reported
Drug hypersensitivity	Allergy to codeine	1985 - Ongoing
Anxiety	Anxiety	1996 - Ongoing
Major depression	Major clinical depression	1996 - Ongoing
HIV infection	Human immunodificiency virus	1997 - Ongoing
Hepatitis C	Hepatitis c	1997 - 2010
Hepatic enzyme increased	Elevated liver enzymes	2010 - Ongoing
Hypersensitivity	Indoor allergies	2010 - Ongoing
Periorbital cellulitis	Bilateral periorbital cellutlitis	Jan 2013 - 2013
Mastoiditis	Bilateral mastoiditis	Nov 2018 - Nov 2018
Pulmonary embolism	Pulmonary embolus	Nov 2018 - Nov 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid	1995 - Ongoing	Health Promotion
Vitamins nos	1995 - Ongoing	Health Promotion
Bupropion	2014 - Ongoing	Major Clinical Depression
Clonazepam	2014 - Ongoing	Anxiety
Ibuprofen	2015 - Ongoing	Generalized Aches
Bictegravir sodium; emtricitabine; tenofovir alafenamide fumarate	2017 - Ongoing	Human Immunodeficiency Virus
Bupropion	Feb 2020 - Ongoing	Anxiety
Tiotropium	13 Oct 2020 (Study Day 25) - Ongoing	Chronic Obstructive Pulmonary Disease
Varenicline	14 Oct 2020 (Study Day 26) - 28 Oct 2020 (Study Day 40)	Smoking Cessation
Influenza vaccine	30 Oct 2020 (Study Day 42) - 30 Oct 2020 (Study Day 42)	Influenza Prophylactic
Calcium chloride; potassium chloride; sodium lactate	24 Nov 2020 (Study Day 67) - 25 Nov 2020 (Study Day 68)	Perirectal Abscess
Ceftriaxone	24 Nov 2020 (Study Day 67) - 24 Nov 2020 (Study Day 67)	Perirectal Abscess
Morphine	24 Nov 2020 (Study Day 67) - 25 Nov 2020 (Study Day 68)	Perirectal Abscess

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Piperacillin sodium; tazobactam sodium	24 Nov 2020 (Study Day 67) - 24 Nov 2020 (Study Day 67)	Perirectal Abscess
Ciprofloxacin	25 Nov 2020 (Study Day 68) - 01 Dec 2020 (Study Day 74)	Perirectal Abscess
Incision and drainage of perirectal abscess*	25 Nov 2020 (Study Day 68) - 25 Nov 2020 (Study Day 68)	Adverse Event
Metronidazole	25 Nov 2020 (Study Day 68) - 01 Dec 2020 (Study Day 74)	Perirectal Abscess
Amantadine hydrochloride	25 Mar 2021 (Study Day 188) - Ongoing	Anxiety

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US355-2499 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	26 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Oesophageal Spasm/Non-Cardiac Chest Pain Related To Esophageal Spasm	SAE	Grade 4	Not related	06 Dec 2020 (Study Day 72) – 07 Dec 2020 (Study Day 73)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2499, a 73-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 26 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Dec 2020 (Study Day 72), 71 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of oesophageal spasm. On 23 Oct 2020 (Study Day 28), the IP dose was discontinued due to physician decision. The event of non-cardiac chest pain related to esophageal spasm lasted for 2 days, after which it was considered to be recovered/resolved on 07 Dec 2020 (Study Day 73). The investigator assessed the event of oesophageal spasm to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001046	Oesophageal spasm

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Penicillin allergy	1957 - Ongoing
Depression	Depression	1985 - Ongoing
Postmenopause	Post menopausal	1986 - Ongoing
Nephrolithiasis	Kidney stone	2006 - 2006
Gastrooesophageal reflux disease	Gastric reflux	2013 - Ongoing
Arteriosclerosis	Arteriosclerosis	2018 - Ongoing
Drug hypersensitivity	Steroid allergy	2018 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2018 - Ongoing
Sinusitis	Sinus infection	Feb 2018 - Feb 2018
Deafness bilateral	Bilateral hearing loss	Nov 2018 - Ongoing
Headache	Headaches	Aug 2020 - Ongoing
Pain in extremity	Right leg pain	17 Sep 2020 (Study Day -9) - 17 Sep 2020 (Study Day -9)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2010 - Ongoing	Coagulation Prophylaxis
Ascorbic acid	2010 - Ongoing	Health Promotion
Colecalciferol	2010 - Ongoing	Health Promotion
Herbal pollen nos	2010 - Ongoing	Health Promotion
Omega-3 nos	2010 - Ongoing	Health Promotion
Probiotics nos	2010 - Ongoing	Health Promotion
Selenium	2010 - Ongoing	Health Promotion
Ubidecarenone	2010 - Ongoing	Health Promotion
Vitamin b complex	2010 - Ongoing	Health Promotion
Vitamin e nos	2010 - Ongoing	Health Promotion
Vitamins nos	2010 - Ongoing	Health Promotion
Zinc	2010 - Ongoing	Health Promotion
Ketorolac tromethamine	17 Sep 2020 (Study Day -9) - 17 Sep 2020 (Study Day -9)	Right Leg Pain
Famotidine	07 Dec 2020 (Study Day 73) - 21 Dec 2020 (Study Day 87)	Non Cardiac Chest Pain Related To Esophageal Spasm

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 1/mild	Related	27 Sep 2020 (Study Day 2) - 07 Oct 2020 (Study Day 12)
Fatigue	Grade 1/mild	Related	27 Sep 2020 (Study Day 2) - 06 Oct 2020 (Study Day 11)
Myalgia	Grade 1/mild	Related	27 Sep 2020 (Study Day 2) - 10 Oct 2020 (Study Day 15)
Pain In Extremity	Grade 2/moderate	Not related	21 Oct 2020 (Study Day 26) - 01 Dec 2020 (Study Day 67)
Fatigue	Grade 2/moderate	Related	22 Jan 2021 (Study Day 119) - Ongoing
Nausea	Grade 1/mild	Related	22 Jan 2021 (Study Day 119) - 31 Jan 2021 (Study Day 128)
Somnolence	Grade 1/mild	Related	22 Jan 2021 (Study Day 119) - 31 Jan 2021 (Study Day 128)
Cough	Grade 1/mild	Not related	29 Jan 2021 (Study Day 126) - 30 Jan 2021 (Study Day 127)
Myalgia	Grade 2/moderate	Not related	29 Jan 2021 (Study Day 126) - 31 Jan 2021 (Study Day 128)
Nasal Congestion	Grade 2/moderate	Not related	29 Jan 2021 (Study Day 126) - 31 Jan 2021 (Study Day 128)
Pain	Grade 2/moderate	Not related	29 Jan 2021 (Study Day 126) - 31 Jan 2021 (Study Day 128)
Rhinorrhoea	Grade 2/moderate	Not related	29 Jan 2021 (Study Day 126) - 31 Jan 2021 (Study Day 128)
Headache	Grade 2/moderate	Not related	30 Jan 2021 (Study Day 127) - 31 Jan 2021 (Study Day 128)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US356-2157 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	11 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	14 Oct 2020 (Study Day 34)
Reason for Narrative:	SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Colorectal Cancer/Colorectal Cancer	SAE, AE leading to study discontinuation	Grade 4	Not related	04 Nov 2020 (Study Day 55) – Ongoing	Not recovered/not resolved
Pelvic Neoplasm/Pelvic Cancer	SAE	Grade 4	Not related	04 Nov 2020 (Study Day 55) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US356-2157, a 62-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 11 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 14 Oct 2020 (Study Day 34). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Nov 2020 (Study Day 55), 54 days after the first dose and 21 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of colorectal cancer. The IP dose was withdrawn due to the colorectal cancer. The event of colorectal cancer was considered to be ongoing. The investigator assessed the event of colorectal cancer to be not related to the IP.

On 04 Nov 2020 (Study Day 55), 54 days after the first dose and 21 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pelvic neoplasm. Action taken with the IP was not applicable. The event of pelvic cancer was considered to be ongoing. The investigator assessed the event of pelvic neoplasm to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000671	Pelvic neoplasm
MOD-2020-000671	Colorectal cancer

Study Completion/Discontinuation

On 02 Dec 2020 (Study Day 83), the participant discontinued from the study due to serious adverse event.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Insomnia	Insomnia	2008 - Ongoing
Migraine	Migraine headaches	2008 - Ongoing
Postmenopause	Post menopause	2008 - Ongoing
Menopausal symptoms	Post menopause syndrome	2010 - Ongoing
Osteoporosis	Osteoporosis	2015 - Ongoing
Vitamin D deficiency	Vitamin d deficiency	2015 - Ongoing
Anxiety	Anxiety	2018 - Ongoing
Folate deficiency	Folic acid deficiency	2019 - Ongoing
Abdominal pain lower	Right lower abdomen pain	Jan 2019 - Ongoing
Pelvic pain	Pelvic pain	Dec 2019 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	Jun 2020 - Ongoing
Ovarian cyst	Benign bilateral ovarian complex cyst	27 Aug 2020 (Study Day -15) - Ongoing
Uterine leiomyoma	Fibroid uterus	27 Aug 2020 (Study Day -15) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Escitalopram oxalate	2008 - Ongoing	Insomnia
Melatonin	2008 - Ongoing	Insominia
Sumatriptan	2015 - Ongoing	Migraine
Alendronate sodium	2019 - Ongoing	Osteoporosis
Colecalciferol	2019 - Ongoing	Osteoporosis
Estradiol	2019 - Ongoing	Post Menopause Syndrome
Folic acid	2019 - Ongoing	Folic Acid Deficiency
Vitamin b12 nos	2019 - Ongoing	Nutritional Supplement
Paracetamol	12 Sep 2020 (Study Day 2) - 12 Sep 2020 (Study Day 2)	Headache
Progesterone	14 Sep 2020 (Study Day 4) - Ongoing	Post Menopause Syndrome
Aciclovir	28 Sep 2020 (Study Day 18) - 07 Oct 2020 (Study Day 27)	Shingles
Lidocaine	30 Sep 2020 (Study Day 20) - 05 Oct 2020 (Study Day 25)	Shingles

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	23 Oct 2020 (Study Day 43) - 23 Oct 2020 (Study Day 43)	Injection Site Pain
Influenza vaccine	30 Oct 2020 (Study Day 50) - 30 Oct 2020 (Study Day 50)	Flu Prophylaxis
Diagnostic laparoscopy*	04 Nov 2020 (Study Day 55) - 04 Nov 2020 (Study Day 55)	Adverse Event
Peritoneal wash*	04 Nov 2020 (Study Day 55) - 04 Nov 2020 (Study Day 55)	Adverse Event
Ct of abdomen with contrast*	05 Nov 2020 (Study Day 56) - 05 Nov 2020 (Study Day 56)	Adverse Event
Colorectal cytology*	06 Nov 2020 (Study Day 57) - 06 Nov 2020 (Study Day 57)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Herpes Zoster	Grade 2/moderate	Not related	17 Sep 2020 (Study Day 7) - 07 Oct 2020 (Study Day 27)
Injection Site Pain	Grade 1/mild	Related	23 Oct 2020 (Study Day 43) - 23 Oct 2020 (Study Day 43)
Atelectasis	Grade 2/moderate	Not related	05 Nov 2020 (Study Day 56) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US356-2205 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	01 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	29 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Diverticulitis/Worsening Of Diverticulitis	SAE	Grade 4	Not related	20 Jan 2021 (Study Day 112) – 04 Feb 2021 (Study Day 127)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US356-2205, a 53-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 01 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 29 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Jan 2021 (Study Day 112), 111 days after the first dose and 83 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of diverticulitis. Action taken with the IP was not applicable. The event of worsening of diverticulitis lasted for 16 days, after which it was considered to be recovered/resolved on 04 Feb 2021 (Study Day 127). The investigator assessed the event of diverticulitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-008079	Diverticulitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1970 - Ongoing
Endometrial ablation	Uterine ablation	2001 - 2004
Vaginal haemorrhage	Accessibe vaginal bleeding	2004 - 2004
Abdominal pain	Abdominal cramp pain	2010 - Ongoing
Constipation	Chronic constipation	2013 - Ongoing
Diverticulitis	Diverticulitis	2013 - Ongoing
Hypothyroidism	Hypothyroidism	2013 - Ongoing
Vitamin D deficiency	Vitamin d deficiency	2013 - Ongoing
Sleep apnoea syndrome	Sleep apnea	2015 - Ongoing
Anxiety	Anxiety	2016 - Ongoing
Drug withdrawal headache	Headaches caffiene withdrawal	2017 - Ongoing
Ear infection	Left ear infection	07 Sep 2020 (Study Day -24) - 15 Sep 2020 (Study Day -16)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ergocalciferol	2013 - Ongoing	Vitamin D Deficiency
Levothyroxine	2013 - Ongoing	Hypothyroidism
Levothyroxine sodium	2014 - Ongoing	Hypothyroidism
Liothyronine	2014 - Ongoing	Hypothyroidism
Naproxen	2017 - Ongoing	Headache Caffeine Withdrawal
Cetirizine hydrochloride	2018 - Ongoing	Seasonal Allergies
Linaclotide	Jan 2020 - Ongoing	Chronic Consipation
Naproxen	Jan 2020 - Ongoing	Abdominal Cramp Pain
Alprazolam	Feb 2020 - Ongoing	Anxiety
Ibuprofen	Mar 2020 - Ongoing	Abdominal Cramp Pain
Ciprofloxacin	09 Sep 2020 (Study Day -22) - 15 Sep 2020 (Study Day -16)	Left Ear Infection
Influenza vaccine	15 Sep 2020 (Study Day -16) - 15 Sep 2020 (Study Day -16)	Flu Prophylaxis
Naproxen	01 Nov 2020 (Study Day 32) - 01 Nov 2020 (Study Day 32)	Body Aches
Naproxen	01 Nov 2020 (Study Day 32) - 01 Nov 2020 (Study Day 32)	Low Grade Fever/Fatigue/Injection Arm Pain
Ct scan*	21 Jan 2021 (Study Day 113) - 21 Jan 2021 (Study Day 113)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Abdominal x ray view*	22 Jan 2021 (Study Day 114) - 22 Jan 2021 (Study Day 114)	Adverse Event
Ciprofloxacin	22 Jan 2021 (Study Day 114) - 04 Feb 2021 (Study Day 127)	Worsening Diverticulitis
Metronidazole	22 Jan 2021 (Study Day 114) - 04 Feb 2021 (Study Day 127)	Worsening Of Diverticulitis
Amoxicillin	12 Mar 2021 (Study Day 163) - 26 Mar 2021 (Study Day 177)	Worsening Diverticulitis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diverticulitis	Grade 2/moderate	Not related	19 Mar 2021 (Study Day 170) - 26 Mar 2021 (Study Day 177)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US356-2230 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	15 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Liver Abscess/Liver Abcess	SAE, AE leading to withdrawal from study vaccine	Grade 4	Not related	07 Nov 2020 (Study Day 24) – 17 Nov 2020 (Study Day 34)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US356-2230, a 45-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 15 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Nov 2020 (Study Day 24), 23 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of liver abscess. On 11 Nov 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of liver abcess lasted for 11 days, after which it was considered to be recovered/resolved on 17 Nov 2020 (Study Day 34). The investigator assessed the event of liver abscess to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000710	Liver abscess

Study Completion/Discontinuation

On 20 Nov 2020 (Study Day 37), the participant discontinued from the study due to withdrawal of consent by participant.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	1995 - Ongoing
Insomnia	Insomnia	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine	2015 - Ongoing	Insomnia
Heparin	07 Nov 2020 (Study Day 24) - 17 Nov 2020 (Study Day 34)	Blood Clots Prophylaxis
Hydralazine	07 Nov 2020 (Study Day 24) - 17 Nov 2020 (Study Day 34)	Blood Pressure Prophylaxis
Influenza vaccine	07 Nov 2020 (Study Day 24) - 07 Nov 2020 (Study Day 24)	Flu Prophylaxis
Ondansetron	07 Nov 2020 (Study Day 24) - 17 Nov 2020 (Study Day 34)	Nausea Prophylaxis
Vancomycin	07 Nov 2020 (Study Day 24) - 17 Nov 2020 (Study Day 34)	Liver Abcess

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diarrhoea	Grade 1/mild	Not related	22 Oct 2020 (Study Day 8) - 23 Oct 2020 (Study Day 9)
Abdominal Pain	Grade 2/moderate	Not related	01 Nov 2020 (Study Day 18) - 07 Nov 2020 (Study Day 24)
Pyrexia	Grade 2/moderate	Not related	01 Nov 2020 (Study Day 18) - 07 Nov 2020 (Study Day 24)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US357-2116 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Suicide Attempt/Suicide Attempt	SAE	Grade 4	Not related	19 Apr 2021 (Study Day 236) – 23 Apr 2021 (Study Day 240)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US357-2116, a 18-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 25 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 19 Apr 2021 (Study Day 236), 235 days after the first dose and 206 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of suicide attempt. Action taken with the IP was not applicable. The event of suicide attempt lasted for 5 days, after which it was considered to be recovered/resolved on 23 Apr 2021 (Study Day 240). The investigator assessed the event of suicide attempt to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-090633	Suicide attempt

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anaemia	Anemia	2014 - Ongoing
Bipolar disorder	Bipolar disorder	2016 - 2017
Oral pain	Oral pain	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	Not reported - 10 Sep 2020 (Study Day 15)	Headache
Melatonin	Not reported - Ongoing	Sleep
Benzocaine	2019 - Ongoing	Oral Pain
Sertraline	15 Dec 2020 (Study Day 111) - Ongoing	Depression

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Depression	Grade 2/moderate	Not related	01 Dec 2020 (Study Day 97) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US357-2125 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	02 Oct 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Alcohol Withdrawal Syndrome/Alcohol Withdrawals	SAE	Grade 2/moderate	Not related	10 Jan 2021 (Study Day 130) – 13 Jan 2021 (Study Day 133)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US357-2125, a 41-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 03 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 02 Oct 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Jan 2021 (Study Day 130), 129 days after the first dose and 100 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of alcohol withdrawal syndrome. Action taken with the IP was not applicable. The event of alcohol withdrawals lasted for 4 days, after which it was considered to be recovered/resolved on 13 Jan 2021 (Study Day 133). The investigator assessed the event of alcohol withdrawal syndrome to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-011008	Alcohol withdrawal syndrome

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Congenital renal disorder	One kidney birth defect	(b) (6) 1978 (Study Day(b) (6) - Ongoing
Psoriasis	Psoriasis	2000 - Ongoing
Herpes simplex	Herpes simplex ii	2013 - Ongoing
Rhinitis allergic	Allergic rhinitis	2013 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2015 - Ongoing
Insomnia	Insomnia	2015 - Ongoing
Alcoholism	Alcoholism	2018 - Ongoing
Blood testosterone decreased	Low testosterone	Jul 2020 - Ongoing
Dandruff	Dandruff	Jul 2020 - Ongoing
Papilloma excision	Subject realized they had a wart on their foot. on 08 Sep 2020, they had it removed per doctors recommendation	01 Aug 2020 (Study Day -33) - 08 Sep 2020 (Study Day 6)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cetirizine	01 Jan 2013 (Study Day -2802) - Ongoing	Allergic Rhinitis
Valaciclovir	01 Jan 2013 (Study Day -2802) - Ongoing	Herpes Simplex Ii
Trazodone	01 Jan 2015 (Study Day -2072) - 03 Mar 2021 (Study Day 182)	Insomnia
Vitamins nos	01 Jan 2017 (Study Day -1341) - Ongoing	Dietary Supplement
Ketoconazole	01 Jul 2020 (Study Day -64) - Ongoing	Dandruff
Testosterone cipionate	01 Jul 2020 (Study Day -64) - 14 Jan 2021 (Study Day 134)	Low Testosterone
Azelastine hydrochloride	01 Aug 2020 (Study Day -33) - Ongoing	Allergic Rhinitis
Famotidine	01 Aug 2020 (Study Day -33) - Ongoing	Gerd
Fluticasone	01 Aug 2020 (Study Day -33) - Ongoing	Allergic Rhinitis
Wart removal- dermatology*	08 Sep 2020 (Study Day 6) - 08 Sep 2020 (Study Day 6)	Other, Scheduled Previously
Acetylsalicylic acid	03 Oct 2020 (Study Day 31) - 04 Oct 2020 (Study Day 32)	Fever, Pain (Headache And General Joint Ache)
Valaciclovir hydrochloride	10 Oct 2020 (Study Day 38) - 21 Oct 2020 (Study Day 49)	Herpes Simplex Flare Up
Hpv vaccine	09 Dec 2020 (Study Day 98) - 09 Dec 2020 (Study Day 98)	Herpes Simplex Prevention
Valaciclovir hydrochloride	10 Dec 2020 (Study Day 99) - 18 Dec 2020 (Study Day 107)	Herpes Simplex Flare Up

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Chlordiazepoxide	10 Jan 2021 (Study Day 130) - 13 Jan 2021 (Study Day 133)	Alcohol Withdraws
I.v. solutions	10 Jan 2021 (Study Day 130) - 13 Jan 2021 (Study Day 133)	Alcohol Withdraws
Vitamins nos	10 Jan 2021 (Study Day 130) - 13 Jan 2021 (Study Day 133)	Alcohol Withdraws
Chlordiazepoxide	13 Jan 2021 (Study Day 133) - 18 Jan 2021 (Study Day 138)	Alcohol Withdraws
Testosterone	14 Jan 2021 (Study Day 134) - 12 Mar 2021 (Study Day 191)	Low Testosterone
Hpv vaccine	18 Jan 2021 (Study Day 138) - 18 Jan 2021 (Study Day 138)	Hpv Prevention
Cetirizine hydrochloride; pseudoephedrine hydrochloride	25 Feb 2021 (Study Day 176) - 03 Mar 2021 (Study Day 182)	Allergic Rhinitis
Levocetirizine dihydrochloride	03 Mar 2021 (Study Day 182) - Ongoing	Allergic Rhinitis
Trazodone	03 Mar 2021 (Study Day 182) - Ongoing	Insomnia
Testosterone	12 Mar 2021 (Study Day 191) - Ongoing	Low Testosterone

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Herpes Simplex	Grade 2/moderate	Not related	10 Oct 2020 (Study Day 38) - 21 Oct 2020 (Study Day 49)
Herpes Simplex	Grade 1/mild	Not related	10 Dec 2020 (Study Day 99) - 17 Dec 2020 (Study Day 106)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US357-2134 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	29 Sep 2020 (Study Day 33)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Anaemia Macrocytic/Macrocytic Anemia	SAE	Grade 3/severe	Not related	08 Nov 2020 (Study Day 73) – Ongoing	Not recovered/not resolved
Fall/Fall	SAE	Grade 3/severe	Not related	08 Nov 2020 (Study Day 73) – 08 Nov 2020 (Study Day 73)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US357-2134, a 48-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 29 Sep 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Nov 2020 (Study Day 73), 72 days after the first dose and 40 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of anaemia macrocytic. Action taken with the IP was not applicable. The event of macrocytic anemia was considered to be ongoing. The investigator assessed the event of anaemia macrocytic to be not related to the IP.

On 08 Nov 2020 (Study Day 73), 72 days after the first dose and 40 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of fall. Action taken with the IP was not applicable. The event of fall lasted for 1 day, after which it was considered to be recovered/resolved on 08 Nov 2020 (Study Day 73). The investigator assessed the event of fall to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000711	Anaemia macrocytic
MOD-2020-000711	Fall

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Alcoholism	Alcoholism	Not reported - Ongoing
Dizziness	Dizziness	Not reported - Ongoing
Fall	Frequent falls	Not reported - Ongoing
Hepatic steatosis	Fatty liver	Not reported - Ongoing
Hypoacusis	Hard of hearing	Not reported - Ongoing
Obesity	Obesity	Not reported - Ongoing
Gastric bypass	Gastric bypass	Jan 2004 - Jan 2004
Seizure	Seizures	2015 - Ongoing
Insomnia	Insomnia	2017 - Ongoing
Anxiety	Anxiety	Aug 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levetiracetam	2015 - Ongoing	Seizures
Gabapentin	2017 - Ongoing	Insomnia
Alprazolam	Aug 2019 - Ongoing	Anxiety
Acetylsalicylic acid; caffeine; paracetamol	17 Sep 2020 (Study Day 21) - 17 Sep 2020 (Study Day 21)	Headache
Ct (computed tomography) abdomen pelvis w*	08 Nov 2020 (Study Day 73) - 08 Nov 2020 (Study Day 73)	Adverse Event
Ct head or brain wo*	08 Nov 2020 (Study Day 73) - 08 Nov 2020 (Study Day 73)	Adverse Event
Hydrocodone bitartrate; paracetamol	08 Nov 2020 (Study Day 73) - Ongoing	Pain Due To Fall
Paracetamol	08 Nov 2020 (Study Day 73) - Ongoing	Pain Due To Fall
Xr humerus min 2 v right dr, xr forearm 2 v right dr, xr shoulder complete min 2 v right dr*	08 Nov 2020 (Study Day 73) - 08 Nov 2020 (Study Day 73)	Adverse Event
Abdomen ultrasound*	09 Nov 2020 (Study Day 74) - 09 Nov 2020 (Study Day 74)	Medical History
Ni echo transthoracic echocardiogram (tte) 2d*	09 Nov 2020 (Study Day 74) - 09 Nov 2020 (Study Day 74)	Adverse Event
Nm myocardial perfusion stress multi*	09 Nov 2020 (Study Day 74) - 09 Nov 2020 (Study Day 74)	Medical History

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diarrhoea	Grade 1/mild	Not related	17 Sep 2020 (Study Day 21) - 17 Sep 2020 (Study Day 21)
Headache	Grade 1/mild	Related	17 Sep 2020 (Study Day 21) - 17 Sep 2020 (Study Day 21)
Nausea	Grade 1/mild	Not related	17 Sep 2020 (Study Day 21) - 17 Sep 2020 (Study Day 21)
Vomiting	Grade 1/mild	Not related	17 Sep 2020 (Study Day 21) - 17 Sep 2020 (Study Day 21)
Nausea	Grade 1/mild	Related	29 Sep 2020 (Study Day 33) - 26 Oct 2020 (Study Day 60)
Diarrhoea	Grade 1/mild	Not related	02 Oct 2020 (Study Day 36) - 05 Oct 2020 (Study Day 39)
Nausea	Grade 1/mild	Not related	05 Nov 2020 (Study Day 70) - 05 Feb 2021 (Study Day 162)
Spinal Pain	Grade 2/moderate	Not applicable	01 Dec 2020 (Study Day 96) - Ongoing
Diarrhoea	Grade 2/moderate	Not related	17 Mar 2021 (Study Day 202) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US357-2181 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	02 Oct 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Post Procedural Fever/Fever Post Hysterectomy	SAE	Grade 2/ moderate	Not related	27 Jan 2021 (Study Day 147) – 30 Jan 2021 (Study Day 150)	Recovered/resolved
Uterine Leiomyoma/Multiple Fibroids	SAE	Grade 3/ severe	Not related	27 Jan 2021 (Study Day 147) – 27 Jan 2021 (Study Day 147)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US357-2181, a 44-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 03 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 02 Oct 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 27 Jan 2021 (Study Day 147), 146 days after the first dose and 117 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of post procedural fever. Action taken with the IP was not applicable. The event of fever post hysterectomy lasted for 4 days, after which it was considered to be recovered/resolved on 30 Jan 2021 (Study Day 150). The investigator assessed the event of post procedural fever to be not related to the IP.

On 27 Jan 2021 (Study Day 147), 146 days after the first dose and 117 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of uterine leiomyoma. Action taken with the IP was not applicable. The event of multiple fibroids lasted for 1 days, after which it was considered to be recovered/resolved on 27 Jan 2021 (Study Day 147). The investigator assessed the event of uterine leiomyoma to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-010302	Post procedural fever
MOD-2021-010302	Uterine leiomyoma

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Caesarean section	C-section	05 Jun 2004 (Study Day -5934) - 05 Jun 2004 (Study Day -5934)
Caesarean section	C-section	12 Sep 2007 (Study Day -4740) - 12 Sep 2007 (Study Day -4740)
Female sterilisation	Bilateral tubal ligation	12 Sep 2007 (Study Day -4740) - 12 Sep 2007 (Study Day -4740)
Hypertension	Hypertension	2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	2017 - Ongoing	Hypertension
Influenza vaccine	16 Oct 2020 (Study Day 44) - 16 Oct 2020 (Study Day 44)	Flu Prevention
Biopsy of cervix*	02 Dec 2020 (Study Day 91) - 02 Dec 2020 (Study Day 91)	Diagnostic
Hysterectomy*	27 Jan 2021 (Study Day 147) - 27 Jan 2021 (Study Day 147)	Adverse Event
Ibuprofen	27 Jan 2021 (Study Day 147) - Ongoing	Pain At Injection Site
Hydrochlorothiazide	25 Feb 2021 (Study Day 176) - Ongoing	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypertension	Grade 2/moderate	Not related	03 Sep 2020 (Study Day 1) - 03 Sep 2020 (Study Day 1)
Vaginal Haemorrhage	Grade 2/moderate	Not related	21 Oct 2020 (Study Day 49) - 30 Nov 2020 (Study Day 89)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US357-2199 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	04 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	05 Oct 2020 (Study Day 32)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Colitis/Worsening Of Colitis	SAE	Grade 2/moderate	Not related	12 Dec 2020 (Study Day 100) – 11 Jan 2021 (Study Day 130)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US357-2199, a 35-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 04 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 05 Oct 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Dec 2020 (Study Day 100), 99 days after the first dose and 68 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of colitis. Action taken with the IP was not applicable. The event of worsening of colitis lasted for 31 days, after which it was considered to be recovered/resolved on 11 Jan 2021 (Study Day 130). The investigator assessed the event of colitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious and nonserious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001485	Colitis
MOD-2020-001485	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Colitis ulcerative	Ulcerative colitis	2011 - Ongoing
Female sterilisation	Bilateral tubal ligation	09 Jan 2015 (Study Day -2065) - 09 Jan 2015 (Study Day -2065)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	2017 - Ongoing	Supplement
Escitalopram	24 Sep 2020 (Study Day 21) - Ongoing	Anxiety
Gentamicin	02 Oct 2020 (Study Day 29) - 12 Oct 2020 (Study Day 39)	Scratch To Right Eye
Loperamide	19 Dec 2020 (Study Day 107) - Ongoing	Acute Hemorrhagic Colitis
Levofloxacin	24 Dec 2020 (Study Day 112) - 30 Dec 2020 (Study Day 118)	COVID-19 Positive
Metronidazole	24 Dec 2020 (Study Day 112) - 29 Dec 2020 (Study Day 117)	Colitis/Diarrhea

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Superficial Injury Of Eye	Grade 1/mild	Not related	02 Oct 2020 (Study Day 29) - 12 Oct 2020 (Study Day 39)
COVID-19	Grade 3/severe	Not related	19 Dec 2020 (Study Day 107) - 07 Jan 2021 (Study Day 126)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US359-2111 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	07 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Diverticular Perforation/Perforated Diverticulitis	SAE	Grade 2/ moderate	Not related	03 Nov 2020 (Study Day 86) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US359-2111, a 73-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 10 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 07 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Nov 2020 (Study Day 86), 85 days after the first dose and 57 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of diverticular perforation. Action taken with the IP was not applicable. The event of perforated diverticulitis was considered to be ongoing. The investigator assessed the event of diverticular perforation to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000704	Diverticular perforation

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Myopia	Myopia bilateral	1955 - Ongoing
Cough	Chronic cough	1988 - Ongoing
Postmenopause	Postmenopausal	1997 - Ongoing
Fibrocystic breast disease	Fibrocystic breast disease	2002 - Ongoing
Hypermetropia	Hyperopia bilateral	2007 - Ongoing
Hypertension	Hypertension	2012 - Ongoing
Deafness bilateral	Hearing loss bilateral	2014 - Ongoing
Hypothyroidism	Hypothyroidism	2014 - Ongoing
Osteoarthritis	Osteoarthritis left knee	Dec 2014 - Ongoing
Skin cosmetic procedure	Restylane refyne dermal filler 1 ml	21 Jul 2020 (Study Day -20) - 21 Jul 2020 (Study Day -20)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium	2005 - Ongoing	Nutritional Supplement
Vitamin d nos	2005 - Ongoing	Nutritional Supplement
Vitamins nos	2005 - Ongoing	Nutritional Supplement
Fexofenadine	2011 - Ongoing	Chronic Cough Secondary To Post Nasal Drainage
Phenylephrine	2011 - Ongoing	Chronic Cough Secondary To Post Nasal Drainage
Levothyroxine	2014 - Ongoing	Hypothyroidism
Telmisartan	2018 - Ongoing	Hypertension
Liothyronine	01 May 2020 (Study Day -101) - Ongoing	Hypothyroidism
Influenza vaccine	26 Sep 2020 (Study Day 48) - 26 Sep 2020 (Study Day 48)	Influenza Prophylaxis

Ceftriaxone	05 Nov 2020 (Study Day 88) - 15 Nov 2020 (Study Day 98)	Colon Abscess
Ct abdomen and pelvis*	05 Nov 2020 (Study Day 88) - 05 Nov 2020 (Study Day 88)	Adverse Event
Hydromorphone	05 Nov 2020 (Study Day 88) - 15 Nov 2020 (Study Day 98)	Abdominal Pain
Macrogol 3350	05 Nov 2020 (Study Day 88) - 15 Nov 2020 (Study Day 98)	Constipation

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metronidazole	05 Nov 2020 (Study Day 88) - 15 Nov 2020 (Study Day 98)	Perforated Diverticulitis
Ondansetron	05 Nov 2020 (Study Day 88) - 15 Nov 2020 (Study Day 98)	Nausea
Ondansetron	05 Nov 2020 (Study Day 88) - 30 Nov 2020 (Study Day 113)	Nausea
Oxycodone hydrochloride	05 Nov 2020 (Study Day 88) - 15 Nov 2020 (Study Day 98)	Abdominal Pain
Paracetamol	05 Nov 2020 (Study Day 88) - Ongoing	Abdominal Pain
Ct guided wound drain placement*	10 Nov 2020 (Study Day 93) - 10 Nov 2020 (Study Day 93)	Adverse Event
Ct abdomen and pelvis*	12 Nov 2020 (Study Day 95) - 12 Nov 2020 (Study Day 95)	Adverse Event
Oxycodone; paracetamol	15 Nov 2020 (Study Day 98) - 22 Nov 2020 (Study Day 105)	Adbominal Pain
Sulfamethoxazole; trimethoprim	15 Nov 2020 (Study Day 98) - 18 Nov 2020 (Study Day 101)	Colon Abscess
Amoxicillin; clavulanic acid	18 Nov 2020 (Study Day 101) - 23 Nov 2020 (Study Day 106)	Colon Abscess
Fluconazole	19 Nov 2020 (Study Day 102) - 25 Nov 2020 (Study Day 108)	Oral Candidiasis Secondary To Iv Antibiotic Use
Probiotics nos	19 Nov 2020 (Study Day 102) - Ongoing	Dietary Supplement
Placement of wound drain*	02 Dec 2020 (Study Day 115) - 02 Dec 2020 (Study Day 115)	Adverse Event
Computed tomography scan*	03 Dec 2020 (Study Day 116) - 03 Dec 2020 (Study Day 116)	Adverse Event
Magnesium citrate	03 Dec 2020 (Study Day 116) - 03 Dec 2020 (Study Day 116)	Constipation
Drain removal*	04 Dec 2020 (Study Day 117) - 04 Dec 2020 (Study Day 117)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Abdominal Pain	Grade 2/moderate	Not related	03 Nov 2020 (Study Day 86) - 30 Jan 2021 (Study Day 174)
Constipation	Grade 1/mild	Not related	03 Nov 2020 (Study Day 86) - 03 Dec 2020 (Study Day 116)
Colonic Abscess	Grade 2/moderate	Not related	05 Nov 2020 (Study Day 88) - Ongoing
Nausea	Grade 1/mild	Not related	05 Nov 2020 (Study Day 88) - 30 Nov 2020 (Study Day 113)
Cholelithiasis	Grade 1/mild	Not related	12 Nov 2020 (Study Day 95) - Ongoing
Pleural Effusion	Grade 1/mild	Not related	12 Nov 2020 (Study Day 95) - Ongoing
Oral Candidiasis	Grade 2/moderate	Not related	18 Nov 2020 (Study Day 101) - 25 Nov 2020 (Study Day 108)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US359-2226 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	18 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	15 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Spinal Cord Abscess/Spinal Cord Abscess	SAE	Grade 4	Not related	17 Dec 2020 (Study Day 122) – 22 Jan 2021 (Study Day 158)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US359-2226, a 34-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 18 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 15 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 17 Dec 2020 (Study Day 122), 121 days after the first dose and 93 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of spinal cord abscess. Action taken with the IP was not applicable. The event of spinal cord abscess lasted for 37 days, after which it was considered to be recovered/resolved on 22 Jan 2021 (Study Day 158). The investigator assessed the event of spinal cord abscess to be not related to the IP.

Additional Information From the Safety Database

No additional details for the serious event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Allergy to ceclor	(b) (6) 1986 - Ongoing
Hypertension	Hypertension	2009 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Back pain	Chronic back pain	2010 - Ongoing
Vasectomy	Vasectomy	2012 - 2012

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	2010 - Ongoing	Chronic Back Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Cough	Grade 1/mild	Not related	28 Sep 2020 (Study Day 42) - 30 Sep 2020 (Study Day 44)
Oropharyngeal Pain	Grade 1/mild	Not related	28 Sep 2020 (Study Day 42) - 30 Sep 2020 (Study Day 44)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US359-2229 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	18 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	15 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Endometrial Hyperplasia/Atypical Complex Hyperplasia	SAE	Grade 3/ severe	Not related	19 Nov 2020 (Study Day 94) – 16 Mar 2021 (Study Day 211)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US359-2229, a 52-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 18 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 15 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 19 Nov 2020 (Study Day 94), 93 days after the first dose and 65 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of endometrial hyperplasia. Action taken with the IP was not applicable. The event of atypical complex hyperplasia lasted for 118 days, after which it was considered to be recovered/resolved on 16 Mar 2021 (Study Day 211). The investigator assessed the event of endometrial hyperplasia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-05275	Endometrial adenocarcinoma

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	Mar 1988 - Ongoing
Rhinitis allergic	Allergic rhinitis	Mar 1988 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	Jan 2008 - Ongoing
Attention deficit hyperactivity disorder	Attention deficiency disorder	Mar 2014 - Ongoing
Gastrooesophageal reflux disease	Gastroesophogeal reflux disease	Mar 2014 - Ongoing
Depression	Depression	Mar 2016 - Ongoing
Insomnia	Insomnia	Mar 2016 - Ongoing
Postmenopause	Postmenopausal	Jan 2018 - Ongoing
Gastrointestinal endoscopic therapy	Endoscopic dilation	Mar 2018 - Mar 2018
Laryngeal stenosis	Subglottic stenosis	Mar 2018 - Mar 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Simvastatin	Jan 2014 - Ongoing	Hypercholesterolemia
Amfetamine	Mar 2014 - Ongoing	Attention Deficiency Disorder
Dexamfetamine sulfate	Mar 2014 - Ongoing	Attention Deficiency Disorder
Hydrochlorothiazide; irbesartan	Jan 2017 - 05 Nov 2020 (Study Day 80)	Hypertension
Paroxetine	Jan 2017 - Ongoing	Depression
Pantoprazole	Mar 2018 - Ongoing	Gastroesophageal Reflux Disease
Ibuprofen	22 Aug 2020 (Study Day 5) - 22 Aug 2020 (Study Day 5)	Pain, Fever
Nitrofurantoin	22 Aug 2020 (Study Day 5) - 26 Aug 2020 (Study Day 9)	Urinary Tract Infection
Influenza vaccine	15 Oct 2020 (Study Day 59) - 15 Oct 2020 (Study Day 59)	Influenza Prophylaxis
Hydrochlorothiazide; irbesartan	06 Nov 2020 (Study Day 81) - Ongoing	Hypertension
Hydrocodone bitartrate; paracetamol	16 Mar 2021 (Study Day 211) - 18 Mar 2021 (Study Day 213)	Atypical Complex Hyperplasia
Hysterectomy*	16 Mar 2021 (Study Day 211) - 16 Mar 2021 (Study Day 211)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Urinary Tract Infection	Grade 1/mild	Not related	22 Aug 2020 (Study Day 5) - 26 Aug 2020 (Study Day 9)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US359-2232 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	20 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	21 Sep 2020 (Study Day 33)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Femoral Neck Fracture/Right Subcapital Femoral Neck Fracture, Displaced Garden Iii	SAE	Grade 3/ severe	Not related	25 Aug 2020 (Study Day 6) – 05 Oct 2020 (Study Day 47)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US359-2232, a 79-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 20 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 21 Sep 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Aug 2020 (Study Day 6), 5 days after the first dose and 27 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of femoral neck fracture. The IP dose was not changed due to the right subcapital femoral neck fracture, displaced garden iii. The event of right subcapital femoral neck fracture, displaced garden iii lasted for 42 days, after which it was considered to be recovered/resolved on 05 Oct 2020 (Study Day 47). The investigator assessed the event of femoral neck fracture to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000230	Femoral neck fracture

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Astigmatism	Astigmatism bilateral	1990 - Ongoing
Postmenopause	Postmenopausal	1990 - Ongoing
Hysterectomy	Hysterectomy	1998 - Ongoing
Hypertension	Hypertension	2000 - Ongoing
Osteoporosis	Osteoporosis	2005 - Ongoing
Neuropathy peripheral	Pedal neuropathy bilateral	2010 - Ongoing
Cataract	Cataract right eye	2012 - Ongoing
Urinary tract infection	Frequent urinary tract infections	2013 - Ongoing
Anxiety	Anxiety	2018 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2018 - Ongoing
Bladder prolapse	Bladder prolapse	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Colecalciferol	2007 - Ongoing	Nutritional Supplement
Amlodipine	Oct 2007 - Ongoing	Hypertension
Lisinopril	Oct 2007 - Ongoing	Hypertension
Trazodone	2018 - Ongoing	Anxiety
Omeprazole	Apr 2018 - Ongoing	Gastroesophageal Reflux Disease
Alendronate sodium	Jul 2019 - Ongoing	Osteoporosis
Nitrofurantoin	20 Aug 2020 (Study Day 1) - 25 Aug 2020 (Study Day 6)	Frequent Urinary Tract Infections
Cefazolin sodium	25 Aug 2020 (Study Day 6) - 26 Aug 2020 (Study Day 7)	Preoperative - Hip Surgery
Fentanyl citrate	25 Aug 2020 (Study Day 6) - 25 Aug 2020 (Study Day 6)	Right Hip Pain, Chest Wall Pain
Magnetic resonance imaging*	25 Aug 2020 (Study Day 6) - 25 Aug 2020 (Study Day 6)	Adverse Event
Paracetamol	25 Aug 2020 (Study Day 6) - 28 Aug 2020 (Study Day 9)	Right Hip Pain
Right femoral neck open reduction internal fixation*	26 Aug 2020 (Study Day 7) - 26 Aug 2020 (Study Day 7)	Adverse Event
Docusate sodium	27 Aug 2020 (Study Day 8) - 03 Sep 2020 (Study Day 15)	Right Subcapital Femoral Neck Fracture, Displaced Garden Iii
Macrogol 3350	27 Aug 2020 (Study Day 8) - 03 Sep 2020 (Study Day 15)	Right Subcapital Femoral Neck Fracture, Displaced Garden Iii
Paracetamol	27 Aug 2020 (Study Day 8) - Ongoing	Right Hip Pain

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Tamsulosin	27 Aug 2020 (Study Day 8) - Ongoing	Urinary Retention
Acetylsalicylic acid	01 Sep 2020 (Study Day 13) - Ongoing	Deep Vein Thrombosis Prophylaxis
Apixaban	28 Sep 2020 (Study Day 40) - Ongoing	Deep Vein Thrombosis Prophylaxis
Thyroid sonogram*	12 Oct 2020 (Study Day 54) - 12 Oct 2020 (Study Day 54)	Diagnostic
Influenza vaccine	20 Oct 2020 (Study Day 62) - 20 Oct 2020 (Study Day 62)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 4	Not related	25 Aug 2020 (Study Day 6) - 01 Oct 2020 (Study Day 43)
Benign Neoplasm Of Thyroid Gland	Grade 1/mild	Not related	25 Aug 2020 (Study Day 6) - Ongoing
Fall	Grade 1/mild	Not related	25 Aug 2020 (Study Day 6) - 25 Aug 2020 (Study Day 6)
Post-Traumatic Pain	Grade 2/moderate	Not related	25 Aug 2020 (Study Day 6) - 26 Aug 2020 (Study Day 7)
Leukocytosis	Grade 1/mild	Not related	27 Aug 2020 (Study Day 8) - 28 Aug 2020 (Study Day 9)
Urinary Retention	Grade 1/mild	Not related	27 Aug 2020 (Study Day 8) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US359-2247 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	29 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	26 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Bradycardia/Bradycardia	SAE	Grade 4	Not related	10 Nov 2020 (Study Day 74) – 16 Nov 2020 (Study Day 80)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US359-2247, a 87-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 29 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 26 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Nov 2020 (Study Day 74), 73 days after the first dose and 45 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of bradycardia. Action taken with the IP was not applicable. The event of bradycardia lasted for 7 days, after which it was considered to be recovered/resolved on 16 Nov 2020 (Study Day 80). The investigator assessed the event of bradycardia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000765	Bradycardia

Study Completion/Discontinuation

On 19 Jan 2021 (Study Day 144), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Myopia	Myopia	1947 - Ongoing
Hypertension	Hypertension	1987 - Ongoing
Postmenopause	Postmenopausal	01 Jan 1987 (Study Day -12294) - Ongoing
Arthritis	Arthritis hands	1995 - Ongoing
Spondylitis	Arthritis lower back	1995 - Ongoing
Drug hypersensitivity	Neurontin allergy	2009 - Ongoing
Spinal stenosis	Spinal stenosis	2009 - Ongoing
Cataract	Cataract right eye	2010 - Ongoing
Hypertriglyceridaemia	Hypertrigluycerdemia	2016 - Ongoing
Osteoporosis	Osteoporosis	2019 - Ongoing
Scoliosis	Scoliosis	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	1990 - Ongoing	Nutritional Supplement
Ibuprofen	1995 - Ongoing	Arthritis Hand
Paracetamol	1995 - Ongoing	Arthritis Hand
Hydrochlorothiazide; triamterene	2001 - Ongoing	Hypertension
Hydrocodone bitartrate; paracetamol	2009 - Ongoing	Spinal Stenosis
Gemfibrozil	2016 - Ongoing	Hypertriglyceridemia
Carvedilol	2019 - 16 Nov 2020 (Study Day 80)	Hypertension
Denosumab	01 Feb 2019 (Study Day -575) - Ongoing	Osteoporosis
Influenza vaccine	19 Oct 2020 (Study Day 52) - 19 Oct 2020 (Study Day 52)	Influenza Prophylaxis
Chest x-ray*	10 Nov 2020 (Study Day 74) - 10 Nov 2020 (Study Day 74)	Adverse Event
Ct abdomen/pelvis*	10 Nov 2020 (Study Day 74) - 10 Nov 2020 (Study Day 74)	Adverse Event
Echocardiogram*	10 Nov 2020 (Study Day 74) - 10 Nov 2020 (Study Day 74)	Adverse Event
Echocardiogram*	11 Nov 2020 (Study Day 75) - 11 Nov 2020 (Study Day 75)	Adverse Event
Ertapenem	11 Nov 2020 (Study Day 75) - 12 Jan 2021 (Study Day 137)	Abdominal Abscess
Fexofenadine	11 Nov 2020 (Study Day 75) - Ongoing	Seasonal Allergies
Echocardiogram*	12 Nov 2020 (Study Day 76) - 12 Nov 2020 (Study Day 76)	Adverse Event
Ct guided abdominal abscess drainage*	13 Nov 2020 (Study Day 77) - 13 Nov 2020 (Study Day 77)	Adverse Event
Amoxicillin; clavulanic acid	14 Nov 2020 (Study Day 78) - Ongoing	Abdominal Abscess

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amiodarone	16 Nov 2020 (Study Day 80) - 22 Nov 2020 (Study Day 86)	Atrial Fibrillation
Amiodarone	23 Nov 2020 (Study Day 87) - Ongoing	Atrial Fibrillation

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Abdominal Abscess	Grade 2/moderate	Not related	10 Nov 2020 (Study Day 74) - Ongoing
Cholelithiasis	Grade 1/mild	Not related	10 Nov 2020 (Study Day 74) - Ongoing
Hypokalaemia	Grade 1/mild	Not related	10 Nov 2020 (Study Day 74) - Ongoing
Seasonal Allergy	Grade 1/mild	Not related	10 Nov 2020 (Study Day 74) - Ongoing
Vertigo	Grade 3/severe	Not related	10 Nov 2020 (Study Day 74) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US360-2004 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 27)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Myocardial Infarction/Nstemi (Non-St Segment Elevation Myocardial Infarction)	SAE	Grade 3/severe	Not related	03 Jan 2021 (Study Day 124) – 04 Jan 2021 (Study Day 125)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US360-2004, a 57-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 02 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 28 Sep 2020 (Study Day 27). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Jan 2021 (Study Day 124), 123 days after the first dose and 97 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of acute myocardial infarction. Action taken with the IP was not applicable. The event of nstemi (non-st segment elevation myocardial infarction) lasted for 2 days, after which it was considered to be recovered/resolved on 04 Jan 2021 (Study Day 125). The investigator assessed the event of acute myocardial infarction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-023120	Acute myocardial infarction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma	1980 - 1980
Seasonal allergy	Seasonal allergies	1980 - Ongoing
Diabetes mellitus	Diabetes	2005 - Ongoing
Irritable bowel syndrome	Irritable bowel syndrome	2009 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2010 - Ongoing
Myocardial infarction	Myocardial infarction	2010 - 2010
Restless legs syndrome	Restless leg syndrome	2010 - Ongoing
Presyncope	Vasovagal episode	2011 - 2011
Menopause	Menopausal	2012 - Ongoing
Presyncope	Vasovagal episode	2012 - 2012
Gastrooesophageal reflux disease	Gastroesophageal reflux disorder (gerd) (self-diagnosed)	2017 - Ongoing
Insomnia	Insomnia (self-diagnosed)	Jul 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	Not reported - Ongoing	Hypercholesterolemia
Berberine	Not reported - Ongoing	Glycemic Control
Empagliflozin	Not reported - Ongoing	Iddm
Gabapentin	Not reported - Ongoing	Restless Leg Syndrome
Loratadine	Not reported - Ongoing	Seasonal Allergies
Metformin	Not reported - Ongoing	Iddm
Unspecified herbal and traditional medicine	Not reported - Ongoing	Anti-Reflux (For Self-Diagnosed Gerd)
Ibuprofen	2000 - Ongoing	Oral Pain
Cannabis sativa	Jul 2020 - Ongoing	Sleep Aide (For Self-Diagnosed Insomnia)
Ibuprofen	02 Sep 2020 (Study Day 1) - 07 Sep 2020 (Study Day 6)	Pain At Injection Site
Ibuprofen	04 Dec 2020 (Study Day 94) - 09 Dec 2020 (Study Day 99)	Headache And Congestion
Fluticasone propionate	10 Dec 2020 (Study Day 100) - 10 Dec 2020 (Study Day 100)	Upper Respiratory Tract Infection
Pseudoephedrine hydrochloride	10 Dec 2020 (Study Day 100) - 10 Dec 2020 (Study Day 100)	Upper Respiratory Tract Infection
Salbutamol	03 Jan 2021 (Study Day 124) - 03 Jan 2021 (Study Day 124)	Shortness Of Breath

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	04 Jan 2021 (Study Day 125) - Ongoing	Nstemi (Non-St Segment Elevated Myocardial Infarction)
Blood work-up*	04 Jan 2021 (Study Day 125) - 04 Jan 2021 (Study Day 125)	Diagnostic
Ekg*	04 Jan 2021 (Study Day 125) - 04 Jan 2021 (Study Day 125)	Adverse Event
Glyceryl trinitrate	04 Jan 2021 (Study Day 125) - 04 Jan 2021 (Study Day 125)	Nstemi (Non-St Segment Elevation Myocardial Infarction)
Left heart catheterization*	04 Jan 2021 (Study Day 125) - 04 Jan 2021 (Study Day 125)	Adverse Event
Metoprolol tartrate	04 Jan 2021 (Study Day 125) - 04 Jan 2021 (Study Day 125)	Nstemi (Non-St Segment Elevation Myocardial Infarction)

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Sinus Congestion	Grade 2/moderate	Not related	04 Dec 2020 (Study Day 94) - 11 Dec 2020 (Study Day 101)
Upper Respiratory Tract Infection	Grade 1/mild	Not related	04 Dec 2020 (Study Day 94) - 10 Dec 2020 (Study Day 100)
Chest Discomfort	Grade 1/mild	Not related	08 Dec 2020 (Study Day 98) - 08 Dec 2020 (Study Day 98)
Dyspnoea	Grade 2/moderate	Not related	03 Jan 2021 (Study Day 124) - 04 Jan 2021 (Study Day 125)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US360-2008 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Immunisation Anxiety Related Reaction/Anxiety Due The Side Effects Of The First Ip	AE leading to withdrawal from study vaccine	Grade 1/mild	Not related	08 Sep 2020 (Study Day 7) – 30 Sep 2020 (Study Day 29)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US360-2008, a 62-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 02 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Sep 2020 (Study Day 7), 6 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of immunisation anxiety related reaction. On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of anxiety due the side effects of the first ip lasted for 23 days, after which it was considered to be recovered/resolved on 30 Sep 2020 (Study Day 29). The investigator assessed the event of immunisation anxiety related reaction to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Arthralgia	Arthralgias of bilateral hands and fingers	Not reported - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hyperlipidaemia	Hyperlipidemia (hl)	Not reported - Ongoing
Hypertension	Hypertension (htn)	Not reported - Ongoing
Diabetes mellitus	Dm - 2010 - controlled with medications	2010 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Colecalciferol	Not reported - Ongoing	Nutritional Needs/Dietary Supplement
Ramipril	Not reported - Ongoing	For Hypertension
Rosuvastatin calcium	Not reported - Ongoing	For Hyperlipidemia
Vitamin b12 nos	Not reported - Ongoing	Nutritional Needs/Dietary Supplement
Metformin hydrochloride; sitagliptin	2010 - Ongoing	Diabetes Mellitus
Celecoxib	23 Sep 2020 (Study Day 22) - 30 Sep 2020 (Study Day 29)	To Treat A.E- Worsening Joint Aches Or Pain Located In Bilateral Shoulder And Hands Reported On Day 21 On 9/23

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Immunisation Anxiety Related Reaction	Grade 1/mild	Not related	08 Sep 2020 (Study Day 7) - 30 Sep 2020 (Study Day 29)
Arthralgia	Grade 2/moderate	Related	09 Sep 2020 (Study Day 8) - 23 Sep 2020 (Study Day 22)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US361-2010 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	01 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	30 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Aortic Aneurysm/ Abdominal Aortic Aneurysm (3cm)	SAE	Grade 1/mild	Not related	16 Oct 2020 (Study Day 46) – 21 Oct 2020 (Study Day 51)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US361-2010, a 67-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 01 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 30 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Oct 2020 (Study Day 46), 45 days after the first dose and 16 days after the second dose of the IP, the participant experienced a Grade 1/mild serious adverse event of aortic aneurysm. Action taken with the IP was not applicable. The event of abdominal aortic aneurysm (3cm) lasted for 6 days, after which it was considered to be recovered/resolved with sequelae on 21 Oct 2020 (Study Day 51). The investigator assessed the event of aortic aneurysm to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000681	Aortic aneurysm

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Peripheral arterial occlusive disease	Peripheral artery disease	Not reported - Ongoing
Tobacco user	Heavy smoker	1965 - Ongoing
Blood cholesterol increased	High cholesterol	2005 - Ongoing
Hypertension	Hypertension	2005 - Ongoing
Coronary artery disease	Coronary artery disease	2006 - Ongoing
Catheterisation cardiac	Cardiac catherization	2007 - 2007
Pulmonary mass	Benign pulmonary nodules in right upper lobe	13 May 2016 (Study Day -1572) - Ongoing
Atrial fibrillation	Atrial fibrillation	2018 - Ongoing
Emphysema	Emphysema	08 May 2018 (Study Day -847) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	2005 - Ongoing	High Cholesterol
Lisinopril	2005 - Ongoing	Hypertension
Metoprolol	2005 - Ongoing	Hypertension
Lung ct scan*	16 Oct 2020 (Study Day 46) - 16 Oct 2020 (Study Day 46)	Medical History

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hyponatraemia	Grade 1/mild	Not related	21 Oct 2020 (Study Day 51) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US362-2012 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	11 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Anxiety/Anxiety	AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	29 Aug 2020 (Study Day 19) – 04 Sep 2020 (Study Day 25)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US362-2012, a 23-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 11 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 29 Aug 2020 (Study Day 19), 18 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of anxiety. On 07 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of anxiety lasted for 7 days, after which it was considered to be recovered/resolved on 04 Sep 2020 (Study Day 25). The investigator assessed the event of anxiety to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

On 13 Nov 2020 (Study Day 95), the participant discontinued from the study due to other.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Headache	Occasional headaches	01 Aug 2020 (Study Day -10) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	01 Aug 2020 (Study Day -10) - Ongoing	Occasional Headache
Paracetamol	01 Aug 2020 (Study Day -10) - Ongoing	Occasional Headache
Alprazolam	29 Aug 2020 (Study Day 19) - Ongoing	Anxiety
Hydroxyzine	29 Aug 2020 (Study Day 19) - Ongoing	Anxiety

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Anxiety	Grade 3/severe	Not related	29 Aug 2020 (Study Day 19) - 04 Sep 2020 (Study Day 25)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US362-2116 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Abdominal Pain Lower/Right Lower Quadrant Abdominal Pain	SAE	Grade 4	Not related	29 Nov 2020 (Study Day 91) – 16 Dec 2020 (Study Day 108)	Recovered/ resolved
Loss Of Consciousness/Loss Of Consciousness	SAE	Grade 4	Not related	29 Nov 2020 (Study Day 91) – 29 Nov 2020 (Study Day 91)	Recovered/ resolved
Nausea/Nausea	SAE	Grade 4	Not related	29 Nov 2020 (Study Day 91) – 03 Dec 2020 (Study Day 95)	Recovered/ resolved
Vomiting/Vomiting	SAE	Grade 4	Not related	29 Nov 2020 (Study Day 91) – 03 Dec 2020 (Study Day 95)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US362-2116, a 55-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 28 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 29 Nov 2020 (Study Day 91), 90 days after the first dose and 62 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of abdominal pain lower. Action taken with the IP was not applicable. The event of right lower quadrant abdominal pain lasted for 18 days, after which it was considered to be recovered/resolved on 16 Dec 2020 (Study Day 108). The investigator assessed the event of abdominal pain lower to be not related to the IP.

On 29 Nov 2020 (Study Day 91), 90 days after the first dose and 62 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of loss of consciousness. Action taken with the IP was not applicable. The event of loss of consciousness lasted for 1 days, after which it was considered to be recovered/resolved on 29 Nov 2020 (Study Day 91). The investigator assessed the event of loss of consciousness to be not related to the IP.

On 29 Nov 2020 (Study Day 91), 90 days after the first dose and 62 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of nausea. Action taken with

the IP was not applicable. The event of nausea lasted for 5 days, after which it was considered to be recovered/resolved on 03 Dec 2020 (Study Day 95). The investigator assessed the event of nausea to be not related to the IP.

On 29 Nov 2020 (Study Day 91), 90 days after the first dose and 62 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of vomiting. Action taken with the IP was not applicable. The event of vomiting lasted for 5 days, after which it was considered to be recovered/resolved on 03 Dec 2020 (Study Day 95). The investigator assessed the event of vomiting to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000976	Abdominal pain lower
MOD-2020-000976	Loss of consciousness
MOD-2020-000976	Nausea
MOD-2020-000976	Vomiting

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Diverticulitis	Diverticulitis	Not reported - Ongoing
Blood cholesterol increased	High cholesterol	2019 - Ongoing
Abdominal hernia	Abdominal hernia	Jun 2020 - 16 Mar 2021 (Study Day 198)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Omega-3 nos	1980 - Ongoing	Prophylaxis
Vitamins nos	1980 - Ongoing	Supplement
Ascorbic acid	2019 - Ongoing	Supplement Vitamin
Colecalciferol	2019 - Ongoing	Supplement Vitamin
Pitavastatin calcium	15 Sep 2020 (Study Day 16) - 12 Jan 2021 (Study Day 135)	Hypercholesterolemia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	25 Oct 2020 (Study Day 56) - 25 Oct 2020 (Study Day 56)	Prophylaxis For Flu
Chest x-ray*	01 Dec 2020 (Study Day 93) - 01 Dec 2020 (Study Day 93)	Diagnostic
Ct abdomen and pelvis with and without contrast*	01 Dec 2020 (Study Day 93) - 01 Dec 2020 (Study Day 93)	Diagnostic
Famotidine	01 Dec 2020 (Study Day 93) - 01 Dec 2020 (Study Day 93)	Gerd
Iopamidol	01 Dec 2020 (Study Day 93) - 01 Dec 2020 (Study Day 93)	Radiopaque Contrast Agent
Liver ultrasound*	01 Dec 2020 (Study Day 93) - 01 Dec 2020 (Study Day 93)	Diagnostic
Morphine	01 Dec 2020 (Study Day 93) - 01 Dec 2020 (Study Day 93)	Abdominal Pain (Right Lower Quadrant)
Ondansetron	01 Dec 2020 (Study Day 93) - 01 Dec 2020 (Study Day 93)	Nausea, Vomiting
Atorvastatin	19 Jan 2021 (Study Day 142) - Ongoing	Hypercholesterolemia
Colonoscopy*	22 Feb 2021 (Study Day 176) - 22 Feb 2021 (Study Day 176)	Diagnostic
Abdominal hernia repair*	16 Mar 2021 (Study Day 198) - 16 Mar 2021 (Study Day 198)	Medical History
Celecoxib	16 Mar 2021 (Study Day 198) - 22 Mar 2021 (Study Day 204)	Abdominal Hernia Repair
Oxycodone hydrochloride; paracetamol	16 Mar 2021 (Study Day 198) - 18 Mar 2021 (Study Day 200)	Abdominal Hernia Repair

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Not related	18 Sep 2020 (Study Day 19) - 24 Nov 2020 (Study Day 86)
Insomnia	Grade 1/mild	Not related	24 Sep 2020 (Study Day 25) - Ongoing
Myalgia	Grade 1/mild	Not related	30 Sep 2020 (Study Day 31) - 28 Dec 2020 (Study Day 120)
Constipation	Grade 1/mild	Not related	29 Nov 2020 (Study Day 91) - 03 Dec 2020 (Study Day 95)
Flatulence	Grade 1/mild	Not related	29 Nov 2020 (Study Day 91) - 03 Dec 2020 (Study Day 95)
Hepatic Cyst	Grade 3/severe	Not related	29 Nov 2020 (Study Day 91) - Ongoing
Gastrooesophageal Reflux Disease	Grade 2/moderate	Not related	01 Dec 2020 (Study Day 93) - 01 Dec 2020 (Study Day 93)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US362-2197 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	17 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	15 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Anaemia/Worsening Anemia	SAE	Grade 4	Not related	12 Jan 2021 (Study Day 118) – 15 Jan 2021 (Study Day 121)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US362-2197, a 56-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 17 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 15 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Jan 2021 (Study Day 118), 117 days after the first dose and 89 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of anaemia. Action taken with the IP was not applicable. The event of worsening anemia lasted for 4 days, after which it was considered to be recovered/resolved on 15 Jan 2021 (Study Day 121). The investigator assessed the event of anaemia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-003469	Anaemia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	1990 - Ongoing
Hysterotomy	Partial hysterotomy	2008 - 2008
Vaginal haemorrhage	Abnormal virginial bleeding	2008 - 2008
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	2010 - Ongoing
Sciatica	Sciatica	2010 - Ongoing
Depression	Depression	2013 - Ongoing
Obesity	Severe obesity	2015 - Ongoing
Anaemia	Anemia	2016 - Ongoing
Cholelithiasis	Gall stones	2016 - Ongoing
Insomnia	Insomnia	2017 - Ongoing
Migraine	Migraine	2018 - Ongoing
Abdominal hernia	Abdominal hernia	2020 - Ongoing
Tendonitis	Bilateral foot tendonitis	2020 - 2020
Gastrointestinal haemorrhage	Gi bleed	Jun 2020 - Jun 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine	2020 - Ongoing	Hypertension
Ferrous sulfate	2020 - Ongoing	Anemia
Vitamin b12 nos	2020 - Ongoing	Prophylaxis Supplement
Vitamin d nos	2020 - Ongoing	Prophylaxis Supplement
Influenza vaccine	01 Sep 2020 (Study Day -16) - 01 Sep 2020 (Study Day -16)	Prophylaxis For Flu
Cbc lab*	12 Jan 2021 (Study Day 118) - 12 Jan 2021 (Study Day 118)	Diagnostic
Chest x-ray*	12 Jan 2021 (Study Day 118) - 12 Jan 2021 (Study Day 118)	Diagnostic
Ekg*	12 Jan 2021 (Study Day 118) - 12 Jan 2021 (Study Day 118)	Diagnostic
Fobt*	12 Jan 2021 (Study Day 118) - 12 Jan 2021 (Study Day 118)	Diagnostic
Iron lab*	12 Jan 2021 (Study Day 118) - 12 Jan 2021 (Study Day 118)	Diagnostic
Iron saturation lab*	12 Jan 2021 (Study Day 118) - 12 Jan 2021 (Study Day 118)	Diagnostic
Pantoprazole sodium sesquihydrate	12 Jan 2021 (Study Day 118) - 15 Jan 2021 (Study Day 121)	Prevent Gerd

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	12 Jan 2021 (Study Day 118) - 15 Jan 2021 (Study Day 121)	Prevention Of Fever
Saccharated iron oxide	12 Jan 2021 (Study Day 118) - 15 Jan 2021 (Study Day 121)	Anemia
Sodium chloride	12 Jan 2021 (Study Day 118) - 15 Jan 2021 (Study Day 121)	Anemia
Tibc lab*	12 Jan 2021 (Study Day 118) - 12 Jan 2021 (Study Day 118)	Diagnostic
Vitamin b12 nos	12 Jan 2021 (Study Day 118) - 15 Jan 2021 (Study Day 121)	Anemia
Blood transfusion (2 units of prbs's)*	13 Jan 2021 (Study Day 119) - 13 Jan 2021 (Study Day 119)	Adverse Event
Lorazepam	13 Jan 2021 (Study Day 119) - 13 Jan 2021 (Study Day 119)	Insomnia
Blood transfusion (1 unit of prbc)*	15 Jan 2021 (Study Day 121) - 15 Jan 2021 (Study Day 121)	Adverse Event
Melatonin	25 Jan 2021 (Study Day 131) - Ongoing	Insomnia
Ibuprofen	24 Feb 2021 (Study Day 161) - 24 Feb 2021 (Study Day 161)	Rib Cage Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Musculoskeletal Chest Pain	Grade 3/severe	Not related	22 Feb 2021 (Study Day 159) - 06 Mar 2021 (Study Day 171)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US362-2211 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	19 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Encephalopathy/ Encephalopathy	SAE	Grade 4	Not related	01 Jan 2021 (Study Day 103) – 02 Jan 2021 (Study Day 104)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US362-2211, a 56-year-old Hispanic or Latino male, received the first dose of placebo in the right arm on 21 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 19 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Jan 2021 (Study Day 103), 102 days after the first dose and 74 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of encephalopathy. Action taken with the IP was not applicable. The event of encephalopathy lasted for 2 days, after which it was considered to be recovered/resolved on 02 Jan 2021 (Study Day 104). The investigator assessed the event of encephalopathy to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002639	Encephalopathy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Prostatomegaly	Enlarged prostate	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Finasteride	Apr 2020 - 09 Oct 2020 (Study Day 19)	Enlarge Prostate
Acetylsalicylic acid	01 Jan 2021 (Study Day 103) - 11 Jan 2021 (Study Day 113)	Prevention Of Blood Clot
Atorvastatin	01 Jan 2021 (Study Day 103) - 11 Jan 2021 (Study Day 113)	Hypercholesterolemia
Bisacodyl	01 Jan 2021 (Study Day 103) - 02 Jan 2021 (Study Day 104)	Prevention Of Constipation
Brain ct wo contrast*	01 Jan 2021 (Study Day 103) - 01 Jan 2021 (Study Day 103)	Diagnostic
Chest single view x-ray*	01 Jan 2021 (Study Day 103) - 01 Jan 2021 (Study Day 103)	Diagnostic

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arachnoid Cyst	Grade 1/mild	Not related	01 Jan 2021 (Study Day 103) - Ongoing
Diastolic Dysfunction	Grade 1/mild	Not related	01 Jan 2021 (Study Day 103) - Ongoing
Hypercholesterolaemia	Grade 1/mild	Not related	01 Jan 2021 (Study Day 103) - 11 Jan 2021 (Study Day 113)
Hypertension	Grade 2/moderate	Not related	01 Jan 2021 (Study Day 103) - Ongoing
Lung Infiltration	Grade 1/mild	Not related	01 Jan 2021 (Study Day 103) - Ongoing
Mastoiditis	Grade 1/mild	Not related	01 Jan 2021 (Study Day 103) - Ongoing
Sinus Tachycardia	Grade 1/mild	Not related	01 Jan 2021 (Study Day 103) - Ongoing
Transient Global Amnesia	Grade 3/severe	Not related	01 Jan 2021 (Study Day 103) - 02 Jan 2021 (Study Day 104)
Transient Ischaemic Attack	Grade 3/severe	Not related	01 Jan 2021 (Study Day 103) - 02 Jan 2021 (Study Day 104)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US362-2282 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	21 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hypotension/Hypotension (1st Episode)	SAE	Grade 3/ severe	Not related	06 Nov 2020 (Study Day 17) – 13 Nov 2020 (Study Day 24)	Recovered/ resolved
Sepsis/Sepsis	SAE	Grade 4	Not related	06 Nov 2020 (Study Day 17) – 26 Nov 2020 (Study Day 37)	Recovered/ resolved
Mental Status Changes/Altered Mental Status (Prolongation Of Hospitalization)	SAE	Grade 4	Not related	10 Nov 2020 (Study Day 21) – 25 Nov 2020 (Study Day 36)	Recovered/ resolved
Hypotension/Hypotension (2nd Episode)	SAE	Grade 3/ severe	Not related	21 Nov 2020 (Study Day 32) – 23 Nov 2020 (Study Day 34)	Recovered/ resolved
Sepsis/Sepsis	SAE	Grade 4	Not related	25 Jan 2021 (Study Day 97) – 31 Jan 2021 (Study Day 103)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US362-2282, a 51-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 21 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Nov 2020 (Study Day 17), 16 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of hypotension. On 17 Nov 2020 (Study Day 28), the IP dose was discontinued due to other. The event of hypotension (1st episode) lasted for 8 days, after which it was considered to be recovered/resolved on 13 Nov 2020 (Study Day 24). The investigator assessed the event of hypotension to be not related to the IP.

On 06 Nov 2020 (Study Day 17), 16 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of sepsis. On 17 Nov 2020 (Study Day 28), the IP dose was discontinued due to other. The event of sepsis lasted for 21 days, after which it was considered to be recovered/resolved on 26 Nov 2020 (Study Day 37). The investigator assessed the event of sepsis to be not related to the IP.

On 10 Nov 2020 (Study Day 21), 20 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of mental status changes. On 17 Nov 2020 (Study Day 28), the IP dose was discontinued due to other. The event of altered mental status (prolongation of hospitalization) lasted for 16 days, after which it was considered to be recovered/resolved on 25 Nov 2020 (Study Day 36). The investigator assessed the event of mental status changes to be not related to the IP.

On 21 Nov 2020 (Study Day 32), 31 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of hypotension. On 17 Nov 2020 (Study Day 28), the IP dose was discontinued due to other. The event of hypotension (2nd episode) lasted for 3 days, after which it was considered to be recovered/resolved on 23 Nov 2020 (Study Day 34). The investigator assessed the event of hypotension to be not related to the IP.

On 25 Jan 2021 (Study Day 97), 96 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of sepsis. On 17 Nov 2020 (Study Day 28), the IP dose was discontinued due to other. The event of sepsis lasted for 7 days, after which it was considered to be recovered/resolved on 31 Jan 2021 (Study Day 103). The investigator assessed the event of sepsis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000832	Sepsis
MOD-2020-000832	Sepsis
MOD-2020-000832	Mental status changes
MOD-2020-000832	Hypotension
MOD-2020-000832	Hypotension

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	Not reported - Ongoing
Diabetes mellitus	Diabetes	Not reported - Ongoing
Seizure	Seizures	Not reported - Ongoing
Tobacco user	Smoker	Not reported - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma (severe)	1971 - Ongoing
Anxiety	Anxiety	1985 - Ongoing
Bipolar disorder	Bipolar disorder	1985 - Ongoing
Paranoia	Paranoia	1985 - Ongoing
Post-traumatic stress disorder	Post-traumatic stress disorder	1985 - Ongoing
HIV infection	Hiv infection	1997 - Ongoing
Schizophrenia	Schizophrenia	2000 - Ongoing
Nerve injury	Nerve damage (neuropathy)	2001 - Ongoing
Postmenopause	Post menopause	2013 - Ongoing
Deep vein thrombosis	Deep vein thrombosis (site unknown)	2019 - Not reported
Ankle fracture	Right ankle fracture	Sep 2020 - 03 Oct 2020 (Study Day -18)
Arthralgia	Right ankle pain	Sep 2020 - Ongoing
Infection	Right ankle infection	Oct 2020 - Ongoing
Ankle operation	Right ankle surgery	03 Oct 2020 (Study Day -18) - 03 Oct 2020 (Study Day -18)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Budesonide	Not reported - Ongoing	Asthma
Montelukast	2000 - Ongoing	Asthma, Chronic Obstructive Pulmonary Disease
Quetiapine fumarate	2000 - 11 Nov 2020 (Study Day 22)	Paranoia
Valproate semisodium	2000 - 06 Nov 2020 (Study Day 17)	Anxiety, Schizophrenia, Seizures
Salbutamol sulfate	2005 - Ongoing	Asthma
Abacavir sulfate; dolutegravir sodium; lamivudine	2010 - 06 Nov 2020 (Study Day 17)	Hiv
Pregabalin	2010 - Ongoing	Nerve Damage
Ipratropium bromide	2011 - Ongoing	Asthma
Ipratropium bromide; salbutamol sulfate	2015 - 06 Nov 2020 (Study Day 17)	Asthma
Salbutamol	2015 - 06 Nov 2020 (Study Day 17)	Asthma
Rivaroxaban	2017 - 13 Nov 2020 (Study Day 24)	Prophylaxis For Dvt
Lurasidone hydrochloride	2020 - 06 Nov 2020 (Study Day 17)	Bipolar Disorder
Paracetamol	Oct 2020 - Ongoing	Right Ankle Pain
Bacitracin; neomycin sulfate; polymyxin b sulfate	03 Oct 2020 (Study Day -18) - 06 Nov 2020 (Study Day 17)	Right Ankle Infection
Ibuprofen	03 Oct 2020 (Study Day -18) - 06 Nov 2020 (Study Day 17)	Right Ankle Pain
Paracetamol	21 Oct 2020 (Study Day 1) - 22 Oct 2020 (Study Day 2)	Fever

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	21 Oct 2020 (Study Day 1) - 22 Oct 2020 (Study Day 2)	Headaches, Muscle Aches, Joint Aches, Chills, Fever
Alprazolam	06 Nov 2020 (Study Day 17) - 10 Nov 2020 (Study Day 21)	Anxiety
Arterial blood gases*	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Diagnostic
Blood culture*	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Diagnostic
Budesonide	06 Nov 2020 (Study Day 17) - 25 Nov 2020 (Study Day 36)	Asthma/Intermittent Wheezing
C-reactive protein*	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Diagnostic
Cefepime	06 Nov 2020 (Study Day 17) - 09 Nov 2020 (Study Day 20)	Right Ankle Cellulitis/Sepsis/Uti
Chest x ray*	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Diagnostic
Clindamycin	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Right Ankle Cellulitis/Sepsis
Complete blood count and differential*	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Diagnostic
Complete metabolic panel*	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Diagnostic
Ct tib-fib right with iv contrast*	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Diagnostic
Electrocardiogram (ekg)*	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Diagnostic
Insulin lispro	06 Nov 2020 (Study Day 17) - Ongoing	Diabetes
Iohexol	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Iv Contrast (Right Leg Ct Scan)
Ketorolac	06 Nov 2020 (Study Day 17) - 10 Nov 2020 (Study Day 21)	Right Leg Pain - Cellulitis
Naloxone hydrochloride	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Lethargy - Suspected Opioid Abuse
Oxygen	06 Nov 2020 (Study Day 17) - 26 Nov 2020 (Study Day 37)	Unknown
Pantoprazole	06 Nov 2020 (Study Day 17) - 25 Nov 2020 (Study Day 36)	Prophylaxis For Gastrointestinal (Gi) Bleed
Paracetamol	06 Nov 2020 (Study Day 17) - 25 Nov 2020 (Study Day 36)	Pain Right Ankle
Right ankle x ray*	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Diagnostic
Right foot x ray*	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Diagnostic
Ultrasound bilateral upper extremities*	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Diagnostic
Urinalysis*	06 Nov 2020 (Study Day 17) - 06 Nov 2020 (Study Day 17)	Diagnostic
Valproate semisodium	06 Nov 2020 (Study Day 17) - 17 Nov 2020 (Study Day 28)	Seizures

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vancomycin	06 Nov 2020 (Study Day 17) - 08 Nov 2020 (Study Day 19)	Right Ankle Cellulitis/Sepsis/Uti
Vancomycin	08 Nov 2020 (Study Day 19) - 11 Nov 2020 (Study Day 22)	Right Ankle Cellulitis/Sepsis
Calcium chloride; potassium chloride; sodium lactate	10 Nov 2020 (Study Day 21) - 18 Nov 2020 (Study Day 29)	Blood Pressure Support - Hypotension
Calcium chloride; potassium chloride; sodium lactate	10 Nov 2020 (Study Day 21) - 11 Nov 2020 (Study Day 22)	Hypotension
Ct brain without iv contrast*	10 Nov 2020 (Study Day 21) - 10 Nov 2020 (Study Day 21)	Diagnostic
Mri brain without iv contrast*	10 Nov 2020 (Study Day 21) - 10 Nov 2020 (Study Day 21)	Diagnostic
Naloxone hydrochloride	10 Nov 2020 (Study Day 21) - 10 Nov 2020 (Study Day 21)	Lethargy - Suspected Opioid Abuse
Nicotine	10 Nov 2020 (Study Day 21) - 25 Nov 2020 (Study Day 36)	Smoking Cessation
Sodium chloride	10 Nov 2020 (Study Day 21) - 13 Nov 2020 (Study Day 24)	Hypotension
Sodium chloride	10 Nov 2020 (Study Day 21) - 22 Nov 2020 (Study Day 33)	Hypotension (1st Episode) And Hypotension (2nd Episode)
Ampicillin; sulbactam	11 Nov 2020 (Study Day 22) - 13 Nov 2020 (Study Day 24)	Right Ankle Cellulitis/Sepsis
Bedside eeg monitoring continuous*	11 Nov 2020 (Study Day 22) - 11 Nov 2020 (Study Day 22)	Diagnostic
Ct abd/pelvis without iv contrast*	11 Nov 2020 (Study Day 22) - 11 Nov 2020 (Study Day 22)	Diagnostic
Ipratropium bromide; salbutamol	11 Nov 2020 (Study Day 22) - 24 Nov 2020 (Study Day 35)	Asthma - Intermittent Wheezing, Atelectasis
Mid line insertion - ultrasound guided*	11 Nov 2020 (Study Day 22) - 11 Nov 2020 (Study Day 22)	Adverse Event
Portable eeg*	11 Nov 2020 (Study Day 22) - 11 Nov 2020 (Study Day 22)	Diagnostic
Transthoracic echo*	11 Nov 2020 (Study Day 22) - 11 Nov 2020 (Study Day 22)	Diagnostic
Valproate semisodium	11 Nov 2020 (Study Day 22) - 17 Nov 2020 (Study Day 28)	Seizures
Vancomycin	11 Nov 2020 (Study Day 22) - 15 Nov 2020 (Study Day 26)	Right Ankle Cellulitis/Sepsis
Calcium gluconate	12 Nov 2020 (Study Day 23) - 12 Nov 2020 (Study Day 23)	Hypocalcemia (2nd Episode)
Chest x ray*	12 Nov 2020 (Study Day 23) - 12 Nov 2020 (Study Day 23)	Diagnostic
Electrolytes nos	12 Nov 2020 (Study Day 23) - 12 Nov 2020 (Study Day 23)	Electrolyte Imbalance
Magnesium bloodwork*	12 Nov 2020 (Study Day 23) - 12 Nov 2020 (Study Day 23)	Diagnostic
Magnesium sulfate	12 Nov 2020 (Study Day 23) - 12 Nov 2020 (Study Day 23)	Hypomagnesemia
Piperacillin sodium; tazobactam sodium	12 Nov 2020 (Study Day 23) - 12 Nov 2020 (Study Day 23)	Right Ankle Cellulitis/Sepsis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Abacavir	13 Nov 2020 (Study Day 24) - 17 Nov 2020 (Study Day 28)	Hiv
Dolutegravir	13 Nov 2020 (Study Day 24) - 17 Nov 2020 (Study Day 28)	Hiv
Lamivudine	13 Nov 2020 (Study Day 24) - 17 Nov 2020 (Study Day 28)	Hiv
Sulfamethoxazole; trimethoprim	13 Nov 2020 (Study Day 24) - 17 Nov 2020 (Study Day 28)	Prophylaxis For Pcp
Aciclovir	14 Nov 2020 (Study Day 25) - 16 Nov 2020 (Study Day 27)	Potential Cns Infection
Ampicillin	14 Nov 2020 (Study Day 25) - 16 Nov 2020 (Study Day 27)	Right Ankle Cellulitis/Sepsis
Cefepime	14 Nov 2020 (Study Day 25) - 16 Nov 2020 (Study Day 27)	Potential Cns Infection
Haloperidol	14 Nov 2020 (Study Day 25) - 18 Nov 2020 (Study Day 29)	Episodes Of Agitation
Lidocaine	15 Nov 2020 (Study Day 26) - 15 Nov 2020 (Study Day 26)	Lumbar Puncture
Lumbar puncture*	15 Nov 2020 (Study Day 26) - 15 Nov 2020 (Study Day 26)	Diagnostic
Vancomycin	15 Nov 2020 (Study Day 26) - 16 Nov 2020 (Study Day 27)	Potential Cns Infection
Chest x ray*	16 Nov 2020 (Study Day 27) - 16 Nov 2020 (Study Day 27)	Diagnostic
Glucose	16 Nov 2020 (Study Day 27) - 18 Nov 2020 (Study Day 29)	Hypoglycemia
Lorazepam	16 Nov 2020 (Study Day 27) - 16 Nov 2020 (Study Day 27)	Episodes Of Agitation
Magnesium bloodwork*	16 Nov 2020 (Study Day 27) - 16 Nov 2020 (Study Day 27)	Diagnostic
Rivaroxaban	16 Nov 2020 (Study Day 27) - 17 Nov 2020 (Study Day 28)	Dvt Prophylaxis
Complete metabolic panel*	17 Nov 2020 (Study Day 28) - 17 Nov 2020 (Study Day 28)	Diagnostic
Ct brain without iv contrast*	17 Nov 2020 (Study Day 28) - 17 Nov 2020 (Study Day 28)	Diagnostic
Quetiapine	17 Nov 2020 (Study Day 28) - 25 Nov 2020 (Study Day 36)	Paranoia
Calcium alginate	18 Nov 2020 (Study Day 29) - 24 Nov 2020 (Study Day 35)	Right Ankle Wound Care
Enoxaparin	18 Nov 2020 (Study Day 29) - 25 Nov 2020 (Study Day 36)	Deep Vein Thrombosis Prophylaxis
Miconazole	18 Nov 2020 (Study Day 29) - Ongoing	Bilateral Inguinal Areas And Pannus Fold
Potassium chloride	18 Nov 2020 (Study Day 29) - 19 Nov 2020 (Study Day 30)	Hypokalemia
Valproate sodium	18 Nov 2020 (Study Day 29) - 25 Nov 2020 (Study Day 36)	Seizures
Zinc oxide	18 Nov 2020 (Study Day 29) - Ongoing	Intergluteal Fold Fissure Wound Care

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Glucose; sodium chloride	19 Nov 2020 (Study Day 30) - 24 Nov 2020 (Study Day 35)	Unknown
Magnesium sulfate	19 Nov 2020 (Study Day 30) - 19 Nov 2020 (Study Day 30)	Hypomagnesemia
Ampicillin; sulbactam	20 Nov 2020 (Study Day 31) - 23 Nov 2020 (Study Day 34)	Sepsis
Hydromorphone	20 Nov 2020 (Study Day 31) - 21 Nov 2020 (Study Day 32)	Right Ankle Pain
Chest x ray*	21 Nov 2020 (Study Day 32) - 21 Nov 2020 (Study Day 32)	Diagnostic
Magnesium sulfate	21 Nov 2020 (Study Day 32) - 21 Nov 2020 (Study Day 32)	Hypomagnesemia (2nd Episode)
Abacavir	22 Nov 2020 (Study Day 33) - 25 Nov 2020 (Study Day 36)	Hiv
Chest x ray*	22 Nov 2020 (Study Day 33) - 22 Nov 2020 (Study Day 33)	Diagnostic
Dolutegravir	22 Nov 2020 (Study Day 33) - 25 Nov 2020 (Study Day 36)	Hiv
Lamivudine	22 Nov 2020 (Study Day 33) - 25 Nov 2020 (Study Day 36)	Hiv
Magnesium sulfate	23 Nov 2020 (Study Day 34) - 23 Nov 2020 (Study Day 34)	Hypomagnesemia (2nd Episode)
Potassium chloride	23 Nov 2020 (Study Day 34) - 23 Nov 2020 (Study Day 34)	Hypokalemia (3rd Episode)
Potassium; sodium phosphate	23 Nov 2020 (Study Day 34) - 23 Nov 2020 (Study Day 34)	Hypokalemia (3rd Episode)
Docusate sodium; sennoside a+b	24 Nov 2020 (Study Day 35) - 25 Nov 2020 (Study Day 36)	Constipation
Lidocaine	24 Nov 2020 (Study Day 35) - 25 Nov 2020 (Study Day 36)	Right Ankle Pain
Macrogol	24 Nov 2020 (Study Day 35) - 25 Nov 2020 (Study Day 36)	Constipation
Meglumine gadoterate	24 Nov 2020 (Study Day 35) - 24 Nov 2020 (Study Day 35)	Mri Right Ankle With And Without Contrast
Mri right ankle with and without iv contrast*	24 Nov 2020 (Study Day 35) - 24 Nov 2020 (Study Day 35)	Diagnostic
Us dvt lower bilateral extremities*	25 Nov 2020 (Study Day 36) - 25 Nov 2020 (Study Day 36)	Diagnostic
Us dvt upper bilateral extremities*	25 Nov 2020 (Study Day 36) - 25 Nov 2020 (Study Day 36)	Diagnostic
Abacavir sulfate; dolutegravir sodium; lamivudine	26 Nov 2020 (Study Day 37) - Ongoing	Hiv
Ibuprofen	26 Nov 2020 (Study Day 37) - Ongoing	Right Foot Pain
Quetiapine fumarate	26 Nov 2020 (Study Day 37) - Ongoing	Paranoia
Rivaroxaban	26 Nov 2020 (Study Day 37) - Ongoing	Prophylaxis For Deep Vein Thrombosis
Valproate semisodium	26 Nov 2020 (Study Day 37) - Ongoing	Anxiety
Amoxicillin trihydrate; clavulanate potassium	25 Jan 2021 (Study Day 97) - 03 Feb 2021 (Study Day 106)	Right Ankle Cellulitis
Alprazolam	Feb 2021 - Ongoing	Anxiety

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metformin	Feb 2021 - Ongoing	Diabetes

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 3/severe	Not related	27 Oct 2020 (Study Day 7) - Ongoing
Cystitis	Grade 2/moderate	Not related	04 Nov 2020 (Study Day 15) - 13 Nov 2020 (Study Day 24)
Atelectasis	Grade 2/moderate	Not related	06 Nov 2020 (Study Day 17) - Ongoing
Cellulitis	Grade 3/severe	Not related	06 Nov 2020 (Study Day 17) - Ongoing
Electrolyte Imbalance	Grade 2/moderate	Not related	06 Nov 2020 (Study Day 17) - 26 Nov 2020 (Study Day 37)
Hypocalcaemia	Grade 1/mild	Not related	06 Nov 2020 (Study Day 17) - 09 Nov 2020 (Study Day 20)
Lethargy	Grade 2/moderate	Not related	06 Nov 2020 (Study Day 17) - 13 Nov 2020 (Study Day 24)
Osteonecrosis	Grade 2/moderate	Not related	06 Nov 2020 (Study Day 17) - Ongoing
Wheezing	Grade 2/moderate	Not related	06 Nov 2020 (Study Day 17) - 25 Nov 2020 (Study Day 36)
Hypocalcaemia	Grade 1/mild	Not related	10 Nov 2020 (Study Day 21) - 14 Nov 2020 (Study Day 25)
Encephalopathy	Grade 3/severe	Not related	11 Nov 2020 (Study Day 22) - 25 Nov 2020 (Study Day 36)
Hypomagnesaemia	Grade 1/mild	Not related	12 Nov 2020 (Study Day 23) - 13 Nov 2020 (Study Day 24)
Agitation	Grade 2/moderate	Not related	14 Nov 2020 (Study Day 25) - 18 Nov 2020 (Study Day 29)
Dysphagia	Grade 3/severe	Not related	16 Nov 2020 (Study Day 27) - 22 Nov 2020 (Study Day 33)
Hypoglycaemia	Grade 2/moderate	Not related	16 Nov 2020 (Study Day 27) - 18 Nov 2020 (Study Day 29)
Hypomagnesaemia	Grade 1/mild	Not related	16 Nov 2020 (Study Day 27) - 24 Nov 2020 (Study Day 35)
Hypokalaemia	Grade 1/mild	Not related	17 Nov 2020 (Study Day 28) - 18 Nov 2020 (Study Day 29)
Fungal Skin Infection	Grade 2/moderate	Not related	18 Nov 2020 (Study Day 29) - 12 Apr 2021 (Study Day 174)
Fungal Skin Infection	Grade 2/moderate	Not related	18 Nov 2020 (Study Day 29) - 12 Apr 2021 (Study Day 174)
Right Hemisphere Deficit Syndrome	Grade 2/moderate	Not related	18 Nov 2020 (Study Day 29) - Ongoing

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Skin Fissures	Grade 2/moderate	Not related	18 Nov 2020 (Study Day 29) - 12 Apr 2021 (Study Day 174)
Hypocalcaemia	Grade 1/mild	Not related	23 Nov 2020 (Study Day 34) - 24 Nov 2020 (Study Day 35)
Hypokalaemia	Grade 1/mild	Not related	23 Nov 2020 (Study Day 34) - 26 Nov 2020 (Study Day 37)
Constipation	Grade 1/mild	Not related	24 Nov 2020 (Study Day 35) - 26 Nov 2020 (Study Day 37)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US363-2022 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Leiomyosarcoma Metastatic/ Metastatic, Recurrent, Stage 4 Leiomyosarcoma	SAE	Grade 4	Not related	20 Nov 2020 (Study Day 85) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US363-2022, a 68-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 25 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Nov 2020 (Study Day 85), 84 days after the first dose and 56 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of leiomyosarcoma metastatic. Action taken with the IP was not applicable. The event of metastatic, recurrent, stage 4 leiomyosarcoma was considered to be ongoing. The investigator assessed the event of leiomyosarcoma metastatic to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000891	Leiomyosarcoma metastatic

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	1978 - 1978
Postmenopause	Postmenopausal	2003 - Ongoing
Osteopenia	Osteopenia	2010 - 01 Jul 2020 (Study Day -58)
Leiomyosarcoma recurrent	Leiomyosarcoma (diagnosed in 2017 and had a polyp removed from nasal cavity and then in july 2020 there was a 2nd surgery which was a skull based resection)	2017 - 01 Nov 2017 (Study Day -1031)
Anxiety	Anxiety	01 Dec 2017 (Study Day -1001) - Ongoing
Insomnia	Insomnia	01 Dec 2017 (Study Day -1001) - Ongoing
Osteonecrosis	Avascular necrosis in right hip	2018 - 01 Apr 2018 (Study Day -880)
Hip arthroplasty	Hip replacement (right)	01 Apr 2018 (Study Day -880) - 01 Apr 2018 (Study Day -880)
Osteoporosis	Osteoporosis	2020 - Ongoing
Skin operation	Partial scalp removal	01 Jul 2020 (Study Day -58) - 01 Jul 2020 (Study Day -58)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	Not reported - Ongoing	Osteoarthririts
Calcium carbonate; ergocalciferol	2010 - Ongoing	Osteoporosis & Osteopenia
Vitamins nos	2010 - Ongoing	General Health
Escitalopram oxalate	2017 - Ongoing	Anxiety
Zolpidem	2017 - Ongoing	Insomnia
Mri on abdomen*	19 Nov 2020 (Study Day 84) - 19 Nov 2020 (Study Day 84)	Diagnostic
Liver biopsy*	16 Dec 2020 (Study Day 111) - 16 Dec 2020 (Study Day 111)	Diagnostic
Pet scan*	23 Dec 2020 (Study Day 118) - 23 Dec 2020 (Study Day 118)	Diagnostic
Gemcitabine	07 Jan 2021 (Study Day 133) - Ongoing	Metastatic Leiomyosarcoma
Vinorelbine	07 Jan 2021 (Study Day 133) - Ongoing	Metastatic Leiomyosarcoma
Radiotherapy	15 Mar 2021 (Study Day 200) - 24 Mar 2021 (Study Day 209)	Leiomyosarcoma (Ae)
Sbrt radiation to sternum*	15 Mar 2021 (Study Day 200) - 15 Mar 2021 (Study Day 200)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

FDA-CBER-2022-1614-3380062

Participant Number:	US363-2032 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	16 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hypertensive Emergency/ Hypertensive Emergency	SAE	Grade 4	Not related	16 Sep 2020 (Study Day 1) – 18 Sep 2020 (Study Day 3)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US363-2032, a 55-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 16 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Sep 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of hypertensive emergency. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to withdrawal of consent by participant. The event of hypertensive emergency lasted for 3 days, after which it was considered to be recovered/resolved on 18 Sep 2020 (Study Day 3). The investigator assessed the event of hypertensive emergency to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000301	Hypertensive emergency

Study Completion/Discontinuation

On 19 Oct 2020 (Study Day 34), the participant discontinued from the study due to withdrawal of consent by participant.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Severe obesity	Not reported - Ongoing
Seasonal allergy	Allergies (pollen/hay fever)	Not reported - Ongoing
Salpingo-oophorectomy unilateral	Right ovary and tube removed	01 Apr 1993 (Study Day -10030) - 01 Apr 1993 (Study Day -10030)
Arthroscopy	Right knee arthroscopy	01 Jun 1995 (Study Day -9239) - 01 Oct 1997 (Study Day -8386)
Atrial fibrillation	Atrial fibrillation	01 Jan 1996 (Study Day -9025) - Ongoing
Hypertension	Hypertension	01 Jan 1996 (Study Day -9025) - Ongoing
Cholecystectomy	Gallbladder removed	01 Jan 1998 (Study Day -8294) - 01 Jan 1998 (Study Day -8294)
Asthma	Mild asthma (on inhaler as needed rarely needed)	01 Jan 2000 (Study Day -7564) - Ongoing
Anaemia	Anemia (low-grade) (two low to be treatable)	01 Jan 2010 (Study Day -3911) - Ongoing
Cardiac ablation	Cardiac ablation	01 Oct 2012 (Study Day -2907) - 01 Apr 2013 (Study Day -2725)
Gastrectomy	Sleeve gastrectomy	01 Oct 2013 (Study Day -2542) - 01 Oct 2013 (Study Day -2542)
Menopause	Menopause	01 Jan 2019 (Study Day -624) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metoprolol	1996 - 05 Oct 2020 (Study Day 20)	Atrial Fibrillation
Lisinopril	2000 - 16 Sep 2020 (Study Day 1)	Hypertension
Levosalbutamol hydrochloride	2010 - Ongoing	Mild Asthma
Ipratropium bromide; salbutamol sulfate	2019 - Ongoing	Asthma Exacerbation
Flecainide	01 Apr 2019 (Study Day -534) - Ongoing	Atrial Fibrillation
Cetirizine	01 Apr 2020 (Study Day -168) - Ongoing	Pollen/Hay Fever Allergies
Lisinopril	16 Sep 2020 (Study Day 1) - Ongoing	Hypertension
Paracetamol	04 Oct 2020 (Study Day 19) - 04 Oct 2020 (Study Day 19)	Migraine
Metoprolol	06 Oct 2020 (Study Day 21) - Ongoing	Atrial Fibrillation

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Atrial Fibrillation	Grade 2/moderate	Not related	01 Oct 2020 (Study Day 16) - Ongoing
Migraine	Grade 1/mild	Not related	04 Oct 2020 (Study Day 19) - 04 Oct 2020 (Study Day 19)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US363-2064 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	09 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	07 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Transient Ischaemic Attack/Transient Ischemic Attack	SAE	Grade 4	Not related	31 Dec 2020 (Study Day 114) – 04 Jan 2021 (Study Day 118)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US363-2064, a 75-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 09 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 07 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 31 Dec 2020 (Study Day 114), 113 days after the first dose and 85 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of transient ischaemic attack. Action taken with the IP was not applicable. The event of transient ischemic attack lasted for 5 days, after which it was considered to be recovered/resolved with sequelae on 04 Jan 2021 (Study Day 118). The investigator assessed the event of transient ischaemic attack to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001558	Transient ischaemic attack

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Rosacea	Rosacea	1990 - Ongoing
Skin cancer	Skin cancer- monitored every 6 months	1990 - Ongoing
Skin neoplasm excision	Skin cancer cells have been removed- 6 different procedures in 30 years period (2 were melanoma and the rest were bcc)	1990 - Not reported
Blood cholesterol increased	High cholesterol	1995 - Ongoing
Hypertension	High blood pressure	1995 - Ongoing
Thyroid mass	Thyroid nodules (resulted in a partial thyroid removal)	2015 - 2015
Thyroidectomy	Thyroid gland removed (partial removal)	2015 - 2015
Benign prostatic hyperplasia	Benign prostatic hyperplasia (bph	2018 - Ongoing
Parkinson's disease	Parkinson's disease (slow progression)	2019 - Ongoing
Obesity	Severe obesity with a bmi over 40	2020 - Ongoing
Basal cell carcinoma	Basal cell carcinoma (skin cancer)	01 Jul 2020 (Study Day -70) - 01 Jul 2020 (Study Day -70)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Doxycycline hyclate	2000 - Ongoing	Rosacea
Amlodipine	2010 - Ongoing	High Blood Pressure
Acetylsalicylic acid	31 Aug 2010 (Study Day -3662) - Ongoing	General Health
Vitamin b12 nos	17 Jul 2013 (Study Day -2611) - Ongoing	General Health
Calcium; vitamin d nos	27 Aug 2014 (Study Day -2205) - Ongoing	General Health
Hydrochlorothiazide	2015 - Ongoing	High Blood Pressure
Irbesartan	2015 - Ongoing	High Blood Pressure
Metoprolol	2015 - Ongoing	High Blood Pressure
Pravastatin	2015 - 04 Jan 2021 (Study Day 118)	High Cholesterol
Vitamin d nos	2015 - Ongoing	General Health
Finasteride	2018 - Ongoing	Prostate And Bladder Issues
Tamsulosin	2018 - Ongoing	Prostate And Bladder Issues
Carbidopa; levodopa	02 Dec 2019 (Study Day -282) - Ongoing	Parkinson's Disease
Mirabegron	14 Jul 2020 (Study Day -57) - Ongoing	Prostate And Bladder Issues
Clopidogrel bisulfate	31 Dec 2020 (Study Day 114) - 31 Dec 2020 (Study Day 114)	Transient Ischemic Attack
Atorvastatin	03 Jan 2021 (Study Day 117) - Ongoing	High Cholesterol
Clopidogrel bisulfate	03 Jan 2021 (Study Day 117) - Ongoing	Tia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Mri*	03 Jan 2021 (Study Day 117) - 03 Jan 2021 (Study Day 117)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US363-2127 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	13 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	11 Nov 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Sexual Abuse/Sexual Assault	SAE	Grade 4	Not related	07 Nov 2020 (Study Day 26) – 07 Nov 2020 (Study Day 26)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US363-2127, a 57-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 13 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 11 Nov 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Nov 2020 (Study Day 26), 25 days after the first dose and 4 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of sexual abuse. The IP dose was not changed due to the sexual assault. The event of sexual assault lasted for 1 day, after which it was considered to be recovered/resolved on 07 Nov 2020 (Study Day 26). The investigator assessed the event of sexual abuse to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000722	Sexual abuse

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Severe obesity (bmi 42.13479)	Not reported - Ongoing
Anaphylactic reaction	Geodon allergy (anaphylaxis)	1993 - Ongoing
Constipation	Constipation	1994 - Ongoing
Small intestine operation	Small bowel surgery	1994 - 1994
Osteoarthritis	Osteoarthritis	2003 - Ongoing
Postmenopause	Post menopausal	2006 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Herpes simplex	Herpes simplex virus	2012 - Ongoing
Small intestinal resection	Small bowel repair due to blockage	2013 - 2013
Rheumatoid arthritis	Rheumatoid arthritis (both ankles)	2016 - Ongoing
Blood cholesterol increased	Elevated cholesterol	Feb 2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Naproxen	2005 - Ongoing	Osteoarthritis & Rheumatoid Arthritis
Vaccinium macrocarpon	2005 - Ongoing	General Health
Acetylsalicylic acid	2010 - Ongoing	Heart Attack Prevention
Curcuma longa	2010 - Ongoing	Osteoarthritis
Fish oil	2010 - Ongoing	Hypertension
Hydrochlorothiazide; lisinopril	2010 - Ongoing	Hyptertension
Probiotics nos	2015 - Ongoing	General Health
Malus spp. vinegar extract	2018 - Ongoing	General Health
Diclofenac sodium	2019 - Ongoing	Rheumatoid Arthritis
Ascorbic acid; rosa canina; sodium ascorbate	01 Feb 2020 (Study Day -255) - Ongoing	General Health
Magnesium	01 Apr 2020 (Study Day -195) - Ongoing	Constipation
Potassium	01 Apr 2020 (Study Day -195) - Ongoing	Hypertension
Colecalciferol	01 May 2020 (Study Day -165) - 2021	To Help With Bone Health
Sambucus nigra	01 Sep 2020 (Study Day -42) - Ongoing	General Health
Naproxen	13 Oct 2020 (Study Day 1) - 13 Oct 2020 (Study Day 1)	Osteoarthritis/Rheumatoid Arthritis
Pravastatin	19 Oct 2020 (Study Day 7) - Ongoing	Slightly Elevated Cholesterol
Azithromycin	07 Nov 2020 (Study Day 26) - 07 Nov 2020 (Study Day 26)	Sexual Assault (Ae)- Presumptive Treatment Of Sti's
Ceftriaxone	07 Nov 2020 (Study Day 26) - 07 Nov 2020 (Study Day 26)	Sexual Assault (Ae)- Presumptive Treatment Of Sti's

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metronidazole	07 Nov 2020 (Study Day 26) - 07 Nov 2020 (Study Day 26)	Sexual Assault (Ae)- Presumptive Treatment Of Sti's
Naproxen	07 Nov 2020 (Study Day 26) - 15 Dec 2020 (Study Day 64)	Fractured Toe (Ae)
Dolutegravir sodium	12 Nov 2020 (Study Day 31) - 20 Nov 2020 (Study Day 39)	Sexual Assault (Ae #1)
Emtricitabine; tenofovir disoproxil fumarate	12 Nov 2020 (Study Day 31) - 20 Nov 2020 (Study Day 39)	Sexual Assault
Colecalciferol	2021 - Ongoing	General Bone Health
Paracetamol	15 Jan 2021 (Study Day 95) - 15 Jan 2021 (Study Day 95)	Arm Soreness After Ol Vaccination
Naproxen	16 Jan 2021 (Study Day 96) - 16 Jan 2021 (Study Day 96)	Pain In Arm After Ol Vaccination
Hydrocodone	17 Jan 2021 (Study Day 97) - 17 Jan 2021 (Study Day 97)	Left Arm Pain After Ol Vaccine
Phentermine	05 Feb 2021 (Study Day 116) - 13 Feb 2021 (Study Day 124)	Severe Obesity
Fluconazole	25 Feb 2021 (Study Day 136) - 26 Feb 2021 (Study Day 137)	Urinary Tract Infection
Nitrofurantoin	25 Feb 2021 (Study Day 136) - 01 Mar 2021 (Study Day 140)	Urinary Tract Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Foot Fracture	Grade 2/moderate	Not related	07 Nov 2020 (Study Day 26) - 15 Dec 2020 (Study Day 64)
Muscle Spasms	Grade 3/severe	Not related	06 Dec 2020 (Study Day 55) - 06 Dec 2020 (Study Day 55)
Cough	Grade 1/mild	Not related	03 Jan 2021 (Study Day 83) - 13 Jan 2021 (Study Day 93)
Urinary Tract Infection	Grade 1/mild	Not related	19 Feb 2021 (Study Day 130) - 03 Mar 2021 (Study Day 142)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US364-2024 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	01 Oct 2020 (Study Day 36)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Rib Fracture/Closed Fracture Of Multiple Ribs	SAE	Grade 3/ severe	Not related	25 Sep 2020 (Study Day 30) – 11 Jan 2021 (Study Day 138)	Recovered/resolved
Traumatic Haemothorax/Hemopneumothorax Right Side	SAE	Grade 4	Not related	25 Sep 2020 (Study Day 30) – 30 Sep 2020 (Study Day 35)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US364-2024, a 70-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 01 Oct 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Sep 2020 (Study Day 30), 29 days after the first dose and 6 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of rib fracture. Action taken with the IP was not applicable. The event of closed fracture of multiple ribs lasted for 109 days, after which it was considered to be recovered/resolved on 11 Jan 2021 (Study Day 138). The investigator assessed the event of rib fracture to be not related to the IP.

On 25 Sep 2020 (Study Day 30), 29 days after the first dose and 6 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of traumatic haemothorax. Action taken with the IP was not applicable. The event of hemopneumothorax right side lasted for 6 days, after which it was considered to be recovered/resolved on 30 Sep 2020 (Study Day 35). The investigator assessed the event of traumatic haemothorax to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-074277	Hemopneumothorax
MOD-2021-074277	Closed fracture of multiple ribs, unspecified

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety disorder	Anxiety disorder	Not reported - Ongoing
Back pain	Back pain	Not reported - Ongoing
Hyperlipidaemia	Hyperlipidemia	Not reported - Ongoing
Depression	Depression	2005 - Ongoing
Osteoporosis	Osteoporosis	28 Mar 2007 (Study Day -4901) - Ongoing
Prostate cancer	Prostate cancer	2010 - 2010
Insomnia	Insomnia	02 May 2015 (Study Day -1944) - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	17 Oct 2017 (Study Day -1045) - Ongoing
Supraventricular extrasystoles	Atrial ectopy	25 Feb 2019 (Study Day -549) - Ongoing
Dandruff	Dandruff	24 Jan 2020 (Study Day -216) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Quetiapine fumarate	02 May 2015 (Study Day -1944) - Ongoing	Insomnia
Venlafaxine hydrochloride	14 May 2015 (Study Day -1932) - Ongoing	Anxiety Disorder
Atorvastatin	25 Oct 2019 (Study Day -307) - Ongoing	Hyperlipidemia
Ketoconazole	24 Jul 2020 (Study Day -34) - Ongoing	Dandruff
Cyclobenzaprine hydrochloride	05 Aug 2020 (Study Day -22) - Ongoing	Back Pain
Meloxicam	05 Aug 2020 (Study Day -22) - 12 Aug 2020 (Study Day -15)	Back Pain
Meclofenamate sodium	12 Aug 2020 (Study Day -15) - Ongoing	Back Pain
Tizanidine hydrochloride	12 Aug 2020 (Study Day -15) - Ongoing	Back Pain
Calcium chloride; potassium chloride; sodium lactate	25 Sep 2020 (Study Day 30) - 26 Sep 2020 (Study Day 31)	Hemopneumothorax, Rib Fracture, Scapula Fracture

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Chest x-ray*	25 Sep 2020 (Study Day 30) - 25 Sep 2020 (Study Day 30)	Diagnostic
Ct chest, absomen, pelvis*	25 Sep 2020 (Study Day 30) - 25 Sep 2020 (Study Day 30)	Diagnostic
Ipratropium; salbutamol	25 Sep 2020 (Study Day 30) - 29 Sep 2020 (Study Day 34)	Hemopneumothorax
Lidocaine	25 Sep 2020 (Study Day 30) - 25 Sep 2020 (Study Day 30)	Closed Fracture Of Multiple Ribs
Morphine	25 Sep 2020 (Study Day 30) - 25 Sep 2020 (Study Day 30)	Closed Fracture Of Multiple Ribs, Closed Fracture Of Body Of Right Scapula
Morphine	25 Sep 2020 (Study Day 30) - 27 Sep 2020 (Study Day 32)	Closed Fracture Of Multiple Ribs, Closed Fracture Of Body Of Right Scapula
Ondansetron	25 Sep 2020 (Study Day 30) - 27 Sep 2020 (Study Day 32)	Nausea
Oxycodone	25 Sep 2020 (Study Day 30) - 27 Sep 2020 (Study Day 32)	Closed Fracture Of Multiple Ribs, Closed Fracture Of Body Of Right Scapula
Oxycodone	25 Sep 2020 (Study Day 30) - 28 Sep 2020 (Study Day 33)	Closed Fracture Of Multiple Ribs, Closed Fracture Of Body Of Right Scapula
Paracetamol	25 Sep 2020 (Study Day 30) - 30 Sep 2020 (Study Day 35)	Closed Fracture Of Multiple Ribs, Closed Fracture Of Body Of Right Scapula
Bisacodyl	26 Sep 2020 (Study Day 31) - 26 Sep 2020 (Study Day 31)	Prophylaxis For Constipation
Celecoxib	26 Sep 2020 (Study Day 31) - 30 Sep 2020 (Study Day 35)	Closed Fracture Of Multiple Ribs, Closed Fracture Of Body Of Right Scapula
Chest x-ray*	26 Sep 2020 (Study Day 31) - 26 Sep 2020 (Study Day 31)	Diagnostic
Docusate sodium; senna alexandrina	26 Sep 2020 (Study Day 31) - 30 Sep 2020 (Study Day 35)	No Bowel Movment For 3 Days
Gabapentin	26 Sep 2020 (Study Day 31) - 30 Sep 2020 (Study Day 35)	Closed Fracture Of Multiple Ribs, Closed Fracture Of Body Of Right Scapula
Lidocaine	26 Sep 2020 (Study Day 31) - 27 Sep 2020 (Study Day 32)	Closed Fracture Of Multiple Ribs
Sodium chloride	26 Sep 2020 (Study Day 31) - 28 Sep 2020 (Study Day 33)	Hemopneumothorax, Closed Fracture Of Multiple Ribs, Closed Fracture Of Body Of Right Scapula
Vascular ult venous duplex lower extremeity complete bilateral*	26 Sep 2020 (Study Day 31) - 26 Sep 2020 (Study Day 31)	Diagnostic
Calcium chloride; potassium chloride; sodium lactate	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Plating Of Right Ribs 3-7 Fractures, Right Chest Tube Placement, Evacuation Of Retained Hemothorax, Video-Assisted Thoracoscopic Surgery Cryoablation Of Right Paraspinal Nerves 3-9

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cefazolin	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Plating Of Right Ribs 3-7 Fractures, Right Chest Tube Placement, Evacuation Of Retained Hemothorax, Video-Assisted Thoracoscopic Surgery Cryoablation Of Right Paraspinal Nerves 3-9
Chest x-ray*	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Diagnostic
Dexamethasone	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Plating Of Right Ribs 3-7 Fractures, Right Chest Tube Placement, Evacuation Of Retained Hemothorax, Video-Assisted Thoracoscopic Surgery Cryoablation Of Right Paraspinal Nerves 3-9
Evacuation of retained hemothorax*	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Adverse Event
Hydromorphone	27 Sep 2020 (Study Day 32) - 28 Sep 2020 (Study Day 33)	Closed Fracture Of Multiple Ribs, Closed Fracture Of Body Of Right Scapula
Lidocaine	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Plating Of Right Ribs 3-7 Fractures, Right Chest Tube Placement, Evacuation Of Retained Hemothorax, Video-Assisted Thoracoscopic Surgery Cryoablation Of Right Paraspinal Nerves 3-9
Magnesium sulfate	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Magnesium Deficiency
Metoclopramide	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Plating Of Right Ribs 3-7 Fractures, Right Chest Tube Placement, Evacuation Of Retained Hemothorax, Video-Assisted Thoracoscopic Surgery Cryoablation Of Right Paraspinal Nerves 3-9
Ondansetron	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Plating Of Right Ribs 3-7 Fractures, Right Chest Tube Placement, Evacuation Of Retained Hemothorax, Video-Assisted Thoracoscopic Surgery Cryoablation Of Right Paraspinal Nerves 3-9
Oxycodone	27 Sep 2020 (Study Day 32) - 29 Sep 2020 (Study Day 34)	Closed Fracture Of Multiple Ribs, Closed Fracture Of Body Of Right Scapula
Phenylephrine	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Plating Of Right Ribs 3-7 Fractures, Right Chest Tube Placement, Evacuation Of Retained Hemothorax, Video-Assisted Thoracoscopic Surgery Cryoablation Of Right Paraspinal Nerves 3-9
Plating of right ribs 3-7 fractures*	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Propofol	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Plating Of Right Ribs 3-7 Fractures, Right Chest Tube Placement, Evacuation Of Retained Hemothorax, Video-Assisted Thoracoscopic Surgery Cryoablation Of Right Paraspinal Nerves 3-9
Right chest tube placement*	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Adverse Event
Rocuronium	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Plating Of Right Ribs 3-7 Fractures, Right Chest Tube Placement, Evacuation Of Retained Hemothorax, Video-Assisted Thoracoscopic Surgery Cryoablation Of Right Paraspinal Nerves 3-9
Sodium chloride	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Plating Of Right Ribs 3-7 Fractures, Right Chest Tube Placement, Evacuation Of Retained Hemothorax, Video-Assisted Thoracoscopic Surgery Cryoablation Of Right Paraspinal Nerves 3-9
Sugammadex	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Plating Of Right Ribs 3-7 Fractures, Right Chest Tube Placement, Evacuation Of Retained Hemothorax, Video-Assisted Thoracoscopic Surgery Cryoablation Of Right Paraspinal Nerves 3-9
Video-assisted thoracoscopic surgery cryoablation of right paraspinal nerves 3-9*	27 Sep 2020 (Study Day 32) - 27 Sep 2020 (Study Day 32)	Adverse Event
Chest x-ray*	28 Sep 2020 (Study Day 33) - 28 Sep 2020 (Study Day 33)	Diagnostic
Heparin	28 Sep 2020 (Study Day 33) - 29 Sep 2020 (Study Day 34)	Prophylaxis For Blood Clot
Lidocaine	28 Sep 2020 (Study Day 33) - 30 Sep 2020 (Study Day 35)	Closed Fracture Of Multiple Ribs
Macrogol 3350	28 Sep 2020 (Study Day 33) - 30 Sep 2020 (Study Day 35)	No Bowel Movment For 3 Days
Sodium chloride	28 Sep 2020 (Study Day 33) - 29 Sep 2020 (Study Day 34)	Hemopneumothorax
Chest x-ray*	29 Sep 2020 (Study Day 34) - 29 Sep 2020 (Study Day 34)	Diagnostic
Lactulose	29 Sep 2020 (Study Day 34) - 30 Sep 2020 (Study Day 35)	No Bowel Movement For 3 Days
Chest x-ray*	30 Sep 2020 (Study Day 35) - 30 Sep 2020 (Study Day 35)	Diagnostic
Magnesium citrate	30 Sep 2020 (Study Day 35) - 30 Sep 2020 (Study Day 35)	Magnesium Deficiency

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Chronic Kidney Disease	Grade 2/moderate	Not related	25 Sep 2020 (Study Day 30) - Ongoing
Nausea	Grade 2/moderate	Not related	25 Sep 2020 (Study Day 30) - 27 Sep 2020 (Study Day 32)
Road Traffic Accident	Grade 3/severe	Not related	25 Sep 2020 (Study Day 30) - 25 Sep 2020 (Study Day 30)
Scapula Fracture	Grade 3/severe	Not related	25 Sep 2020 (Study Day 30) - 11 Jan 2021 (Study Day 138)
Skin Abrasion	Grade 2/moderate	Not related	25 Sep 2020 (Study Day 30) - 08 Oct 2020 (Study Day 43)
Magnesium Deficiency	Grade 2/moderate	Not related	27 Sep 2020 (Study Day 32) - 30 Sep 2020 (Study Day 35)
Constipation	Grade 2/moderate	Not related	29 Sep 2020 (Study Day 34) - 30 Sep 2020 (Study Day 35)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US364-2035 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Osteoarthritis/Worsening Osteoarthritis Left Hip	SAE	Grade 3/severe	Not related	10 Sep 2020 (Study Day 14) – 12 Oct 2020 (Study Day 46)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US364-2035, a 71-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 25 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Sep 2020 (Study Day 14), 13 days after the first dose and 15 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of osteoarthritis. Action taken with the IP was not applicable. The event of worsening osteoarthritis left hip lasted for 33 days, after which it was considered to be recovered/resolved on 12 Oct 2020 (Study Day 46). The investigator assessed the event of osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001195	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraines	1980 - Ongoing
Postmenopause	Postmenopausal	1999 - Ongoing
Atrial fibrillation	Atrial fibrilation	May 2018 - Ongoing
Hyperlipidaemia	Hyperlipidemia	May 2018 - Ongoing
Osteoarthritis	Osteoarthritis	Nov 2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Celecoxib	Not reported - 12 Oct 2020 (Study Day 46)	Osteoarthritis
Paracetamol	Not reported - Ongoing	Osteoarthritis
Sumatriptan	2000 - Ongoing	Migraines
Glucosamine sulfate	2005 - Ongoing	Supplement
Vitamins nos	2005 - Ongoing	Supplement
Calcium; vitamin d nos	2010 - 10 Oct 2020 (Study Day 44)	Supplement
Colecalciferol	2010 - Ongoing	Supplement
Apixaban	May 2018 - Ongoing	Atrial Fibrilation
Atorvastatin	May 2018 - Ongoing	Hyperlipidemia
Metoprolol	May 2018 - Ongoing	Atrial Fibrilation, Hypertension
Palmidrol	2019 - Ongoing	Osteoarthritis
Chest xray*	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)	Diagnostic
Cta abdomen and pelvis*	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)	Diagnostic
Cta chest*	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)	Diagnostic
Diazepam	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)	Muscle Spasm
Ekg*	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)	Diagnostic
Fentanyl citrate	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)	Pain (Left Flank)
Iohexol	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)	Contrast For Chest Ct (Ae Log Line 1)
Ketorolac tromethamine	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)	Pain Left Flank
Lidocaine	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)	Pain Left Flank
Ondansetron hydrochloride	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)	Nausea
Promethazine	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)	Nausea

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sodium chloride	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)	Dehydration
Gabapentin	01 Sep 2020 (Study Day 5) - 01 Sep 2020 (Study Day 5)	Pain Left Flank
Hydrocodone; paracetamol	01 Sep 2020 (Study Day 5) - 01 Sep 2020 (Study Day 5)	Pain Left Flank
Alendronate sodium	03 Sep 2020 (Study Day 7) - Ongoing	Osteopenia
Calcium; vitamin d nos	10 Oct 2020 (Study Day 44) - Ongoing	Supplement
Influenza vaccine	10 Oct 2020 (Study Day 44) - 10 Oct 2020 (Study Day 44)	Prophylaxis For Flu
Calcium chloride; potassium chloride; sodium lactate	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Left Total Hip Replacment
Cefazolin	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Intra-Op Infection Prophylaxis
Dexamethasone	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Hip Surgery
Dexamethasone	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Total Left Hip Replacement
Docusate sodium; senna alexandrina	12 Oct 2020 (Study Day 46) - Ongoing	Prophylaxis For Constipation D/T Opiod Prescription
Docusate sodium; senna alexandrina	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Prophylaxis For Stool Softening During Opiod Use
Famotidine	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Hip Surgery
Fentanyl	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Total Left Hip Replacment
Glucose; sodium chloride	12 Oct 2020 (Study Day 46) - 13 Oct 2020 (Study Day 47)	Hip Surgery
Hydromorphone	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Hip Surgery, Pain
Hydromorphone	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Total Left Hip Replacement
Lidocaine	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Total Left Hip Replacement
Ondansetron	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Total Left Hip Replacement
Oxycodone	12 Oct 2020 (Study Day 46) - Ongoing	Osteoarthritis Left Hip
Oxycodone	12 Oct 2020 (Study Day 46) - Ongoing	Post Operative Pain, Hip
Paracetamol	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Hip Surgery - Pain
Paracetamol	12 Oct 2020 (Study Day 46) - 13 Oct 2020 (Study Day 47)	Hip Surgery, Pain
Paracetamol	12 Oct 2020 (Study Day 46) - Ongoing	Post Operative Pain, Hip
Phenylephrine	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Total Left Hip Replacement
Propofol	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Total Left Hip Replacement
Rocuronium	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Total Left Hip Replacement

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sugammadex	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Total Left Hip Replacement
Total hip replacement, left*	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Adverse Event
Tranexamic acid	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Total Left Hip Replacement
Dexamethasone	13 Oct 2020 (Study Day 47) - 13 Oct 2020 (Study Day 47)	Post Operative Pain, Hip
Oxycodone	13 Oct 2020 (Study Day 47) - 13 Oct 2020 (Study Day 47)	Post Operative Pain, Hip
Dexamethasone	14 Oct 2020 (Study Day 48) - 14 Oct 2020 (Study Day 48)	Post Operative Pain, Hip

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Dehydration	Grade 2/moderate	Not related	31 Aug 2020 (Study Day 4) - 31 Aug 2020 (Study Day 4)
Flank Pain	Grade 2/moderate	Not related	31 Aug 2020 (Study Day 4) - 03 Sep 2020 (Study Day 7)
Muscle Spasms	Grade 2/moderate	Not related	31 Aug 2020 (Study Day 4) - 03 Sep 2020 (Study Day 7)
Nausea	Grade 2/moderate	Not related	31 Aug 2020 (Study Day 4) - 03 Sep 2020 (Study Day 7)
Osteopenia	Grade 2/moderate	Not related	03 Sep 2020 (Study Day 7) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US364-2072 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	01 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	29 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Fall/Fall (Accidental)	SAE	Grade 3/severe	Not related	27 Nov 2020 (Study Day 88) – 27 Nov 2020 (Study Day 88)	Recovered/resolved
Hip Fracture/Hip Fracture S/P Fall	SAE	Grade 3/severe	Not related	27 Nov 2020 (Study Day 88) – 30 Nov 2020 (Study Day 91)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US364-2072, a 79-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 01 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 29 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 27 Nov 2020 (Study Day 88), 87 days after the first dose and 59 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of fall. Action taken with the IP was not applicable. The event of fall (accidental) lasted for 1 days, after which it was considered to be recovered/resolved on 27 Nov 2020 (Study Day 88). The investigator assessed the event of fall to be not related to the IP.

On 27 Nov 2020 (Study Day 88), 87 days after the first dose and 59 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of hip fracture. Action taken with the IP was not applicable. The event of hip fracture s/p fall lasted for 4 days, after which it was considered to be recovered/resolved on 30 Nov 2020 (Study Day 91). The investigator assessed the event of hip fracture to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000987	Fall

CIOMS Number	MedDRA Preferred Term
MOD-2020-000987	Hip fracture

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Postmenopause	Post-menopausal	Not reported - Ongoing
Migraine	Migraines	1980 - Ongoing
Hypercholesterolaemia	Hyper cholesterol	2017 - Ongoing
Hypertension	Hypertension	2017 - Ongoing
Hypothyroidism	Hypothyroidism	2017 - Ongoing
Bone pain	Bone pain (back)	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	2017 - Ongoing	High Cholesterol
Levothyroxine	2017 - Ongoing	Hypothyroidism
Losartan	2017 - Ongoing	Hypertension
Methocarbamol	2018 - Ongoing	Bone Pain
Sumatriptan	2018 - Ongoing	Migraines
Influenza vaccine	23 Oct 2020 (Study Day 53) - 23 Oct 2020 (Study Day 53)	Prophylaxis For Flu
Acetylsalicylic acid	28 Nov 2020 (Study Day 89) - Ongoing	Dvt Prophylaxis
Left hip replacement*	28 Nov 2020 (Study Day 89) - 28 Nov 2020 (Study Day 89)	Adverse Event
Oxycodone	28 Nov 2020 (Study Day 89) - 02 Mar 2021 (Study Day 183)	Hip Fracture S/P Fall
Oxycodone hydrochloride	29 Nov 2020 (Study Day 90) - 02 Mar 2021 (Study Day 183)	Left Hip Replacement Surgery
Fluorouracil	04 Mar 2021 (Study Day 185) - 16 Mar 2021 (Study Day 197)	Pre-Basal Cell Carcinoma Skin Lesion

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Precancerous Skin Lesion	Grade 2/moderate	Not related	04 Mar 2021 (Study Day 185) - 16 Mar 2021 (Study Day 197)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US364-2333 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	21 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	18 Nov 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID19	SAE	Grade 4	Not related	19 Dec 2020 (Study Day 60) – 04 Feb 2021 (Study Day 107)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US364-2333, a 72-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 21 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 18 Nov 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 19 Dec 2020 (Study Day 60), 59 days after the first dose and 31 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of covid-19. Action taken with the IP was not applicable. The event of COVID19 lasted for 48 days, after which it was considered to be recovered/resolved on 04 Feb 2021 (Study Day 107). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001519	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	May 2000 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metformin	May 2000 - Ongoing	Diabetes Type Ii

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US365-2039 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	29 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19 (Sars-Cov-2 Confirmed 10/27/2020)	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	25 Oct 2020 (Study Day 27) – 03 Nov 2020 (Study Day 36)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US365-2039, a 33-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 29 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Oct 2020 (Study Day 27), 26 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of covid-19. On 26 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of COVID-19 (sars-cov-2 confirmed 10/27/2020) lasted for 10 days, after which it was considered to be recovered/resolved on 03 Nov 2020 (Study Day 36). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000624	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Presyncope	Vasovagal response	29 Sep 2020 (Study Day 1) - 29 Sep 2020 (Study Day 1)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	Not reported - Ongoing	Supplement
Ibuprofen	01 Oct 2020 (Study Day 3) - 01 Oct 2020 (Study Day 3)	Headache Pain (Ediary Symptoms)
Ibuprofen	16 Oct 2020 (Study Day 18) - 16 Oct 2020 (Study Day 18)	Headache
Ibuprofen	25 Oct 2020 (Study Day 27) - 27 Oct 2020 (Study Day 29)	COVID-19 Symptoms
Paracetamol	25 Oct 2020 (Study Day 27) - 27 Oct 2020 (Study Day 29)	COVID-19 Symptoms
Paracetamol	28 Oct 2020 (Study Day 30) - Ongoing	COVID-19 Symptoms (Sore Throat)
Ibuprofen	29 Oct 2020 (Study Day 31) - 29 Oct 2020 (Study Day 31)	COVID-19 Symptoms
Ibuprofen	30 Oct 2020 (Study Day 32) - Ongoing	COVID-19 Symptoms (Sore Throat)
Finasteride	10 Nov 2020 (Study Day 43) - Ongoing	Hair Loss
Influenza vaccine	10 Nov 2020 (Study Day 43) - 10 Nov 2020 (Study Day 43)	Influenza Prophylaxis
Ibuprofen	13 Jan 2021 (Study Day 107) - 14 Jan 2021 (Study Day 108)	Muscle Ache (Post Ol Ae)
Paracetamol	13 Jan 2021 (Study Day 107) - 14 Jan 2021 (Study Day 108)	Fever (Post Ol Ae)
Paracetamol	10 Feb 2021 (Study Day 135) - 11 Feb 2021 (Study Day 136)	Headache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 1/mild	Not related	16 Oct 2020 (Study Day 18) - 16 Oct 2020 (Study Day 18)
COVID-19	Grade 1/mild	Not related	25 Oct 2020 (Study Day 27) - 03 Nov 2020 (Study Day 36)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Chills	Grade 2/moderate	Related	13 Jan 2021 (Study Day 107) - 14 Jan 2021 (Study Day 108)
Fatigue	Grade 2/moderate	Related	13 Jan 2021 (Study Day 107) - 14 Jan 2021 (Study Day 108)
Headache	Grade 1/mild	Related	13 Jan 2021 (Study Day 107) - 14 Jan 2021 (Study Day 108)
Injection Site Pain	Grade 1/mild	Related	13 Jan 2021 (Study Day 107) - 15 Jan 2021 (Study Day 109)
Myalgia	Grade 2/moderate	Related	13 Jan 2021 (Study Day 107) - 14 Jan 2021 (Study Day 108)
Pyrexia	Grade 2/moderate	Related	13 Jan 2021 (Study Day 107) - 14 Jan 2021 (Study Day 108)
Lip Swelling	Grade 1/mild	Related	13 Jan 2021 (Study Day 107) - 13 Jan 2021 (Study Day 107)
Dyspnoea	Grade 1/mild	Related	14 Jan 2021 (Study Day 108) - 19 Jan 2021 (Study Day 113)
Oropharyngeal Pain	Grade 1/mild	Not related	15 Jan 2021 (Study Day 109) - 16 Jan 2021 (Study Day 110)
Lip Swelling	Grade 1/mild	Related	10 Feb 2021 (Study Day 135) - Ongoing
Fatigue	Grade 1/mild	Related	10 Feb 2021 (Study Day 135) - 11 Feb 2021 (Study Day 136)
Headache	Grade 1/mild	Related	10 Feb 2021 (Study Day 135) - 11 Feb 2021 (Study Day 136)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US366-2033 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	01 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	29 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Abdominal Pain/ Abdominal Pain	SAE	Grade 3/ severe	Not related	08 Sep 2020 (Study Day 8) – 10 Sep 2020 (Study Day 10)	Recovered/resolved
Appendicitis/Acute Appendicitis	SAE	Grade 3/ severe	Not related	08 Sep 2020 (Study Day 8) – 09 Sep 2020 (Study Day 9)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US366-2033, a 67-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 01 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 29 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Sep 2020 (Study Day 8), 7 days after the first dose and 21 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of abdominal pain. The IP dose was not changed due to the abdominal pain. The event of abdominal pain lasted for 3 days, after which it was considered to be recovered/resolved on 10 Sep 2020 (Study Day 10). The investigator assessed the event of abdominal pain to be not related to the IP.

On 08 Sep 2020 (Study Day 8), 7 days after the first dose and 21 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of appendicitis. The IP dose was not changed due to the acute appendicitis. The event of acute appendicitis lasted for 2 days, after which it was considered to be recovered/resolved on 09 Sep 2020 (Study Day 9). The investigator assessed the event of appendicitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000276	Abdominal pain
MOD-2020-000276	Appendicitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Osteoarthritis	Other and unspecified osteoarthritis	01 Jan 1990 (Study Day -11201) - Ongoing
Postmenopause	Post menopausal	01 Jul 2005 (Study Day -5541) - Ongoing
Atrial fibrillation	Paroxysmal atrial fibrillation	01 Jan 2010 (Study Day -3896) - Ongoing
Hypertension	Hypertension nec	01 Jan 2010 (Study Day -3896) - Ongoing
Anxiety	Anxiety state, unspecified	01 Jan 2016 (Study Day -1705) - Ongoing
Arthralgia	Generalized joint pain	01 Jan 2019 (Study Day -609) - Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	01 Jan 2019 (Study Day -609) - Ongoing
Vitamin D deficiency	Unspecified vitamin d deficiency	23 Apr 2019 (Study Day -497) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrochlorothiazide	01 Jan 2010 (Study Day -3896) - Ongoing	Hypertension
Metoprolol	01 Jan 2010 (Study Day -3896) - Ongoing	Hypertension
Sertraline	01 Jan 2016 (Study Day -1705) - Ongoing	Anxiety
Apixaban	07 Aug 2017 (Study Day -1121) - Ongoing	Paroxysmal Atrial Fibrillation
Vitamin d nos	23 Apr 2019 (Study Day -497) - Ongoing	Vitamin D Deficiency
Flecainide acetate	20 May 2019 (Study Day -470) - Ongoing	Paroxysmal Atrial Fibrillation
Olodaterol hydrochloride; tiotropium bromide monohydrate	01 Jul 2019 (Study Day -428) - Ongoing	Copd
Paracetamol	02 Sep 2020 (Study Day 2) - Ongoing	Generalized Joint Pain
Paracetamol	07 Sep 2020 (Study Day 7) - 07 Sep 2020 (Study Day 7)	Fever/Abdominal Pain
Ct abdomen and pelvis with contrast*	08 Sep 2020 (Study Day 8) - 08 Sep 2020 (Study Day 8)	Adverse Event
Hydromorphone hydrochloride	08 Sep 2020 (Study Day 8) - 08 Sep 2020 (Study Day 8)	Abdominal Pain
Iohexol	08 Sep 2020 (Study Day 8) - 08 Sep 2020 (Study Day 8)	Ct Contrast/Procedure
Famotidine	09 Sep 2020 (Study Day 9) - 09 Sep 2020 (Study Day 9)	Pre-Op
Fentanyl	09 Sep 2020 (Study Day 9) - 09 Sep 2020 (Study Day 9)	Post Op Abdominal Pain

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Laparoscopic appendectomy*	09 Sep 2020 (Study Day 9) - 09 Sep 2020 (Study Day 9)	Adverse Event
Metronidazole	09 Sep 2020 (Study Day 9) - 12 Sep 2020 (Study Day 12)	Appendicitis
Ondansetron	09 Sep 2020 (Study Day 9) - 09 Sep 2020 (Study Day 9)	Pre-Op
Salbutamol	09 Sep 2020 (Study Day 9) - 09 Sep 2020 (Study Day 9)	Copd
Bifidobacterium infantis	10 Sep 2020 (Study Day 10) - 27 Sep 2020 (Study Day 27)	Digestive Support
Ceftriaxone sodium	10 Sep 2020 (Study Day 10) - 10 Sep 2020 (Study Day 10)	Appendicitis
Cefuroxime	10 Sep 2020 (Study Day 10) - 12 Sep 2020 (Study Day 12)	Appendicitis
Ketorolac tromethamine	10 Sep 2020 (Study Day 10) - 10 Sep 2020 (Study Day 10)	Abdominal Pain
Oxycodone hydrochloride	10 Sep 2020 (Study Day 10) - 13 Sep 2020 (Study Day 13)	Post-Op Abdominal Pain
Piperacillin sodium	10 Sep 2020 (Study Day 10) - 10 Sep 2020 (Study Day 10)	Appendicitis
Senna alexandrina extract	19 Sep 2020 (Study Day 19) - 27 Sep 2020 (Study Day 27)	Prophylaxis
Paracetamol	29 Sep 2020 (Study Day 29) - 01 Oct 2020 (Study Day 31)	Muscle Aches
Paracetamol	03 Oct 2020 (Study Day 33) - 03 Oct 2020 (Study Day 33)	Muscle Aches
Loratadine	08 Oct 2020 (Study Day 38) - 12 Oct 2020 (Study Day 42)	Sinus Congestion

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Abdominal Pain	Grade 2/moderate	Not related	07 Sep 2020 (Study Day 7) - 08 Sep 2020 (Study Day 8)
Pyrexia	Grade 1/mild	Not related	07 Sep 2020 (Study Day 7) - 10 Sep 2020 (Study Day 10)
Fatigue	Grade 1/mild	Not related	10 Sep 2020 (Study Day 10) - 07 Oct 2020 (Study Day 37)
Procedural Pain	Grade 2/moderate	Not related	11 Sep 2020 (Study Day 11) - 17 Sep 2020 (Study Day 17)
Myalgia	Grade 2/moderate	Related	29 Sep 2020 (Study Day 29) - 01 Oct 2020 (Study Day 31)
Myalgia	Grade 2/moderate	Related	03 Oct 2020 (Study Day 33) - 03 Oct 2020 (Study Day 33)
Sinus Congestion	Grade 2/moderate	Not related	08 Oct 2020 (Study Day 38) - 12 Oct 2020 (Study Day 42)
Upper-Airway Cough Syndrome	Grade 2/moderate	Not related	08 Oct 2020 (Study Day 38) - 12 Oct 2020 (Study Day 42)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US366-2181 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	22 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	19 Nov 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Schizoaffective Disorder/ Schizoaffective Disorders, Worsening	SAE	Grade 3/severe	Not related	26 Oct 2020 (Study Day 5) – 30 Oct 2020 (Study Day 9)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US366-2181, a 61-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 22 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 19 Nov 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 26 Oct 2020 (Study Day 5), 4 days after the first dose and 24 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of schizoaffective disorder. The IP dose was not changed due to the schizoaffective disorders, worsening. The event of schizoaffective disorders, worsening lasted for 5 days, after which it was considered to be recovered/resolved on 30 Oct 2020 (Study Day 9). The investigator assessed the event of schizoaffective disorder to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000620	Schizoaffective disorder

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Bipolar disorder	Bipolar affective disorder unspecified	15 Jul 1974 (Study Day -16901) - Ongoing
Generalised anxiety disorder	Generalized anxiety disorder	15 Jul 1974 (Study Day -16901) - Ongoing
Major depression	Major depressive disorder recur epis mild	15 Jul 1974 (Study Day -16901) - Ongoing
Schizoaffective disorder	Schizo-affect shizo unspecified condition	15 Jul 1974 (Study Day -16901) - Ongoing
Hyperparathyroidism	Hyperparathyroidism	15 Jul 1980 (Study Day -14709) - Ongoing
Brain neoplasm benign	Benign neoplasm of brain	15 Jul 1993 (Study Day -9961) - Ongoing
Seizure	Other convulsions	15 Jul 1993 (Study Day -9961) - Ongoing
Glaucoma	Unspecified glaucoma	15 Jul 2000 (Study Day -7404) - Ongoing
Urinary retention	Unspecified retention of urine	22 Jun 2006 (Study Day -5236) - Ongoing
Hypertension	Hypertension nec	15 Jul 2014 (Study Day -2291) - Ongoing
Anaemia	Unspecified anemia	15 Jul 2015 (Study Day -1926) - Ongoing
Chronic kidney disease	Chronic kidney disease stg. iv	15 Jul 2015 (Study Day -1926) - Ongoing
Hyperlipidaemia	Hyperlipidemia, unspecified	15 Jul 2015 (Study Day -1926) - Ongoing
Von Willebrand's disease	Low von willebrand factor	15 Jul 2015 (Study Day -1926) - Ongoing
Suicidal ideation	Suicidal ideation	10 Feb 2020 (Study Day -255) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Timolol maleate	15 Jul 2010 (Study Day -3752) - Ongoing	Glaucoma
Asenapine maleate	15 Jul 2013 (Study Day -2656) - Ongoing	Bipolar Disorder
Amlodipine besilate	15 Jul 2014 (Study Day -2291) - Ongoing	Hypertension
Vitamin e nos	15 Jul 2014 (Study Day -2291) - Ongoing	Supplement
Atorvastatin	15 Jul 2015 (Study Day -1926) - Ongoing	Hyperlipidemia
Sodium bicarbonate	15 Jul 2015 (Study Day -1926) - Ongoing	Unspecified Acute Renal Failure
Unspecified herbal and traditional medicine	15 Jul 2015 (Study Day -1926) - Ongoing	Supplement
Vitamin b complex	15 Jul 2015 (Study Day -1926) - Ongoing	Supplement
Acetylsalicylic acid	15 Jul 2018 (Study Day -830) - Ongoing	Heart Health Preventive Measure
Escitalopram	15 Sep 2020 (Study Day -37) - Ongoing	Depression
Hydroxyzine	15 Sep 2020 (Study Day -37) - Ongoing	Anxiety
Lumateperone tosylate	15 Sep 2020 (Study Day -37) - Ongoing	Bipolar Disorder
Risperidone	28 Oct 2020 (Study Day 7) - 30 Oct 2020 (Study Day 9)	Schizoaffective Disorder, Worsening
Risperidone	04 Nov 2020 (Study Day 14) - 30 Nov 2020 (Study Day 40)	Schizoaffective Disorder, Worsening

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lamotrigine	30 Nov 2020 (Study Day 40) - 14 Dec 2020 (Study Day 54)	Bipolar Disorder
Lamotrigine	15 Dec 2020 (Study Day 55) - Ongoing	Bi Polar Disorder

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US367-2097 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	07 Sep 2020 (Study Day 26) – 13 Oct 2020 (Study Day 62)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2097, a 38-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 13 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Sep 2020 (Study Day 26), 25 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of covid-19. On 09 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of COVID-19 lasted for 37 days, after which it was considered to be recovered/resolved on 13 Oct 2020 (Study Day 62). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000309	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	2017 - Ongoing	Chronic Disease Prophylaxis
Probiotics nos	May 2020 - Ongoing	Chronic Disease Prophylaxis
Ibuprofen	16 Aug 2020 (Study Day 4) - 16 Aug 2020 (Study Day 4)	Headache
Ibuprofen	19 Aug 2020 (Study Day 7) - 19 Aug 2020 (Study Day 7)	Headache
Ibuprofen	07 Sep 2020 (Study Day 26) - 13 Oct 2020 (Study Day 62)	COVID
Ibuprofen	13 Sep 2020 (Study Day 32) - 13 Sep 2020 (Study Day 32)	COVID-19
Ibuprofen	16 Sep 2020 (Study Day 35) - 16 Sep 2020 (Study Day 35)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 2/moderate	Related	14 Aug 2020 (Study Day 2) - 23 Aug 2020 (Study Day 11)
COVID-19	Grade 1/mild	Not related	07 Sep 2020 (Study Day 26) - 13 Oct 2020 (Study Day 62)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US367-2187 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Blood Pressure Diastolic Increased/Elevated Diastolic Blood Pressure	AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	21 Sep 2020 (Study Day 34) – 17 Oct 2020 (Study Day 60)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2187, a 72-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 19 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 21 Sep 2020 (Study Day 34), 33 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of blood pressure diastolic increased. On 15 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of elevated diastolic blood pressure lasted for 27 days, after which it was considered to be recovered/resolved on 17 Oct 2020 (Study Day 60). The investigator assessed the event of blood pressure diastolic increased to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2018 - Ongoing	Cardiac Prophylaxis
Atorvastatin	26 Sep 2020 (Study Day 39) - Ongoing	Hypertension
Cefdinir	06 Mar 2021 (Study Day 200) - 07 Mar 2021 (Study Day 201)	Pneumonia Right Lung

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Blood Pressure Diastolic Increased	Grade 3/severe	Not related	21 Sep 2020 (Study Day 34) - 17 Oct 2020 (Study Day 60)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US367-2199 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	18 Sep 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Post Procedural Haematoma/Hematoma R Groin Following Angioplasty	SAE	Grade 3/severe	Not related	06 Oct 2020 (Study Day 49) – 08 Oct 2020 (Study Day 51)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2199, a 71-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 18 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Oct 2020 (Study Day 49), 48 days after the first dose and 18 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of post procedural haematoma. Action taken with the IP was not applicable. The event of hematoma r groin following angioplasty lasted for 3 days, after which it was considered to be recovered/resolved on 08 Oct 2020 (Study Day 51). The investigator assessed the event of post procedural haematoma to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000454	Post procedural haematoma

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cataract	Bilateral cataracts	Not reported - Apr 2019
Benign prostatic hyperplasia	Bph	2010 - Ongoing
Erectile dysfunction	Erectile dysfunction	2010 - Ongoing
Glucose tolerance impaired	Pre diabeties	2010 - Nov 2016
Gout	Gout	2010 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Obesity	Obesity	2010 - Ongoing
Pain in extremity	B/l toe pain	2010 - Ongoing
Peripheral vascular disorder	Peripheral vascular disease	2010 - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	Nov 2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2010 - Ongoing	Cardiovascular Disease Prophylaxis
Atorvastatin	2010 - Ongoing	Hld
Ezetimibe	2010 - Ongoing	Hld
Hydrochlorothiazide	2010 - Ongoing	Hypertension
Meloxicam	2010 - Ongoing	B/L Toe Pain
Metformin	2010 - Ongoing	Prediabestes
Metoprolol tartrate	2010 - Ongoing	Htn
Tamsulosin	2010 - 01 Sep 2020 (Study Day 14)	Bph
Tamsulosin	02 Sep 2020 (Study Day 15) - Ongoing	Bph
Angioplasty surgery*	06 Oct 2020 (Study Day 49) - 06 Oct 2020 (Study Day 49)	Medical History
I.v. solutions	06 Oct 2020 (Study Day 49) - 06 Oct 2020 (Study Day 49)	Post Angioplasty Infection Prevention
Piperacillin sodium; tazobactam sodium	06 Oct 2020 (Study Day 49) - 06 Oct 2020 (Study Day 49)	Post Angioplasty Infection Prevention
Ciprofloxacin	08 Oct 2020 (Study Day 51) - Ongoing	Infection Prophylaxis
Metronidazole	08 Oct 2020 (Study Day 51) - Ongoing	Infection Prophylaxis
Amoxicillin	03 Mar 2021 (Study Day 197) - 10 Mar 2021 (Study Day 204)	Skin Ulcer Right Great Toe
Sulfamethoxazole; trimethoprim	16 Mar 2021 (Study Day 210) - Ongoing	Skin Ulcer Left Heel

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Chest Discomfort	Grade 1/mild	Not related	20 Aug 2020 (Study Day 2) - 22 Aug 2020 (Study Day 4)
Skin Ulcer	Grade 2/moderate	Not related	01 Dec 2020 (Study Day 105) - Ongoing
Skin Ulcer	Grade 2/moderate	Not related	01 Dec 2020 (Study Day 105) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US367-2278 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Ischaemic Stroke/ Ischemic Stroke (Frontal Lobe)	SAE, AE leading to withdrawal from study vaccine	Grade 4	Not related	10 Sep 2020 (Study Day 11) – 11 Sep 2020 (Study Day 12)	Recovered/resolved with sequelae
Speech Disorder/Speech Deficit	SAE, AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	10 Sep 2020 (Study Day 11) – 26 Jan 2021 (Study Day 149)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2278, a 78-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 31 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Sep 2020 (Study Day 11), 10 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of ischaemic stroke. On 27 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of ischemic stroke (frontal lobe) lasted for 2 days, after which it was considered to be recovered/resolved with sequelae on 11 Sep 2020 (Study Day 12). The investigator assessed the event of ischaemic stroke to be not related to the IP.

On 10 Sep 2020 (Study Day 11), 10 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate serious adverse event of speech disorder. On 27 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of speech deficit lasted for 139 days, after which it was considered to be recovered/resolved on 26 Jan 2021 (Study Day 149). The investigator assessed the event of speech disorder to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000286	Ischemic stroke
MOD-2020-000286	Speech disorder

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Sleep apnoea syndrome	Obstructive sleep apnea	Not reported - Ongoing
Myocardial infarction	Myocardial infarction	1989 - 1989
Rhinitis allergic	Allergic rhinitis	1989 - Ongoing
Muscle spasms	Leg cramps	1990 - Ongoing
Cerebrovascular disorder	Cerebral vascular disease	2002 - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	2014 - Ongoing
Cardiac failure congestive	Congestive heart failure	Dec 2019 - Ongoing
Coronary artery disease	Coronary artery disease	Dec 2019 - Ongoing
Implantable defibrillator insertion	Defibrillator implant	Dec 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Furosemide	1989 - Ongoing	Mycardial Infarction
Losartan	1989 - 10 Sep 2020 (Study Day 11)	Myocardial Infaraction
Metoprolol	1989 - Ongoing	Myocardial Infarction
Diphenhydramine hydrochloride	1990 - Ongoing	Leg Cramps (Bilateral)
Loratadine	2000 - Ongoing	Allergic Rhinitis
Glipizide	2014 - Ongoing	Type Ii Diabetes
Metformin	2014 - Ongoing	Type 2 Dm
Spironolactone	2019 - Ongoing	Myocardial Infarction
Pravastatin	Apr 2020 - Ongoing	Frontal Lobe Stroke
Acetylsalicylic acid	10 Sep 2020 (Study Day 11) - 10 Sep 2020 (Study Day 11)	Frontal Lobe Stroke
Carotid duplex*	10 Sep 2020 (Study Day 11) - 10 Sep 2020 (Study Day 11)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ct head stroke protocol w/o contrast*	10 Sep 2020 (Study Day 11) - 10 Sep 2020 (Study Day 11)	Adverse Event
Diagnostic lab testing*	10 Sep 2020 (Study Day 11) - 10 Sep 2020 (Study Day 11)	Adverse Event
Diphenhydramine	10 Sep 2020 (Study Day 11) - Ongoing	Obstructive Sleep Apnea
Speech therapy*	10 Sep 2020 (Study Day 11) - 10 Sep 2020 (Study Day 11)	Adverse Event
Clopidogrel bisulfate	11 Sep 2020 (Study Day 12) - Ongoing	Frontal Lobe Stroke
Losartan	11 Sep 2020 (Study Day 12) - Ongoing	Myocardial Infarction (Prevention)
Metformin	Oct 2020 - Ongoing	Type 2 Diabetes
Influenza vaccine	04 Oct 2020 (Study Day 35) - 04 Oct 2020 (Study Day 35)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US367-2333 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Upper Respiratory Tract Infection/Upper Respiratory Infection (Uri)	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	24 Sep 2020 (Study Day 30) – 30 Sep 2020 (Study Day 36)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2333, a 19-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 26 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Sep 2020 (Study Day 30), 29 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of upper respiratory tract infection. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of upper respiratory infection (uri) lasted for 7 days, after which it was considered to be recovered/resolved on 30 Sep 2020 (Study Day 36). The investigator assessed the event of upper respiratory tract infection to be not related to the IP.

Additional Information From the Safety Database

No additional details for the events are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Attention deficit hyperactivity disorder	Adhd attention deficit hyperactivity disorder	2006 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Etonogestrel	26 Nov 2018 (Study Day -639) - Ongoing	Contraception
Influenza vaccine	09 Nov 2020 (Study Day 76) - 09 Nov 2020 (Study Day 76)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Lymphadenopathy	Grade 1/mild	Related	07 Sep 2020 (Study Day 13) - 18 Sep 2020 (Study Day 24)
Upper Respiratory Tract Infection	Grade 2/moderate	Not related	24 Sep 2020 (Study Day 30) - 30 Sep 2020 (Study Day 36)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US367-2388 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Small Intestinal Obstruction/Recurrent Small Bowel Obstruction	SAE	Grade 3/severe	Not related	01 Nov 2020 (Study Day 63) – 04 Nov 2020 (Study Day 66)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2388, a 70-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 28 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Nov 2020 (Study Day 63), 62 days after the first dose and 34 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of small intestinal obstruction. Action taken with the IP was not applicable. The event of recurrent small bowel obstruction lasted for 4 days, after which it was considered to be recovered/resolved on 04 Nov 2020 (Study Day 66). The investigator assessed the event of small intestinal obstruction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005914	Small intestinal obstruction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Postmenopause	Postmenopausal	Jun 1995 - Ongoing
Constipation	Chronic constipation	2000 - 2001
Colectomy	Colectomy	2001 - 2001
Oedema peripheral	Lower extremity edema	2001 - Ongoing
Small intestinal obstruction	History of multiple small bowel obstructions	2001 - Ongoing
Botulinum toxin injection	Cosmetic botox injections	2011 - Ongoing
Dermal filler injection	Dermal filler injections	2011 - Ongoing
Insomnia	Difficulty sleeping	Nov 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrochlorothiazide; triamterene	2001 - Ongoing	Lower Extremity Edema
Clonazepam	Oct 2020 - Ongoing	Difficulty Sleeping
Influenza vaccine	Oct 2020 - Oct 2020	Influenza Prophylaxis
Ct scan (without contrast)*	01 Nov 2020 (Study Day 63) - 01 Nov 2020 (Study Day 63)	Adverse Event
Ct scan (with contrast)*	02 Nov 2020 (Study Day 64) - 02 Nov 2020 (Study Day 64)	Adverse Event
Iopamidol	02 Nov 2020 (Study Day 64) - 02 Nov 2020 (Study Day 64)	Recurrent Small Bowel Obstruction
Nasogastric tube*	02 Nov 2020 (Study Day 64) - 02 Nov 2020 (Study Day 64)	Adverse Event
Morphine	03 Nov 2020 (Study Day 65) - 03 Nov 2020 (Study Day 65)	Recurrent Small Bowel Obstruction

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Gastrooesophageal Reflux Disease	Grade 1/mild	Not related	Not reported - Not reported

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US368-2001 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	18 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Osteoarthritis/Worsening Of Osteoarthritis R Knee	SAE	Grade 4	Not related	17 Sep 2020 (Study Day 28) – 30 Nov 2020 (Study Day 102)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US368-2001, a 58-year-old Hispanic or Latino female, received the first dose of placebo in the right arm on 21 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 18 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 17 Sep 2020 (Study Day 28), 27 days after the first dose and 1 day before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of osteoarthritis. The IP dose was not changed due to the worsening of osteoarthritis r knee. The event of worsening of osteoarthritis r knee lasted for 75 days, after which it was considered to be recovered/resolved on 30 Nov 2020 (Study Day 102). The investigator assessed the event of osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000996	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hyperlipidaemia	Hyperlipidemia	Not reported - Ongoing
Mammoplasty	Breast augmentation surgery	2002 - 2002
Ovarian cystectomy	L ovarian cyst, removed, benign	Apr 2009 - Apr 2009
Drug hypersensitivity	Allergic to sulfa drugs	2010 - Ongoing
Asthma	Asthma, moderate,	01 Apr 2010 (Study Day -3795) - Ongoing
Steatohepatitis	Early steatohepatitis. controlled with diet	2012 - Ongoing
Ankle fracture	L ankle fracture	Oct 2014 - Nov 2014
Deep vein thrombosis	Dvt - deep venous thrombosis	Dec 2014 - Mar 2015
Osteoarthritis	Osteoarthritis	2015 - Ongoing
Postmenopause	Post menopausal	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium	Not reported - Ongoing	Osteoarthritis
Colecalciferol	Not reported - Ongoing	General Health
Glutathione; phosphatidyl choline	Not reported - 04 Sep 2020 (Study Day 15)	Early Steatohepatitis
Herbal preparation	Not reported - Ongoing	Early Steatohepatitis
Levosalbutamol hydrochloride	Not reported - Ongoing	Asthma Exacerbation
Magnesium glycinate	Not reported - Ongoing	General Health
Monascus purpureus	Not reported - Ongoing	Hyperlipidemia
Nicotinic acid	Not reported - Ongoing	Hyperlipidemia
Omega-3 fatty acids	Not reported - Ongoing	Hyperlipidemia
Probiotics nos	Not reported - Ongoing	General Health
Ubidecarenone	Not reported - 05 Oct 2020 (Study Day 46)	General Health
Vitamin b complex	Not reported - Ongoing	General Health
Vitamins nos	Not reported - Ongoing	General Health
Beclometasone dipropionate	2010 - Ongoing	Asthma
Astragalus propinquus	25 Aug 2020 (Study Day 5) - 25 Aug 2020 (Study Day 5)	Headache
Naproxen sodium	25 Aug 2020 (Study Day 5) - 26 Aug 2020 (Study Day 6)	Headache
Naproxen	03 Oct 2020 (Study Day 44) - 04 Oct 2020 (Study Day 45)	Headache/Lymphadenopathy, Cervical, Bilateral
Total right knee replacement*	30 Nov 2020 (Study Day 102) - 30 Nov 2020 (Study Day 102)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Apixaban	01 Dec 2020 (Study Day 103) - 21 Dec 2020 (Study Day 123)	Deep Vein Thrombosis Prophylaxis
Diphenhydramine hydrochloride; paracetamol	01 Dec 2020 (Study Day 103) - 26 Dec 2020 (Study Day 128)	Pain Related To Right Total Knee Arthroplasty
Oxycodone	01 Dec 2020 (Study Day 103) - 06 Dec 2020 (Study Day 108)	Pain Related To Right Total Knee Arthroplasty
Pantoprazole	01 Dec 2020 (Study Day 103) - 21 Dec 2020 (Study Day 123)	Gastroesophageal Reflux Disease Prophylaxis
Paracetamol	01 Dec 2020 (Study Day 103) - 26 Dec 2020 (Study Day 128)	Pain Related To Right Total Knee Arthroplasty
Bisacodyl	02 Dec 2020 (Study Day 104) - 03 Dec 2020 (Study Day 105)	Constipation Related To Right Total Knee Arthroplasty And Associated Medications
Dexamethasone	03 Dec 2020 (Study Day 105) - 05 Dec 2020 (Study Day 107)	Pain And Inflammation Secondary To Right Total Knee Arthroplasty
Tramadol	16 Dec 2020 (Study Day 118) - 09 Jan 2021 (Study Day 142)	Post Op Pain R Knee Replacement
Naproxen	27 Dec 2020 (Study Day 129) - 16 Mar 2021 (Study Day 208)	Pain Related To Right Total Knee Arthroplasty

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 2/moderate	Not related	03 Oct 2020 (Study Day 44) - 04 Oct 2020 (Study Day 45)
Lymphadenopathy	Grade 2/moderate	Not related	03 Oct 2020 (Study Day 44) - 04 Oct 2020 (Study Day 45)
Hypoaesthesia	Grade 1/mild	Not related	16 Oct 2020 (Study Day 57) - 16 Oct 2020 (Study Day 57)
Procedural Pain	Grade 2/moderate	Not related	01 Dec 2020 (Study Day 103) - Ongoing
Post Procedural Constipation	Grade 2/moderate	Not related	02 Dec 2020 (Study Day 104) - 03 Dec 2020 (Study Day 105)
Procedural Nausea	Grade 2/moderate	Not related	07 Dec 2020 (Study Day 109) - 21 Dec 2020 (Study Day 123)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US368-2017 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Superficial Injury Of Eye/Scratched Cornea - L Eye	SAE	Grade 3/severe	Not related	11 Nov 2020 (Study Day 78) – 01 Dec 2020 (Study Day 98)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US368-2017, a 41-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 26 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 11 Nov 2020 (Study Day 78), 77 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of superficial injury of eye. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of scratched cornea - l eye lasted for 21 days, after which it was considered to be recovered/resolved on 01 Dec 2020 (Study Day 98). The investigator assessed the event of superficial injury of eye to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001058	Superficial injury of eye
MOD-2020-001135	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
HIV infection	Hiv	Apr 2005 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sulfamethoxazole; trimethoprim	Apr 2005 - Ongoing	Pneumocystis Prophylaxis
Cobicistat; darunavir ethanolate; emtricitabine; tenofovir alafenamide fumarate	Jan 2020 - Ongoing	Hiv
Hydrocodone bitartrate; paracetamol	03 Oct 2020 (Study Day 39) - 03 Oct 2020 (Study Day 39)	Abdominal Pain - Due To Colitis And Pancreatitis
Levofloxacin	03 Oct 2020 (Study Day 39) - 13 Oct 2020 (Study Day 49)	Colitis And Pancreatitis
Metronidazole	03 Oct 2020 (Study Day 39) - 13 Oct 2020 (Study Day 49)	Colitis, Pancreatitis
Corneal transplant - left eye*	01 Dec 2020 (Study Day 98) - 01 Dec 2020 (Study Day 98)	Adverse Event
Ciprofloxacin	02 Dec 2020 (Study Day 99) - Ongoing	Cornea Transplant
Dolutegravir	02 Dec 2020 (Study Day 99) - 10 Dec 2020 (Study Day 107)	Corneal Transplant
Prednisolone	02 Dec 2020 (Study Day 99) - 06 Dec 2020 (Study Day 103)	Cornea Transplant
Tobramycin	02 Dec 2020 (Study Day 99) - Ongoing	Cornea Transplant
Vancomycin	02 Dec 2020 (Study Day 99) - 06 Dec 2020 (Study Day 103)	Cornea Transplant
Vancomycin	07 Dec 2020 (Study Day 104) - 13 Dec 2020 (Study Day 110)	Cornea Transplant
Atropine	14 Dec 2020 (Study Day 111) - Ongoing	Cornea Transplant
Prednisolone	14 Dec 2020 (Study Day 111) - Ongoing	Cornea Transplant
Vancomycin	14 Dec 2020 (Study Day 111) - Ongoing	Cornea Transplant
Bacitracin	18 Dec 2020 (Study Day 115) - Ongoing	Cornea Transplant
Measles vaccine; mumps vaccine; rubella vaccine	23 Jan 2021 (Study Day 151) - 23 Jan 2021 (Study Day 151)	Measles, Mumps, And Rubella Prevention
Diphenhydramine; paracetamol; phenylephrine	07 Feb 2021 (Study Day 166) - 08 Feb 2021 (Study Day 167)	COVID-Like Illness (Nasal Congestion, Runny Nose, Chills)
Ibuprofen	07 Feb 2021 (Study Day 166) - Ongoing	COVID-Like Illness (Muscles Aches, Body Aches, And Headache)
Paracetamol	09 Feb 2021 (Study Day 168) - Ongoing	COVID-Like Illness (Muscle Aches)

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	27 Aug 2020 (Study Day 2) - 04 Sep 2020 (Study Day 10)
Myalgia	Grade 1/mild	Related	30 Aug 2020 (Study Day 5) - 04 Sep 2020 (Study Day 10)
Arthralgia	Grade 1/mild	Related	31 Aug 2020 (Study Day 6) - 04 Sep 2020 (Study Day 10)
Suspected COVID-19	Grade 2/moderate	Not related	14 Sep 2020 (Study Day 20) - 03 Oct 2020 (Study Day 39)
Colitis	Grade 3/severe	Not related	21 Sep 2020 (Study Day 27) - 13 Oct 2020 (Study Day 49)
Pancreatitis	Grade 3/severe	Not related	21 Sep 2020 (Study Day 27) - 13 Oct 2020 (Study Day 49)
Suspected COVID-19	Grade 2/moderate	Not related	06 Feb 2021 (Study Day 165) - 13 Feb 2021 (Study Day 172)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US368-2134 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	17 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	15 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Syncope/Syncope, Worsened From Baseline	SAE	Grade 4	Not related	21 Sep 2020 (Study Day 5) – 21 Sep 2020 (Study Day 5)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US368-2134, a 46-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 17 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 15 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 21 Sep 2020 (Study Day 5), 4 days after the first dose and 24 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of syncope. The IP dose was not changed due to the syncope, worsened from baseline. The event of syncope, worsened from baseline lasted for 1 days, after which it was considered to be recovered/resolved on 21 Sep 2020 (Study Day 5). The investigator assessed the event of syncope to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000354	Syncope

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	Not reported - Ongoing
Pain	Generalized chronic pain	2008 - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus, type ii	2008 - Ongoing
Leg amputation	Right below knee amputation	2010 - 2010
Staphylococcal infection	Mrsa infection of right lower extremity	2010 - 2010
Hypertension	Hypertension	2011 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2015 - Ongoing
Syncope	Recurrent syncope	2018 - Ongoing
Skin ulcer	Left foot open ulcer	Mar 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amitriptyline	2008 - Ongoing	Chronic Pain - Generalized
Insulin glargine	2008 - Ongoing	Diabetes Mellitus Type II
Insulin lispro	2008 - Ongoing	Diabetes Mellitus Type II
Linagliptin	2008 - Ongoing	Diabetes Mellitus Type II
Liraglutide	2008 - Ongoing	Diabetes Mellitus Type II
Metformin	2008 - Ongoing	Diabetes Mellitus Type II
Tizanidine	2010 - Ongoing	Chronic Pain - Generalized
Tramadol	2010 - Ongoing	Generalized Chronic Pain
Carvedilol	2011 - Ongoing	Hypertension
Diltiazem	2011 - Ongoing	Hypertension
Omeprazole	2015 - Ongoing	Heartburn Prevention
Pravastatin	2015 - Ongoing	Hyperlipidemia
Ct of the head and cervical spine*	21 Sep 2020 (Study Day 5) - 21 Sep 2020 (Study Day 5)	Adverse Event
Electrocardiogram*	21 Sep 2020 (Study Day 5) - 21 Sep 2020 (Study Day 5)	Adverse Event
Piperacillin sodium; tazobactam sodium	21 Sep 2020 (Study Day 5) - 24 Sep 2020 (Study Day 8)	Cellulitis/Osteomyelitis Of Left Â foot
Vancomycin	21 Sep 2020 (Study Day 5) - 21 Sep 2020 (Study Day 5)	Cellulitis/Osteomyelitis Of Left Foot
X-ray of the chest, left shoulder, left foot*	21 Sep 2020 (Study Day 5) - 21 Sep 2020 (Study Day 5)	Adverse Event
Mri of the left foot*	22 Sep 2020 (Study Day 6) - 22 Sep 2020 (Study Day 6)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Transthoracic echocardiogram*	22 Sep 2020 (Study Day 6) - 22 Sep 2020 (Study Day 6)	Adverse Event
Ibuprofen	24 Sep 2020 (Study Day 8) - 04 Oct 2020 (Study Day 18)	Headaches As A Result Of A Concussion
Sulfamethoxazole; trimethoprim	24 Sep 2020 (Study Day 8) - 06 Oct 2020 (Study Day 20)	Cellulitis/Osteomyelitis Of Left Foot
Angioplasty of left lower extremity*	22 Feb 2021 (Study Day 159) - 22 Feb 2021 (Study Day 159)	Adverse Event
Acetylsalicylic acid	02 Mar 2021 (Study Day 167) - Ongoing	Cardiovascular Health
Electrocardiogram*	02 Mar 2021 (Study Day 167) - 02 Mar 2021 (Study Day 167)	Adverse Event
Piperacillin sodium; tazobactam sodium	02 Mar 2021 (Study Day 167) - 06 Mar 2021 (Study Day 171)	Osteomyelitis Of Left Foot, Necrotizing Fasciitis Of Left Foot
Ultrasound of bilateral lower extremities*	02 Mar 2021 (Study Day 167) - 02 Mar 2021 (Study Day 167)	Adverse Event
Vancomycin	02 Mar 2021 (Study Day 167) - 06 Mar 2021 (Study Day 171)	Osteomyelitis Of Left Foot, Necrotizing Fasciitis Of Left Foot
X-ray of chest*	02 Mar 2021 (Study Day 167) - 02 Mar 2021 (Study Day 167)	Adverse Event
X-ray of left tibia/fibula*	02 Mar 2021 (Study Day 167) - 02 Mar 2021 (Study Day 167)	Adverse Event
Continuous cardiac monitor*	03 Mar 2021 (Study Day 168) - 03 Mar 2021 (Study Day 168)	Adverse Event
Insulin	03 Mar 2021 (Study Day 168) - 08 Mar 2021 (Study Day 173)	Diabetic Ketoacidosis
Magnesium oxide	03 Mar 2021 (Study Day 168) - 03 Mar 2021 (Study Day 168)	Diabetic Ketoacidosis
Magnesium sulfate	03 Mar 2021 (Study Day 168) - 03 Mar 2021 (Study Day 168)	Diabetic Ketoacidosis
Potassium chloride; sodium chloride	03 Mar 2021 (Study Day 168) - 09 Mar 2021 (Study Day 174)	Diabetic Ketoacidosis
Potassium phosphate dibasic	03 Mar 2021 (Study Day 168) - 03 Mar 2021 (Study Day 168)	Diabetic Ketoacidosis
Mri of left foot and left ankle*	04 Mar 2021 (Study Day 169) - 04 Mar 2021 (Study Day 169)	Adverse Event
Staged deep incision and drainage with fasciotomy through multiple layers with excisional debidment of all non-viable tissue and 3rd metatarsal resection, left foot.*	04 Mar 2021 (Study Day 169) - 04 Mar 2021 (Study Day 169)	Adverse Event
X-ray of left foot and left ankle*	04 Mar 2021 (Study Day 169) - 04 Mar 2021 (Study Day 169)	Adverse Event
Ceftriaxone	06 Mar 2021 (Study Day 171) - 09 Mar 2021 (Study Day 174)	Osteomyelitis Of Left Foot, Necrotizing Fasciitis Of Left Foot
Clindamycin	06 Mar 2021 (Study Day 171) - 09 Mar 2021 (Study Day 174)	Osteomyelitis Of Left Foot, Necrotizing Fasciitis Of Left Foot
Ciprofloxacin	08 Mar 2021 (Study Day 173) - 07 Apr 2021 (Study Day 203)	Osteomyelitis Of Left Foot, Necrotizing Fasciitis Of Left Foot
Cefazolin	09 Mar 2021 (Study Day 174) - 13 Apr 2021 (Study Day 209)	Osteomyelitis Of The Left Foot, Necrotizing Fasciitis Of Left Foot

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insertion of left peripherally inserted central catheter*	09 Mar 2021 (Study Day 174) - 09 Mar 2021 (Study Day 174)	Adverse Event
Clopidogrel	10 Mar 2021 (Study Day 175) - Ongoing	Peripheral Vascular Disease

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Cellulitis	Grade 2/moderate	Not related	21 Sep 2020 (Study Day 5) - Ongoing
Osteomyelitis	Grade 2/moderate	Not related	21 Sep 2020 (Study Day 5) - 06 Oct 2020 (Study Day 20)
Concussion	Grade 2/moderate	Not related	24 Sep 2020 (Study Day 8) - 04 Oct 2020 (Study Day 18)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US369-2001 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	23 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Gastric Ulcer Haemorrhage/Bleeding Gastric Ulcer	SAE	Grade 3/severe	Not related	14 Dec 2020 (Study Day 111) – 16 Dec 2020 (Study Day 113)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US369-2001, a 56-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 26 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 23 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 14 Dec 2020 (Study Day 111), 110 days after the first dose and 82 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of gastric ulcer haemorrhage. Action taken with the IP was not applicable. The event of bleeding gastric ulcer lasted for 3 days, after which it was considered to be recovered/resolved on 16 Dec 2020 (Study Day 113). The investigator assessed the event of gastric ulcer haemorrhage to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001199	Gastric ulcer haemorrhage

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Blood testosterone decreased	Low testosterone	2015 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2016 - Ongoing
Gastrooesophageal reflux disease	Gerd (gastroesophageal reflux disease)	Jan 2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Simvastatin	2016 - Ongoing	Hyperlipidemia
Testosterone cipionate	2016 - Ongoing	Low Testosterone
Calcium carbonate	Jan 2018 - 16 Dec 2020 (Study Day 113)	Gerd
Influenza vaccine	Nov 2020 - Nov 2020	Prophylaxis For Flu
Acetylsalicylic acid	11 Dec 2020 (Study Day 108) - 11 Dec 2020 (Study Day 108)	Headache
Esophagogastroduodenoscopy (egd)*	14 Dec 2020 (Study Day 111) - 14 Dec 2020 (Study Day 111)	Adverse Event
Ondansetron	14 Dec 2020 (Study Day 111) - 15 Dec 2020 (Study Day 112)	Gastric Ulcer
Sodium chloride	14 Dec 2020 (Study Day 111) - 15 Dec 2020 (Study Day 112)	Gastric Ulcer
Omeprazole	16 Dec 2020 (Study Day 113) - 18 Jan 2021 (Study Day 146)	Gastric Ulcer
Pantoprazole	16 Dec 2020 (Study Day 113) - 04 Jan 2021 (Study Day 132)	Gastric Ulcer/Eosinophilic Esophagitis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Tachypnoea	Grade 1/mild	Not related	26 Aug 2020 (Study Day 1) - 23 Oct 2020 (Study Day 59)
Sinus Congestion	Grade 1/mild	Not related	28 Aug 2020 (Study Day 3) - 01 Sep 2020 (Study Day 7)
Sneezing	Grade 1/mild	Not related	28 Aug 2020 (Study Day 3) - 01 Sep 2020 (Study Day 7)
Headache	Grade 1/mild	Not related	11 Dec 2020 (Study Day 108) - 11 Dec 2020 (Study Day 108)
Eosinophilic Oesophagitis	Grade 2/moderate	Not related	14 Dec 2020 (Study Day 111) - 18 Jan 2021 (Study Day 146)
Tachypnoea	Grade 1/mild	Not related	08 Feb 2021 (Study Day 167) - 19 Mar 2021 (Study Day 206)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US369-2016 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	29 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	23 Sep 2020 (Study Day 26)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Peripheral Artery Aneurysm/Iliac Artery Aneurysm	SAE	Grade 2/ moderate	Not related	01 Nov 2020 (Study Day 65) – 02 Nov 2020 (Study Day 66)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US369-2016, a 55-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 29 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 23 Sep 2020 (Study Day 26). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Nov 2020 (Study Day 65), 64 days after the first dose and 39 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of peripheral artery aneurysm. Action taken with the IP was not applicable. The event of iliac artery aneurysm lasted for 2 days, after which it was considered to be recovered/resolved on 02 Nov 2020 (Study Day 66). The investigator assessed the event of peripheral artery aneurysm to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000616	Peripheral artery aneurysm

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Erectile dysfunction	Erectile dysfunction	Not reported - Ongoing
Bronchial hyperreactivity	Reactive airway disease	2000 - Ongoing
Folliculitis	Folliculitis	2005 - Ongoing
Peripheral artery aneurysm	Iliac artery aneurysm	2016 - Ongoing
Hypersensitivity	Environmental allergies (dog hair, ragweed)	2017 - Ongoing
Hypertension	Hypertension	2019 - Ongoing
Arteriosclerosis	Slow progression of athersclerosis	Jun 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Budesonide	2000 - Ongoing	Reactive Airway Disease
Clindamycin	2005 - Ongoing	Folliculitis
Sodium fluoride	2005 - Ongoing	Oral Hygiene
Atenolol	2006 - Ongoing	Reactive Airway Disease/Environmental Allergies
Allium sativum	2010 - Ongoing	Heart Health
Calcium citrate; colecalciferol	2010 - Ongoing	Bone Health
Chondroitin; glucosamine	2010 - Ongoing	Joint Health
Curcuma longa	2010 - Ongoing	Joint Health
Fish oil	2010 - Ongoing	Health Promotion
Tadalafil	2010 - Ongoing	Erectile Dysfunction
Ubidecarenone	2010 - Ongoing	Heart Health
Vitamins nos	2010 - Ongoing	Health Promotion
Zingiber officinale	2010 - Ongoing	Heart Health
Acetylsalicylic acid	2017 - Ongoing	Heart Health
Ezetimibe	2017 - Ongoing	Secondary Prevention For Cardiovascular Disease
Montelukast sodium	2017 - Ongoing	Reactive-Airway Disease
Rosuvastatin	Jun 2019 - 12 Oct 2020 (Study Day 45)	Slow Progression Of Atherosclerosis
Lisinopril	21 Sep 2020 (Study Day 24) - Ongoing	Hypertension
Rosuvastatin	12 Oct 2020 (Study Day 45) - Ongoing	Hperlipidemia
Open iliac artery repair*	02 Nov 2020 (Study Day 66) - 02 Nov 2020 (Study Day 66)	Medical History
Docusate sodium	08 Nov 2020 (Study Day 72) - 08 Nov 2020 (Study Day 72)	Stool Softener Following Iliac Artery Aneurysm Procedure

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydromorphone hydrochloride	08 Nov 2020 (Study Day 72) - 13 Nov 2020 (Study Day 77)	Pain (Post Bilateral Iliac Aneurysm Repair)
Paracetamol	08 Nov 2020 (Study Day 72) - 31 Dec 2020 (Study Day 125)	Pain (Post-Bilateral Iliac Aneurysm Repair)
Sennoside a+b	08 Nov 2020 (Study Day 72) - 08 Nov 2020 (Study Day 72)	Stimulant Laxative - Following Iliac Artery Aneurysm Procedure

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Tachypnoea	Grade 1/mild	Not related	23 Sep 2020 (Study Day 26) - 23 Oct 2020 (Study Day 56)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US369-2141 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	19 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Anaphylactic Reaction/Anaphylaxis	SAE	Grade 4	Not related	30 Sep 2020 (Study Day 10) – 30 Sep 2020 (Study Day 10)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US369-2141, a 20-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 21 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 19 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Sep 2020 (Study Day 10), 9 days after the first dose and 19 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of anaphylactic reaction. The IP dose was not changed due to the anaphylaxis. The event of anaphylaxis lasted for 1 days, after which it was considered to be recovered/resolved on 30 Sep 2020 (Study Day 10). The investigator assessed the event of anaphylactic reaction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001210	Anaphylactic reaction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety	Anxiety	Not reported - Ongoing
Attention deficit hyperactivity disorder	Attention-deficit/hyperactivity disorder	Not reported - Ongoing
Borderline personality disorder	Borderline personality disorder	Not reported - Ongoing
Seasonal allergy	Seasonal allergies	Not reported - Ongoing
Depression	Depression	Aug 2019 - Ongoing
Implant site haemorrhage	Bleeding at implant insertion site	Aug 2019 - Ongoing
Post-traumatic stress disorder	Post-traumatic stress disorder	Aug 2019 - Ongoing
Dermatitis contact	Allergy to dove soap	Jan 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Etonogestrel	Aug 2019 - Ongoing	Birth Control
Fluoxetine	Aug 2019 - Ongoing	Depression
Ibuprofen	Sep 2019 - Ongoing	Pain And Bleeding At Implant Site
Diphenhydramine hydrochloride	30 Sep 2020 (Study Day 10) - 30 Sep 2020 (Study Day 10)	Anaphylaxis
Epinephrine	30 Sep 2020 (Study Day 10) - 30 Sep 2020 (Study Day 10)	Anaphylaxis
Famotidine	30 Sep 2020 (Study Day 10) - 30 Sep 2020 (Study Day 10)	Anaphylaxis
Methylprednisolone sodium succinate	30 Sep 2020 (Study Day 10) - 30 Sep 2020 (Study Day 10)	Anaphylaxis
Ibuprofen	21 Oct 2020 (Study Day 31) - 21 Oct 2020 (Study Day 31)	Headache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Tachypnoea	Grade 1/mild	Not related	21 Sep 2020 (Study Day 1) – 16 Nov 2020 (Study Day 57)
Ovarian Cyst	Grade 1/mild	Not related	16 Mar 2021 (Study Day 177) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US371-2013 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	08 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	05 Oct 2020 (Study Day 28)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pneumonia/Pneumonia	SAE	Grade 2/ moderate	Not related	18 Sep 2020 (Study Day 11) – 05 Oct 2020 (Study Day 28)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US371-2013, a 71-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 08 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 05 Oct 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 18 Sep 2020 (Study Day 11), 10 days after the first dose and 17 days before the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of pneumonia. The IP dose was not changed due to the pneumonia. The event of pneumonia lasted for 18 days, after which it was considered to be recovered/resolved on 05 Oct 2020 (Study Day 28). The investigator assessed the event of pneumonia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-033943	Pneumonia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Myopia	Myopia	1958 - Ongoing
Seasonal allergy	Seasonal allergies	1979 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	1990 - Ongoing
Hyperlipidaemia	Hyperlipidemia	1995 - Ongoing
Ventricular extrasystoles	Premature ventricular complexes	2013 - Ongoing
Insomnia	Insomnia	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium carbonate	1990 - Ongoing	Acid Reflux
Colecalciferol	2010 - Ongoing	Supplement
Fish oil	2010 - Ongoing	Supplement
Folic acid	2010 - Ongoing	Supplement
Nicotinic acid	2010 - Ongoing	Supplement
Vitamin b12 nos	2010 - Ongoing	Supplement
Famotidine	2015 - Ongoing	Acid Reflux
Fluticasone propionate	2016 - Ongoing	Seasonal Allergies
Pantoprazole	2016 - Ongoing	Acid Reflux
Diphenhydramine hydrochloride	2019 - Ongoing	Insomnia
Fexofenadine hydrochloride	2019 - Ongoing	Seasonal Allergies
Famotidine	21 Sep 2020 (Study Day 14) - 22 Sep 2020 (Study Day 15)	Pneumonia Inpatient Treatment
Fexofenadine	21 Sep 2020 (Study Day 14) - 22 Sep 2020 (Study Day 15)	Pneumonia Inpatient Treatment
Levofloxacin	21 Sep 2020 (Study Day 14) - 22 Sep 2020 (Study Day 15)	Pneumonia Inpatient Treatment
Melatonin	21 Sep 2020 (Study Day 14) - 22 Sep 2020 (Study Day 15)	Pneumonia Inpatient Treatment
Ondansetron	21 Sep 2020 (Study Day 14) - 22 Sep 2020 (Study Day 15)	Pneumonia Inpatient Treatment
Paracetamol	21 Sep 2020 (Study Day 14) - 22 Sep 2020 (Study Day 15)	Pneumonia Inpatient Treatment
Sildenafil citrate	21 Sep 2020 (Study Day 14) - 22 Sep 2020 (Study Day 15)	Pneumonia Inpatient Treatment
Acetylsalicylic acid	22 Sep 2020 (Study Day 15) - 22 Sep 2020 (Study Day 15)	Generalized Non-Cardiac Chest Pain

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cefdinir	22 Sep 2020 (Study Day 15) - 25 Sep 2020 (Study Day 18)	Pneumonia
Ceftriaxone	22 Sep 2020 (Study Day 15) - 22 Sep 2020 (Study Day 15)	Pneumonia
Doxycycline	22 Sep 2020 (Study Day 15) - 25 Sep 2020 (Study Day 18)	Pneumonia
Sodium chloride	22 Sep 2020 (Study Day 15) - 22 Sep 2020 (Study Day 15)	Pneumonia
Cetirizine hydrochloride	15 Oct 2020 (Study Day 38) - Ongoing	Seasonal Allergies
Influenza vaccine	22 Oct 2020 (Study Day 45) - 22 Oct 2020 (Study Day 45)	Influenza Preventive
Acetylsalicylic acid	15 Nov 2020 (Study Day 69) - Ongoing	Cardiac Prophylaxis
Atorvastatin	15 Nov 2020 (Study Day 69) - Ongoing	Hyperlipidemia
Melatonin	31 Dec 2020 (Study Day 115) - Ongoing	Insomnia
Diphtheria vaccine toxoid; pertussis vaccine; tetanus vaccine toxoid	11 Mar 2021 (Study Day 185) - 11 Mar 2021 (Study Day 185)	Tetanus Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US371-2032 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	07 Oct 2020 (Study Day 28)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Non-Hodgkin's Lymphoma/Non-Hodgkin's Lymphoma	SAE	Grade 2/moderate	Not related	18 Dec 2020 (Study Day 100) – Ongoing	Recovering/resolving

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US371-2032, a 64-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 10 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 07 Oct 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 18 Dec 2020 (Study Day 100), 99 days after the first dose and 72 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of non-hodgkin's lymphoma. Action taken with the IP was not applicable. The event of non-hodgkin's lymphoma was considered to be ongoing. The investigator assessed the event of non-hodgkin's lymphoma to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-015383	Non-Hodgkin's Lymphoma

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Female sterilisation	Bilateral tubal ligation	1978 - 1978
Drug hypersensitivity	Allergy to penicillin	1980 - Ongoing
Cholecystectomy	Cholecystectomy	1985 - 1985
Cholecystitis	Cholecystitis	1985 - 1985
Myopia	Myopia	1990 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2000 - Ongoing
Hypertension	Hypertension	2000 - Ongoing
Dysmenorrhoea	Dysmenorrhea	2001 - 2001
Endometrial ablation	Uterine ablation	2001 - 2001
Depression	Depression	2005 - Ongoing
Hip arthroplasty	Partial left hip replacement	2009 - 2009
Osteoarthritis	Left hip, ball and socket was bone on bone	2009 - 2009
Sleep apnoea syndrome	Obstructive sleep apnea	2010 - Ongoing
Varicose vein	Varicose veins (bilateral)	2010 - Ongoing
Anxiety	Anxiety	2012 - Ongoing
Inguinal hernia	Inguinal hernia	Sep 2018 - Sep 2018
Inguinal hernia repair	Inguinal hernia repair	Sep 2018 - Sep 2018
Pulmonary embolism	Saddle block pulmonary embolus	2019 - 2019
Eczema	Eczema	Mar 2019 - Ongoing
Chest tube insertion	Thoracostomy	May 2019 - May 2019
Thrombosis	Bilateral blood clots	May 2019 - May 2019
Umbilical hernia repair	Umbilical hernia repair	Sep 2019 - Sep 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Triamterene	2000 - Ongoing	Hypertension
Citalopram	2005 - Ongoing	Depression
Vitamins nos	2010 - Ongoing	Supplement
Magnesium	2014 - Ongoing	Supplement
Acetylsalicylic acid	2018 - Ongoing	Cardiac Prophylaxis
Atorvastatin	Jun 2019 - Ongoing	Hyperlipidemia
Paracetamol	08 Oct 2020 (Study Day 29) - 09 Oct 2020 (Study Day 30)	Body Aches, Sore Throat, Headache, And Fatigue

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	27 Oct 2020 (Study Day 48) - 27 Oct 2020 (Study Day 48)	Preventive Health
Right leg vein ablation*	02 Nov 2020 (Study Day 54) - 02 Nov 2020 (Study Day 54)	Adverse Event
Varicella zoster vaccine	02 Nov 2020 (Study Day 54) - 02 Nov 2020 (Study Day 54)	Prevention Health
Ct abdomen/pelvis*	15 Dec 2020 (Study Day 97) - 15 Dec 2020 (Study Day 97)	Adverse Event
Retroperitoneal needle biopsy*	18 Dec 2020 (Study Day 100) - 18 Dec 2020 (Study Day 100)	Adverse Event
Us lower extremities*	18 Dec 2020 (Study Day 100) - 18 Dec 2020 (Study Day 100)	Adverse Event
Allopurinol	23 Dec 2020 (Study Day 105) - Ongoing	Non-Hodgkin's Lymphoma
Apixaban	23 Dec 2020 (Study Day 105) - Ongoing	Non-Hodgkin's Lymphoma
Diphenhydramine hydrochloride; hydrocortisone; nystatin	23 Dec 2020 (Study Day 105) - Ongoing	Non-Hodgkin's Lymphoma
Valsartan	01 Jan 2021 (Study Day 114) - Ongoing	Hypertension
Chest xray*	04 Jan 2021 (Study Day 117) - 04 Jan 2021 (Study Day 117)	Adverse Event
Levofloxacin	04 Jan 2021 (Study Day 117) - 05 Jan 2021 (Study Day 118)	Port Placement
Port placement*	04 Jan 2021 (Study Day 117) - 04 Jan 2021 (Study Day 117)	Adverse Event
Pet ct*	06 Jan 2021 (Study Day 119) - 06 Jan 2021 (Study Day 119)	Adverse Event
Bendamustine	13 Jan 2021 (Study Day 126) - Ongoing	Non-Hodgkin's Lymphoma
Lidocaine; prilocaine	13 Jan 2021 (Study Day 126) - Ongoing	Chemo Therapy Prophylaxis
Prochlorperazine maleate	13 Jan 2021 (Study Day 126) - Ongoing	Non-Hodgkin's Lymphoma
Rituximab	13 Jan 2021 (Study Day 126) - 13 Jan 2021 (Study Day 126)	Non-Hodgkin's Lymphoma
Bendamustine	14 Jan 2021 (Study Day 127) - 14 Jan 2021 (Study Day 127)	Non-Hodgkin's Lymphoma
Bone marrow aspiration and biopsy*	20 Jan 2021 (Study Day 133) - 20 Jan 2021 (Study Day 133)	Adverse Event
Rituximab	11 Mar 2021 (Study Day 183) - 11 Mar 2021 (Study Day 183)	Chemotherapy Non-Hodgkin's Lymphoma

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Varicose Vein	Grade 2/moderate	Not related	02 Nov 2020 (Study Day 54) - 02 Nov 2020 (Study Day 54)
Gastrooesophageal Reflux Disease	Grade 1/mild	Not related	01 Dec 2020 (Study Day 83) - Ongoing

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hydronephrosis	Grade 2/moderate	Not related	18 Dec 2020 (Study Day 100) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US371-2035 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	07 Oct 2020 (Study Day 28)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Upper Limb Fracture/ Worsening Of Left Shoulder Acromial Fracture	SAE	Grade 2/ moderate	Not related	22 Oct 2020 (Study Day 43) – 23 Oct 2020 (Study Day 44)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US371-2035, a 80-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 10 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 07 Oct 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 22 Oct 2020 (Study Day 43), 42 days after the first dose and 15 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of upper limb fracture. Action taken with the IP was not applicable. The event of worsening of left shoulder acromial fracture lasted for 2 days, after which it was considered to be recovered/resolved on 23 Oct 2020 (Study Day 44). The investigator assessed the event of upper limb fracture to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001156	Upper limb fracture

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	1945 - 1945
Tonsillitis	Tonsillitis	1945 - 1945
Presbyopia	Presbyopia	1950 - Ongoing
Varicocele	Varicocele	1972 - 1972
Varicocele repair	Varicocele repair	1972 - 1972
Hyperkeratosis	Keratosis	1995 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	2000 - Ongoing
Gastrooesophageal reflux disease	Acid relfux	2000 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2000 - Ongoing
Inguinal hernia	Inguinal hernia	2010 - 2010
Inguinal hernia repair	Inguinal hernia repair	2010 - 2010
Spinal osteoarthritis	Cervical spondylosis	2010 - Ongoing
Umbilical hernia	Umbilical hernia	2010 - 2010
Umbilical hernia repair	Umbilical hernia repair	2010 - 2010
Insomnia	Insomnia	2012 - Ongoing
Osteoarthritis	Osteoarthritis (hands, shoulder, right knee)	2013 - Ongoing
Cataract operation	Cataract surgery	2015 - 2015
Fracture treatment	Nondisplaced fracture of left acromion process repair	2015 - 2015
Neuropathic arthropathy	Charcot joint of right shoulder	2015 - 2015
Scapula fracture	Nondisplaced fracture of left acromion process	2015 - 2015
Rotator cuff repair	Nontraumatic complete tear of left rotator cuff repair	17 Dec 2015 (Study Day -1729) - 17 Dec 2015 (Study Day -1729)
Rotator cuff syndrome	Nontraumatic complete tear of left rotator cuff	17 Dec 2015 (Study Day -1729) - 17 Dec 2015 (Study Day -1729)
Anxiety	Anxiety	2018 - Ongoing
Coronary artery disease	Coronary artery disease	Jun 2018 - Ongoing
Seasonal allergy	Seasonal allergic rhinitis	Feb 2019 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	Aug 2019 - Ongoing
Tooth impacted	Wisdom teeth impaction	Jul 2020 - Jul 2020
Wisdom teeth removal	Wisdom teeth extraction	Jul 2020 - Jul 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Famotidine	2000 - Ongoing	Gastroesophageal Reflux Disease
Finasteride	2000 - Ongoing	Benign Prostatic Hyperplasia
Glucosamine	2000 - Ongoing	Supplement
Omeprazole	2000 - Ongoing	Acid Reflux
Trazodone	2012 - Ongoing	Insomnia
Cefazolin	22 Oct 2012 (Study Day -2880) - 23 Oct 2020 (Study Day 44)	Prevention Of Infection Due To Surgical Intervention During Hospitalization
Colecalciferol	2015 - Ongoing	Supplement
Vitamin b complex	2015 - Ongoing	Supplement
Escitalopram	2018 - Ongoing	Anxiety
Cetirizine hydrochloride	Feb 2019 - Ongoing	Seasonal Allergic Rhinitis
Acetylsalicylic acid	Aug 2019 - Ongoing	Cardiac Prophylaxis
Fenofibrate	Aug 2019 - Ongoing	Hypercholesterolemia
Rosuvastatin	Aug 2019 - Ongoing	Hypercholesterolemia
Ubiquinol	Dec 2019 - Ongoing	Supplement
Melatonin	Jul 2020 - Ongoing	Insomnia
Ascorbic acid; iron	01 Sep 2020 (Study Day -9) - Ongoing	Supplement
Ascorbic acid; ferrous fumarate	28 Sep 2020 (Study Day 19) - Ongoing	Mild Anemia
Ibuprofen	08 Oct 2020 (Study Day 29) - 08 Oct 2020 (Study Day 29)	Fever
Acetylsalicylic acid	22 Oct 2020 (Study Day 43) - 28 Oct 2020 (Study Day 49)	Pre And Post Op Blood Clot Prophylaxis
Ascorbic acid; ferrous fumarate	22 Oct 2020 (Study Day 43) - Ongoing	Dietary Supplement
Atorvastatin	22 Oct 2020 (Study Day 43) - 23 Oct 2020 (Study Day 44)	Prevention Of Hyperlipidemia During Hospitalization
Bisacodyl	22 Oct 2020 (Study Day 43) - 23 Oct 2020 (Study Day 44)	Prevention Of Constipation Due To Pain Medication During Hospitalization
Calcium chloride; potassium chloride; sodium lactate	22 Oct 2020 (Study Day 43) - 23 Oct 2020 (Study Day 44)	Electrolyte And Fluid Replacement Due To Surgery During Hospitalization
Ct scan*	22 Oct 2020 (Study Day 43) - 22 Oct 2020 (Study Day 43)	Adverse Event
Left shoulder, reverse arthroplasty*	22 Oct 2020 (Study Day 43) - 22 Oct 2020 (Study Day 43)	Adverse Event
Loratadine	22 Oct 2020 (Study Day 43) - 23 Oct 2020 (Study Day 44)	Prevention Of Seasonal Allergies During Hospitalization
Morphine	22 Oct 2020 (Study Day 43) - 23 Oct 2020 (Study Day 44)	Prevention Of Pain Due To Surgery During Hospitalization
Mri of left rotators cuff*	22 Oct 2020 (Study Day 43) - 22 Oct 2020 (Study Day 43)	Adverse Event
Naproxen	22 Oct 2020 (Study Day 43) - 23 Oct 2020 (Study Day 44)	Prevention Of Pain Due To Surgery During Hospitalization

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Oxycodone	22 Oct 2020 (Study Day 43) - 23 Oct 2020 (Study Day 44)	Prevention Of Pain Due To Surgery During Hospitalization
Oxycodone	22 Oct 2020 (Study Day 43) - 24 Oct 2020 (Study Day 45)	Prevention Of Pain Due To Surgery During Hospitalization
Ranitidine	22 Oct 2020 (Study Day 43) - 23 Oct 2020 (Study Day 44)	Prevention Of Gastroesophageal Reflux Disease During Hospitalization
Vancomycin	22 Oct 2020 (Study Day 43) - 22 Oct 2020 (Study Day 43)	Prevention Of Infection Due To Surgery During Hospitalization
X-ray of left shoulder*	22 Oct 2020 (Study Day 43) - 22 Oct 2020 (Study Day 43)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Anaemia	Grade 1/mild	Not related	28 Sep 2020 (Study Day 19) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US371-2064 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	18 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	16 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Osteoarthritis/Left Hip Degenerative Joint Disease With Arthritis	SAE	Grade 2/ moderate	Not related	12 Jan 2021 (Study Day 117) – 05 Feb 2021 (Study Day 141)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US371-2064, a 74-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 18 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 16 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Jan 2021 (Study Day 117), 116 days after the first dose and 88 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of osteoarthritis. Action taken with the IP was not applicable. The event of left hip degenerative joint disease with arthritis lasted for 25 days, after which it was considered to be recovered/resolved on 05 Feb 2021 (Study Day 141). The investigator assessed the event of osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-015319	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypermetropia	Hyperopia	1949 - Ongoing
Sleep apnoea syndrome	Obstructive sleep apnea	1998 - Ongoing
Prostate cancer	Prostate cancer	2005 - 2005
Radical prostatectomy	Radical prostatectomy	2005 - 2005
Hypertension	Hypertension	2009 - Ongoing
Osteoarthritis	Bilateral knees osteoarthritis	2010 - Ongoing
Large intestine polyp	Colon polyps (benign)	2012 - Ongoing
Bladder cancer	Bladder cancer	2014 - 2014
Cystoscopy	Cystoscopy of the bladder	2014 - 2014
Attention deficit hyperactivity disorder	Adult attention deficit disorder	2015 - Ongoing
Purpura senile	Senile purpura	2015 - Ongoing
Sciatica	Sciatica	Dec 2015 - Ongoing
Drug hypersensitivity	Allergy to lovenox	Jun 2019 - Ongoing
Hip arthroplasty	Total hip arthroplasty	Jun 2019 - Jun 2019
Osteoarthritis	Osteoarthritis in right hip	Jun 2019 - Jun 2019
Inguinal hernia	Left inguinal hernia	13 May 2020 (Study Day -128) - 13 May 2020 (Study Day -128)
Inguinal hernia repair	Left inguinal hernia repair	13 May 2020 (Study Day -128) - 13 May 2020 (Study Day -128)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrochlorothiazide	2009 - Ongoing	Hypertension
Ibuprofen	2010 - Ongoing	Osteoarthritis
Colecalciferol	2011 - Ongoing	Supplement
Methylphenidate hydrochloride	2015 - Ongoing	Adult Add
Influenza vaccine	02 Nov 2020 (Study Day 46) - 02 Nov 2020 (Study Day 46)	Preventive Health
Left hip x-ray*	12 Jan 2021 (Study Day 117) - 12 Jan 2021 (Study Day 117)	Adverse Event
Tramadol	22 Jan 2021 (Study Day 127) - 27 Jan 2021 (Study Day 132)	Left Hip Pain
Apixaban	04 Feb 2021 (Study Day 140) - 11 Mar 2021 (Study Day 175)	Left Hip Replacement
Bisacodyl	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Prevention Of Constipation During Hospitalization

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium carbonate	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Prevention Of Acid Reflux During Hospitalized
Cefazolin sodium	04 Feb 2021 (Study Day 140) - 04 Feb 2021 (Study Day 140)	Left Hip Replacement
Cefazolin sodium	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Left Hip Replacement
Colecalciferol	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Supplement
Diphenhydramine	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Prevention Of Of Allergic Reaction While Hospitalized
Docusate	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Prevention Of Constipation While Hospitalized
Glucose	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Left Hip Replacement
Hydrocodone bitartrate; paracetamol	04 Feb 2021 (Study Day 140) - 07 Feb 2021 (Study Day 143)	Left Hip Replacement
Left hip replacement*	04 Feb 2021 (Study Day 140) - 04 Feb 2021 (Study Day 140)	Adverse Event
Magnesium oxide	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Supplement
Methylphenidate	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Left Hip Replacement
Ondansetron	04 Feb 2021 (Study Day 140) - 07 Feb 2021 (Study Day 143)	Left Hip Replacement
Ondansetron	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Prevention Of Nausea While Hospitalized
Paracetamol	04 Feb 2021 (Study Day 140) - 10 Feb 2021 (Study Day 146)	Left Hip Replacement
Paracetamol	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Prevention Of Pain During Hospitalization
Promethazine	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Prevention Of Nausea During Hospitalization
Sennoside a+b	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Prevention Of Constipation While Hospitalized
Simeticone	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Prevention Of Pain While Hospitalized
Sodium chloride	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Flush Of Iv While Hospitalization
Sodium chloride	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Prevention Of Dehydration During Hospitalization
Sodium chloride	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Prevention Of Iv Clotting While Hospitalized
Vitamin d nos	04 Feb 2021 (Study Day 140) - 05 Feb 2021 (Study Day 141)	Supplement

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 2/moderate	Not related	15 Dec 2020 (Study Day 89) - 05 Feb 2021 (Study Day 141)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US371-2094 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	19 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Appendicitis/Appendicitis	SAE	Grade 2/ moderate	Not related	20 Dec 2020 (Study Day 91) – 22 Dec 2020 (Study Day 93)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US371-2094, a 41-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 21 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 19 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Dec 2020 (Study Day 91), 90 days after the first dose and 62 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of appendicitis. Action taken with the IP was not applicable. The event of appendicitis lasted for 3 days, after which it was considered to be recovered/resolved on 22 Dec 2020 (Study Day 93). The investigator assessed the event of appendicitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-020659	Appendicitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tooth impacted	Wisdom teeth impaction	2000 - 2000
Wisdom teeth removal	Wisdom teeth extraction	2000 - 2000
Mammoplasty	Breast implants	2007 - 2007
Bipolar II disorder	Bipolar disorder type ii	2012 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Gabapentin	2015 - Ongoing	Bipolar Disorder Type Ii
Oxcarbazepine	2015 - Ongoing	Bipolar Disorder Type Ii
Venlafaxine	2016 - Ongoing	Bipolar Disorder Type Ii
Quetiapine fumarate	Sep 2017 - Ongoing	Bipolar Disorder Type Ii
Intrauterine contraceptive device	2018 - Ongoing	Contraception
Influenza vaccine	09 Nov 2020 (Study Day 50) - 09 Nov 2020 (Study Day 50)	Influenza Vaccine
Appendectomy*	21 Dec 2020 (Study Day 92) - 21 Dec 2020 (Study Day 92)	Adverse Event
Ondansetron	22 Dec 2020 (Study Day 93) - 22 Dec 2020 (Study Day 93)	Nausea (Appendicitis)

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Uterine Leiomyoma	Grade 1/mild	Not related	21 Dec 2020 (Study Day 92) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US371-2114 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	24 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	22 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Prostate Cancer/ Progression Prostate Cancer	SAE	Grade 3/ severe	Not related	01 Oct 2020 (Study Day 8) – 13 Nov 2020 (Study Day 51)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US371-2114, a 70-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 24 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 22 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Oct 2020 (Study Day 8), 7 days after the first dose and 21 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of prostate cancer. Action taken with the IP was not applicable. The event of progression prostate cancer lasted for 44 days, after which it was considered to be recovered/resolved on 13 Nov 2020 (Study Day 51). The investigator assessed the event of prostate cancer to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-014524	Prostate Cancer

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Allergy to penicillin	1956 - Ongoing
Drug hypersensitivity	Allergy to sulfa	1958 - Ongoing
Immunoglobulins	Antitetanic immunoglobulins from animal origin	1958 - Ongoing
Anisometropia	Anisometropia	1964 - Ongoing
Skull fracture	Left skull fracture	1969 - 1969
Tooth impacted	Wisdom teeth impaction	1972 - 1972
Wisdom teeth removal	Wisdom teeth extraction	1972 - 1972
Haematoma	Hematoma left ankle	1973 - 1973
Haematoma evacuation	Hematoma left ankle removed	1973 - 1973
Skull fracture	Left skull fracture	1975 - 1975
Tonsillectomy	Tonsillectomy	1975 - 1975
Tonsillitis	Tonsillitis	1975 - 1975
Nasal septum deviation	Nasal septum deviation	1980 - 1980
Diabetic neuropathy	Diabetic neuropathy bilateral	1989 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	1989 - Ongoing
Hypertension	Hypertension	1989 - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type 2	1989 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2000 - Ongoing
Sarcoidosis	Sarcoidosis	2002 - Ongoing
Basal cell carcinoma	Basal cell carcinoma bilateral shoulders	2012 - 2012
Basal cell carcinoma	Basal cell carcinoma lower back	2012 - 2012
Skin neoplasm excision	Basal cell carcinoma removal bilateral shoulders	2012 - 2012
Skin neoplasm excision	Basal cell carcinoma removal lower back	2012 - 2012
Elbow operation	Left elbow surgical repair	2018 - 2018
Upper limb fracture	Left elbow fracture	2018 - 2018
Seasonal allergy	Seasonal allergies	2019 - Ongoing
Prostate cancer	Prostate cancer	14 Jul 2020 (Study Day -72) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	1989 - Ongoing	Hyperlipidemia
Empagliflozin; linagliptin	1989 - Ongoing	Type 2 Diabetes

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	1989 - Ongoing	Hypertension
Metformin	1989 - Ongoing	Type 2 Diabetes
Esomeprazole magnesium	2000 - Ongoing	Gastroesophageal Reflux Disease
Colecalciferol	2015 - Ongoing	Supplement
Gabapentin	2015 - Ongoing	Diabetic Neuropathy
Vitamins nos	2015 - Ongoing	Supplement
Iron	2018 - Ongoing	Supplement
Dextromethorphan hydrobromide; guaifenesin	2019 - Ongoing	Seasonal Allergies
Insulin degludec	2019 - Ongoing	Type 2 Diabetes
Krill oil	01 Jan 2020 (Study Day -267) - Ongoing	Supplement
Loratadine	01 Jan 2020 (Study Day -267) - Ongoing	Seasonal Allergies
Ciprofloxacin	13 Nov 2020 (Study Day 51) - 13 Nov 2020 (Study Day 51)	Prevention Of Infection After Surgery While Hospitalized
Heparin	13 Nov 2020 (Study Day 51) - 14 Nov 2020 (Study Day 52)	Prevention Of Deep Vein Thrombosis While Hospitalized
Ondansetron	13 Nov 2020 (Study Day 51) - 14 Nov 2020 (Study Day 52)	Prevention Of Nausea While Hospitalized
Oxybutynin	13 Nov 2020 (Study Day 51) - 14 Nov 2020 (Study Day 52)	Prevention Of Bladder Spasms After Surgery While Hospitalized
Oxycodone	13 Nov 2020 (Study Day 51) - 14 Nov 2020 (Study Day 52)	Prevention Of Pain After Surgery While Hospitalized
Paracetamol	13 Nov 2020 (Study Day 51) - 13 Nov 2020 (Study Day 51)	Prevention Of Pain After Surgery While Hospitalized
Paracetamol	13 Nov 2020 (Study Day 51) - 14 Nov 2020 (Study Day 52)	Prevention Of Pain After Surgery While Hospitalized
Phenazopyridine	13 Nov 2020 (Study Day 51) - 13 Nov 2020 (Study Day 51)	Prevention Of Painful Urination After Surgery While Hospitalized
Robotic assisted laparoscopic radial prostatectomy with bilateral pelvic lymph node dissection*	13 Nov 2020 (Study Day 51) - 13 Nov 2020 (Study Day 51)	Adverse Event
Sodium chloride	13 Nov 2020 (Study Day 51) - 13 Nov 2020 (Study Day 51)	Prevention Of Dehydration While Hospitalized
Colecalciferol	14 Nov 2020 (Study Day 52) - 14 Nov 2020 (Study Day 52)	Supplement
Insulin lispro	14 Nov 2020 (Study Day 52) - 14 Nov 2020 (Study Day 52)	Type 2 Diabetes
Pantoprazole sodium sesquihydrate	14 Nov 2020 (Study Day 52) - 14 Nov 2020 (Study Day 52)	Prevention Of Gastroesophageal Reflux Disease While Hospitalized

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US372-2034 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	02 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	31 Aug 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Prostate Cancer Metastatic/ Metastatic Castrate Sensitive Prostrate Cancer With Metastases	SAE	Grade 3/severe	Not related	01 Sep 2020 (Study Day 31) – 24 Feb 2021 (Study Day 207)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US372-2034, a 65-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 02 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 31 Aug 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Sep 2020 (Study Day 31), 30 days after the first dose and 1 day after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of prostate cancer metastatic. Action taken with the IP was not applicable. The event of metastatic castrate sensitive prostrate cancer with metastases lasted for 177 days, after which it was considered to be recovered/resolved with sequelae on 24 Feb 2021 (Study Day 207). The investigator assessed the event of prostate cancer metastatic to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000416	Prostate Cancer Metastatic

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Claustrophobia	Claustrophobia	2017 - Ongoing
Prostate cancer	Prostate cancer	2017 - Ongoing
Gynaecomastia	Gynecomastia, male	Feb 2017 - Oct 2020
Orchidectomy	Bilateral orchiectomy for surgical castration due to prostate cancer	Feb 2017 - Feb 2017
Intervertebral disc degeneration	Degenerative disc disease worse at l4-l5	2019 - Ongoing
Diverticulitis	Diverticulitis	Jun 2020 - Ongoing
Arthralgia	Right hip pain	Jul 2020 - Ongoing
Insomnia	Insomnia	Jul 2020 - 02 Nov 2020 (Study Day 93)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Iopamidol	Not reported - 2020	Abdominal And Pelvic Ct
Enzalutamide	2018 - Oct 2019	Prostate Cancer
Tramadol	Jun 2020 - Oct 2020	Generalized Pain
Naproxen	Jul 2020 - Ongoing	Hip Pain
Magnesium citrate	Sep 2020 - Sep 2020	Constipation/Generalized Pain
Tamsulosin hydrochloride	Sep 2020 - Ongoing	Benign Prostatic Hyperplasia
Colonoscopy with polyps removal*	01 Sep 2020 (Study Day 31) - 01 Sep 2020 (Study Day 31)	Adverse Event
X-ray of the abdomen*	01 Sep 2020 (Study Day 31) - 01 Sep 2020 (Study Day 31)	Adverse Event
Cervical xray*	03 Sep 2020 (Study Day 33) - 03 Sep 2020 (Study Day 33)	Adverse Event
Meloxicam	09 Sep 2020 (Study Day 39) - Ongoing	Back Pain Related To Metastatic Castrate Sensitive Prostrate Cancer With Metastases
Ct chest with contrast*	18 Sep 2020 (Study Day 48) - 18 Sep 2020 (Study Day 48)	Adverse Event
Hydrocodone bitartrate; paracetamol	23 Sep 2020 (Study Day 53) - Ongoing	Metastatic Castrate Sensitive Prostrate Cancer With Metastases
Lorazepam	25 Sep 2020 (Study Day 55) - Ongoing	Anxiety
Ct of abdomen*	19 Oct 2020 (Study Day 79) - 19 Oct 2020 (Study Day 79)	Adverse Event
Nuclear medicine bone scan*	19 Oct 2020 (Study Day 79) - 19 Oct 2020 (Study Day 79)	Adverse Event
Bupivacaine	29 Oct 2020 (Study Day 89) - 02 Nov 2020 (Study Day 93)	Prostate Cancer

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium chloride; potassium chloride; sodium lactate	29 Oct 2020 (Study Day 89) - 02 Nov 2020 (Study Day 93)	Worsening Of Prostate Cancer
Diphenhydramine hydrochloride	29 Oct 2020 (Study Day 89) - 02 Nov 2020 (Study Day 93)	Prostate Cancer
Flumazenil	29 Oct 2020 (Study Day 89) - 02 Nov 2020 (Study Day 93)	Prostate Cancer
Heparin porcine	29 Oct 2020 (Study Day 89) - 02 Nov 2020 (Study Day 93)	Prostate Cancer
Hydrocodone bitartrate; paracetamol	29 Oct 2020 (Study Day 89) - 02 Nov 2020 (Study Day 93)	Prostate Cancer
Hydromorphone	29 Oct 2020 (Study Day 89) - 02 Nov 2020 (Study Day 93)	Prostate Cancer
Promethazine	29 Oct 2020 (Study Day 89) - 02 Nov 2020 (Study Day 93)	Prostate Cancer
Sodium chloride	29 Oct 2020 (Study Day 89) - 02 Nov 2020 (Study Day 93)	Prostate Cancer
Carboplatin	03 Nov 2020 (Study Day 94) - 03 Nov 2020 (Study Day 94)	Prostate Cancer
Etoposide	03 Nov 2020 (Study Day 94) - 03 Nov 2020 (Study Day 94)	Prostate Cancer
Ct abdomen and pelvis*	04 Nov 2020 (Study Day 95) - 04 Nov 2020 (Study Day 95)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Constipation	Grade 2/moderate	Not related	01 Sep 2020 (Study Day 31) - Ongoing
Insomnia	Grade 1/mild	Not related	01 Sep 2020 (Study Day 31) - 02 Nov 2020 (Study Day 93)
Intervertebral Disc Degeneration	Grade 2/moderate	Not related	01 Sep 2020 (Study Day 31) - Ongoing
Large Intestine Polyp	Grade 1/mild	Not related	01 Sep 2020 (Study Day 31) - 01 Sep 2020 (Study Day 31)
Neck Pain	Grade 1/mild	Not related	01 Sep 2020 (Study Day 31) - 04 Sep 2020 (Study Day 34)
Blood Iron Decreased	Grade 2/moderate	Not related	04 Sep 2020 (Study Day 34) - Ongoing
Anxiety	Grade 1/mild	Not applicable	25 Sep 2020 (Study Day 55) - Ongoing
Cervical Vertebral Fracture	Grade 1/mild	Not related	01 Oct 2020 (Study Day 61) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US372-2338 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	20 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	17 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Incarcerated Hernia/ Acute Incarcerated Left Hernia Lower Quadrant	SAE	Grade 3/severe	Not related	12 Oct 2020 (Study Day 54) – 21 Oct 2020 (Study Day 63)	Recovered/resolved
Urinary Retention/Acute Urinary Retention	SAE	Grade 3/severe	Not related	14 Oct 2020 (Study Day 56) – 26 Oct 2020 (Study Day 68)	Recovered/resolved
Pulmonary Embolism/Pulmonary Embolism	SAE	Grade 3/severe	Not related	26 Oct 2020 (Study Day 68) – 28 Oct 2020 (Study Day 70)	Recovered/resolved
Urinary Tract Infection/ Urinary Tract Infection	SAE	Grade 3/severe	Not related	26 Oct 2020 (Study Day 68) – 10 Nov 2020 (Study Day 83)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US372-2338, a 73-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 20 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 17 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Oct 2020 (Study Day 54), 53 days after the first dose and 25 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of incarcerated hernia. Action taken with the IP was not applicable. The event of acute incarcerated left hernia lower quadrant lasted for 10 days, after which it was considered to be recovered/resolved on 21 Oct 2020 (Study Day 63). The investigator assessed the event of incarcerated hernia to be not related to the IP.

On 14 Oct 2020 (Study Day 56), 55 days after the first dose and 27 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of urinary retention. Action taken with the IP was not applicable. The event of acute urinary retention lasted for 13

days, after which it was considered to be recovered/resolved on 26 Oct 2020 (Study Day 68). The investigator assessed the event of urinary retention to be not related to the IP.

On 26 Oct 2020 (Study Day 68), 67 days after the first dose and 39 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pulmonary embolism. Action taken with the IP was not applicable. The event of pulmonary embolism lasted for 3 days, after which it was considered to be recovered/resolved on 28 Oct 2020 (Study Day 70). The investigator assessed the event of pulmonary embolism to be not related to the IP.

On 26 Oct 2020 (Study Day 68), 67 days after the first dose and 39 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of urinary tract infection. Action taken with the IP was not applicable. The event of urinary tract infection lasted for 16 days, after which it was considered to be recovered/resolved on 10 Nov 2020 (Study Day 83). The investigator assessed the event of urinary tract infection to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000524	Incarcerated hernia
MOD-2020-000524	Urinary retention
MOD-2021-004897	Pulmonary embolism
MOD-2021-004897	Urinary tract infection

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 2 diabetes mellitus	Diabetes 2	1990 - Ongoing
Abdominal hernia	Hernia left lower quadrant	2003 - Ongoing
Anxiety	Anxiety	2010 - Ongoing
Insomnia	Insomnia	2015 - Ongoing
Osteoarthritis	Osteoarthritis arthritis in bilateral knees	2015 - Ongoing
Dyspnoea	Dyspnea	2016 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2016 - Ongoing
Hypertension	Hypertension	2016 - Ongoing
Seasonal allergy	Seasonal allergies	2016 - Ongoing
Varicose vein	Varicose veins	2016 - Ongoing
Anaemia	Chronic anemia	2018 - Ongoing
Thrombophlebitis superficial	Superficial thrombophlebitis	2018 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypoalbuminaemia	Chronic hypoalbuminemia	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin glargine	1993 - Ongoing	Diabetes 2
Insulin lispro	1994 - Ongoing	Diabetes 2
Insulin aspart	03 Mar 2016 (Study Day -1631) - Ongoing	Diabetes 2
Salbutamol sulfate	03 Mar 2016 (Study Day -1631) - Ongoing	Shortness Of Breath
Fluticasone	28 Oct 2016 (Study Day -1392) - Ongoing	Seasonal Allergies
Lisinopril	2017 - Ongoing	Hypertension
Pravastatin	2017 - Ongoing	Hyperlipidemia
Empagliflozin; metformin hydrochloride	2018 - Ongoing	Diabetes 2
Clonazepam	17 Mar 2020 (Study Day -156) - Ongoing	Anxiety
Acetylsalicylic acid	19 Sep 2020 (Study Day 31) - 23 Sep 2020 (Study Day 35)	Left Arm Pain And Swelling
Ibuprofen	19 Sep 2020 (Study Day 31) - 23 Sep 2020 (Study Day 35)	Left Arm Pain And Swelling
Rivaroxaban	02 Oct 2020 (Study Day 44) - Ongoing	Left Sided Dvt
Fentanyl	12 Oct 2020 (Study Day 54) - 21 Oct 2020 (Study Day 63)	Pain Related To Acute Incarcerated Left Hernia Repair With Mesh
Hernia repair*	12 Oct 2020 (Study Day 54) - 12 Oct 2020 (Study Day 54)	Adverse Event
Colecalciferol	13 Oct 2020 (Study Day 55) - Ongoing	Supplement
Zinc	13 Oct 2020 (Study Day 55) - Ongoing	Supplement
Coude foley catheter placement*	14 Oct 2020 (Study Day 56) - 14 Oct 2020 (Study Day 56)	Adverse Event
Paracetamol	14 Oct 2020 (Study Day 56) - 31 Oct 2020 (Study Day 73)	Pain Related To Acute Incarcerated Left Hernia Repair With Mesh
Finasteride	21 Oct 2020 (Study Day 63) - 21 Oct 2020 (Study Day 63)	Acute Urinary Retention Requiring Foley Catheter
Levofloxacin	21 Oct 2020 (Study Day 63) - 28 Oct 2020 (Study Day 70)	Left Hernia Repair With Mesh
Tramadol	21 Oct 2020 (Study Day 63) - 28 Oct 2020 (Study Day 70)	Pain Related To Acute Incarcerated Left Hernia Repair With Mesh
Ceftriaxone	26 Oct 2020 (Study Day 68) - 28 Oct 2020 (Study Day 70)	Urinary Tract Infection
Coude foley catheter replacement*	26 Oct 2020 (Study Day 68) - 26 Oct 2020 (Study Day 68)	Adverse Event
Ondansetron	26 Oct 2020 (Study Day 68) - 28 Oct 2020 (Study Day 70)	Urinary Tract Infection
Oxygen	26 Oct 2020 (Study Day 68) - 28 Oct 2020 (Study Day 70)	Acute Hypoxemic Respiratory Failure

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydromorphone hydrochloride	28 Oct 2020 (Study Day 70) - 03 Nov 2020 (Study Day 76)	Pain Related To Acute Incarcerated Left Hernia Repair With Mesh

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Pain	Grade 2/moderate	Related	19 Sep 2020 (Study Day 31) - 23 Sep 2020 (Study Day 35)
Injection Site Swelling	Grade 2/moderate	Related	19 Sep 2020 (Study Day 31) - 23 Sep 2020 (Study Day 35)
Deep Vein Thrombosis	Not reported	Not applicable	02 Oct 2020 (Study Day 44) - Ongoing
Hypoxia	Grade 2/moderate	Not related	26 Oct 2020 (Study Day 68) - 28 Oct 2020 (Study Day 70)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US372-2406 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	30 Sep 2020 (Study Day 34)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Benign Prostatic Hyperplasia/ Worsening Benign Prostate Hyperplasia	SAE	Grade 2/ moderate	Not related	08 Oct 2020 (Study Day 42) – 14 Oct 2020 (Study Day 48)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US372-2406, a 63-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 30 Sep 2020 (Study Day 34). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Oct 2020 (Study Day 42), 41 days after the first dose and 8 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of benign prostatic hyperplasia. Action taken with the IP was not applicable. The event of worsening benign prostate hyperplasia lasted for 7 days, after which it was considered to be recovered/resolved on 14 Oct 2020 (Study Day 48). The investigator assessed the event of benign prostatic hyperplasia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000775	Benign prostatic hyperplasia

Study Completion/Discontinuation

On 04 Jan 2021 (Study Day 130), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	2010 - Ongoing
Sleep apnoea syndrome	Sleep apnea	2012 - Ongoing
Erectile dysfunction	Erectile dysfunction	2017 - Ongoing
Benign prostatic hyperplasia	Benign prostate hyperplasia	2019 - Ongoing
Dizziness	Dizziness	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Other viral vaccines	Not reported - 2021	Vaccine
Cetirizine hydrochloride	2010 - Ongoing	Seasonal Allergies
Fluticasone propionate	2010 - Ongoing	Seasonal Allergies
Tadalafil	2017 - Ongoing	Ed
Meclozine hydrochloride	2019 - Ongoing	Dizziness
Ct head with contrast*	07 Oct 2020 (Study Day 41) - 07 Oct 2020 (Study Day 41)	Adverse Event
Echo*	07 Oct 2020 (Study Day 41) - 07 Oct 2020 (Study Day 41)	Adverse Event
French foley catheter placement*	07 Oct 2020 (Study Day 41) - 07 Oct 2020 (Study Day 41)	Medical History
Ascorbic acid	08 Oct 2020 (Study Day 42) - Ongoing	Supplement
Hydrocodone bitartrate; paracetamol	08 Oct 2020 (Study Day 42) - 26 Oct 2020 (Study Day 60)	Bladder Spasms
Hyoscyamine sulfate	08 Oct 2020 (Study Day 42) - 26 Oct 2020 (Study Day 60)	Bladder Spasms
Vitamin b complex	08 Oct 2020 (Study Day 42) - Ongoing	Supplement
Turp*	13 Oct 2020 (Study Day 47) - 13 Oct 2020 (Study Day 47)	Adverse Event
Foley catheter replaced*	25 Oct 2020 (Study Day 59) - 25 Oct 2020 (Study Day 59)	Adverse Event
Lidocaine	25 Oct 2020 (Study Day 59) - 25 Oct 2020 (Study Day 59)	Bhp
Cystoscopy for clot evacuation*	26 Oct 2020 (Study Day 60) - 26 Oct 2020 (Study Day 60)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Haemorrhage Urinary Tract	Grade 1/mild	Not applicable	07 Oct 2020 (Study Day 41) - 14 Oct 2020 (Study Day 48)
Bladder Spasm	Grade 2/moderate	Not applicable	08 Oct 2020 (Study Day 42) - 26 Oct 2020 (Study Day 60)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Constipation	Grade 2/moderate	Not related	24 Oct 2020 (Study Day 58) - 27 Oct 2020 (Study Day 61)
Haematuria	Grade 2/moderate	Not related	25 Oct 2020 (Study Day 59) - 26 Oct 2020 (Study Day 60)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US373-2094 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	16 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Supraventricular Tachycardia/ Supraventricular Tachycardia	SAE	Grade 3/severe	Not related	24 Dec 2020 (Study Day 128) – 25 Dec 2020 (Study Day 129)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US373-2094, a 69-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 16 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Dec 2020 (Study Day 128), 127 days after the first dose and 99 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of supraventricular tachycardia. Action taken with the IP was not applicable. The event of supraventricular tachycardia lasted for 2 days, after which it was considered to be recovered/resolved on 25 Dec 2020 (Study Day 129). The investigator assessed the event of supraventricular tachycardia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-004755	Supraventricular tachycardia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Alcohol use	Alcohol use	1968 - Ongoing
Substance use	Marijuana use - inhalation	1968 - 1968
Synovial cyst	Ganglion cyst - left foot	1980 - 1980
Synovial cyst removal	Ganglion cyst left foot removal	1980 - 1980
Drug hypersensitivity	Cipro drug allergy	1990 - Ongoing
Headache	Non-migraine headaches	1990 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	1990 - Ongoing
Abdominal hernia	Abdominal hernia	1995 - 1995
Abdominal hernia repair	Abdominal hernia repair	1995 - 1995
Presbyopia	Presbyopia	2010 - Ongoing
Deafness bilateral	Bilateral hearing loss	2015 - Ongoing
Hypertension	Hypertension	2015 - Ongoing
Prostate cancer	Prostate cancer	2015 - Ongoing
Insomnia	Insomnia	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	1990 - Ongoing	Non-Migraine Headaches
Acetylsalicylic acid	2011 - Ongoing	General Health
Amlodipine besilate	2011 - 27 Jan 2021 (Study Day 162)	Hypertension
Losartan	2015 - Ongoing	Hypertension
Simvastatin	2015 - 27 Jan 2021 (Study Day 162)	Hypercholesterolemia
Eszopiclone	2019 - 27 Jan 2021 (Study Day 162)	Insomnia
Trazodone hydrochloride	2019 - Ongoing	Insomnia
Chest x-ray*	24 Dec 2020 (Study Day 128) - 24 Dec 2020 (Study Day 128)	Diagnostic
Ecg*	24 Dec 2020 (Study Day 128) - 24 Dec 2020 (Study Day 128)	Diagnostic
Head and neck cta*	24 Dec 2020 (Study Day 128) - 24 Dec 2020 (Study Day 128)	Diagnostic
Metoprolol	24 Dec 2020 (Study Day 128) - 24 Dec 2020 (Study Day 128)	Supraventricular Tachycardia
Ecg*	25 Dec 2020 (Study Day 129) - 25 Dec 2020 (Study Day 129)	Diagnostic
Echocardiogram*	25 Dec 2020 (Study Day 129) - 25 Dec 2020 (Study Day 129)	Diagnostic

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metoprolol	25 Dec 2020 (Study Day 129) - Ongoing	Supraventricular Tachycardia
Simvastatin	27 Jan 2021 (Study Day 162) - Ongoing	Hypercholesterolemia
Bilateral total thyroidectomy*	25 Feb 2021 (Study Day 191) - 25 Feb 2021 (Study Day 191)	Adverse Event
Liothyronine sodium	26 Feb 2021 (Study Day 192) - 13 Mar 2021 (Study Day 207)	Thyroid Cancer
Levothyroxine	13 Mar 2021 (Study Day 207) - Ongoing	Thyroid Hormone Therapy Status Post Total Thyroidectomy

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Papillary Thyroid Cancer	Grade 3/severe	Not related	15 Jan 2021 (Study Day 150) - 26 Feb 2021 (Study Day 192)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2182 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	24 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	20 Oct 2020 (Study Day 27)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cervical Spinal Stenosis/C5-C6 Severe Left Canal Stenosis	SAE	Grade 3/ severe	Not related	22 Oct 2020 (Study Day 29) – 17 Nov 2020 (Study Day 55)	Recovered/ resolved
Lung Adenocarcinoma/ Right Lung Adenocarcinoma	SAE	Grade 3/ severe	Not related	28 Oct 2020 (Study Day 35) – Ongoing	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2182, a 62-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 24 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 20 Oct 2020 (Study Day 27). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 22 Oct 2020 (Study Day 29), 28 days after the first dose and 2 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of cervical spinal stenosis. Action taken with the IP was not applicable. The event of c5-c6 severe left canal stenosis lasted for 27 days, after which it was considered to be recovered/resolved on 17 Nov 2020 (Study Day 55). The investigator assessed the event of cervical spinal stenosis to be not related to the IP.

On 28 Oct 2020 (Study Day 35), 34 days after the first dose and 8 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of lung adenocarcinoma. Action taken with the IP was not applicable. The event of right lung adenocarcinoma was considered to be ongoing. The investigator assessed the event of lung adenocarcinoma to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000594	Cervical spinal stenosis
MOD-2021-028098	Lung adenocarcinoma

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Chronic kidney disease	Stage 4 kidney disease	Not reported - Ongoing
Drug hypersensitivity	Penicillin allergy	1968 - Ongoing
Tonsillitis	Tonsillitis	1968 - 1968
Endometriosis	Endometriosis	1979 - 2006
Hypercholesterolaemia	Hypercholesterolemia	2000 - Ongoing
Hypertension	Hypertension	2000 - Ongoing
Postmenopause	Post menopausal	2001 - Ongoing
Ovarian cyst	Ovarian cysts	2003 - 2006
Hysterectomy	Hysterectomy	2006 - 2006
Lumbar spinal stenosis	Lumbar canal stenosis	2013 - Ongoing
Coronary artery disease	Cornonary artery disease	2019 - Ongoing
Insomnia	Insomnia	2019 - Ongoing
Paraesthesia	Lower extremity paresthesis	Aug 2020 - 05 Oct 2020 (Study Day 12)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine	2018 - Ongoing	Hypertension
Atorvastatin	2018 - Ongoing	High Cholesterol
Hydralazine	2018 - Ongoing	Hypertension
Hydroxyzine	2018 - Ongoing	Insomnia
Lisinopril	2018 - Ongoing	Hypertension
Acetylsalicylic acid	2019 - Ongoing	Cardiac Prophylaxis
Clopidogrel	2019 - Ongoing	Coronary Artery Disease
Isosorbide	Aug 2020 - Ongoing	Cad
Varenicline tartrate	Aug 2020 - Ongoing	Smoking Cessation
Colecalciferol	Sep 2020 - Ongoing	Vitamin Supplement
Gabapentin	Sep 2020 - 28 Sep 2020 (Study Day 5)	Lumbar Canal Stenosis
Gabapentin	28 Sep 2020 (Study Day 5) - 22 Mar 2021 (Study Day 180)	Lumbar Canal Stenosis
Ct c-spine without contrast*	22 Oct 2020 (Study Day 29) - 22 Oct 2020 (Study Day 29)	Adverse Event

Oxycodone	13 Nov 2020 (Study Day 51) - Ongoing	Lumbar Canal Stenosis
Influenza vaccine	20 Nov 2020 (Study Day 58) - 20 Nov 2020 (Study Day 58)	Flu Prophylaxis
Glyceryl trinitrate	Dec 2020 - Ongoing	Cardiac Related Chest Pain
Tizanidine	Dec 2020 - Ongoing	Cardiac Related Chest Pain And Neuropathy In Bilateral Legs
Radiation therapy*	15 Mar 2021 (Study Day 173) - 15 Mar 2021 (Study Day 173)	Adverse Event
Radiotherapy	15 Mar 2021 (Study Day 173) - 19 Mar 2021 (Study Day 177)	Right Lung Adenocarcinoma
Chest x-ray*	16 Mar 2021 (Study Day 174) - 16 Mar 2021 (Study Day 174)	Adverse Event
Ecg*	16 Mar 2021 (Study Day 174) - 16 Mar 2021 (Study Day 174)	Adverse Event
Gabapentin	22 Mar 2021 (Study Day 180) - Ongoing	Lumbar Canal Stenosis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Neuropathy Peripheral	Grade 2/moderate	Not related	17 Nov 2020 (Study Day 55) - Ongoing
Chest Pain	Grade 2/moderate	Not related	20 Dec 2020 (Study Day 88) - Ongoing
Radiation Associated Pain	Grade 2/moderate	Not related	16 Mar 2021 (Study Day 174) - 17 Mar 2021 (Study Day 175)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2192 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	26 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	27 Oct 2020 (Study Day 32)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Systemic Inflammatory Response Syndrome/Sirs (Systemic Inflammatory Response Syndrome)	SAE	Grade 4	Not related	11 Mar 2021 (Study Day 167) – 16 Mar 2021 (Study Day 172)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2192, a 35-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 26 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 27 Oct 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 11 Mar 2021 (Study Day 167), 166 days after the first dose and 135 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of systemic inflammatory response syndrome. Action taken with the IP was not applicable. The event of sirs (systemic inflammatory response syndrome) lasted for 6 days, after which it was considered to be recovered/resolved on 16 Mar 2021 (Study Day 172). The investigator assessed the event of systemic inflammatory response syndrome to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-045330	Systemic inflammatory response syndrome

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Arthritis	Arthritis - back	1998 - Ongoing
Exostosis	Bone spurs - neck	1998 - Ongoing
Scoliosis	Scoliosis	1998 - Ongoing
Hepatic steatosis	Hepatic steatosis	2000 - Ongoing
Female sterilisation	Tubal ligation	2009 - 2009
Hepatic enzyme increased	Liver enzyme elevation	2009 - Ongoing
Irritable bowel syndrome	Irritable bowel syndrom	2009 - 2009
Goodpasture's syndrome	Goodpasture syndrome	2011 - 2012
Drug intolerance	Iodine intolerance	2012 - Ongoing
Drug intolerance	Tylenol intolerance	2012 - Ongoing
Drug intolerance	Zofran intolerance	2013 - Ongoing
Nephrolithiasis	Kidney stones	2016 - 2016
Migraine	Migraines - intermittent	2017 - Ongoing
Cholecystectomy	Cholecystectomy	2018 - 2018
Hysterectomy	Hysterectomy	2018 - 2018
Menorrhagia	Menorrhagia	2018 - 2018
Postmenopause	Post menopausal	2018 - Ongoing
Gastrooesophageal reflux disease	Gastroesophagel reflux disease	2019 - 2019
Impaired gastric emptying	Gastroparesis	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cannabis sativa	2018 - Ongoing	Back Pain
Estradiol	2018 - Ongoing	Post Menopausal Hormone Replacement
Ibuprofen	2018 - Ongoing	Arthritis - Back Pain
Gastric pacemaker*	18 Nov 2020 (Study Day 54) - 18 Nov 2020 (Study Day 54)	Medical History
Oxycodone	18 Nov 2020 (Study Day 54) - Ongoing	Post Procedure Gastric Pacemaker Pain
Benzonatate	12 Mar 2021 (Study Day 168) - 16 Mar 2021 (Study Day 172)	Systemic Inflammatory Response Syndrome
Salbutamol	12 Mar 2021 (Study Day 168) - 16 Mar 2021 (Study Day 172)	Systemic Inflammatory Response Syndrome

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US393-2206 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	28 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	05 Nov 2020 (Study Day 39)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Non-Cardiac Chest Pain/ Non-Cardiac Chest Pain (General Pain And Discomfort)	SAE	Grade 3/ severe	Not related	31 Jan 2021 (Study Day 126) – 01 Mar 2021 (Study Day 155)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2206, a 56-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 28 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 05 Nov 2020 (Study Day 39). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 31 Jan 2021 (Study Day 126), 125 days after the first dose and 87 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of non-cardiac chest pain. Action taken with the IP was not applicable. The event of non-cardiac chest pain (general pain and discomfort) lasted for 30 days, after which it was considered to be recovered/resolved on 01 Mar 2021 (Study Day 155). The investigator assessed the event of non-cardiac chest pain to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-014170	Non-cardiac chest pain

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma	1975 - Ongoing
Anxiety	Anxiety	1991 - Ongoing
Depression	Depression	1991 - Ongoing
Hypertension	Hypertension	1995 - Ongoing
Osteoarthritis	Osteoarthritis	1995 - Ongoing
Type 2 diabetes mellitus	Diabetes type ii	1998 - Ongoing
Vertigo	Vertigo	1998 - Ongoing
Back pain	Back pain	2000 - Ongoing
Insomnia	Insomnia	2000 - Ongoing
Carpal tunnel syndrome	Carpal tunnel (both wrists)	2005 - Ongoing
Fibromyalgia	Fibromyalgia	2005 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	2005 - Ongoing
Aortic aneurysm	Aortic aneurysm	Sep 2005 - Sep 2005
Eczema	Eczema	2008 - Ongoing
Muscle spasms	Generalized muscle spasms	2008 - Ongoing
Seasonal allergy	Seasonal allergies	2008 - Ongoing
Gastrectomy	Gastric sleeve	2011 - 2011
Obesity	Obesity	2011 - 2011
Postmenopause	Post-menopausal	2013 - Ongoing
Large intestine polyp	Benign colon polyps	2014 - 2014
Transient ischaemic attack	Transient ischemic attack	2014 - 2014
Endometrial ablation	Uterine ablation	2016 - 2016
Constipation	Constipation	2018 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2018 - Ongoing
Cataract	Left eye cataract	Apr 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	1995 - Ongoing	Hypertension
Metoprolol	1995 - Ongoing	Hypertension
Amlodipine	1998 - Ongoing	Hypertension
Meclozine	1998 - 07 Dec 2020 (Study Day 71)	Vertigo
Fluticasone propionate; salmeterol xinafoate	2000 - Ongoing	Asthma
Salbutamol sulfate	2000 - Ongoing	Asthma

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Pantoprazole	2005 - Oct 2020	Acid Reflux
Diphenhydramine hydrochloride	2008 - Ongoing	Seasonal Allergies
Oxycodone hydrochloride; paracetamol	2008 - Ongoing	Back Pain
Venlafaxine	2009 - Ongoing	Depression
Venlafaxine	2009 - Ongoing	Fibromyalgia
Buspirone	2011 - Ongoing	Anxiety
Atorvastatin	2018 - Ongoing	Hypercholesterol
Linaclotide	2018 - Ongoing	Constipation
Spironolactone	2018 - Ongoing	Hypertension
Trazodone	2018 - Oct 2020	Insomnia
Tizanidine	2019 - Ongoing	Generalized Muscle Spasms
Paracetamol	30 Sep 2020 (Study Day 3) - 01 Oct 2020 (Study Day 4)	Treat Fever/Pain Ae Diary 1
Influenza vaccine	19 Nov 2020 (Study Day 53) - 19 Nov 2020 (Study Day 53)	Influenza Prophylaxis
Acetylsalicylic acid	04 Feb 2021 (Study Day 130) - 05 Feb 2021 (Study Day 131)	Chest Pain (Non-Cardiac)
Chest xray*	04 Feb 2021 (Study Day 130) - 04 Feb 2021 (Study Day 130)	Adverse Event
Cyclobenzaprine	04 Feb 2021 (Study Day 130) - 04 Feb 2021 (Study Day 130)	Muscle Spasms (Generalized)
Ecg*	04 Feb 2021 (Study Day 130) - 04 Feb 2021 (Study Day 130)	Adverse Event
Enoxaparin	04 Feb 2021 (Study Day 130) - 04 Feb 2021 (Study Day 130)	Prophylaxis For Dvt
Glyceryl trinitrate	04 Feb 2021 (Study Day 130) - 05 Feb 2021 (Study Day 131)	Chest Pain (Non-Cardiac)
Labetalol	04 Feb 2021 (Study Day 130) - 04 Feb 2021 (Study Day 130)	Hypertension
Morphine	04 Feb 2021 (Study Day 130) - 04 Feb 2021 (Study Day 130)	Chest Pain (Non-Cardiac)
Morphine	04 Feb 2021 (Study Day 130) - 05 Feb 2021 (Study Day 131)	Chest Pain (Non-Cardiac)
Pantoprazole	04 Feb 2021 (Study Day 130) - 05 Feb 2021 (Study Day 131)	Acid Reflux
Paracetamol	04 Feb 2021 (Study Day 130) - 05 Feb 2021 (Study Day 131)	Chest Pain (Non-Cardiac)
Omeprazole	16 Feb 2021 (Study Day 142) - Ongoing	Worsening Acid Reflux
Ct angiogram - chest, abdomen & pelvis*	26 Feb 2021 (Study Day 152) - 26 Feb 2021 (Study Day 152)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Upper Respiratory Tract Infection	Grade 2/moderate	Not related	28 Dec 2020 (Study Day 92) - 07 Jan 2021 (Study Day 102)
Upper Respiratory Tract Infection	Grade 2/moderate	Not related	22 Jan 2021 (Study Day 117) - 28 Jan 2021 (Study Day 123)
Gastrooesophageal Reflux Disease	Grade 2/moderate	Not related	16 Feb 2021 (Study Day 142) - 24 Feb 2021 (Study Day 150)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2215 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	30 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	29 Oct 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Colitis/Colitis	SAE	Grade 3/ severe	Not related	28 Jan 2021 (Study Day 121) – 22 Mar 2021 (Study Day 174)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2215, a 66-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 30 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 29 Oct 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Jan 2021 (Study Day 121), 120 days after the first dose and 91 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of colitis. Action taken with the IP was not applicable. The event of colitis lasted for 54 days, after which it was considered to be recovered/resolved on 22 Mar 2021 (Study Day 174). The investigator assessed the event of colitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-009255	Colitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Appendicitis	Appendicitis	1967 - 1967
Joint dislocation	Dislocated left shoulder	1976 - Ongoing
Nerve compression	Pinched nerve in left dislocated shoulder	1976 - Ongoing
Ulcer haemorrhage	Bleeding ulcer	2015 - 2015
Cataract	Bilateral cataracts	2018 - 2019
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	2019 - Ongoing
Hepatitis C	Hepatitis c	Feb 2020 - Ongoing
Peripheral swelling	Left lower leg swelling	30 Sep 2020 (Study Day 1) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	2019 - 23 Mar 2021 (Study Day 175)	Chronic Obstructive Pulmonary Disease
Sofosbuvir; velpatasvir	May 2020 - Aug 2020	Hepatitis C
Gabapentin	Aug 2020 - Ongoing	Pinched Nerve In Left Dislocated Shoulder
Paracetamol	30 Oct 2020 (Study Day 31) - 30 Oct 2020 (Study Day 31)	Injection Site Pain
Colonoscopy*	29 Jan 2021 (Study Day 122) - 29 Jan 2021 (Study Day 122)	Adverse Event
Acetylsalicylic acid	01 Feb 2021 (Study Day 125) - 22 Mar 2021 (Study Day 174)	Colitis
Atorvastatin	03 Feb 2021 (Study Day 127) - 03 Mar 2021 (Study Day 155)	Colitis
Umeclidinium bromide; vilanterol trifenatate	24 Mar 2021 (Study Day 176) - Ongoing	Chronic Obstructive Pulmonary Disorder

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US393-2296 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	22 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	19 Nov 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hypoglycaemia/ Hypoglycemia	SAE	Grade 3/severe	Not related	21 Jan 2021 (Study Day 92) – 03 Feb 2021 (Study Day 105)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2296, a 66-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 22 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 19 Nov 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 21 Jan 2021 (Study Day 92), 91 days after the first dose and 63 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of hypoglycaemia. Action taken with the IP was not applicable. The event of hypoglycemia lasted for 14 days, after which it was considered to be recovered/resolved on 03 Feb 2021 (Study Day 105). The investigator assessed the event of hypoglycaemia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-011634	Hypoglycaemia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1985 - Ongoing
Asthma	Asthma	1991 - Ongoing
Hypertension	Hypertension	1991 - Ongoing
Rubber sensitivity	Latex allergy	1993 - Ongoing
Meniscus injury	Right knee torn meniscus	1995 - 1995
Cardiac failure congestive	Congestive heart failure	2004 - Ongoing
Cardiomyopathy	Cardiomyopathy	2004 - Ongoing
Erectile dysfunction	Erectile dysfunction	2004 - Ongoing
Hyperthyroidism	Hyperthyroidism	2004 - Ongoing
Neuropathy peripheral	Peripheral neuropathy	2004 - Ongoing
Oedema peripheral	Bilateral lower extremity edema	2004 - Ongoing
Transient ischaemic attack	Transient ischemia attack	2004 - 2004
Type 2 diabetes mellitus	Type 2 diabetes	2004 - Ongoing
Cataract	Bilateral cataracts	2012 - 2015
Cardiac pacemaker insertion	Pacemaker	2015 - Ongoing
Hand fracture	Right hand pinky fracture	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Loratadine	1991 - Ongoing	Seasonal Allergies
Salbutamol	1991 - Ongoing	Asthma
Acetylsalicylic acid	2004 - Ongoing	Prophylaxis For Chronic Heart Failure
Insulin glargine	2004 - 31 Jan 2021 (Study Day 102)	Type 2 Diabetes
Insulin lispro	2004 - 31 Jan 2021 (Study Day 102)	Type 2 Diabetes
Levothyroxine sodium	2004 - 02 Feb 2021 (Study Day 104)	Hypothyroidism
Losartan	2004 - 15 Feb 2021 (Study Day 117)	Hypertension
Carvedilol	2013 - 02 Feb 2021 (Study Day 104)	Hypertension
Furosemide	2015 - 15 Feb 2021 (Study Day 117)	Congestive Heart Failure
Spironolactone	2017 - Ongoing	Chronic Heart Failure
Chest x-ray*	31 Jan 2021 (Study Day 102) - 31 Jan 2021 (Study Day 102)	Adverse Event
Ct head and cervical spine without contrast*	31 Jan 2021 (Study Day 102) - 31 Jan 2021 (Study Day 102)	Adverse Event
Enoxaparin sodium	31 Jan 2021 (Study Day 102) - 03 Feb 2021 (Study Day 105)	Cardiac Prophylaxis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin lispro	31 Jan 2021 (Study Day 102) - 31 Jan 2021 (Study Day 102)	Hypoglycemia
Ultrasound of abdomen*	31 Jan 2021 (Study Day 102) - 31 Jan 2021 (Study Day 102)	Adverse Event
Chest x-ray*	01 Feb 2021 (Study Day 103) - 01 Feb 2021 (Study Day 103)	Adverse Event
Echocardiogram*	01 Feb 2021 (Study Day 103) - 01 Feb 2021 (Study Day 103)	Adverse Event
Furosemide	01 Feb 2021 (Study Day 103) - 02 Feb 2021 (Study Day 104)	Shortness Of Breath
Insulin lispro	01 Feb 2021 (Study Day 103) - 01 Feb 2021 (Study Day 103)	Hypoglycemia
Insulin lispro	02 Feb 2021 (Study Day 104) - 02 Feb 2021 (Study Day 104)	Hypoglycemia
Carvedilol	03 Feb 2021 (Study Day 105) - Ongoing	Hypertension
Dapagliflozin propanediol monohydrate	03 Feb 2021 (Study Day 105) - Ongoing	Type 2 Diabetes
Insulin glargine	03 Feb 2021 (Study Day 105) - Ongoing	Type 2 Diabetes
Furosemide	16 Feb 2021 (Study Day 118) - Ongoing	Chronic Heart Failure
Levothyroxine sodium	17 Mar 2021 (Study Day 147) - Ongoing	Hypothyroidism

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Dyspnoea	Grade 2/moderate	Not related	31 Jan 2021 (Study Day 102) - 03 Feb 2021 (Study Day 105)
Hepatic Enzyme Abnormal	Grade 2/moderate	Not related	31 Jan 2021 (Study Day 102) - Ongoing
Injury	Grade 2/moderate	Not related	31 Jan 2021 (Study Day 102) - 03 Feb 2021 (Study Day 105)
Hyponatraemia	Grade 2/moderate	Not related	02 Feb 2021 (Study Day 104) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US394-2001 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥ 65 Years
First Dose of Vaccine:	20 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 36)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Prostate Cancer/Prostate Cancer	SAE	Grade 3/severe	Not related	13 Oct 2020 (Study Day 55) – Ongoing	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US394-2001, a 68-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 20 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 24 Sep 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 13 Oct 2020 (Study Day 55), 54 days after the first dose and 19 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of prostate cancer. Action taken with the IP was not applicable. The event of prostate cancer was considered to be ongoing. The investigator assessed the event of prostate cancer to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001231	Prostate cancer

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asbestosis	Asbestosis	1994 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Osteoarthritis	Osteoarthritis generalized	2000 - Ongoing
Pleural effusion	Pleural effusion	2004 - 2004
Pleural effusion	Pulmonary effusion	2004 - 2004
Thoracotomy	Thoracotomy	2004 - 2004
Nephrolithiasis	Nephrolithiasis	2008 - 2008
Ureteral stent insertion	Right ureteral stent	Dec 2008 - Dec 2008
Hypertension	Hypertension	2011 - Ongoing
Atrial fibrillation	Atrial fibrillation	27 Sep 2011 (Study Day -3250) - Ongoing
Cardiac ablation	Cardiac ablasion	May 2012 - May 2012
Knee arthroplasty	Left knee replacement	10 Jun 2015 (Study Day -1898) - 10 Jun 2015 (Study Day -1898)
Drug hypersensitivity	Striptomycin allergy	2016 - Ongoing
Cataract	Bilateral cataracts	2017 - May 2017
Rotator cuff syndrome	Left rotator cuff tear	2017 - 02 Aug 2017 (Study Day -1114)
Cataract operation	Bilateral cataracts removal	May 2017 - May 2017
Rotator cuff repair	Left rotator cuff repair	02 Aug 2017 (Study Day -1114) - 02 Aug 2017 (Study Day -1114)
Blood cholesterol increased	High cholesterol	2018 - Ongoing
Cardiac ablation	Cardiac ablation	12 Feb 2019 (Study Day -555) - 12 Feb 2019 (Study Day -555)
Atrial flutter	Atrial flutter	May 2019 - Ongoing
Sleep apnoea syndrome	Obstructive sleep apnea	27 Jun 2019 (Study Day -420) - Ongoing
Knee arthroplasty	Right knee replacement	12 Feb 2020 (Study Day -190) - 12 Feb 2020 (Study Day -190)
Nocturia	Nocturia	Aug 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Losartan	2015 - 18 Feb 2021 (Study Day 183)	Hypertension
Acetylsalicylic acid	2018 - Ongoing	Cardiac Prophylaxis
Atorvastatin	2018 - Ongoing	High Cholsterol
Diclofenac	2018 - Dec 2020	Osteoarthritis Generalized
Celecoxib	20 Aug 2020 (Study Day 1) - Dec 2020	Osteoarthritis Generalized
Influenza vaccine	13 Oct 2020 (Study Day 55) - 13 Oct 2020 (Study Day 55)	Preventative
Amoxicillin; clavulanic acid	15 Dec 2020 (Study Day 118) - 19 Dec 2020 (Study Day 122)	Elevated Psa (Prostate Cancer)
Prostate biopsy*	15 Dec 2020 (Study Day 118) - 15 Dec 2020 (Study Day 118)	Adverse Event
Celecoxib	19 Feb 2021 (Study Day 184) - Ongoing	Osteoarthritis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrochlorothiazide; telmisartan	19 Feb 2021 (Study Day 184) - Ongoing	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US394-2021 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Road Traffic Accident/Motor Vehicle Accident Trauma	SAE, AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	06 Sep 2020 (Study Day 10) – 01 Oct 2020 (Study Day 35)	Recovered/ resolved
Substance Abuse/Polysubstance Abuse	AE leading to withdrawal from study vaccine, AE leading to study discontinuation	Grade 2/ moderate	Not related	06 Sep 2020 (Study Day 10) – Ongoing	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US394-2021, a 49-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 28 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Sep 2020 (Study Day 10), 9 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of road traffic accident. On 24 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of motor vehicle accident trauma lasted for 26 days, after which it was considered to be recovered/resolved on 01 Oct 2020 (Study Day 35). The investigator assessed the event of road traffic accident to be not related to the IP.

On 06 Sep 2020 (Study Day 10), 9 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of substance abuse. On 24 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of polysubstance abuse was considered to be ongoing. The investigator assessed the event of substance abuse to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000409	Road traffic accident

Study Completion/Discontinuation

On 08 Oct 2020 (Study Day 42), the participant discontinued from the study due to the adverse event of substance abuse.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraine headaches	1981 - Ongoing
Uterine leiomyoma	Uterine fibroids	2012 - 22 Mar 2016 (Study Day -1620)
Hysterectomy	Hysterectomy	22 Mar 2016 (Study Day -1620) - 22 Mar 2016 (Study Day -1620)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amitriptyline	Feb 2020 - Ongoing	Migraine Headaches
Topiramate	Feb 2020 - Ongoing	Migraine Headaches
Phenylephrine	06 Aug 2020 (Study Day -22) - 11 Sep 2020 (Study Day 15)	Motor Vehicle Accident Trauma
Bilateral femur xray*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Chest x-ray*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Ct abdomen/pelvis with contrast*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Ct angio of neck*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Ct chest with contrast*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Ct chest without contrast*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Ct right knee without contrast*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Electrocardiogram*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Glucose	06 Sep 2020 (Study Day 10) - 09 Sep 2020 (Study Day 13)	Supplement/Hydration
Iohexol	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Ct Chest, Ct Angio Neck, Ct Abdomen/Pelvis
Left knee xray*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Left wrist xray*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Pelvis x-ray*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Right ankle xray*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Right femur xray*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Right knee xray*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Right tibula and fibula xray*	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Adverse Event
Sodium chloride	06 Sep 2020 (Study Day 10) - 06 Sep 2020 (Study Day 10)	Motor Vehicle Accident Trauma
Chest xray*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
Spinal cord decompression*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
T5-6 posterior arthrodesis*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
T6-7 anterior arthrodesis*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
T6-7 facetectomy*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
T6-7 laminectomy*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
T6-7 posterior arthrodesis*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
T7-8 anterior arthrodesis*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
T7-8 facetectomy*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
T7-8 posterior arthrodesis*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
T8-9 posterior arthrodesis*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
Transpedicular screw fixation t6-9*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
Ultrasound of b/l lower extremity*	07 Sep 2020 (Study Day 11) - 07 Sep 2020 (Study Day 11)	Adverse Event
Ct chest with contrast*	08 Sep 2020 (Study Day 12) - 08 Sep 2020 (Study Day 12)	Adverse Event
Iohexol	08 Sep 2020 (Study Day 12) - 08 Sep 2020 (Study Day 12)	Ct Chest

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Chest xray*	09 Sep 2020 (Study Day 13) - 09 Sep 2020 (Study Day 13)	Adverse Event
Left thoracostomy tube placement*	09 Sep 2020 (Study Day 13) - 09 Sep 2020 (Study Day 13)	Adverse Event
Open reduction and internal fixation of sternal fracture*	09 Sep 2020 (Study Day 13) - 09 Sep 2020 (Study Day 13)	Adverse Event
Chest xray*	10 Sep 2020 (Study Day 14) - 10 Sep 2020 (Study Day 14)	Adverse Event
Ct angio chest*	10 Sep 2020 (Study Day 14) - 10 Sep 2020 (Study Day 14)	Adverse Event
Iohexol	10 Sep 2020 (Study Day 14) - 10 Sep 2020 (Study Day 14)	Ct Angio Chest
Chest x ray*	11 Sep 2020 (Study Day 15) - 11 Sep 2020 (Study Day 15)	Adverse Event
Electrocardiogram*	11 Sep 2020 (Study Day 15) - 11 Sep 2020 (Study Day 15)	Adverse Event
Ultrasound of b/l lower extremity*	11 Sep 2020 (Study Day 15) - 11 Sep 2020 (Study Day 15)	Adverse Event
Chest xray*	12 Sep 2020 (Study Day 16) - 12 Sep 2020 (Study Day 16)	Adverse Event
Left thoracostomy tube removal*	12 Sep 2020 (Study Day 16) - 12 Sep 2020 (Study Day 16)	Adverse Event
Right knee xray*	14 Sep 2020 (Study Day 18) - 14 Sep 2020 (Study Day 18)	Adverse Event
Right ankle xray*	21 Sep 2020 (Study Day 25) - 21 Sep 2020 (Study Day 25)	Adverse Event
Right knee xray*	21 Sep 2020 (Study Day 25) - 21 Sep 2020 (Study Day 25)	Adverse Event
Alprazolam	22 Sep 2020 (Study Day 26) - 30 Sep 2020 (Study Day 34)	Motor Vehicle Accident Trauma
Amitriptyline hydrochloride	22 Sep 2020 (Study Day 26) - 30 Sep 2020 (Study Day 34)	Motor Vehicle Accident Trauma
Ascorbic acid	22 Sep 2020 (Study Day 26) - 01 Oct 2020 (Study Day 35)	Motor Vehicle Accident Trauma
Baclofen	22 Sep 2020 (Study Day 26) - 27 Sep 2020 (Study Day 31)	Motor Vehicle Accident Trauma
Chest xray*	22 Sep 2020 (Study Day 26) - 22 Sep 2020 (Study Day 26)	Adverse Event
Docusate	22 Sep 2020 (Study Day 26) - 22 Sep 2020 (Study Day 26)	Motor Vehicle Accident Trauma
Enoxaparin	22 Sep 2020 (Study Day 26) - 01 Oct 2020 (Study Day 35)	Motor Vehicle Accident Trauma
Famotidine	22 Sep 2020 (Study Day 26) - 01 Oct 2020 (Study Day 35)	Motor Vehicle Accident Trauma
Hydrocodone; paracetamol	22 Sep 2020 (Study Day 26) - Ongoing	Motor Vehicle Accident Trauma
Ibuprofen	22 Sep 2020 (Study Day 26) - 01 Oct 2020 (Study Day 35)	Motor Vehicle Accident Trauma
Lidocaine	22 Sep 2020 (Study Day 26) - 01 Oct 2020 (Study Day 35)	Motor Vehicle Accident Trauma

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Prazosin	22 Sep 2020 (Study Day 26) - 30 Sep 2020 (Study Day 34)	Motor Vehicle Accident Trauma
Topiramate	22 Sep 2020 (Study Day 26) - 01 Oct 2020 (Study Day 35)	Motor Vehicle Accident Trauma
Magnesium oxide	23 Sep 2020 (Study Day 27) - 01 Oct 2020 (Study Day 35)	Motor Vehicle Accident Trauma
Nicotine	23 Sep 2020 (Study Day 27) - 01 Oct 2020 (Study Day 35)	Motor Vehicle Accident Trauma
Vitamins nos	23 Sep 2020 (Study Day 27) - 01 Oct 2020 (Study Day 35)	Motor Vehicle Accident Trauma
Melatonin	24 Sep 2020 (Study Day 28) - 30 Sep 2020 (Study Day 34)	Motor Vehicle Accident Trauma
Xray right knee*	29 Sep 2020 (Study Day 33) - 29 Sep 2020 (Study Day 33)	Adverse Event
Pregabalin	30 Sep 2020 (Study Day 34) - 01 Oct 2020 (Study Day 35)	Motor Vehicle Accident Trauma
Xray of right knee*	30 Sep 2020 (Study Day 34) - 30 Sep 2020 (Study Day 34)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Pleural Effusion	Grade 2/moderate	Not related	06 Sep 2020 (Study Day 10) - Ongoing
Substance Abuse	Grade 2/moderate	Not related	06 Sep 2020 (Study Day 10) - Ongoing
Respiratory Distress	Grade 1/mild	Not related	09 Sep 2020 (Study Day 13) - 01 Oct 2020 (Study Day 35)
Insomnia	Grade 1/mild	Not related	13 Sep 2020 (Study Day 17) - Ongoing
Urinary Tract Infection	Grade 1/mild	Not related	13 Sep 2020 (Study Day 17) - 08 Oct 2020 (Study Day 42)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US394-2036 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	29 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Sepsis/Sepsis	SAE	Grade 3/ severe	Not related	12 Dec 2020 (Study Day 104) – 24 Dec 2020 (Study Day 116)	Recovered/ resolved
Type 2 Diabetes Mellitus/Worsening Of Diabetes Mellitus Ii	SAE	Grade 3/ severe	Not related	12 Dec 2020 (Study Day 104) – 24 Dec 2020 (Study Day 116)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US394-2036, a 45-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 29 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Dec 2020 (Study Day 104), 103 days after the first dose and 74 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of sepsis. Action taken with the IP was not applicable. The event of sepsis lasted for 13 days, after which it was considered to be recovered/resolved on 24 Dec 2020 (Study Day 116). The investigator assessed the event of sepsis to be not related to the IP.

On 12 Dec 2020 (Study Day 104), 103 days after the first dose and 74 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of type 2 diabetes mellitus. Action taken with the IP was not applicable. The event of worsening of diabetes mellitus ii lasted for 13 days, after which it was considered to be recovered/resolved on 24 Dec 2020 (Study Day 116). The investigator assessed the event of type 2 diabetes mellitus to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001169	Sepsis
MOD-2020-001169	Type 2 diabetes mellitus

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 2 diabetes mellitus	Diabetes mellitus ii	2014 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin glargine	2014 - Ongoing	Diabetes Mellitus Ii
Abdomen/pelvis ct*	13 Dec 2020 (Study Day 105) - 13 Dec 2020 (Study Day 105)	Adverse Event
Buttock ultrasound*	13 Dec 2020 (Study Day 105) - 13 Dec 2020 (Study Day 105)	Adverse Event
Calcium chloride; potassium chloride; sodium lactate	13 Dec 2020 (Study Day 105) - 20 Dec 2020 (Study Day 112)	Sepsis
Cefepime	13 Dec 2020 (Study Day 105) - 13 Dec 2020 (Study Day 105)	Perineal Abcess
Chest x-ray*	13 Dec 2020 (Study Day 105) - 13 Dec 2020 (Study Day 105)	Adverse Event
Docusate	13 Dec 2020 (Study Day 105) - 24 Dec 2020 (Study Day 116)	Sepsis
Glucose; sodium chloride	13 Dec 2020 (Study Day 105) - 13 Dec 2020 (Study Day 105)	Sepsis
Insulin	13 Dec 2020 (Study Day 105) - 13 Dec 2020 (Study Day 105)	Diabetes Mellitis Ii
Insulin aspart	13 Dec 2020 (Study Day 105) - 24 Dec 2020 (Study Day 116)	Diabetes Mellitus Ii
Magnesium sulfate	13 Dec 2020 (Study Day 105) - 15 Dec 2020 (Study Day 107)	Sepsis
Morphine	13 Dec 2020 (Study Day 105) - 20 Dec 2020 (Study Day 112)	Perineal Abscess

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ondansetron	13 Dec 2020 (Study Day 105) - 13 Dec 2020 (Study Day 105)	Sepsis
Oxycodone	13 Dec 2020 (Study Day 105) - 24 Dec 2020 (Study Day 116)	Perineal Abscess
Paracetamol	13 Dec 2020 (Study Day 105) - 24 Dec 2020 (Study Day 116)	Perineal Abscess
Piperacillin; tazobactam	13 Dec 2020 (Study Day 105) - 20 Dec 2020 (Study Day 112)	Sepsis
Potassium chloride	13 Dec 2020 (Study Day 105) - 13 Dec 2020 (Study Day 105)	Sepsis
Potassium phosphate dibasic	13 Dec 2020 (Study Day 105) - 15 Dec 2020 (Study Day 107)	Sepsis
Sodium chloride	13 Dec 2020 (Study Day 105) - 13 Dec 2020 (Study Day 105)	Diabetes Mellitis Ii
Vancomycin	13 Dec 2020 (Study Day 105) - 20 Dec 2020 (Study Day 112)	Perineal Abcess
Insulin glargine	14 Dec 2020 (Study Day 106) - 16 Dec 2020 (Study Day 108)	Worsening Of Diabetes Mellitus Ii
Oxycodone	14 Dec 2020 (Study Day 106) - 24 Dec 2020 (Study Day 116)	Perineal Abscess
Hydrocodone bitartrate; paracetamol	15 Dec 2020 (Study Day 107) - 21 Dec 2020 (Study Day 113)	Perineal Abscess
Hydromorphone	15 Dec 2020 (Study Day 107) - 21 Dec 2020 (Study Day 113)	Sepsis
Naproxen	15 Dec 2020 (Study Day 107) - 18 Dec 2020 (Study Day 110)	Perineal Abscess
Pelvic ultrasound*	15 Dec 2020 (Study Day 107) - 15 Dec 2020 (Study Day 107)	Adverse Event
Right thigh wound debridement*	16 Dec 2020 (Study Day 108) - 16 Dec 2020 (Study Day 108)	Adverse Event
Scrotum ultrasound*	16 Dec 2020 (Study Day 108) - 16 Dec 2020 (Study Day 108)	Adverse Event
Clindamycin	17 Dec 2020 (Study Day 109) - 23 Dec 2020 (Study Day 115)	Perineal Abscess
Insulin glargine	17 Dec 2020 (Study Day 109) - 19 Dec 2020 (Study Day 111)	Worsening Of Diabetes Mellitus Ii
Fentanyl	18 Dec 2020 (Study Day 110) - 18 Dec 2020 (Study Day 110)	Perineal Abscess
Insulin glargine	20 Dec 2020 (Study Day 112) - 20 Dec 2020 (Study Day 112)	Worsening Of Diabetes Mellitus Ii
Macrogol 3350	20 Dec 2020 (Study Day 112) - 24 Dec 2020 (Study Day 116)	Sepsis
Sodium hypochlorite	20 Dec 2020 (Study Day 112) - 31 Dec 2020 (Study Day 123)	Perineal Abcess
Insulin glargine	21 Dec 2020 (Study Day 113) - 21 Dec 2020 (Study Day 113)	Worsening Of Diabetes Mellitus Ii
Glucose	22 Dec 2020 (Study Day 114) - 24 Jan 2021 (Study Day 147)	Worsening Of Diabetes Mellitus Ii
Insulin glargine	22 Dec 2020 (Study Day 114) - 22 Dec 2020 (Study Day 114)	Worsening Of Diabetes Mellitus Ii

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Clindamycin	24 Dec 2020 (Study Day 116) - Ongoing	Perineal Abcess
Ibuprofen	24 Dec 2020 (Study Day 116) - Ongoing	Diabetic Sore
Insulin aspart	24 Dec 2020 (Study Day 116) - Ongoing	Diabetes Mellitis Ii
Insulin glargine	24 Dec 2020 (Study Day 116) - Ongoing	Diabetes Mellitis Ii
Oxycodone	24 Dec 2020 (Study Day 116) - Ongoing	Diabetic Sore
Oxycodone	24 Dec 2020 (Study Day 116) - 31 Dec 2020 (Study Day 123)	Perineal Abcess

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious event is presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Perineal Abscess	Grade 3/severe	Not related	12 Dec 2020 (Study Day 104) - 31 Dec 2020 (Study Day 123)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US394-2151 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	12 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Femur Fracture/Left Femur Fracture	SAE, AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	13 Oct 2020 (Study Day 2) – 22 Nov 2020 (Study Day 42)	Recovered/ resolved
Joint Injury/Right Knee Injury	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	13 Oct 2020 (Study Day 2) – 22 Nov 2020 (Study Day 42)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US394-2151, a 54-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 12 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 13 Oct 2020 (Study Day 2), 1 day after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild serious adverse event of femur fracture. On 08 Nov 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of left femur fracture lasted for 41 days, after which it was considered to be recovered/resolved on 22 Nov 2020 (Study Day 42). The investigator assessed the event of femur fracture to be not related to the IP.

On 13 Oct 2020 (Study Day 2), 1 day after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of joint injury. On 08 Nov 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of right knee injury lasted for 41 days, after which it was considered to be recovered/resolved on 22 Nov 2020 (Study Day 42). The investigator assessed the event of joint injury to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000548	Femur fracture

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	1975 - Ongoing
Tonsillar hypertrophy	Tonsil enlargement	1979 - 1979
Tonsillectomy	Tonsilectomy	1979 - 1979
Caesarean section	Cesarean section	24 Sep 1985 (Study Day -12802) - 24 Sep 1985 (Study Day -12802)
Facial bones fracture	Multiple facial fractures	1991 - 1991
Facial operation	Facial repair	1991 - 1991
Hip fracture	Rt hip fracture	1992 - 1992
Hip surgery	Rt hip repair	1992 - 1992
Joint arthroplasty	Rt arm, elbow and wrist repair	1992 - 1992
Limb operation	Right leg repair	1992 - 1992
Lower limb fracture	Rt leg fracture	1992 - 1992
Upper limb fracture	Rt arm fracture	1992 - 1992
Upper limb fracture	Rt elbow fracture	1992 - 1992
Wrist fracture	Rt wrist fracture	1992 - 1992
Cholecystectomy	Cholecystectomy	1993 - 1993
Cholelithiasis	Gall stones	1993 - 1993
Ankle fracture	Left ankle fracture	1996 - 1996
Ankle operation	Lft ankle repair	1996 - 1996
Depression	Depression/anxiety	2000 - Ongoing
Neuropathy peripheral	Neuropathy	2000 - Ongoing
Oedema peripheral	Edema in lower limbs	2000 - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus ii	2000 - Ongoing
Pain	Chronic pain	2009 - Ongoing
Drug hypersensitivity	Diflucan allergy	2012 - Ongoing
Bipolar disorder	Bipolar disorder	2013 - Ongoing
Drug hypersensitivity	Januvia allergy	2014 - Ongoing
Gastrooesophageal reflux disease	Gastroesophogeal reflux disease	2014 - Ongoing
Hypokalaemia	Hypokalemia	2014 - Ongoing
Seasonal allergy	Seasonal allergies	2014 - Ongoing
Osteoarthritis	Osteoarthritis of the right knee	2015 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2016 - Ongoing
Osteoarthritis	Degenerative joint disease pelvis	12 Jan 2016 (Study Day -1735) - Ongoing
Rotator cuff syndrome	Impingement syndrome shoulder	12 Jan 2016 (Study Day -1735) - Ongoing
Breast mass	Nodule of breast skin unspecified site	29 Jan 2016 (Study Day -1718) - Ongoing
Breast mass	Breast lump unspecified location	09 Feb 2016 (Study Day -1707) - Ongoing
Bronchitis	Bronchitis	19 Jun 2016 (Study Day -1576) - Not reported
Upper respiratory tract infection	Upper respiratory infection	19 Jun 2016 (Study Day -1576) - Not reported
Diarrhoea	Diarrhea	23 Jun 2016 (Study Day -1572) - Ongoing
Anaemia	Anemia	2017 - Ongoing
Hyperlipidaemia	Hyperlipidimia	2017 - Ongoing
Osteoarthritis	Osteoarthritis of the left knee	2017 - 24 Feb 2020 (Study Day -231)
Diabetic retinopathy	Mild non-proliferative diabetic retinopathy	28 Aug 2017 (Study Day -1141) - Ongoing
Upper respiratory tract infection	Acute upper respiratory infection	20 Sep 2017 (Study Day -1118) - 30 Sep 2017 (Study Day -1108)
Ear pain	Bilateral earache	31 Oct 2017 (Study Day -1077) - Nov 2017
Hypoglycaemia	Hypoglycemia	2018 - Ongoing
Postmenopause	Post menopausal	Oct 2018 - Ongoing
Postmenopause	Post menopausal	Oct 2018 - Ongoing
Nail dystrophy	Dystrophia unguium	13 Dec 2018 (Study Day -669) - Ongoing
Dental caries	Tooth decay	2019 - 25 Aug 2020 (Study Day -48)
Onycholysis	Onycholysis	19 Jun 2019 (Study Day -481) - Jul 2019
Osteopenia	Osteopenia	23 Jun 2019 (Study Day -477) - Ongoing
Knee arthroplasty	Left knee arthroplasty/ total replacement	24 Feb 2020 (Study Day -231) - 24 Feb 2020 (Study Day -231)
Nasal congestion	Nasal congestion	20 Aug 2020 (Study Day -53) - Ongoing
Oral surgery	Oral surgery for implants	25 Aug 2020 (Study Day -48) - 25 Aug 2020 (Study Day -48)
Knee arthroplasty	Rt knee arthroplasty/ total replacement	05 Oct 2020 (Study Day -7) - 05 Oct 2020 (Study Day -7)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bupropion hydrochloride	2000 - Ongoing	Depression
Furosemide	2000 - Ongoing	Edema, Lower Limbs
Gabapentin	2000 - Ongoing	Neuropathy
Glipizide	2000 - Ongoing	Diabetes Mellitus Ii
Metformin	2000 - Ongoing	Diabetes Mellitus Ii
Citalopram hydrobromide	2009 - Ongoing	Depression/Anxiety
Meloxicam	2009 - Ongoing	Chronic Pain

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Topiramate	2013 - Ongoing	Depression/Anxiety
Omeprazole	2014 - 17 Oct 2020 (Study Day 6)	Gastroesophageal Reflux Disease
Potassium	2014 - Ongoing	Hypokalemia
Losartan	2016 - Ongoing	Hypertension
Acetylsalicylic acid	2017 - Ongoing	Cardiac Prophylaxis
Canagliflozin	2017 - Ongoing	Diabetes Mellitus Ii
Iron	2017 - 17 Oct 2020 (Study Day 6)	Anemia
Montelukast sodium	2017 - Ongoing	Seasonal Allergies
Pravastatin	2017 - 17 Oct 2020 (Study Day 6)	Hyperlipidemia
Doxepin	2018 - Ongoing	Depression/Anxiety
Liraglutide	2018 - Ongoing	Diabetes Mellitus Ii
Tramadol	2018 - Ongoing	Chronic Pain
Ibuprofen	05 Oct 2020 (Study Day -7) - Ongoing	Knee Pain, Osteoarthritis
Paracetamol	05 Oct 2020 (Study Day -7) - 17 Oct 2020 (Study Day 6)	Knee Pain, Osteoarthritis
Oxycodone	10 Oct 2020 (Study Day -2) - 01 Nov 2020 (Study Day 21)	Knee Pain, Osteoarthritis; Left Femur Injury
Left femur xray*	17 Oct 2020 (Study Day 6) - 17 Oct 2020 (Study Day 6)	Adverse Event
Left hip xray*	17 Oct 2020 (Study Day 6) - 17 Oct 2020 (Study Day 6)	Adverse Event
Left knee xray*	17 Oct 2020 (Study Day 6) - 17 Oct 2020 (Study Day 6)	Adverse Event
Pelvis xray*	17 Oct 2020 (Study Day 6) - 17 Oct 2020 (Study Day 6)	Adverse Event
Ascorbic acid	18 Oct 2020 (Study Day 7) - 22 Oct 2020 (Study Day 11)	Supplement
Atorvastatin	18 Oct 2020 (Study Day 7) - 22 Oct 2020 (Study Day 11)	Hyperlipidemia
Ct left knee without contrast*	18 Oct 2020 (Study Day 7) - 18 Oct 2020 (Study Day 7)	Adverse Event
Ferrous sulfate	18 Oct 2020 (Study Day 7) - 22 Oct 2020 (Study Day 11)	Supplement
Gabapentin	18 Oct 2020 (Study Day 7) - 19 Oct 2020 (Study Day 8)	Neuropathy
Hydromorphone	18 Oct 2020 (Study Day 7) - 22 Oct 2020 (Study Day 11)	Left Femur Fracture
Insulin	18 Oct 2020 (Study Day 7) - 22 Oct 2020 (Study Day 11)	Diabetes Mellitus Ii
Loperamide hydrochloride	18 Oct 2020 (Study Day 7) - 18 Oct 2020 (Study Day 7)	Diarrhea
Oxycodone	18 Oct 2020 (Study Day 7) - 22 Oct 2020 (Study Day 11)	Left Femur Fracture
Pantoprazole	18 Oct 2020 (Study Day 7) - 22 Oct 2020 (Study Day 11)	Gastroesphageal Reflux Disease
Paracetamol	18 Oct 2020 (Study Day 7) - 22 Oct 2020 (Study Day 11)	Left Femur Fracture

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Pramipexole	18 Oct 2020 (Study Day 7) - 22 Oct 2020 (Study Day 11)	Left Femur Injury
Blood transfusion (6 units)*	19 Oct 2020 (Study Day 8) - 19 Oct 2020 (Study Day 8)	Adverse Event
Calcium chloride; potassium chloride; sodium lactate	19 Oct 2020 (Study Day 8) - 20 Oct 2020 (Study Day 9)	Nutritional Supplement
Fentanyl	19 Oct 2020 (Study Day 8) - 19 Oct 2020 (Study Day 8)	Left Femur Fracture
Left distal femur replacement*	19 Oct 2020 (Study Day 8) - 19 Oct 2020 (Study Day 8)	Adverse Event
Left femur xray*	19 Oct 2020 (Study Day 8) - 19 Oct 2020 (Study Day 8)	Adverse Event
Gabapentin	20 Oct 2020 (Study Day 9) - 22 Oct 2020 (Study Day 11)	Neuropathy

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious event is presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Joint Injury	Grade 2/moderate	Not related	13 Oct 2020 (Study Day 2) - 22 Nov 2020 (Study Day 42)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US395-2004 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	04 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	06 Oct 2020 (Study Day 33)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Spondylolisthesis/Worsening Of Degenerative Spondylolithesis	SAE	Grade 3/ severe	Not related	22 Nov 2020 (Study Day 80) – 24 Dec 2020 (Study Day 112)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US395-2004, a 69-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 04 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 06 Oct 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 22 Nov 2020 (Study Day 80), 79 days after the first dose and 47 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of spondylolisthesis. Action taken with the IP was not applicable. The event of worsening of degenerative spondylolithesis lasted for 33 days, after which it was considered to be recovered/resolved on 24 Dec 2020 (Study Day 112). The investigator assessed the event of spondylolisthesis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-012108	Spondylolisthesis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1956 - Ongoing
Menopause	Menopause	1990 - Ongoing
Glaucoma	Glaucoma	2000 - Ongoing
Gastrooesophageal reflux disease	Gerd	2010 - Ongoing
Intervertebral disc protrusion	Herniated lumbar disks	2010 - Ongoing
Osteoarthritis	Osteoarthritis	2010 - Ongoing
Spondylolisthesis	Degenerative spondylolisthesis	2010 - Ongoing
Cataract	Right eye cataract	2015 - 2015
Cataract operation	Right eye cataract surgery	2015 - 2015
Hyperlipidaemia	Hyperlipidemia	2015 - Ongoing
Hypertension	Hypertension	2015 - Ongoing
Depression	Depression	2017 - Ongoing
Rosacea	Rosacea	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Betaxolol hydrochloride	2000 - Ongoing	Glaucoma
Montelukast	2010 - Ongoing	Seasonal Allergies
Acetylsalicylic acid	2015 - Ongoing	Cardiac Prophylaxis
Azelastine hydrochloride; fluticasone propionate	2015 - Ongoing	Seasonal Allergies
Famotidine	2015 - Ongoing	Gerd
Rosuvastatin	2015 - Ongoing	Hyperlipidemia
Escitalopram oxalate	2017 - Ongoing	Depression
Amlodipine	Sep 2019 - 19 Oct 2020 (Study Day 46)	Hypertension
Gabapentin	22 Feb 2020 (Study Day -195) - 24 Dec 2020 (Study Day 112)	Post-Op Pain
Diclofenac	May 2020 - 16 Oct 2020 (Study Day 43)	Herniated Lumbar Disks
Steroids	12 Jun 2020 (Study Day -84) - Ongoing	Herniated Lumbar Disks
Doxycycline	04 Sep 2020 (Study Day 1) - 22 Sep 2020 (Study Day 19)	Rosacea
Metronidazole	04 Sep 2020 (Study Day 1) - Ongoing	Rosacea
Pimecrolimus	04 Sep 2020 (Study Day 1) - Ongoing	Rosacea
Sulfacetamide	04 Sep 2020 (Study Day 1) - Ongoing	Rosacea
Amlodipine	19 Oct 2020 (Study Day 46) - Ongoing	Hypertension

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	26 Oct 2020 (Study Day 53) - 26 Oct 2020 (Study Day 53)	Influenza Prevention
Betaxolol	22 Dec 2020 (Study Day 110) - 24 Dec 2020 (Study Day 112)	Glaucoma
Calcium chloride; potassium chloride; sodium lactate	22 Dec 2020 (Study Day 110) - 23 Dec 2020 (Study Day 111)	Post-Op Fluids
Cefazolin sodium	22 Dec 2020 (Study Day 110) - 22 Dec 2020 (Study Day 110)	Post-Op Prophylaxis
Dexamethasone	22 Dec 2020 (Study Day 110) - 22 Dec 2020 (Study Day 110)	Post-Op Pain
Gabapentin	22 Dec 2020 (Study Day 110) - 22 Dec 2020 (Study Day 110)	Post Op Pain
Gentamicin	22 Dec 2020 (Study Day 110) - 22 Dec 2020 (Study Day 110)	Post-Op Prophylaxis
Hydromorphone hydrochloride	22 Dec 2020 (Study Day 110) - 22 Dec 2020 (Study Day 110)	Post-Op Pain
Lumbar fusion; lumbar laminectomy*	22 Dec 2020 (Study Day 110) - 22 Dec 2020 (Study Day 110)	Adverse Event
Magnesium sulfate	22 Dec 2020 (Study Day 110) - 22 Dec 2020 (Study Day 110)	Post-Op Pain
Oxycodone	22 Dec 2020 (Study Day 110) - 22 Dec 2020 (Study Day 110)	Post-Op Pain
Paracetamol	22 Dec 2020 (Study Day 110) - 22 Dec 2020 (Study Day 110)	Post-Op Pain
Sennoside a+b	22 Dec 2020 (Study Day 110) - 23 Dec 2020 (Study Day 111)	Constipation
Tranexamic acid	22 Dec 2020 (Study Day 110) - 22 Dec 2020 (Study Day 110)	Post-Op Bleeding
Xr l spine 1 vw*	22 Dec 2020 (Study Day 110) - 22 Dec 2020 (Study Day 110)	Other, Intraoperative Imaging
Dexamethasone	23 Dec 2020 (Study Day 111) - 23 Dec 2020 (Study Day 111)	Post-Op Pain
Ondansetron	23 Dec 2020 (Study Day 111) - 23 Dec 2020 (Study Day 111)	Post-Op Nausea
Paracetamol	23 Dec 2020 (Study Day 111) - 24 Dec 2020 (Study Day 112)	Post-Op Pain
Hydrocodone	27 Dec 2020 (Study Day 115) - 02 Jan 2021 (Study Day 121)	Post-Op Pain
Paracetamol	27 Dec 2020 (Study Day 115) - 02 Jan 2021 (Study Day 121)	Post-Op Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US395-2052 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	08 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	13 Oct 2020 (Study Day 36)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Giardiasis/Diarrhea From Giardia	SAE	Grade 3/severe	Not related	09 Feb 2021 (Study Day 155) – 12 Mar 2021 (Study Day 186)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US395-2052, a 74-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 08 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 13 Oct 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Feb 2021 (Study Day 155), 154 days after the first dose and 119 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of giardiasis. Action taken with the IP was not applicable. The event of diarrhea from giardia lasted for 32 days, after which it was considered to be recovered/resolved on 12 Mar 2021 (Study Day 186). The investigator assessed the event of giardiasis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-040015	Giardiasis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	1947 - 1947
Wisdom teeth removal	Wisdom teeth removal	1963 - 1963
Basal cell carcinoma	Basal cell skin cancer	1975 - 2015
Keratotomy	Radial keratotomy	1982 - 1982
Keratotomy	Radial keratotomy	1984 - 1984
Obesity	Obesity	1994 - Ongoing
Hysterectomy	Complete hysterectomy	1998 - 1998
Hyperlipidaemia	Hyperlipidemia	2012 - Ongoing
Type 2 diabetes mellitus	Type ii diabetes	2012 - Ongoing
Cataract operation	Bilateral cataract surgery	2015 - 2015
Rotator cuff repair	Bilateral rotator cuff repair	2017 - 2017
Retinal tear	Right torn retina	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2005 - Ongoing	Cardiac Prophylaxis
Exenatide	2012 - Ongoing	Type Ii Diabetes
Metformin	2012 - 19 Jan 2021 (Study Day 134)	Type Ii Diabetes
Glipizide	2018 - 15 Oct 2020 (Study Day 38)	Type Ii Diabetes
Pneumococcal vaccine polysacch 23v	03 Feb 2020 (Study Day -218) - 03 Feb 2020 (Study Day -218)	Pneumonia Vaccine
Influenza vaccine	24 Aug 2020 (Study Day -15) - 24 Aug 2020 (Study Day -15)	Influenza Vaccine
Fenofibrate	Dec 2020 - Ongoing	Hyperlipidemia
Metformin	20 Jan 2021 (Study Day 135) - 09 Feb 2021 (Study Day 155)	Type Ii Diabetes
Metformin	09 Feb 2021 (Study Day 155) - Ongoing	Type Ii Diabetes
Azithromycin	24 Feb 2021 (Study Day 170) - 26 Feb 2021 (Study Day 172)	Traveler's Diarrhea
Glipizide	24 Feb 2021 (Study Day 170) - Ongoing	Type Ii Diabetes
Enoxaparin sodium	06 Mar 2021 (Study Day 180) - 13 Mar 2021 (Study Day 187)	Right Pulmonary Embolism
Metronidazole	08 Mar 2021 (Study Day 182) - 12 Mar 2021 (Study Day 186)	Diarrhea From Giardia
Dabigatran etexilate mesilate	14 Mar 2021 (Study Day 188) - Ongoing	Right Pulmonary Embolism

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US395-2104 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	17 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hip Fracture/Hip Fracture	SAE, AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	05 Oct 2020 (Study Day 19) – 08 Oct 2020 (Study Day 22)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US395-2104, a 67-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 17 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 05 Oct 2020 (Study Day 19), 18 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of hip fracture. On 14 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of hip fracture lasted for 4 days, after which it was considered to be recovered/resolved on 08 Oct 2020 (Study Day 22). The investigator assessed the event of hip fracture to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000494	Hip fracture

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma	1957 - Ongoing
Lower limb fracture	Broken leg	07 Dec 2002 (Study Day -6494) - 07 Dec 2002 (Study Day -6494)
Prostatomegaly	Enlarged prostate	2014 - Ongoing
Oedema peripheral	Bilateral lower extremity edema	2019 - Ongoing
Seasonal allergy	Seasonal allergies	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Boron; chromium; copper; germanium; iodine; manganese; molybdenum; selenium; silicon; sitosterol; vanadium; vitamin d nos; zinc	2014 - Ongoing	Enlarged Prostate
Diphenhydramine hydrochloride	2020 - Ongoing	Seasonal Allergies
Pneumococcal vaccine polysacch 23v	Apr 2020 - Apr 2020	Pneumonia Vaccine
Calcium chloride; potassium chloride; sodium lactate	07 Oct 2020 (Study Day 21) - 08 Oct 2020 (Study Day 22)	Hip Fracture
Enoxaparin sodium	07 Oct 2020 (Study Day 21) - 12 Oct 2020 (Study Day 26)	Hip Fracture
Sennoside a+b	07 Oct 2020 (Study Day 21) - 11 Oct 2020 (Study Day 25)	Constipation Prevention
Sodium chloride	07 Oct 2020 (Study Day 21) - 07 Oct 2020 (Study Day 21)	Hip Fracture
Cefazolin	08 Oct 2020 (Study Day 22) - 08 Oct 2020 (Study Day 22)	Hip Fracture
Left trochanteric nailing*	08 Oct 2020 (Study Day 22) - 08 Oct 2020 (Study Day 22)	Adverse Event
Morphine	08 Oct 2020 (Study Day 22) - 08 Oct 2020 (Study Day 22)	Hip Fracture
Ondansetron	08 Oct 2020 (Study Day 22) - 08 Oct 2020 (Study Day 22)	Nausea Prevention
Paracetamol	08 Oct 2020 (Study Day 22) - 08 Oct 2020 (Study Day 22)	Hip Fracture
Calcium citrate	09 Oct 2020 (Study Day 23) - 12 Oct 2020 (Study Day 26)	Hip Fracture
Colecalciferol	09 Oct 2020 (Study Day 23) - 12 Oct 2020 (Study Day 26)	Hip Fracture
Paracetamol	09 Oct 2020 (Study Day 23) - 11 Oct 2020 (Study Day 25)	Hip Fracture

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Apixaban	10 Oct 2020 (Study Day 24) - Ongoing	Deep Vein Thrombosis Prophylaxis
Macrogol 3350	11 Oct 2020 (Study Day 25) - 12 Oct 2020 (Study Day 26)	Constipation Prevention
Continued physical therapy for fractured left hip*	12 Oct 2020 (Study Day 26) - 12 Oct 2020 (Study Day 26)	Adverse Event
Calcium citrate	01 Nov 2020 (Study Day 46) - Ongoing	Prophylaxis/Bone Health [secondary To Hip Fracture]
Colecalciferol	01 Nov 2020 (Study Day 46) - 21 Nov 2020 (Study Day 66)	Prophylaxis/Bone Health [secondary To Hip Fracture]

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US395-2116 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	18 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Blood Pressure Increased/Worsening Of Baseline Elevated Grade 3 Blood Pressure	AE leading to withdrawal from study vaccine	Grade 3/severe	Not related	23 Oct 2020 (Study Day 36) – 23 Oct 2020 (Study Day 36)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US395-2116, a 75-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 18 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Oct 2020 (Study Day 36), 35 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of blood pressure increased. On 15 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of worsening of baseline elevated grade 3 blood pressure lasted for 1 day, after which it was considered to be recovered/resolved on 23 Oct 2020 (Study Day 36). The investigator assessed the event of blood pressure increased to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Rhinitis allergic	Allergic rhinitis	1959 - Ongoing
Gout	Gout [bilateral feet]	1995 - Ongoing
Diabetes mellitus	Diabetes	2007 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2007 - Ongoing
Hypertension	Hypertension	2012 - Ongoing
Erectile dysfunction	Erectile dysfunction	2013 - Ongoing
Musculoskeletal pain	Shoulder pain	2013 - Ongoing
Neck pain	Neck pain	2013 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	2015 - Ongoing
Osteoarthritis	Osteoarthritis of hip	2020 - Ongoing
Spinal osteoarthritis	Osteoarthritis of back	2020 - Ongoing
Tooth infection	Dental infection	06 Aug 2020 (Study Day -43) - 07 Sep 2020 (Study Day -11)
Cardiac murmur	Cardiac murmur	18 Sep 2020 (Study Day 1) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Allopurinol	1997 - Ongoing	Gout [bilateral Feet]
Colchicine	1997 - Ongoing	Gout [bilateral Feet]
Metformin	2007 - Ongoing	Diabetes
Lisinopril	2015 - 22 Oct 2020 (Study Day 35)	Hypertension
Sildenafil	2017 - Ongoing	Erectile Dysfunction
Tramadol	Mar 2020 - Ongoing	Osteoarthritis
Pantoprazole	Aug 2020 - Ongoing	Acid Reflux
Amoxicillin	06 Aug 2020 (Study Day -43) - 07 Sep 2020 (Study Day -11)	Dental Infection
Ibuprofen	23 Sep 2020 (Study Day 6) - 22 Oct 2020 (Study Day 35)	Osteoarthritis
Atorvastatin calcium	06 Oct 2020 (Study Day 19) - Ongoing	Hyperlipidemia
Sodium chloride	22 Oct 2020 (Study Day 35) - 23 Oct 2020 (Study Day 36)	Dehydration
Tramadol	14 Jan 2021 (Study Day 119) - Ongoing	Neck/Shoulder Pain
Diphenhydramine hydrochloride	18 Feb 2021 (Study Day 154) - Ongoing	Allergic Rhinitis
Fluocinonide	18 Feb 2021 (Study Day 154) - Ongoing	Xerosis
Loratadine	18 Feb 2021 (Study Day 154) - Ongoing	Allergic Rhinitis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Dehydration	Grade 2/moderate	Not related	22 Oct 2020 (Study Day 35) - 23 Oct 2020 (Study Day 36)
Blood Pressure Increased	Grade 3/severe	Not related	23 Oct 2020 (Study Day 36) - 23 Oct 2020 (Study Day 36)
Xerosis	Grade 2/moderate	Not related	16 Feb 2021 (Study Day 152) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US395-2141 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	23 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	28 Oct 2020 (Study Day 36)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Spinal Osteoarthritis/ Worsening Of Lumbar Spondylosis	SAE	Grade 3/severe	Not related	04 Feb 2021 (Study Day 135) – 10 Mar 2021 (Study Day 169)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US395-2141, a 63-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 23 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 28 Oct 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Feb 2021 (Study Day 135), 134 days after the first dose and 99 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of spinal osteoarthritis. Action taken with the IP was not applicable. The event of worsening of lumbar spondylosis lasted for 35 days, after which it was considered to be recovered/resolved on 10 Mar 2021 (Study Day 169). The investigator assessed the event of spinal osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-059047	Spinal osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Sulfa allergy	1975 - Ongoing
Rubber sensitivity	Latex allergy	1975 - Ongoing
Headache	Headaches	1978 - Ongoing
Postmenopause	Postmenopausal	2009 - Ongoing
Sinus headache	Sinus headaches	2010 - Ongoing
Seasonal allergy	Seasonal allergies	2017 - Ongoing
Spinal osteoarthritis	Lumbar spondylosis	Jun 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cetirizine hydrochloride	Feb 2019 - Ongoing	Seasonal Allergies
Influenza vaccine	Sep 2019 - Sep 2019	Influenza Prevention
Naproxen sodium	Aug 2020 - Ongoing	Headaches
Vitamin d nos	23 Jan 2021 (Study Day 123) - Ongoing	Vitamin D Deficiency
Gabapentin	04 Feb 2021 (Study Day 135) - Ongoing	Worsening Lumbar Spondylosis
Cefazolin sodium	10 Mar 2021 (Study Day 169) - 15 Mar 2021 (Study Day 174)	Preventative Antibiotic
Cyclobenzaprine	10 Mar 2021 (Study Day 169) - 11 Mar 2021 (Study Day 170)	Worsening Lubar Spondylosis
Docusate	10 Mar 2021 (Study Day 169) - Ongoing	Constipation
Hydromorphone hydrochloride	10 Mar 2021 (Study Day 169) - 10 Mar 2021 (Study Day 169)	Post Op Pain
Lumbar 4-5 spinal fusion [lumbar spondylolisthesis, l5-s1 stenosis, radiculopathy, and back pain]*	10 Mar 2021 (Study Day 169) - 10 Mar 2021 (Study Day 169)	Adverse Event
Ondansetron	10 Mar 2021 (Study Day 169) - 10 Mar 2021 (Study Day 169)	Nausea
Oxycodone	10 Mar 2021 (Study Day 169) - Ongoing	Worsening Lubar Spondylosis
Benzocaine; menthol	11 Mar 2021 (Study Day 170) - 11 Mar 2021 (Study Day 170)	Topical Anesthesia
Lidocaine	11 Mar 2021 (Study Day 170) - 16 Mar 2021 (Study Day 175)	Worsening Lubar Spondylosis
Lumbar spine ct w/o contrast for lumbar spondylosis*	11 Mar 2021 (Study Day 170) - 11 Mar 2021 (Study Day 170)	Adverse Event
Methocarbamol	11 Mar 2021 (Study Day 170) - Ongoing	Worsening Lubar Spondylosis
Oxycodone	11 Mar 2021 (Study Day 170) - Ongoing	Worsening Lubar Spondylosis
Paracetamol	11 Mar 2021 (Study Day 170) - Ongoing	Worsening Lubar Spondylosis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lactulose	12 Mar 2021 (Study Day 171) - 12 Mar 2021 (Study Day 171)	Constipation
Magnesium citrate	12 Mar 2021 (Study Day 171) - 12 Mar 2021 (Study Day 171)	Constipation
Oxycodone	12 Mar 2021 (Study Day 171) - 16 Mar 2021 (Study Day 175)	Worsening Lubar Spondylosis
Lumbar spine ct w/o contrast for lumbar spondylosis*	13 Mar 2021 (Study Day 172) - 13 Mar 2021 (Study Day 172)	Adverse Event
Sodium phosphate dibasic; sodium phosphate monobasic	13 Mar 2021 (Study Day 172) - 13 Mar 2021 (Study Day 172)	Constipation
Diphenhydramine	15 Mar 2021 (Study Day 174) - 15 Mar 2021 (Study Day 174)	Seasonal Allergies
Insulin aspart	15 Mar 2021 (Study Day 174) - 15 Mar 2021 (Study Day 174)	Post Op Bg Control
Lactulose	15 Mar 2021 (Study Day 174) - 15 Mar 2021 (Study Day 174)	Constipation
Mri spine w/o contrast for lumbar spondylosis*	15 Mar 2021 (Study Day 174) - 15 Mar 2021 (Study Day 174)	Adverse Event
Salbutamol	16 Mar 2021 (Study Day 175) - Ongoing	Seasonal Allergies

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious event is presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Vitamin D Deficiency	Grade 2/moderate	Not related	15 Jan 2021 (Study Day 115) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US395-2158 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	28 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Blood Pressure Diastolic Increased/Elevated Diastolic Blood Pressure	AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	26 Oct 2020 (Study Day 29) – 23 Nov 2020 (Study Day 57)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US395-2158, a 41-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 28 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 26 Oct 2020 (Study Day 29), 28 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of blood pressure diastolic increased. On 25 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of elevated diastolic blood pressure lasted for 29 days, after which it was considered to be recovered/resolved on 23 Nov 2020 (Study Day 57). The investigator assessed the event of blood pressure diastolic increased to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2011 - 2011

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	14 Dec 2020 (Study Day 78) - Ongoing	Tooth Ache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Blood Pressure Diastolic Increased	Grade 3/severe	Not related	26 Oct 2020 (Study Day 29) - 23 Nov 2020 (Study Day 57)
Toothache	Grade 1/mild	Not related	14 Dec 2020 (Study Day 78) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US395-2216 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	09 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hypertension/Hypertension	AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	06 Nov 2020 (Study Day 29) – 02 Dec 2020 (Study Day 55)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US395-2216, a 31-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 09 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Nov 2020 (Study Day 29), 28 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of hypertension. On 05 Nov 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of hypertension lasted for 27 days, after which it was considered to be recovered/resolved on 02 Dec 2020 (Study Day 55). The investigator assessed the event of hypertension to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Attention deficit hyperactivity disorder	Attention deficit hyperactivity disorder	1995 - Ongoing
Obesity	Obesity	2014 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Appendicitis	Appendicitis	30 Sep 2019 (Study Day -375) - 03 Oct 2019 (Study Day -372)
Appendicectomy	Appendectomy	03 Oct 2019 (Study Day -372) - 03 Oct 2019 (Study Day -372)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amfetamine aspartate; amfetamine sulfate; dexamfetamine saccharate; dexamfetamine sulfate	1996 - Ongoing	Attention Deficit Hyperactivity Disorder
Etonogestrel	2015 - Ongoing	Contraception
Lisinopril	17 Oct 2020 (Study Day 9) - Ongoing	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypertension	Grade 2/moderate	Not related	16 Oct 2020 (Study Day 8) – 06 Nov 2020 (Study Day 29)
Hypertension	Grade 3/severe	Not related	06 Nov 2020 (Study Day 29) - 02 Dec 2020 (Study Day 55)
Cough	Grade 2/moderate	Not related	06 Feb 2021 (Study Day 121) - 25 Feb 2021 (Study Day 140)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US396-2042 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cellulitis/Cellulitis - Right Upper Arm	SAE	Grade 3/ severe	Not related	18 Feb 2021 (Study Day 172) – 08 Mar 2021 (Study Day 190)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US396-2042, a 57-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 28 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 18 Feb 2021 (Study Day 172), 171 days after the first dose and 143 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of cellulitis. Action taken with the IP was not applicable. The event of cellulitis - right upper arm lasted for 19 days, after which it was considered to be recovered/resolved on 08 Mar 2021 (Study Day 190). The investigator assessed the event of cellulitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-022085	Cellulitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2000 - Ongoing
Migraine	Migraine headaches	2005 - Ongoing
Anxiety	Anxiety	2010 - Ongoing
Back pain	Chronic pain back	2010 - Ongoing
Depression	Depression	2010 - Ongoing
Joint range of motion decreased	Decreased range of motion neck	2010 - Ongoing
Neck pain	Chronic pain neck	2010 - Ongoing
Pain in extremity	Chronic pain left arm	2010 - Ongoing
Postmenopause	Post-menopausal	2015 - Ongoing
Intervertebral disc protrusion	Herniated disc back	Feb 2018 - Feb 2018
Shoulder operation	Right shoulder surgery	Feb 2020 - Feb 2020
Upper limb fracture	Fractured right shoulder	Feb 2020 - Feb 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2010 - Ongoing	Cardiac Prophylaxis
Fluoxetine	2010 - Ongoing	Depression
Gabapentin	2010 - Ongoing	Chronic Pain Of Neck, Back And Left Arm
Iron	2010 - Ongoing	Dietary Supplement
Mirtazapine	2010 - Ongoing	Depression And Anxiety
Vitamins nos	2010 - Ongoing	Dietary Supplement
Metoprolol succinate	2015 - Ongoing	Hypertension
Oxycodone hydrochloride; paracetamol	2015 - Ongoing	Chronic Pain Of Neck, Back And Left Arm
Lamotrigine	2019 - Ongoing	Depression
Erenumab	2020 - Ongoing	Migraine Headaches
Hydroxyzine hydrochloride	2020 - Ongoing	Anxiety
Cefalexin	18 Feb 2021 (Study Day 172) - 19 Feb 2021 (Study Day 173)	Cellulitis Right Upper Arm
Sulfamethoxazole; trimethoprim	18 Feb 2021 (Study Day 172) - 19 Feb 2021 (Study Day 173)	Cellulitis Right Upper Arm
Cefadroxil	23 Feb 2021 (Study Day 177) - 05 Mar 2021 (Study Day 187)	Cellulitis Right Upper Arm

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US397-2049 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	29 Sep 2020 (Study Day 34)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Kidney Injury/Acute Renal Failure	SAE	Grade 2/ moderate	Not related	15 Nov 2020 (Study Day 81) – 17 Nov 2020 (Study Day 83)	Recovered/ resolved
Septic Shock/Septic Shock	SAE	Grade 3/ severe	Not related	15 Nov 2020 (Study Day 81) – 04 Dec 2020 (Study Day 100)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US397-2049, a 57-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 29 Sep 2020 (Study Day 34). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Nov 2020 (Study Day 81), 80 days after the first dose and 47 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of acute kidney injury. Action taken with the IP was not applicable. The event of acute renal failure lasted for 3 days, after which it was considered to be recovered/resolved on 17 Nov 2020 (Study Day 83). The investigator assessed the event of acute kidney injury to be not related to the IP.

On 15 Nov 2020 (Study Day 81), 80 days after the first dose and 47 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of septic shock. Action taken with the IP was not applicable. The event of septic shock lasted for 20 days, after which it was considered to be recovered/resolved on 04 Dec 2020 (Study Day 100). The investigator assessed the event of septic shock to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000856	Acute kidney injury
MOD-2020-000856	Septic shock

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	1983 - Ongoing
Urinary tract infection	Urinary tract infection (recurring)	1983 - Ongoing
Autonomic dysreflexia	Dysreflexia	May 1983 - Ongoing
Bladder catheterisation	Suprapubic catheterization	May 1983 - Ongoing
Neurogenic bladder	Neurogenic bladder	May 1983 - Ongoing
Spinal cord injury cervical	Spinal cord injury (c5,c6) quadriplegic	May 1983 - Ongoing
Deep vein thrombosis	Deep vein thrombosis	1993 - 1993
Pneumonia	Pneumonia	Jan 2019 - Jan 2019
Cardiac arrest	Cardiac arrest	07 Feb 2019 (Study Day -567) - 07 Feb 2019 (Study Day -567)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine	May 1983 - Ongoing	Neurogenic Bladder
Diazepam	May 1983 - Ongoing	Neurogenic Bladder
Oxybutynin	May 1983 - 14 Nov 2020 (Study Day 80)	Neurogenic Bladder
Ascorbic acid	Jun 2010 - Ongoing	General Health Supplement
Vitamin d nos	Jun 2010 - Ongoing	General Health Supplement
Zinc	Aug 2017 - Ongoing	General Health Supplement
D-mannose	Sep 2017 - Ongoing	General Health Supplement
Cefepime	15 Nov 2020 (Study Day 81) - 20 Nov 2020 (Study Day 86)	Septic Shock
Norepinephrine	15 Nov 2020 (Study Day 81) - 17 Nov 2020 (Study Day 83)	Septic Shock
Oxybutynin	15 Nov 2020 (Study Day 81) - Ongoing	Neurogenic Bladder
Salbutamol	15 Nov 2020 (Study Day 81) - Ongoing	Wheezing
Vancomycin	15 Nov 2020 (Study Day 81) - 15 Nov 2020 (Study Day 81)	Septic Shock
Piperacillin sodium; tazobactam sodium	16 Nov 2020 (Study Day 82) - 19 Nov 2020 (Study Day 85)	Septic Shock
Replacement of suprapubic catheter*	16 Nov 2020 (Study Day 82) - 16 Nov 2020 (Study Day 82)	Medical History
Paracetamol	17 Nov 2020 (Study Day 83) - Ongoing	Fever, Pain

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	17 Nov 2020 (Study Day 83) - 24 Feb 2021 (Study Day 182)	Sepsis/Prophylaxis
Amikacin	19 Nov 2020 (Study Day 85) - 19 Nov 2020 (Study Day 85)	Septic Shock
Amoxicillin	20 Nov 2020 (Study Day 86) - 04 Dec 2020 (Study Day 100)	Septic Shock
Heparin	15 Jan 2021 (Study Day 142) - 22 Feb 2021 (Study Day 180)	Vte Prophylaxis
Docusate sodium	08 Feb 2021 (Study Day 166) - Ongoing	Constipation

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US397-2064 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	30 Sep 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cardiac Failure Congestive/ Congestive Heart Failure Exacerbation	SAE	Grade 2/ moderate	Not related	02 Sep 2020 (Study Day 3) – 05 Sep 2020 (Study Day 6)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US397-2064, a 69-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 30 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Sep 2020 (Study Day 3), 2 days after the first dose and 28 days before the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of cardiac failure congestive. The IP dose was not changed due to the congestive heart failure exacerbation. The event of congestive heart failure exacerbation lasted for 4 days, after which it was considered to be recovered/resolved on 05 Sep 2020 (Study Day 6). The investigator assessed the event of cardiac failure congestive to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000260	Congestive heart failure aggravated

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Acute myocardial infarction	Nstemi type ii	Not reported
Aortic valve incompetence	Severe aortic insufficiency	Not reported - Ongoing
Systemic lupus erythematosus	Systemic lupus erythematosus	Not reported - Ongoing
Drug hypersensitivity	Allergy to penicillin	2000 - Ongoing
Transient ischaemic attack	Transient ischemic attack	2000 - 2000
Peripheral arterial occlusive disease	Peripheral arterial disease l leg	2010 - 2011
Postmenopause	Post menopausal	2010 - Ongoing
Cardiac failure	Heart failure with preserved ejection fraction	2014 - Ongoing
Fibromyalgia	Fibromylagia	2014 - Ongoing
Blood cholesterol increased	High cholesterol	2017 - Ongoing
Drug hypersensitivity	Allergy to sulfa drug	2017 - Ongoing
Hypertension	Hypertension	2017 - Ongoing
Seasonal allergy	Seasonal allergy	2018 - Ongoing
Vitamin D deficiency	Vitamin d deficiency	2018 - Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease (copd)	2019 - Ongoing
Coronary artery disease	Non obstructive cad	Oct 2019 - Ongoing
Constipation	Constipation	08 Oct 2019 (Study Day -328) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2012 - Ongoing	Prevention Of Heart Failure
Carvedilol	2014 - Ongoing	Heart Failure With Preserved Ejection Fraction
Tramadol	2014 - Ongoing	Fibromyalgia
Rosuvastatin	2017 - Ongoing	Hypercholesterolemia
Ergocalciferol	2018 - Ongoing	Vitamin D Deficiency
Fluticasone propionate	2018 - Ongoing	Seasonal Allergies
Salbutamol	2019 - Ongoing	Copd
Tiotropium bromide	2019 - Ongoing	Copd
Losartan	Oct 2019 - 17 Sep 2020 (Study Day 18)	Hypertension
Macrogol 3350	08 Oct 2019 (Study Day -328) - Ongoing	Constipation
Bumetanide	Jan 2020 - Ongoing	Heart Failure With Preserved Ejection Fraction

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bumetanide	02 Sep 2020 (Study Day 3) - 02 Sep 2020 (Study Day 3)	Congestive Heart Failure
Losartan	18 Sep 2020 (Study Day 19) - 19 Nov 2020 (Study Day 81)	Hypertension
Benign polypectomy*	06 Oct 2020 (Study Day 37) - 06 Oct 2020 (Study Day 37)	Diagnostic
Routine colonoscopy*	06 Oct 2020 (Study Day 37) - 06 Oct 2020 (Study Day 37)	Diagnostic
Amlodipine	19 Nov 2020 (Study Day 81) - Ongoing	Hypertension
Influenza vaccine	19 Nov 2020 (Study Day 81) - 19 Nov 2020 (Study Day 81)	Flu Prevention
Pneumococcal vaccine	19 Nov 2020 (Study Day 81) - 19 Nov 2020 (Study Day 81)	Pneumonia Prevention
Computed tomography (ct scan) of chest*	30 Nov 2020 (Study Day 92) - 30 Nov 2020 (Study Day 92)	Medical History
Clindamycin	31 Dec 2020 (Study Day 123) - 07 Jan 2021 (Study Day 130)	Tooth Infection (Third Top Molar Abscess)
Diphenhydramine hydrochloride	31 Dec 2020 (Study Day 123) - 07 Jan 2021 (Study Day 130)	Suspected Allergic Reaction To Clindamycin. Per M.D At V4 - Not Determined To Be An Allergic Reaction
Annual mammograms*	13 Jan 2021 (Study Day 136) - 13 Jan 2021 (Study Day 136)	Other, Routine

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Large Intestine Polyp	Grade 1/mild	Not related	06 Oct 2020 (Study Day 37) - 07 Oct 2020 (Study Day 38)
Tooth Abscess	Grade 2/moderate	Not related	29 Dec 2020 (Study Day 121) - Ongoing
Dermatitis	Grade 1/mild	Not related	31 Dec 2020 (Study Day 123) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US397-2097 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	01 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hypertensive Urgency/ Hypertensive Urgency	SAE	Grade 3/ severe	Not related	08 Jan 2021 (Study Day 128) – 10 Jan 2021 (Study Day 130)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US397-2097, a 67-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 03 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 01 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Jan 2021 (Study Day 128), 127 days after the first dose and 99 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of hypertensive urgency. Action taken with the IP was not applicable. The event of hypertensive urgency lasted for 3 days, after which it was considered to be recovered/resolved on 10 Jan 2021 (Study Day 130). The investigator assessed the event of hypertensive urgency to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-003115	Hypertensive urgency

Study Completion/Discontinuation

On 29 Jan 2021 (Study Day 149), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Lactose intolerance	Lactose intolerance	(b) (6) 1952 (Study Day(b) (6)) - Ongoing
Hypertension	Hypertension	1971 - Ongoing
Cataract	Cataracts bilateral	1980 - Sep 2019
Hypercholesterolaemia	Hypercholesterolemia	1980 - Ongoing
Transient ischaemic attack	History of t.i.a (transient ischemic attack)	2000 - 2008
Myocardial infarction	History of heart attack	2002 - 2013
Cerebrovascular accident	History of strokes	2004 - 2010
Erectile dysfunction	Erectile dysfunction	2010 - Ongoing
Asthma	Mild asthma	2015 - Ongoing
Sleep apnoea syndrome	Sleep apnea	Sep 2019 - Ongoing
Prostatomegaly	Enlarged prostate	Jun 2020 - Ongoing
Hemiparesis	Hemiparesis, secondary to cva	03 Sep 2020 (Study Day 1) - Ongoing
Oedema peripheral	Bilateral edema of ankles	03 Sep 2020 (Study Day 1) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	1971 - Ongoing	Hypertension
Acetylsalicylic acid	1980 - Ongoing	Blood Clot Prophylaxis
Atorvastatin	1980 - 05 Jan 2021 (Study Day 125)	Hyperlipidemia
Carvedilol	1980 - Ongoing	Hypertension
Clopidogrel	2013 - Ongoing	Prophylaxis For Heart Attacks
Nifedipine	2013 - 05 Jan 2021 (Study Day 125)	Heart Stent
Sildenafil	2015 - Ongoing	Erectile Dysfunction
Eplerenone	2019 - Ongoing	Hypertension
Ascorbic acid; betacarotene; cupric oxide; tocopheryl acetate; zinc oxide	Sep 2019 - Ongoing	Post Op Eye Recover
Fluticasone propionate	Sep 2019 - Ongoing	Asthma
Ascorbic acid; betacarotene; biotin; calcium carbonate; calcium pantothenate; chromic chloride; colecalciferol; cupric oxide; cyanocobalamin; dl-alpha tocopheryl acetate; folic acid; lycopene; magnesi	01 Jan 2020 (Study Day -246) - Ongoing	General Health
Vitamin b12 nos	Mar 2020 - Ongoing	General Health
Tamsulosin	Jun 2020 - Ongoing	Enlarged Prostate
Ipratropium; salbutamol	05 Aug 2020 (Study Day -29) - Ongoing	Asthma

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin calcium	05 Jan 2021 (Study Day 125) - Ongoing	Hypercholesterolemia
Nifedipine	05 Jan 2021 (Study Day 125) - Ongoing	Hypertension
Other viral vaccines	27 Jan 2021 (Study Day 147) - 27 Jan 2021 (Study Day 147)	COVID-19 Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US397-2104 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	01 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Vomiting/Intractable Vomiting	SAE	Grade 3/ severe	Not related	28 Mar 2021 (Study Day 207) – 29 Mar 2021 (Study Day 208)	Recovered/ resolved
Depression/Depession	SAE	Grade 3/ severe	Not related	08 Apr 2021 (Study Day 218) – 13 Apr 2021 (Study Day 223)	Recovered/ resolved
Substance-Induced Mood Disorder/Substance Induced Mood Disorder, Alcohol Use Disorder Severe-Withdrawal,hyperglycemia Sleeplessnes	SAE	Grade 3/ severe	Not related	08 Apr 2021 (Study Day 218) – 13 Apr 2021 (Study Day 223)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US397-2104, a 55-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 03 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 01 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Mar 2021 (Study Day 207), 206 days after the first dose and 178 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of vomiting. Action taken with the IP was not applicable. The event of intractable vomiting lasted for 2 days, after which it was considered to be recovered/resolved on 29 Mar 2021 (Study Day 208). The investigator assessed the event of vomiting to be not related to the IP.

On 08 Apr 2021 (Study Day 218), 217 days after the first dose and 189 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of depression. The IP dose was not changed due to the depression. The event of depression lasted for 6 days, after which it was considered to be recovered/resolved on 13 Apr 2021 (Study Day 223). The investigator assessed the event of depression to be not related to the IP.

On 08 Apr 2021 (Study Day 218), 217 days after the first dose and 189 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of substance-induced mood disorder. Action taken with the IP was not applicable. The event of substance induced mood disorder, alcohol use disorder severe-withdrawal, hyperglycemia sleeplessness lasted for 6 days, after which it was considered to be recovered/resolved on 13 Apr 2021 The investigator assessed the event of substance-induced mood disorder to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-061289	Vomiting
MOD-2021-080860	Substance-induced mood disorder
MOD-2021-080860	Depression

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Neuropathy peripheral	Neuropathy on both feet	08 Feb 2019 (Study Day -573) - Ongoing
Hypertension	Hypertension	Mar 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Gabapentin	08 Feb 2019 (Study Day -573) - Ongoing	Neuropathy Both Feet
Lisinopril	Mar 2019 - Ongoing	Hypertension
Vitamin b nos	Mar 2019 - Ongoing	General Health
Paracetamol	01 Oct 2020 (Study Day 29) - 03 Oct 2020 (Study Day 31)	Mild Pain In Injection Site

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Decreased Appetite	Grade 1/mild	Not related	15 Feb 2021 (Study Day 166) - Ongoing
Dyspnoea	Grade 1/mild	Not related	15 Feb 2021 (Study Day 166) - Ongoing
Fatigue	Grade 1/mild	Not related	15 Feb 2021 (Study Day 166) - Ongoing
Nausea	Grade 1/mild	Not related	15 Feb 2021 (Study Day 166) - Ongoing
Vomiting	Grade 1/mild	Not related	15 Feb 2021 (Study Day 166) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US397-2116 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	04 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	02 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Dyspnoea/Shortness Of Breath Possible Fluid In The Lungs	SAE	Grade 3/ severe	Not related	28 Dec 2020 (Study Day 116) – 30 Dec 2020 (Study Day 118)	Recovered/resolved
Pneumonia/Pneumonia	SAE	Grade 2/ moderate	Not related	06 Feb 2021 (Study Day 156) – 16 Feb 2021 (Study Day 166)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US397-2116, a 64-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 04 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 02 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Dec 2020 (Study Day 116), 115 days after the first dose and 87 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of dyspnoea. Action taken with the IP was not applicable. The event of shortness of breath possible fluid in the lungs lasted for 3 days, after which it was considered to be recovered/resolved on 30 Dec 2020 (Study Day 118). The investigator assessed the event of dyspnoea to be not related to the IP.

On 06 Feb 2021 (Study Day 156), 155 days after the first dose and 127 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of pneumonia. Action taken with the IP was not applicable. The event of pneumonia lasted for 11 days, after which it was considered to be recovered/resolved on 16 Feb 2021 (Study Day 166). The investigator assessed the event of pneumonia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001563	Dyspnoea
MOD-2021-014129	Pneumonia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
HIV infection	Hiv	1992 - Ongoing
Skin cancer	Cancerous tumor, left inguinal	Jan 1999 - Sep 2004
Uterine cancer	Uterine cancer	Jan 1999 - Sep 2004
Postmenopause	Post menopausal	Feb 1999 - Ongoing
Osteoarthritis	Osteoarthritis (bilateral knees & shoulders) secondary to radiation	Sep 2004 - Ongoing
Hypertension	Hypertension	2018 - Ongoing
Type 2 diabetes mellitus	Diabetes type 2	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	Sep 2004 - Ongoing	Osteoarthritis
Paracetamol	Sep 2004 - Ongoing	Osteoarthritis
Cobicistat; darunavir ethanolate	2008 - Ongoing	Hiv
Dolutegravir sodium	2008 - Ongoing	Hiv
Emtricitabine; tenofovir alafenamide fumarate	2008 - Ongoing	Hiv
Enalapril	2018 - Ongoing	Hypertension
Insulin glargine	2018 - Ongoing	Diabetes Type Ii
Metformin	2018 - Ongoing	Diabetes Type Ii
Influenza vaccine	21 Oct 2020 (Study Day 48) - 21 Oct 2020 (Study Day 48)	Prevention Of Flu
Ct scan chest*	28 Dec 2020 (Study Day 116) - 28 Dec 2020 (Study Day 116)	Adverse Event
Furosemide	28 Dec 2020 (Study Day 116) - Ongoing	Shortness Of Breath Possible Fluid In The Lungs

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin	28 Dec 2020 (Study Day 116) - 28 Dec 2020 (Study Day 116)	Type Ii Diabetes Mellitus
Apixaban	31 Dec 2020 (Study Day 119) - 11 Jan 2021 (Study Day 130)	Prevention Of Blood Clot
Losartan	Feb 2021 - Ongoing	High Blood Pressure & Pt Was Put On Medication When Pt Had Pneumonia
Metoprolol	Feb 2021 - Ongoing	High Blood Pressure & While Experiencing Pneumonia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US398-2022 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Tooth Socket Haemorrhage/ Hemorrhage From Wisdom Tooth Extraction #32	SAE	Grade 3/ severe	Not related	15 Jan 2021 (Study Day 142) – 18 Jan 2021 (Study Day 145)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2022, a 67-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 25 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Jan 2021 (Study Day 142), 141 days after the first dose and 112 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of tooth socket haemorrhage. Action taken with the IP was not applicable. The event of hemorrhage from wisdom tooth extraction #32 lasted for 4 days, after which it was considered to be recovered/resolved on 18 Jan 2021 (Study Day 145). The investigator assessed the event of tooth socket haemorrhage to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-004543	Tooth socket hemorrhage

Study Completion/Discontinuation

On 20 Jan 2021 (Study Day 147), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Aortic valve disease	Damaged aortic valve	Jul 2008 - Sep 2008
Endocarditis	Endocarditis	06 Aug 2008 (Study Day -4404) - 12 Sep 2008 (Study Day -4367)
Aortic valve replacement	Mechanical aortic valve placement	Sep 2008 - Sep 2008
Artificial heart implant	Mechanical heart valve	Sep 2008 - Ongoing
Insomnia	Insomnia	2011 - Ongoing
Knee arthroplasty	Left knee replacement	2016 - 2016
Meniscus injury	Knee tear	2016 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2019 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2019 - Ongoing
Hypertension	Hypertension	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Warfarin	Sep 2008 - 15 Jan 2021 (Study Day 142)	Mechanical Heart Valve
Hydrochlorothiazide	12 Sep 2008 (Study Day -4367) - Ongoing	Hypertension
Zolpidem	2011 - Ongoing	Insomnia
Ubidecarenone	2014 - Ongoing	Muscle Supplement
Acetylsalicylic acid	2015 - Ongoing	Cardiac Prophylaxis
Potassium	2015 - Ongoing	Muscle Supplement
Atorvastatin	2019 - Ongoing	Hyperlipidemia
Losartan	2019 - Ongoing	Hypertension
Omeprazole	2019 - Ongoing	Gastroesophageal Reflux Disease
Influenza vaccine	11 Aug 2020 (Study Day -16) - 11 Aug 2020 (Study Day -16)	Prophylaxis
Amoxicillin	19 Dec 2020 (Study Day 115) - 23 Dec 2020 (Study Day 119)	Tooth Abscess
Tooth # 32 extraction*	19 Dec 2020 (Study Day 115) - 19 Dec 2020 (Study Day 115)	Adverse Event
Other viral vaccines	05 Jan 2021 (Study Day 132) - 05 Jan 2021 (Study Day 132)	Vs. COVID 19
Epinephrine; lidocaine	15 Jan 2021 (Study Day 142) - 15 Jan 2021 (Study Day 142)	Hemorrhage
Thrombin	15 Jan 2021 (Study Day 142) - 15 Jan 2021 (Study Day 142)	Hemorrhage
Tranexamic acid	15 Jan 2021 (Study Day 142) - 15 Jan 2021 (Study Day 142)	Hemorrhage

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Heparin	16 Jan 2021 (Study Day 143) - 18 Jan 2021 (Study Day 145)	Mechanical Heart Valve
Packing and suturing extraction site # 32*	16 Jan 2021 (Study Day 143) - 16 Jan 2021 (Study Day 143)	Adverse Event
Phytomenadione	16 Jan 2021 (Study Day 143) - 16 Jan 2021 (Study Day 143)	Hemorrhage (Anticoagulation Reversal)
Plasma	16 Jan 2021 (Study Day 143) - 16 Jan 2021 (Study Day 143)	Hemorrhage From Wisdom Tooth Extraction
Enoxaparin sodium	18 Jan 2021 (Study Day 145) - Ongoing	Mechanical Heart Valve
Warfarin	18 Jan 2021 (Study Day 145) - Ongoing	Mechanical Heart Valve

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Tooth Abscess	Grade 2/moderate	Not related	19 Dec 2020 (Study Day 115) - 23 Dec 2020 (Study Day 119)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2031 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	01 Oct 2020 (Study Day 36)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Coronary Artery Disease/ Coronary Artery Disease	SAE	Grade 3/ severe	Not related	10 Sep 2020 (Study Day 15) – 26 Sep 2020 (Study Day 31)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2031, a 86-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 01 Oct 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Sep 2020 (Study Day 15), 14 days after the first dose and 21 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of coronary artery disease. The IP dose was not changed due to the coronary artery disease. The event of coronary artery disease lasted for 17 days, after which it was considered to be recovered/resolved on 26 Sep 2020 (Study Day 31). The investigator assessed the event of coronary artery disease to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000381	Coronary artery disease

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1970 - Ongoing
Hysterectomy	Hysterectomy	1980 - 1980
Postmenopause	Post menopausal	1980 - Ongoing
Uterine enlargement	Enlarged uterus	1980 - 1980
Intestinal obstruction	Bowel obstruction	1988 - 1988
Sigmoidectomy	Sigmoid resection	1988 - 1988
Food allergy	Allergy to shellfish (anaphylaxis)	1990 - Ongoing
Hypertension	High blood pressure	1995 - Ongoing
Tendon operation	Right dequervain's tenosynovitis surgery	1995 - 1995
Tenosynovitis stenosans	Right dequervain's tenosynovitis	1995 - 1995
Tenolysis	Left dequervain's tenosynovitis surgery	2000 - 2000
Tenosynovitis stenosans	Left dequervain's tenosynovitis	2000 - 2000
Cataract	Left eye cataract	Nov 2003 - 16 Dec 2003 (Study Day -6099)
Cataract	Right eye cataract	Nov 2003 - 02 Dec 2003 (Study Day -6113)
Cataract operation	Right eye cataract surgery	02 Dec 2003 (Study Day -6113) - 02 Dec 2003 (Study Day -6113)
Cataract operation	Left eye cataract surgery	16 Dec 2003 (Study Day -6099) - 16 Dec 2003 (Study Day -6099)
Medical device implantation	Back surgery metal implants l4-l5	2017 - 2017
Spinal stenosis	Spinal stenosis	2017 - 2017
Urticaria	Allergy to penicillin (hives)	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Immunotherapy	1970 - Ongoing	Seasonal Allergies
Estradiol	2015 - Ongoing	Post Menopausal
Torasemide	Jun 2020 - 24 Sep 2020 (Study Day 29)	High Blood Pressure
Nuclear gxt*	24 Sep 2020 (Study Day 29) - 24 Sep 2020 (Study Day 29)	Adverse Event
Spect, myocardial perfusion*	24 Sep 2020 (Study Day 29) - 24 Sep 2020 (Study Day 29)	Adverse Event
Cardiac catheterization with stent placement*	25 Sep 2020 (Study Day 30) - 25 Sep 2020 (Study Day 30)	Adverse Event
Acetylsalicylic acid	26 Sep 2020 (Study Day 31) - 26 Apr 2021 (Study Day 243)	Coronary Artery Disease

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	26 Sep 2020 (Study Day 31) - 21 Jan 2021 (Study Day 148)	High Blood Pressure
Rosuvastatin	26 Sep 2020 (Study Day 31) - Ongoing	Coronary Artery Disease
Ticagrelor	26 Sep 2020 (Study Day 31) - 26 Apr 2021 (Study Day 243)	Coronary Artery Disease
Electrocardiogram*	08 Oct 2020 (Study Day 43) - 08 Oct 2020 (Study Day 43)	Adverse Event
Influenza vaccine	16 Oct 2020 (Study Day 51) - 16 Oct 2020 (Study Day 51)	Flu Prevention
Lisinopril	22 Jan 2021 (Study Day 149) - 18 Feb 2021 (Study Day 176)	Hypertension
Lisinopril	18 Feb 2021 (Study Day 176) - Ongoing	High Blood Pressure

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypertension	Grade 2/moderate	Not related	27 Aug 2020 (Study Day 1) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2050 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 26)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Gastroenteritis Viral/ Viral Gastroenteritis	SAE	Grade 2/moderate	Not related	02 Mar 2021 (Study Day 184) – 07 Mar 2021 (Study Day 189)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2050, a 34-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 25 Sep 2020 (Study Day 26). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Mar 2021 (Study Day 184), 183 days after the first dose and 158 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of gastroenteritis viral. Action taken with the IP was not applicable. The event of viral gastroenteritis lasted for 6 days, after which it was considered to be recovered/resolved on 07 Mar 2021 (Study Day 189). The investigator assessed the event of gastroenteritis viral to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-037917	Gastroenteritis viral

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 1 diabetes mellitus	Diabetes type 1	1998 - Ongoing
Hidradenitis	Hidradenitis suppurativa	2005 - Ongoing
Epilepsy	Epilepsy (stable on dilantin)	2011 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin aspart	1998 - Ongoing	Diabetes Type 1
Phenytoin	Nov 2011 - Ongoing	Epilepsy
Naproxen	04 Sep 2020 (Study Day 5) - 05 Sep 2020 (Study Day 6)	Injection Site Pain
Naproxen sodium	26 Sep 2020 (Study Day 27) - 27 Sep 2020 (Study Day 28)	Headache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hidradenitis	Grade 1/mild	Not related	10 Sep 2020 (Study Day 11) - 25 Sep 2020 (Study Day 26)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2069 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	01 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	30 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Osteoarthritis/Worsening R Knee Osteo Arthritis	SAE	Grade 3/ severe	Not related	29 Dec 2020 (Study Day 120) – 30 Dec 2020 (Study Day 121)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2069, a 65-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 01 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 30 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 29 Dec 2020 (Study Day 120), 119 days after the first dose and 90 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of osteoarthritis. Action taken with the IP was not applicable. The event of worsening r knee osteo arthritis lasted for 2 days, after which it was considered to be recovered/resolved with sequelae on 30 Dec 2020 (Study Day 121). The investigator assessed the event of osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001523	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma	(b) (6) 1954 (Study Day (b) (6) - Ongoing
Tonsillitis	Tonsillitis	1971 - 1976
Tonsillectomy	Tonsil surgery	1976 - 1976
Benign breast neoplasm	Bening mass (right breast)	1985 - 1990
Benign breast lump removal	Lumpectomy right breast (benign)	Aug 1989 - Aug 1989
Osteoarthritis	Osteoarthritis (generalized)	1990 - Ongoing
Female sterilisation	Tubal ligation (sterilization)	20 Apr 1990 (Study Day -11092) - 20 Apr 1990 (Study Day -11092)
Sleep disorder	Sleeping problems	2000 - Ongoing
Diverticulitis	Diverticulitis	Jan 2015 - May 2015
Colectomy	Colon resection	May 2015 - May 2015
Thoracic vertebral fracture	Back injury (t12 fracture)	Oct 2017 - Nov 2017
Vertebroplasty	Kyphoplasty	Nov 2017 - Nov 2017
Back pain	Back pain (lower)	Jan 2018 - Ongoing
Knee arthroplasty	Joint replacement knee (left)	06 May 2019 (Study Day -484) - 06 May 2019 (Study Day -484)
Seasonal allergy	Seasonal allergies	Aug 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	1954 - Ongoing	Asthma
Chondroitin; glucosamine	1990 - Ongoing	Osteoarhtritis (Generalized)
Diphenhydramine hydrochloride	2000 - Ongoing	Sleeping Probelms
Calcium	2010 - Ongoing	Dietary Supplement
Colecalciferol	2010 - Ongoing	Dietary Supplement
Fish oil	2010 - Ongoing	Dietary Supplement
Magnesium	2010 - Ongoing	Dietary Supplement
Melatonin	2010 - Ongoing	Sleeping Problems
Diclofenac	2015 - Ongoing	Osteoarthritis (Generalized)
Fibre, dietary	Jun 2015 - Ongoing	Dietary Supplement
Probiotics nos	Jun 2015 - Ongoing	Dietary Supplement
Hydrocodone bitartrate; paracetamol	Nov 2018 - 20 Dec 2020 (Study Day 111)	Back Pain (Low)
Tizanidine	2019 - Ongoing	Back Pain (Low)
Loratadine; pseudoephedrine sulfate	Aug 2019 - Ongoing	Seasonal Allergies
Vitamins nos	Mar 2020 - Ongoing	Dietary Supplement

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fluticasone furoate; vilanterol trifenatate	Apr 2020 - 30 Sep 2020 (Study Day 30)	Asthma
Fluticasone propionate; salmeterol	01 Oct 2020 (Study Day 31) - Ongoing	Asthma
Influenza vaccine	20 Oct 2020 (Study Day 50) - 20 Oct 2020 (Study Day 50)	Flu Prophylaxis
Ciprofloxacin	24 Nov 2020 (Study Day 85) - 27 Nov 2020 (Study Day 88)	Uti
Gabapentin	29 Dec 2020 (Study Day 120) - 24 Mar 2021 (Study Day 205)	Total Knee Replacment Surgery Post Op Pain
Right total knee replacement*	29 Dec 2020 (Study Day 120) - 29 Dec 2020 (Study Day 120)	Other, Osteoartritis
Acetylsalicylic acid	30 Dec 2020 (Study Day 121) - Ongoing	Cardiac Prophylaxis
Oxycodone hydrochloride; paracetamol	30 Dec 2020 (Study Day 121) - 07 Jan 2021 (Study Day 129)	Post Op Pain (Lower Back)
Hydrocodone bitartrate; paracetamol	07 Jan 2021 (Study Day 129) - 24 Feb 2021 (Study Day 177)	Lower Back Pain
Hydrocodone bitartrate; paracetamol	24 Feb 2021 (Study Day 177) - Ongoing	Lower Back Pain
Gabapentin	24 Mar 2021 (Study Day 205) - Ongoing	Pain From Knee Replacement

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Urinary Tract Infection	Grade 2/moderate	Not related	20 Nov 2020 (Study Day 81) - 27 Nov 2020 (Study Day 88)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2088 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	30 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Muscular Weakness/ Diffuse Muscle Weakness	SAE	Grade 3/severe	Not related	30 Nov 2020 (Study Day 90) – Ongoing	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2088, a 62-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 02 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 30 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Nov 2020 (Study Day 90), 89 days after the first dose and 61 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of muscular weakness. Action taken with the IP was not applicable. The event of diffuse muscle weakness was considered to be ongoing. The investigator assessed the event of muscular weakness to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-014642	Muscular weakness

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Naproxen allergy	1977 - Ongoing
Endometrial ablation	Uterine ablation	1996 - 1996
Menorrhagia	Menorrhagia	1996 - 29 Sep 1997 (Study Day -8374)
Hysterectomy	Hysterectomy	29 Sep 1997 (Study Day -8374) - 29 Sep 1997 (Study Day -8374)
Postmenopause	Postmenopausal	29 Sep 1997 (Study Day -8374) - Ongoing
Arthroscopy	Arthroscopy right	2002 - 2002
Meniscus injury	Torn meniscus right	2002 - 2002
Irritable bowel syndrome	Irritable bowel syndrome	2005 - Ongoing
Anxiety	Anxiety	2006 - Ongoing
Depression	Depression	2006 - Ongoing
Arthroscopy	Arthroscopy left	2007 - 2007
Ligament rupture	Anterior cruciate ligament injury left	2007 - 2007
Rhinitis allergic	Allergic rhinitis	2007 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2010 - Ongoing
Otitis media acute	Acute otitis media bilateral	31 Aug 2020 (Study Day -2) - 07 Sep 2020 (Study Day 6)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Clonazepam	2007 - Ongoing	Anxiety And Depression
Vortioxetine hydrobromide	2007 - Ongoing	Depression
Pantoprazole	2009 - Ongoing	Irritable Bowel Syndrome
Topiramate	2009 - Ongoing	Anxiety And Depression
Pravastatin	2010 - Ongoing	Hyperlipidemia
Ascorbic acid	2018 - Ongoing	Health Supplement
Vitamin b12 nos	2018 - Ongoing	Health Supplement
Colecalciferol	2019 - Ongoing	Health Supplement
Famotidine	2019 - 08 Sep 2020 (Study Day 7)	Irritable Bowel Syndrome
Fluticasone	2019 - Ongoing	Allergic Rhinitis
Montelukast	2019 - 08 Sep 2020 (Study Day 7)	Allergic Rhinitis
Ofloxacin	02 Sep 2020 (Study Day 1) - 07 Sep 2020 (Study Day 6)	Acute Otitis Media
Influenza vaccine	05 Nov 2020 (Study Day 65) - 05 Nov 2020 (Study Day 65)	Flu Prophylaxis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ondansetron	23 Nov 2020 (Study Day 83) - 28 Nov 2020 (Study Day 88)	Nausea

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Nausea	Grade 2/moderate	Not related	17 Nov 2020 (Study Day 77) - 28 Nov 2020 (Study Day 88)
Vomiting	Grade 2/moderate	Not related	17 Nov 2020 (Study Day 77) - 28 Nov 2020 (Study Day 88)
Fatigue	Grade 1/mild	Not related	24 Nov 2020 (Study Day 84) - 28 Nov 2020 (Study Day 88)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2125 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	07 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	09 Oct 2020 (Study Day 33)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Diabetic Foot Infection/ Diabetic Foot Infection Left Foot	SAE	Grade 3/ severe	Not related	24 Jan 2021 (Study Day 140) – 18 Mar 2021 (Study Day 193)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2125, a 50-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 07 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 09 Oct 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Jan 2021 (Study Day 140), 139 days after the first dose and 107 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of diabetic foot infection. Action taken with the IP was not applicable. The event of diabetic foot infection left foot lasted for 54 days, after which it was considered to be recovered/resolved on 18 Mar 2021 (Study Day 193). The investigator assessed the event of diabetic foot infection to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-009172	Diabetic foot infection

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	Not reported - Ongoing
Type 2 diabetes mellitus	Diabetes type ii	2000 - Ongoing
Osteomyelitis	Osteomyelitis right foot	2011 - Dec 2019
Coronary arterial stent insertion	2 cardiac stents	2015 - 2015
Myocardial infarction	Heart attack	2015 - 2015
Arteriosclerosis	Arteriosclerosis iliac arteries	2019 - Ongoing
Venous stent insertion	4 iliac vein stents	Sep 2019 - Sep 2019
Leg amputation	Right leg amputation (under the knee)	Dec 2019 - Dec 2019
Hypertension	High blood pressure	Jun 2020 - Ongoing
Blood cholesterol increased	High cholesterol	05 Aug 2020 (Study Day -33) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin aspart	Jun 2019 - Ongoing	Diabetes Type Ii
Acetylsalicylic acid	Oct 2019 - Ongoing	Cardiac Stents
Clopidogrel bisulfate	Oct 2019 - Ongoing	Arteriosclerosis Iliac Arteries
Vitamins nos	Apr 2020 - Ongoing	Supplement
Amlodipine	Jun 2020 - Ongoing	High Blood Pressure
Rosuvastatin calcium	05 Aug 2020 (Study Day -33) - Ongoing	High Cholesterol
Influenza vaccine	26 Oct 2020 (Study Day 50) - 26 Oct 2020 (Study Day 50)	Prophylaxis
Cefalexin	26 Jan 2021 (Study Day 142) - 26 Jan 2021 (Study Day 142)	Diabetic Foot Infection (Left)
Ceftriaxone	26 Jan 2021 (Study Day 142) - 28 Jan 2021 (Study Day 144)	Diabetic Foot Infection (Left)
Sulfamethoxazole; trimethoprim	26 Jan 2021 (Study Day 142) - 26 Jan 2021 (Study Day 142)	Diabetic Foot Infection (Left)
Cefalexin	31 Jan 2021 (Study Day 147) - 13 Feb 2021 (Study Day 160)	Left Foot Diabetic Infection
Debridement and bone biopsy left foot*	07 Feb 2021 (Study Day 154) - 07 Feb 2021 (Study Day 154)	Adverse Event
Ciprofloxacin	10 Feb 2021 (Study Day 157) - 15 Feb 2021 (Study Day 162)	Left Foot Diabetic Infection
Doxycycline	10 Feb 2021 (Study Day 157) - 15 Feb 2021 (Study Day 162)	Left Foot Diabetic Infection
Losartan	06 Mar 2021 (Study Day 181) - Ongoing	High Blood Pressure
Rivaroxaban	06 Mar 2021 (Study Day 181) - Ongoing	Cardiac Stents

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ciprofloxacin	16 Mar 2021 (Study Day 191) - 18 Mar 2021 (Study Day 193)	Diabetic Foot Infection (Left)
Doxycycline	16 Mar 2021 (Study Day 191) - 21 Mar 2021 (Study Day 196)	Diabetic Foot Infection (Left)
Excisional debridement and skin graft placement left foot*	17 Mar 2021 (Study Day 192) - 17 Mar 2021 (Study Day 192)	Adverse Event
Ciprofloxacin	18 Mar 2021 (Study Day 193) - 21 Mar 2021 (Study Day 196)	Diabetic Foot Infection (Left)

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diabetic Mononeuropathy	Grade 1/mild	Not related	16 Nov 2020 (Study Day 71) - 15 Jan 2021 (Study Day 131)
Diplopia	Grade 1/mild	Not related	16 Nov 2020 (Study Day 71) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2144 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	17 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	14 Oct 2020 (Study Day 28)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pancreatitis/Pancreatitis	SAE	Grade 2/ moderate	Not related	14 Feb 2021 (Study Day 151) – 21 Feb 2021 (Study Day 158)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2144, a 43-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 17 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 14 Oct 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 14 Feb 2021 (Study Day 151), 150 days after the first dose and 123 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of pancreatitis. Action taken with the IP was not applicable. The event of pancreatitis lasted for 8 days, after which it was considered to be recovered/resolved on 21 Feb 2021 (Study Day 158). The investigator assessed the event of pancreatitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-016729	Pancreatitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Allergy to vaccine	Tetanus allergy	1982 - Ongoing
Drug hypersensitivity	Penicillin allergy	1982 - Ongoing
Seasonal allergy	Seasonal allergies	1985 - Ongoing
Back pain	Chronic low back pain	1998 - Ongoing
Anxiety	Anxiety	2004 - Ongoing
Depression	Depression	2004 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	2004 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2004 - Ongoing
Hypertension	Hypertension	2004 - Ongoing
Hypertriglyceridaemia	Hypertriglyceridemia	2004 - Ongoing
Hypothyroidism	Hypothyroidism	2004 - Ongoing
Type 2 diabetes mellitus	Diabetes mellitius type 2	2004 - Ongoing
Drug hypersensitivity	Niacin allergy	2005 - Ongoing
Eczema	Eczema	2010 - Ongoing
Cartilage injury	Torn labrum left shoulder	2011 - 2011
Cartilage operation	Torn labrum left shoulder surgery	2011 - 2011
Sleep apnoea syndrome	Sleep apnea	2011 - Ongoing
Ketoacidosis	Ketoacidosis hospitalization	Feb 2019 - Feb 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Loratadine	1996 - Ongoing	Seasonal Allergies
Atorvastatin	2004 - 14 Feb 2021 (Study Day 151)	Hypercholesterolemia
Fenofibrate	2004 - 14 Feb 2021 (Study Day 151)	Hypertriglyceridemia
Hydrochlorothiazide; lisinopril	Jul 2004 - Ongoing	Hypertension
Levothyroxine	Jul 2004 - Ongoing	Hypothyroidism
Metformin	Jul 2004 - Ongoing	Diabetes Mellitus Type 2
Morphine	2011 - Ongoing	Chronic Low Back Pain
Oxycodone	2011 - Ongoing	Chronic Low Back Pain
Omeprazole	Jul 2011 - Ongoing	Acid Reflux
Bupropion	Jul 2012 - Ongoing	Depression
Buspirone	Jul 2012 - Ongoing	Anxiety
Duloxetine	Jul 2012 - Ongoing	Anxiety And Depression
Folic acid	Jul 2012 - Ongoing	Nutritional Supplement

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Empagliflozin; linagliptin	Jan 2020 - Ongoing	Diabetes Mellitus Type 2
Insulin	Jul 2020 - Ongoing	Diabetes Mellitus Type 2
Verapamil	Jul 2020 - Ongoing	Hypertension
Influenza vaccine	02 Sep 2020 (Study Day -15) - 02 Sep 2020 (Study Day -15)	Prophylaxis
Ketoconazole	08 Sep 2020 (Study Day -9) - Ongoing	Eczema
Lorazepam	13 Oct 2020 (Study Day 27) - Ongoing	Anxiety
Eicosapentaenoic acid ethyl ester	14 Oct 2020 (Study Day 28) - Ongoing	Hypertriglyceridemia
Naproxen	11 Jan 2021 (Study Day 117) - Ongoing	Viral Syndrome
Atorvastatin	14 Feb 2021 (Study Day 151) - Ongoing	Hypercholesterolemia
Empagliflozin	14 Feb 2021 (Study Day 151) - Ongoing	Diabetes Mellitus 2
Fenofibrate	14 Feb 2021 (Study Day 151) - Ongoing	Hypertriglyceridemia
Ondansetron	18 Feb 2021 (Study Day 155) - 20 Feb 2021 (Study Day 157)	Pancreatitis
Pantoprazole	18 Feb 2021 (Study Day 155) - 20 Feb 2021 (Study Day 157)	Pancreatitis
Sodium chloride	18 Feb 2021 (Study Day 155) - 20 Feb 2021 (Study Day 157)	Pancreatitis
Tizanidine	18 Feb 2021 (Study Day 155) - 20 Feb 2021 (Study Day 157)	Chronic Low Back Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 1/mild	Not related	20 Sep 2020 (Study Day 4) - 02 Oct 2020 (Study Day 16)
Headache	Grade 2/moderate	Not related	20 Sep 2020 (Study Day 4) - 25 Sep 2020 (Study Day 9)
Myalgia	Grade 1/mild	Not related	21 Sep 2020 (Study Day 5) - 02 Oct 2020 (Study Day 16)
Fatigue	Grade 2/moderate	Not related	24 Sep 2020 (Study Day 8) - 02 Oct 2020 (Study Day 16)
Viral Infection	Grade 2/moderate	Not related	01 Jan 2021 (Study Day 107) - 16 Jan 2021 (Study Day 122)
Diarrhoea	Grade 1/mild	Not related	19 Jan 2021 (Study Day 125) - 20 Jan 2021 (Study Day 126)
Rhinitis Allergic	Grade 2/moderate	Not related	21 Jan 2021 (Study Day 127) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2151 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Gastritis/Acute Gastritis Without Bleeding	SAE	Grade 3/ severe	Not related	26 Dec 2020 (Study Day 108) – 31 Dec 2020 (Study Day 113)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2151, a 60-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 10 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 26 Dec 2020 (Study Day 108), 107 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of gastritis. On 07 Oct 2020 (Study Day 28), the IP dose was discontinued due to physician decision. The event of acute gastritis without bleeding lasted for 6 days, after which it was considered to be recovered/resolved on 31 Dec 2020 (Study Day 113). The investigator assessed the event of gastritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001720	Gastritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety	Anxiety	1974 - Ongoing
Hypertension	Hypertension	1976 - Ongoing
Migraine	Migraines	1976 - Ongoing
Back pain	Chronic back pain	1991 - Ongoing
Constipation	Constipation, probably opioid induced	1994 - Ongoing
Cerebrovascular accident	Stroke	2001 - 2001
Craniotomy	Craniotomy	2001 - 2001
Epilepsy	Seizures (epilepsy)	2001 - Ongoing
Postmenopause	Post-menopausal	2005 - Ongoing
Depression	Depression	2012 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2013 - Ongoing
Heart valve replacement	Heart valve replacement	Dec 2013 - Dec 2013
Myocardial infarction	Myocardial infarction	Dec 2013 - Dec 2013
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	2020 - Ongoing
Osteoporosis	Osteoporosis	2020 - Ongoing
Restless legs syndrome	Restless leg syndrome	2020 - Ongoing
Gastric ulcer	Stomach ulcer	Apr 2020 - 29 Dec 2020 (Study Day 111)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	1978 - Ongoing	Supplement
Docusate sodium	1994 - Ongoing	Prevent Constipation Due To Medication
Hydrocodone bitartrate; paracetamol	1994 - Ongoing	Chronic Back Pain
Metoprolol	2001 - 30 Sep 2020 (Study Day 21)	Hypertension
Atorvastatin	2013 - Ongoing	Hyperlipidemia
Gabapentin	2018 - Ongoing	Migraine
Levetiracetam	2018 - Ongoing	Seizures/Epilepsy
Topiramate	2018 - Ongoing	Seizures/Epilepsy
Trazodone	2018 - Ongoing	Depression
Famotidine	2020 - 25 Sep 2020 (Study Day 16)	Stomach Ulcer
Fluticasone furoate; umeclidinium bromide; vilanterol trifenatate	2020 - Ongoing	Chronic Obstructive Pulmonary Disease
Omeprazole	2020 - 25 Sep 2020 (Study Day 16)	Stomach Ulcer

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Quetiapine	2020 - Ongoing	Depression
Ropinirole hydrochloride	2020 - 15 Oct 2020 (Study Day 36)	Restless Leg Syndrome
Sucralfate	2020 - 25 Sep 2020 (Study Day 16)	Stomach Ulcer
Vortioxetine hydrobromide	2020 - Ongoing	Depression
Ondansetron	Sep 2020 - Ongoing	Gastroparesis
Famotidine	26 Sep 2020 (Study Day 17) - 12 Oct 2020 (Study Day 33)	Stomach Ulcer
Omeprazole	26 Sep 2020 (Study Day 17) - 12 Oct 2020 (Study Day 33)	Stomach Ulcer
Sucralfate	26 Sep 2020 (Study Day 17) - 12 Oct 2020 (Study Day 33)	Stomach Ulcer
Famotidine	13 Oct 2020 (Study Day 34) - 30 Dec 2020 (Study Day 112)	Stomach Ulcer
Diltiazem	15 Oct 2020 (Study Day 36) - Ongoing	Hypertension
Ropinirole	15 Oct 2020 (Study Day 36) - Ongoing	Restless Leg Syndrome
Diphenhydramine hydrochloride	17 Nov 2020 (Study Day 69) - 28 Nov 2020 (Study Day 80)	Allergic Reaction (Flu Vaccine)
Influenza vaccine	17 Nov 2020 (Study Day 69) - 17 Nov 2020 (Study Day 69)	Prophylaxis Flu
Salbutamol	17 Nov 2020 (Study Day 69) - 28 Nov 2020 (Study Day 80)	Allergic Reaction (Flu Vaccine)
Ct abd/ pelvis*	21 Dec 2020 (Study Day 103) - 21 Dec 2020 (Study Day 103)	Adverse Event
Gi cocktail	26 Dec 2020 (Study Day 108) - 26 Dec 2020 (Study Day 108)	Stomach Ulcer
Ct angio chest*	27 Dec 2020 (Study Day 109) - 27 Dec 2020 (Study Day 109)	Medical History
Echocardiogram*	28 Dec 2020 (Study Day 110) - 28 Dec 2020 (Study Day 110)	Medical History
Endoscopy (egd-upper)*	29 Dec 2020 (Study Day 111) - 29 Dec 2020 (Study Day 111)	Adverse Event
Famotidine	31 Dec 2020 (Study Day 113) - Ongoing	Stomach Ulcer
Gabapentin	31 Dec 2020 (Study Day 113) - Ongoing	Chronic Lbp
Hydrocodone bitartrate; paracetamol	31 Dec 2020 (Study Day 113) - Ongoing	Chronic Lbp
Sucralfate	31 Dec 2020 (Study Day 113) - Ongoing	Stomach Ulcer
Macrogol 3350	04 Jan 2021 (Study Day 117) - Ongoing	Constipation
Pantoprazole	04 Jan 2021 (Study Day 117) - Ongoing	Stomach Ulcer
Salbutamol	04 Jan 2021 (Study Day 117) - Ongoing	Copd
Domperidone	02 Mar 2021 (Study Day 174) - Ongoing	Gastroparesis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Gastric Ulcer	Grade 2/moderate	Not related	30 Sep 2020 (Study Day 21) - 15 Oct 2020 (Study Day 36)
Pruritus	Grade 2/moderate	Not related	17 Nov 2020 (Study Day 69) - 22 Nov 2020 (Study Day 74)
Impaired Gastric Emptying	Grade 2/moderate	Not related	08 Feb 2021 (Study Day 152) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2169 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	14 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	09 Oct 2020 (Study Day 26)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Localised Infection/Left Anterior Lower Leg Infection	SAE	Grade 2/ moderate	Not related	30 Dec 2020 (Study Day 108) – 01 Mar 2021 (Study Day 169)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2169, an 81-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 14 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 09 Oct 2020 (Study Day 26). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Dec 2020 (Study Day 108), 107 days after the first dose and 82 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of localised infection. Action taken with the IP was not applicable. The event of left anterior lower leg infection lasted for 62 days, after which it was considered to be recovered/resolved on 01 Mar 2021 (Study Day 169). The investigator assessed the event of localised infection to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-010869	Localised infection

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Nephrolithiasis	Renal stone	Not reported - Ongoing
Inguinal hernia	(r) groin hernia	1995 - 1995
Inguinal hernia repair	(r) groin hernia repair	1995 - 1995
Inguinal hernia	(l) groin hernia	2000 - 2000
Inguinal hernia repair	(l) groin hernia repair	2000 - 2000
Hyperlipidaemia	Hyperlipidemia	2005 - Ongoing
Umbilical hernia	Umbilical hernia	2005 - 2005
Umbilical hernia repair	Umbilical hernia repair	2005 - 2005
Cataract	Cataracts (bilateral)	2010 - 2010
Cataract operation	Bilateral cateract surgery	2010 - 2010
Erectile dysfunction	Erectile dysfunction	2010 - Ongoing
Syncope	Syncope	2016 - 2016
Balance disorder	Balance issue	2017 - Ongoing
Osteoarthritis	Arthritis (osteoarthritis)	2017 - Ongoing
Peripheral arterial occlusive disease	Peripheral artery disease (legs)	2018 - Ongoing
Deafness	Hearing loss (mild)	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	2005 - Ongoing	Hyperlipidemia
Acetylcysteine; calcium mefolinate; mecobalamin	2015 - Ongoing	To Prevent Memory Loss
Acetylsalicylic acid	2015 - Ongoing	To Prevent Blood Clots
Bisoprolol	2015 - Ongoing	To Prevent Hypertension
Vitamins nos	2015 - Ongoing	Supplement
Vitamin d nos	2017 - Ongoing	Supplement
Vitamins nos	2017 - Ongoing	Supplement
Minocycline	30 Dec 2020 (Study Day 108) - 13 Jan 2021 (Study Day 122)	Left Leg Anterior Infection
Cefdinir	23 Jan 2021 (Study Day 132) - 02 Feb 2021 (Study Day 142)	Left Anterior Leg Infection
Metronidazole	23 Jan 2021 (Study Day 132) - 02 Feb 2021 (Study Day 142)	Left Anterior Leg Infection
Lithotripsy for renal stones*	06 Feb 2021 (Study Day 146) - 06 Feb 2021 (Study Day 146)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diarrhoea	Grade 1/mild	Not related	03 Dec 2020 (Study Day 81) - 04 Dec 2020 (Study Day 82)
Limb Injury	Grade 2/moderate	Not related	18 Dec 2020 (Study Day 96) - 18 Dec 2020 (Study Day 96)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2244 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	28 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hemiparesis/Right Sided Hemiparesis	SAE	Grade 3/ severe	Not related	03 Feb 2021 (Study Day 129) – Ongoing	Recovering/ resolving

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2244, a 59-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 28 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Feb 2021 (Study Day 129), 128 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of hemiparesis. On 25 Oct 2020 (Study Day 28), the IP dose was discontinued due to protocol deviation. The event of right sided hemiparesis was considered to be ongoing. The investigator assessed the event of hemiparesis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-020919	Gastrointestinal haemorrhage

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Caesarean section	Cesarean section	1980 - 1980
Caesarean section	Cesarean section	1982 - 1982
Caesarean section	Cesarean section	1987 - 1987
Postmenopause	Post-menopausal	2018 - Ongoing
Coronary arterial stent insertion	Coronary artery and stent surgery	Feb 2020 - Feb 2020
Hyperlipidaemia	Hyperlipidemia	Feb 2020 - Ongoing
Hypertension	Hypertension	Feb 2020 - Ongoing
Myocardial infarction	Myocardial infarction	Feb 2020 - Feb 2020
Type 2 diabetes mellitus	Diabetes type 2	Feb 2020 - Ongoing
Embolism	Embolus (arterial)	Jun 2020 - Ongoing
Paraesthesia	Hands tingling	Jun 2020 - Ongoing
Transient ischaemic attack	Transient ischemic attack	Jun 2020 - Jun 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	Feb 2020 - Ongoing	Hyperlipidemia
Carvedilol	Feb 2020 - Ongoing	Hypertension
Insulin glargine; lixisenatide	Feb 2020 - 24 Dec 2020 (Study Day 88)	Diabetes Type 2
Isosorbide mononitrate	Feb 2020 - Ongoing	Myocardial Infarction Prevention
Torasemide	Feb 2020 - Ongoing	Hypertension
Acetylsalicylic acid	Jun 2020 - Ongoing	Arterial Embolus
Clopidogrel	Jun 2020 - Ongoing	Arterial Embolus
Potassium chloride	Jun 2020 - Ongoing	Transient Ischemic Attack
Warfarin	Jun 2020 - 09 Mar 2021 (Study Day 163)	Arterial Embolus
Influenza vaccine	23 Oct 2020 (Study Day 26) - 23 Oct 2020 (Study Day 26)	Flu Prevention
Metformin	25 Dec 2020 (Study Day 89) - Ongoing	Diabetes Type Ii
Saxagliptin	25 Dec 2020 (Study Day 89) - Ongoing	Diabetes Type Ii
Apixaban	06 Mar 2021 (Study Day 160) - Ongoing	Prophylaxis For Cerebrovascular Disease

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US398-2246 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	28 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	26 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Bronchitis/Acute Bronchitis	SAE	Grade 2/ moderate	Not related	28 Nov 2020 (Study Day 62) – 15 Dec 2020 (Study Day 79)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2246, a 76-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 28 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 26 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Nov 2020 (Study Day 62), 61 days after the first dose and 33 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of bronchitis. Action taken with the IP was not applicable. The event of acute bronchitis lasted for 18 days, after which it was considered to be recovered/resolved on 15 Dec 2020 (Study Day 79). The investigator assessed the event of bronchitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001054	Bronchitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	Not reported - Ongoing
Tonsillectomy	Tonsillectomy	1959 - 1959
Tonsillitis	Tonsillitis	1959 - 1959
Back pain	Lower back pain	1976 - Ongoing
Hysterectomy	Hysterectomy	1996 - 1996
Smear cervix abnormal	Abnormal cervix cells	1996 - 1996
Botulinum toxin injection	Botox injection-lips	Jun 2009 - Jun 2009
Glaucoma	Bilateral glaucoma	2010 - Ongoing
Hypothyroidism	Hypothyroidism	2012 - Ongoing
Neuropathy peripheral	Neuropathy bilateral feet	2012 - Ongoing
Pollakiuria	Urinary frequency	2017 - Ongoing
Hypertension	Hypertension	2018 - Ongoing
Spinal fusion surgery	Spinal lumbar fusion	17 Jun 2019 (Study Day -469) - 17 Jun 2019 (Study Day -469)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	2012 - Ongoing	Neuropathy
Latanoprost	04 Feb 2014 (Study Day -2428) - Ongoing	Bilateral Glaucoma
Timolol	04 Feb 2014 (Study Day -2428) - Ongoing	Bilateral Glaucoma
Ascorbic acid	2015 - Ongoing	Supplement
Vitamin a nos	2015 - Ongoing	Supplement
Vitamin b12 nos	2015 - Ongoing	Supplement
Levothyroxine	01 May 2015 (Study Day -1977) - Ongoing	Hypothyroidism
Gabapentin	2018 - Ongoing	Lower Back Pain
Lisinopril	05 Oct 2018 (Study Day -724) - Ongoing	Hypertension
Diclofenac sodium	18 Sep 2020 (Study Day -10) - Ongoing	Lower Back Pain
Alprazolam	04 Oct 2020 (Study Day 7) - Ongoing	Hypertension And Anxiety
Oxybutynin	29 Oct 2020 (Study Day 32) - Ongoing	Urinary Frequency
Erythromycin	07 Nov 2020 (Study Day 41) - 11 Nov 2020 (Study Day 45)	Right Ear Infection
Prednisone	07 Nov 2020 (Study Day 41) - 11 Nov 2020 (Study Day 45)	Right Ear Infection
Amlodipine	28 Nov 2020 (Study Day 62) - Ongoing	Hypertension
Ceftriaxone	29 Nov 2020 (Study Day 63) - 30 Nov 2020 (Study Day 64)	Acute Bronchitis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levofloxacin	01 Dec 2020 (Study Day 65) - 15 Dec 2020 (Study Day 79)	Bronchitis
Benzonatate	08 Dec 2020 (Study Day 72) - 15 Dec 2020 (Study Day 79)	Bronchitis
Codeine; promethazine	08 Dec 2020 (Study Day 72) - 15 Dec 2020 (Study Day 79)	Bronchitis
Ibuprofen	29 Jan 2021 (Study Day 124) - Ongoing	Back Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Anxiety	Grade 2/moderate	Not related	04 Oct 2020 (Study Day 7) - Ongoing
Cough	Grade 1/mild	Not related	04 Oct 2020 (Study Day 7) - 05 Oct 2020 (Study Day 8)
Ear Infection	Grade 2/moderate	Not related	07 Nov 2020 (Study Day 41) - 11 Nov 2020 (Study Day 45)
Back Pain	Grade 2/moderate	Not related	25 Nov 2020 (Study Day 59) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2256 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	30 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	28 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	SAE	Grade 2/ moderate	Not related	23 Nov 2020 (Study Day 55) – 11 Dec 2020 (Study Day 73)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2256, a 46-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 30 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 28 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Nov 2020 (Study Day 55), 54 days after the first dose and 26 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of covid-19. Action taken with the IP was not applicable. The event of symptomatic COVID-19 lasted for 19 days, after which it was considered to be recovered/resolved on 11 Dec 2020 (Study Day 73). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001031	COVID-19

Study Completion/Discontinuation

On 13 Feb 2021 (Study Day 137), the participant discontinued from the study due to withdrawal of consent by participant.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Lactose intolerance	Lactose intolerant	2012 - Ongoing
Headache	Headaches (at night)	Jun 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid	Jun 2020 - Ongoing	Supplement
Calcium	Jun 2020 - Ongoing	Supplement
Colecalciferol	Jun 2020 - Ongoing	Supplement
Iron	Jun 2020 - Ongoing	Supplement
Magnesium	Jun 2020 - Ongoing	Supplement
Omega-3 nos	Jun 2020 - 04 Nov 2020 (Study Day 36)	Supplement
Potassium	Jun 2020 - Ongoing	Supplement
Vitamin b complex	Jun 2020 - Ongoing	Supplement
Xantofyl	Jun 2020 - Ongoing	Supplement
Zinc	Jun 2020 - Ongoing	Supplement
Paracetamol	17 Oct 2020 (Study Day 18) - Ongoing	Headache
Omega-3 nos	04 Nov 2020 (Study Day 36) - Ongoing	Supplement
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol; phenylephrine hydrochloride	28 Nov 2020 (Study Day 60) - 11 Dec 2020 (Study Day 73)	Symptomatic COVID 19
Dextromethorphan; paracetamol; phenylephrine	28 Nov 2020 (Study Day 60) - 11 Dec 2020 (Study Day 73)	Symptomatic COVID-19
Diphenhydramine hydrochloride; paracetamol; phenylephrine hydrochloride	02 Dec 2020 (Study Day 64) - 11 Dec 2020 (Study Day 73)	Symptomatic COVID 19
Diphenhydramine; paracetamol; phenylephrine	02 Dec 2020 (Study Day 64) - 11 Dec 2020 (Study Day 73)	Symptomatic COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Fall/Fall	SAE	Grade 2/moderate	Not related	02 Dec 2020 (Study Day 55) – 02 Dec 2020 (Study Day 55)	Recovered/ resolved
Transient Ischaemic Attack/ Transient Ischemic Attack Vs Slurred Speech 2nd Medication Use	SAE	Grade 2/moderate	Not related	02 Dec 2020 (Study Day 55) – 05 Dec 2020 (Study Day 58)	Recovered/ resolved
Hypoglycaemia/Hypoglycemia	SAE	Grade 3/severe	Not related	05 Feb 2021 (Study Day 120) – 05 Feb 2021 (Study Day 120)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2269, a 58-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 09 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 06 Nov 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Dec 2020 (Study Day 55), 54 days after the first dose and 26 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of fall. Action taken with the IP was not applicable. The event of fall lasted for 1 day, after which it was considered to be recovered/resolved on 02 Dec 2020 (Study Day 55). The investigator assessed the event of fall to be not related to the IP.

On 02 Dec 2020 (Study Day 55), 54 days after the first dose and 26 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of transient ischaemic attack. Action taken with the IP was not applicable. The event of transient ischemic attack vs slurred speech 2nd medication use lasted for 4 days, after which it was considered to be recovered/resolved on 05 Dec 2020 (Study Day 58). The investigator assessed the event of transient ischaemic attack to be not related to the IP.

On 05 Feb 2021 (Study Day 120), 119 days after the first dose and 91 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of hypoglycaemia. Action taken with the IP was not applicable. The event of hypoglycemia lasted for 1 day, after which it was considered to be recovered/resolved on 05 Feb 2021 (Study Day 120). The investigator assessed the event of hypoglycaemia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001229	Fall
MOD-2020-001229	Transient ischaemic attack
MOD-2021-011815	Hypoglycaemia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Irritable bowel syndrome	Irritable bowel syndrome	Not reported - Ongoing
Obesity	Obesity	Not reported - Ongoing
Type 2 diabetes mellitus	Diabetes type 2	07 Jul 1990 (Study Day -11052) - Ongoing
Deafness bilateral	Hearing loss bilateral	Jun 2000 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	2013 - Ongoing
Intervertebral disc degeneration	Lumbar disk degeneration	2015 - Ongoing
Osteoarthritis	Osteoarthritis right knee	15 Jul 2015 (Study Day -1913) - Ongoing
Blood cholesterol increased	High cholesterol	28 Jun 2016 (Study Day -1564) - Ongoing
Hypertension	Hypertension	28 Jun 2016 (Study Day -1564) - Ongoing
Transient ischaemic attack	Transient ischemic attack	15 Jul 2016 (Study Day -1547) - 15 Jul 2016 (Study Day -1547)
Nausea	Nausea intermittent	2017 - Ongoing
Postmenopause	Post menopausal	2017 - Ongoing
Seasonal allergy	Seasonal allergies	2017 - Ongoing
Neuropathy peripheral	Peripheral neuropathy	2018 - Ongoing
Spinal fusion surgery	Spinal fusion	2018 - 2018
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	2019 - Ongoing
Hypertonic bladder	Overactive bladder	09 Oct 2019 (Study Day -366) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cyclobenzaprine	Not reported - Ongoing	Lumbar Disc Degenerations
Insulin human	1990 - Ongoing	Type 2 Diabetes
Insulin lispro	1990 - 03 Dec 2020 (Study Day 56)	Type 2 Diabetes
Glipizide	25 Jul 1990 (Study Day -11034) - 02 Dec 2020 (Study Day 55)	Type 2 Diabetes
Acetylsalicylic acid	2017 - Ongoing	Cardiac Prophylaxis
Atorvastatin	2017 - Ongoing	High Cholesterol
Lisinopril	2017 - Ongoing	Hypertension
Loratadine	2017 - Ongoing	Seasonal Allergies
Ondansetron	2017 - Ongoing	Intermittent Nausea
Pantoprazole	2017 - Ongoing	Acid Reflux
Baclofen	2018 - Ongoing	Neuropathy
Duloxetine	2018 - 17 Dec 2020 (Study Day 70)	Neuropathy
Gabapentin	Jun 2018 - Ongoing	Neuropathy
Salbutamol	2019 - Ongoing	Chronic Obstructive Pulmonary Disease
Oxybutynin	Oct 2019 - Ongoing	Overactive Bladder
Ct brain perfusion scan*	02 Dec 2020 (Study Day 55) - 02 Dec 2020 (Study Day 55)	Adverse Event
Ct brain*	03 Dec 2020 (Study Day 56) - 03 Dec 2020 (Study Day 56)	Adverse Event
Cta brain*	03 Dec 2020 (Study Day 56) - 03 Dec 2020 (Study Day 56)	Adverse Event
Ecg*	03 Dec 2020 (Study Day 56) - 03 Dec 2020 (Study Day 56)	Adverse Event
X-ray chest*	03 Dec 2020 (Study Day 56) - 03 Dec 2020 (Study Day 56)	Adverse Event
X-ray hip*	03 Dec 2020 (Study Day 56) - 03 Dec 2020 (Study Day 56)	Adverse Event
Mri brain*	05 Dec 2020 (Study Day 58) - 05 Dec 2020 (Study Day 58)	Adverse Event
Amlodipine	17 Dec 2020 (Study Day 70) - Ongoing	Hypertension
Carvedilol	17 Dec 2020 (Study Day 70) - Ongoing	Hypertension
Dicycloverine	17 Dec 2020 (Study Day 70) - Ongoing	Irritable Bowel Syndrome
Metformin	Feb 2021 - Ongoing	Diabetes Mellitus 2
Ceftriaxone	05 Feb 2021 (Study Day 120) - 07 Feb 2021 (Study Day 122)	Cystitis Acute
Glucose	05 Feb 2021 (Study Day 120) - 05 Feb 2021 (Study Day 120)	Hypoglycemia
Insulin glargine	05 Feb 2021 (Study Day 120) - 08 Mar 2021 (Study Day 151)	Type Two Diabetes
Insulin lispro	05 Feb 2021 (Study Day 120) - Ongoing	Type Two Diabetes

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sodium chloride	05 Feb 2021 (Study Day 120) - 05 Feb 2021 (Study Day 120)	Hypoglycemia
Cefdinir	08 Feb 2021 (Study Day 123) - 10 Feb 2021 (Study Day 125)	Cystitis Acute
Fluconazole	08 Feb 2021 (Study Day 123) - 08 Feb 2021 (Study Day 123)	Prophylaxis For Cystitis Acute
Occupational therapy*	03 Mar 2021 (Study Day 146) - 03 Mar 2021 (Study Day 146)	Other, Motility Dysfunctional
Physical therapy*	03 Mar 2021 (Study Day 146) - 03 Mar 2021 (Study Day 146)	Other, Motility Dysfunctional
Meropenem	04 Mar 2021 (Study Day 147) - 07 Mar 2021 (Study Day 150)	Urinary Tract Infection
Cefdinir	06 Mar 2021 (Study Day 149) - 16 Mar 2021 (Study Day 159)	Bilateral Pneumonia
Fluconazole	06 Mar 2021 (Study Day 149) - 12 Mar 2021 (Study Day 155)	Vaginal Candidiasis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hyperglycaemia	Grade 2/moderate	Not applicable	05 Jan 2021 (Study Day 89) - 06 Jan 2021 (Study Day 90)
Urinary Tract Infection	Grade 1/mild	Not related	05 Jan 2021 (Study Day 89) - 15 Jan 2021 (Study Day 99)
Cystitis	Grade 2/moderate	Not related	05 Feb 2021 (Study Day 120) - 10 Feb 2021 (Study Day 125)
Vulvovaginal Candidiasis	Grade 2/moderate	Not related	06 Mar 2021 (Study Day 149) - 12 Mar 2021 (Study Day 155)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2272 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	13 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	10 Nov 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Atrial Fibrillation/Atrial Fibrillation With Rapid Ventricular Rate, New Onset	SAE	Grade 3/ severe	Not related	19 Oct 2020 (Study Day 7) – 20 Oct 2020 (Study Day 8)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2272, a 69-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 13 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 10 Nov 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 19 Oct 2020 (Study Day 7), 6 days after the first dose and 22 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of atrial fibrillation. The IP dose was not changed due to the atrial fibrillation with rapid ventricular rate, new onset. The event of atrial fibrillation with rapid ventricular rate, new onset lasted for 2 days, after which it was considered to be recovered/resolved on 20 Oct 2020 (Study Day 8). The investigator assessed the event of atrial fibrillation to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000505	Atrial fibrillation

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Food allergy	Shellfish allergy	Not reported - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	Not reported - Ongoing
Obesity	Obesity	Not reported - Ongoing
Osteoarthritis	Right knee joint osteoarthritis	Not reported - 2012
Varicose vein	Varicose veins	Not reported - Ongoing
Back pain	Lower back pain (intermittent)	1961 - Ongoing
Musculoskeletal pain	Right shoulder pain	1961 - Ongoing
Bronchial hyperreactivity	Reactive airway disease	2001 - Ongoing
Oophorectomy	Left oophorectomy	2001 - 2001
Postmenopause	Post menopausal	2002 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2005 - Ongoing
Hypertension	Hypertension	2005 - Ongoing
Pollakiuria	Urinary frequency	2005 - Ongoing
Osteoarthritis	Left knee osteoarthritis	2010 - Ongoing
Osteopenia	Osteopenia	2010 - Ongoing
Knee arthroplasty	Right knee joint replacement	2012 - 2012
Arteriosclerosis coronary artery	Coronary artery atherosclerosis, mild	30 Dec 2015 (Study Day -1749) - Ongoing
X-ray limb	Right shoulder x-ray	2020 - 2020
Sleep apnoea syndrome	Obstructive sleep apnea	12 Oct 2020 (Study Day -1) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2000 - Ongoing	Lower Back Pain And Right Shoulder Pain
Methocarbamol	2000 - Ongoing	Lower Back Pain And Right Shoulder Pain
Acetylsalicylic acid	2005 - Ongoing	Prophylaxis
Budesonide	2005 - Ongoing	Reactive Airway Disease
Colecalciferol	2005 - Ongoing	Supplement
Olmesartan	2005 - Ongoing	Hypertension
Rosuvastatin	2005 - Ongoing	Hyperhcolesterolemia
Salbutamol	2005 - Ongoing	Reactive Airway Disease
Ascorbic acid; betacarotene; cupric oxide; tocopheryl acetate; zinc oxide	2019 - Ongoing	Supplement
Curcuma longa	2019 - Ongoing	Prophylaxis For Osteoarthritis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ubidecarenone	2019 - Ongoing	Supplement
Chest xray*	20 Oct 2020 (Study Day 8) - 20 Oct 2020 (Study Day 8)	Adverse Event
Diltiazem	20 Oct 2020 (Study Day 8) - 21 Oct 2020 (Study Day 9)	Atrial Fibrillation With Rapid Ventricular Response
Diltiazem	20 Oct 2020 (Study Day 8) - 20 Oct 2020 (Study Day 8)	Atril Fibrillation With Rapid Ventricular Rate
Electrocardiogram*	20 Oct 2020 (Study Day 8) - 20 Oct 2020 (Study Day 8)	Adverse Event
Simeticone	20 Oct 2020 (Study Day 8) - 20 Oct 2020 (Study Day 8)	Abdominal Gas Feeling
Apixaban	21 Oct 2020 (Study Day 9) - Ongoing	Atrial Fibrillation
Diltiazem	21 Oct 2020 (Study Day 9) - Ongoing	Atrial Fibrillation
Echocardiogram*	21 Oct 2020 (Study Day 9) - 21 Oct 2020 (Study Day 9)	Adverse Event
Cpap... continuous psotive airway pressure*	05 Nov 2020 (Study Day 24) - 05 Nov 2020 (Study Day 24)	Medical History
Paracetamol	11 Nov 2020 (Study Day 30) - 13 Nov 2020 (Study Day 32)	Injection Site
Cefalexin	02 Feb 2021 (Study Day 113) - 07 Feb 2021 (Study Day 118)	Urinary Frequency (Increased)
Amoxicillin; clavulanic acid	07 Feb 2021 (Study Day 118) - 13 Feb 2021 (Study Day 124)	Urinary Frequency (Increased)

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Flatulence	Grade 2/moderate	Not related	20 Oct 2020 (Study Day 8) - 20 Oct 2020 (Study Day 8)
Cystitis	Grade 1/mild	Not related	04 Feb 2021 (Study Day 115) - 13 Feb 2021 (Study Day 124)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US325-2516 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	21 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	20 Oct 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pleural Effusion/Small Bilateral Pleural Effusions	SAE	Grade 3/severe	Not related	30 Sep 2020 (Study Day 10) – 10 Oct 2020 (Study Day 20)	Recovered/resolved
Pneumonia Mycoplasmal/Bilateral Multifocal Pneumonia Right Greater Than Left Due To Mycoplasma Pneumonia	SAE	Grade 3/severe	Not related	30 Sep 2020 (Study Day 10) – 20 Oct 2020 (Study Day 30)	Recovered/resolved
Respiratory Failure/Hypoxemia Respiratory Failure On Admission, Resolved	SAE	Grade 3/severe	Not related	30 Sep 2020 (Study Day 10) – 10 Oct 2020 (Study Day 20)	Recovered/resolved
Colitis/Acute Colitis	SAE	Grade 3/severe	Not related	30 Sep 2020 (Study Day 10) – 20 Oct 2020 (Study Day 30)	Recovered/resolved
Heart Rate Irregular/ Irregular Heart Beat	SAE	Grade 3/severe	Not related	01 Apr 2021 (Study Day 193) – Ongoing	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US325-2516, a 40-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 21 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 20 Oct 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Sep 2020 (Study Day 10), 9 days after the first dose and 20 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pleural effusion. The IP dose was not changed due to the small bilateral pleural effusions. The event of small bilateral pleural effusions lasted for 11 days, after which it was considered to be recovered/resolved on 10 Oct 2020 (Study Day 20). The investigator assessed the event of pleural effusion to be not related to the IP.

On 30 Sep 2020 (Study Day 10), 9 days after the first dose and 20 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pneumonia

mycoplasmal. The IP dose was not changed due to the bilateral multifocal pneumonia right greater than left due to mycoplasma pneumonia. The event of bilateral multifocal pneumonia right greater than left due to mycoplasma pneumonia lasted for 21 days, after which it was considered to be recovered/resolved on 20 Oct 2020 (Study Day 30) The investigator assessed the event of pneumonia mycoplasmal to be not related to the IP.

On 30 Sep 2020 (Study Day 10), 9 days after the first dose and 20 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of respiratory failure. Action taken with the IP was not applicable. The event of hypoxemia respiratory failure on admission, resolved lasted for 11 days, after which it was considered to be recovered/resolved on 10 Oct 2020 (Study Day 20). The investigator assessed the event of respiratory failure to be not related to the IP.

On 30 Sep 2020 (Study Day 10), 9 days after the first dose and 20 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of colitis. The IP dose was not changed due to the acute colitis. The event of acute colitis lasted for 21 days, after which it was considered to be recovered/resolved on 20 Oct 2020 (Study Day 30). The investigator assessed the event of colitis to be not related to the IP.

On 01 Apr 2021 (Study Day 193), 192 days after the first dose and 163 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of heart rate irregular. Action taken with the IP was not applicable. The event of heart beat irregular lasted for an unreported number of days, after which it was considered to be recovered/resolved on an unreported date. The investigator assessed the event of heart rate irregular to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000455	Pneumonia mycoplasmal
MOD-2020-000455	Respiratory failure
MOD-2020-000455	Colitis
MOD-2020-000455	Pleural effusion

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cirrhosis alcoholic	Alcoholic liver cirrhosis	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Type 2 diabetes mellitus	Type II diabetes mellitus	2010 - Ongoing
Insomnia	Insomnia	Apr 2010 - Ongoing
Seizure	Seizure disorder	2012 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Propranolol	2010 - Ongoing	Hypertension
Sitagliptin	2010 - Ongoing	Type II Diabetes Mellitus
Trazodone	Apr 2010 - 10 Oct 2020 (Study Day 20)	Insomnia
Levetiracetam	30 Sep 2014 (Study Day -2183) - Ongoing	Seizures
Tramadol	30 Sep 2016 (Study Day -1452) - Ongoing	Generalized Pain
Trazodone	14 Apr 2020 (Study Day -160) - Ongoing	Insomnia
Pantoprazole sodium sesquihydrate	16 Apr 2020 (Study Day -158) - Ongoing	Gastroesophageal Reflux Disease
Abdominal ultrasound*	30 Sep 2020 (Study Day 10) - 30 Sep 2020 (Study Day 10)	Adverse Event
Azithromycin	30 Sep 2020 (Study Day 10) - 30 Sep 2020 (Study Day 10)	Bilateral Multifocal Pneumonia Right Greater Than Left Due To Mycoplasma Pneumonia
Chest x-ray*	30 Sep 2020 (Study Day 10) - 30 Sep 2020 (Study Day 10)	Adverse Event
Chlordiazepoxide	30 Sep 2020 (Study Day 10) - Ongoing	Alcohol Withdrawal Symptoms
Dextromethorphan hydrobromide; guaifenesin	30 Sep 2020 (Study Day 10) - 10 Oct 2020 (Study Day 20)	Cough
Furosemide	30 Sep 2020 (Study Day 10) - 30 Oct 2020 (Study Day 40)	Hypertension
Insulin glargine	30 Sep 2020 (Study Day 10) - 10 Oct 2020 (Study Day 20)	Type 2 Diabetes Mellitus
Salbutamol sulfate	30 Sep 2020 (Study Day 10) - 10 Oct 2020 (Study Day 20)	Shortness Of Breath
Spironolactone	30 Sep 2020 (Study Day 10) - 30 Oct 2020 (Study Day 40)	Hypertension

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Thiamine hydrochloride	30 Sep 2020 (Study Day 10) - 30 Jan 2021 (Study Day 132)	Thiamin Deficiency
Ultrasound of the kidneys and urinary bladder*	30 Sep 2020 (Study Day 10) - 30 Sep 2020 (Study Day 10)	Adverse Event
Azithromycin	01 Oct 2020 (Study Day 11) - 04 Oct 2020 (Study Day 14)	Bilateral Multifocal Pneumonia Right Greater Than Left Due To Mycoplasma Pneumonia
Computed tomography angiogram chest with iv contrast*	01 Oct 2020 (Study Day 11) - 01 Oct 2020 (Study Day 11)	Adverse Event
Dexamethasone	01 Oct 2020 (Study Day 11) - 10 Oct 2020 (Study Day 20)	Bilateral Multifocal Pneumonia Right Greater Than Left Due To Mycoplasma Pneumonia
Famotidine	01 Oct 2020 (Study Day 11) - 10 Oct 2020 (Study Day 20)	Gastroesophageal Reflux Disease
Transthoracic echocardiogram*	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Adverse Event
Chest x-ray*	04 Oct 2020 (Study Day 14) - 04 Oct 2020 (Study Day 14)	Adverse Event
Computed tomography of the abdomen/pelvis w/o contrast*	04 Oct 2020 (Study Day 14) - 04 Oct 2020 (Study Day 14)	Adverse Event
Abdominal x-ray*	05 Oct 2020 (Study Day 15) - 05 Oct 2020 (Study Day 15)	Adverse Event
Ultrasound paracentesis with image*	05 Oct 2020 (Study Day 15) - 05 Oct 2020 (Study Day 15)	Adverse Event
Colonoscopy*	06 Oct 2020 (Study Day 16) - 06 Oct 2020 (Study Day 16)	Adverse Event
Left colon biopsy*	06 Oct 2020 (Study Day 16) - 06 Oct 2020 (Study Day 16)	Adverse Event
Right colon biopsy*	06 Oct 2020 (Study Day 16) - 06 Oct 2020 (Study Day 16)	Adverse Event
Abdominal x-ray*	07 Oct 2020 (Study Day 17) - 07 Oct 2020 (Study Day 17)	Adverse Event
Levofloxacin	11 Oct 2020 (Study Day 21) - 20 Oct 2020 (Study Day 30)	Colitis,pneumonia
Metronidazole	11 Oct 2020 (Study Day 21) - 20 Oct 2020 (Study Day 30)	Colitis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US357-2120 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Colitis/Acute Colitis	SAE	Grade 3/severe	Not related	14 Dec 2020 (Study Day 110) – 14 Jan 2021 (Study Day 141)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US357-2120, a 59-year-old Hispanic or Latino male, received the first dose of placebo in the right arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 25 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 14 Dec 2020 (Study Day 110), 109 days after the first dose and 80 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of colitis. Action taken with the IP was not applicable. The event of acute colitis lasted for 32 days, after which it was considered to be recovered/resolved on 14 Jan 2021 (Study Day 141). The investigator assessed the event of colitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005912	Colitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 2 diabetes mellitus	Diabetes type II	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Loperamide	24 Dec 2020 (Study Day 120) - 08 Jan 2021 (Study Day 135)	Diarrhea
Mesalazine	11 Feb 2021 (Study Day 169) - Ongoing	Colitis
Trimebutine	11 Feb 2021 (Study Day 169) - Ongoing	Colitis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Colitis	Grade 2/moderate	Not related	11 Feb 2021 (Study Day 169) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US373-2235 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	SAE, COVID-19	Grade 2/ moderate	Not related	31 Dec 2020 (Study Day 123) – 26 Jan 2021 (Study Day 149)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US373-2235, a 86-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 28 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 31 Dec 2020 (Study Day 123), 122 days after the first dose and 94 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of covid-19. Action taken with the IP was not applicable. The event of symptomatic COVID-19 lasted for 27 days, after which it was considered to be recovered/resolved on 26 Jan 2021 (Study Day 149). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005758	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Adenoidectomy	Adenoidectomy	1936 - 1936
Adenoiditis	Adenoiditis	1936 - 1936
Mastoidectomy	Unilateral mastoidectomy	1936 - 1936
Mastoiditis	Mastoiditis	1936 - 1936
Tonsillectomy	Tonsillectomy	1936 - 1936
Tonsillitis	Tonsillitis	1936 - 1936
Uterine prolapse	Uterine prolapse	1971 - Nov 1976
Nerve root injury cervical	Cervical spine nerve impairment	1975 - 1975
Spinal laminectomy	Cervical spine laminectomy	1975 - 1975
Hysterectomy	Total hysterectomy	1976 - 1976
Postmenopause	Postmenopausal	1976 - Ongoing
Spinal osteoarthritis	Osteoarthritis lumbar spine	1980 - Ongoing
Osteoarthritis	Left knee osteoarthritis	2010 - 2017
Type 2 diabetes mellitus	T2dm	2011 - Ongoing
Atrial fibrillation	Atrial fibrillation	2015 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2015 - Ongoing
Knee arthroplasty	Left knee arthroplasty	2017 - 2017

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Estradiol	1976 - Ongoing	Post-Menopausal
Chondroitin; glucosamine	2010 - Ongoing	Vitamin Deficiency
Plantago ovata	2010 - Ongoing	Constipation
Vitamins nos	2010 - Ongoing	Vitamin Deficiency
Diltiazem hydrochloride	2015 - Ongoing	Atrial Fibrillation
Rosuvastatin	2015 - Ongoing	Hyperlipidemia
Dabigatran etexilate mesilate	2019 - Ongoing	Atrial Fibrillation
Unspecified herbal and traditional medicine	2019 - Ongoing	Malnutrition
Zinc	01 Jan 2021 (Study Day 124) - Ongoing	Vitammin Deficiency
Azithromycin	02 Jan 2021 (Study Day 125) - 02 Jan 2021 (Study Day 125)	Symptomatic COVID 19
Azithromycin	03 Jan 2021 (Study Day 126) - 04 Feb 2021 (Study Day 158)	Symptomatic COVID 19
Azithromycin	05 Jan 2021 (Study Day 128) - 06 Jan 2021 (Study Day 129)	Symptomatic COVID 19

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metformin	15 Jan 2021 (Study Day 138) - Ongoing	T2dm
Doxycycline	04 Feb 2021 (Study Day 158) - 09 Feb 2021 (Study Day 163)	L Lower Leg Spider Bite

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthropod Bite	Grade 2/moderate	Not related	15 Dec 2020 (Study Day 107) - 09 Feb 2021 (Study Day 163)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US373-2249 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	01 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	29 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Deep Vein Thrombosis/ Deep Vein Thrombosis - Right Leg	SAE	Grade 3/severe	Not related	15 Jan 2021 (Study Day 137) – Ongoing	Recovering/resolving

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US373-2249, an 80-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 01 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 29 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Jan 2021 (Study Day 137), 136 days after the first dose and 108 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of deep vein thrombosis. Action taken with the IP was not applicable. The event of deep vein thrombosis - right leg was considered to be ongoing. The investigator assessed the event of deep vein thrombosis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-009707	Deep vein thrombosis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tobacco user	Tobacco use	1959 - 1966
Alcohol use	Alcohol use	1965 - Ongoing
Cataract	Bilateral eyes cataracts	2007 - 2008
Cataract operation	Bilateral eyes cataract lens surgery	2008 - 2008
Prostate cancer	Prostate cancer	2008 - 2008
Prostatectomy	Prostectomy	Jan 2008 - Jan 2008
Pulmonary embolism	Pulmonary embolism	Jan 2008 - Jan 2008
Actinic keratosis	Actinic keratosis - face and scalp	2010 - Ongoing
Drug hypersensitivity	Allergy to cipro	2010 - Ongoing
Herpes zoster	Shingles	2010 - 2010
Cancer surgery	Squamous cell carcinoma removal surgery - right ear	2016 - 2016
Squamous cell carcinoma	Squamous cell carcinoma - right ear	2016 - 2016
Basal cell carcinoma	Basal cell carcinoma - back of the neck	2018 - 2018
Micrographic skin surgery	Moh's surgery - neck	2018 - 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Warfarin	2008 - 29 Jan 2021 (Study Day 151)	Pulmonary Embolism
Calcium	2010 - Ongoing	Vitamin Deficiency
Vitamin d nos	2010 - Ongoing	Vitamin Deficiency
Simeticone	22 Oct 2020 (Study Day 52) - 26 Oct 2020 (Study Day 56)	Loose Stools
Bilateral duplex lower extremity ultrasound*	29 Jan 2021 (Study Day 151) - 29 Jan 2021 (Study Day 151)	Diagnostic
Enoxaparin sodium	29 Jan 2021 (Study Day 151) - 31 Jan 2021 (Study Day 153)	Dvt Right Leg
Famotidine	29 Jan 2021 (Study Day 151) - 31 Jan 2021 (Study Day 153)	Gi Prophylaxis
Echocardiogram*	30 Jan 2021 (Study Day 152) - 30 Jan 2021 (Study Day 152)	Diagnostic
Apixaban	31 Jan 2021 (Study Day 153) - Ongoing	Dvt Right Leg

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diarrhoea	Grade 2/moderate	Not related	22 Oct 2020 (Study Day 52) - 27 Oct 2020 (Study Day 57)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US373-2262 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	06 Sep 2020 (Study Day 5) – 19 Sep 2020 (Study Day 18)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US373-2262, a 37-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 02 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 06 Sep 2020 (Study Day 5), 4 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of covid-19. On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of symptomatic COVID-19 lasted for 14 days, after which it was considered to be recovered/resolved on 19 Sep 2020 (Study Day 18). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000270	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Constipation	Constipation	1989 - Ongoing
Astigmatism	Astigmatism	1996 - 2010
Hypersensitivity	Environmental allergies	1996 - Ongoing
Myopia	Myopia	1996 - 2010
Iron deficiency anaemia	Iron deficiency anemia	1998 - 1999
Keratomileusis	Lasik	2010 - 2010
Rosacea	Rosacea - facial	2013 - Ongoing
Anxiety	Anxiety	2014 - Ongoing
Dysmenorrhoea	Menstrual cramps	2014 - Ongoing
Hypertension	Hypertension	2014 - Ongoing
Perinatal depression	Post-partum depression	2014 - 2014
Urinary tract infection	Uncomplicated urinary tract infection	2014 - 2014
Migraine	Migraine headaches	2017 - Ongoing
Papilloma viral infection	Human papillomavirus	2019 - Ongoing
Ligament sprain	Left sprained ankle	Mar 2020 - Ongoing
Substance use	Marijuana use - oral	May 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	2014 - Ongoing	Menstrual Cramps
Ibuprofen	2017 - Ongoing	Migraine Headaches
Ibuprofen	Mar 2020 - Ongoing	Left Sprained Ankle
Losartan	Jun 2020 - Ongoing	Hypertension
Paracetamol	04 Sep 2020 (Study Day 3) - 04 Sep 2020 (Study Day 3)	E-Diary Pain - Headache
Paracetamol	12 Sep 2020 (Study Day 11) - 19 Sep 2020 (Study Day 18)	Symptomatic COVID-19
Influenza vaccine	16 Oct 2020 (Study Day 45) - 16 Oct 2020 (Study Day 45)	Influenza

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	06 Sep 2020 (Study Day 5) - 19 Sep 2020 (Study Day 18)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US373-2304 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	09 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	07 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pulmonary Embolism/Bilateral Pulmonary Embolism	SAE	Grade 3/severe	Not related	25 Oct 2020 (Study Day 47) – 15 Apr 2021 (Study Day 219)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US373-2304, a 55-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 09 Sep 2020 (Study Day 1). The second dose was administered in the right arm on 07 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Oct 2020 (Study Day 47), 46 days after the first dose and 18 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pulmonary embolism. Action taken with the IP was not applicable. The event of bilateral pulmonary embolism lasted for 173 days, after which it was considered to be recovered/resolved with sequelae on 15 Apr 2021 (Study Day 219). The investigator assessed the event of pulmonary embolism to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000628	Pulmonary embolism

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypersensitivity	Environmental allergies	1965 - Ongoing
Asthma	Asthma	1974 - Ongoing
Myopia	Myopia bilateral	1974 - Ongoing
Allergy to animal	Allergy to pet dander	1978 - Ongoing
Carpal tunnel syndrome	Right carpal tunnel	1994 - 12 Jun 2020 (Study Day -89)
Depression	Depression	1996 - Ongoing
Insomnia	Insomnia	1996 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	1998 - Ongoing
Back pain	Chronic back pain	2010 - Ongoing
Neck pain	Chronic neck pain	2010 - Ongoing
Cystocele	Cystocele	16 Nov 2013 (Study Day -2489) - 16 Nov 2013 (Study Day -2489)
Cystocele repair	Cystocele surgery	16 Nov 2013 (Study Day -2489) - 16 Nov 2013 (Study Day -2489)
Urinary tract infection	Frequent urinary tract infections	2015 - Ongoing
Cystocele	Cystocele	17 Aug 2015 (Study Day -1850) - 17 Aug 2015 (Study Day -1850)
Cystocele repair	Cystocele surgery	17 Aug 2015 (Study Day -1850) - 17 Aug 2015 (Study Day -1850)
Menopause	Peri menopause	2017 - Ongoing
Carpal tunnel decompression	Right carpal tunnel release	12 Jun 2020 (Study Day -89) - 12 Jun 2020 (Study Day -89)
Tendon sheath incision	Right trigger finger release	12 Jun 2020 (Study Day -89) - 12 Jun 2020 (Study Day -89)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	1974 - Ongoing	Asthma
Cetirizine hydrochloride	1978 - Ongoing	Pet Dander And Environmental Allergies
Amitriptyline	1996 - Ongoing	Depression / Insomnia
Bupropion hydrochloride	1996 - Ongoing	Depression
Fluoxetine	1996 - Ongoing	Depression
Colecalciferol	1998 - Ongoing	Vitamin Deficiency
Magnesium	1998 - Ongoing	Vitamin Deficiency
Pantoprazole	1998 - Ongoing	Gastroesophageal Reflux Disease

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	1998 - Ongoing	Vitamin Deficiency
Zinc	1998 - Ongoing	Vitamin Deficiency
Gabapentin	2010 - Ongoing	Chronic Back Pain
Hydrocodone bitartrate; paracetamol	2010 - Ongoing	Post Surgical Pain
Naproxen	2010 - 29 Oct 2020 (Study Day 51)	Chronic Back Pain
Estradiol	2017 - Ongoing	Peri-Menopause
Ethinylestradiol; etonogestrel	2018 - 11 Nov 2020 (Study Day 64)	Pregnancy
Chest x-ray*	29 Oct 2020 (Study Day 51) - 29 Oct 2020 (Study Day 51)	Diagnostic
Cta pulmonary embolus*	29 Oct 2020 (Study Day 51) - 29 Oct 2020 (Study Day 51)	Diagnostic
Heparin	29 Oct 2020 (Study Day 51) - 03 Nov 2020 (Study Day 56)	Bilateral Pulmonary Embolism
Bilateral venous duplex lower extremity ultrasound*	30 Oct 2020 (Study Day 52) - 30 Oct 2020 (Study Day 52)	Diagnostic
Chest x-ray*	02 Nov 2020 (Study Day 55) - 02 Nov 2020 (Study Day 55)	Diagnostic
Apixaban	03 Nov 2020 (Study Day 56) - Ongoing	Sae- Bilateral Pulmonary Embolism
Cyclobenzaprine	22 Feb 2021 (Study Day 167) - Ongoing	Chronic Back Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Pain	Grade 1/mild	Related	08 Oct 2020 (Study Day 30) - 18 Oct 2020 (Study Day 40)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US373-2311 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Device Dislocation/Displaced Left Breast Silicone Implant	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	29 Sep 2020 (Study Day 20) – 05 Oct 2020 (Study Day 26)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US373-2311, a 32-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 10 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 29 Sep 2020 (Study Day 20), 19 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of device dislocation. On 07 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of displaced left breast silicone implant lasted for 7 days, after which it was considered to be recovered/resolved on 05 Oct 2020 (Study Day 26). The investigator assessed the event of device dislocation to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Insomnia	Insomnia	1995 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Substance use	Marijuana use	2015 - Ongoing
Mammoplasty	Bilateral breast augmentation surgery	2017 - 2017

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fish oil	2010 - Ongoing	Malnutrition
Vitamins nos	2010 - Ongoing	Vitamin Deficiency
Quetiapine	2019 - Ongoing	Insomnia
Ibuprofen	18 Sep 2020 (Study Day 9) - 22 Oct 2020 (Study Day 43)	Left Axillary Lymphadenopathy
Bilateral breast implant removal and left pectoral muscle repair*	05 Oct 2020 (Study Day 26) - 05 Oct 2020 (Study Day 26)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Lymphadenopathy	Grade 1/mild	Related	18 Sep 2020 (Study Day 9) - 22 Oct 2020 (Study Day 43)
Device Dislocation	Grade 2/moderate	Not related	29 Sep 2020 (Study Day 20) - 05 Oct 2020 (Study Day 26)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US374-2022 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	16 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID 19	SAE	Grade 1/mild	Not related	24 Nov 2020 (Study Day 98) – 15 Dec 2020 (Study Day 119)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2022, a 38-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 16 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Nov 2020 (Study Day 98), 97 days after the first dose and 69 days after the second dose of the IP, the participant experienced a Grade 1/mild serious adverse event of covid-19. Action taken with the IP was not applicable. The event of COVID 19 lasted for 22 days, after which it was considered to be recovered/resolved on 15 Dec 2020 (Study Day 119). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001076	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	Not reported - Ongoing
Asthma	Asthma [mild]	1989 - Ongoing
Endometriosis	Endometriosis	1997 - Ongoing
Eczema	Generalized eczema	2010 - Ongoing
Generalised anxiety disorder	Generalized anxiety disorder	2010 - Ongoing
Seasonal allergy	Seasonal allergies	2010 - Ongoing
Attention deficit hyperactivity disorder	Attention deficit disorder	2015 - Ongoing
Depression	Depression	2018 - Ongoing
Arthralgia	Hip pain	Aug 2020 - Ongoing
Back pain	Back pain	Aug 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid	2010 - Ongoing	Supplement
Diazepam	2010 - Ongoing	Generalized Anxiety Disorder
Fluocinonide	2010 - Ongoing	Eczema
Levosalbutamol	2010 - Ongoing	Asthma
Loratadine	2010 - Ongoing	Seasonal Allergies
Vitamins nos	2010 - Ongoing	Supplement
Amfetamine aspartate; amfetamine sulfate; dexamfetamine saccharate; dexamfetamine sulfate	2015 - Ongoing	Attention Defecit Disorder

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Doxycycline	24 Nov 2020 (Study Day 98) - 11 Dec 2020 (Study Day 115)	Sinus Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Back Pain	Grade 1/mild	Not related	24 Aug 2020 (Study Day 6) - 24 Aug 2020 (Study Day 6)
Injection Site Pain	Grade 1/mild	Not related	03 Oct 2020 (Study Day 46) - 07 Oct 2020 (Study Day 50)
Diarrhoea	Grade 1/mild	Not related	04 Oct 2020 (Study Day 47) - 04 Oct 2020 (Study Day 47)
Diarrhoea	Grade 1/mild	Not related	18 Nov 2020 (Study Day 92) - 18 Nov 2020 (Study Day 92)
Sinusitis	Grade 2/moderate	Not related	18 Nov 2020 (Study Day 92) - 11 Dec 2020 (Study Day 115)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US374-2076 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	25 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	22 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Osteoarthritis/Worsening Osteoarthritis	SAE	Grade 2/moderate	Not related	12 Jan 2021 (Study Day 141) – 04 Mar 2021 (Study Day 192)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2076, a 76-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 25 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 22 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Jan 2021 (Study Day 141), 140 days after the first dose and 112 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of osteoarthritis. Action taken with the IP was not applicable. The event of worsening osteoarthritis lasted for 52 days, after which it was considered to be recovered/resolved on 04 Mar 2021 (Study Day 192). The investigator assessed the event of osteoarthritis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005459	Osteoarthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Menopause	Menopause	Jun 1990 - Ongoing
Drug hypersensitivity	Neosporin allergy	2000 - Ongoing
Hypothyroidism	Hypothyroidism	2000 - Ongoing
Osteoarthritis	Osteoarthritis	2000 - Ongoing
Coronary artery disease	Coronary artery disease	2017 - Ongoing
Blood cholesterol increased	High cholesterol	Mar 2017 - Ongoing
Hypertension	Hypertension	Mar 2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2000 - Ongoing	Osteoarthritis
Levothyroxine	2000 - Ongoing	Hypothyroidism
Acetylsalicylic acid	Mar 2017 - Ongoing	Prophylaxis Coronary Artery Disease
Atorvastatin	Mar 2017 - Ongoing	High Cholesterol
Metoprolol	Mar 2017 - Ongoing	Hypertension
Influenza vaccine	10 Oct 2020 (Study Day 47) - 10 Oct 2020 (Study Day 47)	Flu Prevention
Cefazolin	12 Jan 2021 (Study Day 141) - 14 Jan 2021 (Study Day 143)	Post Op Prophylaxis
Fentanyl	12 Jan 2021 (Study Day 141) - 13 Jan 2021 (Study Day 142)	Post Op Pain
Paracetamol	12 Jan 2021 (Study Day 141) - Ongoing	Post Operative Right Shoulder Pain
Right should replacement for worsening osteoarthritis*	12 Jan 2021 (Study Day 141) - 12 Jan 2021 (Study Day 141)	Adverse Event
Amlodipine	14 Jan 2021 (Study Day 143) - Ongoing	Worsening Htn
Oxycodone	14 Jan 2021 (Study Day 143) - 16 Jan 2021 (Study Day 145)	Post Op Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypertension	Grade 2/moderate	Not related	12 Jan 2021 (Study Day 141) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US374-2132 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pelvic Pain/Left Side Pelvic Pain	SAE	Grade 3/severe	Not related	10 Jan 2021 (Study Day 136) – 11 Jan 2021 (Study Day 137)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2132, a 28-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 25 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Jan 2021 (Study Day 136), 135 days after the first dose and 107 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pelvic pain. Action taken with the IP was not applicable. The event of left side pelvic pain lasted for 2 days, after which it was considered to be recovered/resolved on 11 Jan 2021 (Study Day 137). The investigator assessed the event of pelvic pain to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-018733	Pelvic pain

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Allergy to cefaclor	1995 - Ongoing
Adenoidectomy	Adenoidectomy	1999 - 1999
Drug hypersensitivity	Allergy bactrim	10 Jan 2010 (Study Day -3883) - Ongoing
Adnexal torsion	Right ovarian torsion	Feb 2020 - Feb 2020
Ovarian cyst	Right ovarian cyst	Feb 2020 - Feb 2020
Ovarian cystectomy	Laparoscopic ovarian cystectomy	Feb 2020 - Feb 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Botulinum toxin type a	25 Sep 2020 (Study Day 29) - 25 Sep 2020 (Study Day 29)	Cosmetic To Forehead Wrinkles
Paracetamol	25 Sep 2020 (Study Day 29) - 28 Sep 2020 (Study Day 32)	Pain And Fever
Influenza vaccine	12 Oct 2020 (Study Day 46) - 12 Oct 2020 (Study Day 46)	Flu Prophylaxis
Doppler ultrasound*	10 Jan 2021 (Study Day 136) - 10 Jan 2021 (Study Day 136)	Adverse Event
Ibuprofen	10 Jan 2021 (Study Day 136) - 11 Jan 2021 (Study Day 137)	Left-Sided Pelvic Pain
Oxycodone	10 Jan 2021 (Study Day 136) - 10 Jan 2021 (Study Day 136)	Left-Sided Pelvic Pain
Paracetamol	10 Jan 2021 (Study Day 136) - 11 Jan 2021 (Study Day 137)	Left-Sided Pelvic Pain
Pelvic ultrasound*	10 Jan 2021 (Study Day 136) - 10 Jan 2021 (Study Day 136)	Adverse Event
Transvaginal uhaa sound*	10 Jan 2021 (Study Day 136) - 10 Jan 2021 (Study Day 136)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Lymphadenopathy	Grade 1/mild	Related	01 Sep 2020 (Study Day 5) - 04 Sep 2020 (Study Day 8)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Viral Infection	Grade 1/mild	Not related	18 Oct 2020 (Study Day 52) - 25 Oct 2020 (Study Day 59)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3380297

Participant Number:	US374-2330 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	11 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	09 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Respiratory Failure/Acute Hypoxemic Respiratory Failure	SAE	Grade 3/severe	Not related	28 Nov 2020 (Study Day 79) – 03 Dec 2020 (Study Day 84)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2330, a 74-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 11 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 09 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Nov 2020 (Study Day 79), 78 days after the first dose and 50 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of acute respiratory failure. Action taken with the IP was not applicable. The event of acute hypoxemic respiratory failure lasted for 6 days, after which it was considered to be recovered/resolved on 03 Dec 2020 (Study Day 84). The investigator assessed the event of acute respiratory failure to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000955	Acute Respiratory Failure

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	Not reported - Ongoing
Menopause	Menopause	2000 - Ongoing
Hypertension	Hypertension	2005 - Ongoing
Nephrectomy	Nephrectomy (r)	2006 - Ongoing
Renal failure	Stage 2 renal insufficiency	2006 - Ongoing
Fluid retention	Fluid retention	2010 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2010 - Ongoing
Sinus congestion	Sinus congestion	2010 - Ongoing
Osteoarthritis	Osteoarthritis - bilateral knees	2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	1985 - 29 Nov 2020 (Study Day 80)	Cardiac
Amlodipine	2005 - Ongoing	Hypertension
Metoprolol	2005 - Ongoing	Hypertension
Atorvastatin	2010 - Ongoing	Hypercholesterolemia
Fexofenadine hydrochloride	2010 - Oct 2020	Sinus Congestion
Furosemide	05 Aug 2020 (Study Day -37) - 29 Nov 2020 (Study Day 80)	Fluid Retention
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	22 Sep 2020 (Study Day 12) - Ongoing	Nasal Congestion
Ibuprofen	22 Sep 2020 (Study Day 12) - 07 Oct 2020 (Study Day 27)	Sinus Headache
Paracetamol	09 Oct 2020 (Study Day 29) - 09 Oct 2020 (Study Day 29)	Sinus Headache
Losartan	19 Oct 2020 (Study Day 39) - Ongoing	Renal Insufficiency
Influenza vaccine	27 Oct 2020 (Study Day 47) - 27 Oct 2020 (Study Day 47)	Influenza Prophylaxis
Paracetamol	27 Oct 2020 (Study Day 47) - 27 Oct 2020 (Study Day 47)	Left Arm Pain From Seasonal Influenza Vaccine
Dabigatran	30 Nov 2020 (Study Day 81) - Ongoing	Atrial Fibrillation
Furosemide	30 Nov 2020 (Study Day 81) - 03 Dec 2020 (Study Day 84)	Acute Hypoxemic Respiratory Failure
Furosemide	30 Nov 2020 (Study Day 81) - Ongoing	Fluid Retention
Spironolactone	30 Nov 2020 (Study Day 81) - 19 Feb 2021 (Study Day 162)	Fluid Retention

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Oxygen	03 Dec 2020 (Study Day 84) - 09 Feb 2021 (Study Day 152)	Acute Hypoxemic Respiratory Failure
Chest ct for evaulation of chf*	29 Dec 2020 (Study Day 110) - 29 Dec 2020 (Study Day 110)	Adverse Event
Fluticasone propionate	30 Dec 2020 (Study Day 111) - Ongoing	Sinus Congestion
Corticosteroid nos	06 Jan 2021 (Study Day 118) - 06 Jan 2021 (Study Day 118)	Ostearthritis
Corticosteroid nos	06 Jan 2021 (Study Day 118) - 06 Jan 2021 (Study Day 118)	Osteoarthritis
Spironolactone	19 Feb 2021 (Study Day 162) - Ongoing	Fluid Retention
Sleep study*	25 Feb 2021 (Study Day 168) - 25 Feb 2021 (Study Day 168)	Other, Rule Out Sleep Apnea

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Sinus Headache	Grade 1/mild	Not related	22 Sep 2020 (Study Day 12) - 29 Sep 2020 (Study Day 19)
Cough	Grade 1/mild	Not related	23 Sep 2020 (Study Day 13) - 28 Sep 2020 (Study Day 18)
Nasal Congestion	Grade 1/mild	Not related	23 Sep 2020 (Study Day 13) - 28 Sep 2020 (Study Day 18)
Injection Site Pain	Grade 1/mild	Not related	27 Oct 2020 (Study Day 47) - 27 Oct 2020 (Study Day 47)
Cardiac Failure Congestive	Grade 3/severe	Not related	26 Nov 2020 (Study Day 77) - Ongoing
Arteriosclerosis	Grade 2/moderate	Not related	29 Nov 2020 (Study Day 80) - Ongoing
Atrial Fibrillation	Grade 2/moderate	Not related	03 Dec 2020 (Study Day 84) - Ongoing
Chronic Kidney Disease	Grade 2/moderate	Not related	03 Dec 2020 (Study Day 84) - 27 Jan 2021 (Study Day 139)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US374-2342 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	11 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	09 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Major Depression/Major Depressive Disorder Without Psychotic Features	SAE	Grade 3/severe	Not related	16 Sep 2020 (Study Day 6) – 17 Sep 2020 (Study Day 7)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2342, a 18-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 11 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 09 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Sep 2020 (Study Day 6), 5 days after the first dose and 23 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of major depression. The IP dose was not changed due to the major depressive disorder without psychotic features. The event of major depressive disorder without psychotic features lasted for 2 days, after which it was considered to be recovered/resolved on 17 Sep 2020 (Study Day 7). The investigator assessed the event of major depression to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000313	Major Depression

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Childhood asthma	Childhood asthma	2008 - 2013
Depression	Depression	2013 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atomoxetine hydrochloride	14 Jan 2019 (Study Day -606) - Ongoing	Depression
Ethinylestradiol; levonorgestrel	May 2019 - Ongoing	Birth Control
Sertraline hydrochloride	19 Sep 2020 (Study Day 9) - Oct 2020	Depression
Sertraline hydrochloride	Oct 2020 - Ongoing	Depression
Influenza vaccine	21 Oct 2020 (Study Day 41) - 21 Oct 2020 (Study Day 41)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US374-2364 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	17 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	15 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Syncope/Syncope	SAE	Grade 3/severe	Not related	10 Jan 2021 (Study Day 116) – 11 Jan 2021 (Study Day 117)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2364, a 64-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 17 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 15 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Jan 2021 (Study Day 116), 115 days after the first dose and 87 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of syncope. Action taken with the IP was not applicable. The event of syncope lasted for 2 days, after which it was considered to be recovered/resolved on 11 Jan 2021 (Study Day 117). The investigator assessed the event of syncope to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005513	Syncope

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Depression	Depression	1990 - Ongoing
HIV infection	Hiv	1990 - Ongoing
Sleep apnoea syndrome	Sleep apnea	2000 - Ongoing
Deep vein thrombosis	Deep vein thrombosis	2016 - Ongoing
Myocardial infarction	Myocardial infarction 1	2017 - 2017
Cardiac pacemaker insertion	Placement of pacemaker	04 Aug 2017 (Study Day -1140) - 04 Aug 2017 (Study Day -1140)
Myocardial infarction	Myocardial infarction 2	2018 - 2018
Anxiety	Anxiety	15 Apr 2020 (Study Day -155) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2017 - Ongoing	Leg Pain From Hx Of Deep Vein Thrombosis
Atorvastatin	2018 - Ongoing	Cardiac Prophylaxis
Dolutegravir sodium	2018 - Ongoing	Hiv
Emtricitabine; tenofovir alafenamide fumarate	2018 - Ongoing	Hiv
Metoprolol	2018 - Ongoing	Cardiac Prophylaxis
Mometasone furoate	2018 - Ongoing	Sleep Apnea
Apixaban	2019 - Ongoing	Deep Vein Thrombosis
Clonazepam	Apr 2020 - Ongoing	Anxiety
Escitalopram	May 2020 - 11 Nov 2020 (Study Day 56)	Anxiety
Gabapentin	May 2020 - Ongoing	Anxiety
Paracetamol	28 Sep 2020 (Study Day 12) - 29 Sep 2020 (Study Day 13)	Viral Illness Unspecified
Lorazepam	04 Oct 2020 (Study Day 18) - 04 Oct 2020 (Study Day 18)	Anxiety
Influenza vaccine	05 Nov 2020 (Study Day 50) - 05 Nov 2020 (Study Day 50)	Prophylaxis Flu Vaccine
Pneumococcal vaccine polysacch 23v	05 Nov 2020 (Study Day 50) - 05 Nov 2020 (Study Day 50)	Prophylaxis Pneumonia Vaccine
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	06 Nov 2020 (Study Day 51) - 06 Nov 2020 (Study Day 51)	Viral Illness Unspecified
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	06 Nov 2020 (Study Day 51) - 09 Nov 2020 (Study Day 54)	Viral Illness Unspecified

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sulfamethoxazole; trimethoprim	06 Nov 2020 (Study Day 51) - 10 Nov 2020 (Study Day 55)	Viral Illness Unspecified (Cough)
Ultrasound on left calf for dvt*	11 Nov 2020 (Study Day 56) - 11 Nov 2020 (Study Day 56)	Diagnostic
Benzonatate	14 Nov 2020 (Study Day 59) - Ongoing	Anxiety
Escitalopram	14 Nov 2020 (Study Day 59) - Ongoing	Anxiety

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Not related	22 Sep 2020 (Study Day 6) - 02 Oct 2020 (Study Day 16)
Chills	Grade 1/mild	Not related	23 Sep 2020 (Study Day 7) - 02 Oct 2020 (Study Day 16)
Viral Infection	Grade 2/moderate	Not related	27 Sep 2020 (Study Day 11) - 08 Oct 2020 (Study Day 22)
Pain In Extremity	Grade 2/moderate	Not related	01 Oct 2020 (Study Day 15) - 05 Oct 2020 (Study Day 19)
Peripheral Swelling	Grade 1/mild	Not related	01 Oct 2020 (Study Day 15) - 05 Oct 2020 (Study Day 19)
Pain In Extremity	Grade 2/moderate	Not related	29 Oct 2020 (Study Day 43) - 23 Nov 2020 (Study Day 68)
Peripheral Swelling	Grade 2/moderate	Not related	29 Oct 2020 (Study Day 43) - 23 Nov 2020 (Study Day 68)
Viral Infection	Grade 2/moderate	Not related	05 Nov 2020 (Study Day 50) - 19 Nov 2020 (Study Day 64)
Anxiety	Grade 2/moderate	Not related	08 Jan 2021 (Study Day 114) - Ongoing
Musculoskeletal Pain	Grade 2/moderate	Not related	01 Mar 2021 (Study Day 166) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US374-2384 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	16 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	13 Oct 2020 (Study Day 28)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Diverticulitis/Diverticulitis	SAE	Grade 3/severe	Not related	01 Nov 2020 (Study Day 47) – 09 Nov 2020 (Study Day 55)	Recovered/ resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2384, a 40-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 16 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 13 Oct 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Nov 2020 (Study Day 47), 46 days after the first dose and 19 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of diverticulitis. Action taken with the IP was not applicable. The event of diverticulitis lasted for 9 days, after which it was considered to be recovered/resolved with sequelae on 09 Nov 2020 (Study Day 55). The investigator assessed the event of diverticulitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000625	Diverticulitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	Not reported - Ongoing
Pneumonia	Pneumonia	Not reported
Vitamin D deficiency	Vitamin d deficiency	2015 - Ongoing
Hypertension	Hypertension	30 Jun 2017 (Study Day -1174) - Ongoing
Sarcoidosis	Sarcoidosis	2019 - Ongoing
Pneumonia	Pneumonia	Apr 2019 - Apr 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Colecalciferol	2015 - Ongoing	Vitamin D Deficiency
Varenicline tartrate	12 Dec 2016 (Study Day -1374) - Ongoing	Smoking Cessation
Hydrochlorothiazide	30 Jun 2017 (Study Day -1174) - Ongoing	Hypertension
Losartan	30 Jun 2017 (Study Day -1174) - Ongoing	Hypertension
Chromium nicotinate; nicotinic acid	Jan 2018 - Ongoing	Supplement Prophylaxis
Fluticasone furoate; umeclidinium bromide; vilanterol trifenatate	2019 - Ongoing	Sarcoidosis
Prednisone	Jul 2019 - Ongoing	Sarcoidosis
Choline; inositol; methionine	02 Oct 2020 (Study Day 17) - Ongoing	Obesity
Vitamin b12 nos	02 Oct 2020 (Study Day 17) - Ongoing	Obesity
Metronidazole	08 Oct 2020 (Study Day 23) - 15 Oct 2020 (Study Day 30)	Bacterial Vaginosis
Acetylsalicylic acid; caffeine	13 Oct 2020 (Study Day 28) - 13 Oct 2020 (Study Day 28)	Headache
Ibuprofen	13 Oct 2020 (Study Day 28) - 17 Oct 2020 (Study Day 32)	Headache
Influenza vaccine	28 Oct 2020 (Study Day 43) - 28 Oct 2020 (Study Day 43)	Influenza Prophylaxis
Levofloxacin	01 Nov 2020 (Study Day 47) - 09 Nov 2020 (Study Day 55)	Thrombus Prophylaxis
Ondansetron	01 Nov 2020 (Study Day 47) - 09 Nov 2020 (Study Day 55)	Nausea/Diverticulitis
Piperacillin; tazobactam	01 Nov 2020 (Study Day 47) - 09 Nov 2020 (Study Day 55)	Diverticulitis
Ketorolac	02 Nov 2020 (Study Day 48) - 09 Nov 2020 (Study Day 55)	Diverticulitis
Labetalol	02 Nov 2020 (Study Day 48) - 09 Nov 2020 (Study Day 55)	Hypertension
Hartman’s procedure*	05 Nov 2020 (Study Day 51) - 05 Nov 2020 (Study Day 51)	Adverse Event
Levofloxacin	10 Nov 2020 (Study Day 56) - 17 Nov 2020 (Study Day 63)	Pneumonia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metronidazole	10 Nov 2020 (Study Day 56) - 17 Nov 2020 (Study Day 63)	Diverticulitis
Oxycodone hydrochloride; paracetamol	10 Nov 2020 (Study Day 56) - 25 Nov 2020 (Study Day 71)	Post-Op Pain
Potassium chloride	10 Nov 2020 (Study Day 56) - 13 Nov 2020 (Study Day 59)	Hypokalemia
Hydrocodone bitartrate; paracetamol	27 Nov 2020 (Study Day 73) - 15 Dec 2020 (Study Day 91)	Post-Op Pain
Cyclobenzaprine hydrochloride	15 Dec 2020 (Study Day 91) - 30 Dec 2020 (Study Day 106)	Lower Back Muscle Strain
Zolpidem tartrate	15 Dec 2020 (Study Day 91) - 04 Jan 2021 (Study Day 111)	Insomnia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Bacterial Vaginosis	Grade 2/moderate	Not related	07 Oct 2020 (Study Day 22) - 15 Oct 2020 (Study Day 30)
Headache	Grade 1/mild	Not related	13 Oct 2020 (Study Day 28) - 13 Oct 2020 (Study Day 28)
Pneumonia	Grade 2/moderate	Not related	10 Nov 2020 (Study Day 56) - Ongoing
Insomnia	Grade 2/moderate	Not related	15 Dec 2020 (Study Day 91) - 04 Jan 2021 (Study Day 111)
Muscle Strain	Grade 2/moderate	Not related	15 Dec 2020 (Study Day 91) - 30 Dec 2020 (Study Day 106)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US374-2395 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	17 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Deep Vein Thrombosis/Deep Vein Thrombosis	AE leading to withdrawal from study vaccine	Grade 3/severe	Not related	25 Sep 2020 (Study Day 9) – 15 Feb 2021 (Study Day 152)	Recovered/ resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2395, a 61-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 17 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Sep 2020 (Study Day 9), 8 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of deep vein thrombosis. On 14 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of deep vein thrombosis lasted for 144 days, after which it was considered to be recovered/resolved with sequelae on 15 Feb 2021 (Study Day 152). The investigator assessed the event of deep vein thrombosis to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Allergy to penicillin	1970 - Ongoing
Contrast media allergy	Allergy to contrast dye	1982 - Ongoing
HIV infection	Human immunodeficiency virus (hiv)	1988 - Ongoing
Deep vein thrombosis	Deep vein thrombosis	Feb 2019 - Feb 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bictegravir sodium; emtricitabine; tenofovir alafenamide fumarate	2018 - Ongoing	Human Immunodeficiency Virus
Enoxaparin	25 Sep 2020 (Study Day 9) - 04 Nov 2020 (Study Day 49)	Deep Vein Thrombosis
Influenza vaccine	06 Oct 2020 (Study Day 20) - 06 Oct 2020 (Study Day 20)	Influenza Prophylaxis
Apixaban	05 Nov 2020 (Study Day 50) - Ongoing	Deep Vein Thrombosis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Deep Vein Thrombosis	Grade 3/severe	Not related	25 Sep 2020 (Study Day 9) - 15 Feb 2021 (Study Day 152)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US375-2129 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	18 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	21 Sep 2020 (Study Day 35)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Papillary Thyroid Cancer/Papillary Thyroid Carcinoma Exacerbation	SAE	Grade 4	Not related	01 Oct 2020 (Study Day 45) – 02 Oct 2020 (Study Day 46)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US375-2129, a 46-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 18 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 21 Sep 2020 (Study Day 35). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Oct 2020 (Study Day 45), 44 days after the first dose and 10 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of papillary thyroid cancer. Action taken with the IP was not applicable. The event of papillary thyroid carcinoma exacerbation lasted for 2 days, after which it was considered to be recovered/resolved on 02 Oct 2020 (Study Day 46). The investigator assessed the event of papillary thyroid cancer to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000702	Papillary Thyroid Cancer

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Thyroid cancer	Thyroid carcinoma	Not reported - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levonorgestrel	2019 - 2019	Contraceptive
Left thyroid fine needle aspiration with biopsy*	28 Aug 2020 (Study Day 11) - 28 Aug 2020 (Study Day 11)	Medical History
Naproxen sodium	22 Sep 2020 (Study Day 36) - 22 Sep 2020 (Study Day 36)	Injection Site Pain
Calcium carbonate; colecalciferol	02 Oct 2020 (Study Day 46) - Ongoing	Hypocalcemia
Doxycycline	02 Oct 2020 (Study Day 46) - 07 Oct 2020 (Study Day 51)	Post Procedure Infection Prophylaxis
Total thyroidectomy*	02 Oct 2020 (Study Day 46) - 02 Oct 2020 (Study Day 46)	Adverse Event
Influenza vaccine	21 Oct 2020 (Study Day 65) - 21 Oct 2020 (Study Day 65)	Influenza Prophylaxis
Thyroid cancer ablation with i-131*	22 Oct 2020 (Study Day 66) - 22 Oct 2020 (Study Day 66)	Adverse Event
Levothyroxine sodium	26 Oct 2020 (Study Day 70) - Ongoing	Hypothyroidism Due To Thyroid Cancer
Total body iodine scan*	04 Nov 2020 (Study Day 79) - 04 Nov 2020 (Study Day 79)	Adverse Event
Botulinum toxin type a	12 Feb 2021 (Study Day 179) - 12 Feb 2021 (Study Day 179)	Cosmetic Elective
Tetanus vaccine	15 Mar 2021 (Study Day 210) - 15 Mar 2021 (Study Day 210)	Tetanus Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Pain	Grade 2/moderate	Related	21 Sep 2020 (Study Day 35) - 02 Oct 2020 (Study Day 46)
Hypocalcaemia	Grade 1/mild	Not related	02 Oct 2020 (Study Day 46) - 20 Jan 2021 (Study Day 156)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US375-2245 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	25 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	06 Oct 2020 (Study Day 43)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Facial Paralysis/Bell's Palsy	SAE	Grade 3/severe	Not related	06 Nov 2020 (Study Day 74) – 29 Dec 2020 (Study Day 127)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US375-2245, a 67-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 25 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 06 Oct 2020 (Study Day 43). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Nov 2020 (Study Day 74), 73 days after the first dose and 31 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of facial paralysis. Action taken with the IP was not applicable. The event of bell's palsy lasted for 54 days, after which it was considered to be recovered/resolved on 29 Dec 2020 (Study Day 127). The investigator assessed the event of facial paralysis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000678	Bell's palsy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Arthralgia	Joint pain (location and associated medical condition unknown)	Not reported - Ongoing
Cerebrovascular accident	Previous cerebrovascular accident	Not reported
Drug hypersensitivity	Naproxen allergy	Not reported - Ongoing
Drug hypersensitivity	Penicillin allergy	Not reported - Ongoing
Rubber sensitivity	Latex allergy	Not reported - Ongoing
Seasonal allergy	Seasonal allergies	Not reported - Ongoing
Tonsillectomy	Tonsillectomy	1974 - 1974
Female sterilisation	Tubal ligation	1979 - 1979
Biopsy breast	Breast biopsy (unknown if benign or malignant)	1994 - 1994
Colonoscopy	Colonoscopy	2003 - 2003
Biopsy breast	Breast biopsy (unknown if benign or malignant)	2004 - 2004
Urinary incontinence	Urinary incontinence	2004 - Ongoing
Depression	Depression	2010 - Ongoing
Appendicectomy	Appendectomy	2017 - 2017
Colonoscopy	Colonoscopy	2017 - 2017
Sleep apnoea syndrome	Obstructive sleep apnea	2017 - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type ii	2017 - Ongoing
Asthma	Asthma	2018 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2018 - Ongoing
Tendonitis	Tendinitis bilateral wrists	Jul 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Escitalopram oxalate	2010 - Ongoing	Depression
Cannabidiol	2017 - Ongoing	Supplement
Cetirizine hydrochloride	2017 - Ongoing	Seasonal Allergies
Cinnamomum verum	2017 - Ongoing	Supplement
Curcumin	2017 - Ongoing	Supplement
Fexofenadine	2017 - Ongoing	Seasonal Allergies
Fish oil	2017 - Ongoing	Supplement
Meloxicam	2017 - Ongoing	Joint Pain (Type And Locaton Unknown)
Nicotinic acid	2017 - Ongoing	Supplement

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	2017 - Ongoing	Supplement
Fenofibrate	2018 - Ongoing	Hyperlipidemia
Rosuvastatin	2018 - Ongoing	Hyperlipidemia
Metformin	2019 - Ongoing	Type Ii Diabetes Mellitus
Azelastine	2020 - Ongoing	Seasonal Allergies
Curcuma longa	2020 - Ongoing	Supplement
Ibuprofen	2020 - Ongoing	Supplement
Ibuprofen; paracetamol	2020 - Ongoing	General Pain Relief
Salbutamol	2020 - Ongoing	Asthma
Vitamin b complex	2020 - Ongoing	Supplement
Ibuprofen	01 Oct 2020 (Study Day 38) - Ongoing	Tendinitis Bilateral Wrists
Corticosteroid nos	06 Oct 2020 (Study Day 43) - 06 Oct 2020 (Study Day 43)	Tendinitis Bilateral Wrists
Influenza vaccine	20 Oct 2020 (Study Day 57) - 20 Oct 2020 (Study Day 57)	Prevention Of Seasonal Influenza
Chest x-ray*	06 Nov 2020 (Study Day 74) - 06 Nov 2020 (Study Day 74)	Adverse Event
Ct w/o contrast*	06 Nov 2020 (Study Day 74) - 06 Nov 2020 (Study Day 74)	Diagnostic
Enoxaparin sodium	06 Nov 2020 (Study Day 74) - 07 Nov 2020 (Study Day 75)	Stroke Prevention
Mri*	06 Nov 2020 (Study Day 74) - 06 Nov 2020 (Study Day 74)	Adverse Event
Clopidogrel bisulfate	08 Nov 2020 (Study Day 76) - 11 Nov 2020 (Study Day 79)	Prevention Of Stroke
Valaciclovir	08 Nov 2020 (Study Day 76) - 18 Nov 2020 (Study Day 86)	Treatment Of Bell’s Palsy
Methylprednisolone	11 Nov 2020 (Study Day 79) - 11 Nov 2020 (Study Day 79)	Treatment Of Bell’s Palsy
Prednisone	16 Nov 2020 (Study Day 84) - 22 Nov 2020 (Study Day 90)	Treatment Of Bell’s Palsy
Pseudoephedrine hydrochloride	10 Dec 2020 (Study Day 108) - 13 Dec 2020 (Study Day 111)	Nasal Congestion
Carotid artery doppler*	15 Mar 2021 (Study Day 203) - 15 Mar 2021 (Study Day 203)	Adverse Event
Acetylsalicylic acid	22 Mar 2021 (Study Day 210) - Ongoing	Thrombolytic Prophylaxis
Mri w/ contrast*	25 Mar 2021 (Study Day 213) - 25 Mar 2021 (Study Day 213)	Adverse Event
Mri w/o contrast*	25 Mar 2021 (Study Day 213) - 25 Mar 2021 (Study Day 213)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Nasal Congestion	Grade 1/mild	Not related	07 Dec 2020 (Study Day 105) - 15 Dec 2020 (Study Day 113)
Oropharyngeal Pain	Grade 1/mild	Not related	07 Dec 2020 (Study Day 105) - 13 Dec 2020 (Study Day 111)
Rhinorrhoea	Grade 1/mild	Not related	07 Dec 2020 (Study Day 105) - 15 Dec 2020 (Study Day 113)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US375-2259 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	23 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Atrial Fibrillation/Simultaneous Occurrence Of Atrial Fibrillation	SAE	Grade 4	Not related	20 Dec 2020 (Study Day 117) – 21 Dec 2020 (Study Day 118)	Recovered/ resolved
Atrial Flutter/Simultaneous Occurrence Of Atrial Flutter	SAE	Grade 4	Not related	20 Dec 2020 (Study Day 117) – 21 Dec 2020 (Study Day 118)	Recovered/ resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US375-2259, a 74-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 26 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 23 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Dec 2020 (Study Day 117), 116 days after the first dose and 88 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of atrial fibrillation. Action taken with the IP was not applicable. The event of simultaneous occurrence of atrial fibrillation lasted for 2 days, after which it was considered to be recovered/resolved on 21 Dec 2020 (Study Day 118). The investigator assessed the event of atrial fibrillation to be not related to the IP.

On 20 Dec 2020 (Study Day 117), 116 days after the first dose and 88 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of atrial flutter. Action taken with the IP was not applicable. The event of simultaneous occurrence of atrial flutter lasted for 2 days, after which it was considered to be recovered/resolved with sequelae on 21 Dec 2020 (Study Day 118). The investigator assessed the event of atrial flutter to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Terms
MOD-2020-001228	Atrial fibrillation
MOD-2020-001228	Atrial flutter

Study Completion/Discontinuation

On 03 Feb 2021 (Study Day 162), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Adenoidectomy	Adenoidectomy	Not reported
Aortic valve replacement	Aortic valve replacement	Not reported
Coronary artery bypass	Coronary artery bypass graft	Not reported
Coronary artery disease	Coronary artery disease	Not reported - Ongoing
Inguinal hernia repair	Inguinal hernia surgery times 3	Not reported
Lipoma excision	Lipoma removal right neck	Not reported
Tonsillectomy	Tonsillectomy	Not reported
Eyeglasses therapy	Glasses (unknown associated condition/diagnosis)	1960 - Ongoing
Vasectomy	Vasectomy	1976 - 1976
Nephrolithiasis	Kidney stones	1980 - Ongoing
Osteoarthritis	Osteoarthritis (unknown site)	1990 - Ongoing
Deafness	Hearing loss	2010 - Ongoing
Eczema	Eczema	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Type V hyperlipidaemia	Mixed hyperlipidemia	2010 - Ongoing
Cardiac murmur	Cardiac murmur due to coronary artery bypass grafting and aortic valve replacement	2012 - Ongoing
Colitis ulcerative	Ulcerative colitis history	2015 - 2019
Macular degeneration	Macular degeneration	2015 - Ongoing
Pneumonia	Pneumonia	2015 - 2015
Muscle spasms	Muscle spasms	2017 - Ongoing
Glucose tolerance impaired	Prediabetic	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2010 - 21 Dec 2020 (Study Day 118)	Heart Health
Magnesium	2010 - Ongoing	Heart Health
Silybum marianum	2010 - Ongoing	Liver Health
Thiamine	2010 - Ongoing	Supplement
Vitamins nos	2010 - Ongoing	General Health Supplement
Ascorbic acid; betacarotene; cupric oxide; tocopheryl acetate; zinc oxide	2015 - Ongoing	Dry Eyes
Tizanidine	2017 - Ongoing	Muscle Relaxant For Muscle Spasms
Atenolol	14 May 2018 (Study Day -835) - Ongoing	Heart Health
Meloxicam	2019 - Ongoing	Osteoarthritis (Upper And Lower Extremities)
Metoprolol	2019 - 21 Dec 2020 (Study Day 118)	Hypertension
Simvastatin	2019 - 21 Dec 2020 (Study Day 118)	Hypercholesterolemia
Mesalazine	2020 - Ongoing	Ulcerative Colitis
Cetirizine	07 May 2020 (Study Day -111) - Ongoing	Seasonal Allergies
Influenza vaccine	14 Oct 2020 (Study Day 50) - 14 Oct 2020 (Study Day 50)	Prophylaxis For Seasonal Influenza
Amiodarone	20 Dec 2020 (Study Day 117) - Ongoing	Atrial Flutter
Apixaban	20 Dec 2020 (Study Day 117) - Ongoing	Stroke/Blood Clot Prophylaxis
Atorvastatin	20 Dec 2020 (Study Day 117) - Ongoing	Mixed Hyperlipidemia
Diltiazem	20 Dec 2020 (Study Day 117) - 21 Dec 2020 (Study Day 118)	Atrial Flutter
Echo tte*	20 Dec 2020 (Study Day 117) - 20 Dec 2020 (Study Day 117)	Adverse Event
Enoxaparin	20 Dec 2020 (Study Day 117) - 21 Dec 2020 (Study Day 118)	Blood Clot Prevention
Heparin	20 Dec 2020 (Study Day 117) - 21 Dec 2020 (Study Day 118)	Blood Clot Prevention
Ep-cardioversion with transesophageal echo*	21 Dec 2020 (Study Day 118) - 21 Dec 2020 (Study Day 118)	Adverse Event
Metoprolol succinate	22 Dec 2020 (Study Day 119) - Ongoing	Essential Hypertension
Other viral vaccines	12 Jan 2021 (Study Day 140) - 12 Jan 2021 (Study Day 140)	COVID Prevention
Apixaban	20 Jan 2021 (Study Day 148) - Ongoing	Atrial Flutter
Other viral vaccines	02 Feb 2021 (Study Day 161) - 02 Feb 2021 (Study Day 161)	COVID Preventative

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US376-2161 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	30 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Dehydration/[diarrhea With] Dehydration	SAE	Grade 2/ moderate	Not related	09 Nov 2020 (Study Day 69) – 15 Nov 2020 (Study Day 75)	Recovered/ resolved
Diarrhoea/Diarrhea	SAE	Grade 3/ severe	Not related	09 Nov 2020 (Study Day 69) – 15 Nov 2020 (Study Day 75)	Recovered/ resolved
Acute Kidney Injury/Acute Kidney Injury	SAE	Grade 3/ severe	Not related	10 Nov 2020 (Study Day 70) – 11 Nov 2020 (Study Day 71)	Recovered/ resolved
Hypokalaemia/Hypokalemia	SAE	Grade 1/ mild	Not related	10 Nov 2020 (Study Day 70) – 15 Nov 2020 (Study Day 75)	Recovered/ resolved
Hyponatraemia/Acute Hyponatremia	SAE	Grade 1/ mild	Not related	10 Nov 2020 (Study Day 70) – 15 Nov 2020 (Study Day 75)	Recovered/ resolved
Pneumonia/Left Upper Lobe Pneumonia	SAE	Grade 3/ severe	Not related	10 Nov 2020 (Study Day 70) – 18 Nov 2020 (Study Day 78)	Recovered/ resolved
Sepsis/Sepsis	SAE	Grade 3/ severe	Not related	10 Nov 2020 (Study Day 70) – 20 Nov 2020 (Study Day 80)	Recovered/ resolved
Urinary Tract Infection/Urinary Tract Infection	SAE	Grade 3/ severe	Not related	24 Dec 2020 (Study Day 114) – Ongoing	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US376-2161, a 74-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 02 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 30 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Nov 2020 (Study Day 69), 68 days after the first dose and 40 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of dehydration. Action taken with the IP was not applicable. The event of [diarrhea with] dehydration lasted for 7 days,

after which it was considered to be recovered/resolved on 15 Nov 2020 (Study Day 75). The investigator assessed the event of dehydration to be not related to the IP.

On 09 Nov 2020 (Study Day 69), 68 days after the first dose and 40 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of diarrhoea. Action taken with the IP was not applicable. The event of diarrhea lasted for 7 days, after which it was considered to be recovered/resolved on 15 Nov 2020 (Study Day 75). The investigator assessed the event of diarrhoea to be not related to the IP.

On 10 Nov 2020 (Study Day 70), 69 days after the first dose and 41 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of acute kidney injury. Action taken with the IP was not applicable. The event of acute kidney injury lasted for 2 days, after which it was considered to be recovered/resolved on 11 Nov 2020 (Study Day 71). The investigator assessed the event of acute kidney injury to be not related to the IP.

On 10 Nov 2020 (Study Day 70), 69 days after the first dose and 41 days after the second dose of the IP, the participant experienced a Grade 1/mild serious adverse event of hypokalaemia. Action taken with the IP was not applicable. The event of hypokalemia lasted for 6 days, after which it was considered to be recovered/resolved on 15 Nov 2020 (Study Day 75). The investigator assessed the event of hypokalaemia to be not related to the IP.

On 10 Nov 2020 (Study Day 70), 69 days after the first dose and 41 days after the second dose of the IP, the participant experienced a Grade 1/mild serious adverse event of hyponatraemia. Action taken with the IP was not applicable. The event of acute hyponatremia lasted for 6 days, after which it was considered to be recovered/resolved on 15 Nov 2020 (Study Day 75). The investigator assessed the event of hyponatraemia to be not related to the IP.

On 10 Nov 2020 (Study Day 70), 69 days after the first dose and 41 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pneumonia. Action taken with the IP was not applicable. The event of left upper lobe pneumonia lasted for 9 days, after which it was considered to be recovered/resolved on 18 Nov 2020 (Study Day 78). The investigator assessed the event of pneumonia to be not related to the IP.

On 10 Nov 2020 (Study Day 70), 69 days after the first dose and 41 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of sepsis. Action taken with the IP was not applicable. The event of sepsis lasted for 11 days, after which it was considered to be recovered/resolved on 20 Nov 2020 (Study Day 80). The investigator assessed the event of sepsis to be not related to the IP.

On 24 Dec 2020 (Study Day 114), 113 days after the first dose and 85 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of urinary tract infection. Action taken with the IP was not applicable. The event of urinary tract infection was

considered to be ongoing. The investigator assessed the event of urinary tract infection to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000729	Dehydration
MOD-2020-000729	Diarrhoea
MOD-2020-000729	Acute kidney injury
MOD-2020-000729	Hypokalaemia
MOD-2020-000729	Hyponatraemia
MOD-2020-000729	Pneumonia
MOD-2020-000729	Sepsis
MOD-2020-001373	Urinary tract infection

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Vasectomy	Vasectomy	1981 - 1981
Nephrolithiasis	Kidney stones	1995 - Ongoing
Diabetes mellitus	Diabetes	1998 - Ongoing
Diabetic neuropathy	Diabetic neuropathy in feet and lower legs	1998 - Ongoing
Blood cholesterol increased	High cholesterol	2000 - Ongoing
Hypertension	Hypertension	Aug 2000 - Ongoing
Cerebrovascular accident	Stroke - cerebellum	2006 - 2006
Coronary artery bypass	Cardiovascular arterial bypass graph	2007 - 2007
Myocardial infarction	Heart attack	2007 - 2007
Hypoaesthesia	Numbness in feet	2010 - Ongoing
Tremor	Tremors	2011 - Ongoing
Cataract	Cataracts - bilateral	2016 - 2017

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin lispro	1998 - Ongoing	Type Ii Diabetes
Lisinopril	Aug 2000 - Ongoing	Hypertension
Acetylsalicylic acid	2005 - Ongoing	Heart Health
Insulin detemir	2007 - Ongoing	Type Ii Diabetes
Atorvastatin	Feb 2007 - Ongoing	High Cholesterol
Metformin	Feb 2007 - Ongoing	Type Ii Diabetes
Gabapentin	2010 - 24 Dec 2020 (Study Day 114)	Polyneuropathy In Feet
Ct chest scan without contrast*	10 Nov 2020 (Study Day 70) - 10 Nov 2020 (Study Day 70)	Adverse Event
Ondansetron	10 Nov 2020 (Study Day 70) - 10 Nov 2020 (Study Day 70)	Nausea
Paracetamol	10 Nov 2020 (Study Day 70) - 10 Nov 2020 (Study Day 70)	Headache
Sodium chloride	10 Nov 2020 (Study Day 70) - 11 Nov 2020 (Study Day 71)	Dehydration, Hyponatremia, And Acute Kidney Injury
Piperacillin; tazobactam	12 Nov 2020 (Study Day 72) - 15 Nov 2020 (Study Day 75)	Pneumonia
Vancomycin	13 Nov 2020 (Study Day 73) - 15 Nov 2020 (Study Day 75)	Pneumonia
Cefdinir	15 Nov 2020 (Study Day 75) - 18 Nov 2020 (Study Day 78)	Pneumonia And Sepsis
Doxycycline hyclate	15 Nov 2020 (Study Day 75) - 18 Nov 2020 (Study Day 78)	Pneumonia And Sepsis
Gentamicin	15 Dec 2020 (Study Day 105) - 15 Dec 2020 (Study Day 105)	Kidney Stone
Kidney stone removal*	15 Dec 2020 (Study Day 105) - 15 Dec 2020 (Study Day 105)	Medical History
Right ureteral stent*	15 Dec 2020 (Study Day 105) - 15 Dec 2020 (Study Day 105)	Medical History
Tramadol	15 Dec 2020 (Study Day 105) - 20 Dec 2020 (Study Day 110)	Kidney Stone
Tamsulosin hydrochloride	18 Dec 2020 (Study Day 108) - Ongoing	Kidney Stones
Azithromycin	19 Dec 2020 (Study Day 109) - 20 Dec 2020 (Study Day 110)	Kidney Stone
Gabapentin	24 Dec 2020 (Study Day 114) - Ongoing	Neuropathy
Ultrasound of urinary/renal system*	24 Dec 2020 (Study Day 114) - 24 Dec 2020 (Study Day 114)	Adverse Event
Cefdinir	26 Dec 2020 (Study Day 116) - 31 Dec 2020 (Study Day 121)	Urinary Tract Infection
Right ureteral stent removal*	28 Dec 2020 (Study Day 118) - 28 Dec 2020 (Study Day 118)	Medical History

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 3/severe	Not related	05 Nov 2020 (Study Day 65) - 10 Nov 2020 (Study Day 70)
Cough	Grade 1/mild	Not related	09 Nov 2020 (Study Day 69) - 10 Nov 2020 (Study Day 70)
Fatigue	Grade 3/severe	Not related	09 Nov 2020 (Study Day 69) - 11 Nov 2020 (Study Day 71)
Pain	Grade 2/moderate	Not related	09 Nov 2020 (Study Day 69) - 10 Nov 2020 (Study Day 70)
Faeces Discoloured	Grade 3/severe	Not related	10 Nov 2020 (Study Day 70) - 11 Nov 2020 (Study Day 71)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US376-2175 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	01 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Muscular Weakness/Bilateral Lower Extremity Weakness	SAE	Grade 3/ severe	Not related	15 Dec 2020 (Study Day 104) – 18 Dec 2020 (Study Day 107)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US376-2175, an 81-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 03 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 01 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Dec 2020 (Study Day 104), 103 days after the first dose and 75 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of muscular weakness. Action taken with the IP was not applicable. The event of bilateral lower extremity weakness lasted for 4 days, after which it was considered to be recovered/resolved on 18 Dec 2020 (Study Day 107). The investigator assessed the event of muscular weakness to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001248	Muscular weakness

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tinnitus	Tinnitus	1957 - Ongoing
Deafness	Hearing loss	1961 - Ongoing
Drug hypersensitivity	Talwin allergy	1968 - Ongoing
Blood cholesterol increased	High cholesterol	1988 - Ongoing
Blood triglycerides increased	High triglycerides	1988 - Ongoing
Arthritis	Arthritis	1999 - Ongoing
Back pain	Chronic back pain	1999 - Ongoing
Erectile dysfunction	Erectile dysfunction	1999 - Ongoing
Libido decreased	Decreased libido	1999 - Ongoing
Osteoarthritis	Osteoarthritis	1999 - Ongoing
Depression	Depression	2000 - Ongoing
Gait disturbance	Unsteady gait	2000 - Ongoing
Herpes zoster	Shingles	2000 - 2000
Nocturia	Frequent nighttime urination	2000 - Ongoing
Peripheral vascular disorder	Peripheral vascular disease in left leg	2000 - Ongoing
Malignant melanoma	Melanoma in right eye	2014 - 2014
Gastritis	Gastritis	2016 - Ongoing
Glaucoma	Glaucoma	2016 - Ongoing
Hypermetropia	Farsighted	2016 - Ongoing
Hypertension	Hypertension	2016 - Ongoing
Retinopathy	Retinopothy in right eye	2016 - Ongoing
Rotator cuff repair	Right rotator cuff repair	2018 - 2018
Arthralgia	Recurremt joint pain	2019 - Ongoing
Drug hypersensitivity	Clindamycin allergy	2019 - Ongoing
Pneumonia	Pneumonia	2019 - 2019
Tenoplasty	Left rotator cuff/biceps tendon repair	2019 - 2019
Cataract	Cataracts	01 Feb 2020 (Study Day -215) - 01 Feb 2020 (Study Day -215)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	Not reported - Ongoing	Pvd
Colecalciferol	Not reported - Ongoing	Supplement
Omega 9 fatty acids; omega-3 fatty acids; omega-6 fatty acids	Not reported - Ongoing	Supplement

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamin b12 nos	Not reported - Ongoing	Supplement
Vitamin e nos	Not reported - Ongoing	Supplement
Vitex agnus-castus extract	Not reported - Ongoing	Eye Health
Simvastatin	1988 - 2020	High Cholesterol
Bupivacaine hydrochloride	1999 - Ongoing	Chronic Back Pain
Clonidine	1999 - Ongoing	Chronic Back Pain
Morphine sulfate	1999 - Ongoing	Chronic Back Pain
Desvenlafaxine	2000 - Ongoing	Depression
Furosemide	2000 - Ongoing	Edema Legs
Triazolam	01 Sep 2000 (Study Day -7307) - Ongoing	Depression
Amlodipine	2016 - Ongoing	High Blood Pressure
Calcium carbonate	2016 - Ongoing	Osteoarthritis
Cilostazol	2016 - Ongoing	Pvd
Gabapentin	2016 - 14 Jan 2021 (Study Day 134)	Pvd
Omeprazole	2016 - 2020	Gastritis
Cyclobenzaprine	Aug 2019 - Ongoing	Chronic Back Pain
Pantoprazole	2020 - Ongoing	Gastritis
Pravastatin	2020 - 18 Dec 2020 (Study Day 107)	High Cholesterol
Central nervous system inplant / pvd*	14 Jan 2021 (Study Day 134) - 14 Jan 2021 (Study Day 134)	Medical History
Gabapentin	14 Jan 2021 (Study Day 134) - Ongoing	Pvd
“nevro” - permanent wires / pvd*	04 Feb 2021 (Study Day 155) - 04 Feb 2021 (Study Day 155)	Medical History

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Lymphadenopathy	Grade 1/mild	Related	04 Sep 2020 (Study Day 2) - 05 Sep 2020 (Study Day 3)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US377-2051 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	12 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Incarcerated Hernia/Acute Incarcerated Ventral Hernia	SAE, AE leading to withdrawal from study vaccine, AE leading to study discontinuation	Grade 3/ severe	Not related	04 Sep 2020 (Study Day 24) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US377-2051, a 67-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 12 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Sep 2020 (Study Day 24), 23 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of incarcerated hernia. On 08 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of acute incarcerated ventral hernia was considered to be ongoing. The investigator assessed the event of incarcerated hernia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000296	Incarcerated Hernia

Study Completion/Discontinuation

On 28 Sep 2020 (Study Day 48), the participant discontinued from the study due to serious adverse event.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Postmenopause	Post menopausal	2000 - Ongoing
Depression	Depression	2004 - Ongoing
Hypertension	Hypertension	2004 - Ongoing
Obesity	Obesity	2005 - Ongoing
Fibromyalgia	Fibromyalgia	2006 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2000 - Ongoing	Cardiac Prophylaxis
Amlodipine besilate; benazepril hydrochloride	2004 - Ongoing	Hypertension
Duloxetine	2004 - Ongoing	Depression
Cyclobenzaprine	2006 - Ongoing	Fibromyalgia
Exploratory laparotomy with repair of incarcerated recurrent ventral hernia with phasix mesh enterectomy with anastomosis*	10 Sep 2020 (Study Day 30) - 10 Sep 2020 (Study Day 30)	Adverse Event
Oxycodone; paracetamol	14 Sep 2020 (Study Day 34) - Ongoing	Acute Incarcerated Ventral Hernia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Acute Kidney Injury	Grade 3/severe	Not related	05 Sep 2020 (Study Day 25) - 14 Sep 2020 (Study Day 34)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US377-2103 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	20 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 36)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Colitis/Acute Colitis Of Sigmoid And Descending Colon	SAE	Grade 4	Not related	30 Dec 2020 (Study Day 133) – 14 Jan 2021 (Study Day 148)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US377-2103, a 53-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 20 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 24 Sep 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Dec 2020 (Study Day 133), 132 days after the first dose and 97 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of colitis. Action taken with the IP was not applicable. The event of acute colitis of sigmoid and descending colon lasted for 16 days, after which it was considered to be recovered/resolved on 14 Jan 2021 (Study Day 148). The investigator assessed the event of colitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001855	Colitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraines	1977 - Ongoing
Erectile dysfunction	Erectile dysfunction	2008 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sumatriptan	1990 - Ongoing	Migraine
Testosterone	2008 - Ongoing	Erectile Dysfunction
Hydrochlorothiazide; lisinopril	23 Aug 2020 (Study Day 4) - Ongoing	Hypertension
Cefalexin	01 Sep 2020 (Study Day 13) - 07 Sep 2020 (Study Day 19)	Dog Bite
Duloxetine	13 Nov 2020 (Study Day 86) - 30 Dec 2020 (Study Day 133)	Depression
Influenza vaccine	02 Jan 2021 (Study Day 136) - 02 Jan 2021 (Study Day 136)	Influenza Prophylaxis
Ciprofloxacin	03 Jan 2021 (Study Day 137) - 07 Jan 2021 (Study Day 141)	Acute Colitis Of Sigmoid And Descending Colon.
Metronidazole	03 Jan 2021 (Study Day 137) - 09 Jan 2021 (Study Day 143)	Acute Colitis Of Sigmoid And Descending Colon.

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypertension	Grade 1/mild	Not related	23 Aug 2020 (Study Day 4) - Ongoing
Animal Bite	Grade 1/mild	Not related	01 Sep 2020 (Study Day 13) - 01 Sep 2020 (Study Day 13)
Depression	Grade 1/mild	Not related	13 Nov 2020 (Study Day 86) - 30 Dec 2020 (Study Day 133)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US377-2187 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	30 Sep 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Appendicitis/Appendicitis	SAE	Grade 3/ severe	Not related	07 Dec 2020 (Study Day 99) – 07 Dec 2020 (Study Day 99)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US377-2187, a 37-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 30 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Dec 2020 (Study Day 99), 98 days after the first dose and 68 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of appendicitis. Action taken with the IP was not applicable. The event of appendicitis lasted for 1 day, after which it was considered to be recovered/resolved on 07 Dec 2020 (Study Day 99). The investigator assessed the event of appendicitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001053	Appendicitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Palpitations	Palpitations	2000 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	01 Sep 2020 (Study Day 2) - 01 Sep 2020 (Study Day 2)	Pain At The Injection Site
Ibuprofen	02 Oct 2020 (Study Day 33) - 02 Oct 2020 (Study Day 33)	Headache
Paracetamol	01 Dec 2020 (Study Day 93) - 02 Dec 2020 (Study Day 94)	Myalgia Abdominal Obliques
Abscess drainage*	07 Dec 2020 (Study Day 99) - 07 Dec 2020 (Study Day 99)	Adverse Event
Appendectomy*	07 Dec 2020 (Study Day 99) - 07 Dec 2020 (Study Day 99)	Adverse Event
Hydrocodone bitartrate; paracetamol	08 Dec 2020 (Study Day 100) - 20 Dec 2020 (Study Day 112)	Post Appendectomy
Piperacillin sodium; tazobactam sodium	08 Dec 2020 (Study Day 100) - 11 Dec 2020 (Study Day 103)	Post Appendectomy Infection Prophylaxis
Ciprofloxacin	10 Dec 2020 (Study Day 102) - 20 Dec 2020 (Study Day 112)	Post Appendectomy Infection Prophylaxis
Metronidazole	10 Dec 2020 (Study Day 102) - 20 Dec 2020 (Study Day 112)	Post Appendectomy Infection Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Appendiceal Abscess	Grade 3/severe	Not related	07 Dec 2020 (Study Day 99) - 07 Dec 2020 (Study Day 99)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US378-2073 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	24 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Angioedema/Angiodema	AE leading to withdrawal from study vaccine	Grade 3/severe	Not related	28 Aug 2020 (Study Day 5) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US378-2073, a 56-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 24 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Aug 2020 (Study Day 5), 4 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of angioedema. On 20 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of angiodema was considered to be ongoing. The investigator assessed the event of angioedema to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

On 24 Dec 2020 (Study Day 123), the participant discontinued from the study due to other.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Psoriasis	Scalp psoriasis	1995 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	2000 - Ongoing	General Health
Ethinylestradiol; norethisterone acetate	Oct 2010 - Ongoing	Contraception
Diphenhydramine hydrochloride	28 Aug 2020 (Study Day 5) - 28 Aug 2020 (Study Day 5)	Angioedema
Famotidine	28 Aug 2020 (Study Day 5) - 28 Aug 2020 (Study Day 5)	Angioedema
Naproxen	28 Aug 2020 (Study Day 5) - 28 Aug 2020 (Study Day 5)	Malaise
Naproxen	29 Aug 2020 (Study Day 6) - 29 Aug 2020 (Study Day 6)	Angioedema
Famotidine	12 Sep 2020 (Study Day 20) - 12 Sep 2020 (Study Day 20)	Angioedema
Fexofenadine hydrochloride	18 Sep 2020 (Study Day 26) - 18 Sep 2020 (Study Day 26)	Angioedema
Influenza vaccine	05 Oct 2020 (Study Day 43) - 05 Oct 2020 (Study Day 43)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Angioedema	Grade 3/severe	Not related	28 Aug 2020 (Study Day 5) - Ongoing
Malaise	Grade 1/mild	Related	28 Aug 2020 (Study Day 5) - 28 Aug 2020 (Study Day 5)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US378-2100 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Small Intestinal Obstruction/ Small Bowel Obstruction	SAE	Grade 4	Not related	29 Nov 2020 (Study Day 95) – 02 Dec 2020 (Study Day 98)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US378-2100, a 76-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 24 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 29 Nov 2020 (Study Day 95), 94 days after the first dose and 66 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of small intestinal obstruction. Action taken with the IP was not applicable. The event of small bowel obstruction lasted for 4 days, after which it was considered to be recovered/resolved on 02 Dec 2020 (Study Day 98). The investigator assessed the event of small intestinal obstruction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001021	Small intestinal obstruction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Appendicectomy	Appendecotmy	1970 - 1970
Hysterectomy	Hysterectomy	Sep 2000 - Sep 2000
Hypercholesterolaemia	Hypercholesterolemia	2015 - Ongoing
Muscle spasms	Leg spasms	Jan 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Rosuvastatin	2015 - Ongoing	Hypercholesterolemia
Biotin	2016 - Ongoing	General Health
Vitamin d nos	2016 - Ongoing	General Health
Magnesium	Jan 2020 - Ongoing	Leg Spasms
Glucosamine	15 Oct 2020 (Study Day 50) - Ongoing	Leg Spasms
Influenza vaccine	17 Oct 2020 (Study Day 52) - 17 Oct 2020 (Study Day 52)	Influenza Prophylaxis
Pneumococcal vaccine polysacch 23v	17 Oct 2020 (Study Day 52) - 17 Oct 2020 (Study Day 52)	Pneumococcal Prophylaxis
Ondansetron	30 Nov 2020 (Study Day 96) - 30 Nov 2020 (Study Day 96)	Small Bowel Obstruction
Anesthetics, general	02 Dec 2020 (Study Day 98) - 02 Dec 2020 (Study Day 98)	Small Bowel Obstruction
Enoxaparin sodium	02 Dec 2020 (Study Day 98) - 04 Dec 2020 (Study Day 100)	Deep Vein Thrombosis Prophylaxis
Laparoscopic removal of abdominal adhesions*	02 Dec 2020 (Study Day 98) - 02 Dec 2020 (Study Day 98)	Adverse Event
Anesthetics, general	11 Feb 2021 (Study Day 169) - 11 Feb 2021 (Study Day 169)	Neck Lift
Clindamycin	11 Feb 2021 (Study Day 169) - 16 Feb 2021 (Study Day 174)	Infection Prophylaxis Post Neck Lift
Hydrocodone bitartrate; paracetamol	11 Feb 2021 (Study Day 169) - 16 Feb 2021 (Study Day 174)	Post-Op Pain Neck Lift
Neck lift*	11 Feb 2021 (Study Day 169) - 11 Feb 2021 (Study Day 169)	Other, Elective Cosmetic
Paracetamol	15 Feb 2021 (Study Day 173) - 15 Feb 2021 (Study Day 173)	Post-Op Pain Neck Lift

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US378-2153 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	04 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	06 Oct 2020 (Study Day 33)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Appendicitis/Appendicitis	SAE	Grade 4	Not related	26 Nov 2020 (Study Day 84) – 27 Nov 2020 (Study Day 85)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US378-2153, a 65-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 04 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 06 Oct 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 26 Nov 2020 (Study Day 84), 83 days after the first dose and 51 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of appendicitis. Action taken with the IP was not applicable. The event of appendicitis lasted for 2 days, after which it was considered to be recovered/resolved on 27 Nov 2020 (Study Day 85). The investigator assessed the event of appendicitis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000915	Appendicitis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2000 - Ongoing
Gastrooesophageal reflux disease	Gerd	2006 - Ongoing
Hysterosalpingo-oophorectomy	Bilateral oophorectomy + hysterectomy	Apr 2008 - Apr 2008
Rhinitis allergic	Allergic rhinitis	2009 - Ongoing
Depression	Depression	2016 - Ongoing
Anxiety	Anxiety	Apr 2017 - Ongoing
Osteoporosis	Osteoporosis	Jan 2018 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	Sep 2018 - Ongoing
Dermatitis contact	Generalized contact dermatitis	24 Aug 2020 (Study Day -11) - 24 Aug 2020 (Study Day -11)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metoprolol succinate	2006 - Ongoing	Hypertension
Omeprazole	2006 - Ongoing	Gerd
Cetirizine	2009 - Ongoing	Allergic Rhinitis
Amlodipine	2012 - Ongoing	Hypertension
Losartan	May 2012 - Ongoing	Hypertension
Bupropion	2016 - Ongoing	Depression
Acetylsalicylic acid	Oct 2016 - Ongoing	Cardiovascular Prophylaxis
Lorazepam	Apr 2017 - Ongoing	Anxiety
Rosuvastatin	Sep 2018 - Ongoing	Hypercholesterolemia
Dexamethasone	24 Aug 2020 (Study Day -11) - 24 Aug 2020 (Study Day -11)	Generalized Contact Dermatitis
Prednisone	24 Aug 2020 (Study Day -11) - 29 Aug 2020 (Study Day -6)	Generalized Contact Dermatitis
Triamcinolone	24 Aug 2020 (Study Day -11) - 24 Aug 2020 (Study Day -11)	Generalized Contact Dermatitis
Zoledronic acid	18 Sep 2020 (Study Day 15) - 18 Sep 2020 (Study Day 15)	Osteoporosis
Influenza vaccine	21 Sep 2020 (Study Day 18) - 21 Sep 2020 (Study Day 18)	Influenza Prophylaxis
Appendectomy*	27 Nov 2020 (Study Day 85) - 27 Nov 2020 (Study Day 85)	Adverse Event
Ceftriaxone	27 Nov 2020 (Study Day 85) - 27 Nov 2020 (Study Day 85)	Appendicitis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fentanyl	27 Nov 2020 (Study Day 85) - 27 Nov 2020 (Study Day 85)	Appendicitis
Lidocaine	27 Nov 2020 (Study Day 85) - 27 Nov 2020 (Study Day 85)	Appendicitis
Morphine sulfate	27 Nov 2020 (Study Day 85) - 27 Nov 2020 (Study Day 85)	Appendicitis
Ondansetron	27 Nov 2020 (Study Day 85) - 27 Nov 2020 (Study Day 85)	Appendicitis
Oxycodone	27 Nov 2020 (Study Day 85) - 27 Nov 2020 (Study Day 85)	Appendicitis
Oxycodone	27 Nov 2020 (Study Day 85) - 30 Nov 2020 (Study Day 88)	Appendicitis (Post-Op Pain)
Phenylephrine	27 Nov 2020 (Study Day 85) - 27 Nov 2020 (Study Day 85)	Appendicitis
Propofol	27 Nov 2020 (Study Day 85) - 27 Nov 2020 (Study Day 85)	Appendicitis
Rocuronium	27 Nov 2020 (Study Day 85) - 27 Nov 2020 (Study Day 85)	Appendicitis
Sugammadex	27 Nov 2020 (Study Day 85) - 27 Nov 2020 (Study Day 85)	Appendicitis
Paracetamol	30 Nov 2020 (Study Day 88) - 14 Dec 2020 (Study Day 102)	Appendicitis (Post-Op Pain)
Diphtheria vaccine toxoid; pertussis vaccine acellular; tetanus vaccine toxoid	04 Jan 2021 (Study Day 123) - 04 Jan 2021 (Study Day 123)	Diphtheria, Tetanus, Pertussis Prophylaxis
Pneumococcal vaccine conj 7v (crm197)	04 Jan 2021 (Study Day 123) - 04 Jan 2021 (Study Day 123)	Pneumococcal Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US378-2162 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	08 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	09 Oct 2020 (Study Day 32)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Coronary Syndrome/Acute Coronary Syndrome	SAE	Grade 4	Not related	21 Sep 2020 (Study Day 14) – 21 Sep 2020 (Study Day 14)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US378-2162, a 78-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 08 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 09 Oct 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 21 Sep 2020 (Study Day 14), 13 days after the first dose and 18 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of acute coronary syndrome. The IP dose was not changed due to the acute coronary syndrome. The event of acute coronary syndrome lasted for 1 day, after which it was considered to be recovered/resolved on 21 Sep 2020 (Study Day 14). The investigator assessed the event of acute coronary syndrome to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000444	Acute Coronary Syndrome

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Constipation	Constipation	Not reported - Ongoing
Coronary artery disease	Coronary artery disease	Not reported - Ongoing
Deafness neurosensory	Sensory hearing loss	Not reported - Ongoing
Essential tremor	Essential tremor	Not reported - Ongoing
Gastrooesophageal reflux disease	Gerd	Not reported - Ongoing
Hyperlipidaemia	Hyperlipidemia	Not reported - Ongoing
Hypertension	Hypertension	Not reported - Ongoing
Benign prostatic hyperplasia	Bph	2015 - Ongoing
Back pain	Back pain	2017 - Ongoing
Angina pectoris	Angina	30 Oct 2017 (Study Day -1044) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	Not reported - Ongoing	Cad
Atorvastatin	Not reported - Ongoing	Hyperlipidemia
Carbidopa; levodopa	Not reported - Ongoing	Tremors
Losartan	Not reported - Ongoing	Hypertension
Macrogol 3350	Not reported - Ongoing	Constipation
Omeprazole	Not reported - Ongoing	Gerd
Primidone	Not reported - Ongoing	Tremor
Tamsulosin hydrochloride	Not reported - Ongoing	Bph
Vitamins nos	2000 - Ongoing	General Health
Finasteride	2015 - Ongoing	Bph
Gabapentin	2017 - 22 Oct 2020 (Study Day 45)	Back Pain
Paracetamol	2017 - Ongoing	Back Pain
Vitamin d nos	08 Sep 2020 (Study Day 1) - Ongoing	General Health
Nuclear stress test*	22 Sep 2020 (Study Day 15) - 22 Sep 2020 (Study Day 15)	Adverse Event
Left heart catheterization*	23 Sep 2020 (Study Day 16) - 23 Sep 2020 (Study Day 16)	Adverse Event
Metoprolol	24 Sep 2020 (Study Day 17) - 27 Oct 2020 (Study Day 50)	Coronary Artery Disease
Paracetamol	09 Oct 2020 (Study Day 32) - 09 Oct 2020 (Study Day 32)	Post-Vaccination Symptom Prophylaxis
Glyceryl trinitrate	14 Oct 2020 (Study Day 37) - 14 Oct 2020 (Study Day 37)	Cardiac Chest Pain

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Colonoscopy*	22 Oct 2020 (Study Day 45) - 22 Oct 2020 (Study Day 45)	Other, Routine
Influenza vaccine	26 Oct 2020 (Study Day 49) - 26 Oct 2020 (Study Day 49)	Influenza Prophylaxis
Metoprolol	28 Oct 2020 (Study Day 51) - Ongoing	Cornary Artery Disease
Investigational drug	20 Jan 2021 (Study Day 135) - 20 Jan 2021 (Study Day 135)	Fracture Prophylaxis
Glyceryl trinitrate	21 Jan 2021 (Study Day 136) - Ongoing	Chest Pain (Cardiac)
Isosorbide mononitrate	23 Jan 2021 (Study Day 138) - Ongoing	Angina
Ranolazine	23 Jan 2021 (Study Day 138) - Ongoing	Angina
Skin biopsy right arm*	12 Mar 2021 (Study Day 186) - 12 Mar 2021 (Study Day 186)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Angina Pectoris	Grade 2/moderate	Not related	14 Oct 2020 (Study Day 37) - 14 Oct 2020 (Study Day 37)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US379-2080 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	30 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	04 Nov 2020 (Study Day 36)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	SAE	Grade 1/ mild	Not related	03 Dec 2020 (Study Day 65) – 31 Dec 2020 (Study Day 93)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US379-2080, a 42-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 30 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 04 Nov 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Dec 2020 (Study Day 65), 64 days after the first dose and 29 days after the second dose of the IP, the participant experienced a Grade 1/mild serious adverse event of covid-19. Action taken with the IP was not applicable. The event of COVID-19 lasted for 29 days, after which it was considered to be recovered/resolved on 31 Dec 2020 (Study Day 93). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001122	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Depression	Depression	1990 - Ongoing
Drug hypersensitivity	Allergy to sulfa	1998 - Ongoing
Seasonal allergy	Seasonal allergies	1999 - Ongoing
Asthma	Seasonal asthma	2010 - Ongoing
Female sterilisation	Tuballigation	2014 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	2010 - Ongoing	Seasonal Asthma
Vitamin b12 nos	2017 - Ongoing	Vitamin B Deficiency Prophylaxis
Vitamin d nos	2017 - Ongoing	Vitamin D Deficiency Prophylaxis
Fexofenadine hydrochloride	2019 - Ongoing	Seasonal Allergies
Guaifenesin	2019 - Ongoing	Seasonal Allergies
Sertraline	Mar 2020 - Ongoing	Depression
Influenza vaccine	15 Oct 2020 (Study Day 16) - 15 Oct 2020 (Study Day 16)	Influenza Prophylaxis
Dextromethorphan hydrobromide; paracetamol	29 Oct 2020 (Study Day 30) - 30 Oct 2020 (Study Day 31)	Common Cold
Dextromethorphan hydrobromide; paracetamol	03 Dec 2020 (Study Day 65) - 04 Dec 2020 (Study Day 66)	COVID 19
Ibuprofen	05 Dec 2020 (Study Day 67) - 21 Dec 2020 (Study Day 83)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 1/mild	Not related	07 Oct 2020 (Study Day 8) – 10 Oct 2020 (Study Day 11)
Nasopharyngitis	Grade 1/mild	Not related	29 Oct 2020 (Study Day 30) - 30 Oct 2020 (Study Day 31)
Aphthous Ulcer	Grade 1/mild	Related	28 Dec 2020 (Study Day 90) - 31 Dec 2020 (Study Day 93)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US379-2090 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	07 Oct 2020 (Study Day 1)

Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID 19	SAE	Grade 1/ mild	Not related	12 Dec 2020 (Study Day 67) – 29 Dec 2020 (Study Day 84)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US379-2090, a 24-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 07 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 05 Nov 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Dec 2020 (Study Day 67), 66 days after the first dose and 37 days after the second dose of the IP, the participant experienced a Grade 1/mild serious adverse event of covid-19. Action taken with the IP was not applicable. The event of COVID 19 lasted for 18 days, after which it was considered to be recovered/resolved on 29 Dec 2020 (Study Day 84). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001182	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	2001 - Ongoing
Musculoskeletal pain	Left shoulder pain	2017 - Ongoing
Arthralgia	Right ankle joint pain	2018 - Ongoing
Arthralgia	Right knee joint pain	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	13 Dec 2020 (Study Day 68) - 23 Dec 2020 (Study Day 78)	COVID-19 Symptom

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US379-2094 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	09 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	06 Nov 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Kidney Injury/ Acute Kidney Injury	SAE	Grade 4	Not related	20 Oct 2020 (Study Day 12) – 22 Oct 2020 (Study Day 14)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US379-2094, a 66-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 09 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 06 Nov 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Oct 2020 (Study Day 12), 11 days after the first dose and 17 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of acute kidney injury. The IP dose was not changed due to the acute kidney injury. The event of acute kidney injury lasted for 3 days, after which it was considered to be recovered/resolved on 22 Oct 2020 (Study Day 14). The investigator assessed the event of acute kidney injury to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000543	Acute Kidney Injury

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	1972 - Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	1975 - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus, type 2	2001 - Ongoing
Osteoarthritis	Left shoulder osteoarthritis	2005 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	2008 - Ongoing
Tinnitus	Tinnitus	2009 - Ongoing
Gout	Gout	2010 - Ongoing
Insomnia	Insomnia	2010 - Ongoing
Diabetic neuropathy	Diabetic neuropathy	2011 - Ongoing
Carpal tunnel syndrome	Carpal tunnel syndrome, bilateral	2014 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	2015 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2015 - Ongoing
Hypertension	Hpertension	2015 - Ongoing
Diabetic retinopathy	Diabetic retinopathy of both eyes	18 Jun 2020 (Study Day -113) - Ongoing
Foot fracture	Closed fracture of phalanx of left 3rd toe	01 Sep 2020 (Study Day -38) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin aspart	2008 - Ongoing	Diabetes Mellitus Type 2
Pantoprazole	2008 - Ongoing	Acid Reflux
Melatonin	2010 - Ongoing	Insomnia
Carvedilol	2015 - Ongoing	Hypertension
Eicosapentaenoic acid ethyl ester	2015 - Ongoing	Hyperholesterolemia
Insulin glargine	2015 - 28 Oct 2020 (Study Day 20)	Diabetes Mellitus Type 2
Losartan potassium	2015 - 20 Oct 2020 (Study Day 12)	Renal Prophylaxis
Salbutamol	2015 - Ongoing	Copd
Tamsulosin	2015 - Ongoing	Benign Prostatic Hyperplasia
Ibuprofen	2017 - 01 Mar 2021 (Study Day 144)	Bilateral Carpal Tunnel Syndrome, Left Shoulder Osteoarthritis
Acetylsalicylic acid	2018 - Ongoing	Cardiac Prophyaxis
Duloxetine	2018 - Ongoing	Diabetic Neuropathy
Empagliflozin	2018 - Ongoing	Diabetes Mellitus, Type 2
Fluticasone furoate; vilanterol trifenatate	2018 - Ongoing	Copd

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Pregabalin	2018 - Ongoing	Diabetic Neuropathy
Furosemide	20 Oct 2020 (Study Day 12) - 22 Oct 2020 (Study Day 14)	Acute Kidney Injury
Glyceryl trinitrate	20 Oct 2020 (Study Day 12) - 20 Oct 2020 (Study Day 12)	Acute Kidney Injury
Insulin lispro	20 Oct 2020 (Study Day 12) - 22 Oct 2020 (Study Day 14)	Elevated Blood Glucose
Oxycodone; paracetamol	20 Oct 2020 (Study Day 12) - 22 Oct 2020 (Study Day 14)	Acute Kidney Injury
Trazodone	21 Oct 2020 (Study Day 13) - 21 Oct 2020 (Study Day 13)	Insomnia
Chest x-ray*	22 Oct 2020 (Study Day 14) - 22 Oct 2020 (Study Day 14)	Adverse Event
Echocardiogram*	22 Oct 2020 (Study Day 14) - 22 Oct 2020 (Study Day 14)	Adverse Event
Furosemide	22 Oct 2020 (Study Day 14) - 05 Nov 2020 (Study Day 28)	Acute Kidney Injury
Renal ultrasound*	22 Oct 2020 (Study Day 14) - 22 Oct 2020 (Study Day 14)	Adverse Event
Insulin glargine	29 Oct 2020 (Study Day 21) - Ongoing	Elevated Blood Glucose
Influenza vaccine	15 Dec 2020 (Study Day 68) - 15 Dec 2020 (Study Day 68)	Influenza Prophylaxis
Tramadol	12 Jan 2021 (Study Day 96) - 13 Jan 2021 (Study Day 97)	Right Great Toenail Injury
Azithromycin	30 Jan 2021 (Study Day 114) - 05 Feb 2021 (Study Day 120)	Upper Respiratory Infection
Dextromethorphan hydrobromide; promethazine hydrochloride	30 Jan 2021 (Study Day 114) - 05 Feb 2021 (Study Day 120)	Upper Respiratory Infection
Prednisone	30 Jan 2021 (Study Day 114) - 04 Feb 2021 (Study Day 119)	Upper Respiratory Infection
Paracetamol	04 Mar 2021 (Study Day 147) - Ongoing	Bilateral Carpal Tunnel Syndrome, Left Shoulder Osteoarthritis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diabetes Mellitus	Grade 2/moderate	Not related	20 Oct 2020 (Study Day 12) - 11 Feb 2021 (Study Day 126)
Renal Cyst	Grade 1/mild	Not related	20 Oct 2020 (Study Day 12) - Ongoing
Renal Impairment	Grade 1/mild	Not related	22 Oct 2020 (Study Day 14) - Ongoing
Nail Injury	Grade 2/moderate	Not related	12 Jan 2021 (Study Day 96) - 26 Feb 2021 (Study Day 141)
Upper Respiratory Tract Infection	Grade 2/moderate	Not related	29 Jan 2021 (Study Day 113) - 06 Feb 2021 (Study Day 121)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US380-2149 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	07 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	08 Oct 2020 (Study Day 32)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID 19	SAE	Grade 2/ moderate	Not related	23 Nov 2020 (Study Day 78) – 01 Feb 2021 (Study Day 148)	Recovered/resolved with sequelae
Thrombophlebitis Superficial/Superficial Venous Thrombosis	SAE	Grade 2/ moderate	Not related	01 Dec 2020 (Study Day 86) – 03 Dec 2020 (Study Day 88)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US380-2149, a 64-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 07 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 08 Oct 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Nov 2020 (Study Day 78), 77 days after the first dose and 46 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of covid-19. Action taken with the IP was not applicable. The event of symptomatic COVID 19 lasted for 71 days, after which it was considered to be recovered/resolved with sequelae on 01 Feb 2021 (Study Day 148). The investigator assessed the event of covid-19 to be not related to the IP.

On 01 Dec 2020 (Study Day 86), 85 days after the first dose and 54 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of thrombophlebitis superficial. Action taken with the IP was not applicable. The event of superficial venous thrombosis lasted for 3 days, after which it was considered to be recovered/resolved on 03 Dec 2020 (Study Day 88). The investigator assessed the event of thrombophlebitis superficial to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000954	COVID-19
MOD-2020-000954	Thrombophlebitis Superficial

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Arteriosclerosis coronary artery	Arteriosclerotic heart disease	2008 - Ongoing
Drug hypersensitivity	Sulfa-drug allergy	2008 - Ongoing
Hypertension	Hypertension	2008 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid; dextromethorphan hydrobromide; doxylamine succinate; phenylephrine bitartrate	Not reported - Ongoing	COVID-19
Paracetamol	Not reported - Ongoing	COVID-19
Paracetamol	Not reported - 03 Dec 2020 (Study Day 88)	Cardiac Chest Pain
Acetylsalicylic acid	2008 - Ongoing	Hypertension
Amlodipine	2008 - Ongoing	Hypertension
Atorvastatin	2008 - Ongoing	Arteriosclerotic Heart Disease
Carvedilol	2008 - 31 Dec 2020 (Study Day 116)	Hypertension
Losartan	2008 - Ongoing	Hypertension
Influenza vaccine	27 Oct 2020 (Study Day 51) - 27 Oct 2020 (Study Day 51)	Prevent Influenza Infection
Enoxaparin sodium	01 Dec 2020 (Study Day 86) - 02 Dec 2020 (Study Day 87)	Superficial Venous Thrombosis
Ibuprofen	02 Dec 2020 (Study Day 87) - 03 Dec 2020 (Study Day 88)	Cardiac Chest Pain
Fluticasone propionate	14 Dec 2020 (Study Day 99) - Ongoing	COVID 19
Rivaroxaban	21 Dec 2020 (Study Day 106) - Ongoing	Arteriosclerotic Heart Disease
Clopidogrel bisulfate	30 Dec 2020 (Study Day 115) - Ongoing	Stent Placement
Carvedilol	31 Dec 2020 (Study Day 116) - Jan 2021	Hypertension

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Carvedilol	Jan 2021 - Ongoing	Hypertension
Cardiac catheterizaation with stent placement*	01 Jan 2021 (Study Day 117) - 01 Jan 2021 (Study Day 117)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Angina Pectoris	Grade 2/moderate	Not related	01 Dec 2020 (Study Day 86) - 03 Dec 2020 (Study Day 88)
Extrasystoles	Grade 1/mild	Not related	01 Dec 2020 (Study Day 86) - Ongoing
Hypertension	Grade 2/moderate	Not related	31 Dec 2020 (Study Day 116) - Ongoing
Arteriosclerosis Coronary Artery	Grade 2/moderate	Not related	01 Jan 2021 (Study Day 117) - 01 Jan 2021 (Study Day 117)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US380-2218 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	11 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	13 Oct 2020 (Study Day 33)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hiatus Hernia/ Paraesophogeal Hiatal Hernia Worsening	SAE	Grade 2/ moderate	Not related	28 Oct 2020 (Study Day 48) – 05 Nov 2020 (Study Day 56)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US380-2218, a 64-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 11 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 13 Oct 2020 (Study Day 33). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Oct 2020 (Study Day 48), 47 days after the first dose and 15 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of hiatus hernia. Action taken with the IP was not applicable. The event of paraesophogeal hiatal hernia worsening lasted for 9 days, after which it was considered to be recovered/resolved on 05 Nov 2020 (Study Day 56). The investigator assessed the event of hiatus hernia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000612	Hiatus Hernia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety	Anxiety	Not reported - Ongoing
Blood cholesterol increased	High choloesterol	Not reported - Ongoing
Dust allergy	Dust allergy	Not reported - Ongoing
Hiatus hernia	Hiatal hernia	Not reported - Ongoing
Hypersensitivity	Enrionmental allergies	Not reported - Ongoing
Hypertension	Hypertension	Not reported - Ongoing
Hypertriglyceridaemia	Hypertriglycerides	Not reported - Ongoing
Prostatomegaly	Enlarged prostate	Not reported - Ongoing
Type 2 diabetes mellitus	Diabetes type 2	Not reported - Ongoing
Rash	Generalized rash	2015 - Ongoing
HIV infection	Hiv	2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	Not reported - Ongoing	Heart Health
Atorvastatin	Not reported - Ongoing	High Cholesterol
Fenofibrate	Not reported - Ongoing	Hypertriglycerides
Glimepiride	Not reported - Ongoing	Diabetes Type 2
Lisinopril	Not reported - Ongoing	Hypertension
Colecalciferol	2015 - Ongoing	Supplement
Levocetirizine	2015 - Ongoing	Dust Allergies
Abacavir sulfate; dolutegravir sodium; lamivudine	2016 - Ongoing	Hiv
Venlafaxine	2016 - Ongoing	Anxiety
Tamsulosin	2017 - Ongoing	Enlarged Prostate
Triamcinolone acetonide	2017 - Ongoing	Generalized Rash
Cxr*	28 Oct 2020 (Study Day 48) - 28 Oct 2020 (Study Day 48)	Adverse Event
Heparin	29 Oct 2020 (Study Day 49) - 05 Nov 2020 (Study Day 56)	Clot Prevention
Left pigtail catheter*	30 Oct 2020 (Study Day 50) - 30 Oct 2020 (Study Day 50)	Adverse Event
Paraesophagealâ hernia repair*	30 Oct 2020 (Study Day 50) - 30 Oct 2020 (Study Day 50)	Adverse Event
Cxr*	31 Oct 2020 (Study Day 51) - 31 Oct 2020 (Study Day 51)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	06 Nov 2020 (Study Day 57) - 06 Nov 2020 (Study Day 57)	Prevent Influenza Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US381-2010 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	03 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	28 Aug 2020 (Study Day 26)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Angina Unstable/Unstable Angina	SAE	Grade 3/ severe	Not related	23 Dec 2020 (Study Day 143) – 04 Jan 2021 (Study Day 155)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2010, a 71-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 03 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 28 Aug 2020 (Study Day 26). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Dec 2020 (Study Day 143), 142 days after the first dose and 117 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of angina unstable. Action taken with the IP was not applicable. The event of unstable angina lasted for 13 days, after which it was considered to be recovered/resolved on 04 Jan 2021 (Study Day 155). The investigator assessed the event of angina unstable to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001430	Angina Unstable

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Gastrooesophageal reflux disease	Gerd	1977 - Ongoing
Deafness bilateral	Bilateral hearing loss	1995 - Ongoing
Sleep apnoea syndrome	Sleep apnea	2000 - Ongoing
Blood cholesterol increased	Elevated cholesterol	2001 - Ongoing
Rotator cuff syndrome	Left rotator cuff strain	2004 - 2005
Rotator cuff repair	Left rotator cuff repair	2005 - 2005
Arthralgia	Bilateral knee pain	2007 - 2013
Hepatic steatosis	Fatty liver	2010 - Ongoing
Type 2 diabetes mellitus	Diabetes type 2	2010 - Ongoing
Meniscus injury	Bilateral meniscus tear	2013 - 2013
Meniscus operation	Bilateral meniscus repair	2013 - 2013
Osteoarthritis	Bilateral knee osteoarthritis	2014 - Ongoing
Osteoarthritis	Bilateral shoulder osteoarthritis	2014 - Ongoing
Benign prostatic hyperplasia	Bph	2019 - Ongoing
Diabetic neuropathy	Bilateral lower extremity sensory diabetic neuropathy	2019 - Ongoing
Diverticulitis	Recurrent diverticulitis	2019 - 2019
Tobacco user	Weekly cigar smoker	Jan 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Omeprazole	1977 - 15 Feb 2021 (Study Day 197)	Gastroesophageal Reflux Disease
Simvastatin	2001 - 28 Dec 2020 (Study Day 148)	Elevated Cholesterol
Metformin	2019 - 28 Dec 2020 (Study Day 148)	Diabetes Mellitus Type 2
Tamsulosin	2019 - Ongoing	Benign Prostatic Hyperplasia
Ibuprofen	28 Aug 2020 (Study Day 26) - 30 Aug 2020 (Study Day 28)	Muscle Ache, Joint Aches, Headache, Fever, & Injection Site Pain
Chest, abdominal, and pelvic computerized tomography angiography*	26 Dec 2020 (Study Day 146) - 26 Dec 2020 (Study Day 146)	Adverse Event
Ecg*	26 Dec 2020 (Study Day 146) - 26 Dec 2020 (Study Day 146)	Adverse Event
Resting echocardiography*	26 Dec 2020 (Study Day 146) - 26 Dec 2020 (Study Day 146)	Adverse Event
Stress echocardiogram*	26 Dec 2020 (Study Day 146) - 26 Dec 2020 (Study Day 146)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	28 Dec 2020 (Study Day 148) - Ongoing	Unstable Angina And Cad
Atorvastatin	28 Dec 2020 (Study Day 148) - Ongoing	Unstable Angina And Cad
Carvedilol	28 Dec 2020 (Study Day 148) - Ongoing	Unstable Angina And Cad
Clopidogrel bisulfate	28 Dec 2020 (Study Day 148) - Ongoing	Unstable Angina And Cad
Isosorbide mononitrate	28 Dec 2020 (Study Day 148) - Ongoing	Unstable Angina And Cad
Chest x-ray*	29 Dec 2020 (Study Day 149) - 29 Dec 2020 (Study Day 149)	Adverse Event
Cardiac echocardiogram*	04 Jan 2021 (Study Day 155) - 04 Jan 2021 (Study Day 155)	Adverse Event
Left coronary angiography*	04 Jan 2021 (Study Day 155) - 04 Jan 2021 (Study Day 155)	Adverse Event
Lisinopril	04 Jan 2021 (Study Day 155) - 15 Feb 2021 (Study Day 197)	Hypertension
Percutaneous intervention with a drug eluting stent*	04 Jan 2021 (Study Day 155) - 04 Jan 2021 (Study Day 155)	Adverse Event
Right coronary angiography*	04 Jan 2021 (Study Day 155) - 04 Jan 2021 (Study Day 155)	Adverse Event
Losartan	15 Feb 2021 (Study Day 197) - Ongoing	Hypertension
Pantoprazole	15 Feb 2021 (Study Day 197) - Ongoing	Worsening Gastroesophageal Reflux Disease

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Neck Pain	Grade 1/mild	Not related	12 Aug 2020 (Study Day 10) - 14 Aug 2020 (Study Day 12)
Rash Maculo-Papular	Grade 2/moderate	Related	12 Aug 2020 (Study Day 10) - 14 Aug 2020 (Study Day 12)
Ear Pain	Grade 1/mild	Not related	16 Nov 2020 (Study Day 106) - 04 Dec 2020 (Study Day 124)
Coronary Artery Disease	Grade 2/moderate	Not related	04 Jan 2021 (Study Day 155) - Ongoing
Hypertension	Grade 1/mild	Not related	04 Jan 2021 (Study Day 155) - Ongoing
Drug Hypersensitivity	Grade 2/moderate	Not related	15 Feb 2021 (Study Day 197) - Ongoing
Gastrooesophageal Reflux Disease	Grade 2/moderate	Not related	15 Feb 2021 (Study Day 197) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US381-2059 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	06 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	01 Sep 2020 (Study Day 27)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Anxiety Disorder/Anxiety Disorder	SAE	Grade 4	Not related	24 Oct 2020 (Study Day 80) – 10 Nov 2020 (Study Day 97)	Recovered/resolved
Major Depression/Severe Episode Of Recurrent Major Depressive Disorder	SAE	Grade 4	Not related	29 Oct 2020 (Study Day 85) – 10 Nov 2020 (Study Day 97)	Recovered/resolved
Major Depression/Severe Episode Of Recurrent Major Depressive Disorder	SAE	Grade 4	Not related	18 Nov 2020 (Study Day 105) – 30 Nov 2020 (Study Day 117)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2059, a 20-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 06 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 01 Sep 2020 (Study Day 27). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Oct 2020 (Study Day 80), 79 days after the first dose and 53 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of anxiety disorder. Action taken with the IP was not applicable. The event of anxiety disorder lasted for 18 days, after which it was considered to be recovered/resolved on 10 Nov 2020 (Study Day 97). The investigator assessed the event of anxiety disorder to be not related to the IP.

On 29 Oct 2020 (Study Day 85), 84 days after the first dose and 58 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of major depression. Action taken with the IP was not applicable. The event of severe episode of recurrent major depressive disorder lasted for 13 days, after which it was considered to be recovered/resolved on 10 Nov 2020 (Study Day 97). The investigator assessed the event of major depression to be not related to the IP.

On 18 Nov 2020 (Study Day 105), 104 days after the first dose and 78 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of major depression. Action taken with the IP was not applicable. The event of severe episode of recurrent major depressive

disorder lasted for 13 days, after which it was considered to be recovered/resolved on 30 Nov 2020 (Study Day 117). The investigator assessed the event of major depression to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000573	Anxiety disorder
MOD-2020-000573	Major depression
MOD-2020-000858	Major depression

Study Completion/Discontinuation

On 23 Mar 2021 (Study Day 230), the participant discontinued from the study due to other.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Eyelid retraction	(b) eyelid retraction	Not reported - Ongoing
Drug hypersensitivity	Atropine allergy	(b) (6) 1999 (Study Day (b) (6) - Ongoing
Eye operation	Left eye shunt revision x18	(b) (6) 1999 (Study Day (b) (6) - 2013
Glaucoma	Left eye glaucoma	(b) (6) 1999 (Study Day (b) (6) - Ongoing
Headache	Frequent headaches	2008 - Ongoing
Anxiety	Anxiety	2018 - Ongoing
Depression	Depression	2018 - Ongoing
Electronic cigarette user	Vape smoker	2018 - Ongoing
Drug abuse	Marijuana abuse	Feb 2019 - Ongoing
Alcohol use disorder	Alcohol use disorder	Jan 2020 - Ongoing
Major depression	Recurrent major depressive disorder	Jan 2020 - Ongoing
Nicotine dependence	Nicotine addiction	Jan 2020 - Ongoing
Post-traumatic stress disorder	Post traumatic stress disorder	Jan 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Substance abuse treatment program*	Not reported - Not reported	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Dorzolamide hydrochloride; timolol maleate	01 May 2018 (Study Day -828) - Ongoing	Glaucoma
Travoprost	01 May 2018 (Study Day -828) - 30 Oct 2020 (Study Day 86)	Glaucoma
Sertraline	20 Dec 2019 (Study Day -230) - 24 Oct 2020 (Study Day 80)	Depression/Anxiety
Ethinylestradiol; etonogestrel	Jun 2020 - Ongoing	Pregnancy Prevention/ Birth Control
Brimonidine tartrate	24 Aug 2020 (Study Day 19) - 30 Oct 2020 (Study Day 86)	Glaucoma
Ibuprofen	08 Oct 2020 (Study Day 64) - 13 Oct 2020 (Study Day 69)	COVID-Like Illness
Sertraline	24 Oct 2020 (Study Day 80) - 26 Oct 2020 (Study Day 82)	Depression/Anxeity
Hydroxyzine	26 Oct 2020 (Study Day 82) - 26 Oct 2020 (Study Day 82)	Anxiety Disorder
Urine drug screen*	26 Oct 2020 (Study Day 82) - 26 Oct 2020 (Study Day 82)	Adverse Event
Bupropion	27 Oct 2020 (Study Day 83) - Ongoing	Anxiety Disorder
Nicotine	27 Oct 2020 (Study Day 83) - Ongoing	Worsening Nicotine Addiction
Nicotine polacrilex	27 Oct 2020 (Study Day 83) - Ongoing	Worsening Nicotine Addiction
Clonazepam	30 Oct 2020 (Study Day 86) - Ongoing	Major Depressive Disorder
Diphenhydramine	30 Oct 2020 (Study Day 86) - 30 Oct 2020 (Study Day 86)	Major Depressive Disorder
Trazodone	30 Oct 2020 (Study Day 86) - Ongoing	Major Depressive Disorder
Hydroxyzine hydrochloride	31 Oct 2020 (Study Day 87) - Ongoing	Major Depressive Disorder
Latanoprost	31 Oct 2020 (Study Day 87) - Ongoing	Glaucoma
Nicotine polacrilex	31 Oct 2020 (Study Day 87) - 08 Nov 2020 (Study Day 95)	Nicotine Addiction
Prazosin	31 Oct 2020 (Study Day 87) - Ongoing	Major Depressive Disorder
Quetiapine	31 Oct 2020 (Study Day 87) - 03 Nov 2020 (Study Day 90)	Major Depressive Disorder
Dorzolamide; timolol	01 Nov 2020 (Study Day 88) - Ongoing	Glaucoma
Quetiapine	03 Nov 2020 (Study Day 90) - Ongoing	Major Depressive Disorder
Chlorpromazine	06 Nov 2020 (Study Day 93) - Ongoing	Major Depressive Disorder
Dorzolamide hydrochloride; timolol maleate	18 Nov 2020 (Study Day 105) - 18 Nov 2020 (Study Day 105)	Glaucoma
Lorazepam	18 Nov 2020 (Study Day 105) - 18 Nov 2020 (Study Day 105)	Severe Episode Of Recurrent Major Deppressive Disorder
Olanzapine	18 Nov 2020 (Study Day 105) - 18 Nov 2020 (Study Day 105)	Severe Episode Of Recurrent Major Deppressive Disorder
Quetiapine	18 Nov 2020 (Study Day 105) - 18 Nov 2020 (Study Day 105)	Severe Episode Of Recurrent Major Deppressive Disorder
Brimonidine tartrate	19 Nov 2020 (Study Day 106) - 19 Nov 2020 (Study Day 106)	Glaucoma
Hydroxyzine	19 Nov 2020 (Study Day 106) - 19 Nov 2020 (Study Day 106)	Severe Episode Of Recurrent Major Deppressive Disorder
Trazodone	19 Nov 2020 (Study Day 106) - 19 Nov 2020 (Study Day 106)	Severe Episode Of Recurrent Major Deppressive Disorder

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Brimonidine tartrate	30 Nov 2020 (Study Day 117) - Ongoing	Glaucoma
Clonazepam	30 Nov 2020 (Study Day 117) - Ongoing	Severe Episode Of Recurrent Major Deppressive Disorder
Lurasidone	30 Nov 2020 (Study Day 117) - Ongoing	Severe Episode Of Recurrent Major Deppressive Disorder

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Nausea	Grade 1/mild	Not related	23 Sep 2020 (Study Day 49) - 23 Sep 2020 (Study Day 49)
Vomiting	Grade 1/mild	Not related	23 Sep 2020 (Study Day 49) - 23 Sep 2020 (Study Day 49)
Suspected COVID-19	Grade 2/moderate	Not related	08 Oct 2020 (Study Day 64) - 13 Oct 2020 (Study Day 69)
Nicotine Dependence	Grade 2/moderate	Not related	27 Oct 2020 (Study Day 83) - Ongoing
Dissociative Disorder	Grade 4	Not related	29 Oct 2020 (Study Day 85) - 10 Nov 2020 (Study Day 97)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US381-2062 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	06 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	04 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hyponatraemia/Worsening Hyponatremia	SAE	Grade 4	Not related	16 Jan 2021 (Study Day 164) – 20 Jan 2021 (Study Day 168)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2062, a 55-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 06 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 04 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Jan 2021 (Study Day 164), 163 days after the first dose and 134 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of hyponatraemia. Action taken with the IP was not applicable. The event of worsening hyponatremia lasted for 5 days, after which it was considered to be recovered/resolved on 20 Jan 2021 (Study Day 168). The investigator assessed the event of hyponatraemia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-004902	Hyponatremia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Headache	Headaches	1972 - Ongoing
Substance use	Occasional marijuana use	1975 - Ongoing
Visual impairment	Bilateral vision impairment	1975 - Ongoing
Nicotine dependence	Nicotine addiction	1983 - Ongoing
Alcohol abuse	Alcohol abuse	1986 - 1988
Caesarean section	Caesarean section	21 Mar 1989 (Study Day -11461) - 21 Mar 1989 (Study Day -11461)
Anxiety	Anxiety	1998 - Ongoing
Bipolar disorder	Bipolar	1998 - Ongoing
Depression	Depression	1998 - Ongoing
Migraine	Migraines	1998 - Ongoing
Craniotomy	Craniotomy	Nov 1998 - Nov 1998
Intra-cerebral aneurysm operation	Brain aneurysm clipping	Nov 1998 - Nov 1998
Intracranial aneurysm	Brain aneurysm	Nov 1998 - Nov 1998
Medical device implantation	Skull steel plate placement	Nov 1998 - Nov 1998
Generalised tonic-clonic seizure	Grandmal seizure	2012 - 2012
Hypokalaemia	Hypokalemia	2012 - 11 Jul 2019 (Study Day -392)
Hyponatraemia	Hyponatremia	2012 - Ongoing
Intervertebral disc degeneration	Degenerative disc disease	2012 - Ongoing
Back pain	Chronic back pain	2013 - Ongoing
Skin discolouration	Bilateral upper extremity discoloration	May 2015 - Ongoing
Postmenopause	Post menopausal	2017 - Ongoing
Hypertension	Hypertension	Jul 2017 - Ongoing
Osteoarthritis	Bilateral hand osteoarthritis	2018 - Ongoing
Osteopenia	Osteopenia	2019 - Ongoing
Osteoporosis	Osteoporosis	2019 - Ongoing
Vitamin D deficiency	Vitamin d deficiency	2019 - Ongoing
Fibrocystic breast disease	Bilateral fibrocystic breast	Feb 2019 - Ongoing
Blood cholesterol increased	High cholesterol	Feb 2020 - Ongoing
Bursitis	Right elbow bursitis	01 May 2020 (Study Day -97) - Ongoing
Cellulitis	Right elbow cellulitis	01 May 2020 (Study Day -97) - 01 Jun 2020 (Study Day -66)
Cellulitis	Right elbow cellulitis	24 Jun 2020 (Study Day -43) - Jul 2020
Rash	Abdominal rash	Jul 2020 - Jul 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2013 - 05 Aug 2020 (Study Day -1)	Chronic Back Pain
Fluoxetine hydrochloride	Jul 2017 - Ongoing	Bipolar
Hydrochlorothiazide; lisinopril	Jul 2017 - 20 Jan 2021 (Study Day 168)	Hypertension
Hydroxyzine	Jul 2017 - Ongoing	Anxiety
Metoprolol tartrate	Jul 2017 - 12 Nov 2020 (Study Day 99)	Hypertension
Olanzapine	Jul 2017 - Ongoing	Bipolar
Ergocalciferol	2019 - Ongoing	Vitamin D Deficiency
Meloxicam	2019 - Ongoing	Chronic Back Pain
Methocarbamol	2019 - Ongoing	Chronic Back Pain
Atorvastatin	Feb 2020 - Ongoing	High Cholesterol
Pneumococcal vaccine	10 Jul 2020 (Study Day -27) - 10 Jul 2020 (Study Day -27)	Pneumonia Prevention
Ibuprofen	07 Aug 2020 (Study Day 2) - 08 Aug 2020 (Study Day 3)	Chronic Back Pain
Ibuprofen	25 Aug 2020 (Study Day 20) - 25 Aug 2020 (Study Day 20)	Chronic Back Pain
Paracetamol	04 Sep 2020 (Study Day 30) - 04 Sep 2020 (Study Day 30)	Pain At Injection Site
Influenza vaccine	16 Oct 2020 (Study Day 72) - 16 Oct 2020 (Study Day 72)	Influenza Prevention
Chest x-ray*	16 Jan 2021 (Study Day 164) - 16 Jan 2021 (Study Day 164)	Adverse Event
Ct head without contrast*	16 Jan 2021 (Study Day 164) - 16 Jan 2021 (Study Day 164)	Adverse Event
Ekg 12-lead*	16 Jan 2021 (Study Day 164) - 16 Jan 2021 (Study Day 164)	Adverse Event
Magnesium sulfate	16 Jan 2021 (Study Day 164) - 16 Jan 2021 (Study Day 164)	Hyponatremia
Nicotine	16 Jan 2021 (Study Day 164) - Ongoing	Nicotine Addiction
Potassium chloride	16 Jan 2021 (Study Day 164) - 16 Jan 2021 (Study Day 164)	Hypokalemia
Sodium chloride	16 Jan 2021 (Study Day 164) - 16 Jan 2021 (Study Day 164)	Hyponatremia
Ekg 12 lead*	17 Jan 2021 (Study Day 165) - 17 Jan 2021 (Study Day 165)	Adverse Event
Echo*	19 Jan 2021 (Study Day 167) - 19 Jan 2021 (Study Day 167)	Adverse Event
Us carotid doppler*	19 Jan 2021 (Study Day 167) - 19 Jan 2021 (Study Day 167)	Adverse Event
Amlodipine	20 Jan 2021 (Study Day 168) - 20 Feb 2021 (Study Day 199)	Hyponatremia
Metoprolol	20 Jan 2021 (Study Day 168) - Ongoing	Hyponatremia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sodium chloride	20 Jan 2021 (Study Day 168) - 27 Jan 2021 (Study Day 175)	Hyponatremia
Vitamin b1 nos	20 Jan 2021 (Study Day 168) - 20 Feb 2021 (Study Day 199)	Hyponatremia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fall	Grade 2/moderate	Not related	14 Jan 2021 (Study Day 162) - 14 Jan 2021 (Study Day 162)
Cerebral Atrophy	Grade 1/mild	Not related	16 Jan 2021 (Study Day 164) - Ongoing
Electrocardiogram Qt Prolonged	Grade 1/mild	Not related	16 Jan 2021 (Study Day 164) - Ongoing
Hypokalaemia	Grade 3/severe	Not related	16 Jan 2021 (Study Day 164) - 20 Jan 2021 (Study Day 168)
Liver Function Test Increased	Grade 1/mild	Not related	16 Jan 2021 (Study Day 164) - Ongoing
Troponin Increased	Grade 1/mild	Not related	16 Jan 2021 (Study Day 164) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US381-2098 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	10 Sep 2020 (Study Day 32)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Prostate Cancer/Prostate Cancer	SAE	Grade 3/ severe	Not related	28 Aug 2020 (Study Day 19) – Ongoing	Not recovered/ not resolved
Plasma Cell Myeloma/Multiple Myeloma	SAE	Grade 3/ severe	Not related	24 Nov 2020 (Study Day 107) – Ongoing	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2098, a 67-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 10 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 10 Sep 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Aug 2020 (Study Day 19), 18 days after the first dose and 13 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of prostate cancer. The IP dose was not changed due to the prostate cancer. The event of prostate cancer was considered to be ongoing. The investigator assessed the event of prostate cancer to be not related to the IP.

On 24 Nov 2020 (Study Day 107), 106 days after the first dose and 75 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of plasma cell myeloma. Action taken with the IP was not applicable. The event of multiple myeloma was considered to be ongoing. The investigator assessed the event of plasma cell myeloma to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000469	Prostate cancer
MOD-2020-001071	Plasma cell myeloma

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anosmia	Anosmia	1985 - Ongoing
Craniofacial fracture	Craniofacial separation	1985 - 1985
Cranioplasty	Craniofacial reconstruction	1985 - 1985
Eye prosthesis user	Dependency of right eye prosthetic	1985 - Ongoing
Road traffic accident	History of motor vehicle accident	03 Nov 1985 (Study Day -12699) - 03 Nov 1985 (Study Day -12699)
Alcohol use	Alcohol use-16 oz of wine/day	2000 - Ongoing
Anxiety	Anxiety	2000 - Ongoing
Vasectomy	Vasectomy	2008 - 2008
Inguinal hernia	(r) inguinal hernia	2009 - 2009
Inguinal hernia repair	(r) inguinal hernia repair	2009 - 2009
Drug hypersensitivity	Sulfa allergy	2015 - Ongoing
Food allergy	Shrimp allergy	2015 - Ongoing
Sensation of foreign body	Globus sensation	2019 - Ongoing
Vitamin B12 deficiency	Vitamin b12-deficiency	2019 - Ongoing
Microalbuminuria	Microalbumuinuria	Jun 2019 - Ongoing
Cataract	(l) cataract	Feb 2020 - Ongoing
Thyroid mass	Thyroid nodules	09 Mar 2020 (Study Day -154) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ubidecarenone	2010 - Ongoing	General Health
Vitamin b12 nos	2019 - Ongoing	B-12 Deficiency
Paracetamol	10 Sep 2020 (Study Day 32) - 11 Sep 2020 (Study Day 33)	Pain At Injection Site
Acetylsalicylic acid	24 Sep 2020 (Study Day 46) - 24 Sep 2020 (Study Day 46)	Bilateral Hip Pain And Neck Pain
Paracetamol	24 Sep 2020 (Study Day 46) - 24 Sep 2020 (Study Day 46)	Bilateral Hip Pain And Neck Pain
Ascorbic acid	Oct 2020 - 04 Dec 2020 (Study Day 117)	Prostate Cancer And Multiple Myeloma
Cannabidiol	Oct 2020 - Ongoing	Prostate Cancer And Multiple Myeloma
Colecalciferol	Oct 2020 - 04 Dec 2020 (Study Day 117)	Prostate Cancer And Multiple Myeloma

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fish oil	Oct 2020 - Ongoing	Prostate Cancer And Multiple Myeloma
Biopsy of prostate*	02 Oct 2020 (Study Day 54) - 02 Oct 2020 (Study Day 54)	Adverse Event
Ceftriaxone	02 Oct 2020 (Study Day 54) - 02 Oct 2020 (Study Day 54)	Prostate Biopsy
Left cataract removal*	15 Oct 2020 (Study Day 67) - 15 Oct 2020 (Study Day 67)	Adverse Event
Pneumococcal vaccine polysacch 23v	04 Nov 2020 (Study Day 87) - 04 Nov 2020 (Study Day 87)	Immunization
Prednisone	04 Nov 2020 (Study Day 87) - 13 Nov 2020 (Study Day 96)	Bilateral Hip Pain
Ct pet scan*	17 Nov 2020 (Study Day 100) - 17 Nov 2020 (Study Day 100)	Adverse Event
Tizanidine hydrochloride	20 Nov 2020 (Study Day 103) - 02 Dec 2020 (Study Day 115)	Multiple Myeloma
Bone marrow aspirate*	02 Dec 2020 (Study Day 115) - 02 Dec 2020 (Study Day 115)	Adverse Event
Peripheral blood smear*	02 Dec 2020 (Study Day 115) - 02 Dec 2020 (Study Day 115)	Adverse Event
Tramadol	02 Dec 2020 (Study Day 115) - Ongoing	Multiple Myeloma
Lenalidomide	04 Dec 2020 (Study Day 117) - 08 Dec 2020 (Study Day 121)	Prostate Cancer
Acetylsalicylic acid	08 Dec 2020 (Study Day 121) - Ongoing	Multiple Myeloma
Aciclovir	08 Dec 2020 (Study Day 121) - Ongoing	Multiple Myeloma
Bortezomib	08 Dec 2020 (Study Day 121) - Ongoing	Multiple Myeloma
Denosumab	08 Dec 2020 (Study Day 121) - Ongoing	Multiple Myeloma
Dexamethasone	08 Dec 2020 (Study Day 121) - Ongoing	Multiple Myeloma
Famotidine	08 Dec 2020 (Study Day 121) - Ongoing	Multiple Myeloma
Hydrocodone bitartrate; paracetamol	08 Dec 2020 (Study Day 121) - Ongoing	Multiple Myeloma
Lenalidomide	08 Dec 2020 (Study Day 121) - Ongoing	Multiple Myeloma
Prochlorperazine	08 Dec 2020 (Study Day 121) - Ongoing	Multiple Myeloma
Lidocaine	22 Dec 2020 (Study Day 135) - Ongoing	Multiple Myeloma
Escitalopram oxalate	05 Jan 2021 (Study Day 149) - Ongoing	Worsening Anxiety

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Neck Pain	Grade 1/mild	Not related	22 Sep 2020 (Study Day 44) - 30 Nov 2020 (Study Day 113)
Arthralgia	Grade 1/mild	Not related	24 Sep 2020 (Study Day 46) - 11 Dec 2020 (Study Day 124)
Cataract	Grade 2/moderate	Not related	15 Oct 2020 (Study Day 67) - 15 Oct 2020 (Study Day 67)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Anxiety	Grade 2/moderate	Not related	05 Jan 2021 (Study Day 149) - 05 Feb 2021 (Study Day 180)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US381-2132 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	11 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	08 Sep 2020 (Study Day 29)

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Obesity/Worsening Obesity	SAE	Grade 3/ severe	Not related	24 Dec 2020 (Study Day 136) – 26 Dec 2020 (Study Day 138)	Recovered/resolved
Postoperative Abscess/ Abscess (Post Surgical Abdominal)	SAE	Grade 4	Not related	29 Jan 2021 (Study Day 172) – 06 Feb 2021 (Study Day 180)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2132, a 72-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 11 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 08 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Dec 2020 (Study Day 136), 135 days after the first dose and 107 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of obesity. Action taken with the IP was not applicable. The event of worsening obesity lasted for 3 days, after which it was considered to be recovered/resolved on 26 Dec 2020 (Study Day 138). The investigator assessed the event of obesity to be not related to the IP.

On 29 Jan 2021 (Study Day 172), 171 days after the first dose and 143 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of postoperative abscess. Action taken with the IP was not applicable. The event of abscess (post surgical abdominal) lasted for 9 days, after which it was considered to be recovered/resolved on 06 Feb 2021 (Study Day 180). The investigator assessed the event of postoperative abscess to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-003686	Obesity
MOD-2021-012044	Postoperative abscess

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Sinusitis	Sinusitis	1965 - Ongoing
Fracture treatment	Left broken hand surgery	1968 - 1968
Hand fracture	Left broken hand	1968 - 1968
Anaphylactic reaction	Penicillin allergy (anaphylactic)	1975 - Ongoing
Drug hypersensitivity	Sulfa allergy	1975 - Ongoing
Ex-tobacco user	Past smoker	1975 - 1980
Asthma	Moderate persistent asthma with acute exacerbation	1990 - Ongoing
Hypersensitivity	Environmental allergies	1990 - Ongoing
Insomnia	Insomnia	1990 - Ongoing
Ligament operation	Left cruciate ligament torn-repair	1999 - 1999
Ligament rupture	Left torn cruciate ligament	1999 - 1999
Ankle fracture	Left ankle break	2007 - 2007
Ankle operation	Left ankle surgery	2007 - 2007
Sinus operation	Sinus surgery	2007 - 2007
Depression	Depression	25 Aug 2011 (Study Day -3274) - Ongoing
Hypertension	Hypertension	25 Aug 2011 (Study Day -3274) - Ongoing
Testicular failure	Testicular hypofunction	25 Aug 2011 (Study Day -3274) - Ongoing
Osteoarthritis	Osteoarthritis bilateral hands	2013 - Ongoing
Anxiety	Anxiety	2015 - Ongoing
Polycythaemia	Erythrocytosis	03 Feb 2015 (Study Day -2016) - Ongoing
Vitamin D deficiency	Vitamin d deficiency	03 Feb 2015 (Study Day -2016) - Ongoing
Cholecystectomy	Gallbladder removal	2018 - 2018
Cholecystitis	Gallbladder inflammation	2018 - 2018
Obesity	Obesity	11 Jan 2018 (Study Day -943) - Ongoing
Sleep apnoea syndrome	Obstructive sleep apnea	21 Aug 2018 (Study Day -721) - Ongoing
Gastrooesophageal reflux disease	Gerd	2019 - Ongoing
Restless legs syndrome	Bilateral restless legs syndrome	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Budesonide; formoterol fumarate	1990 - 26 Oct 2020 (Study Day 77)	Asthma
Fluticasone propionate	1990 - Ongoing	Environmental Allergies
Salbutamol	1990 - Ongoing	Asthma
Testosterone	Aug 2011 - Ongoing	Testicular Hypofunction
Trazodone	2014 - Ongoing	Insomnia
Alprazolam	2015 - 26 Oct 2020 (Study Day 77)	Anxiety
Hydrochlorothiazide	2015 - 20 Feb 2021 (Study Day 194)	Hypertension
Levocetirizine dihydrochloride	2015 - Ongoing	Environmental Allergies
Azelastine	2016 - Ongoing	Environmental Allergies
Celecoxib	2016 - Ongoing	Osteoarthritis In Both Hands
Tamsulosin	2016 - Ongoing	Preventative Prostate Health
Epinephrine	2017 - Ongoing	Penicillin Allergy
Vitamins nos	2017 - Ongoing	Vitamin D Deficiency
Bupropion	2018 - Ongoing	Depression
Metoprolol	2018 - Ongoing	Hypertension
Quercetin	2018 - Ongoing	General Health
Iron	2019 - 20 Feb 2021 (Study Day 194)	General Health
Rotigotine	2019 - 24 Feb 2021 (Study Day 198)	Restless Leg Syndrome
Vitamins nos	2019 - 24 Dec 2020 (Study Day 136)	General Health
Buspirone	27 Aug 2020 (Study Day 17) - 08 Sep 2020 (Study Day 29)	Worsening Anxiety
Omeprazole	27 Aug 2020 (Study Day 17) - Ongoing	Worsening Gerd
Paracetamol	09 Sep 2020 (Study Day 30) - 11 Sep 2020 (Study Day 32)	Headache And Pain At Injection Site
Alprazolam	26 Oct 2020 (Study Day 77) - 01 Jan 2021 (Study Day 144)	Worsening Anxiety
Buspirone	26 Oct 2020 (Study Day 77) - 01 Jan 2021 (Study Day 144)	Worsening Anxiety
Umeclidinium bromide; vilanterol trifenatate	26 Oct 2020 (Study Day 77) - Ongoing	Bronchitis
Gastric sleeve surgery*	24 Dec 2020 (Study Day 136) - 24 Dec 2020 (Study Day 136)	Adverse Event
Vitamins nos	26 Dec 2020 (Study Day 138) - Ongoing	Supplement
Alprazolam	01 Jan 2021 (Study Day 144) - Ongoing	Anxiety
Buspirone	01 Jan 2021 (Study Day 144) - Ongoing	Anxiety
Abscess drain*	30 Jan 2021 (Study Day 173) - 30 Jan 2021 (Study Day 173)	Adverse Event
Linezolid	06 Feb 2021 (Study Day 180) - 12 Feb 2021 (Study Day 186)	Abscess
Losartan	20 Feb 2021 (Study Day 194) - Ongoing	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Anxiety	Grade 2/moderate	Not related	27 Aug 2020 (Study Day 17) - 08 Sep 2020 (Study Day 29)
Gastrooesophageal Reflux Disease	Grade 2/moderate	Not related	27 Aug 2020 (Study Day 17) - 08 Sep 2020 (Study Day 29)
Dermatitis	Grade 3/severe	Related	09 Sep 2020 (Study Day 30) - 17 Sep 2020 (Study Day 38)
Anxiety	Grade 2/moderate	Not related	26 Oct 2020 (Study Day 77) - 01 Nov 2020 (Study Day 83)
Bronchitis	Grade 2/moderate	Not related	26 Oct 2020 (Study Day 77) - 31 Oct 2020 (Study Day 82)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US381-2169 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	11 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Fall/Multiple Falls	SAE	Grade 4	Not related	17 Dec 2020 (Study Day 126) – 21 Dec 2020 (Study Day 130)	Recovered/resolved
Urinary Tract Infection/Urinary Tract Infection	SAE	Grade 4	Not related	21 Dec 2020 (Study Day 130) – 28 Dec 2020 (Study Day 137)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2169, a 67-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 14 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 11 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 17 Dec 2020 (Study Day 126), 125 days after the first dose and 97 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of fall. Action taken with the IP was not applicable. The event of multiple falls lasted for 5 days, after which it was considered to be recovered/resolved on 21 Dec 2020 (Study Day 130). The investigator assessed the event of fall to be not related to the IP.

On 21 Dec 2020 (Study Day 130), 129 days after the first dose and 101 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of urinary tract infection. Action taken with the IP was not applicable. The event of urinary tract infection lasted for 8 days, after which it was considered to be recovered/resolved on 28 Dec 2020 (Study Day 137). The investigator assessed the event of urinary tract infection to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002878	Fall
MOD-2021-002878	Urinary tract infection

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Iron deficiency anaemia	Iron deficiency induced anemia	1974 - 20 Mar 1982 (Study Day -14027)
Substance use	Recreational marijuana use	1982 - Ongoing
Female sterilisation	Tubal ligation	20 Mar 1982 (Study Day -14027) - 20 Mar 1982 (Study Day -14027)
Urticaria	Flagyl allergy (hives)	1998 - Ongoing
Neuropathy peripheral	Unilateral peripheral neuropathy (right side only, sensory or motor in nature unknown)	2000 - Ongoing
Postmenopause	Post menopausal	15 May 2005 (Study Day -5570) - Ongoing
Constipation	Chronic constipation	2010 - Ongoing
Arthralgia	(r) hip pain	2011 - Ongoing
Osteoarthritis	Osteoarthritis bilateral knee	11 Aug 2011 (Study Day -3291) - Ongoing
Peroneal nerve palsy	Left foot drop	2013 - Ongoing
Insomnia	Insomnia	2016 - Ongoing
Headache	Headaches	Jan 2017 - Ongoing
Hypertonic bladder	Overactive bladder	Nov 2019 - Ongoing
Influenza	Influenza strain b	06 Jan 2020 (Study Day -221) - 15 Jan 2020 (Study Day -212)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Butalbital; paracetamol	Jan 2017 - Ongoing	Headaches
Tramadol	2018 - Ongoing	Osteoarthritis Bilateral Knee
Zolpidem	2018 - Ongoing	Insomnia
Mirabegron	Nov 2019 - Ongoing	Overactive Bladder
Gabapentin	Jun 2020 - Ongoing	Right Sided Unilateral Peripheral (Both Limbs) Neuropathy
Nitrofurantoin	27 Aug 2020 (Study Day 14) - 03 Sep 2020 (Study Day 21)	Urinary Tract Infection
Influenza vaccine	08 Oct 2020 (Study Day 56) - 08 Oct 2020 (Study Day 56)	Flu Prophalactic
Right total knee replacement*	04 Dec 2020 (Study Day 113) - 04 Dec 2020 (Study Day 113)	Medical History

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	05 Dec 2020 (Study Day 114) - 19 Dec 2020 (Study Day 128)	Post Op Pain-Right Total Knee Replacement
Celecoxib	05 Dec 2020 (Study Day 114) - 11 Dec 2020 (Study Day 120)	Post Op Pain Right Total Knee Replacement
Oxycodone; paracetamol	05 Dec 2020 (Study Day 114) - 21 Dec 2020 (Study Day 130)	Post-Op Pain (Right Total Knee Replacement)
Sennoside a+b	05 Dec 2020 (Study Day 114) - 09 Dec 2020 (Study Day 118)	Opioid Induced Constipation
Ct of head*	21 Dec 2020 (Study Day 130) - 21 Dec 2020 (Study Day 130)	Adverse Event
Ultrasound of right lower extremity*	21 Dec 2020 (Study Day 130) - 21 Dec 2020 (Study Day 130)	Adverse Event
Ct of pelvis*	22 Dec 2020 (Study Day 131) - 22 Dec 2020 (Study Day 131)	Adverse Event
Nitrofurantoin	22 Dec 2020 (Study Day 131) - 28 Dec 2020 (Study Day 137)	Uti
Hydrocodone bitartrate; paracetamol	28 Dec 2020 (Study Day 137) - 12 Jan 2021 (Study Day 152)	Post-Op Pain Right Total Knee Replacement
Nitrofurantoin	18 Feb 2021 (Study Day 189) - 25 Feb 2021 (Study Day 196)	Urinary Tract Infection
Scarring debridement*	03 Mar 2021 (Study Day 202) - 03 Mar 2021 (Study Day 202)	Adverse Event
Diphenhydramine hydrochloride; paracetamol; phenylephrine hydrochloride	20 Mar 2021 (Study Day 219) - 20 Mar 2021 (Study Day 219)	Nasal Congestion
Pseudoephedrine hydrochloride	21 Mar 2021 (Study Day 220) - 21 Mar 2021 (Study Day 220)	Nasal Congestion
Diphenhydramine hydrochloride; paracetamol; phenylephrine hydrochloride	22 Mar 2021 (Study Day 221) - 22 Mar 2021 (Study Day 221)	Nasal Congestion
Pseudoephedrine hydrochloride	23 Mar 2021 (Study Day 222) - 23 Mar 2021 (Study Day 222)	Nasal Congestion

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Urinary Tract Infection	Grade 1/mild	Not related	27 Aug 2020 (Study Day 14) - 03 Sep 2020 (Study Day 21)
Procedural Pain	Grade 2/moderate	Not related	05 Dec 2020 (Study Day 114) - Ongoing
Sciatica	Grade 3/severe	Not related	21 Dec 2020 (Study Day 130) - 30 Dec 2020 (Study Day 139)
Urinary Tract Infection	Grade 1/mild	Not related	11 Feb 2021 (Study Day 182) - 25 Feb 2021 (Study Day 196)
Joint Range Of Motion Decreased	Grade 2/moderate	Not related	25 Feb 2021 (Study Day 196) - Ongoing

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Rhinovirus Infection	Grade 1/mild	Not related	18 Mar 2021 (Study Day 217) - 01 Apr 2021 (Study Day 231)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US381-2270 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Diabetes Mellitus/Diabetes Mellitus	SAE	Grade 4	Not related	08 Jan 2021 (Study Day 136) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2270, a 40-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 26 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 24 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Jan 2021 (Study Day 136), 135 days after the first dose and 106 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of diabetes mellitus. Action taken with the IP was not applicable. The event of diabetes mellitus was considered to be ongoing. The investigator assessed the event of diabetes mellitus to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious and nonserious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002629	Type 2 diabetes mellitus
MOD-2020-001035	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tobacco user	Smoker - cigarettes 3x day	1980 - Ongoing
Seasonal allergy	Seasonal allergies	2015 - Ongoing
Arthralgia	Left elbow pain	01 Aug 2020 (Study Day -25) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fexofenadine hydrochloride	Jan 2020 - Feb 2020	Seasonal Allergies
Mentha x piperita oil	10 Sep 2020 (Study Day 16) - 13 Sep 2020 (Study Day 19)	Constipation
Mentha x piperita oil	13 Sep 2020 (Study Day 19) - 03 Oct 2020 (Study Day 39)	Digestive Health
Influenza vaccine	17 Oct 2020 (Study Day 53) - 17 Oct 2020 (Study Day 53)	Prophalactic
Ketoconazole	09 Nov 2020 (Study Day 76) - 15 Nov 2020 (Study Day 82)	Tinea Pedis
Paracetamol	29 Nov 2020 (Study Day 96) - 29 Nov 2020 (Study Day 96)	Headache
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	03 Dec 2020 (Study Day 100) - 03 Dec 2020 (Study Day 100)	Fever (100.4)
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	04 Dec 2020 (Study Day 101) - 06 Dec 2020 (Study Day 103)	Symptomatic COVID 19
Azithromycin	07 Dec 2020 (Study Day 104) - 07 Dec 2020 (Study Day 104)	Stmptomatic COVID 19
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol; phenylephrine hydrochloride	07 Dec 2020 (Study Day 104) - 10 Dec 2020 (Study Day 107)	Symptomatic COVID19
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	07 Dec 2020 (Study Day 104) - 10 Dec 2020 (Study Day 107)	Symptomatic COVID 19
Ibuprofen	07 Dec 2020 (Study Day 104) - 07 Dec 2020 (Study Day 104)	Symptomatic COVID 19
Menthol	07 Dec 2020 (Study Day 104) - 08 Dec 2020 (Study Day 105)	Symptomatic COVID 19
Azithromycin	08 Dec 2020 (Study Day 105) - 11 Dec 2020 (Study Day 108)	Symptomatic COVID 19
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	11 Dec 2020 (Study Day 108) - 17 Dec 2020 (Study Day 114)	Symptomatic COVID 19
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	11 Dec 2020 (Study Day 108) - 11 Dec 2020 (Study Day 108)	Symptomatic COVID 19

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	12 Dec 2020 (Study Day 109) - 14 Dec 2020 (Study Day 111)	Symptomatic COVID 19
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	16 Dec 2020 (Study Day 113) - 17 Dec 2020 (Study Day 114)	Symptomatic COVID 19
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol; phenylephrine hydrochloride	19 Dec 2020 (Study Day 116) - 19 Dec 2020 (Study Day 116)	Symptomatic COVID-19
Cymbopogon schoenanthus	20 Dec 2020 (Study Day 117) - 20 Dec 2020 (Study Day 117)	Symptomatic COVID-19
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	20 Dec 2020 (Study Day 117) - 20 Dec 2020 (Study Day 117)	Symptomatic COVID-19
Eucalyptus globulus oil; menthol	20 Dec 2020 (Study Day 117) - 21 Dec 2020 (Study Day 118)	Symptomatic COVID-19
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	29 Dec 2020 (Study Day 126) - 29 Dec 2020 (Study Day 126)	Symptomatic COVID-19
Eucalyptus globulus oil; menthol	29 Dec 2020 (Study Day 126) - 29 Dec 2020 (Study Day 126)	Symptomatic COVID-19
Blood culture*	08 Jan 2021 (Study Day 136) - 08 Jan 2021 (Study Day 136)	Adverse Event
Blood glucose level*	08 Jan 2021 (Study Day 136) - 08 Jan 2021 (Study Day 136)	Adverse Event
Chest x-ray*	08 Jan 2021 (Study Day 136) - 08 Jan 2021 (Study Day 136)	Adverse Event
Ekg*	08 Jan 2021 (Study Day 136) - 08 Jan 2021 (Study Day 136)	Adverse Event
Urinalysis*	08 Jan 2021 (Study Day 136) - 08 Jan 2021 (Study Day 136)	Adverse Event
Glipizide	10 Jan 2021 (Study Day 138) - 27 Jan 2021 (Study Day 155)	Type II Diabetes
Metformin	10 Jan 2021 (Study Day 138) - 27 Jan 2021 (Study Day 155)	Type II Diabetes
Insulin glargine	14 Jan 2021 (Study Day 142) - 18 Feb 2021 (Study Day 177)	Type II Diabetes
Insulin aspart	18 Jan 2021 (Study Day 146) - Ongoing	Type II Diabetes
Triamcinolone	21 Jan 2021 (Study Day 149) - Ongoing	Pruitis-Bilateral Feet
Fexofenadine hydrochloride	30 Jan 2021 (Study Day 158) - Ongoing	Seasonal Allergies
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	31 Jan 2021 (Study Day 159) - 31 Jan 2021 (Study Day 159)	Symptomatic COVID-19
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	01 Feb 2021 (Study Day 160) - 01 Feb 2021 (Study Day 160)	Symptomatic COVID-19
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	03 Feb 2021 (Study Day 162) - 03 Feb 2021 (Study Day 162)	Symptomatic COVID-19
Paracetamol	03 Feb 2021 (Study Day 162) - 03 Feb 2021 (Study Day 162)	Tooth Pain

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	04 Feb 2021 (Study Day 163) - 04 Feb 2021 (Study Day 163)	Symptomatic COVID-19
Paracetamol	04 Feb 2021 (Study Day 163) - 04 Feb 2021 (Study Day 163)	Tooth Pain
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	05 Feb 2021 (Study Day 164) - 05 Feb 2021 (Study Day 164)	Symptomatic COVID-19
Dextromethorphan hydrobromide; guaifenesin; paracetamol; phenylephrine hydrochloride	07 Feb 2021 (Study Day 166) - 07 Feb 2021 (Study Day 166)	Symptomatic COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Constipation	Grade 1/mild	Not related	07 Sep 2020 (Study Day 13) - 13 Sep 2020 (Study Day 19)
Temperature Intolerance	Grade 1/mild	Not related	07 Oct 2020 (Study Day 43) - 08 Oct 2020 (Study Day 44)
Erythema	Grade 1/mild	Not related	01 Nov 2020 (Study Day 68) - 29 Dec 2020 (Study Day 126)
Skin Abrasion	Grade 1/mild	Not related	01 Nov 2020 (Study Day 68) - 29 Dec 2020 (Study Day 126)
Tinea Pedis	Grade 2/moderate	Not related	01 Nov 2020 (Study Day 68) - 21 Jan 2021 (Study Day 149)
COVID-19	Grade 2/moderate	Not related	29 Nov 2020 (Study Day 96) - 07 Feb 2021 (Study Day 166)
Abnormal Loss Of Weight	Grade 1/mild	Not related	21 Dec 2020 (Study Day 118) - 17 Feb 2021 (Study Day 176)
Tachycardia	Grade 1/mild	Not related	22 Dec 2020 (Study Day 119) - 28 Dec 2020 (Study Day 125)
Pruritus	Grade 1/mild	Not related	21 Jan 2021 (Study Day 149) - Ongoing
Vision Blurred	Grade 1/mild	Not related	23 Jan 2021 (Study Day 151) - 01 Feb 2021 (Study Day 160)
Toothache	Grade 1/mild	Not related	03 Feb 2021 (Study Day 162) - 06 Feb 2021 (Study Day 165)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US381-2280 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Depression Suicidal/Major Depressive Disorder With Suicidal Ideation	SAE	Grade 4	Not related	12 Nov 2020 (Study Day 78) – 17 Nov 2020 (Study Day 83)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2280, a 29-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 24 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Nov 2020 (Study Day 78), 77 days after the first dose and 49 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of depression suicidal. Action taken with the IP was not applicable. The event of major depressive disorder with suicidal ideation lasted for 6 days, after which it was considered to be recovered/resolved on 17 Nov 2020 (Study Day 83). The investigator assessed the event of depression suicidal to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000796	Depression suicidal

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Allergy to sulfa	1995 - Ongoing
Anxiety	Anxiety	1998 - Ongoing
Depression	Depression	1998 - Ongoing
Suicidal ideation	Recurrent suicidal ideation	1998 - 2018
Dizziness	Intermittent dizziness	2000 - Ongoing
Hypersensitivity	Environmental allergies	2000 - Ongoing
Back pain	Back pain	2001 - Ongoing
Fatigue	Fatigue	2001 - Ongoing
Scoliosis	Scoliosis	2001 - Ongoing
Anaemia	Anemia	2002 - Ongoing
Seizure	Seizure	2002 - 2002
Migraine	Migraines	2006 - Ongoing
Gastrooesophageal reflux disease	Gerd	2010 - Ongoing
Cholecystectomy	Cholecystectomy	Apr 2014 - Apr 2014
Cholecystitis	Cholecystitis	Apr 2014 - Apr 2014
Cervix carcinoma stage 0	Stage 0 cervical ca	Aug 2014 - Aug 2014
Loop electrosurgical excision procedure	Leep procedure (loop electrosurgical excision procedure)	Aug 2014 - Aug 2014
Hallucination, auditory	Auditory hallucinations	2016 - Ongoing
Visual impairment	Bilateral vision impairment	2017 - Ongoing
Autism spectrum disorder	Autism spectrum disorder	2018 - Ongoing
Hyperlipidaemia	Hyperlipidemia	Dec 2019 - Ongoing
Peripheral swelling	Bilateral le swelling	Dec 2019 - Ongoing
Polycystic ovaries	Polycystic ovarian syndrome	Dec 2019 - Ongoing
Sinus arrhythmia	Sinus arrhythmia	27 Aug 2020 (Study Day 1) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Omeprazole	2010 - Ongoing	Gerd
Bupropion hydrochloride	Aug 2016 - 19 Oct 2020 (Study Day 54)	Depression
Spironolactone	Dec 2019 - Ongoing	Bilateral Le Swelling
Vitamins nos	Dec 2019 - Ongoing	General Health
Cetirizine hydrochloride	Mar 2020 - 19 Oct 2020 (Study Day 54)	Environmental Allergies
Intrauterine contraceptive device	14 Aug 2020 (Study Day -13) - Ongoing	Contraception

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	25 Sep 2020 (Study Day 30) - 25 Sep 2020 (Study Day 30)	Headache
Naproxen	25 Sep 2020 (Study Day 30) - 25 Sep 2020 (Study Day 30)	Headache
Ibuprofen	16 Oct 2020 (Study Day 51) - 24 Oct 2020 (Study Day 59)	COVID Like Illness
Ibuprofen	16 Oct 2020 (Study Day 51) - 25 Oct 2020 (Study Day 60)	COVID Like Illness
Ascorbic acid	20 Oct 2020 (Study Day 55) - Ongoing	General Health
Bupropion hydrochloride	20 Oct 2020 (Study Day 55) - Ongoing	Depression
Cetirizine hydrochloride	20 Oct 2020 (Study Day 55) - Ongoing	Environmental Allergies
Colecalciferol	20 Oct 2020 (Study Day 55) - Ongoing	General Health
Nitrofurantoin	20 Oct 2020 (Study Day 55) - 25 Oct 2020 (Study Day 60)	Urinary Tract Infection
Benzocaine; dextromethorphan hydrobromide	23 Oct 2020 (Study Day 58) - 23 Oct 2020 (Study Day 58)	COVID Like Illness
Caffeine; paracetamol	23 Oct 2020 (Study Day 58) - 23 Oct 2020 (Study Day 58)	COVID Like Illness
Caffeine; paracetamol	25 Oct 2020 (Study Day 60) - 25 Oct 2020 (Study Day 60)	COVID Like Illness
Urine drug screen*	13 Nov 2020 (Study Day 79) - 13 Nov 2020 (Study Day 79)	Adverse Event
Aripiprazole	17 Nov 2020 (Study Day 83) - Ongoing	Major Depressive Disorder
Calcium carbonate	17 Nov 2020 (Study Day 83) - Ongoing	Gerd Exacerbation
Paracetamol	17 Nov 2020 (Study Day 83) - 30 Nov 2020 (Study Day 96)	Headache And Upper Respiratory Illness
Ibuprofen	21 Nov 2020 (Study Day 87) - 21 Nov 2020 (Study Day 87)	Headache
Potassium	09 Feb 2021 (Study Day 167) - Ongoing	Bilateral Le Cramping

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Gastrooesophageal Reflux Disease	Grade 2/moderate	Not related	26 Sep 2020 (Study Day 31) - 17 Nov 2020 (Study Day 83)
Depression	Grade 2/moderate	Not related	05 Oct 2020 (Study Day 40) - 27 Oct 2020 (Study Day 62)
Suspected COVID-19	Grade 2/moderate	Not related	16 Oct 2020 (Study Day 51) - 25 Oct 2020 (Study Day 60)
Urinary Tract Infection	Grade 1/mild	Not related	19 Oct 2020 (Study Day 54) - 25 Oct 2020 (Study Day 60)
Suspected COVID-19	Grade 2/moderate	Not related	13 Nov 2020 (Study Day 79) - 01 Feb 2021 (Study Day 159)
Upper Respiratory Tract Infection	Grade 2/moderate	Not related	13 Nov 2020 (Study Day 79) - 01 Feb 2021 (Study Day 159)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Muscle Spasms	Grade 1/mild	Not related	23 Jan 2021 (Study Day 150) - 19 Feb 2021 (Study Day 177)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US382-2003 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	04 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	01 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Myocardial Infarction/Myocardial Infarction	SAE	Grade 3/severe	Not related	24 Oct 2020 (Study Day 82) – 27 Oct 2020 (Study Day 85)	Recovered/ resolved
Pericarditis/Acute Pericarditis	SAE	Grade 4	Not related	12 Nov 2020 (Study Day 101) – 13 Nov 2020 (Study Day 102)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US382-2003, a 65-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 04 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 01 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Oct 2020 (Study Day 82), 81 days after the first dose and 53 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of myocardial infarction. Action taken with the IP was not applicable. The event of myocardial infarction lasted for 4 days, after which it was considered to be recovered/resolved on 27 Oct 2020 (Study Day 85). The investigator assessed the event of myocardial infarction to be not related to the IP.

On 12 Nov 2020 (Study Day 101), 100 days after the first dose and 72 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pericarditis. Action taken with the IP was not applicable. The event of acute pericarditis lasted for 2 days, after which it was considered to be recovered/resolved on 13 Nov 2020 (Study Day 102). The investigator assessed the event of pericarditis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000566	Myocardial infarction
MOD-2020-000811	Pericarditis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Attention deficit hyperactivity disorder	Attention deficient hyperactivity disorder	1990 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2017 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	08 Jan 2019 (Study Day -574) - Ongoing
Hiatus hernia	Hiatal hernia	17 Jul 2019 (Study Day -384) - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type II	Jan 2020 - Ongoing
Bursitis	Bursitis of olecranon of right elbow	07 May 2020 (Study Day -89) - Ongoing
Dermatitis contact	Contact dermatatis - sea life, snorkling	02 Jul 2020 (Study Day -33) - 09 Jul 2020 (Study Day -26)
Benign prostatic hyperplasia	Benign prostatic hypertrophy with outflow obstruction	17 Jul 2020 (Study Day -18) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphtheria vaccine toxoid; pertussis vaccine acellular; tetanus vaccine toxoid	12 Apr 2016 (Study Day -1575) - 12 Apr 2016 (Study Day -1575)	Vaccine
Pneumococcal vaccine	10 Sep 2016 (Study Day -1424) - 10 Sep 2016 (Study Day -1424)	Vaccine
Influenza vaccine	01 Oct 2018 (Study Day -673) - 01 Oct 2018 (Study Day -673)	Vaccine
Simvastatin	03 Dec 2018 (Study Day -610) - Ongoing	Hypercholesterolemia
Influenza vaccine	16 Oct 2019 (Study Day -293) - 16 Oct 2019 (Study Day -293)	Vaccine
Varicella zoster vaccine	05 Dec 2019 (Study Day -243) - 05 Dec 2019 (Study Day -243)	Vaccine
Metformin	28 Jan 2020 (Study Day -189) - Ongoing	Diabetes Mellitus Ii
Varicella zoster vaccine	03 Mar 2020 (Study Day -154) - 03 Mar 2020 (Study Day -154)	Vaccine
Paracetamol	01 Sep 2020 (Study Day 29) - 02 Sep 2020 (Study Day 30)	Injection Site Pain, Headache, Swelling At Injection Site, Chills, Fatigue
Methylprednisolone	16 Sep 2020 (Study Day 44) - 22 Sep 2020 (Study Day 50)	Urticarial Rash (Right Arm)

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	24 Oct 2020 (Study Day 82) - Ongoing	Myocardial Infarction, Coronary Artery Disease
Atorvastatin	24 Oct 2020 (Study Day 82) - Ongoing	Myocardial Infarction, Coronary Artery Disease
Heart cath*	24 Oct 2020 (Study Day 82) - 24 Oct 2020 (Study Day 82)	Adverse Event
Metoprolol succinate	24 Oct 2020 (Study Day 82) - Ongoing	Myocardial Infarction, Coronary Artery Disease
Cardiac stent*	25 Oct 2020 (Study Day 83) - 25 Oct 2020 (Study Day 83)	Adverse Event
Lisinopril	25 Oct 2020 (Study Day 83) - Ongoing	Myocardial Infarction
Prasugrel	25 Oct 2020 (Study Day 83) - Ongoing	Myocardial Infarction
Cardiac lab work*	12 Nov 2020 (Study Day 101) - 12 Nov 2020 (Study Day 101)	Adverse Event
Chest x-ray*	12 Nov 2020 (Study Day 101) - 12 Nov 2020 (Study Day 101)	Adverse Event
Colchicine	12 Nov 2020 (Study Day 101) - 13 Nov 2020 (Study Day 102)	Acute Pericarditis
Echocardiogram*	12 Nov 2020 (Study Day 101) - 12 Nov 2020 (Study Day 101)	Adverse Event
Ibuprofen	12 Nov 2020 (Study Day 101) - 13 Nov 2020 (Study Day 102)	Acute Pericarditis
Pantoprazole	12 Nov 2020 (Study Day 101) - 13 Nov 2020 (Study Day 102)	Acute Pericarditis
Electrocardiogram*	18 Nov 2020 (Study Day 107) - 18 Nov 2020 (Study Day 107)	Diagnostic

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Salivary Hypersecretion	Grade 1/mild	Not related	04 Aug 2020 (Study Day 1) - 04 Aug 2020 (Study Day 1)
Urticaria	Grade 2/moderate	Not related	16 Sep 2020 (Study Day 44) - 30 Sep 2020 (Study Day 58)
Coronary Artery Disease	Grade 2/moderate	Not related	24 Oct 2020 (Study Day 82) - Ongoing
Angina Pectoris	Grade 2/moderate	Not related	10 Nov 2020 (Study Day 99) - 12 Nov 2020 (Study Day 101)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US382-2015 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	05 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	03 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cardiac Failure/Heart Failure	SAE	Grade 3/severe	Not related	09 Sep 2020 (Study Day 36) – 12 Sep 2020 (Study Day 39)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US382-2015, an 83-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 05 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 03 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Sep 2020 (Study Day 36), 35 days after the first dose and 6 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of cardiac failure. Action taken with the IP was not applicable. The event of heart failure lasted for 4 days, after which it was considered to be recovered/resolved with sequelae on 12 Sep 2020 (Study Day 39). The investigator assessed the event of cardiac failure to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000284	Cardiac failure

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cardiac murmur	Heart murmur	Not reported - Ongoing
Purpura senile	Senile purpura left arm	Not reported - Ongoing
Atrial fibrillation	Atrial fibrillation	2018 - Ongoing
Hypertension	Hypertension	2018 - Ongoing
Hypogonadism	Hypogonadism	2018 - Ongoing
Neuropathy peripheral	Peripheral nerve disease	Nov 2018 - Ongoing
Restless legs syndrome	Restless leg syndrome	Nov 2018 - Ongoing
Rhinitis allergic	Allergic rhinitis	16 Nov 2018 (Study Day -628) - Ongoing
Benign prostatic hyperplasia	Benign prostaic hyperplasia	27 Nov 2018 (Study Day -617) - Ongoing
Mitral valve incompetence	Mitral valve regurgitation	03 Dec 2018 (Study Day -611) - Ongoing
Tricuspid valve incompetence	Tricuspid valve regurgitation	03 Dec 2018 (Study Day -611) - Ongoing
Ventricular extrasystoles	Ventricular premature beats	2019 - Ongoing
Cardiac pacemaker insertion	Biotrink pacemaker insertion	01 Apr 2019 (Study Day -492) - Ongoing
Chronotropic incompetence	Chronotropic incompentence	01 Apr 2019 (Study Day -492) - Ongoing
Pulmonary valve incompetence	Pulmonic valve regurgitation	01 Apr 2019 (Study Day -492) - Ongoing
Sinus node dysfunction	Sinus node dysfunction	01 Apr 2019 (Study Day -492) - Ongoing
Insomnia	Insomnia	Sep 2019 - Ongoing
Sleep apnoea syndrome	Obstructive sleep apnea	Sep 2019 - Ongoing
Aortic valve incompetence	Aortic valve regurgitation	27 Dec 2019 (Study Day -222) - Ongoing
Hypercoagulation	Hypercoagulabity state	27 Dec 2019 (Study Day -222) - Ongoing
Depression	Depressive disorder	Jun 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Pneumococcal vaccine polysacch 23v	07 Apr 2015 (Study Day -1947) - 07 Apr 2015 (Study Day -1947)	Vaccine
Pneumococcal vaccine 13v	04 May 2016 (Study Day -1554) - 04 May 2016 (Study Day -1554)	Vaccine
Amlodipine	2018 - Ongoing	Hypertension
Fluticasone propionate	2018 - Ongoing	Allergic Rhinitis
Gabapentin	2018 - Ongoing	Peripheral Nerve Disease
Lisinopril	2018 - Ongoing	Hyptertension
Metoprolol succinate	2018 - Ongoing	Paroxysmal Atrial Fibrillation
Tamsulosin	2018 - Ongoing	Benign Prostatic Hyperplasia
Testosterone cipionate	2018 - Ongoing	Hypogonadism

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Varicella zoster vaccine	Oct 2018 - Oct 2018	Vaccine
Diphenhydramine hydrochloride; paracetamol	2019 - Ongoing	Obstructive Sleep Apnea
Influenza vaccine	Sep 2019 - Sep 2019	Vaccine
Apixaban	Dec 2019 - Ongoing	Cardiac Health
Paracetamol	2020 - Ongoing	Unknown
Cardiac ablation*	09 Sep 2020 (Study Day 36) - 09 Sep 2020 (Study Day 36)	Adverse Event
Metoprolol succinate	09 Sep 2020 (Study Day 36) - Ongoing	Atrial Fibrillation
Omeprazole	09 Sep 2020 (Study Day 36) - Ongoing	Gi Prophyaxis
Chest x-ray 1 view*	10 Sep 2020 (Study Day 37) - 10 Sep 2020 (Study Day 37)	Diagnostic
Echocardiogram*	10 Sep 2020 (Study Day 37) - 10 Sep 2020 (Study Day 37)	Adverse Event
Furosemide	10 Sep 2020 (Study Day 37) - 12 Sep 2020 (Study Day 39)	Bilateral Edema, Extremities (Arms/Legs)
Oxygen	10 Sep 2020 (Study Day 37) - 12 Sep 2020 (Study Day 39)	Heart Failure
Ct angiography coronary artery scan*	11 Sep 2020 (Study Day 38) - 11 Sep 2020 (Study Day 38)	Diagnostic
Ct coronary chest noncardiac with contrast*	11 Sep 2020 (Study Day 38) - 11 Sep 2020 (Study Day 38)	Diagnostic
Incentive spirometer*	11 Sep 2020 (Study Day 38) - 11 Sep 2020 (Study Day 38)	Other, Prophylaxis
Chest x-ray 2 views*	12 Sep 2020 (Study Day 39) - 12 Sep 2020 (Study Day 39)	Diagnostic
Amiodarone	10 Dec 2020 (Study Day 128) - 27 Feb 2021 (Study Day 207)	Atrial Fibrillation
Cardioversion*	29 Jan 2021 (Study Day 178) - 29 Jan 2021 (Study Day 178)	Adverse Event
Furosemide	09 Feb 2021 (Study Day 189) - Ongoing	Heart Failure

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Phrenic Nerve Injury	Grade 3/severe	Not related	09 Sep 2020 (Study Day 36) - Ongoing
Oedema Peripheral	Grade 1/mild	Not related	10 Sep 2020 (Study Day 37) - 12 Sep 2020 (Study Day 39)
Pleural Effusion	Grade 1/mild	Not related	11 Sep 2020 (Study Day 38) - 12 Sep 2020 (Study Day 39)
Oedema Peripheral	Grade 2/moderate	Not related	01 Feb 2021 (Study Day 181) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US382-2119 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	17 Sep 2020 (Study Day 36)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Urinary Tract Infection/Urinary Tract Infection	SAE	Grade 3/severe	Not related	03 Sep 2020 (Study Day 22) – 06 Sep 2020 (Study Day 25)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US382-2119, a 73-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 13 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 17 Sep 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Sep 2020 (Study Day 22), 21 days after the first dose and 14 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of urinary tract infection. The IP dose was delayed due to the urinary tract infection. The event of urinary tract infection lasted for 4 days, after which it was considered to be recovered/resolved on 06 Sep 2020 (Study Day 25). The investigator assessed the event of urinary tract infection to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000280	Urinary tract infection

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Affective disorder	Mood disorder	Not reported - Ongoing
Arthralgia	Hip pain	Not reported - Ongoing
Blood cholesterol increased	High cholesterol	Not reported - Ongoing
Diarrhoea	Chronic diarrhea	Not reported - Ongoing
Gastrooesophageal reflux disease	Gerd	Not reported - Ongoing
Gastrooesophageal reflux disease	Gerd	Not reported - Ongoing
Hypertonic bladder	Overactive bladder	Not reported - Ongoing
Hypothyroidism	Hypothyroid	Not reported - Ongoing
Iron deficiency anaemia	Iron deficiency anemia	Not reported - Ongoing
Macular degeneration	Macular degeneration	Not reported - Ongoing
Osteopenia	Osteopenia	Not reported - Ongoing
Systemic lupus erythematosus	Systemic lupus	1987 - Ongoing
Hysterectomy	Total hysterectomy	1988 - 1988
Crohn's disease	Crohn's disease	1990 - Ongoing
Seasonal allergy	Seasonal allergies	1990 - Ongoing
Hypothyroidism	Hypothyrodism	2003 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid; betacarotene; cupric oxide; tocopheryl acetate; zinc oxide	Not reported - Ongoing	Eye Health
Atropine; diphenoxylate	Not reported - Ongoing	Frequent Diarrhea
Budesonide	Not reported - Ongoing	Crohn's
Calcium; colecalciferol	Not reported - Ongoing	Supplement
Gabapentin	Not reported - Ongoing	Unk
Glucosamine sulfate	Not reported - Ongoing	Supplement
Levocetirizine	Not reported - Ongoing	Seasonal Allergies
Levothyroxine	Not reported - Ongoing	Hypothyrodism
Magnesium	Not reported - Ongoing	Supplement
Omeprazole	Not reported - Ongoing	Acid Reflux/Gerd
Potassium	Not reported - Ongoing	Supplement
Probiotics nos	Not reported - Ongoing	Supplement
Pyridoxine hydrochloride	Not reported - Ongoing	Supplement
Sertraline	Not reported - Ongoing	Unk
Solifenacin succinate	Not reported - Ongoing	Overactive Bladder

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamin b12 nos	Not reported - Ongoing	Supplement
Vitamin e nos	Not reported - Ongoing	Supplement
Measles vaccine; mumps vaccine; rubella vaccine	1953 - 1953	Vaccine
Polio vaccine	1953 - 1953	Vaccine
Varicella zoster vaccine	1953 - 1953	Vaccine
Influenza vaccine	Sep 2019 - Sep 2019	Vaccine
Paracetamol	17 Aug 2020 (Study Day 5) - 23 Aug 2020 (Study Day 11)	Tooth Pain
Levofloxacin	07 Sep 2020 (Study Day 26) - 11 Sep 2020 (Study Day 30)	Urinary Tract Infection
Ibuprofen	28 Sep 2020 (Study Day 47) - Ongoing	Hip Pain
Umeclidinium bromide; vilanterol trifenatate	20 Oct 2020 (Study Day 69) - Ongoing	Asthma, Copd

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Toothache	Grade 2/moderate	Not related	17 Aug 2020 (Study Day 5) - 22 Aug 2020 (Study Day 10)
Mental Status Changes	Grade 1/mild	Not related	04 Sep 2020 (Study Day 23) - 06 Sep 2020 (Study Day 25)
Sepsis	Grade 2/moderate	Not related	04 Sep 2020 (Study Day 23) - 06 Sep 2020 (Study Day 25)
Asthma	Grade 1/mild	Not related	19 Oct 2020 (Study Day 68) - Ongoing
Chronic Obstructive Pulmonary Disease	Grade 1/mild	Not related	19 Oct 2020 (Study Day 68) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US382-2154 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	17 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	14 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Myocardial Infarction/Myocardial Infarction	SAE	Grade 3/severe	Not related	28 Dec 2020 (Study Day 134) – 09 Jan 2021 (Study Day 146)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US382-2154, a 63-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 17 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 14 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Dec 2020 (Study Day 134), 133 days after the first dose and 105 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of myocardial infarction. Action taken with the IP was not applicable. The event of myocardial infarction lasted for 13 days, after which it was considered to be recovered/resolved on 09 Jan 2021 (Study Day 146). The investigator assessed the event of myocardial infarction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001526	Myocardial infarction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Herpes simplex	Herpes simplex	1987 - Ongoing
Blood testosterone decreased	Decreased testosterone	1992 - Ongoing
Depression	Depression	2000 - Ongoing
Headache	Headaches	2000 - Ongoing
Erectile dysfunction	Erectile dysfunction	2005 - Ongoing
Sleep apnoea syndrome	Sleep apnea	2010 - Ongoing
Anxiety	Anxiety	2013 - Ongoing
Acne	Acne	2015 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	2016 - Ongoing
Pollakiuria	Frequent urination	2016 - Ongoing
Seasonal allergy	Seasonal allergies	2018 - Ongoing
Seasonal allergy	Seasonal allergies	2018 - Ongoing
Hypertension	Hypertension	14 Nov 2018 (Study Day -642) - Ongoing
Insomnia	Chronic insomnia	14 Nov 2018 (Study Day -642) - Ongoing
Type V hyperlipidaemia	Mixed hyperlipidemia	14 Nov 2018 (Study Day -642) - Ongoing
Labile hypertension	Labile hypertension	06 May 2019 (Study Day -469) - Ongoing
Botulinum toxin injection	Botox injection	Sep 2019 - Ongoing
Chronic kidney disease	Chronic kidney disease stage 3	11 May 2020 (Study Day -98) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Prednisone	Not reported - Ongoing	Seasonal Allergies
Valaciclovir	1987 - Ongoing	Hsv
Testosterone cipionate	1992 - Ongoing	Low Testosterone
Acetylsalicylic acid; caffeine; paracetamol	2000 - Ongoing	Headaches
Bupropion hydrochloride	2000 - Ongoing	Depression
Tadalafil	2005 - Ongoing	Ed
Eszopiclone	2010 - Ongoing	Sleep Apnea
Alprazolam	2013 - Ongoing	Anxiety
Diphtheria vaccine toxoid; pertussis vaccine acellular; tetanus vaccine toxoid	01 May 2014 (Study Day -2300) - 01 May 2014 (Study Day -2300)	Vaccine
Acetylsalicylic acid	2015 - Ongoing	Supplement - Heart Health
Alpha-amylase swine pancreas; cellulase; lipase; protease nos	2015 - Ongoing	Supplement

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Anastrozole	2015 - Ongoing	Low Testosterone
Ascorbic acid	2015 - Ongoing	Supplement
Chondroitin; glucosamine	2015 - Ongoing	Supplement
Colecalciferol	2015 - Ongoing	Supplement
Fibre, dietary	2015 - Ongoing	Supplement
Ginkgo biloba	2015 - Ongoing	Supplement
Keratin	2015 - Ongoing	Supplement
Menaquinone-7	2015 - Ongoing	Supplement
Probiotics nos	2015 - Ongoing	Supplement
Unspecified herbal and traditional medicine	2015 - Ongoing	Supplement
Zinc	2015 - Ongoing	Supplement
Alfuzosin	2016 - Ongoing	Frequent Urination
Allergens nos	2018 - Ongoing	Allergies
Montelukast	2018 - Ongoing	Seasonal Allergies
Triamcinolone acetonide	2018 - Ongoing	Seasonal Allergies
Influenza vaccine	13 Feb 2020 (Study Day -186) - 13 Feb 2020 (Study Day -186)	Vaccine
Varicella zoster vaccine	01 Apr 2020 (Study Day -138) - 01 Apr 2020 (Study Day -138)	Vaccine
Efinaconazole	Jun 2020 - Ongoing	Supplement
Naproxen sodium	14 Sep 2020 (Study Day 29) - 15 Sep 2020 (Study Day 30)	Muscle Aches, Headache
Salbutamol	Nov 2020 - Ongoing	More Frequent Coughing And Asthmatic Symptoms
Amlodipine	24 Dec 2020 (Study Day 130) - Ongoing	Hypertension
Heart cath*	29 Dec 2020 (Study Day 135) - 29 Dec 2020 (Study Day 135)	Adverse Event
Implantable cardioverter defibrillator*	08 Jan 2021 (Study Day 145) - 08 Jan 2021 (Study Day 145)	Adverse Event
Amiodarone	09 Jan 2021 (Study Day 146) - Ongoing	Heart Attack
Apixaban	09 Jan 2021 (Study Day 146) - Ongoing	Heart Attack
Carvedilol	09 Jan 2021 (Study Day 146) - Ongoing	Heart Attack

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 2/moderate	Related	14 Sep 2020 (Study Day 29) - 25 Sep 2020 (Study Day 40)
Injection Site Joint Pain	Grade 1/mild	Related	14 Sep 2020 (Study Day 29) - 22 Sep 2020 (Study Day 37)
Asthma	Grade 2/moderate	Not related	27 Nov 2020 (Study Day 103) - Ongoing

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Cough	Grade 1/mild	Not related	25 Dec 2020 (Study Day 131) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US382-2278 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Dehydration/Dehydration	SAE	Grade 2/ moderate	Not related	26 Sep 2020 (Study Day 32) – 28 Sep 2020 (Study Day 34)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US382-2278, a 69-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 26 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 25 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 26 Sep 2020 (Study Day 32), 31 days after the first dose and 1 day after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of dehydration. Action taken with the IP was not applicable. The event of dehydration lasted for 3 days, after which it was considered to be recovered/resolved on 28 Sep 2020 (Study Day 34). The investigator assessed the event of dehydration to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000367	Dehydration

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Arteriosclerosis	Atherosclerosis	Not reported - Ongoing
Asthma	Asthma	Not reported - Ongoing
Blood triglycerides increased	High triglycerides	Not reported - Ongoing
Diabetes mellitus	Diabetes	Not reported - Ongoing
Gastrooesophageal reflux disease	Acid reflux	Not reported - Ongoing
Hypertension	Hypertension	Not reported - Ongoing
Hypothyroidism	Hypothyroidism	Not reported - Ongoing
Seasonal allergy	Seasonal allergies	Not reported - Ongoing
Postmenopause	Post menopausal	Jan 2005 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	Not reported - Ongoing	Atherosclerosis Of Aorta
Calcium	Not reported - Ongoing	Supplement
Cetirizine hydrochloride	Not reported - Ongoing	Seasonal Allergies
Chondroitin; glucosamine	Not reported - Ongoing	Supplement
Clopidogrel	Not reported - Ongoing	Stroke Prevention
Fish oil	Not reported - Ongoing	Supplement
Fluticasone	Not reported - Ongoing	Seasonal Allergies
Fluticasone propionate; salmeterol xinafoate	Not reported - Ongoing	Asthma
Levocetirizine dihydrochloride	Not reported - Ongoing	Seasonal Allergies
Levothyroxine sodium	Not reported - Ongoing	Hypothyroidism
Losartan	Not reported - Ongoing	Hbp
Metformin hydrochloride; sitagliptin	Not reported - Ongoing	Diabetes
Methylcellulose	Not reported - Ongoing	Supplement
Omega-3-acid ethyl ester	Not reported - Ongoing	Unk
Omeprazole	Not reported - Ongoing	Reflux
Rosuvastatin	Not reported - Ongoing	High Triglycerides
Vaccinium macrocarpon	Not reported - Ongoing	Supplement
Venlafaxine hydrochloride	Not reported - Ongoing	Hormone Replacement Therapy - Post Menopausal
Vitamin b complex	Not reported - Ongoing	Supplement
Influenza vaccine	01 Sep 2019 (Study Day -360) - 01 Sep 2019 (Study Day -360)	Vaccine

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Nitrofurantoin	09 Sep 2020 (Study Day 15) - Ongoing	Uti
Lumbar puncture*	27 Sep 2020 (Study Day 33) - 27 Sep 2020 (Study Day 33)	Diagnostic
Magnesium; sodium chloride	27 Sep 2020 (Study Day 33) - 29 Sep 2020 (Study Day 35)	Dehydration - Sae
Pregabalin	05 Jan 2021 (Study Day 133) - Ongoing	Neuropathy
Zinc acetate; zinc gluconate	19 Jan 2021 (Study Day 147) - Ongoing	Common Cold

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 2/moderate	Not related	26 Sep 2020 (Study Day 32) - 28 Sep 2020 (Study Day 34)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US383-2014 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	31 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	28 Aug 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hypertensive Emergency/ Hypertensive Emergency	SAE	Grade 3/ severe	Not related	31 Aug 2020 (Study Day 32) – 02 Sep 2020 (Study Day 34)	Recovered/ resolved
Sinus Tachycardia/Sinus Tachycardia	SAE	Grade 2/ moderate	Not related	31 Aug 2020 (Study Day 32) – 02 Sep 2020 (Study Day 34)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US383-2014, a 56-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 31 Jul 2020 (Study Day 1). The second dose was administered in the right arm on 28 Aug 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 31 Aug 2020 (Study Day 32), 31 days after the first dose and 3 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of hypertensive emergency. Action taken with the IP was not applicable. The event of hypertensive emergency lasted for 3 days, after which it was considered to be recovered/resolved on 02 Sep 2020 (Study Day 34). The investigator assessed the event of hypertensive emergency to be not related to the IP.

On 31 Aug 2020 (Study Day 32), 31 days after the first dose and 3 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of sinus tachycardia. Action taken with the IP was not applicable. The event of sinus tachycardia lasted for 3 days, after which it was considered to be recovered/resolved on 02 Sep 2020 (Study Day 34). The investigator assessed the event of sinus tachycardia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000307	Hypertensive emergency
MOD-2020-000307	Sinus tachycardia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Benign breast neoplasm	Benign left breast mass	1981 - 1981
Benign neoplasm of skin	Benign tumor right arm	1981 - 1981
Appendicitis	Appendicitis	1992 - 1992
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	1999 - Ongoing
Hysterectomy	Complete hysteretomy	2000 - 2000
Menorrhagia	Menorrhagia	2000 - 2000
Ankle fracture	Broken left ankle	2001 - 2001
Anxiety	Anxiety	2010 - Ongoing
Cough	Chronic cough	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Pleurisy	Pleurisy	2010 - Ongoing
Muscle spasms	Muscle spasms	2013 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Clonidine	2010 - Ongoing	Hypertension
Homatropine methylbromide; hydrocodone bitartrate	2010 - Ongoing	Chronic Obstructive Pulmonary Disease
Oxycodone hydrochloride; paracetamol	2010 - Ongoing	Chronic Obstructive Pulmonary Disease
Fluticasone propionate	2013 - Ongoing	Chronic Obstructive Pulmonary Disease
Ipratropium bromide; salbutamol sulfate	2013 - Ongoing	Chronic Obstructive Pulmonary Disease
Levosalbutamol hydrochloride	2013 - Ongoing	Chronic Obstructive Pulmonary Disease
Tiotropium bromide	2013 - Ongoing	Copd- Chronic Obstructive Pulmonary Disease
Tizanidine	2013 - Ongoing	Muscle Spasms In The Lower Back
Ct scan of head*	31 Aug 2020 (Study Day 32) - 31 Aug 2020 (Study Day 32)	Adverse Event
Ct scan of pelvis and abdomen*	31 Aug 2020 (Study Day 32) - 31 Aug 2020 (Study Day 32)	Adverse Event
Echocardiogram*	31 Aug 2020 (Study Day 32) - 31 Aug 2020 (Study Day 32)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Aluminium hydroxide; magnesium hydroxide; simeticone	01 Sep 2020 (Study Day 33) - 01 Sep 2020 (Study Day 33)	Reflux Prophylaxis
Insulin lispro	01 Sep 2020 (Study Day 33) - 01 Sep 2020 (Study Day 33)	Hyperglycemia
Lorazepam	01 Sep 2020 (Study Day 33) - 01 Sep 2020 (Study Day 33)	Hypertensive Emergency
Macrogol 3350	01 Sep 2020 (Study Day 33) - 01 Sep 2020 (Study Day 33)	Constipation Prophylaxis
Melatonin	01 Sep 2020 (Study Day 33) - 01 Sep 2020 (Study Day 33)	Hypertensive Emergency
Morphine sulfate	01 Sep 2020 (Study Day 33) - 01 Sep 2020 (Study Day 33)	Abdominal Pain
Nicardipine hydrochloride	01 Sep 2020 (Study Day 33) - 01 Sep 2020 (Study Day 33)	Hypertensive Emergency
Ondansetron	01 Sep 2020 (Study Day 33) - 01 Sep 2020 (Study Day 33)	Nausea Prophylaxis
Oxycodone hydrochloride; paracetamol	01 Sep 2020 (Study Day 33) - 01 Sep 2020 (Study Day 33)	Abdominal Pain
Pantoprazole sodium sesquihydrate	01 Sep 2020 (Study Day 33) - 01 Sep 2020 (Study Day 33)	Acid Reflux Prophylaxis
Paracetamol	01 Sep 2020 (Study Day 33) - 01 Sep 2020 (Study Day 33)	Hypertensive Emergency

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Abdominal Pain	Grade 1/mild	Not related	31 Aug 2020 (Study Day 32) - 02 Sep 2020 (Study Day 34)
Back Pain	Grade 1/mild	Not related	31 Aug 2020 (Study Day 32) - 02 Sep 2020 (Study Day 34)
Brain Natriuretic Peptide Increased	Grade 1/mild	Not related	31 Aug 2020 (Study Day 32) - 02 Sep 2020 (Study Day 34)
Hyperglycaemia	Grade 1/mild	Not related	31 Aug 2020 (Study Day 32) - 02 Sep 2020 (Study Day 34)
Mental Status Changes	Grade 1/mild	Not related	31 Aug 2020 (Study Day 32) - 02 Sep 2020 (Study Day 34)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US383-2043 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	02 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	04 Sep 2020 (Study Day 34)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Toxic Shock Syndrome/ Suspected Toxic Shock Syndrome	SAE	Grade 3/ severe	Not related	23 Aug 2020 (Study Day 22) – 25 Aug 2020 (Study Day 24)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US383-2043, a 29-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 02 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 04 Sep 2020 (Study Day 34). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Aug 2020 (Study Day 22), 21 days after the first dose and 12 days before the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of toxic shock syndrome. The IP dose was not changed due to the suspected toxic shock syndrome. The event of suspected toxic shock syndrome lasted for 3 days, after which it was considered to be recovered/resolved on 25 Aug 2020 (Study Day 24). The investigator assessed the event of toxic shock syndrome to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000259	Toxic shock syndrome

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tooth impacted	Wisdom teeth impaction	2014 - 2014
Wisdom teeth removal	Wisdom teeth removal	2014 - 2014

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cetirizine hydrochloride	2015 - Ongoing	Seasonal Allergies
Chest x-ray*	23 Aug 2020 (Study Day 22) - 23 Aug 2020 (Study Day 22)	Adverse Event
Clindamycin	23 Aug 2020 (Study Day 22) - 25 Aug 2020 (Study Day 24)	Suspected Toxic Shock Syndrome
Famotidine	23 Aug 2020 (Study Day 22) - 25 Aug 2020 (Study Day 24)	Gastrointestinal Prophylaxis
Piperacillin sodium; tazobactam sodium	23 Aug 2020 (Study Day 22) - 25 Aug 2020 (Study Day 24)	Suspected Toxic Shock Syndrome
Vancomycin	23 Aug 2020 (Study Day 22) - 25 Aug 2020 (Study Day 24)	Suspected Toxic Shock Syndrome
Abdominal ct scan*	24 Aug 2020 (Study Day 23) - 24 Aug 2020 (Study Day 23)	Adverse Event
Amoxicillin; clavulanic acid	25 Aug 2020 (Study Day 24) - 30 Aug 2020 (Study Day 29)	Urinary Tract Infection
Ibuprofen	05 Sep 2020 (Study Day 35) - 05 Sep 2020 (Study Day 35)	Ar - Headache, Fever

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Urinary Tract Infection	Grade 2/moderate	Not related	23 Aug 2020 (Study Day 22) - 30 Aug 2020 (Study Day 29)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US383-2055 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	03 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	09 Sep 2020 (Study Day 38)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Syncope/Syncopal Episode	SAE	Grade 3/severe	Not related	20 Sep 2020 (Study Day 49) – 23 Sep 2020 (Study Day 52)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US383-2055, a 71-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 03 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 09 Sep 2020 (Study Day 38). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Sep 2020 (Study Day 49), 48 days after the first dose and 11 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of syncope. Action taken with the IP was not applicable. The event of syncopal episode lasted for 4 days, after which it was considered to be recovered/resolved on 23 Sep 2020 (Study Day 52). The investigator assessed the event of syncope to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000339	Syncopal attack

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Headache	Intermittent headaches	1990 - Ongoing
Intervertebral disc degeneration	Degenerative disc disease	1999 - Ongoing
Rhinitis allergic	Allergic rhinitis	2000 - Ongoing
Hypertension	Hypertension	2015 - Ongoing
Hypothyroidism	Hypothyroidism	2015 - Ongoing
Nasal septum deviation	Deviated septum	2018 - Dec 2019
Paranasal cyst	Maxillary sinus cyst (benign)	2019 - Dec 2019
Cholecystitis	Cholecystitis	May 2019 - May 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fluticasone propionate	2000 - Ongoing	Allergic Rhinitis
Thyroid	2015 - Ongoing	Hypothyroidism
Oxycodone	2016 - Ongoing	Degenerative Disc Disease
Amlodipine	2018 - 20 Sep 2020 (Study Day 49)	Hypertension
Nebivolol hydrochloride	Jan 2020 - Ongoing	Hypertension
Ct scan of neck and spine*	20 Aug 2020 (Study Day 18) - 20 Aug 2020 (Study Day 18)	Adverse Event
Ekg*	20 Aug 2020 (Study Day 18) - 20 Aug 2020 (Study Day 18)	Adverse Event
Influenza vaccine	25 Aug 2020 (Study Day 23) - 25 Aug 2020 (Study Day 23)	Vaccination
Ct of facial bones*	20 Sep 2020 (Study Day 49) - 20 Sep 2020 (Study Day 49)	Adverse Event
Hyponatremia chloride levels*	20 Sep 2020 (Study Day 49) - 20 Sep 2020 (Study Day 49)	Adverse Event
Hyponatremia chloride levels*	21 Sep 2020 (Study Day 50) - 21 Sep 2020 (Study Day 50)	Adverse Event
Oxycodone hydrochloride; paracetamol	21 Sep 2020 (Study Day 50) - 29 Sep 2020 (Study Day 58)	Post Surgical Pain
Tolvaptan	21 Sep 2020 (Study Day 50) - 21 Sep 2020 (Study Day 50)	Ae- Hyponatremia
Hyponatremia chloride levels*	22 Sep 2020 (Study Day 51) - 22 Sep 2020 (Study Day 51)	Adverse Event
Open reduction, internal fixation of the right zygomaticomaxillary complex fracture.*	22 Sep 2020 (Study Day 51) - 22 Sep 2020 (Study Day 51)	Adverse Event
Lisinopril	24 Sep 2020 (Study Day 53) - Ongoing	Ae-Syncopal Episode
Sodium chloride	24 Sep 2020 (Study Day 53) - Ongoing	Ae-Hyponatremia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Facial Bones Fracture	Grade 2/moderate	Not related	20 Sep 2020 (Study Day 49) - 23 Sep 2020 (Study Day 52)
Hyponatraemia	Grade 2/moderate	Not related	20 Sep 2020 (Study Day 49) - 23 Sep 2020 (Study Day 52)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US383-2074 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	04 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Myocardial Infarction/St Elevation Myocardial Infarction (Unspecified Artery)	SAE	Grade 3/severe	Not related	16 Sep 2020 (Study Day 44) – 18 Sep 2020 (Study Day 46)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US383-2074, an 82-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 04 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Sep 2020 (Study Day 44), 43 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of acute myocardial infarction. On 31 Aug 2020 (Study Day 28), the IP dose was discontinued due to other (participant did not withdraw consent for the study but did not wish to receive second IP dose). The event of st elevation myocardial infarction (unspecified artery) lasted for 3 days, after which it was considered to be recovered/resolved on 18 Sep 2020 (Study Day 46). The investigator assessed the event of acute myocardial infarction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000311	Acute myocardial infarction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Female sterilisation	Tubal ligation	1970 - 1970
Back pain	Intermittent back pain	2000 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2005 - Ongoing
Hypertension	Hypertension	2005 - Ongoing
Hysterectomy	Hysterectomy	2005 - 2005
Menorrhagia	Menorrhagia	2005 - 2005

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Famotidine	Not reported - Ongoing	Acid Reflux
Lisinopril	2005 - Ongoing	Hypertension
Simvastatin	2005 - 16 Sep 2020 (Study Day 44)	Hyperlipidemia
Diphenhydramine hydrochloride	2010 - Ongoing	Sleep Aid
Naproxen sodium	07 Sep 2020 (Study Day 35) - 08 Sep 2020 (Study Day 36)	Lumbar Back Pain
Cardiac echo: noted low normal left ventricle systolic function, grade 1 left ventricular diastolic dysfunction*	16 Sep 2020 (Study Day 44) - 16 Sep 2020 (Study Day 44)	Adverse Event
Chest x-ray*	16 Sep 2020 (Study Day 44) - 16 Sep 2020 (Study Day 44)	Adverse Event
Labs obtained all noted within normal limits with the exception of glucose noted at 144*	16 Sep 2020 (Study Day 44) - 16 Sep 2020 (Study Day 44)	Adverse Event
Lch- attempted pci to rca unsuccessful*	16 Sep 2020 (Study Day 44) - 16 Sep 2020 (Study Day 44)	Adverse Event
Clopidogrel	17 Sep 2020 (Study Day 45) - Ongoing	Ae - Myocardial Infarction
Glyceryl trinitrate	17 Sep 2020 (Study Day 45) - Ongoing	Ae - Myocardial Infarction
Heart catherization*	17 Sep 2020 (Study Day 45) - 17 Sep 2020 (Study Day 45)	Adverse Event
Isosorbide mononitrate	17 Sep 2020 (Study Day 45) - Ongoing	Ae - Myocardial Infarction
Metoprolol tartrate	17 Sep 2020 (Study Day 45) - Ongoing	Myocardial Infarction
Rosuvastatin	17 Sep 2020 (Study Day 45) - Ongoing	Adverse Event - Myocardial Infarction
Acetylsalicylic acid	19 Sep 2020 (Study Day 47) - Ongoing	Cardiac Prophylaxis
Rosuvastatin calcium	19 Sep 2020 (Study Day 47) - Ongoing	Dyslipidemia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Back Pain	Grade 1/mild	Not related	07 Sep 2020 (Study Day 35) - 08 Sep 2020 (Study Day 36)
Wrist Fracture	Grade 2/moderate	Not applicable	15 Mar 2021 (Study Day 224) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US383-2150 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	09 Sep 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Endometrial Cancer/ Endometrioid Carcinoma	SAE	Grade 3/ severe	Not related	Not reported – 18 Jan 2021 (Study Day 162)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US383-2150, a 61-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 10 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 09 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On an unknown date (Study Day not reported), the participant experienced a Grade 3/severe serious adverse event of endometrial cancer. Action taken with the IP was not applicable. The event of endometrioid carcinoma lasted for an unreported duration, after which it was considered to be recovered/resolved on 18 Jan 2021 (Study Day 162). The investigator assessed the event of endometrial cancer to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-009642	Endometrial cancer

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Ovarian cyst	Ovarian cyst	1986 - 1987
Appendicectomy	Appendectomy	1987 - 1987
Appendicitis	Appendicitis	1987 - 1987
Oophorectomy	Oophorectomy	1987 - 1987
Postmenopause	Post menopausal	2008 - Ongoing
Anxiety	Anxiety	2009 - Ongoing
Insomnia	Insomnia	2009 - Ongoing
Aortic valve replacement	Aortic valve replacement	2012 - 2012
Heart valve incompetence	Leaky aortic valve	2012 - Ongoing
Bronchiectasis	Bronchiectasis	2016 - Ongoing
Colitis	Colitis	2018 - Ongoing
Seasonal allergy	Seasonal allergic rhinitis	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Dilation and curettage*	Not reported - Not reported	Adverse Event
Endometrial biopsy*	Not reported - Not reported	Diagnostic
Vaginal ultrasound*	Not reported - Not reported	Adverse Event
Clonazepam	2009 - Ongoing	Insomnia
Sertraline	2009 - Ongoing	Anxiety
Acetylsalicylic acid	2012 - Ongoing	Cardiac Prophylaxis
Diphenhydramine hydrochloride	2018 - Ongoing	Seasonal Allergic Rhinitis
Eluxadoline	2018 - Ongoing	Colitis
Formoterol fumarate; mometasone furoate	2018 - Ongoing	Bronchiectasis
Salbutamol sulfate	2018 - Ongoing	Bronchiectasis
Total abdominal hysterectomy and bilateral salpingo oophorectomy*	18 Jan 2021 (Study Day 162) - 18 Jan 2021 (Study Day 162)	Adverse Event
Pet ct of skull and mid thigh*	03 Feb 2021 (Study Day 178) - 03 Feb 2021 (Study Day 178)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Postmenopausal Haemorrhage	Grade 2/moderate	Not related	Not reported - 18 Jan 2021 (Study Day 162)
Viral Infection	Grade 1/mild	Not related	11 Nov 2020 (Study Day 94) - 13 Nov 2020 (Study Day 96)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US383-2211 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	18 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	15 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Chronic Obstructive Pulmonary Disease/Copd Exacerbation	SAE	Grade 3/ severe	Not related	08 Oct 2020 (Study Day 52) – 16 Oct 2020 (Study Day 60)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US383-2211, a 76-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 18 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 15 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Oct 2020 (Study Day 52), 51 days after the first dose and 23 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of chronic obstructive pulmonary disease. Action taken with the IP was not applicable. The event of copd exacerbation lasted for 9 days, after which it was considered to be recovered/resolved on 16 Oct 2020 (Study Day 60). The investigator assessed the event of chronic obstructive pulmonary disease to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000466	Chronic obstructive pulmonary disease

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Angina pectoris	Angina pectoris	2000 - Ongoing
Type 2 diabetes mellitus	Diabetes ii	2004 - Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	2005 - Ongoing
Pain	Chronic pain	2005 - Ongoing
Insomnia	Insomnia	2006 - Ongoing
Sleep apnoea syndrome	Sleep apnea	2006 - Ongoing
Atrial fibrillation	Atrial fibrillation	2010 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Neuropathy peripheral	Neuropathy	2011 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2012 - Ongoing
Hypothyroidism	Hypothyroidism	2014 - Ongoing
Restless legs syndrome	Restless leg syndrome	2017 - Ongoing
Osteoarthritis	Osteoarthritis bilateral extremities	Dec 2017 - Ongoing
Depression	Depression	Jan 2020 - Ongoing
Rhinitis allergic	Allergic rhinitis	Jan 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Glyceryl trinitrate	2010 - Ongoing	Angina
Gabapentin	2011 - Ongoing	Neuropathy
Atorvastatin	2012 - Ongoing	Hyperlipidemia
Budesonide; formoterol fumarate	2014 - Ongoing	Chronic Obstructive Pulmonary Disease
Insulin lispro	2015 - Ongoing	Diabetes Type Ii
Ipratropium bromide; salbutamol sulfate	2015 - Ongoing	Chronic Obstructive Pulmonary Disease
Levothyroxine	2016 - Ongoing	Hypothyroidism
Tamsulosin	2016 - Ongoing	Benign Prostatic Hyperplasia
Carvedilol	2017 - Ongoing	Hypertension
Meloxicam	2017 - Ongoing	Osteoarthritis Bilateral Extremities
Ropinirole	2017 - Ongoing	Restless Leg Syndrome
Finasteride	2018 - Ongoing	Benign Prostatic Hyperplasion

Salbutamol sulfate	Jun 2020 - Ongoing	Chronic Obstructive Pulmonary Disease
Chest x-ray(wnl)*	08 Oct 2020 (Study Day 52) - 08 Oct 2020 (Study Day 52)	Adverse Event
Covid 19 test (negative)*	08 Oct 2020 (Study Day 52) - 08 Oct 2020 (Study Day 52)	Adverse Event
Influenza a and b testing (negative)*	08 Oct 2020 (Study Day 52) - 08 Oct 2020 (Study Day 52)	Adverse Event
Oxygen	08 Oct 2020 (Study Day 52) - 08 Oct 2020 (Study Day 52)	Copd Exacerbation
Prednisone	08 Oct 2020 (Study Day 52) - 10 Oct 2020 (Study Day 54)	Copd Exacerbation
Benzonatate	09 Oct 2020 (Study Day 53) - 16 Oct 2020 (Study Day 60)	Adverse Event - Chronic Obstructive Pulmonary Disease Exacerbation
Doxycycline	09 Oct 2020 (Study Day 53) - 16 Oct 2020 (Study Day 60)	Adverse Event - Chronic Obstructive Pulmonary Disease Exacerbation
Guaifenesin	09 Oct 2020 (Study Day 53) - 16 Oct 2020 (Study Day 60)	Chronic Obstructive Pulmonary Disease Exacerbation
Ipratropium bromide; salbutamol sulfate	09 Oct 2020 (Study Day 53) - Ongoing	Adverse Event - Chronic Obstructive Pulmonary Disease Exacerbation
Prednisone	11 Oct 2020 (Study Day 55) - 13 Oct 2020 (Study Day 57)	Copd Exacerbation
Prednisone	14 Oct 2020 (Study Day 58) - 14 Oct 2020 (Study Day 58)	Copd Exacerbation

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US384-2027 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	08 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Respiratory Failure/Acute Hypoxemia Respiratory Failure (Worsening)	SAE	Grade 3/ severe	Not related	19 Dec 2020 (Study Day 101) – 23 Dec 2020 (Study Day 105)	Recovered/resolved
Pneumothorax/Worsening Left Pneumothorax	SAE	Grade 3/ severe	Not related	19 Dec 2020 (Study Day 101) – 23 Dec 2020 (Study Day 105)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US384-2027, a 81-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 10 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 08 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 19 Dec 2020 (Study Day 101), 100 days after the first dose and 72 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of acute respiratory failure. Action taken with the IP was not applicable. The event of acute hypoxemia respiratory failure (worsening) lasted for 5 days, after which it was considered to be recovered/resolved on 23 Dec 2020 (Study Day 105). The investigator assessed the event of acute respiratory failure to be not related to the IP.

On 19 Dec 2020 (Study Day 101), 100 days after the first dose and 72 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pneumothorax. Action taken with the IP was not applicable. The event of worsening left pneumothorax lasted for 5 days, after which it was considered to be recovered/resolved on 23 Dec 2020 (Study Day 105). The investigator assessed the event of pneumothorax to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001230	Pneumothorax
MOD-2020-001230	Respiratory failure

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Acute respiratory failure	Acute hypoxemic respiratory failure (secondary to recurrent left pneumothorax)	Not reported - Ongoing
Asthma	Asthma	Not reported - Ongoing
Atrial fibrillation	Atrial fibrillation	Not reported - Ongoing
Benign prostatic hyperplasia	Benign prostate hyperplasia	Not reported - Ongoing
Benign prostatic hyperplasia	Â€œbenign prostatic hyperplasia,	Not reported - Ongoing
Constipation	Constipation	Not reported - Ongoing
Ileostomy	Ileostomy	Not reported - Ongoing
Lymphadenopathy	Distant lung lymphadenopathy benign	Not reported
Oedema peripheral	Chronic bilateral lower extremity edema (secondary to venous insufficiency)	Not reported - Ongoing
Pulmonary mass	Pulmonary nodules	Not reported
Type 2 diabetes mellitus	Type ii diabetes (insulin dependent)	1980 - Ongoing
Blood pressure increased	Elevated blood pressure	1990 - Ongoing
Prostate cancer	Prostate cancer	2008 - 2013
Sleep apnoea syndrome	Sleep apneia	2010 - Ongoing
Tremor	Tremors, hands	2010 - Ongoing
Colon cancer	Colon cancer	2012 - 2012
Lung neoplasm malignant	Lung cancer	2013 - 2013
Heart valve replacement	Heart valve tavr replacement	2016 - 2016
Cataract operation	Cataract surgery	2019 - 2019
Chronic obstructive pulmonary disease	Copd (chronic obstructive pulmonary disease)	May 2020 - Ongoing
Pneumothorax	Left pneumothorax	03 May 2020 (Study Day -130) - 09 May 2020 (Study Day -124)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ipratropium bromide	Not reported - Ongoing	Asthma
Metoprolol tartrate	Not reported - Ongoing	Atrial Fibrilation
Salbutamol sulfate	Not reported - Ongoing	Asthma
Insulin detemir	1980 - 23 Dec 2020 (Study Day 105)	Type Ii Diabetes
Insulin lispro	1980 - 23 Dec 2020 (Study Day 105)	Type Ii Diabetes

Tamsulosin	2008 - Ongoing	Prostate Cancer
Topiramate	2010 - Ongoing	Tremors
Influenza vaccine	20 Aug 2020 (Study Day -21) - 20 Aug 2020 (Study Day -21)	Vaccine
Budesonide; formoterol fumarate dihydrate	Dec 2020 - Ongoing	Copd Worsened
Enoxaparin	19 Dec 2020 (Study Day 101) - 23 Dec 2020 (Study Day 105)	Dvt Prevention
Oxygen	19 Dec 2020 (Study Day 101) - 19 Dec 2020 (Study Day 101)	Oxygen Saturation 92%
Bullectomy*	21 Dec 2020 (Study Day 103) - 21 Dec 2020 (Study Day 103)	Adverse Event
Left video assisted thoracoscopic surgery (lvats)*	21 Dec 2020 (Study Day 103) - 21 Dec 2020 (Study Day 103)	Adverse Event
Talc pleurodesis*	21 Dec 2020 (Study Day 103) - 21 Dec 2020 (Study Day 103)	Adverse Event
Docusate sodium	23 Dec 2020 (Study Day 105) - Ongoing	Constipation
Insulin detemir	23 Dec 2020 (Study Day 105) - Ongoing	Diabetes Ii
Insulin lispro	23 Dec 2020 (Study Day 105) - Ongoing	Diabetes Ii
Paracetamol; tramadol hydrochloride	23 Dec 2020 (Study Day 105) - 13 Jan 2021 (Study Day 126)	Pain, Left Rib Cage S/P Surgery, Discharge To Home
Topiramate	23 Dec 2020 (Study Day 105) - Ongoing	Hand Tremors Worsening

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Chronic Obstructive Pulmonary Disease	Grade 1/mild	Not related	01 Dec 2020 (Study Day 83) - 13 Jan 2021 (Study Day 126)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Procedural Pain	Grade 2/moderate	Not related	23 Dec 2020 (Study Day 105) - 13 Jan 2021 (Study Day 126)
Tremor	Grade 2/moderate	Not related	23 Dec 2020 (Study Day 105) - 13 Jan 2021 (Study Day 126)
Fatigue	Grade 2/moderate	Not related	29 Dec 2020 (Study Day 111) - 13 Jan 2021 (Study Day 126)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US385-2200 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	22 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Nephrolithiasis/Kidney Stones	SAE	Grade 3/ severe	Not related	23 Nov 2020 (Study Day 33) – 29 Nov 2020 (Study Day 39)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US385-2200, a 53-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 22 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Nov 2020 (Study Day 33), 32 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of nephrolithiasis. On 18 Nov 2020 (Study Day 28), the IP dose was discontinued due to lost to follow-up. The event of kidney stones lasted for 7 days, after which it was considered to be recovered/resolved on 29 Nov 2020 (Study Day 39). The investigator assessed the event of nephrolithiasis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000911	Nephrolithiasis

Study Completion/Discontinuation

On 18 Dec 2020 (Study Day 58), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	06 Nov 2020 (Study Day 16) - 06 Nov 2020 (Study Day 16)	Prophylaxis For Influenza

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US386-2020 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	17 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	16 Sep 2020 (Study Day 31)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Adenocarcinoma Gastric/Medullary Gastric Adenocarcinoma Stage III	SAE	Grade 2/moderate	Not related	04 Jan 2021 (Study Day 141) – Ongoing	Not recovered/not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US386-2020, a 61-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 17 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 16 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Jan 2021 (Study Day 141), 140 days after the first dose and 110 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of adenocarcinoma gastric. Action taken with the IP was not applicable. The event of medullary gastric adenocarcinoma stage III was considered to be ongoing. The investigator assessed the event of adenocarcinoma gastric to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005895	Adenocarcinoma gastric

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type 2	2010 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2018 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	Mar 2020 - Ongoing
Hyperlipidaemia	Hyperlipidemia	Mar 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metformin	2018 - Ongoing	Diabetes Mellitus Type 2
Gabapentin	Jun 2019 - Jun 2019	Peripheral Neuropathy
Atorvastatin	Mar 2020 - 15 Feb 2021 (Study Day 183)	Hyperlipidemia
Glipizide	Mar 2020 - 12 Jan 2021 (Study Day 149)	Diabetes Mellitus Type 2
Lisinopril	Mar 2020 - 15 Feb 2021 (Study Day 183)	Hypertension
Tamsulosin hydrochloride	Mar 2020 - Ongoing	Benign Prostatic Hyperplasia
Iron	30 Oct 2020 (Study Day 75) - Ongoing	Iron Deficiency Anemia
Macrogol; potassium chloride; sodium bicarbonate; sodium chloride; sodium sulfate	03 Jan 2021 (Study Day 140) - 03 Jan 2021 (Study Day 140)	Colonoscopy
Colonoscopy with biopsy*	04 Jan 2021 (Study Day 141) - 04 Jan 2021 (Study Day 141)	Adverse Event
Esophagogastroduodenoscopy with biopsy*	04 Jan 2021 (Study Day 141) - 04 Jan 2021 (Study Day 141)	Adverse Event
Fentanyl	04 Jan 2021 (Study Day 141) - 04 Jan 2021 (Study Day 141)	Colonoscopy
Fentanyl	04 Jan 2021 (Study Day 141) - 04 Jan 2021 (Study Day 141)	Endoscopy
Midazolam hydrochloride	04 Jan 2021 (Study Day 141) - 04 Jan 2021 (Study Day 141)	Colonoscopy
Midazolam hydrochloride	04 Jan 2021 (Study Day 141) - 04 Jan 2021 (Study Day 141)	Endoscopy
Moderate sedation*	04 Jan 2021 (Study Day 141) - 04 Jan 2021 (Study Day 141)	Adverse Event
Ferric carboxymaltose	13 Jan 2021 (Study Day 150) - 13 Jan 2021 (Study Day 150)	Iron Deficiency Anemia
Glipizide	13 Jan 2021 (Study Day 150) - Ongoing	Uncontrolled Type 2 Diabetes Mellitis
Vitamins nos	13 Jan 2021 (Study Day 150) - Ongoing	Anemia
Red blood cells, concentrated	19 Jan 2021 (Study Day 156) - 19 Jan 2021 (Study Day 156)	Iron Deficiency Anemia
Ct of chest, abdomen and pelvis*	22 Jan 2021 (Study Day 159) - 22 Jan 2021 (Study Day 159)	Adverse Event
Gastric biopsy*	04 Feb 2021 (Study Day 172) - 04 Feb 2021 (Study Day 172)	Adverse Event
Upper endoscopy*	04 Feb 2021 (Study Day 172) - 04 Feb 2021 (Study Day 172)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diagnostic laparoscopy*	19 Feb 2021 (Study Day 187) - 19 Feb 2021 (Study Day 187)	Adverse Event
Paracetamol	19 Feb 2021 (Study Day 187) - 23 Feb 2021 (Study Day 191)	Pain Post Portha Cath Insertion
Port placement*	19 Feb 2021 (Study Day 187) - 19 Feb 2021 (Study Day 187)	Adverse Event
Mri abdomen*	20 Feb 2021 (Study Day 188) - 20 Feb 2021 (Study Day 188)	Adverse Event
Lidocaine; prilocaine	22 Feb 2021 (Study Day 190) - 22 Feb 2021 (Study Day 190)	Porth-A-Cath Access
Ondansetron	22 Feb 2021 (Study Day 190) - Ongoing	Chemotherapy Induced-Nausea
Pet/ct scan skull base to mid thigh*	22 Feb 2021 (Study Day 190) - 22 Feb 2021 (Study Day 190)	Adverse Event
Prochlorperazine	22 Feb 2021 (Study Day 190) - Ongoing	Chemotherapy Induced-Nausea
Pantoprazole	17 Mar 2021 (Study Day 213) - Ongoing	Prophylaxis For Heartburn

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Cough	Grade 1/mild	Not related	07 Sep 2020 (Study Day 22) - 07 Sep 2020 (Study Day 22)
Non-Cardiac Chest Pain	Grade 1/mild	Not related	08 Sep 2020 (Study Day 23) - 30 Sep 2020 (Study Day 45)
Iron Deficiency Anaemia	Grade 1/mild	Not related	30 Oct 2020 (Study Day 75) - Ongoing
Diabetes Mellitus Inadequate Control	Grade 2/moderate	Not related	13 Jan 2021 (Study Day 150) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US386-2021 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	17 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	14 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Myocardial Infarction/ Inferolateral Stemi	SAE	Grade 4	Not related	04 Oct 2020 (Study Day 49) – 07 Oct 2020 (Study Day 52)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US386-2021, a 55-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 17 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 14 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Oct 2020 (Study Day 49), 48 days after the first dose and 20 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of myocardial infarction. Action taken with the IP was not applicable. The event of inferolateral stemi lasted for 4 days, after which it was considered to be recovered/resolved on 07 Oct 2020 (Study Day 52). The investigator assessed the event of myocardial infarction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000421	Myocardial Infarction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Sulfa allergy	Not reported - Ongoing
Rhabdomyolysis	Statin intolerant (rhabdomyolysis)	Not reported - Ongoing
Hyperthyroidism	Hyperthyroidism	2008 - 2008
Hypothyroidism	Hypothyroidism	2008 - Ongoing
Radioactive iodine therapy	Thyroid i131 ablation	2008 - 2008
Type 2 diabetes mellitus	Diabetes mellitus type 2	21 May 2010 (Study Day -3741) - Ongoing
Hypertension	Hypertension	May 2011 - Ongoing
Seasonal allergy	Seasonal allergies	2014 - Ongoing
Vitamin D deficiency	Vitamin d deficiency	2015 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2016 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	2017 - Ongoing
Drug hypersensitivity	Bactrim allergy	2018 - Ongoing
Coronary artery disease	Coronary artery disease	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine sodium	2008 - 09 Feb 2021 (Study Day 177)	Hypothroidism
Metoprolol succinate	2008 - 05 Oct 2020 (Study Day 50)	Hypertension
Acetylsalicylic acid	2010 - 03 Oct 2020 (Study Day 48)	Coronary Artery Disease
Vitamin d nos	2015 - 06 Oct 2020 (Study Day 51)	Vitamin D Deficiency
Ezetimibe	2016 - 09 Feb 2021 (Study Day 177)	Hyperlipidemia
Insulin aspart	2016 - 10 Oct 2020 (Study Day 55)	Diabetes Mellitus Type 2
Liothyronine sodium	2017 - Ongoing	Hypothryoidism
Liothyronine sodium	2017 - Ongoing	Hypothyroidism
Tamsulosin hydrochloride	2017 - Ongoing	Benign Prostatic Hyperplasia
Isosorbide mononitrate	2019 - 04 Oct 2020 (Study Day 49)	Coronary Artery Disease
Amlodipine besilate	Jun 2019 - 05 Oct 2020 (Study Day 50)	Hypertension
Hydrochlorothiazide; olmesartan	2020 - Ongoing	Hypertension
Measles vaccine live (enders-edmonston); mumps vaccine live (jeryl lynn); rubella vaccine live (wistar ra 27/3)	12 Aug 2020 (Study Day -5) - 12 Aug 2020 (Study Day -5)	Prevention Of Mumps, Measles, Rubella
Diphenhydramine hydrochloride	14 Sep 2020 (Study Day 29) - 15 Sep 2020 (Study Day 30)	Injection Site Swelling

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	15 Sep 2020 (Study Day 30) - 16 Sep 2020 (Study Day 31)	Fever And Injection Site Pain
Acetylsalicylic acid	04 Oct 2020 (Study Day 49) - Ongoing	Coronary Artery Disease
Acetylsalicylic acid	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Inferolateral Stemi
Adenosine	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	During Pci For Inferolateral Stemi
Carvedilol	04 Oct 2020 (Study Day 49) - 17 Oct 2020 (Study Day 62)	Hypertension
Chest x ray*	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Adverse Event
Contrast media	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	During Pci
Docusate sodium	04 Oct 2020 (Study Day 49) - 07 Oct 2020 (Study Day 52)	Prophylaxis For Constipation During Hospitalization For Inferolateral Stemi
Ekg*	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Adverse Event
Enoxaparin	04 Oct 2020 (Study Day 49) - 07 Oct 2020 (Study Day 52)	Prophylaxis For Deep Vein Thrombosis
Eptifibatide	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Inferolateral Stemi
Fentanyl	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Inferolateral Stemi
Heparin	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Inferolateral Stemi
Influenza vaccine	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Influenza
Intravascular ultrasound (iv us)*	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Adverse Event
Left heart catherization*	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Adverse Event
Lisinopril	04 Oct 2020 (Study Day 49) - 17 Oct 2020 (Study Day 62)	Hypertension
Morphine sulfate	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Inferolateral Stemi
Nicotinic acid	04 Oct 2020 (Study Day 49) - Ongoing	Hyperlipidemia
Pantoprazole	04 Oct 2020 (Study Day 49) - Ongoing	Prophylaxis For Gerd
Percutaneous coronary intervention (pci)*	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Adverse Event
Selective coronary angiogram*	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Adverse Event
Sennoside a+b	04 Oct 2020 (Study Day 49) - 07 Oct 2020 (Study Day 52)	Prophylaxis For Constipation During Hospitalization For Inferolateral Stem
Sodium chloride	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	During Pci For Inferolateral Stemi
Sodium chloride	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	For Iv Flush

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sodium chloride	04 Oct 2020 (Study Day 49) - 07 Oct 2020 (Study Day 52)	Hydration During Hospitalization For Inferolateral Stemi
Ticagrelor	04 Oct 2020 (Study Day 49) - Ongoing	Cardiovascular Event Prevention
Ticagrelor	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Inferolateral Stemi
Ultrasound guided access through right femoral artery*	04 Oct 2020 (Study Day 49) - 04 Oct 2020 (Study Day 49)	Adverse Event
Transthoracic echocardiogram with doppler*	05 Oct 2020 (Study Day 50) - 05 Oct 2020 (Study Day 50)	Adverse Event
Vitamin d nos	07 Oct 2020 (Study Day 52) - Ongoing	Vitamin D Deficiency
Alirocumab	16 Oct 2020 (Study Day 61) - Ongoing	Hyperlipidemia
Amlodipine besilate	17 Oct 2020 (Study Day 62) - Ongoing	Hypertension
Metoprolol succinate	17 Oct 2020 (Study Day 62) - Ongoing	Hypertension
Diltiazem	22 Oct 2020 (Study Day 67) - Ongoing	Coronary Artery Disease
Diphtheria vaccine toxoid; pertussis vaccine acellular; tetanus vaccine toxoid	09 Nov 2020 (Study Day 85) - 09 Nov 2020 (Study Day 85)	Prevention Of Tetanus And Difteria
Dulaglutide	14 Dec 2020 (Study Day 120) - Ongoing	Type 2 Diabetes Mellitus
Levothyroxine sodium	10 Feb 2021 (Study Day 178) - Ongoing	Hypothyroidism
Hydrocortisone	04 Mar 2021 (Study Day 200) - Ongoing	Low Cortisol Level

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diabetes Mellitus Inadequate Control	Grade 2/moderate	Not related	14 Dec 2020 (Study Day 120) - Ongoing
Cortisol Decreased	Grade 1/mild	Not related	04 Mar 2021 (Study Day 200) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US386-2044 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Heart Rate Irregular/Irregular Heart Beat	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	10 Sep 2020 (Study Day 21) – 10 Sep 2020 (Study Day 21)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US386-2044, a 52-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 21 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Sep 2020 (Study Day 21), 20 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of heart rate irregular. On 17 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of irregular heart beat lasted for 1 day, after which it was considered to be recovered/resolved on 10 Sep 2020 (Study Day 21). The investigator assessed the event of heart rate irregular to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

On 15 Dec 2020 (Study Day 117), the participant discontinued from the study due to other.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamin d nos	2017 - Ongoing	Vitamin Supplement
Vitamin e nos	2017 - Ongoing	Vitamin Supplement
Ascorbic acid	2019 - Ongoing	Vitamin Supplement
Pantoprazole	2019 - Ongoing	Gerd
Influenza vaccine	10 Oct 2020 (Study Day 51) - 10 Oct 2020 (Study Day 51)	Influenza Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Heart Rate Irregular	Grade 1/mild	Not related	10 Sep 2020 (Study Day 21) - 10 Sep 2020 (Study Day 21)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US386-2050 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	24 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	29 Aug 2020 (Study Day 6) – 11 Sep 2020 (Study Day 19)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US386-2050, a 50-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 24 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 29 Aug 2020 (Study Day 6), 5 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of covid-19. On 20 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of symptomatic COVID-19 lasted for 14 days, after which it was considered to be recovered/resolved on 11 Sep 2020 (Study Day 19). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000269	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	Jan 2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Famotidine	Jan 2020 - Ongoing	Gerd
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	29 Aug 2020 (Study Day 6) - 29 Aug 2020 (Study Day 6)	Symptomatic COVID 19
Paracetamol	29 Aug 2020 (Study Day 6) - 30 Aug 2020 (Study Day 7)	Symptomatic COVID 19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	29 Aug 2020 (Study Day 6) - 11 Sep 2020 (Study Day 19)
Fatigue	Grade 1/mild	Related	31 Aug 2020 (Study Day 8) - 01 Sep 2020 (Study Day 9)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US386-2053 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	24 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	21 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	SAE	Grade 2/ moderate	Not related	16 Oct 2020 (Study Day 54) – 21 Dec 2020 (Study Day 120)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US386-2053, a 74-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 24 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 21 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Oct 2020 (Study Day 54), 53 days after the first dose and 25 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of covid-19. Action taken with the IP was not applicable. The event of symptomatic COVID-19 lasted for 67 days, after which it was considered to be recovered/resolved on 21 Dec 2020 (Study Day 120). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000502	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1990 - Ongoing
Hyperlipidaemia	Hyperlipidemia	1996 - Ongoing
Hypertension	Hypertension	1996 - Ongoing
Postmenopause	Post menopausal	1996 - Ongoing
Gastrooesophageal reflux disease	Gerd	2000 - Ongoing
Uterine leiomyoma	Uterine fibroid	09 Oct 2019 (Study Day -320) - Ongoing
Postmenopausal haemorrhage	Post menopausal bleeding	Apr 2020 - May 2020
Sinusitis	Sinusitis	13 Aug 2020 (Study Day -11) - 23 Aug 2020 (Study Day -1)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2005 - Ongoing	Prophylaxis For Coronary Artery Disease
Atorvastatin	2005 - Ongoing	Hyperlipidemia
Hydrochlorothiazide	2005 - Ongoing	Hypertension
Levocetirizine	2012 - Ongoing	Seasonal Allergies
Montelukast	2012 - Ongoing	Seasonal Allergies
Azelastine	2015 - Ongoing	Seasonal Allergies
Nifedipine	2017 - Ongoing	Hypertension
Vitamins nos	2019 - Ongoing	Vitamin Supplement
Naproxen sodium	23 Sep 2020 (Study Day 31) - 23 Sep 2020 (Study Day 31)	Leg Pain
Melatonin	27 Sep 2020 (Study Day 35) - 27 Sep 2020 (Study Day 35)	Insomnia
Paracetamol	17 Oct 2020 (Study Day 55) - 21 Dec 2020 (Study Day 120)	Symptomatic COVID 19
Aluminium hydroxide; magnesium carbonate	20 Oct 2020 (Study Day 58) - 21 Dec 2020 (Study Day 120)	Symptomatic COVID-19
Calcium chloride; potassium chloride; sodium lactate	23 Oct 2020 (Study Day 61) - 23 Oct 2020 (Study Day 61)	Dehydration Associated With Symptomatic COVID 19
Benzonatate	31 Oct 2020 (Study Day 69) - 21 Dec 2020 (Study Day 120)	Symptomatic COVID-19
Ergocalciferol	31 Oct 2020 (Study Day 69) - Ongoing	Prophylaxis Vitamin D Deficiency
Azithromycin	10 Nov 2020 (Study Day 79) - 10 Nov 2020 (Study Day 79)	Symptomatic COVID 19

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Codeine; guaifenesin	10 Nov 2020 (Study Day 79) - 21 Dec 2020 (Study Day 120)	Symptomatic COVID 19
Salbutamol	10 Nov 2020 (Study Day 79) - 21 Dec 2020 (Study Day 120)	Symptomatic COVID 19
Azithromycin	11 Nov 2020 (Study Day 80) - 21 Nov 2020 (Study Day 90)	Symptomatic COVID 19
Fluticasone	14 Nov 2020 (Study Day 83) - 21 Dec 2020 (Study Day 120)	Symptomatic COVID 19
Pantoprazole	09 Dec 2020 (Study Day 108) - 13 Dec 2020 (Study Day 112)	Exacerbation Of Gastroesophageal Reflux Disease

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Pain In Extremity	Grade 1/mild	Not related	23 Sep 2020 (Study Day 31) - 23 Sep 2020 (Study Day 31)
Insomnia	Grade 1/mild	Not related	27 Sep 2020 (Study Day 35) - Ongoing
Abnormal Loss Of Weight	Grade 1/mild	Not related	18 Nov 2020 (Study Day 87) - Ongoing
Gastrooesophageal Reflux Disease	Grade 1/mild	Not related	05 Dec 2020 (Study Day 104) - 13 Dec 2020 (Study Day 112)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US386-2098 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hypertension/Hypertension	AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	29 Sep 2020 (Study Day 30) – 15 Oct 2020 (Study Day 46)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US386-2098, a 45-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 31 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 29 Sep 2020 (Study Day 30), 29 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of hypertension. On 27 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of hypertension lasted for 17 days, after which it was considered to be recovered/resolved on 15 Oct 2020 (Study Day 46). The investigator assessed the event of hypertension to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	2014 - Ongoing
Supraventricular tachycardia	Supraventricular tachycardia	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fish oil	2015 - Ongoing	Supplement
Metoprolol	2015 - Ongoing	Svt
Vitamins nos	2018 - Ongoing	Supplement
Melatonin	Feb 2020 - Ongoing	Prophylaxis For Insomnia
Losartan	01 Oct 2020 (Study Day 32) - 19 Apr 2021 (Study Day 232)	Hypertension
Ubidecarenone	23 Dec 2020 (Study Day 115) - Ongoing	General Well-Being

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypertension	Grade 3/severe	Not related	29 Sep 2020 (Study Day 30) - 15 Oct 2020 (Study Day 46)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US386-2099 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Flank Pain/Left Flank Pain	SAE	Grade 3/severe	Not related	30 Dec 2020 (Study Day 122) – 11 Apr 2021 (Study Day 224)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US386-2099, a 51-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 28 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Dec 2020 (Study Day 122), 121 days after the first dose and 93 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of flank pain. Action taken with the IP was not applicable. The event of left flank pain lasted for 103 days, after which it was considered to be recovered/resolved on 11 Apr 2021 (Study Day 224). The investigator assessed the event of flank pain to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-048696	Flank pain

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Pain	General body aches	2000 - Ongoing
Chronic hepatitis B	Chronic hepatitis b	Feb 2005 - Ongoing
HIV infection	Hiv	Dec 2018 - Ongoing
Glucose tolerance impaired	Prediabetes	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Entecavir	Feb 2005 - Ongoing	Hepatitis B
Cobicistat; darunavir ethanolate	Dec 2018 - Ongoing	Hiv
Doravirine	Dec 2018 - Ongoing	Hiv
Ibuprofen	2020 - Ongoing	General Pain
Ibuprofen	04 Oct 2020 (Study Day 35) - 04 Oct 2020 (Study Day 35)	General Pain Post Vaccination Reactogenicity Symptoms
Camphor; eucalyptus spp. oil; menthol	19 Oct 2020 (Study Day 50) - 19 Oct 2020 (Study Day 50)	Forehead Pain
Influenza vaccine	21 Oct 2020 (Study Day 52) - 21 Oct 2020 (Study Day 52)	Influenza
Ibuprofen	12 Feb 2021 (Study Day 166) - 12 Feb 2021 (Study Day 166)	Prophylaxis Post Vaccine Reactogenicity Symptoms
Calcium chloride dihydrate; potassium chloride; sodium chloride; sodium lactate	13 Mar 2021 (Study Day 195) - 14 Mar 2021 (Study Day 196)	Left Proximal And Distal Ureteral Calculi Non Obstructing Left Nephrolithiasis
Docusate sodium; sennoside a+b	13 Mar 2021 (Study Day 195) - 14 Mar 2021 (Study Day 196)	Left Proximal And Distal Ureteral Calculi Non Obstructing Left Nephrolithiasis
Morphine	13 Mar 2021 (Study Day 195) - 14 Mar 2021 (Study Day 196)	Left Proximal And Distal Ureteral Calculi Non Obstructing Left Nephrolithiasis
Phenazopyridine hydrochloride	13 Mar 2021 (Study Day 195) - 14 Mar 2021 (Study Day 196)	Left Proximal And Distal Ureteral Calculi Non Obstructing Left Nephrolithiasis
Sodium chloride	13 Mar 2021 (Study Day 195) - 14 Mar 2021 (Study Day 196)	Left Proximal And Distal Ureteral Calculi Non Obstructing Left Nephrolithiasis
Cystoscopy*	14 Mar 2021 (Study Day 196) - 14 Mar 2021 (Study Day 196)	Adverse Event
Laser lithotripsy*	14 Mar 2021 (Study Day 196) - 14 Mar 2021 (Study Day 196)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Macrogol 3350	14 Mar 2021 (Study Day 196) - 14 Mar 2021 (Study Day 196)	Left Proximal And Distal Ureteral Calculi Non Obstructing Left Nephrolithiasis
Tamsulosin	14 Mar 2021 (Study Day 196) - 14 Mar 2021 (Study Day 196)	Left Proximal And Distal Ureteral Calculi Non Obstructing Left Nephrolithiasis
Ureteral stent placement*	14 Mar 2021 (Study Day 196) - 14 Mar 2021 (Study Day 196)	Adverse Event
Ureteroscopy*	14 Mar 2021 (Study Day 196) - 14 Mar 2021 (Study Day 196)	Adverse Event
Azithromycin	15 Mar 2021 (Study Day 197) - Ongoing	Prophylaxis For Pain Post Laparoscopic Surgery (Due To Nephrolithiasis)
Cefuroxime axetil	15 Mar 2021 (Study Day 197) - 21 Mar 2021 (Study Day 203)	Prophylaxis For Infection Post Laparoscopic Surgery Due To Nephrolithiasis
Hydrocodone bitartrate; paracetamol	15 Mar 2021 (Study Day 197) - Ongoing	Prophylaxis For Pain Post Laparoscopic Surgery(Due To Nephrolithiasis)
Tolterodine	22 Mar 2021 (Study Day 204) - Ongoing	Prophylaxis For Urinary Spasm

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Tinnitus	Grade 1/mild	Not related	12 Oct 2020 (Study Day 43) - 19 Oct 2020 (Study Day 50)
Headache	Grade 1/mild	Not related	19 Oct 2020 (Study Day 50) - 19 Oct 2020 (Study Day 50)
Dysuria	Grade 2/moderate	Not related	04 Jan 2021 (Study Day 127) - 19 Apr 2021 (Study Day 232)
Haematuria	Grade 2/moderate	Not related	04 Jan 2021 (Study Day 127) - 19 Apr 2021 (Study Day 232)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US386-2119 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	01 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Atrial Fibrillation/ Worsening Of Paroxysmal Atrial Fibrillation	SAE	Grade 2/ moderate	Not related	01 Dec 2020 (Study Day 90) – 24 Feb 2021 (Study Day 175)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US386-2119, a 68-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 03 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 01 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Dec 2020 (Study Day 90), 89 days after the first dose and 61 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of atrial fibrillation. Action taken with the IP was not applicable. The event of worsening of paroxysmal atrial fibrillation lasted for 86 days, after which it was considered to be recovered/resolved on 24 Feb 2021 (Study Day 175). The investigator assessed the event of atrial fibrillation to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-023562	Atrial fibrillation

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1958 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Atrial fibrillation	Paroxysmal atrial fibriliation	2015 - Ongoing
Cardiac failure congestive	Congestive heart failure	2015 - Ongoing
Ischaemic cardiomyopathy	Ischemic cardiomyopathy	2015 - Ongoing
Myocardial infarction	Myocardial infarction	2015 - 2015
Coronary artery bypass	Coronary artery bypass graft surgery	23 Feb 2015 (Study Day -2019) - 23 Feb 2015 (Study Day -2019)
Coronary artery disease	Coronary artery disease	23 Feb 2015 (Study Day -2019) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cetirizine hydrochloride	2010 - Ongoing	Seasonal Allergies
Vitamins nos	2010 - Ongoing	Prophylaxis For General Health
Atorvastatin	2015 - Ongoing	Coronary Artery Disease
Losartan	2015 - Ongoing	Hypertension
Rivaroxaban	2015 - Ongoing	Atrial Fibrillation
Sotalol	2015 - 04 Feb 2021 (Study Day 155)	Paroxysmal Atrial Fibrillation
Vitamin b12 nos	2015 - Ongoing	Prophylaxis For General Health
Paracetamol	Sep 2020 - Ongoing	Prophylaxis For Toothache
Loperamide hydrochloride	03 Sep 2020 (Study Day 1) - 03 Sep 2020 (Study Day 1)	Diarrhea
Paracetamol	01 Oct 2020 (Study Day 29) - 03 Oct 2020 (Study Day 31)	Pain On Injection Site Post Vaccination
Influenza vaccine	16 Oct 2020 (Study Day 44) - 16 Oct 2020 (Study Day 44)	Influenza
Levofloxacin	24 Oct 2020 (Study Day 52) - 31 Oct 2020 (Study Day 59)	Gum Infection Right Upper Quadrant Gum Area
Benzocaine	Nov 2020 - Ongoing	Gum Infection Right Upper Quadrant Gum Area
Colonoscopy*	16 Nov 2020 (Study Day 75) - 16 Nov 2020 (Study Day 75)	Other, Routine Screening
Sotalol	01 Dec 2020 (Study Day 90) - 04 Feb 2021 (Study Day 155)	Worsening Of Paroxysmal Atrial Fibrillation
Bismuth subsalicylate	24 Dec 2020 (Study Day 113) - 24 Dec 2020 (Study Day 113)	Diarrhea

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Loperamide hydrochloride	24 Dec 2020 (Study Day 113) - 24 Dec 2020 (Study Day 113)	Diarrhea
Acetylsalicylic acid	18 Jan 2021 (Study Day 138) - Ongoing	Prophylaxis For Thromboembolic Event
Holter monitor*	18 Jan 2021 (Study Day 138) - 18 Jan 2021 (Study Day 138)	Adverse Event
Cardiac mri*	20 Jan 2021 (Study Day 140) - 20 Jan 2021 (Study Day 140)	Adverse Event
Carvedilol	04 Feb 2021 (Study Day 155) - 07 Feb 2021 (Study Day 158)	Paroxysmal Atrial Fibrillation
Metoprolol	08 Feb 2021 (Study Day 159) - Ongoing	Paroxymal Atrial Fibrilation
Ceftriaxone	23 Feb 2021 (Study Day 174) - 23 Feb 2021 (Study Day 174)	Dual Chamber Defribilator Implantation
Etomidate	23 Feb 2021 (Study Day 174) - 23 Feb 2021 (Study Day 174)	Implantation Of Dual Chamber Icd
Fentanyl	23 Feb 2021 (Study Day 174) - 23 Feb 2021 (Study Day 174)	Implantation Of Dual Chamber Icd
Implantation of dual chamber implantable cardioverter defibrillator (icd)*	23 Feb 2021 (Study Day 174) - 23 Feb 2021 (Study Day 174)	Adverse Event
Midazolam hydrochloride	23 Feb 2021 (Study Day 174) - 23 Feb 2021 (Study Day 174)	Implantation Of Dual Chamber Icd
Minocycline	24 Feb 2021 (Study Day 175) - 28 Feb 2021 (Study Day 179)	Prophylaxis For Icd Implantation Site Infection
Tramadol hydrochloride	26 Feb 2021 (Study Day 177) - 07 Mar 2021 (Study Day 186)	Pain On Left Upper Anterior Chest Area (Icd Implantation Site)
Paracetamol	28 Feb 2021 (Study Day 179) - 28 Feb 2021 (Study Day 179)	Low Grade Fever

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diarrhoea	Grade 1/mild	Not related	03 Sep 2020 (Study Day 1) – 03 Sep 2020 (Study Day 1)
Gingivitis	Grade 1/mild	Not related	16 Oct 2020 (Study Day 44) - 15 Jan 2021 (Study Day 135)
Haemorrhoids	Grade 1/mild	Not related	01 Nov 2020 (Study Day 60) - Ongoing
Dizziness	Grade 1/mild	Not related	16 Nov 2020 (Study Day 75) - Ongoing
Diarrhoea	Grade 1/mild	Related	24 Dec 2020 (Study Day 113) - 24 Dec 2020 (Study Day 113)
Ventricular Extrasystoles	Grade 1/mild	Not related	18 Jan 2021 (Study Day 138) - Ongoing
Haematuria	Grade 2/moderate	Not related	06 Feb 2021 (Study Day 157) - 07 Feb 2021 (Study Day 158)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Medical Device Site Pain	Grade 2/moderate	Not related	24 Feb 2021 (Study Day 175) - Ongoing
Pyrexia	Grade 1/mild	Not related	28 Feb 2021 (Study Day 179) - 28 Feb 2021 (Study Day 179)
Dysuria	Grade 1/mild	Not related	23 Mar 2021 (Study Day 202) - Ongoing
Haematuria	Grade 1/mild	Not related	23 Mar 2021 (Study Day 202) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US386-2286 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	16 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Viral Infection/Viral Like Illness	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	01 Nov 2020 (Study Day 17) – 11 Nov 2020 (Study Day 27)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US386-2286, a 54-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 16 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Nov 2020 (Study Day 17), 16 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of viral infection. On 12 Nov 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of viral like illness lasted for 11 days, after which it was considered to be recovered/resolved on 11 Nov 2020 (Study Day 27). The investigator assessed the event of viral infection to be not related to the IP.

Additional Information From the Safety Database

No additional details for the events are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Psoriasis	Psoriasis intermittent	1976 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1976 - Ongoing
Malignant melanoma	Melanoma right hip stage 1	2011 - 2011
Basal cell carcinoma	Basal cell carcinoma suprasternal notch	2014 - 2014
Benign neoplasm of thyroid gland	Benign thyroid nodule	2015 - 2015
Hypothyroidism	Hypothyroidism	2015 - Ongoing
Thyroidectomy	S/p left thyroidectomy	2015 - 2015

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid	1985 - Ongoing	Prophylaxis For General
Vitamins nos	1985 - Ongoing	Prophylaxis For General Health
Acetylsalicylic acid	2010 - Ongoing	Melanoma
Fluticasone propionate	2014 - Ongoing	Seasonal Allergies
Levothyroxine	2015 - Ongoing	Hypothyroidism
Paracetamol	01 Nov 2020 (Study Day 17) - 10 Nov 2020 (Study Day 26)	Viral Like Illness
Ibuprofen	03 Nov 2020 (Study Day 19) - 10 Nov 2020 (Study Day 26)	Viral Like Illness
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	05 Nov 2020 (Study Day 21) - 10 Nov 2020 (Study Day 26)	Viral Like Illness
Azithromycin	06 Nov 2020 (Study Day 22) - 06 Nov 2020 (Study Day 22)	Viral Like Illness
Azithromycin	06 Nov 2020 (Study Day 22) - 10 Nov 2020 (Study Day 26)	Viral Like Illness
Ondansetron	06 Nov 2020 (Study Day 22) - 09 Nov 2020 (Study Day 25)	Viral Like Illness

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Viral Infection	Grade 2/moderate	Not related	01 Nov 2020 (Study Day 17) - 11 Nov 2020 (Study Day 27)
Viral Upper Respiratory Tract Infection	Grade 1/mild	Not related	09 Dec 2020 (Study Day 55) - 19 Dec 2020 (Study Day 65)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US387-2001 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	31 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	28 Aug 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Rib Fracture/Right Rib Fractures (#9-#11)	SAE	Grade 3/severe	Not related	30 Nov 2020 (Study Day 123) – 24 Dec 2020 (Study Day 147)	Recovered/resolved
Acute Respiratory Failure/Acute Respiratory Failure	SAE	Grade 3/severe	Not related	02 Dec 2020 (Study Day 125) – 17 Dec 2020 (Study Day 140)	Recovered/resolved
Pneumonia/Pneumonia (Bilateral)	SAE	Grade 3/severe	Not related	06 Dec 2020 (Study Day 129) – 06 Jan 2021 (Study Day 160)	Recovered/resolved
Failure To Thrive/Failure To Thrive	SAE	Grade 4	Not related	24 Dec 2020 (Study Day 147) – 06 Jan 2021 (Study Day 160)	Recovered/resolved
Duodenal Ulcer Perforation/Perforated Duodenal Ulcer	SAE	Grade 4	Not related	25 Jan 2021 (Study Day 179) – 25 Jan 2021 (Study Day 179)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2001, a 72-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 31 Jul 2020 (Study Day 1). The second dose was administered in the left arm on 28 Aug 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Nov 2020 (Study Day 123), 122 days after the first dose and 94 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of rib fracture. Action taken with the IP was not applicable. The event of right rib fractures (#9-#11) lasted for 25 days, after which it was considered to be recovered/resolved on 24 Dec 2020 (Study Day 147). The investigator assessed the event of rib fracture to be not related to the IP.

On 02 Dec 2020 (Study Day 125), 124 days after the first dose and 96 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of acute respiratory failure. Action taken with the IP was not applicable. The event of acute respiratory failure lasted

for 16 days, after which it was considered to be recovered/resolved on 17 Dec 2020 (Study Day 140). The investigator assessed the event of acute respiratory failure to be not related to the IP.

On 06 Dec 2020 (Study Day 129), 128 days after the first dose and 100 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of pneumonia. Action taken with the IP was not applicable. The event of pneumonia (bilateral) lasted for 32 days, after which it was considered to be recovered/resolved on 06 Jan 2021 (Study Day 160). The investigator assessed the event of pneumonia to be not related to the IP.

On 24 Dec 2020 (Study Day 147), 146 days after the first dose and 118 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of failure to thrive. Action taken with the IP was not applicable. The event of failure to thrive lasted for 14 days, after which it was considered to be recovered/resolved on 06 Jan 2021 (Study Day 160). The investigator assessed the event of failure to thrive to be not related to the IP.

On 25 Jan 2021 (Study Day 179), 178 days after the first dose and 150 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of duodenal ulcer perforation. Action taken with the IP was not applicable. The event of perforated duodenal ulcer lasted for 1 day, after which it was considered to be recovered/resolved on 25 Jan 2021 (Study Day 179). The investigator assessed the event of duodenal ulcer perforation to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001364	Rib fracture
MOD-2020-001364	Acute respiratory failure
MOD-2020-001364	Pneumonia
MOD-2020-001364	Failure to thrive
MOD-2021-008566	Duodenal ulcer perforation

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Myopia	Nearsighted	1960 - Ongoing
Rotator cuff repair	Right rotator cuff tear repair	1990 - 1990
Rotator cuff syndrome	Right rotator cuff tear	1990 - 1990

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Insomnia	Insomnia	2000 - Ongoing
Blood cholesterol increased	High cholesterol	2010 - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	2010 - Ongoing
Back pain	Low back pain	2015 - Ongoing
Constipation	Opiate induced constipation	2015 - Ongoing
Sinus tachycardia	Sinus tachycardia	2017 - Ongoing
Arthralgia	Joint aches(generalized)	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Glimepiride	Not reported - Ongoing	Type II Dm
Metoprolol tartrate	Not reported - Ongoing	Type II Dm
Rosuvastatin calcium	Not reported - Ongoing	Elevated Cholesterol
Vitamins nos	1980 - Ongoing	Health Maintenance
Metformin	2010 - Ongoing	Type 2 Diabetes
Simvastatin	2010 - Ongoing	Hypercholesterolemia
Oxycodone hydrochloride; paracetamol	2015 - Ongoing	Low Back Pain
Quetiapine fumarate	2015 - 03 Dec 2020 (Study Day 126)	Insomnia
Atenolol	2017 - Ongoing	Sinus Tachycardia
In dwelling catheter placement*	01 Dec 2020 (Study Day 124) - 01 Dec 2020 (Study Day 124)	Adverse Event
Pa chest and right ribs 3 views*	01 Dec 2020 (Study Day 124) - 01 Dec 2020 (Study Day 124)	Adverse Event
Xray ribs with pa right chest*	01 Dec 2020 (Study Day 124) - 01 Dec 2020 (Study Day 124)	Adverse Event
Xray chest 1 vew frontal*	02 Dec 2020 (Study Day 125) - 02 Dec 2020 (Study Day 125)	Adverse Event
Acetylcysteine	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Pneumonia
Atenolol	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Sinus Tachycordia
Atorvastatin	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	High Cholesterol
Furosemide	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Pleurol Effusion
Glimepiride	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Type II Diabetes
Glucagon	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Type II Diabetes
Glucose	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Type II Diabetes

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Heparin	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Throboembolism Phrophylaxis
Influenza vaccine	03 Dec 2020 (Study Day 126) - 03 Dec 2020 (Study Day 126)	Flu Prevention
Insulin aspart	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Type II Diabetes
Iopamidol	03 Dec 2020 (Study Day 126) - 03 Dec 2020 (Study Day 126)	Iv Contrast
Ipratropium bromide; salbutamol sulfate	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Pneumonia
Lisinopril	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Hypertension Secondary To Pain
Lisinopril	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Hypertension Secondary To Pain Of Rib Fractures
Macrogol 3350	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Constipation Opiate Induced
Naloxone	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Opiate Reversal
Nicotine	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Nicotine Addiction
Nystatin; zinc oxide	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Staphaureus Prevention (Nasal)
Ondansetron	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Nausea Due To Pain
Oxycodone hydrochloride; paracetamol	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Generalized Pain
Pantoprazole	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Acid Reducer
Paracetamol	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Generalized Body Pain Associated With Broken Ribs/ Fall
Potassium chloride	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Hypokalemia
Potassium citrate	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Hypokalemia
Quetiapine	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Insomnia
Ramelteon	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Insomnia
Ranitidine	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Stomach Acid Reducer
Simvastatin	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	High Cholesterol
Sulfadiazine silver	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Right Knee Abrasion
Tamsulosin	03 Dec 2020 (Study Day 126) - 17 Dec 2020 (Study Day 140)	Benign Prostatic Hyperplaia
Xray chest 1 view frontal*	04 Dec 2020 (Study Day 127) - 04 Dec 2020 (Study Day 127)	Adverse Event
Ct angio chest with contrast*	05 Dec 2020 (Study Day 128) - 05 Dec 2020 (Study Day 128)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Endotracheal intubation*	05 Dec 2020 (Study Day 128) - 05 Dec 2020 (Study Day 128)	Adverse Event
Nasogastric tube placement*	05 Dec 2020 (Study Day 128) - 05 Dec 2020 (Study Day 128)	Adverse Event
Sequential compression device applied bilaterally to legs*	05 Dec 2020 (Study Day 128) - 05 Dec 2020 (Study Day 128)	Other, Deep Vein Thrombosis Prevention Due To Bed Bound.
Xray chest 1 view frontal*	05 Dec 2020 (Study Day 128) - 05 Dec 2020 (Study Day 128)	Adverse Event
Echocardiogram*	06 Dec 2020 (Study Day 129) - 06 Dec 2020 (Study Day 129)	Adverse Event
Xray chest 1 view frontal*	06 Dec 2020 (Study Day 129) - 06 Dec 2020 (Study Day 129)	Adverse Event
Echocardiogram*	07 Dec 2020 (Study Day 130) - 07 Dec 2020 (Study Day 130)	Adverse Event

Endotracheal extubation*	09 Dec 2020 (Study Day 132) - 09 Dec 2020 (Study Day 132)	Adverse Event
Nasogastric tube removal*	09 Dec 2020 (Study Day 132) - 09 Dec 2020 (Study Day 132)	Adverse Event
Xray chest 1 view frontal*	09 Dec 2020 (Study Day 132) - 09 Dec 2020 (Study Day 132)	Adverse Event
Cta thorax*	10 Dec 2020 (Study Day 133) - 10 Dec 2020 (Study Day 133)	Adverse Event
Xray chest 1 view frontal*	10 Dec 2020 (Study Day 133) - 10 Dec 2020 (Study Day 133)	Adverse Event
Xray chest 1 view frontal*	11 Dec 2020 (Study Day 134) - 11 Dec 2020 (Study Day 134)	Adverse Event
Cefepime hydrochloride	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	B/L Pneumonia
Citric acid; potassium bicarbonate	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Hypokalcemia
Electrolyte solutions [umbrella term]	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Hypokalcemia
Glucose	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Type II Diabetes
Glucose; magnesium sulfate	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Low Magnesium
Insulin	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Type II Diabetes
Iopamidol	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Contrast Media For Ct
Lactulose	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Constipation
Magnesium oxide	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Low Magnesium
Magnesium sulfate	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Low Magnesium

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metoprolol tartrate	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Sinus Tochycardio
Metronidazole	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Infection Suspected With Shock
Mupirocin	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Staphylococcus Aureus Prevention
Norepinephrine bitartrate	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Shock Hypotemcon
Oxycodone; paracetamol	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Low Back Pain
Pantoprazole sodium sesquihydrate	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Acid Reflux
Paracetamol	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Generalized Pain
Phenylephrine hydrochloride	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Shock Hypotemcon
Phosphorus	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Low Phosphorus
Phytomenadione	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Failure To Thrive/ Vitamin Deficiency / Bleeding Prop
Piperacillin sodium	24 Dec 2020 (Study Day 147) - 24 Dec 2020 (Study Day 147)	Septic Shock Of Unknown Etiology
Potassium chloride	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Hypokalcemia
Quetiapine fumarate	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Insomnia
Sodium chloride	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Hyponatremia / Carrier For Antibiotic
Sodium chloride	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Iv Hyprotion
Sodium chloride	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Ivpb
Sodium chloride	24 Dec 2020 (Study Day 147) - 24 Dec 2020 (Study Day 147)	Septic Shock Of Unknown Etiology
Solutions for parenteral nutrition	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Hypokalcemia
Tazobactam sodium	24 Dec 2020 (Study Day 147) - 24 Dec 2020 (Study Day 147)	Septic Shock Of Unknown Etiology
Trazodone	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Insomnia
Vancomycin hydrochloride	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	B/L
Vancomycin hydrochloride	24 Dec 2020 (Study Day 147) - 24 Dec 2020 (Study Day 147)	Bilateral Pneumonia
Vasopressin	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)	Shock Hypotemcon
Quetiapine	30 Dec 2020 (Study Day 153) - Ongoing	Insomnia
Ct abd w/o contrast*	25 Jan 2021 (Study Day 179) - 25 Jan 2021 (Study Day 179)	Diagnostic

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine hydrochloride	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Insomnia
Enoxaparin sodium	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Dvt Prophylaxis
Famotidine	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Acid Reducer For Ulcer Hx
Glucagon	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Type II Diabetes
Glucose	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Type II Diabetes
Grahm patch*	25 Jan 2021 (Study Day 179) - 25 Jan 2021 (Study Day 179)	Adverse Event
Hydrocodone bitartrate; paracetamol	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Low Back Pain
Hydroxyzine hydrochloride	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Insomnia
Insulin aspart	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Type II Dm
Lapartomoy exploratory*	25 Jan 2021 (Study Day 179) - 25 Jan 2021 (Study Day 179)	Adverse Event
Morphine	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Status Post Surgical Pain
Myroxylon balsamum var. pereirae; ricinus communis oil	25 Jan 2021 (Study Day 179) - 15 Mar 2021 (Study Day 228)	Left Knee Abrasion
Nicotine	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Nicotine Patch
Ondansetron	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Nausea 2 To Duodenal Ucler
Pantoprazole	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Acid Reducer For Ulcer Hx
Paracetamol	25 Jan 2021 (Study Day 179) - 08 Feb 2021 (Study Day 193)	Generalized Joint Pain
Omeprazole	26 Jan 2021 (Study Day 180) - Ongoing	Acid Reducer
Ondansetron	05 Mar 2021 (Study Day 218) - Ongoing	Nausea Secondary To Duodenal Ulcer (Sae)
Ondansetron	05 Mar 2021 (Study Day 218) - Ongoing	Nausea Secondary To Status Post Duodenal Ulcer

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Skin Abrasion	Grade 1/mild	Not related	30 Nov 2020 (Study Day 123) - 15 Mar 2021 (Study Day 228)
Hypertension	Grade 1/mild	Not related	16 Dec 2020 (Study Day 139) - 17 Dec 2020 (Study Day 140)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Septic Shock	Grade 3/severe	Not related	24 Dec 2020 (Study Day 147) - 06 Jan 2021 (Study Day 160)
C-Reactive Protein Increased	Grade 2/moderate	Not related	25 Dec 2020 (Study Day 148) - 06 Jan 2021 (Study Day 160)
Faecaloma	Grade 1/mild	Not related	25 Dec 2020 (Study Day 148) - 26 Dec 2020 (Study Day 149)
Leukocytosis	Grade 3/severe	Not related	25 Dec 2020 (Study Day 148) - 25 Jan 2021 (Study Day 179)
Fatigue	Grade 1/mild	Not related	09 Feb 2021 (Study Day 194) - 28 Mar 2021 (Study Day 241)
Pain	Grade 2/moderate	Not related	09 Feb 2021 (Study Day 194) - 02 Apr 2021 (Study Day 246)
Nausea	Grade 2/moderate	Not related	05 Mar 2021 (Study Day 218) - 26 Mar 2021 (Study Day 239)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US390-2020 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	30 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Myocardial Infarction/Myocardial Infarction	SAE	Grade 3/severe	Not related	15 Feb 2021 (Study Day 167) – 16 Feb 2021 (Study Day 168)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US390-2020, a 57-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 02 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 30 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Feb 2021 (Study Day 167), 166 days after the first dose and 138 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of myocardial infarction. Action taken with the IP was not applicable. The event of myocardial infarction lasted for 2 days, after which it was considered to be recovered/resolved on 16 Feb 2021 (Study Day 168). The investigator assessed the event of myocardial infarction to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-023125	Myocardial infarction

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Morbid obesity	2000 - Ongoing
Sciatica	Sciatica	2010 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	19 Feb 2021 (Study Day 171) - Ongoing	Hyperlipedemia
Levofloxacin	19 Feb 2021 (Study Day 171) - 24 Feb 2021 (Study Day 176)	Infection (Lower Lobes Of Lungs)
Lisinopril	19 Feb 2021 (Study Day 171) - Ongoing	Hypertension
Metoprolol	19 Feb 2021 (Study Day 171) - Ongoing	Hypertension
Ticagrelor	19 Feb 2021 (Study Day 171) - Ongoing	Hyperlipidemia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hyperlipidaemia	Grade 1/mild	Not related	15 Feb 2021 (Study Day 167) - Ongoing
Hypertension	Grade 1/mild	Not related	16 Feb 2021 (Study Day 168) - Ongoing
Pneumonia	Grade 2/moderate	Not related	16 Feb 2021 (Study Day 168) - 24 Feb 2021 (Study Day 176)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US390-2021 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	29 Sep 2020 (Study Day 28)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cholelithiasis/Cholelithiasis	SAE	Grade 3/ severe	Not related	22 Feb 2021 (Study Day 174) – 01 Mar 2021 (Study Day 181)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US390-2021, a 38-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 02 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 29 Sep 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 22 Feb 2021 (Study Day 174), 173 days after the first dose and 146 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of cholelithiasis. Action taken with the IP was not applicable. The event of cholelithiasis lasted for 8 days, after which it was considered to be recovered/resolved on 01 Mar 2021 (Study Day 181). The investigator assessed the event of cholelithiasis to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-027979	Cholelithiasis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	30 Sep 2020 (Study Day 29) - 10 Oct 2020 (Study Day 39)	Headache
Cholecystectomy*	23 Feb 2021 (Study Day 175) - 23 Feb 2021 (Study Day 175)	Adverse Event
Amoxicillin; clavulanate potassium	25 Feb 2021 (Study Day 177) - Ongoing	Cholelithiasis
Oxycodone; paracetamol	25 Feb 2021 (Study Day 177) - Ongoing	Cholelithiasis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 1/mild	Related	11 Sep 2020 (Study Day 10) - 11 Sep 2020 (Study Day 10)
Headache	Grade 1/mild	Related	07 Oct 2020 (Study Day 36) - 10 Oct 2020 (Study Day 39)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US391-2121 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	08 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	06 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Small Intestinal Obstruction/Small Bowel Obstruction	SAE	Grade 4	Not related	17 Dec 2020 (Study Day 101) – 18 Dec 2020 (Study Day 102)	Recovered/resolved
Atrial Fibrillation/ Paroxysmal Atrial Fibrillation	SAE	Grade 3/ severe	Not related	20 Dec 2020 (Study Day 104) – 25 Dec 2020 (Study Day 109)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US391-2121, a 73-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 08 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 06 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 17 Dec 2020 (Study Day 101), 100 days after the first dose and 72 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of small intestinal obstruction. Action taken with the IP was not applicable. The event of small bowel obstruction lasted for 2 days, after which it was considered to be recovered/resolved on 18 Dec 2020 (Study Day 102). The investigator assessed the event of small intestinal obstruction to be not related to the IP.

On 20 Dec 2020 (Study Day 104), 103 days after the first dose and 75 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of atrial fibrillation. Action taken with the IP was not applicable. The event of paroxysmal atrial fibrillation lasted for 6 days, after which it was considered to be recovered/resolved on 25 Dec 2020 (Study Day 109). The investigator assessed the event of atrial fibrillation to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001186	Small intestinal obstruction
MOD-2020-001186	Atrial fibrillation

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cardioversion	Direct current cardioversion	1st in Feb 2012; 2nd May 2012
Endometriosis	Endometriosis	1972 - 1984
Benign neoplasm of thyroid gland	Benign thyroid nodules	1982 - 1984
Drug hypersensitivity	Sulfa allergy-hives	1984 - Ongoing
Hysterectomy	Total abdominal hysterectomy	1984 - 1984
Post procedural hypothyroidism	Hypothyroidism (post-surgical)	1984 - Ongoing
Thyroidectomy	Thyroidectomy	1984 - 1984
Drug hypersensitivity	Penicillin allergy	1990 - Ongoing
Cholelithiasis	Gall stones	1994 - 1995
Cholecystectomy	Gallbladder removal	1995 - 1995
Drug hypersensitivity	Demerol allergy-vomiting	1995 - Ongoing
Arthritis	Arthritis	2009 - Ongoing
Knee arthroplasty	Left knee replacement (secondary to arthritis)	2009 - 2009
Hip arthroplasty	Left hip replacement (secondary to arthritis)	2010 - 2010
Atrial fibrillation	Atrial fibrillation	2011 - Ongoing
Cardiac ablation	Heart ablation	May 2012 - May 2012
Drug hypersensitivity	Zofran allergy-vomiting	2014 - Ongoing
Hypertension	Hypertension	2015 - Ongoing
Knee arthroplasty	Right knee replacement (secondary to arthritis)	2015 - 2015
Limb injury	Fall-shoulder injury (right)	2017 - 2017
Shoulder arthroplasty	Right shoulder replacement	2017 - 2017
Drug eruption	Prednisone allergy-rash	2018 - Ongoing
Facial paralysis	Bell's palsy	2018 - 2019
Cataract	Cataracts-bilateral	Feb 2020 - May 2020
Cataract operation	Cataract surgery-left	Feb 2020 - Feb 2020
Cataract operation	Cataract surgery-right	May 2020 - May 2020

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Osteoarthritis	Degenerative joint disease, right hip	Jun 2020 - Ongoing
Joint range of motion decreased	Decreased range of motion right hip	08 Sep 2020 (Study Day 1) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Estrogens conjugated	1984 - Ongoing	Hormone Replacement
Levothyroxine sodium	1984 - Ongoing	Hypothypoidism
Apixaban	2011 - Ongoing	Atrial Fibrillation
Sotalol	2011 - 28 Dec 2020 (Study Day 112)	Atrial Fibrillation
Amlodipine	2015 - 28 Dec 2020 (Study Day 112)	Hypertension
Paracetamol	2015 - Ongoing	Arthritis
Influenza vaccine	21 Oct 2020 (Study Day 44) - 21 Oct 2020 (Study Day 44)	Flu Prevention
Bowel resection*	18 Dec 2020 (Study Day 102) - 18 Dec 2020 (Study Day 102)	Adverse Event
Cefepime	18 Dec 2020 (Study Day 102) - 18 Dec 2020 (Study Day 102)	Infection Prophylaxis
Ct abdomen/pelvis with contrast*	18 Dec 2020 (Study Day 102) - 18 Dec 2020 (Study Day 102)	Diagnostic
Diltiazem	18 Dec 2020 (Study Day 102) - 19 Dec 2020 (Study Day 103)	Hypertension
Electrocardiogram*	18 Dec 2020 (Study Day 102) - 18 Dec 2020 (Study Day 102)	Diagnostic
Metoprolol	18 Dec 2020 (Study Day 102) - 22 Dec 2020 (Study Day 106)	Paroxysmal A-Fib
Morphine	18 Dec 2020 (Study Day 102) - 25 Dec 2020 (Study Day 109)	Small Bowel Obstruction
Promethazine	18 Dec 2020 (Study Day 102) - 25 Dec 2020 (Study Day 109)	Small Bowl Obstruction
X-ray chest*	18 Dec 2020 (Study Day 102) - 18 Dec 2020 (Study Day 102)	Diagnostic
Digoxin	19 Dec 2020 (Study Day 103) - 19 Dec 2020 (Study Day 103)	Paroxysmal A-Fib
Potassium chloride	19 Dec 2020 (Study Day 103) - 27 Dec 2020 (Study Day 111)	Hyperkalemia
Cefepime	20 Dec 2020 (Study Day 104) - 25 Dec 2020 (Study Day 109)	Prophylaxis For Small Bowel Obstruction
Esmolol	20 Dec 2020 (Study Day 104) - 25 Dec 2020 (Study Day 109)	Paroxysmal A-Fib
Melatonin	20 Dec 2020 (Study Day 104) - 26 Dec 2020 (Study Day 110)	Insomnia
Trazodone	20 Dec 2020 (Study Day 104) - 27 Dec 2020 (Study Day 111)	Insomnia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amino acids nos; glucose; lipids nos	21 Dec 2020 (Study Day 105) - 28 Dec 2020 (Study Day 112)	Nutritional Support
Amiodarone	21 Dec 2020 (Study Day 105) - 27 Dec 2020 (Study Day 111)	Paroxysmal A-Fib
Digoxin	21 Dec 2020 (Study Day 105) - 25 Dec 2020 (Study Day 109)	Paroxysmal A-Fib
Enoxaparin sodium	21 Dec 2020 (Study Day 105) - 27 Dec 2020 (Study Day 111)	Clot Prevention
Olanzapine	21 Dec 2020 (Study Day 105) - 21 Dec 2020 (Study Day 105)	Post-Op Altered Mental Status
Transthoracic echocardiogram*	21 Dec 2020 (Study Day 105) - 21 Dec 2020 (Study Day 105)	Diagnostic
Furosemide	22 Dec 2020 (Study Day 106) - 24 Dec 2020 (Study Day 108)	Small Bowel Obstruction
Levothyroxine	23 Dec 2020 (Study Day 107) - 27 Dec 2020 (Study Day 111)	Hypothyroidism Post Thyroidectomy
Paracetamol	26 Dec 2020 (Study Day 110) - 26 Dec 2020 (Study Day 110)	Post Surgery - Small Bowel Obstruction
Amiodarone	27 Dec 2020 (Study Day 111) - Ongoing	Paroxysmal A-Fib
Amlodipine	27 Jan 2021 (Study Day 142) - Ongoing	Hypertension
Sotalol	27 Jan 2021 (Study Day 142) - Ongoing	Atrial Fibrillation

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Pleural Effusion	Grade 1/mild	Not related	18 Dec 2020 (Study Day 102) - 21 Dec 2020 (Study Day 105)
Left Atrial Enlargement	Grade 1/mild	Not related	21 Dec 2020 (Study Day 105) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US391-2241 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	12 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pulmonary Embolism/Pulmonary Embolism, Lll	SAE, AE leading to withdrawal from study vaccine	Grade 4	Not related	03 Nov 2020 (Study Day 23) – 09 Nov 2020 (Study Day 29)	Recovered/ resolved
Schizophrenia/Worsening Of Schizophrenia Psychotic Disorder	SAE	Grade 3/ severe	Not related	01 Dec 2020 (Study Day 51) – 04 Dec 2020 (Study Day 54)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US391-2241, a 59-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 12 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Nov 2020 (Study Day 23), 22 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of pulmonary embolism. On 08 Nov 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event of pulmonary embolism. The event of pulmonary embolism, lll lasted for 7 days, after which it was considered to be recovered/resolved on 09 Nov 2020 (Study Day 29). The investigator assessed the event of pulmonary embolism to be not related to the IP.

On 01 Dec 2020 (Study Day 51), 50 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of schizophrenia. On 08 Nov 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event of pulmonary embolism. The event of worsening of schizophrenia psychotic disorder lasted for 4 days, after which it was considered to be recovered/resolved on 04 Dec 2020 (Study Day 54). The investigator assessed the event of schizophrenia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000646	Pulmonary embolism
MOD-2020-001041	Schizophrenia

Study Completion/Discontinuation

On 04 Feb 2021 (Study Day 116), the participant discontinued from the study due to physician decision (participant was withdrawn due to his refusal to medically manage his mental health (schizophrenia); realizing that this condition will likely worsen without treatment, participant withdrawn.).

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Food allergy	Allergy to oranges- itchy all over	Not reported - Ongoing
Pruritus allergic	Allergy to tomatoes- itchy all over	Not reported - Ongoing
Pain	General body aches	2000 - Ongoing
Schizophrenia	Schizophrenia psychotic disorder	2006 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2000 - Ongoing	Generalized Body Aches
Chest x-ray*	04 Nov 2020 (Study Day 24) - 04 Nov 2020 (Study Day 24)	Diagnostic
Doppler ultrasound*	04 Nov 2020 (Study Day 24) - 04 Nov 2020 (Study Day 24)	Diagnostic
Electrocardiogram*	04 Nov 2020 (Study Day 24) - 04 Nov 2020 (Study Day 24)	Diagnostic
Enoxaparin sodium	04 Nov 2020 (Study Day 24) - 05 Nov 2020 (Study Day 25)	Pulmonary Embolism
Iopamidol	04 Nov 2020 (Study Day 24) - 04 Nov 2020 (Study Day 24)	Diagnostic Agent For Cta
Ketorolac tromethamine	04 Nov 2020 (Study Day 24) - 04 Nov 2020 (Study Day 24)	Chest Pain
Transthoracic echocardiography*	04 Nov 2020 (Study Day 24) - 04 Nov 2020 (Study Day 24)	Diagnostic

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Apixaban	05 Nov 2020 (Study Day 25) - Ongoing	Pulmonary Embolism
Codeine phosphate; paracetamol	05 Nov 2020 (Study Day 25) - 05 Nov 2020 (Study Day 25)	Chest Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Asthenia	Grade 4	Related	03 Nov 2020 (Study Day 23) - 06 Nov 2020 (Study Day 26)
Pleuritic Pain	Grade 1/mild	Related	03 Nov 2020 (Study Day 23) - 05 Nov 2020 (Study Day 25)
Dry Skin	Grade 1/mild	Not related	21 Nov 2020 (Study Day 41) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US392-2067 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	01 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Confusional State/Confusion	SAE, AE leading to withdrawal from study vaccine	Grade 3/severe	Not related	07 Sep 2020 (Study Day 7) – 09 Sep 2020 (Study Day 9)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US392-2067, a 77-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 01 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Sep 2020 (Study Day 7), 6 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of confusional state. On 28 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of confusion lasted for 3 days, after which it was considered to be recovered/resolved on 09 Sep 2020 (Study Day 9). The investigator assessed the event of confusional state to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000273	Confusional state

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Allergy to penicillin	1950 - 2000
Tonsillectomy	Tonsillectomy	Dec 1953 - Dec 1953
Tonsillitis	Tonsillitis	Dec 1953 - Dec 1953
Female sterilisation	Tubal ligation	Jun 1973 - Jun 1973
Breast cyst excision	Right breast cyst removal benign	1975 - 1975
Caffeine allergy	Allergy of caffeine	1980 - Ongoing
Menorrhagia	Menorrhagia	1982 - 1982
Hysterectomy	Hysterectomy	12 Mar 1982 (Study Day -14053) - 12 Mar 1982 (Study Day -14053)
Drug hypersensitivity	Allergy to erythromycin	1997 - Ongoing
Allergy to chemicals	Chronic allergies (chemical)	1998 - Ongoing
Urinary incontinence	Urinary incontinence	2001 - 2001
Urinary bladder suspension	Bladder suspension	05 Sep 2001 (Study Day -6936) - 05 Sep 2001 (Study Day -6936)
Hypercholesterolaemia	Hypercholesterolemia	2003 - Ongoing
Breast cancer	Left breast cancer	2004 - 21 Jan 2005 (Study Day -5702)
Drug hypersensitivity	Allergy to nitrofurantoin	2005 - Ongoing
Breast conserving surgery	Lumpectomy left breast(cancerous)	21 Jan 2005 (Study Day -5702) - 21 Jan 2005 (Study Day -5702)
Sleep apnoea syndrome	Sleep apnea	2008 - Ongoing
Cataract	Bilateral cataracts	2010 - 2010
Cataract operation	Bilateral cataract surgery	2010 - 2010
Drug hypersensitivity	Allergy to ciprofloxacin	2010 - Ongoing
Drug hypersensitivity	Allergy to septra	2010 - Ongoing
Hypothyroidism	Hypothyroidism	2010 - Ongoing
Urinary tract infection	Chronic recurrent uti's	2010 - Ongoing
Musculoskeletal pain	Left shoulder pain	2011 - 09 Sep 2011 (Study Day -3280)
Musculoskeletal pain	Right shoulder pain	2011 - 30 Dec 2011 (Study Day -3168)
Shoulder arthroplasty	Left shoulder replacement	09 Sep 2011 (Study Day -3280) - 09 Sep 2011 (Study Day -3280)
Shoulder arthroplasty	Right shoulder replacement	30 Dec 2011 (Study Day -3168) - 30 Dec 2011 (Study Day -3168)
Dizziness	Dizziness	2013 - Ongoing
Atrial fibrillation	Atrial fibrillation	2015 - Ongoing
Osteoarthritis	Osteoarthritis bilateral hands	2015 - Ongoing
Dyspnoea	Chronic shortness of breath	2017 - Ongoing
Arthralgia	Left knee pain	2018 - 2018
Fatigue	Fatigue	2018 - Ongoing
Knee arthroplasty	Left knee replacement	07 Jun 2018 (Study Day -817) - 07 Jun 2018 (Study Day -817)
Dysphagia	Dysphagia	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Colecalciferol	2010 - Ongoing	Supplement
Fallopia japonica; vitis vinifera seed	2010 - Ongoing	Supplement
Levothyroxine sodium	2010 - Ongoing	Hypothyroidism
Omega-3 nos	2010 - Ongoing	Supplement
Ubidecarenone	2010 - Ongoing	Supplement
Vaccinium macrocarpon	2010 - Ongoing	Supplement
Apixaban	2015 - Ongoing	Atrial Fibrillation
Atorvastatin	2015 - Ongoing	Hypercholesterolemia
Azelastine hydrochloride; fluticasone propionate	2017 - Ongoing	Chronic Allergies (Chemical)
Ct chest*	07 Sep 2020 (Study Day 7) - 07 Sep 2020 (Study Day 7)	Adverse Event
Ct scan of head*	07 Sep 2020 (Study Day 7) - 07 Sep 2020 (Study Day 7)	Adverse Event
Eeg*	08 Sep 2020 (Study Day 8) - 08 Sep 2020 (Study Day 8)	Adverse Event
Mri head*	08 Sep 2020 (Study Day 8) - 08 Sep 2020 (Study Day 8)	Adverse Event
Echocardiogram*	09 Sep 2020 (Study Day 9) - 09 Sep 2020 (Study Day 9)	Adverse Event
Influenza vaccine	14 Sep 2020 (Study Day 14) - 14 Sep 2020 (Study Day 14)	Flu Prophylaxis
Eeg(72 hours)*	27 Sep 2020 (Study Day 27) - 27 Sep 2020 (Study Day 27)	Adverse Event
Nitrofurantoin	27 Dec 2020 (Study Day 118) - 05 Jan 2021 (Study Day 127)	Ae#6 Worsening Chronic Recurrent Urinary Tract Infections
Ceftriaxone	28 Dec 2020 (Study Day 119) - 28 Dec 2020 (Study Day 119)	Ae#6 Worsening Of Chronic Recurrent Urinary Tract Infections
I.v. solutions	28 Dec 2020 (Study Day 119) - 28 Dec 2020 (Study Day 119)	Nausea/Vomiting/Diarrhea(Ae 4,5,6)
Ondansetron hydrochloride	28 Dec 2020 (Study Day 119) - 28 Dec 2020 (Study Day 119)	Nausea/Vomiting (Ae 4/5)

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 1/mild	Not related	28 Sep 2020 (Study Day 28) - 29 Sep 2020 (Study Day 29)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diarrhoea	Grade 2/moderate	Not related	27 Dec 2020 (Study Day 118) - 28 Dec 2020 (Study Day 119)
Nausea	Grade 2/moderate	Not related	27 Dec 2020 (Study Day 118) - 28 Dec 2020 (Study Day 119)
Urinary Tract Infection	Grade 2/moderate	Not related	27 Dec 2020 (Study Day 118) - 04 Jan 2021 (Study Day 126)
Vomiting	Grade 2/moderate	Not related	27 Dec 2020 (Study Day 118) - 28 Dec 2020 (Study Day 119)
Dacryostenosis Acquired	Grade 2/moderate	Not related	01 Feb 2021 (Study Day 154) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US392-2080 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hypertension/Worsening Of Hypertension	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	02 Oct 2020 (Study Day 30) – 24 Feb 2021 (Study Day 175)	Recovered/ resolved
Septic Shock/Septic Shock	SAE	Grade 3/ severe	Not related	03 Feb 2021 (Study Day 154) – 07 Feb 2021 (Study Day 158)	Recovered/ resolved
Polyarteritis Nodosa/Polyarteritis Nodosa	SAE	Grade 3/ severe	Not related	10 Feb 2021 (Study Day 161) – Ongoing	Unknown

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US392-2080, a 46-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 03 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Oct 2020 (Study Day 30), 29 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of hypertension. On 30 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event of hypertension. The event of worsening of hypertension lasted for 146 days, after which it was considered to be recovered/resolved on 24 Feb 2021 (Study Day 175). The investigator assessed the event of hypertension to be not related to the IP.

On 03 Feb 2021 (Study Day 154), 153 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of septic shock. On 30 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event of hypertension. The event of septic shock lasted for 5 days, after which it was considered to be recovered/resolved on 07 Feb 2021 (Study Day 158). The investigator assessed the event of septic shock to be not related to the IP.

On 10 Feb 2021 (Study Day 161), 160 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of polyarteritis nodosa. On 30 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event of hypertension. The outcome of the event was unknown. The investigator assessed the event of polyarteritis nodosa to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-033666	Septic shock
MOD-2021-033666	Polyarteritis nodosa

Study Completion/Discontinuation

On 25 Feb 2021 (Study Day 176), the participant discontinued from the study due to lost to follow-up.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Alcohol abuse	Alcohol abuse	Not reported - Ongoing
Anxiety	Anxiety	Not reported - Ongoing
Cardiac failure chronic	Chronic heart failure	Not reported - Ongoing
Chlamydial infection	Chlamydia	Not reported
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	Not reported - Ongoing
Drug abuse	Cocaine abuse	Not reported - Ongoing
Gonococcal infection	Gonococcal infection	Not reported
Herpes simplex	Herpes simplex	Not reported
Hyperlipidaemia	Hyperlipidemia	Not reported - Ongoing
Oedema peripheral	Peripheral edema	Not reported - Ongoing
Sleep apnoea syndrome	Obstructive sleep apnea	Not reported - Ongoing
Syphilis	Syphilis infection	Not reported
Uterine haemorrhage	Abnormal uterine bleeding	Not reported
Chronic hepatitis B	Chronic hepatitis b	1993 - Ongoing
Depression	Depression	1993 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	1993 - Ongoing
Headache	Headaches	1993 - Ongoing
Hepatic cirrhosis	Cirrhosis	1993 - Ongoing
Schizoaffective disorder	Schizo affective disorder	1993 - Ongoing
Uterine leiomyoma	Uterine fibroids	1993 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	20 Jun 1993 (Study Day -9937) - Ongoing
Caesarean section	Caesarean section	1995 - 1995
Knee operation	Knee surgery right	1995 - 1995
Female sterilisation	Tubal ligation	1997 - 1997
Joint dislocation	Patella dislocated right	1997 - 1997
Joint dislocation reduction	Reconstruction of dislocated patella right	1997 - 1997
Caesarean section	Cesarean section	21 Jan 1997 (Study Day -8626) - 21 Jan 1997 (Study Day -8626)
Obesity	Obesity	2010 - Ongoing
Menorrhagia	Menorrhagia	2012 - Sep 2014
Hysterectomy	Hysterectomy	Sep 2014 - Sep 2014

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine	30 Jun 1993 (Study Day -9927) - 09 Sep 2020 (Study Day 7)	Hypertension
Amlodipine	09 Sep 2020 (Study Day 7) - 20 Oct 2020 (Study Day 48)	Hypertension
Amlodipine	21 Oct 2020 (Study Day 49) - Ongoing	Worsening Hypertension(Ae #1)
Losartan	21 Oct 2020 (Study Day 49) - Ongoing	Worsening Hypertension(Ae #1)
Acetylsalicylic acid	2021 - Ongoing	Sae#3 Polyarteritis Nodosa
Albumin nos	2021 - 2021	Acute Renal Failure
Amiodarone	2021 - 05 Feb 2021 (Study Day 156)	Atrial Fibrillation
Aripiprazole	2021 - Ongoing	Schizo Affective Disorder
Atorvastatin	2021 - Ongoing	Hyperlipidemia
Buspirone	2021 - Ongoing	Anxiety
Calcium chloride; potassium chloride; sodium lactate	2021 - Ongoing	Hydration
Carvedilol	2021 - Ongoing	Hypertension
Ceftriaxone	2021 - Ongoing	Sae#1(Septic Shock)
Chlorhexidine gluconate	2021 - Ongoing	Ae#10 (Left Dorsal Tongue Ulcerative Lesion)
Chlortalidone	2021 - Ongoing	Hypertension
Diclofenac	2021 - Ongoing	Pain
Diltiazem	2021 - Ongoing	Atrial Fibrillation
Duloxetine	2021 - Ongoing	Neuropathy Pain
Famotidine	2021 - Ongoing	Gerd
Fentanyl	2021 - Ongoing	Pain
Fluoxetine	2021 - Ongoing	Depression

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fluticasone	2021 - Ongoing	Chronic Obstructive Pulmonary Disease
Folic acid	2021 - Ongoing	Anemia
Furosemide	2021 - 07 Feb 2021 (Study Day 158)	Acute Renal Failure
Gabapentin	2021 - Ongoing	Neuropathy Pain
Gabapentin	2021 - Ongoing	Sae#3 (Polyarteritis Nodosa)
Hydrochlorothiazide; losartan potassium	2021 - Ongoing	Hypertension
Hydrocodone bitartrate; paracetamol	2021 - Ongoing	Sae#3 (Polyarteritis Nodosa)
Hydromorphone hydrochloride	2021 - Ongoing	Pain
Ipratropium bromide	2021 - Ongoing	Chronic Obstructive Pulmonary Disease
Ketorolac tromethamine	2021 - Ongoing	Pain
Lidocaine	2021 - Ongoing	Ae#10(Left Dorsal Tongue Ulcerative Lesion)
Lidocaine	2021 - Ongoing	Pain
Lorazepam	2021 - Ongoing	Anxiety
Macrogol	2021 - Ongoing	Constipation
Methocarbamol	2021 - Ongoing	Sae#3(Polyarteritis Nodosa)
Metoprolol	2021 - Ongoing	Hypertension
Norepinephrine bitartrate	2021 - Ongoing	Sae#1(Septic Shock)
Nystatin	2021 - Ongoing	Sae#3(Polyarteritis Nodosa)
Ondansetron	2021 - Ongoing	Nausea/Vomiting
Piperacillin	2021 - Ongoing	Sae#1 (Septic Shock)
Salbutamol	2021 - Ongoing	Chronic Obstructive Pulmonary Disease
Sennoside a+b	2021 - Ongoing	Constipation
Thiamine	2021 - Ongoing	Supplement
Tiotropium bromide	2021 - Ongoing	Chronic Obstructive Pulmonary Disease
Tramadol	2021 - Ongoing	Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypertension	Grade 2/moderate	Not related	02 Oct 2020 (Study Day 30) - 24 Feb 2021 (Study Day 175)
Tongue Ulceration	Grade 2/moderate	Not related	09 Jan 2021 (Study Day 129) - Ongoing
Cystitis	Grade 2/moderate	Not related	03 Feb 2021 (Study Day 154) - 01 Mar 2021 (Study Day 180)
Hyponatraemia	Grade 1/mild	Not related	03 Feb 2021 (Study Day 154) - 24 Feb 2021 (Study Day 175)
Left Ventricular Hypertrophy	Grade 3/severe	Not related	03 Feb 2021 (Study Day 154) - Ongoing
Normocytic Anaemia	Grade 2/moderate	Not related	03 Feb 2021 (Study Day 154) - Ongoing
Osteoarthritis	Grade 2/moderate	Not related	03 Feb 2021 (Study Day 154) - Ongoing
Thrombophlebitis Superficial	Grade 1/mild	Not related	08 Feb 2021 (Study Day 159) - Ongoing
Urinary Tract Infection	Grade 2/moderate	Not related	24 Feb 2021 (Study Day 175) - 01 Mar 2021 (Study Day 180)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2003 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	25 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Amnesia/Intermittent Memory Loss	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	09 Sep 2020 (Study Day 16) – 11 Sep 2020 (Study Day 18)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2003, a 72-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 25 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Sep 2020 (Study Day 16), 15 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of amnesia. On 21 Sep 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of intermittent memory loss lasted for 3 days, after which it was considered to be recovered/resolved on 11 Sep 2020 (Study Day 18). The investigator assessed the event of amnesia to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hiatus hernia	Hiatal hernia	1962 - Ongoing
Drug hypersensitivity	Drug allergy - sulfa drugs	1980 - Ongoing
Drug hypersensitivity	Drug allergy -penicillin	1980 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Nephritis	Nephritis	1982 - 1982
Urinary tract infection	Urinary tract infection	1986 - 1986
Breast cancer	Breast cancer	2004 - 2004
Mitral valve incompetence	Mitral valve insufficieny	2004 - Ongoing
Postmenopause	Post-menopausal	2004 - Ongoing
Migraine	Migraines (light and noise)	2007 - Ongoing
Nausea	Nausea	2015 - Ongoing
Photopsia	Flashing lights in eyes bilateral	2019 - Ongoing
Sinus node dysfunction	Sick sinus syndrome	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Calcium citrate; vitamin d nos	2018 - Ongoing	Nutritional Supplement
Vitamin d nos	01 Jan 2021 (Study Day 130) - Ongoing	Nutritional Supplement
Ciprofloxacin	17 Mar 2021 (Study Day 205) - 24 Mar 2021 (Study Day 212)	Urinary Tract Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Amnesia	Grade 2/moderate	Not related	09 Sep 2020 (Study Day 16) - 11 Sep 2020 (Study Day 18)
Fatigue	Grade 1/mild	Related	09 Sep 2020 (Study Day 16) - 20 Sep 2020 (Study Day 27)
Nausea	Grade 2/moderate	Related	09 Sep 2020 (Study Day 16) - 20 Sep 2020 (Study Day 27)
Pyrexia	Grade 1/mild	Related	09 Sep 2020 (Study Day 16) - 16 Sep 2020 (Study Day 23)
Arthralgia	Grade 2/moderate	Not related	29 Oct 2020 (Study Day 66) - 20 Nov 2020 (Study Day 88)
Photopsia	Grade 1/mild	Not related	23 Dec 2020 (Study Day 121) - Ongoing
Urinary Tract Infection	Grade 2/moderate	Not related	17 Mar 2021 (Study Day 205) - 24 Mar 2021 (Study Day 212)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2005 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	25 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	21 Sep 2020 (Study Day 28)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hiatus Hernia/Hiatal Hernia	SAE	Grade 3/severe	Not related	20 Oct 2020 (Study Day 57) – 22 Oct 2020 (Study Day 59)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2005, a 79-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 25 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 21 Sep 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Oct 2020 (Study Day 57), 56 days after the first dose and 29 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of hiatus hernia. Action taken with the IP was not applicable. The event of hiatal hernia lasted for 3 days, after which it was considered to be recovered/resolved with sequelae on 22 Oct 2020 (Study Day 59). The investigator assessed the event of hiatus hernia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000552	Hiatus hernia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Blood cholesterol increased	High cholesterol	Not reported - Ongoing
Constipation	Chronic constipation	Not reported - Ongoing
Deafness	Hearing loss	Not reported - Ongoing
Depression	Depression	Not reported - Ongoing
Diarrhoea	Diarrhea - intermittent	Not reported - Ongoing
Dyshidrotic eczema	Dyshydrosis	Not reported - Ongoing
Herpes zoster	Shingles	Not reported
Hypertension	High blood pressure	Not reported - Ongoing
Hypothyroidism	Hypothyroidism	Not reported - Ongoing
Osteoporosis	Osteoporosis	Not reported - Ongoing
Urinary incontinence	Incontinence - urinary	Not reported - Ongoing
Type 2 diabetes mellitus	Diabetes type ii	1960 - Ongoing
Hysterectomy	Hysterectomy	1969 - 1969
Cholelithiasis	Gallstones	1976 - 1976
Carpal tunnel syndrome	Carpal tunnel right hand	2015 - Ongoing
Dry eye	Dry eyes	2017 - Ongoing
Gastrooesophageal reflux disease	Gerd	2018 - Ongoing
Osteoarthritis	Osteoarthritis right thumb	21 Jan 2020 (Study Day -217) - Ongoing
Dyshidrotic eczema	Dyshyrodrotic eczema b/l hands	May 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	2005 - Ongoing	Hypertension
Duloxetine	2007 - Ongoing	Depression
Insulin glargine	2010 - Ongoing	Diabetes Type 2
Insulin lispro	2010 - Ongoing	Diabetes Type 2
Calcium	2013 - Ongoing	Nutritional Supplement
Colecalciferol	2013 - Ongoing	Nutritional Supplement
Vitamin e nos	2013 - Ongoing	Nutritional Supplement
Omeprazole	2015 - 09 Oct 2020 (Study Day 46)	Gerd
Alendronate sodium	2017 - Ongoing	Osteoporosis
Atorvastatin	2017 - Ongoing	Dyslipidemia
Carmellose sodium	2017 - Ongoing	Dry Eye
Metoprolol	2017 - Ongoing	Hypertension
Acetylsalicylic acid	2018 - Ongoing	Cardiac Protection
Levothyroxine sodium	2018 - Ongoing	Hypothyroidism
Oxybutynin	2019 - Ongoing	Incontinence - Urinary
Colestipol	Mar 2020 - Ongoing	Dyslipidemia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrocortisone	May 2020 - 15 Nov 2020 (Study Day 83)	Dyshydrotic Eczema B/L Hands
Ranitidine	07 Sep 2020 (Study Day 14) - Ongoing	Gerd
Paracetamol	14 Sep 2020 (Study Day 21) - 15 Sep 2020 (Study Day 22)	Right Hip Joint Ache
Omeprazole	09 Oct 2020 (Study Day 46) - 20 Oct 2020 (Study Day 57)	Gerd
Bisacodyl	20 Oct 2020 (Study Day 57) - 22 Oct 2020 (Study Day 59)	Constipation
Ct neck without contrast*	20 Oct 2020 (Study Day 57) - 20 Oct 2020 (Study Day 57)	Adverse Event
Ct scan thorax without contrast*	20 Oct 2020 (Study Day 57) - 20 Oct 2020 (Study Day 57)	Adverse Event
Electrocardiogram*	20 Oct 2020 (Study Day 57) - 20 Oct 2020 (Study Day 57)	Adverse Event
Glucose	20 Oct 2020 (Study Day 57) - 22 Oct 2020 (Study Day 59)	Diabetes Mellitus Ii
Morphine	20 Oct 2020 (Study Day 57) - 22 Oct 2020 (Study Day 59)	Hiatal Hernia
Ondansetron	20 Oct 2020 (Study Day 57) - 22 Oct 2020 (Study Day 59)	Nausea/Vomiting
Pantoprazole	20 Oct 2020 (Study Day 57) - 22 Oct 2020 (Study Day 59)	Gerd
Paracetamol	20 Oct 2020 (Study Day 57) - 22 Oct 2020 (Study Day 59)	Hiatal Hernia
Promethazine	20 Oct 2020 (Study Day 57) - 22 Oct 2020 (Study Day 59)	Vomiting Secondary To Hiatal Hernia
Sodium chloride	20 Oct 2020 (Study Day 57) - 22 Oct 2020 (Study Day 59)	Hiatal Hernia
Chest x-ray*	21 Oct 2020 (Study Day 58) - 21 Oct 2020 (Study Day 58)	Adverse Event
Upper gi endoscopy*	21 Oct 2020 (Study Day 58) - 21 Oct 2020 (Study Day 58)	Adverse Event
Acetylsalicylic acid	19 Jan 2021 (Study Day 148) - 20 Jan 2021 (Study Day 149)	Bruised Knees Due To Fall
Paracetamol	20 Jan 2021 (Study Day 149) - 20 Jan 2021 (Study Day 149)	Bruised Knees Due To Fall
Paracetamol	04 Mar 2021 (Study Day 192) - 04 Mar 2021 (Study Day 192)	Injection Site Pain
Right hand x-ray*	08 Mar 2021 (Study Day 196) - 08 Mar 2021 (Study Day 196)	Adverse Event
Surgery on right eye tear duct*	11 Mar 2021 (Study Day 199) - 11 Mar 2021 (Study Day 199)	Adverse Event
Neomycin; polymyxin b	13 Mar 2021 (Study Day 201) - Ongoing	Nasolacrimal Stenosis Of Right Eye

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Pain	Grade 1/mild	Related	01 Sep 2020 (Study Day 8) - 06 Sep 2020 (Study Day 13)
Gastrooesophageal Reflux Disease	Grade 2/moderate	Not related	07 Sep 2020 (Study Day 14) - 17 Oct 2020 (Study Day 54)
Vomiting	Grade 1/mild	Not related	12 Sep 2020 (Study Day 19) - 14 Sep 2020 (Study Day 21)
Arthralgia	Grade 1/mild	Not related	14 Sep 2020 (Study Day 21) - 15 Sep 2020 (Study Day 22)
Dysphagia	Grade 2/moderate	Not related	01 Oct 2020 (Study Day 38) - 22 Oct 2020 (Study Day 59)
Nausea	Grade 2/moderate	Not related	01 Oct 2020 (Study Day 38) - 22 Oct 2020 (Study Day 59)
Vomiting	Grade 2/moderate	Not related	01 Oct 2020 (Study Day 38) - 22 Oct 2020 (Study Day 59)
Weight Decreased	Grade 1/mild	Not related	01 Oct 2020 (Study Day 38) - 31 Oct 2020 (Study Day 68)
Vomiting	Grade 1/mild	Not related	09 Oct 2020 (Study Day 46) - 17 Oct 2020 (Study Day 54)
Dehydration	Grade 2/moderate	Not related	20 Oct 2020 (Study Day 57) - 20 Oct 2020 (Study Day 57)
Dacryostenosis Acquired	Grade 2/moderate	Not related	18 Feb 2021 (Study Day 178) - Ongoing
Fall	Grade 2/moderate	Not related	06 Mar 2021 (Study Day 194) - 06 Mar 2021 (Study Day 194)
Peripheral Swelling	Grade 2/moderate	Not related	06 Mar 2021 (Study Day 194) - 01 Apr 2021 (Study Day 220)
Glaucoma	Grade 2/moderate	Not related	24 Mar 2021 (Study Day 212) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2018 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 28)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug Withdrawal Syndrome/Suboxone Withdrawal	SAE	Grade 3/severe	Not related	04 Jan 2021 (Study Day 130) – 18 Mar 2021 (Study Day 203)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2018, a 47-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 24 Sep 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Jan 2021 (Study Day 130), 129 days after the first dose and 102 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of drug withdrawal syndrome. Action taken with the IP was not applicable. The event of suboxone withdrawal lasted for 74 days, after which it was considered to be recovered/resolved on 18 Mar 2021 (Study Day 203). The investigator assessed the event of drug withdrawal syndrome to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005904	Drug withdrawal syndrome

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug abuse	Drug abuse	1995 - 2015
Ex-drug abuser	Ex heroin user	1995 - 2015
Anxiety	Anxiety	2000 - Ongoing
Depression	Depression	2000 - Ongoing
Gastrooesophageal reflux disease	Gerd	2005 - Ongoing
Arthralgia	Knee pain	2012 - Ongoing
Back pain	Back pain	2012 - Ongoing
Myalgia	Muscle aches	2012 - Ongoing
Neuralgia	Neuropathy related to back pain	2012 - Ongoing
Pain in extremity	Leg pain	2012 - Ongoing
Hepatitis C	Hepatitis c	2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Omeprazole	2012 - Ongoing	Gerd
Gabapentin	2017 - Ongoing	Neuropathy Related To Back Pain
Ibuprofen	2017 - Ongoing	Back/ Knee Pain
Buprenorphine hydrochloride; naloxone hydrochloride	Jul 2020 - Jan 2021	Opioid Dependence
Cefalexin	13 Oct 2020 (Study Day 47) - 09 Nov 2020 (Study Day 74)	Rash On Bilateral Legs Urticaria
Gi cocktail	27 Oct 2020 (Study Day 61) - 27 Oct 2020 (Study Day 61)	Abdominal Pain
Ondansetron	27 Oct 2020 (Study Day 61) - 27 Oct 2020 (Study Day 61)	Abdominal Pain
Pantoprazole	27 Oct 2020 (Study Day 61) - 27 Oct 2020 (Study Day 61)	Abdominal Pain
Aluminium hydroxide; magnesium hydroxide	05 Mar 2021 (Study Day 190) - 15 Mar 2021 (Study Day 200)	Suboxone Withdrawal
Baclofen	05 Mar 2021 (Study Day 190) - 15 Mar 2021 (Study Day 200)	Suboxone Withdrawal
Dicycloverine	05 Mar 2021 (Study Day 190) - 15 Mar 2021 (Study Day 200)	Suboxone Withdrawal
Folic acid	05 Mar 2021 (Study Day 190) - 15 Mar 2021 (Study Day 200)	Nutritional Supplement
Hydroxyzine embonate	05 Mar 2021 (Study Day 190) - 15 Mar 2021 (Study Day 200)	Anxiety

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ondansetron	05 Mar 2021 (Study Day 190) - 15 Mar 2021 (Study Day 200)	Suboxone Withdrawal
Paracetamol	05 Mar 2021 (Study Day 190) - 15 Mar 2021 (Study Day 200)	Neuropathy Pain
Thiamine	05 Mar 2021 (Study Day 190) - 15 Mar 2021 (Study Day 200)	Nutritional Supplement
Vitamins nos	05 Mar 2021 (Study Day 190) - 15 Mar 2021 (Study Day 200)	Nutritional Supplement
Olanzapine	15 Mar 2021 (Study Day 200) - Ongoing	Insomnia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 1/mild	Related	28 Aug 2020 (Study Day 1) - 23 Sep 2020 (Study Day 27)
Fatigue	Grade 1/mild	Related	28 Aug 2020 (Study Day 1) - 05 Sep 2020 (Study Day 9)
Arthralgia	Grade 1/mild	Related	24 Sep 2020 (Study Day 28) - 06 Oct 2020 (Study Day 40)
Myalgia	Grade 1/mild	Related	24 Sep 2020 (Study Day 28) - 06 Oct 2020 (Study Day 40)
Fatigue	Grade 1/mild	Related	24 Sep 2020 (Study Day 28) - 06 Oct 2020 (Study Day 40)
Urticaria	Grade 2/moderate	Not related	10 Oct 2020 (Study Day 44) - 24 Oct 2020 (Study Day 58)
Abdominal Pain	Grade 2/moderate	Not related	26 Oct 2020 (Study Day 60) - 28 Oct 2020 (Study Day 62)
Insomnia	Grade 2/moderate	Not related	05 Jan 2021 (Study Day 131) - Ongoing
Abscess Limb	Grade 2/moderate	Not related	08 Feb 2021 (Study Day 165) - 08 Mar 2021 (Study Day 193)
Dry Skin	Grade 1/mild	Not related	15 Feb 2021 (Study Day 172) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2051 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	01 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	05 Oct 2020 (Study Day 35)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pneumonia/Pneumonia	SAE	Grade 4	Not related	19 Nov 2020 (Study Day 80) – 23 Dec 2020 (Study Day 114)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2051, a 57-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 01 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 05 Oct 2020 (Study Day 35). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 19 Nov 2020 (Study Day 80), 79 days after the first dose and 45 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pneumonia. Action taken with the IP was not applicable. The event of pneumonia lasted for 35 days, after which it was considered to be recovered/resolved on 23 Dec 2020 (Study Day 114). The investigator assessed the event of pneumonia to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000982	Pneumonia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Nephrolithiasis	Kidney stones	2007 - 2007
Hypertension	Hypertension	2013 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	2013 - Ongoing	Hypertension
Vitamins nos	2014 - Ongoing	Nutritional Supplement
Ascorbic acid	Jun 2020 - Ongoing	Nutritional Supplement
Omeprazole	03 Sep 2020 (Study Day 3) - 19 Nov 2020 (Study Day 80)	Acid Indigestion
Amoxicillin	19 Nov 2020 (Study Day 80) - 24 Nov 2020 (Study Day 85)	Pneumonia
Azithromycin	19 Nov 2020 (Study Day 80) - 23 Nov 2020 (Study Day 84)	Pneumonia
Computerized tomography of chest*	20 Nov 2020 (Study Day 81) - 20 Nov 2020 (Study Day 81)	Adverse Event
Levofloxacin	23 Nov 2020 (Study Day 84) - 14 Dec 2020 (Study Day 105)	Pneumonia
Levofloxacin	23 Nov 2020 (Study Day 84) - 14 Dec 2020 (Study Day 105)	Valley Fever
Fluconazole	24 Dec 2020 (Study Day 115) - Ongoing	Valley Fever
Branch retinal vein occlusion with retinal neovascularization*	05 Jan 2021 (Study Day 127) - 05 Jan 2021 (Study Day 127)	Adverse Event
Endoscopy*	12 Feb 2021 (Study Day 165) - 12 Feb 2021 (Study Day 165)	Adverse Event
Omeprazole	23 Feb 2021 (Study Day 176) - Ongoing	Acid Indigestion
Bismuth subsalicylate	16 Mar 2021 (Study Day 197) - Ongoing	H. Pylori Infection
Doxycycline	16 Mar 2021 (Study Day 197) - Ongoing	H. Pylori Infection
Metronidazole	16 Mar 2021 (Study Day 197) - Ongoing	H. Pylori Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Dyspepsia	Grade 2/moderate	Not related	03 Sep 2020 (Study Day 3) - 19 Nov 2020 (Study Day 80)
Mass	Grade 2/moderate	Not related	19 Nov 2020 (Study Day 80) - Ongoing
Coccidioidomycosis	Grade 2/moderate	Not related	12 Dec 2020 (Study Day 103) - Ongoing
Eye Haemorrhage	Grade 2/moderate	Not related	05 Jan 2021 (Study Day 127) - 12 Jan 2021 (Study Day 134)
Helicobacter Gastritis	Grade 2/moderate	Not related	12 Feb 2021 (Study Day 165) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2077 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	04 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	02 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Gastritis/Gastritis	SAE	Grade 3/severe	Not related	06 Nov 2020 (Study Day 64) – Ongoing	Not recovered/ not resolved
Nausea/Intermittent Nausea	SAE	Grade 3/severe	Not related	06 Nov 2020 (Study Day 64) – Ongoing	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2077, a 29-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 04 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 02 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Nov 2020 (Study Day 64), 63 days after the first dose and 35 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of gastritis. Action taken with the IP was not applicable. The event of gastritis was considered to be ongoing. The investigator assessed the event of gastritis to be not related to the IP.

On 06 Nov 2020 (Study Day 64), 63 days after the first dose and 35 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of nausea. Action taken with the IP was not applicable. The event of intermittent nausea was considered to be ongoing. The investigator assessed the event of nausea to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000774	Gastritis
MOD-2020-000774	Nausea

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Appendicectomy	Appendectomy	1994 - 1994
Appendicitis	Appendicitis	1994 - 1994
Aspiration pleural cavity	Right thoracentesis	2008 - 2008
Pneumonia	Pneumonia	2008 - 2008
Fibula fracture	Broken fibula	Nov 2019 - Nov 2019
Fibula fracture	Broken tibula	Nov 2019 - Nov 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	04 Sep 2020 (Study Day 1) - 04 Oct 2020 (Study Day 31)	Injection Site Pain
Paracetamol	05 Sep 2020 (Study Day 2) - 05 Sep 2020 (Study Day 2)	Pain At Injection Site
Melatonin	Oct 2020 - Ongoing	Nutritional Supplement
Paracetamol	03 Oct 2020 (Study Day 30) - 05 Oct 2020 (Study Day 32)	Headache, Body Aches, Fever
Gamma-aminobutyric acid; theanine	14 Oct 2020 (Study Day 41) - Ongoing	Anxiety
Vitamins nos	17 Oct 2020 (Study Day 44) - Ongoing	Vitamin Supplement
Bismuth subsalicylate	07 Nov 2020 (Study Day 65) - 09 Nov 2020 (Study Day 67)	Intermittent Nausea
Dicycloverine hydrochloride	11 Nov 2020 (Study Day 69) - 12 Nov 2020 (Study Day 70)	Nausea
Morphine	11 Nov 2020 (Study Day 69) - 12 Nov 2020 (Study Day 70)	Gastric Pain

Oxycodone hydrochloride; paracetamol	05 Jan 2021 (Study Day 124) - Ongoing	Leg Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Anxiety	Grade 2/moderate	Not related	14 Oct 2020 (Study Day 41) - Ongoing
Pain In Extremity	Grade 2/moderate	Not related	05 Jan 2021 (Study Day 124) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2151 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	17 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	23 Oct 2020 (Study Day 37)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Depression/Worsening Depression	SAE	Grade 3/ severe	Not related	08 Jan 2021 (Study Day 114) – 02 Feb 2021 (Study Day 139)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2151, a 19-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 17 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 23 Oct 2020 (Study Day 37). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Jan 2021 (Study Day 114), 113 days after the first dose and 77 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of depression. Action taken with the IP was not applicable. The event of worsening depression lasted for 26 days, after which it was considered to be recovered/resolved with sequelae on 02 Feb 2021 (Study Day 139). The investigator assessed the event of depression to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005624	Depression

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Acne	Acne	2013 - Ongoing
Bipolar disorder	Bipolar disorder	2013 - Ongoing
Depression	Depression	2013 - Ongoing
Insomnia	Insomnia	2013 - Ongoing
Anxiety	Anxiety	2015 - Ongoing
Headache	Headache	2019 - Ongoing
Myalgia	Muscle ache	Apr 2020 - Ongoing
Seasonal allergy	Seasonal allergies	Jun 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Melatonin	2018 - Sep 2020	Insomnia
Diphenhydramine	Sep 2020 - 06 Oct 2020 (Study Day 20)	Worsening Insomnia
Ibuprofen	Sep 2020 - Ongoing	Muscle Aches
Melatonin	Sep 2020 - 06 Oct 2020 (Study Day 20)	Insomnia
Fluoxetine	06 Oct 2020 (Study Day 20) - 15 Oct 2020 (Study Day 29)	Depression
Hydroxyzine	06 Oct 2020 (Study Day 20) - 05 Nov 2020 (Study Day 50)	Anxiety
Fluoxetine	16 Oct 2020 (Study Day 30) - 07 Jan 2021 (Study Day 113)	Depression
Ibuprofen	24 Oct 2020 (Study Day 38) - 29 Oct 2020 (Study Day 43)	Worsening Headache
Trazodone	27 Oct 2020 (Study Day 41) - 07 Jan 2021 (Study Day 113)	Depression
Fish oil	24 Nov 2020 (Study Day 69) - Ongoing	Supplement
Vitamins nos	24 Nov 2020 (Study Day 69) - Ongoing	Supplement
Fluoxetine	08 Jan 2021 (Study Day 114) - Ongoing	Worsening Depression
Olanzapine	08 Jan 2021 (Study Day 114) - 20 Feb 2021 (Study Day 157)	Worsening Depression
Trazodone	08 Jan 2021 (Study Day 114) - Ongoing	Worsening Depression

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US395-2033 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, Severe COVID-19, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Gastritis/Gastritis W/ Intractable Vomiting	SAE	Grade 3/severe	Not related	23 Sep 2020 (Study Day 22) – 30 Sep 2020 (Study Day 29)	Recovered/resolved
COVID-19/COVID-19 Infection	COVID-19, AE leading to withdrawal from study vaccine	Grade 3/severe	Not related	06 Oct 2020 (Study Day 35) – 25 Oct 2020 (Study Day 54)	Recovered/resolved
Pericarditis/Pericarditis	SAE	Grade 3/severe	Not related	31 Oct 2020 (Study Day 60) – 03 Nov 2020 (Study Day 63)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0. The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US395-2033, a 52-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 02 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Sep 2020 (Study Day 22), 21 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of gastritis. On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of gastritis w/ intractable vomiting lasted for 8 days, after which it was considered to be recovered/resolved on 30 Sep 2020 (Study Day 29). The investigator assessed the event of gastritis to be not related to the IP.

On 31 Oct 2020 (Study Day 60), 59 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of pericarditis. On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of pericarditis lasted for 4 days, after which it was considered to be recovered/resolved on 03 Nov 2020 (Study Day 63). The investigator assessed the event of pericarditis to be not related to the IP.

Severe COVID-19 Details

On 06 Oct 2020 (Study Day 35), 34 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/Severe non-serious adverse event of COVID-19 infection.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 08 Oct 2020 (Study Day 37), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
03 Oct 2020 (Study Day 32)	Body Aches	Mild
03 Oct 2020 (Study Day 32)	Headache	Mild
03 Oct 2020 (Study Day 32)	Temperature (°F)	101.3
04 Oct 2020 (Study Day 33)	Body Aches	Mild
04 Oct 2020 (Study Day 33)	Muscle Aches (Myalgia)	Mild
07 Oct 2020 (Study Day 36)	Temperature (°F)	101.9
08 Oct 2020 (Study Day 37)	Body Aches	Mild
08 Oct 2020 (Study Day 37)	Cough	Mild
08 Oct 2020 (Study Day 37)	Difficulty Breathing	Mild
08 Oct 2020 (Study Day 37)	Fatigue	Mild
08 Oct 2020 (Study Day 37)	Headache	Mild
08 Oct 2020 (Study Day 37)	Muscle Aches (Myalgia)	Mild
08 Oct 2020 (Study Day 37)	New Loss of Smell	Mild
08 Oct 2020 (Study Day 37)	New Loss of Taste	Mild
08 Oct 2020 (Study Day 37)	Shortness of Breath	Mild
08 Oct 2020 (Study Day 37)	Sore Throat	Mild
08 Oct 2020 (Study Day 37)	Temperature (°F)	102.2
09 Oct 2020 (Study Day 38)	Chills	Moderate
09 Oct 2020 (Study Day 38)	Cough	Moderate
09 Oct 2020 (Study Day 38)	Difficulty Breathing	Severe
09 Oct 2020 (Study Day 38)	Fatigue	Severe
09 Oct 2020 (Study Day 38)	Headache	Mild
09 Oct 2020 (Study Day 38)	Nausea	Mild
09 Oct 2020 (Study Day 38)	New Loss of Smell	Mild
09 Oct 2020 (Study Day 38)	New Loss of Taste	Mild
09 Oct 2020 (Study Day 38)	O2 Saturation (%)	92
09 Oct 2020 (Study Day 38)	Shortness of Breath	Severe
09 Oct 2020 (Study Day 38)	Sore Throat	Mild
09 Oct 2020 (Study Day 38)	Temperature (°F)	103.1
10 Oct 2020 (Study Day 39)	Chills	Mild
10 Oct 2020 (Study Day 39)	Cough	Mild

Symptom Date	Symptom	Result
10 Oct 2020 (Study Day 39)	Fatigue	Moderate
10 Oct 2020 (Study Day 39)	Headache	Moderate
10 Oct 2020 (Study Day 39)	New Loss of Smell	Mild
10 Oct 2020 (Study Day 39)	New Loss of Taste	Mild
10 Oct 2020 (Study Day 39)	O2 Saturation (%)	93
10 Oct 2020 (Study Day 39)	Shortness of Breath	Moderate
10 Oct 2020 (Study Day 39)	Temperature (°F)	103.7
11 Oct 2020 (Study Day 40)	Chills	Moderate
11 Oct 2020 (Study Day 40)	Cough	Moderate
11 Oct 2020 (Study Day 40)	Difficulty Breathing	Severe
11 Oct 2020 (Study Day 40)	Fatigue	Severe
11 Oct 2020 (Study Day 40)	Headache	Severe
11 Oct 2020 (Study Day 40)	Nausea	Mild
11 Oct 2020 (Study Day 40)	New Loss of Smell	Moderate
11 Oct 2020 (Study Day 40)	New Loss of Taste	Moderate
11 Oct 2020 (Study Day 40)	O2 Saturation (%)	89
11 Oct 2020 (Study Day 40)	Shortness of Breath	Severe
11 Oct 2020 (Study Day 40)	Temperature (°F)	101.9
12 Oct 2020 (Study Day 41)	Chills	Mild
12 Oct 2020 (Study Day 41)	Cough	Mild
12 Oct 2020 (Study Day 41)	Fatigue	Mild
12 Oct 2020 (Study Day 41)	Headache	Moderate
12 Oct 2020 (Study Day 41)	Nausea	Moderate
12 Oct 2020 (Study Day 41)	New Loss of Smell	Mild
12 Oct 2020 (Study Day 41)	New Loss of Taste	Mild
12 Oct 2020 (Study Day 41)	Shortness of Breath	Mild
12 Oct 2020 (Study Day 41)	Temperature (°F)	102.7
12 Oct 2020 (Study Day 41)	Vomiting	Moderate
13 Oct 2020 (Study Day 42)	Chills	Mild
13 Oct 2020 (Study Day 42)	Cough	Moderate
13 Oct 2020 (Study Day 42)	Fatigue	Moderate
13 Oct 2020 (Study Day 42)	Headache	Mild
13 Oct 2020 (Study Day 42)	Nausea	Mild
13 Oct 2020 (Study Day 42)	New Loss of Smell	Mild
13 Oct 2020 (Study Day 42)	New Loss of Taste	Mild
13 Oct 2020 (Study Day 42)	Shortness of Breath	Mild
13 Oct 2020 (Study Day 42)	Temperature (°F)	102.1
14 Oct 2020 (Study Day 43)	Cough	Mild
14 Oct 2020 (Study Day 43)	Diarrhea	Mild
14 Oct 2020 (Study Day 43)	Fatigue	Moderate
14 Oct 2020 (Study Day 43)	Headache	Mild
14 Oct 2020 (Study Day 43)	Nausea	Mild
14 Oct 2020 (Study Day 43)	New Loss of Smell	Mild

Symptom Date	Symptom	Result
14 Oct 2020 (Study Day 43)	New Loss of Taste	Mild
14 Oct 2020 (Study Day 43)	Shortness of Breath	Mild
15 Oct 2020 (Study Day 44)	Chills	Mild
15 Oct 2020 (Study Day 44)	Cough	Mild
15 Oct 2020 (Study Day 44)	Fatigue	Moderate
15 Oct 2020 (Study Day 44)	Nausea	Mild
15 Oct 2020 (Study Day 44)	New Loss of Smell	Mild
15 Oct 2020 (Study Day 44)	New Loss of Taste	Mild
16 Oct 2020 (Study Day 45)	Chills	Mild
16 Oct 2020 (Study Day 45)	Cough	Mild
16 Oct 2020 (Study Day 45)	Diarrhea	Mild
16 Oct 2020 (Study Day 45)	Fatigue	Moderate
16 Oct 2020 (Study Day 45)	Headache	Mild
16 Oct 2020 (Study Day 45)	Nausea	Mild
16 Oct 2020 (Study Day 45)	Shortness of Breath	Mild
17 Oct 2020 (Study Day 46)	Cough	Mild
17 Oct 2020 (Study Day 46)	Diarrhea	Mild
17 Oct 2020 (Study Day 46)	Fatigue	Moderate
17 Oct 2020 (Study Day 46)	Nausea	Mild
18 Oct 2020 (Study Day 47)	Cough	Mild
18 Oct 2020 (Study Day 47)	Diarrhea	Mild
18 Oct 2020 (Study Day 47)	Fatigue	Moderate
18 Oct 2020 (Study Day 47)	Nausea	Mild
19 Oct 2020 (Study Day 48)	Cough	Mild
19 Oct 2020 (Study Day 48)	Diarrhea	Mild
19 Oct 2020 (Study Day 48)	Fatigue	Moderate
19 Oct 2020 (Study Day 48)	Nausea	Mild
20 Oct 2020 (Study Day 49)	Cough	Mild
20 Oct 2020 (Study Day 49)	Diarrhea	Mild
20 Oct 2020 (Study Day 49)	Fatigue	Mild
20 Oct 2020 (Study Day 49)	Nausea	Mild
21 Oct 2020 (Study Day 50)	Cough	Mild
21 Oct 2020 (Study Day 50)	Fatigue	Mild
22 Oct 2020 (Study Day 51)	Fatigue	Mild
22 Oct 2020 (Study Day 51)	Nausea	Mild
23 Oct 2020 (Study Day 52)	Diarrhea	Mild
23 Oct 2020 (Study Day 52)	Fatigue	Mild
24 Oct 2020 (Study Day 53)	Diarrhea	Mild
24 Oct 2020 (Study Day 53)	Fatigue	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
09 Oct 2020 (Study Day 38)	Oxygen Saturation	89%
09 Oct 2020 - 11 Oct 2020 (Study Day 38-40)	Oxygen Saturation of SpO2 ≤ 93% on room air at sea level	Yes

On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 infection lasted for 20 days, after which it was considered to be recovered/resolved on 25 Oct 2020 (Study Day 54). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious and nonserious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000371	Gastritis
MOD-2020-000994	COVID-19
MOD-2020-000643	Pericarditis

Study Completion/Discontinuation

On 20 Jan 2021 (Study Day 141), the participant discontinued from the study due to physician decision (not medically stable to proceed to open label vaccine. will get outside eua leading to withdraw).

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Herpes simplex	Herpes simplex I	1976 - Ongoing
Chronic sinusitis	Chronic sinusitis	1992 - Ongoing
Osteoarthritis	Osteoarthritis	1995 - Ongoing
Depression	Depression	1996 - Ongoing
Ankle arthroplasty	Left ankle reconstruction	2000 - 2000
Obesity	Severe obesity	2005 - Ongoing
Rheumatoid arthritis	Rheumatoid arthritis	2006 - Ongoing
Hysterectomy	Hysterectomy	2009 - 2009
Uterine leiomyoma	Uterine fibroids	2009 - 2009
Anxiety	Anxiety	2010 - Ongoing
Antiphospholipid syndrome	Antiphospholipid syndrome	2011 - Ongoing
Knee arthroplasty	Right total knee arthroplasty	2011 - 2011

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Pain	Chronic pain syndrome	2014 - Ongoing
Knee arthroplasty	Left total knee arthroplasty	2015 - 2015
Rheumatoid arthritis	Rhuematoid arthritis flare	Mar 2020 - Apr 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paroxetine hydrochloride	1996 - 03 Oct 2020 (Study Day 32)	Depression
Fondaparinux sodium	2011 - Ongoing	Antiphospholipid Syndrome
Hydrocodone bitartrate; paracetamol	2014 - Ongoing	Chronic Pain Syndrome
Oxycodone	2014 - Ongoing	Chronic Pain Syndrome
Melatonin	08 Jun 2020 (Study Day -86) - Ongoing	Insomnia
Abatacept	10 Jun 2020 (Study Day -84) - Ongoing	Rheumatoid Arthritis
Barium sulfate	05 Aug 2020 (Study Day -28) - 03 Nov 2020 (Study Day 63)	Imaging (Barium Swallow)
Paracetamol	05 Sep 2020 (Study Day 4) - 12 Sep 2020 (Study Day 11)	Myalgia
Paracetamol	06 Sep 2020 (Study Day 5) - 12 Sep 2020 (Study Day 11)	COVID 19
Aciclovir	08 Sep 2020 (Study Day 7) - 14 Sep 2020 (Study Day 13)	Herpes Simplex I
Ondansetron	11 Sep 2020 (Study Day 10) - 11 Oct 2020 (Study Day 40)	Nausea
Fluoxetine	23 Sep 2020 (Study Day 22) - Ongoing	Depression
Gluconate sodium; magnesium chloride hexahydrate; potassium chloride; sodium acetate trihydrate; sodium chloride	23 Sep 2020 (Study Day 22) - 23 Sep 2020 (Study Day 22)	Gastritis
Morphine	23 Sep 2020 (Study Day 22) - 24 Sep 2020 (Study Day 23)	Gastritis
Ondansetron	23 Sep 2020 (Study Day 22) - 23 Sep 2020 (Study Day 22)	Gastritis
Paracetamol	23 Sep 2020 (Study Day 22) - 23 Sep 2020 (Study Day 22)	Gastritis
Prochlorperazine	23 Sep 2020 (Study Day 22) - 26 Sep 2020 (Study Day 25)	Gastritis
Ciprofloxacin	24 Sep 2020 (Study Day 23) - 25 Sep 2020 (Study Day 24)	Antibiotic
Metronidazole	24 Sep 2020 (Study Day 23) - 24 Sep 2020 (Study Day 23)	Gastritis
Metronidazole	24 Sep 2020 (Study Day 23) - 25 Sep 2020 (Study Day 24)	Gastritis
Morphine	24 Sep 2020 (Study Day 23) - 24 Sep 2020 (Study Day 23)	Pain Secondary To Gastritis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ondansetron	24 Sep 2020 (Study Day 23) - 27 Sep 2020 (Study Day 26)	Gastritis
Ondansetron	24 Sep 2020 (Study Day 23) - 26 Sep 2020 (Study Day 25)	Nausea Secondary To Gastritis
Paracetamol	24 Sep 2020 (Study Day 23) - 24 Sep 2020 (Study Day 23)	Pain Secondary To Gastritis
Prochlorperazine	24 Sep 2020 (Study Day 23) - 24 Sep 2020 (Study Day 23)	Nausea Secondary To Gastritis
Prochlorperazine	24 Sep 2020 (Study Day 23) - 25 Sep 2020 (Study Day 24)	Nausea Secondary To Gastritis
Ciprofloxacin	25 Sep 2020 (Study Day 24) - 25 Sep 2020 (Study Day 24)	Gastritis
Metronidazole	25 Sep 2020 (Study Day 24) - 25 Sep 2020 (Study Day 24)	Gastritis
Morphine	25 Sep 2020 (Study Day 24) - 27 Sep 2020 (Study Day 26)	Pain Secondary To Gastritis
Glucose; sodium chloride	26 Sep 2020 (Study Day 25) - 26 Sep 2020 (Study Day 25)	Fluids
Melatonin	26 Sep 2020 (Study Day 25) - 30 Sep 2020 (Study Day 29)	Insomnia
Paracetamol	26 Sep 2020 (Study Day 25) - 30 Sep 2020 (Study Day 29)	Headache
Paracetamol	26 Sep 2020 (Study Day 25) - 26 Sep 2020 (Study Day 25)	Pain Secondary To Gastritis
Paroxetine	26 Sep 2020 (Study Day 25) - Ongoing	Depression
Sodium chloride	26 Sep 2020 (Study Day 25) - 30 Sep 2020 (Study Day 29)	Prophylaxis Fluids
Fondaparinux	27 Sep 2020 (Study Day 26) - 30 Sep 2020 (Study Day 29)	Prophylaxis Dvt
Morphine	27 Sep 2020 (Study Day 26) - 29 Sep 2020 (Study Day 28)	Pain Secondary To Gastritis
Prochlorperazine	27 Sep 2020 (Study Day 26) - 30 Sep 2020 (Study Day 29)	Nausea
Esophagogastroduodenoscopy for gastritis*	28 Sep 2020 (Study Day 27) - 28 Sep 2020 (Study Day 27)	Adverse Event
Omeprazole	28 Sep 2020 (Study Day 27) - 28 Sep 2020 (Study Day 27)	Nausea Secondary To Gastritis
Oxycodone	28 Sep 2020 (Study Day 27) - 29 Sep 2020 (Study Day 28)	Pain Secondary Gastritis
Pantoprazole	28 Sep 2020 (Study Day 27) - 30 Sep 2020 (Study Day 29)	Gastritis
Moxifloxacin	29 Sep 2020 (Study Day 28) - 30 Sep 2020 (Study Day 29)	Cellulitis
Oxycodone	29 Sep 2020 (Study Day 28) - 30 Sep 2020 (Study Day 29)	Pain Secondary To Gastritis
Oxymetazoline	29 Sep 2020 (Study Day 28) - 30 Sep 2020 (Study Day 29)	Seasonal Allergies
Oxycodone	30 Sep 2020 (Study Day 29) - 30 Sep 2020 (Study Day 29)	Pain Secondary To Gastritis
Pantoprazole	30 Sep 2020 (Study Day 29) - Ongoing	Gastritis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Prochlorperazine	30 Sep 2020 (Study Day 29) - 30 Oct 2020 (Study Day 59)	Gastritis
Vancomycin	30 Sep 2020 (Study Day 29) - 10 Oct 2020 (Study Day 39)	C Diff
Moxifloxacin	01 Oct 2020 (Study Day 30) - 08 Oct 2020 (Study Day 37)	Cellulitis
Doxycycline	06 Oct 2020 (Study Day 35) - 05 Nov 2020 (Study Day 65)	COVID-19
Fluticasone propionate	06 Oct 2020 (Study Day 35) - 05 Nov 2020 (Study Day 65)	Seasonal Allergies
Lactobacillus acidophilus	06 Oct 2020 (Study Day 35) - 05 Nov 2020 (Study Day 65)	Prophylactic
Paracetamol	06 Oct 2020 (Study Day 35) - 13 Oct 2020 (Study Day 42)	COVID-19 Positive
Pantoprazole	20 Oct 2020 (Study Day 49) - Ongoing	Gastritis
12 lead ekg for pericarditis*	31 Oct 2020 (Study Day 60) - 31 Oct 2020 (Study Day 60)	Adverse Event
Cta pe protocol w wo iv contrast for pericarditis*	31 Oct 2020 (Study Day 60) - 31 Oct 2020 (Study Day 60)	Adverse Event
Fondaparinux	31 Oct 2020 (Study Day 60) - 31 Oct 2020 (Study Day 60)	Deep Vein Thrombosis
Glyceryl trinitrate	31 Oct 2020 (Study Day 60) - 31 Oct 2020 (Study Day 60)	Pericarditis
Morphine	31 Oct 2020 (Study Day 60) - 31 Oct 2020 (Study Day 60)	Pericarditis
Ondansetron	31 Oct 2020 (Study Day 60) - 31 Oct 2020 (Study Day 60)	Nausea
Oxycodone	31 Oct 2020 (Study Day 60) - 01 Nov 2020 (Study Day 61)	Chronic Pain Syndrome
Paracetamol	31 Oct 2020 (Study Day 60) - 01 Nov 2020 (Study Day 61)	Pericarditis
Sodium chloride	31 Oct 2020 (Study Day 60) - 01 Nov 2020 (Study Day 61)	Pericarditis
Clonazepam	01 Nov 2020 (Study Day 61) - 02 Nov 2020 (Study Day 62)	Anxiety
Ct of the head without contrast for pericarditis*	01 Nov 2020 (Study Day 61) - 01 Nov 2020 (Study Day 61)	Adverse Event
Ct of the sinus without contrast for pericarditis*	01 Nov 2020 (Study Day 61) - 01 Nov 2020 (Study Day 61)	Adverse Event
Fluoxetine	01 Nov 2020 (Study Day 61) - 03 Nov 2020 (Study Day 63)	Depression
Hydrocodone bitartrate; paracetamol	01 Nov 2020 (Study Day 61) - 03 Nov 2020 (Study Day 63)	Pericarditis
Lorazepam	01 Nov 2020 (Study Day 61) - 02 Nov 2020 (Study Day 62)	Anxiety
Morphine	01 Nov 2020 (Study Day 61) - 01 Nov 2020 (Study Day 61)	Pericarditis
Mri of the brain without contrast for pericarditis*	01 Nov 2020 (Study Day 61) - 01 Nov 2020 (Study Day 61)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Pantoprazole sodium sesquihydrate	01 Nov 2020 (Study Day 61) - 01 Nov 2020 (Study Day 61)	Gastroesophageal Reflux Disease
Pantoprazole sodium sesquihydrate	01 Nov 2020 (Study Day 61) - 03 Nov 2020 (Study Day 63)	Gastroesophageal Reflux Disease
Pharmacological nuclear cardiac stress test for pericarditis*	01 Nov 2020 (Study Day 61) - 01 Nov 2020 (Study Day 61)	Adverse Event
Sodium chloride	01 Nov 2020 (Study Day 61) - 02 Nov 2020 (Study Day 62)	Pericarditis
Colchicine	02 Nov 2020 (Study Day 62) - Ongoing	Pericarditis
Potassium chloride	02 Nov 2020 (Study Day 62) - 02 Nov 2020 (Study Day 62)	Pericarditis
Transthoracic echo report (2d with doppler and color flow)*	02 Nov 2020 (Study Day 62) - 02 Nov 2020 (Study Day 62)	Adverse Event
Clonazepam	03 Nov 2020 (Study Day 63) - Ongoing	Anxiety
Prednisone	11 Jan 2021 (Study Day 132) - 17 Jan 2021 (Study Day 138)	Rheumatoid Arthritis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Herpes Simplex	Grade 2/moderate	Not related	07 Sep 2020 (Study Day 6) - 14 Sep 2020 (Study Day 13)
Lymphadenopathy	Grade 2/moderate	Related	09 Sep 2020 (Study Day 8) - 16 Sep 2020 (Study Day 15)
COVID-19	Grade 3/severe	Not related	06 Oct 2020 (Study Day 35) - 25 Oct 2020 (Study Day 54)
Blood Pressure Increased	Grade 3/severe	Not related	14 Jan 2021 (Study Day 135) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US300-2031 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	28 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pneumonia/Pneumonia	SAE	Grade 2/moderate	Not related	09 Sep 2020 (Study Day 44) – 12 Sep 2020 (Study Day 47)	Recovered/resolved
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 1/mild	Not related	18 Sep 2020 (Study Day 53) – 22 Oct 2020 (Study Day 87)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US300-2031, a 25-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 28 Jul 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Sep 2020 (Study Day 44), 43 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate serious adverse event of pneumonia. On 24 Aug 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of pneumonia lasted for 4 days, after which it was considered to be recovered/resolved on 12 Sep 2020 (Study Day 47). The investigator assessed the event of pneumonia to be not related to the IP.

On 18 Sep 2020 (Study Day 53), 52 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild nonserious adverse event of COVID-19. On 24 Aug 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 35 days, after which it was considered to be recovered/resolved on 22 Oct 2020 (Study Day 87). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious and serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000379	Pneumonia
MOD-2020-000379	COVID-19

Study Completion/Discontinuation

On 26 Feb 2021 (Study Day 214), the participant discontinued from the study due to lost to follow-up.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Mild intermittent asthma	1995 - 2010
Obesity	Obesity	2000 - Ongoing
Fibromyalgia	Fibromialgia	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	28 Jul 2020 (Study Day 1) - 05 Aug 2020 (Study Day 9)	Suspected COVID 19
Ibuprofen	29 Jul 2020 (Study Day 2) - 29 Jul 2020 (Study Day 2)	Muscle Aches All Over Body
Ibuprofen	30 Jul 2020 (Study Day 3) - 03 Aug 2020 (Study Day 7)	Headache
Ibuprofen	27 Aug 2020 (Study Day 31) - 27 Aug 2020 (Study Day 31)	Suspected COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Suspected COVID-19	Grade 1/mild	Not related	28 Jul 2020 (Study Day 1) - 14 Aug 2020 (Study Day 18)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 1/mild	Related	29 Jul 2020 (Study Day 2) - 06 Aug 2020 (Study Day 10)
Myalgia	Grade 1/mild	Related	29 Jul 2020 (Study Day 2) - 07 Aug 2020 (Study Day 11)
Fatigue	Grade 1/mild	Related	30 Jul 2020 (Study Day 3) - 05 Aug 2020 (Study Day 9)
Suspected COVID-19	Grade 1/mild	Not related	21 Aug 2020 (Study Day 25) - 01 Sep 2020 (Study Day 36)
COVID-19	Grade 1/mild	Not related	18 Sep 2020 (Study Day 53) - 22 Oct 2020 (Study Day 87)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US300-2302 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	15 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	07 Oct 2020 (Study Day 23) – 17 Oct 2020 (Study Day 33)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US300-2302, a 50-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 15 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Oct 2020 (Study Day 23), 22 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of covid-19. On 12 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 11 days, after which it was considered to be recovered/resolved on 17 Oct 2020 (Study Day 33). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000472	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Female sterilisation	Bilateral tubal ligation	1999 - 1999
Obesity	Obesity	2000 - Ongoing
Menorrhagia	Menorrhagia	2011 - 2012
Ankle fracture	Right malleolar fracture	2015 - Ongoing
Osteoarthritis	Generalized osteoarthritis	2015 - Ongoing
Arthralgia	Right chronic ankle pain	May 2015 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Esomeprazole magnesium	2019 - Ongoing	Gastroesophageal Reflux Disease
Acetylsalicylic acid	May 2020 - Ongoing	Right Chronic Ankle Pain/Generalize Osteoarthritis
Phenylephrine hydrochloride	08 Oct 2020 (Study Day 24) - 08 Oct 2020 (Study Day 24)	COVID-19
Root canal*	27 Oct 2020 (Study Day 43) - 27 Oct 2020 (Study Day 43)	Adverse Event
Medroxyprogesterone	01 Feb 2021 (Study Day 140) - Ongoing	Endometrial Hyperplasia Prophylaxis
Iud removal surgery*	12 Mar 2021 (Study Day 179) - 12 Mar 2021 (Study Day 179)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Tooth Abscess	Grade 2/moderate	Not related	20 Sep 2020 (Study Day 6) – 27 Oct 2020 (Study Day 43)
COVID-19	Grade 1/mild	Not related	07 Oct 2020 (Study Day 23) - 17 Oct 2020 (Study Day 33)
Uterine Perforation	Grade 2/moderate	Not related	01 Feb 2021 (Study Day 140) - 12 Mar 2021 (Study Day 179)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US302-2012 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	27 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	27 Jul 2020 (Study Day 1) – 15 Sep 2020 (Study Day 51)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US302-2012, a 35-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 27 Jul 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 27 Jul 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of covid-19. On 23 Aug 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 51 days, after which it was considered to be recovered/resolved on 15 Sep 2020 (Study Day 51). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000229	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	28 Jul 2020 (Study Day 2) - 01 Aug 2020 (Study Day 6)	Possible COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	27 Jul 2020 (Study Day 1) - 15 Sep 2020 (Study Day 51)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US302-2063 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	29 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	27 Aug 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Breast Pain/Worsening Of Bilateral Large Painful Breast	SAE	Grade 4	Not related	16 Aug 2020 (Study Day 19) – 22 Oct 2020 (Study Day 86)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US302-2063, a 58-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 29 Jul 2020 (Study Day 1). The second dose was administered in the left arm on 27 Aug 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Aug 2020 (Study Day 19), 18 days after the first dose and 11 days before the second dose of the IP, the participant experienced a Grade 4 serious adverse event of breast pain. Action taken with the IP was not applicable. The event of worsening of bilateral large painful breast lasted for 68 days, after which it was considered to be recovered/resolved on 22 Oct 2020 (Study Day 86). The investigator assessed the event of breast pain to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-003399	Breast pain

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraines	1980 - Ongoing
Drug hypersensitivity	Imitrex allergy	1990 - Ongoing
Drug hypersensitivity	Toradol allergy	2000 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2000 - Ongoing
Breast pain	Bilateral large painful breast	2004 - 22 Oct 2020 (Study Day 86)
Drug hypersensitivity	Morphine allergy	2005 - Ongoing
Postmenopause	Post menopausal	2010 - Ongoing
Inguinal hernia	Inguinal hernia	Mar 2010 - 22 Oct 2020 (Study Day 86)
Obesity	Obesity	29 Jul 2020 (Study Day 1) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2000 - Ongoing	Cardiac Prophylaxis
Atorvastatin	2001 - Ongoing	Hypercholesterolemia
Ibuprofen	Jan 2020 - Ongoing	Migraines
Breast reduction surgery*	21 Oct 2020 (Study Day 85) - 21 Oct 2020 (Study Day 85)	Medical History
Panniculectomy*	21 Oct 2020 (Study Day 85) - 21 Oct 2020 (Study Day 85)	Medical History
Worsening of inguinal hernia repair*	21 Oct 2020 (Study Day 85) - 21 Oct 2020 (Study Day 85)	Medical History

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US303-2171 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	05 Sep 2020 (Study Day 27) – 24 Sep 2020 (Study Day 46)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US303-2171, a 52-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 10 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 05 Sep 2020 (Study Day 27), 26 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of covid-19. On 06 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 20 days, after which it was considered to be recovered/resolved on 24 Sep 2020 (Study Day 46). The investigator assessed the event of covid-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000320	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anaphylactic reaction	Penicillin allergy-anaphylaxis	1978 - Ongoing
Drug hypersensitivity	Azithromycin allergy	1989 - Ongoing
Asthma exercise induced	Exercise-induced asthma	2010 - Ongoing
Oestrogen deficiency	Estrogen defiency	2018 - Ongoing
Postmenopause	Postmenopausal	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fluticasone propionate	2010 - Ongoing	Medical History: Exercise-Induced Asthma
Montelukast sodium	2010 - Ongoing	Medical History: Exercise-Induced Asthma
Salbutamol	2010 - Ongoing	Medical History: Exercise-Induced Asthma
Estrogens conjugated; medroxyprogesterone acetate	May 2020 - Ongoing	Medical History: Estrogen Hormone Defiency
Prednisone	14 Sep 2020 (Study Day 36) - 17 Sep 2020 (Study Day 39)	Adverse Event: Generalized Urticaria
Prednisone	18 Sep 2020 (Study Day 40) - 22 Sep 2020 (Study Day 44)	Adverse Event: Generalized Urticaria
Prednisone	23 Sep 2020 (Study Day 45) - 28 Sep 2020 (Study Day 50)	Adverse Event: Generalized Urticaria
Prednisone	29 Sep 2020 (Study Day 51) - 05 Oct 2020 (Study Day 57)	Adverse Event: Generalized Urticaria
Influenza vaccine	07 Oct 2020 (Study Day 59) - 07 Oct 2020 (Study Day 59)	Prophylaxis For Seasonal Influenza
Ibuprofen	17 Mar 2021 (Study Day 220) - Ongoing	Right Hip Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	05 Sep 2020 (Study Day 27) - 24 Sep 2020 (Study Day 46)
Urticaria	Grade 2/moderate	Not related	13 Sep 2020 (Study Day 35) - 24 Sep 2020 (Study Day 46)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US303-2172 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID 19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	01 Sep 2020 (Study Day 23) – 08 Sep 2020 (Study Day 30)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US303-2172, a 57-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 10 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Sep 2020 (Study Day 23), 22 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of covid-19. On 06 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID 19 lasted for 8 days, after which it was considered to be recovered/resolved on 08 Sep 2020 (Study Day 30). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000268	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Pruritus	Chronic itching- bilateral hands	2009 - Ongoing
Arthralgia	Arthralgia- bilateral knees	2010 - Ongoing
Seasonal allergy	Seasonal allergies	2010 - Ongoing
Blood testosterone decreased	Low testosterone	2014 - Ongoing
Bronchogenic cyst	Benign bronchial cleft cyst	2018 - 2018
Lung cyst removal	Bronchial left cyst removal	2018 - 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Gabapentin	2009 - Ongoing	Medical History: Chronic Itching Bilateral Hands
Triamcinolone acetonide	2009 - Ongoing	Medical History: Chronic Itching Bilateral Hands
Loratadine	2010 - Ongoing	Medical History: Seasonal Allergies
Meloxicam	2010 - Ongoing	Medical History: Arthralgia-Bilateral Knees, Hips, And Shoulders
Testosterone	2014 - Ongoing	Medical History: Low Testosterone
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	02 Sep 2020 (Study Day 24) - 15 Sep 2020 (Study Day 37)	Adverse Event: Sars-Cov-2 Infection
Dextromethorphan hydrobromide; paracetamol; phenylephrine hydrochloride	02 Sep 2020 (Study Day 24) - 15 Sep 2020 (Study Day 37)	Adverse Event: Sars-Cov-2 Infection
Paracetamol	02 Sep 2020 (Study Day 24) - 15 Sep 2020 (Study Day 37)	Adverse Event: Sars-Cov-2 Infection
Influenza vaccine	09 Oct 2020 (Study Day 61) - 09 Oct 2020 (Study Day 61)	Prophylaxis For Seasonal Influenza
Testosterone	16 Nov 2020 (Study Day 99) - 16 Nov 2020 (Study Day 99)	Hypogonadism
Lisinopril	03 Dec 2020 (Study Day 116) - Ongoing	Hypertension Secondary To Hypogonadism
Omeprazole	16 Mar 2021 (Study Day 219) - Ongoing	Acid Reflux

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Upper Respiratory Tract Infection	Grade 1/mild	Not applicable	31 Aug 2020 (Study Day 22) - 08 Sep 2020 (Study Day 30)
COVID-19	Grade 1/mild	Not related	01 Sep 2020 (Study Day 23) - 08 Sep 2020 (Study Day 30)
Hypogonadism	Grade 1/mild	Not related	16 Nov 2020 (Study Day 99) - Ongoing
Secondary Hypertension	Grade 1/mild	Not related	03 Dec 2020 (Study Day 116) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3380521

Participant Number:	US303-2211 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	18 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/SARS-Cov-2 Infection	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not applicable	18 Aug 2020 (Study Day 1) – 18 Aug 2020 (Study Day 1)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US303-2211, a 43-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 18 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 18 Aug 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 14 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of SARS-CoV-2 infection lasted for 1 day, after which it was considered to be recovered/resolved on 18 Aug 2020 (Study Day 1). The investigator assessed the event of COVID-19 to be not applicable to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1980 - Ongoing
Depression	Depression	2018 - Ongoing
Hypothyroidism	Hypothyroidism	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	2018 - Ongoing	Medical History: Hypothyroidism
Sertraline	2018 - Ongoing	Medical History: Depression
Influenza vaccine	02 Oct 2020 (Study Day 46) - 02 Oct 2020 (Study Day 46)	Prevention Of Seasonal Flu

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not applicable	18 Aug 2020 (Study Day 1) - 18 Aug 2020 (Study Day 1)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US303-2305 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19 Infection	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	08 Sep 2020 (Study Day 19) – 08 Sep 2020 (Study Day 19)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US303-2305, a 71-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 21 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Sep 2020 (Study Day 19), 18 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of covid-19. On 17 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 infection lasted for 1 day, after which it was considered to be recovered/resolved on 08 Sep 2020 (Study Day 19). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Postmenopause	Postmenopausal	1985 - Ongoing
Hypothyroidism	Hypothyroidism	2009 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	2010 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2010 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Osteoarthritis	Osteoarthritis in bilateral hands	2010 - Ongoing
Osteopenia	Osteopenia	2016 - Ongoing
Restless legs syndrome	Restless leg syndrome	2018 - Ongoing
Arrhythmia supraventricular	Supraventricular arrhythmias	Feb 2020 - Ongoing
Pulmonary embolism	Bilateral pulmonary embolism	Feb 2020 - Feb 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Omeprazole	2010 - Ongoing	Medical History: Acid Reflux
Levothyroxine	2011 - Ongoing	Medical History: Hypothyroidism
Calcium; vitamin d nos	2016 - Ongoing	Medical History: Osteopenia
Atorvastatin	2017 - Ongoing	Medical History: Hypercholesterolemia
Ropinirole	2018 - Ongoing	Medical History: Restless Leg Syndrome
Apixaban	Feb 2020 - 26 Aug 2020 (Study Day 6)	Medical History: Pulmonary Embolism Prophylaxis
Metoprolol	Feb 2020 - Ongoing	Medical History: Supraventricular Arrhythmia
Apixaban	26 Aug 2020 (Study Day 6) - Ongoing	Pulmonary Embolism Prophylaxis
Influenza vaccine	10 Oct 2020 (Study Day 51) - 10 Oct 2020 (Study Day 51)	Seasonal Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	08 Sep 2020 (Study Day 19) - 08 Sep 2020 (Study Day 19)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US303-2320 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	22 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Sars-Cov-2 Infection	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	22 Aug 2020 (Study Day 1) – 22 Aug 2020 (Study Day 1)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US303-2320, a 61-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 22 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 22 Aug 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of covid-19. On 18 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of sars-cov-2 infection lasted for 1 day, after which it was considered to be recovered/resolved on 22 Aug 2020 (Study Day 1). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

On 07 Jan 2021 (Study Day 139), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Deafness bilateral	Bilateral hearing loss	1980 - Ongoing
Nasal septal operation	Deviated septum repair	Oct 1994 - Oct 1994

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Nasal septum deviation	Deviated septum	Oct 1994 - Oct 1994
Seasonal allergy	Seasonal allergies	2000 - Ongoing
Cholecystectomy	Cholecystectomy	2006 - 2006
Cholelithiasis	Gall stones	2006 - 2006
Asthma	Asthma	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	1990 - Ongoing	Nutritional Supplement
Pseudoephedrine hydrochloride	2000 - Ongoing	Medical History: Seasonal Allergies
Fluticasone furoate; vilanterol trifenatate	2018 - Ongoing	Medical History: Asthma (Mild)
Fluticasone propionate	Jan 2019 - Ongoing	Medical History: Seasonal Allergies
Guaifenesin	Jan 2020 - Ongoing	Medical History: Seasonal Allergies
Other viral vaccines	07 Jan 2021 (Study Day 139) - 07 Jan 2021 (Study Day 139)	Prophylaxis Against COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	22 Aug 2020 (Study Day 1) - 22 Aug 2020 (Study Day 1)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US304-2209 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	08 Sep 2020 (Study Day 26) – 06 Oct 2020 (Study Day 54)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US304-2209, a 30-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 14 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Sep 2020 (Study Day 26), 25 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of covid-19. On 10 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 29 days, after which it was considered to be recovered/resolved on 06 Oct 2020 (Study Day 54). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000300	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraine headaches	2013 - Ongoing
Type 2 diabetes mellitus	Diabetes type 2	2013 - Ongoing
Anxiety	Anxiety	2018 - Ongoing
Obesity	Obesity	Apr 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metformin hydrochloride	2013 - 22 Sep 2020 (Study Day 40)	Diabetes Type 2
Escitalopram	2018 - Ongoing	Anxiety
Empagliflozin	2019 - 22 Sep 2020 (Study Day 40)	Diabetes Type 2
Glimepiride	2019 - Ongoing	Diabetes Type 2
Propranolol	2019 - Ongoing	Migraine Headaches
Rizatriptan	Jan 2020 - Ongoing	Migraine Headaches
Ethinylestradiol; ferrous fumarate; norethisterone acetate	Apr 2020 - Ongoing	Contraception
Phentermine	Apr 2020 - Ongoing	Obesity
Amoxicillin; clavulanic acid	18 Sep 2020 (Study Day 36) - 28 Sep 2020 (Study Day 46)	Acute Bacterial Sinusitis
Semaglutide	23 Sep 2020 (Study Day 41) - Ongoing	Diabetes Type 2
Influenza vaccine	08 Oct 2020 (Study Day 56) - 08 Oct 2020 (Study Day 56)	Influenza Prophylaxis
Methocarbamol	01 Dec 2020 (Study Day 110) - 16 Dec 2020 (Study Day 125)	Left Shoulder Soft Tissue Injury
Tramadol	01 Dec 2020 (Study Day 110) - 16 Dec 2020 (Study Day 125)	Left Shoulder Soft Tissue Injury

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	08 Sep 2020 (Study Day 26) - 06 Oct 2020 (Study Day 54)
Sinusitis Bacterial	Grade 1/mild	Not related	18 Sep 2020 (Study Day 36) - 28 Sep 2020 (Study Day 46)
Limb Injury	Grade 1/mild	Not related	01 Dec 2020 (Study Day 110) - 09 Dec 2020 (Study Day 118)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US308-2247 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	16 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID 19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	13 Oct 2020 (Study Day 28) – 22 Oct 2020 (Study Day 37)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US308-2247, a 41-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 16 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 13 Oct 2020 (Study Day 28), 27 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of covid-19. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID 19 lasted for 10 days, after which it was considered to be recovered/resolved on 22 Oct 2020 (Study Day 37). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000485	COVID-19

Study Completion/Discontinuation

On 15 Mar 2021 (Study Day 181), the participant discontinued from the study due to lost to follow-up.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	2016 - Ongoing	Nutrtional Supplement
Ethinylestradiol; etonogestrel	2019 - Ongoing	Birth Control
Ibuprofen	14 Oct 2020 (Study Day 29) - 22 Oct 2020 (Study Day 37)	COVID 19
Paracetamol	14 Oct 2020 (Study Day 29) - 22 Oct 2020 (Study Day 37)	COVID 19
Ascorbic acid	16 Oct 2020 (Study Day 31) - 22 Oct 2020 (Study Day 37)	Nutritional Supplement
Oxymetazoline hydrochloride	16 Oct 2020 (Study Day 31) - 22 Oct 2020 (Study Day 37)	COVID-19 Symptom Relief
Influenza vaccine	29 Oct 2020 (Study Day 44) - 29 Oct 2020 (Study Day 44)	Annual Flu Preventative

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US311-2266 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19 Diagnosis	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	06 Sep 2020 (Study Day 24) – 26 Sep 2020 (Study Day 44)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US311-2266, a 28-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 14 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Sep 2020 (Study Day 24), 23 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 10 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 diagnosis lasted for 21 days, after which it was considered to be recovered/resolved on 26 Sep 2020 (Study Day 44). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000394	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraines	Not reported - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid; caffeine; paracetamol	18 Sep 2020 (Study Day 36) - 18 Sep 2020 (Study Day 36)	Migraine/Headache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	06 Sep 2020 (Study Day 24) - 26 Sep 2020 (Study Day 44)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US311-2267 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19 Diagnosis	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	06 Sep 2020 (Study Day 24) – 17 Sep 2020 (Study Day 35)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US311-2267, a 27-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 14 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Sep 2020 (Study Day 24), 23 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 10 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 diagnosis lasted for 12 days, after which it was considered to be recovered/resolved on 17 Sep 2020 (Study Day 35). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000375	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

No prior or concomitant medications or procedures were reported.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	06 Sep 2020 (Study Day 24) - 17 Sep 2020 (Study Day 35)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US315-2025 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	29 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	14 Aug 2020 (Study Day 17) – 27 Aug 2020 (Study Day 30)	Recovered/ resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US315-2025, a 39-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 29 Jul 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 14 Aug 2020 (Study Day 17), 16 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 25 Aug 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 14 days, after which it was considered to be recovered/resolved with sequelae on 27 Aug 2020 (Study Day 30). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000223	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Premenstrual pain	Premenstrual cramps	2001 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2008 - Ongoing	Premenstrual Cramps
Ibuprofen	14 Aug 2020 (Study Day 17) - 14 Aug 2020 (Study Day 17)	COVID 19
Ibuprofen	16 Aug 2020 (Study Day 19) - 16 Aug 2020 (Study Day 19)	COVID 19
Paracetamol	17 Aug 2020 (Study Day 20) - 30 Aug 2020 (Study Day 33)	COVID 19
Paracetamol	01 Sep 2020 (Study Day 35) - 01 Sep 2020 (Study Day 35)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	14 Aug 2020 (Study Day 17) - 27 Aug 2020 (Study Day 30)
Vision Blurred	Grade 1/mild	Not related	14 Aug 2020 (Study Day 17) - 18 Sep 2020 (Study Day 52)
Hyperhidrosis	Grade 1/mild	Not related	19 Aug 2020 (Study Day 22) - 23 Aug 2020 (Study Day 26)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US317-2467 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID 19 Symptomatic	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	29 Oct 2020 (Study Day 9) – 07 Nov 2020 (Study Day 18)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US317-2467, a 55-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 21 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 29 Oct 2020 (Study Day 9), 8 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 17 Nov 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID 19 symptomatic lasted for 10 days, after which it was considered to be recovered/resolved on 07 Nov 2020 (Study Day 18). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000665	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Glaucoma	Left eye glaucoma	1998 - Ongoing
Presbyopia	Presbyopia	2010 - Ongoing
Hand fracture	Right scaphoide fracture (right hand)	2011 - 2011
Epistaxis	Occasional nose bleeds	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	29 Oct 2020 (Study Day 9) - 05 Nov 2020 (Study Day 16)	COVID Symptoms - Fever
Azithromycin	30 Oct 2020 (Study Day 10) - 05 Nov 2020 (Study Day 16)	COVID 19
Cefalexin	19 Nov 2020 (Study Day 30) - 02 Dec 2020 (Study Day 43)	Neck Hairline Folliculitis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US318-2292 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	11 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	23 Aug 2020 (Study Day 13) – 28 Aug 2020 (Study Day 18)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US318-2292, a 19-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 11 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Aug 2020 (Study Day 13), 12 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 07 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 6 days, after which it was considered to be recovered/resolved on 28 Aug 2020 (Study Day 18). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000240	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Colitis	Colitis	2003 - Ongoing
Crohn's disease	Crohns disease	2003 - Ongoing
Fracture treatment	Right arm fracture surgically repaired	May 2006 - May 2006
Upper limb fracture	Right arm fracture	May 2006 - Jul 2006
Fracture treatment	Right arm fracture surgical repair	May 2020 - May 2020
Upper limb fracture	Right arm fracture	May 2020 - May 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	26 Aug 2020 (Study Day 16) - 28 Aug 2020 (Study Day 18)	Positive COVID Pcr

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	23 Aug 2020 (Study Day 13) - 28 Aug 2020 (Study Day 18)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US319-2086 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	06 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	03 Sep 2020 (Study Day 29)
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Suspected COVID-19/ COVID-Like Illness	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	30 Oct 2020 (Study Day 86) – 07 Nov 2020 (Study Day 94)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US319-2086, a 23-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 06 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 03 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Oct 2020 (Study Day 86), 85 days after the first dose and 57 days after the second dose of the IP, the participant experienced a Grade 1/mild non-serious adverse event of suspected COVID-19. The IP dose was withdrawn due to the COVID-like illness. The event of COVID-like illness lasted for 9 days, after which it was considered to be recovered/resolved on 07 Nov 2020 (Study Day 94). The investigator assessed the event of suspected COVID-19 to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Nasal septal operation	Deviated septum repair	1998 - 1998
Bipolar disorder	Bipolar	2016 - Ongoing
Depression	Depression	2016 - Ongoing
Attention deficit hyperactivity disorder	Attention deficit disorder	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Escitalopram	2016 - Ongoing	Depression
Lamotrigine	2016 - Ongoing	Bipolar/ Mood Stabilizer
Amfetamine aspartate; amfetamine sulfate; dexamfetamine saccharate; dexamfetamine sulfate	2019 - 07 Apr 2021 (Study Day 245)	Attention Deficit Hyperactivity Disorder
Ibuprofen	03 Sep 2020 (Study Day 29) - 05 Sep 2020 (Study Day 31)	Fever/Headache/Pain At Injection Site
Paracetamol	03 Sep 2020 (Study Day 29) - 05 Sep 2020 (Study Day 31)	Fever/Headache/Pain At Injection Site
Ibuprofen	30 Oct 2020 (Study Day 86) - 31 Oct 2020 (Study Day 87)	COVID-Like Illness
Paracetamol	30 Oct 2020 (Study Day 86) - 01 Nov 2020 (Study Day 88)	COVID-Like Illness
Iron	02 Nov 2020 (Study Day 89) - Ongoing	Supplement
Paracetamol	02 Nov 2020 (Study Day 89) - 02 Nov 2020 (Study Day 89)	COVID-Like Illness
Iron	04 Feb 2021 (Study Day 183) - Ongoing	Supplement

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Suspected COVID-19	Grade 1/mild	Not related	30 Oct 2020 (Study Day 86) - 07 Nov 2020 (Study Day 94)
Anaemia	Grade 1/mild	Not related	02 Nov 2020 (Study Day 89) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US321-2066 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	06 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	09 Aug 2020 (Study Day 4) – 25 Aug 2020 (Study Day 20)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US321-2066, a 43-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 06 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 09 Aug 2020 (Study Day 4), 3 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 02 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of COVID-19 lasted for 17 days, after which it was considered to be recovered/resolved on 25 Aug 2020 (Study Day 20). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Female sterilisation	Bilateral tubal ligation	Not reported
Menorrhagia	Menorrhagia	2011 - 2017
Hypertension	Hypertension	2015 - Ongoing
Endometrial ablation	Uterine ablation	2017 - 2017
Headache	Headaches	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	2015 - Ongoing	Hypertension
Propranolol	2018 - Ongoing	Headaches
Sumatriptan	07 Aug 2020 (Study Day 2) - Ongoing	Migraine Headaches
Paracetamol	09 Aug 2020 (Study Day 4) - Ongoing	Headache
Paracetamol	09 Aug 2020 (Study Day 4) - Ongoing	Headaches
Prednisone	10 Aug 2020 (Study Day 5) - 15 Aug 2020 (Study Day 10)	COVID-19
Topiramate	29 Sep 2020 (Study Day 55) - Ongoing	Migraine Headaches
Influenza vaccine	06 Nov 2020 (Study Day 93) - 06 Nov 2020 (Study Day 93)	Immunization
Azithromycin	28 Dec 2020 (Study Day 145) - 02 Jan 2021 (Study Day 150)	Acute Sinusitis
Prednisone	28 Dec 2020 (Study Day 145) - 29 Dec 2020 (Study Day 146)	Acute Sinusitis
Prednisone	30 Dec 2020 (Study Day 147) - 02 Jan 2021 (Study Day 150)	Acute Sinusitis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 2/moderate	Related	07 Aug 2020 (Study Day 2) - 16 Aug 2020 (Study Day 11)
COVID-19	Grade 2/moderate	Not related	09 Aug 2020 (Study Day 4) - 25 Aug 2020 (Study Day 20)
Rhinovirus Infection	Grade 1/mild	Not related	24 Dec 2020 (Study Day 141) - 02 Jan 2021 (Study Day 150)
Acute Sinusitis	Grade 2/moderate	Not related	28 Dec 2020 (Study Day 145) - 02 Jan 2021 (Study Day 150)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US322-2424 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/SARS COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	10 Sep 2020 (Study Day 11) – 05 Oct 2020 (Study Day 36)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US322-2424, a 65-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 31 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Sep 2020 (Study Day 11), 10 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 27 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of SARS COVID-19 lasted for 26 days, after which it was considered to be recovered/resolved on 05 Oct 2020 (Study Day 36). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000324	COVID-19

Study Completion/Discontinuation

On 07 Nov 2020 (Study Day 69), the participant discontinued from the study due to withdrawal of consent by participant.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypothyroidism	Hypothyroidism	Not reported - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	1991 - Ongoing	Hypothyroid

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US323-2021 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Arthralgia/Worsening Upper Extremities Arthralgia	AE leading to withdrawal from study vaccine	Grade 1/ mild	Related	25 Aug 2020 (Study Day 16) – Not reported	Recovering/ resolving

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US323-2021, a 47-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 10 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Aug 2020 (Study Day 16), 15 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of arthralgia. On 06 Sep 2020 (Study Day 28), the IP dose was discontinued due to physician decision. The event of worsening upper extremities arthralgia was considered to be ongoing. The investigator assessed the event of arthralgia to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

On 28 Sep 2020 (Study Day 50), the participant discontinued from the study due to other.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tobacco user	Past tobacco use, cigarettes, 5 per day	Not reported - 2000
Anxiety	Anxiety	2008 - Ongoing
Vitamin D deficiency	Vitamin d deficiency	May 2018 - Ongoing
Osteoarthritis	Osteoarthritis	Oct 2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sertraline hydrochloride	2013 - Ongoing	Anxiety
Colecalciferol	May 2018 - Ongoing	Vitamin D Deficiency
Vitamins nos	2020 - Ongoing	Maintenance
Ibuprofen	11 Aug 2020 (Study Day 2) - 11 Aug 2020 (Study Day 2)	Injection Site Pain
Ibuprofen	25 Aug 2020 (Study Day 16) - Ongoing	Upper Extremity Arthralgia
Celecoxib	16 Sep 2020 (Study Day 38) - Ongoing	Upper Extremity Arthralgia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US324-2002 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	06 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	09 Aug 2020 (Study Day 4) – 02 Sep 2020 (Study Day 28)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US324-2002, a 35-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 06 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Aug 2020 (Study Day 4), 3 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 02 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 25 days, after which it was considered to be recovered/resolved on 02 Sep 2020 (Study Day 28). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000210	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma	Jan 1985 - Ongoing
Drug hypersensitivity	Drug allergy-erythromycin	Jan 1985 - Ongoing
Seasonal allergy	Seasonal allergic rhinitis	Jan 1985 - Ongoing
Obesity	Obesity	Aug 2010 - Ongoing
Drug hypersensitivity	Drug allergy-aspirin	Jan 2014 - Ongoing
Drug hypersensitivity	Drug allergy-ibuprofen	Jan 2014 - Ongoing
Insomnia	Insomnia	2015 - Ongoing
Anxiety	Anxiety	Jan 2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	Jan 1990 - Ongoing	Asthma
Loratadine	01 Jan 1990 (Study Day -11175) - Ongoing	Seasonal Allergic Rhinitis
Medroxyprogesterone acetate	01 Oct 2012 (Study Day -2866) - Ongoing	Birth Control
Sertraline	Jan 2015 - Ongoing	Anxiety
Trazodone	Jan 2015 - Ongoing	Insomnia
Fluticasone propionate	2019 - Ongoing	Asthma
Paracetamol	10 Aug 2020 (Study Day 5) - 11 Aug 2020 (Study Day 6)	COVID-19 (Symptoms)
Sulfamethoxazole; trimethoprim	13 Aug 2020 (Study Day 8) - 19 Aug 2020 (Study Day 14)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	09 Aug 2020 (Study Day 4) - 02 Sep 2020 (Study Day 28)
Sneezing	Grade 1/mild	Not related	09 Aug 2020 (Study Day 4) - 11 Aug 2020 (Study Day 6)
Fatigue	Grade 1/mild	Not related	13 Aug 2020 (Study Day 8) - 13 Aug 2020 (Study Day 8)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US324-2288 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/SARS-CoV-2	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	09 Sep 2020 (Study Day 7) – 23 Sep 2020 (Study Day 21)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US324-2288, a 58-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 03 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Sep 2020 (Study Day 7), 6 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 30 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of SARS-CoV-2 lasted for 15 days, after which it was considered to be recovered/resolved on 23 Sep 2020 (Study Day 21). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000294	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2000 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2005 - Ongoing
Bradycardia	Bradycardia	2010 - Ongoing
Obesity	Obesity	2015 - Ongoing
Postmenopause	Postmenopausal	2016 - Ongoing
Gastrectomy	Gastric sleeve	2017 - 2017
Breast hyperplasia	Hyperplasia bilateral breast	Aug 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Clonidine	2000 - Ongoing	Hypertension
Simvastatin	2005 - 28 Sep 2020 (Study Day 26)	Hyperlipidemia
Botulinum toxin type a	2014 - 2014	Cosmetic
Anastrozole	Aug 2020 - Ongoing	Hyperplasia In Breast Tissue, Bilateral
Dextromethorphan hydrobromide; paracetamol; phenylephrine hydrochloride	10 Sep 2020 (Study Day 8) - 24 Sep 2020 (Study Day 22)	Fever And Congestion (COVID-19 Symptoms)
Paracetamol	10 Sep 2020 (Study Day 8) - 23 Sep 2020 (Study Day 21)	Fever(COVID-19 Symptoms)
Rosuvastatin calcium	29 Sep 2020 (Study Day 27) - Ongoing	Hyperlipidemia
Influenza vaccine	12 Oct 2020 (Study Day 40) - 12 Oct 2020 (Study Day 40)	Prophylaxis For Influenza
Monascus purpureus	26 Oct 2020 (Study Day 54) - 26 Oct 2020 (Study Day 54)	Supplement For Hyperlipidemia
Varicella zoster vaccine rge (cho)	26 Oct 2020 (Study Day 54) - 26 Oct 2020 (Study Day 54)	Prophylaxis For Shingles
Acetylsalicylic acid	09 Nov 2020 (Study Day 68) - Ongoing	Heart Health

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	09 Sep 2020 (Study Day 7) - 23 Sep 2020 (Study Day 21)
Hyperlipidaemia	Grade 2/moderate	Not related	29 Sep 2020 (Study Day 27) - 05 Mar 2021 (Study Day 184)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US325-2020 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	04 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19 Infection	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	13 Aug 2020 (Study Day 10) – 30 Aug 2020 (Study Day 27)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US325-2020, a 24-year-old race not reported male, received the first dose of placebo in the left arm on 04 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 13 Aug 2020 (Study Day 10), 9 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 31 Aug 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 infection lasted for 18 days, after which it was considered to be recovered/resolved on 30 Aug 2020 (Study Day 27). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000432	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Depression	Depression	2008 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	17 Aug 2020 (Study Day 14) - 22 Aug 2020 (Study Day 19)	COVID +
Azithromycin	17 Aug 2020 (Study Day 14) - 22 Aug 2020 (Study Day 19)	COVID +
Brompheniramine maleate; dextromethorphan hydrobromide; pseudoephedrine hydrochloride	17 Aug 2020 (Study Day 14) - 31 Aug 2020 (Study Day 28)	COVID +

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	13 Aug 2020 (Study Day 10) - 30 Aug 2020 (Study Day 27)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US325-2075 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	07 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	13 Aug 2020 (Study Day 7) – 21 Aug 2020 (Study Day 15)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US325-2075, a 67-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 07 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 13 Aug 2020 (Study Day 7), 6 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 03 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 9 days, after which it was considered to be recovered/resolved on 21 Aug 2020 (Study Day 15).

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000212	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hip arthroplasty	Right hip replacement	Jan 2016 - Jan 2016
Type 2 diabetes mellitus	Type 2 diabetes	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	13 Aug 2020 (Study Day 7) - 19 Aug 2020 (Study Day 13)	COVID Positive
Azithromycin	13 Aug 2020 (Study Day 7) - 13 Aug 2020 (Study Day 7)	COVID Positive
Loratadine	13 Aug 2020 (Study Day 7) - 19 Aug 2020 (Study Day 13)	COVID Positive
Paracetamol	13 Aug 2020 (Study Day 7) - 15 Aug 2020 (Study Day 9)	COVID Positive
Azithromycin	14 Aug 2020 (Study Day 8) - 19 Aug 2020 (Study Day 13)	COVID Positive

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	13 Aug 2020 (Study Day 7) - 21 Aug 2020 (Study Day 15)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US327-2260 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	22 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ Symptomatic COVID- 19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	26 Aug 2020 (Study Day 5) – 29 Aug 2020 (Study Day 8)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US327-2260, a 30-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 22 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 26 Aug 2020 (Study Day 5), 4 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 18 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 4 days, after which it was considered to be recovered/resolved on 29 Aug 2020 (Study Day 8). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000857	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma exercise induced	Exercise induced asthma	Not reported - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	29 Sep 2020 (Study Day 39) - 29 Sep 2020 (Study Day 39)	Influenza Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	26 Aug 2020 (Study Day 5) - 29 Aug 2020 (Study Day 8)
Nasal Congestion	Grade 1/mild	Not related	26 Aug 2020 (Study Day 5) - 29 Aug 2020 (Study Day 8)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US329-2412 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	24 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	25 Sep 2020 (Study Day 2) – 11 Jan 2021 (Study Day 110)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US329-2412, a 42-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 24 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 25 Sep 2020 (Study Day 2), 1 day after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 21 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 109 days, after which it was considered to be recovered/resolved on 11 Jan 2021 (Study Day 110). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000357	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Myopia	Myopia	1988 - Ongoing
Polycystic ovaries	Polycystic ovarian syndrome - pcos	1995 - Ongoing
Anxiety	Anxiety	2000 - Ongoing
Depression	Depression	2000 - Ongoing
Allergy to arthropod sting	Allergies to bees	2003 - Ongoing
Female sterilisation	Tubal ligation - bilateral	2004 - 2004
Bunion operation	Bunionectomy	2008 - 2008
Foot deformity	Bunions	2008 - 2008
Hypertension	Hypertension	2012 - Ongoing
Hypothyroidism	Hypothyroid	2012 - Ongoing
Rhinitis allergic	Allergic rhinitis	2012 - Ongoing
Seasonal allergy	Seasonal allergies	2012 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease - gerd	2013 - Ongoing
Type 2 diabetes mellitus	Type ii diabetes	2014 - Ongoing
Cholecystectomy	Cholecystectomy	2016 - 2016
Cholelithiasis	Gall stones	2016 - 2016
Non-alcoholic steatohepatitis	Nonalcoholic steatohepatitis - nash	2016 - Ongoing
Hysterectomy	Partial hysterectomy	Apr 2016 - Apr 2016
Asthma	Asthma	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine	2012 - Ongoing	Hypertension
Cetirizine hydrochloride	2012 - Ongoing	Seasonal Allergies
Levothyroxine	2012 - Ongoing	Hypothyroid
Losartan	2012 - Ongoing	Hypertension
Dexlansoprazole	2013 - Ongoing	Gerd
Liraglutide	2014 - Ongoing	Type Ii Diabetes
Colecalciferol	Jan 2016 - Ongoing	Supplement
Iron	Jan 2016 - Ongoing	Supplement
Vitamin b complex	Jan 2016 - Ongoing	Supplement
Spironolactone	2017 - Ongoing	Polycystic Ovary Syndrome
Fluticasone	2018 - Ongoing	Seasonal Allergies
Fluticasone propionate; salmeterol xinafoate	2018 - Ongoing	Asthma

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Montelukast	2018 - Ongoing	Seasonal Allergies
Salbutamol	2018 - Ongoing	Asthma
Escitalopram oxalate	Jun 2018 - Ongoing	Depression/Anxiety
Paracetamol	25 Sep 2020 (Study Day 2) - 11 Jan 2021 (Study Day 110)	COVID Generalized Pain/Fever
Azithromycin	30 Sep 2020 (Study Day 7) - 03 Oct 2020 (Study Day 10)	Prevention Of Phneumonia
Azithromycin	30 Oct 2020 (Study Day 37) - 03 Nov 2020 (Study Day 41)	Prevention Of Pneumonia
Glimepiride	07 Jan 2021 (Study Day 106) - Ongoing	Type 2 Diabetes
Metformin	07 Jan 2021 (Study Day 106) - Ongoing	Type 2 Diabetes

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	24 Sep 2020 (Study Day 1) - 07 Oct 2020 (Study Day 14)
Headache	Grade 1/mild	Related	24 Sep 2020 (Study Day 1) - 07 Oct 2020 (Study Day 14)
Myalgia	Grade 1/mild	Related	24 Sep 2020 (Study Day 1) - 05 Oct 2020 (Study Day 12)
COVID-19	Grade 2/moderate	Not related	25 Sep 2020 (Study Day 2) - 11 Jan 2021 (Study Day 110)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US331-2068 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	17 Aug 2020 (Study Day 5) – 28 Aug 2020 (Study Day 16)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US331-2068, a 21-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 13 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 17 Aug 2020 (Study Day 5), 4 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 09 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 12 days, after which it was considered to be recovered/resolved on 28 Aug 2020 (Study Day 16). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000242	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ethinylestradiol; ferrous fumarate; norethisterone acetate	Aug 2019 - Ongoing	Birth Control
Ibuprofen	18 Aug 2020 (Study Day 6) - 19 Aug 2020 (Study Day 7)	Symptomatic COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	17 Aug 2020 (Study Day 5) - 28 Aug 2020 (Study Day 16)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US331-2548 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	08 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	03 Oct 2020 (Study Day 26) – 15 Oct 2020 (Study Day 38)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US331-2548, a 65-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 08 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Oct 2020 (Study Day 26), 25 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 05 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 13 days, after which it was considered to be recovered/resolved on 15 Oct 2020 (Study Day 38). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000457	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Attention deficit hyperactivity disorder	Attention deficit disorder	2000 - Ongoing
Rotator cuff syndrome	Left rotator cuff tear	2002 - 2012
Meniscus injury	Right knee meniscus tear	2009 - 2017
Hypercholesterolaemia	Hypercholesterolemia	2010 - Ongoing
Osteoarthritis	Bilateral knee osteoarthritis	2010 - Ongoing
Rotator cuff repair	Left rotator cuff repair	2012 - 2012
Sleep apnoea syndrome	Obstructive sleep apnea	2014 - Ongoing
Hypertension	Hypertension	2017 - Ongoing
Meniscus operation	Right knee meniscus tear repair	2017 - 2017
Deafness bilateral	Bilateral hearing loss	2018 - Ongoing
Ligament sprain	Left elbow strain	Jan 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Methylphenidate	2005 - 16 Oct 2020 (Study Day 39)	Attention Deficit Disorder
Acetylsalicylic acid	2012 - Ongoing	Health Maintenance
Fish oil	2012 - Ongoing	Prophylaxis
Oxygen	2014 - Ongoing	Obstructive Sleep Apnea
Lisinopril	2017 - 16 Oct 2020 (Study Day 39)	Hypertension
Rosuvastatin	2017 - Ongoing	Hypercholesterolemia
Alirocumab	Jan 2020 - Ongoing	Hypercholesterolemia
Paracetamol; phenylephrine hydrochloride	03 Oct 2020 (Study Day 26) - 07 Oct 2020 (Study Day 30)	Symptomatic COVID-19
Hydrochlorothiazide; lisinopril	17 Oct 2020 (Study Day 40) - Ongoing	Exacerbation Of Hypertension
Cardiac stress test*	22 Oct 2020 (Study Day 45) - 22 Oct 2020 (Study Day 45)	Diagnostic
Ferric citrate	14 Dec 2020 (Study Day 98) - Ongoing	Osteoarthritis
Left knee arthroplasty*	14 Dec 2020 (Study Day 98) - 14 Dec 2020 (Study Day 98)	Medical History
Meloxicam	14 Dec 2020 (Study Day 98) - Ongoing	Osteoarthritis
Paracetamol	14 Dec 2020 (Study Day 98) - Ongoing	Osteoarthritis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	03 Oct 2020 (Study Day 26) - 15 Oct 2020 (Study Day 38)
Hypertension	Grade 3/severe	Not related	07 Oct 2020 (Study Day 30) - 03 Nov 2020 (Study Day 57)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US331-2587 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	09 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	03 Oct 2020 (Study Day 25) – 20 Oct 2020 (Study Day 42)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US331-2587, a 27-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 09 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Oct 2020 (Study Day 25), 24 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 06 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 18 days, after which it was considered to be recovered/resolved on 20 Oct 2020 (Study Day 42). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000459	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Occasional migraine	2003 - Ongoing
Carpal tunnel syndrome	Right carpal tunnel	2010 - Ongoing
Anxiety	Anxiety	2014 - Ongoing
Attention deficit hyperactivity disorder	Attention deficit hyperactivity disorder	2014 - Ongoing
Depression	Depression	2014 - Ongoing
Fallopian tube cyst	Cyst on fallopian tube	2014 - 2014
Salpingectomy	Unilateral salpingectomy	2014 - 2014
Hypothyroidism	Hypothyroidism	2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid; caffeine; paracetamol	2003 - Ongoing	Occasional Migraine
Sumatriptan	2003 - Ongoing	Occasional Migraine
Naproxen sodium	2010 - Ongoing	Right Carpal Tunnel
Amfetamine aspartate; amfetamine sulfate; dexamfetamine saccharate; dexamfetamine sulfate	2014 - Ongoing	Attention Deficit Hyperactivity Disorder
Ethinylestradiol; ferrous fumarate; norethisterone acetate	2015 - 21 Dec 2020 (Study Day 104)	Birth Control
Levothyroxine	2016 - Ongoing	Hypothyroidism
Acetylsalicylic acid; caffeine; paracetamol	05 Oct 2020 (Study Day 27) - 19 Oct 2020 (Study Day 41)	Symptomatic COVID-19
Ibuprofen	08 Oct 2020 (Study Day 30) - 13 Oct 2020 (Study Day 35)	Symptomatic COVID 19
Phenylephrine hydrochloride	08 Oct 2020 (Study Day 30) - 13 Oct 2020 (Study Day 35)	Symptomatic COVID 19
Triamcinolone acetonide	11 Oct 2020 (Study Day 33) - 20 Oct 2020 (Study Day 42)	Symptomatic COVID 19
Influenza vaccine	23 Oct 2020 (Study Day 45) - 23 Oct 2020 (Study Day 45)	Influenza Prophylaxis
Tuberculosis skin test*	23 Oct 2020 (Study Day 45) - 23 Oct 2020 (Study Day 45)	Diagnostic
Ethinylestradiol; etonogestrel	21 Dec 2020 (Study Day 104) - Ongoing	Birth Control

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	03 Oct 2020 (Study Day 25) - 20 Oct 2020 (Study Day 42)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US332-2061 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	07 Sep 2020 (Study Day 18) – 15 Sep 2020 (Study Day 26)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US332-2061, a 57-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 21 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Sep 2020 (Study Day 18), 17 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 17 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 9 days, after which it was considered to be recovered/resolved on 15 Sep 2020 (Study Day 26). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000303	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Penicillin allergy	1967 - Ongoing
Food allergy	Shellfish allergy	1990 - Ongoing
Arthroscopy	Left knee arthroscopy	1992 - 1992
Meniscus injury	Left knee torn meniscus	1992 - 1992
Migraine	Migraine	1994 - Ongoing
Caesarean section	Cesarean section	1999 - 1999
Caesarean section	Cesarean section	2001 - 2001
Dermatitis contact	Band-aids allergy	2001 - Ongoing
Female sterilisation	Bilateral tubal ligation	2001 - 2001
Abdominoplasty	Abdominoplasty, elective	2004 - 2004
Mammoplasty	Breast augmentation	2004 - 2004
Hot flush	Hot flashes	2008 - Ongoing
Postmenopause	Post-menopausal	2008 - Ongoing
Mammoplasty	Breast augmentation	2010 - 2010

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	Jan 2010 - Ongoing	Supplements
Venlafaxine hydrochloride	Jun 2020 - 03 Sep 2020 (Study Day 14)	Hot Flashes
Influenza vaccine	Sep 2020 - Sep 2020	Prophylaxis
Paracetamol	07 Sep 2020 (Study Day 18) - 15 Sep 2020 (Study Day 26)	Symptomatic COVID-19
Diphenhydramine hydrochloride; paracetamol; phenylephrine hydrochloride	10 Sep 2020 (Study Day 21) - 15 Sep 2020 (Study Day 26)	Symptomatic COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	07 Sep 2020 (Study Day 18) - 15 Sep 2020 (Study Day 26)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US333-2060 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	25 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 31)
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Migraine/Worsening Of Migrianes	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	25 Aug 2020 (Study Day 1) – 27 Aug 2020 (Study Day 3)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US333-2060, a 43-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 25 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 24 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Aug 2020 (Study Day 1), on the day of the first dose and 30 days before the second dose of the IP, the participant experienced a Grade 2/moderate non-serious adverse event of migraine. The IP dose was withdrawn due to the worsening of migrianes. The event of worsening of migrianes lasted for 3 days, after which it was considered to be recovered/resolved on 27 Aug 2020 (Study Day 3). The investigator assessed the event of migraine to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Astigmatism	Astigmatism	1991 - 18 Dec 2020 (Study Day 116)
Hypotension	Hypotension	1997 - Ongoing
Migraine	Migranes	2000 - Ongoing
Depression	Depression	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ethinylestradiol; levonorgestrel	2020 - Ongoing	Pregnancy Prophylaxis
Acetylsalicylic acid	25 Aug 2020 (Study Day 1) - 27 Aug 2020 (Study Day 3)	Worsening Of Migraines
Ubrogepant	25 Aug 2020 (Study Day 1) - 25 Aug 2020 (Study Day 1)	Worsening Of Migraines
Ibuprofen	27 Aug 2020 (Study Day 3) - 27 Aug 2020 (Study Day 3)	Headache
Acetylsalicylic acid	26 Sep 2020 (Study Day 33) - 26 Sep 2020 (Study Day 33)	Headache
Influenza vaccine	09 Oct 2020 (Study Day 46) - 09 Oct 2020 (Study Day 46)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Migraine	Grade 2/moderate	Related	25 Aug 2020 (Study Day 1) - 27 Aug 2020 (Study Day 3)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US333-2089 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	17 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	18 Sep 2020 (Study Day 2) – 09 Oct 2020 (Study Day 23)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US333-2089, a 42-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 17 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 18 Sep 2020 (Study Day 2), 1 day after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 14 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 22 days, after which it was considered to be recovered/resolved on 09 Oct 2020 (Study Day 23). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000377	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Depression	Depression	2002 - Ongoing
Arthralgia	Bilateral knee pain	2012 - Ongoing
Insomnia	Insomnia	2018 - Ongoing
Umbilical hernia	Umbillical hernia	May 2020 - 04 Aug 2020 (Study Day -44)
Umbilical hernia repair	Umbillical hernia repair	04 Aug 2020 (Study Day -44) - 04 Aug 2020 (Study Day -44)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bupropion	2005 - Ongoing	Depression
Glucosamine	2012 - Ongoing	Bilateral Knee Pain
Duloxetine	2015 - Ongoing	Depression
Levonorgestrel	Jul 2016 - Ongoing	Pregnancy Prophylaxis
Hydrocodone bitartrate; paracetamol	18 Sep 2020 (Study Day 2) - 18 Sep 2020 (Study Day 2)	Injection Site Pain
Paracetamol	18 Sep 2020 (Study Day 2) - 26 Sep 2020 (Study Day 10)	Injection Site Pain, Muscle Aches
Diphenhydramine hydrochloride; paracetamol; phenylephrine hydrochloride	24 Sep 2020 (Study Day 8) - 26 Sep 2020 (Study Day 10)	Symptomatic COVID-19
Paracetamol	24 Sep 2020 (Study Day 8) - 05 Oct 2020 (Study Day 19)	Symptomatic COVID-19
Caffeine; mepyramine maleate; paracetamol	30 Sep 2020 (Study Day 14) - 02 Oct 2020 (Study Day 16)	Stomach Pain
Oxycodone	03 Oct 2020 (Study Day 17) - 03 Oct 2020 (Study Day 17)	Symptomatic COVID-19
Escitalopram oxalate	12 Feb 2021 (Study Day 149) - Ongoing	Depression
Zolpidem tartrate	12 Feb 2021 (Study Day 149) - Ongoing	Insomnia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	18 Sep 2020 (Study Day 2) - 09 Oct 2020 (Study Day 23)
Abdominal Pain Upper	Grade 2/moderate	Not related	30 Sep 2020 (Study Day 14) - 02 Oct 2020 (Study Day 16)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US334-2323 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	15 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	11 Nov 2020 (Study Day 28) – 05 Dec 2020 (Study Day 52)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US334-2323, a 26-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 15 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 11 Nov 2020 (Study Day 28), 27 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 11 Nov 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 25 days, after which it was considered to be recovered/resolved on 05 Dec 2020 (Study Day 52). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000938	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Headache	Headaches	2013 - Ongoing
Ovarian cyst	Benign ovarian cyst (r)	2015 - Ongoing
Attention deficit hyperactivity disorder	Adhd	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2013 - Ongoing	Headaches
Amfetamine sulfate	2019 - Ongoing	Adhd
Levonorgestrel	Mar 2019 - Ongoing	Contraception
Influenza vaccine	09 Sep 2020 (Study Day -36) - 09 Sep 2020 (Study Day -36)	Influenza Prophylaxis
Doxycycline	04 Oct 2020 (Study Day -11) - 08 Oct 2020 (Study Day -7)	Ovarian Cyst Infection Prophylaxis
Dextromethorphan	16 Nov 2020 (Study Day 33) - 26 Nov 2020 (Study Day 43)	Symptomatic COVID-19 Infection Ae
Paracetamol	17 Nov 2020 (Study Day 34) - 22 Nov 2020 (Study Day 39)	Symptomatic COVID-19 Infection Ae

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US335-2072 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	19 Aug 2020 (Study Day 7) – 08 Sep 2020 (Study Day 27)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US335-2072, a 63-year-old Hispanic or Latino female, received the first dose of placebo in the right arm on 13 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 19 Aug 2020 (Study Day 7), 6 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 09 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 21 days, after which it was considered to be recovered/resolved on 08 Sep 2020 (Study Day 27). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000224	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Caesarean section	C-section	1979 - 1979
Presbyopia	Presbyopia	1997 - Ongoing
Abdominoplasty	Tummy tuck	2000 - 2000
Postmenopause	Postmenopausal	2007 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	19 Aug 2020 (Study Day 7) - 28 Aug 2020 (Study Day 16)	Body Aches (Due To COVID-19)
Paracetamol	19 Aug 2020 (Study Day 7) - 28 Aug 2020 (Study Day 16)	Headache
Guaifenesin	27 Aug 2020 (Study Day 15) - 31 Aug 2020 (Study Day 19)	Cough (Due To COVID-19)

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	19 Aug 2020 (Study Day 7) - 08 Sep 2020 (Study Day 27)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US336-2083 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	08 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	28 Aug 2020 (Study Day 21) – 06 Sep 2020 (Study Day 30)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US336-2083, a 18-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 08 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Aug 2020 (Study Day 21), 20 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 04 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 10 days, after which it was considered to be recovered/resolved on 06 Sep 2020 (Study Day 30). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000263	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	29 Aug 2020 (Study Day 22) - 31 Aug 2020 (Study Day 24)	COVID-19
Zinc	29 Aug 2020 (Study Day 22) - 05 Sep 2020 (Study Day 29)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	28 Aug 2020 (Study Day 21) - 06 Sep 2020 (Study Day 30)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US336-2124 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	18 Aug 2020 (Study Day 6) – 18 Sep 2020 (Study Day 37)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US336-2124, a 20-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 13 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 18 Aug 2020 (Study Day 6), 5 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 09 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 32 days, after which it was considered to be recovered/resolved on 18 Sep 2020 (Study Day 37). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000226	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Rhinitis allergic	Allergic rhinitis	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fluticasone propionate	2019 - Ongoing	Allergic Rhinitis
Famotidine; ibuprofen	21 Aug 2020 (Study Day 9) - 21 Aug 2020 (Study Day 9)	Sars-Cov 2 Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arthralgia	Grade 1/mild	Related	14 Aug 2020 (Study Day 2) - 23 Aug 2020 (Study Day 11)
COVID-19	Grade 1/mild	Not related	18 Aug 2020 (Study Day 6) - 18 Sep 2020 (Study Day 37)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US337-2092 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	19 Aug 2020 (Study Day 1) – 31 Aug 2020 (Study Day 13)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US337-2092, a 68-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 19 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 19 Aug 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 15 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 13 days, after which it was considered to be recovered/resolved on 31 Aug 2020 (Study Day 13). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-050658	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2005 - Ongoing
Hypertension	Hypertension	2015 - Ongoing
Varicose vein	Varicose veins left leg	06 Jan 2020 (Study Day -226) - 06 Jan 2020 (Study Day -226)
Varicose vein	Varicose veins right leg	06 Jan 2020 (Study Day -226) - 06 Jan 2020 (Study Day -226)
Varicose vein operation	Varicose removal left leg	06 Jan 2020 (Study Day -226) - 06 Jan 2020 (Study Day -226)
Varicose vein operation	Varicose vein removal right leg	06 Jan 2020 (Study Day -226) - 06 Jan 2020 (Study Day -226)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	2005 - 2005	Hypertension
Atorvastatin	2010 - Ongoing	Hypercholesterolemia
Tetanus vaccine	20 Sep 2011 (Study Day -3256) - 20 Sep 2011 (Study Day -3256)	Infection Prophylaxis/Prevention
Ubidecarenone	2017 - Ongoing	Dietary Supplement
Pneumococcal vaccine	09 Aug 2017 (Study Day -1106) - 09 Aug 2017 (Study Day -1106)	Pneumonia Prophylaxis/Prevention
Colecalciferol	Aug 2018 - Ongoing	Dietary Supplement
Influenza vaccine	Oct 2019 - Oct 2019	Influenza Prophylaxis/Prevention
Metoprolol	Jan 2020 - Ongoing	Hypertension
Varicella zoster vaccine rge (cho)	10 Jul 2020 (Study Day -40) - 10 Jul 2020 (Study Day -40)	Herpes Zoster Prophylaxis/Prevention
Influenza vaccine	30 Oct 2020 (Study Day 73) - 30 Oct 2020 (Study Day 73)	Influenza Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	19 Aug 2020 (Study Day 1) - 31 Aug 2020 (Study Day 13)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US338-2035 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19 [positive Test]	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	14 Aug 2020 (Study Day 1) – 26 Aug 2020 (Study Day 13)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US338-2035, a 32-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 14 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 14 Aug 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 10 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 [positive test] lasted for 13 days, after which it was considered to be recovered/resolved on 26 Aug 2020 (Study Day 13). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraine headaches	2002 - Ongoing
Seasonal allergy	Seasonal allergies	2012 - Ongoing
Herpes simplex	Herpes simplex virus 2	2014 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety	Anxiety	2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Caffeine; paracetamol	2002 - Ongoing	Migraine Headaches
Chondroitin; glucosamine	2012 - Ongoing	Nutritional Supplement
Colecalciferol	2012 - Ongoing	Nutritional Supplement
Vitamin b12 nos	2012 - Ongoing	Nutritional Supplement
Fexofenadine hydrochloride	2014 - Ongoing	Seasonal Allergies
Valaciclovir hydrochloride	2014 - Ongoing	Herpes Simplex Virus 2
Emtricitabine; tenofovir disoproxil fumarate	2015 - Ongoing	Prophylaxis For Hiv
Acetylsalicylic acid	2020 - Ongoing	Prophylaxis For Blood Clots Related To COVID-19
Sertraline hydrochloride	2020 - Ongoing	Anxiety
Zinc	2020 - Ongoing	Nutritional Supplement
Covid pcr test*	14 Aug 2020 (Study Day 1) - 14 Aug 2020 (Study Day 1)	Diagnostic
Influenza vaccine	19 Sep 2020 (Study Day 37) - 19 Sep 2020 (Study Day 37)	Flu
Paracetamol	29 Jan 2021 (Study Day 169) - 29 Jan 2021 (Study Day 169)	Pain At Injection Site
Benzonatate	12 Feb 2021 (Study Day 183) - 15 Feb 2021 (Study Day 186)	Productive Cough
Paracetamol	26 Feb 2021 (Study Day 197) - 26 Feb 2021 (Study Day 197)	Solicited Symptoms Of Injection Site Soreness And Headache
Paracetamol	27 Feb 2021 (Study Day 198) - 27 Feb 2021 (Study Day 198)	Solicited Symptoms Of Injection Site Soreness And Headache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	14 Aug 2020 (Study Day 1) - 26 Aug 2020 (Study Day 13)
Injection Site Pain	Grade 1/mild	Related	16 Aug 2020 (Study Day 3) - 23 Aug 2020 (Study Day 10)
Lymphadenopathy	Grade 1/mild	Related	16 Aug 2020 (Study Day 3) - 23 Aug 2020 (Study Day 10)
Myalgia	Grade 1/mild	Related	19 Aug 2020 (Study Day 6) - 23 Aug 2020 (Study Day 10)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US341-2129 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	05 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	12 Aug 2020 (Study Day 8) – 19 Sep 2020 (Study Day 46)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US341-2129, a 37-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 05 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Aug 2020 (Study Day 8), 7 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 01 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 39 days, after which it was considered to be recovered/resolved on 19 Sep 2020 (Study Day 46). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000227	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine hydrochloride; ibuprofen	12 Aug 2020 (Study Day 8) - 12 Aug 2020 (Study Day 8)	Headache
Dextromethorphan; doxylamine; paracetamol	13 Aug 2020 (Study Day 9) - 17 Aug 2020 (Study Day 13)	COVID-19
Ibuprofen	13 Aug 2020 (Study Day 9) - 17 Aug 2020 (Study Day 13)	COVID-19
Acetylsalicylic acid	14 Aug 2020 (Study Day 10) - 17 Aug 2020 (Study Day 13)	COVID-19
Ibuprofen	01 Feb 2021 (Study Day 181) - 01 Feb 2021 (Study Day 181)	Headache - Solicited Adverse Reaction

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	12 Aug 2020 (Study Day 8) - 19 Sep 2020 (Study Day 46)
Headache	Grade 1/mild	Related	12 Aug 2020 (Study Day 8) - 12 Aug 2020 (Study Day 8)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US343-2334 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Asymptomatic COVID-19/SARS-Cov-2 Infection (Asymptomatic)	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	16 Sep 2020 (Study Day 20) – 26 Sep 2020 (Study Day 30)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US343-2334, a 29-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 28 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Sep 2020 (Study Day 20), 19 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of asymptomatic COVID-19. On 24 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of SARS-CoV-2 infection (asymptomatic) lasted for 11 days, after which it was considered to be recovered/resolved on 26 Sep 2020 (Study Day 30). The investigator assessed the event of asymptomatic COVID-19 to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

On 29 Dec 2020 (Study Day 124), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Mild asthma	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	2018 - Ongoing	Asthma
Hepatitis b vaccine	05 Oct 2020 (Study Day 39) - 05 Oct 2020 (Study Day 39)	Hepatitis B Prophylaxis
Influenza vaccine	05 Oct 2020 (Study Day 39) - 05 Oct 2020 (Study Day 39)	Flu Prophylaxis
Other viral vaccines	17 Dec 2020 (Study Day 112) - 17 Dec 2020 (Study Day 112)	COVID-19 Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Asymptomatic COVID-19	Grade 1/mild	Not related	16 Sep 2020 (Study Day 20) - 26 Sep 2020 (Study Day 30)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US345-2295 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	06 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not applicable	06 Aug 2020 (Study Day 1) – 25 Aug 2020 (Study Day 20)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US345-2295, a 62-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 06 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 06 Aug 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 02 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 20 days, after which it was considered to be recovered/resolved on 25 Aug 2020 (Study Day 20). The investigator assessed the event of COVID-19 to be not applicable to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000205	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Reaction to food additive	Allergy to saccharin	1975 - Ongoing
Chronic sinusitis	Chronic sinusitis	1977 - Ongoing
Drug hypersensitivity	Allergy to sulfa	1995 - Ongoing
Sinus operation	Sinus surgery	1995 - 1995
Dyspepsia	Heartburn	2010 - Ongoing
Hypertension	High blood pressure	2015 - Ongoing
Seasonal allergy	Seasonal allergies	2015 - Ongoing
Blood testosterone decreased	Low testosterone	2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cetirizine	2015 - Ongoing	Seasonal Allergies
Lisinopril	2015 - Ongoing	High Blood Pressure
Omeprazole	2015 - Ongoing	Heartburn
Ascorbic acid	07 Aug 2020 (Study Day 2) - Ongoing	Immune Boost
Docosahexaenoic acid; eicosapentaenoic acid	07 Aug 2020 (Study Day 2) - Ongoing	Immune Health
Famotidine	07 Aug 2020 (Study Day 2) - Ongoing	Stomach Coating/Acid Reflux
Fluticasone propionate	07 Aug 2020 (Study Day 2) - Ongoing	Sinus Congestion/ COVID 19
Salbutamol	07 Aug 2020 (Study Day 2) - 13 Sep 2020 (Study Day 39)	Chest Congestion/ COVID 19
Vitamins nos	07 Aug 2020 (Study Day 2) - Ongoing	Supplement
Zinc acetate; zinc gluconate	07 Aug 2020 (Study Day 2) - 13 Aug 2020 (Study Day 8)	COVID-19
Benzonatate	10 Aug 2020 (Study Day 5) - 03 Sep 2020 (Study Day 29)	COVID-19
Amoxicillin; clavulanic acid	03 Sep 2020 (Study Day 29) - 13 Sep 2020 (Study Day 39)	Worsening Of Chronic Sinusitis
Amoxicillin; clavulanic acid	02 Oct 2020 (Study Day 58) - 23 Oct 2020 (Study Day 79)	Worsening Of Sinusitis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not applicable	06 Aug 2020 (Study Day 1) - 25 Aug 2020 (Study Day 20)
Gastrooesophageal Reflux Disease	Grade 1/mild	Not related	07 Aug 2020 (Study Day 2) - 13 Aug 2020 (Study Day 8)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3380597

Participant Number:	US347-2096 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	07 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	09 Nov 2020 (Study Day 34) – 29 Nov 2020 (Study Day 54)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US347-2096, a 42-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 07 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Nov 2020 (Study Day 34), 33 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 03 Nov 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 21 days, after which it was considered to be recovered/resolved on 29 Nov 2020 (Study Day 54). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000786	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergic rhinitis	1996 - Ongoing
Borderline personality disorder	Borderline personality disorder	Jan 2000 - Ongoing
Intervertebral disc protrusion	Herniated disc, l5-s1	2005 - Sep 2005
Seborrhoeic dermatitis	Seborrheic dermititis, perioral	2017 - Ongoing
Cholecystitis	Cholecystitis	Sep 2019 - Oct 2019
Cholecystectomy	Cholecystectomy	Oct 2019 - Oct 2019
Obesity	Obesity	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Azelastine hydrochloride; fluticasone propionate	2000 - Ongoing	Allergic Rhinitis
Carbamazepine	2000 - Ongoing	Bpd
Ibuprofen	2000 - Ongoing	Generalized Pain
Allergens nos	2016 - Ongoing	Allergic Rhinitis
Ketoconazole	2017 - Ongoing	Seborrheic Dermititis
Sertraline hydrochloride	01 Sep 2020 (Study Day -36) - Ongoing	Bpd
Influenza vaccine	21 Oct 2020 (Study Day 15) - 21 Oct 2020 (Study Day 15)	Influenza Prophylaxis
Ascorbic acid	10 Nov 2020 (Study Day 35) - Ongoing	Supplement
Colecalciferol	10 Nov 2020 (Study Day 35) - Ongoing	Supplement
Zinc	10 Nov 2020 (Study Day 35) - Ongoing	Supplement
Azithromycin	12 Nov 2020 (Study Day 37) - 12 Nov 2020 (Study Day 37)	COVID-19
Salbutamol	12 Nov 2020 (Study Day 37) - 29 Nov 2020 (Study Day 54)	COVID-19
Paracetamol	06 Feb 2021 (Study Day 123) - 06 Feb 2021 (Study Day 123)	Pain At Injection Site
Lisinopril	18 Mar 2021 (Study Day 163) - Ongoing	Elevated Blood Pressure

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	09 Nov 2020 (Study Day 34) - 29 Nov 2020 (Study Day 54)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US348-2302 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	19 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	16 Nov 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	SAE	Grade 3/ severe	Not related	11 Jan 2021 (Study Day 85) – 27 Jan 2021 (Study Day 101)	Recovered/resolved
Acute Kidney Injury/Acute Renal Failure Superimposed On Chronic Kidney Disease	SAE	Grade 3/ severe	Not related	29 Jan 2021 (Study Day 103) – 03 Feb 2021 (Study Day 108)	Recovered/resolved
Nausea/Intractable Nausea	SAE	Grade 3/ severe	Not related	29 Jan 2021 (Study Day 103) – 03 Feb 2021 (Study Day 108)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US348-2302, a 73-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 19 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 16 Nov 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 11 Jan 2021 (Study Day 85), 84 days after the first dose and 57 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of COVID-19. Action taken with the IP was not applicable. The event of COVID-19 lasted for 17 days, after which it was considered to be recovered/resolved on 27 Jan 2021 (Study Day 101). The investigator assessed the event of COVID-19 to be not related to the IP.

On 29 Jan 2021 (Study Day 103), 102 days after the first dose and 74 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of acute kidney injury. Action taken with the IP was not applicable. The event of acute renal failure superimposed on chronic kidney disease lasted for 6 days, after which it was considered to be recovered/resolved on 03 Feb 2021 (Study Day 108). The investigator assessed the event of acute kidney injury to be not related to the IP.

On 29 Jan 2021 (Study Day 103), 102 days after the first dose and 74 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of nausea. Action taken with the IP was not applicable. The event of intractable nausea lasted for 6 days, after which it was considered to be recovered/resolved on 03 Feb 2021 (Study Day 108). The investigator assessed the event of nausea to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-014606	Acute kidney injury
MOD-2021-014606	Nausea
MOD-2021-006694	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	1996 - Ongoing
Arthritis	Arthritis in right knee	2012 - Ongoing
Chronic kidney disease	Chronic kidney disease stage 3	2014 - Ongoing
Cataract	Cataract	2017 - Ongoing
Glaucoma	Glaucoma	2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine	2014 - Ongoing	Hypertension
Metoprolol	2014 - Ongoing	Hypertension
Diclofenac	2016 - Ongoing	Arthritis In Knee
Dorzolamide; timolol	2017 - Ongoing	Glaucoma
Latanoprost	2017 - Ongoing	Glaucoma
Azithromycin	21 Jan 2021 (Study Day 95) - 25 Jan 2021 (Study Day 99)	COVID 19
Ceftriaxone	21 Jan 2021 (Study Day 95) - 24 Jan 2021 (Study Day 98)	COVID 19 Related Pneumonia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Dexamethasone	21 Jan 2021 (Study Day 95) - 21 Jan 2021 (Study Day 95)	COVID 19
Paracetamol	21 Jan 2021 (Study Day 95) - 25 Jan 2021 (Study Day 99)	Fever
Supplemental oxygen*	21 Jan 2021 (Study Day 95) - 21 Jan 2021 (Study Day 95)	Adverse Event
X-ray chest*	21 Jan 2021 (Study Day 95) - 21 Jan 2021 (Study Day 95)	Diagnostic
Ascorbic acid	22 Jan 2021 (Study Day 96) - 30 Jan 2021 (Study Day 104)	COVID 19
Convalescent plasma infusion*	22 Jan 2021 (Study Day 96) - 22 Jan 2021 (Study Day 96)	Adverse Event
Dexamethasone	22 Jan 2021 (Study Day 96) - 01 Feb 2021 (Study Day 106)	COVID 19
Enoxaparin	22 Jan 2021 (Study Day 96) - 25 Jan 2021 (Study Day 99)	Vte Prophylaxis
Famotidine	22 Jan 2021 (Study Day 96) - 24 Jan 2021 (Study Day 98)	Peptic Ulcer Disease Prophylaxis
Lung perfusion scan*	22 Jan 2021 (Study Day 96) - 22 Jan 2021 (Study Day 96)	Diagnostic
Remdesivir	22 Jan 2021 (Study Day 96) - 25 Jan 2021 (Study Day 99)	COVID 19
Zinc sulfate	22 Jan 2021 (Study Day 96) - 30 Jan 2021 (Study Day 104)	COVID 19
Enoxaparin	01 Feb 2021 (Study Day 106) - 03 Feb 2021 (Study Day 108)	Vte Prophylaxis
Insulin lispro	01 Feb 2021 (Study Day 106) - 03 Feb 2021 (Study Day 108)	Hyperglycemia From Newly Diagnosed Diabetes Type Ii
Sodium chloride	02 Feb 2021 (Study Day 107) - 03 Feb 2021 (Study Day 108)	Hyponatremia
Metformin	03 Feb 2021 (Study Day 108) - Ongoing	Hyperglycemia From Newly Diagnosed Diabetes Type Ii
Omeprazole	04 Feb 2021 (Study Day 109) - Ongoing	Gerd Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hyperkalaemia	Grade 1/mild	Not related	01 Feb 2021 (Study Day 106) - 02 Feb 2021 (Study Day 107)
Hypermagnesaemia	Grade 1/mild	Not related	01 Feb 2021 (Study Day 106) - 03 Feb 2021 (Study Day 108)
Hyponatraemia	Grade 2/moderate	Not related	01 Feb 2021 (Study Day 106) - 03 Feb 2021 (Study Day 108)
Type 2 Diabetes Mellitus	Grade 3/severe	Not related	01 Feb 2021 (Study Day 106) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US349-2117 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19, Confirmed	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	22 Sep 2020 (Study Day 13) – 05 Oct 2020 (Study Day 26)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US349-2117, a 61-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 10 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 22 Sep 2020 (Study Day 13), 12 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 07 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19, confirmed lasted for 14 days, after which it was considered to be recovered/resolved on 05 Oct 2020 (Study Day 26). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000361	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Postmenopause	Post menopausal	2007 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2016 - Ongoing
Dermal filler injection	Dermal filler injection	2018 - 2019
Skin cosmetic procedure	Skin cosmetic procedure	2018 - 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamin d nos	2015 - Ongoing	Supplement
Vitamins nos	2015 - Ongoing	Supplement
Zinc	2015 - Ongoing	Supplement
Hydrocodone bitartrate; paracetamol	22 Sep 2020 (Study Day 13) - 22 Sep 2020 (Study Day 13)	Myalgias
Ibuprofen	23 Sep 2020 (Study Day 14) - 27 Sep 2020 (Study Day 18)	Coivd-19 (Confirmed) - Myalgias, Fever
Paracetamol	24 Sep 2020 (Study Day 15) - 24 Sep 2020 (Study Day 15)	Fever, Myalgias And Headache
Pseudoephedrine	01 Oct 2020 (Study Day 22) - 01 Oct 2020 (Study Day 22)	Sinus Congestion From COVID-19 Infection
Colesevelam	23 Dec 2020 (Study Day 105) - Ongoing	Hyperlipidemia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	22 Sep 2020 (Study Day 13) - 05 Oct 2020 (Study Day 26)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US349-2237 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	22 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19 Infection	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	22 Sep 2020 (Study Day 1) – 09 Oct 2020 (Study Day 18)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US349-2237, a 60-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 22 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 22 Sep 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 19 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 infection lasted for 18 days, after which it was considered to be recovered/resolved on 09 Oct 2020 (Study Day 18). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000397	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Rhinitis allergic	Allergic rhinitis	Not reported - Ongoing
Asthma	Asthma-mild	1966 - Ongoing
Gastrooesophageal reflux disease	Gastro-esophageal reflux disease	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Azelastine	Not reported - Ongoing	Allergic Rhinitis
Fluticasone	Not reported - Ongoing	Allergic Rhinitis
Fluticasone propionate; salmeterol xinafoate	Not reported - Ongoing	Asthma
Montelukast	Not reported - Ongoing	Asthma
Pantoprazole	01 Jan 2018 (Study Day -995) - Ongoing	Gerd
Naproxen	24 Sep 2020 (Study Day 3) - 27 Sep 2020 (Study Day 6)	Myalgias, Arthralgias Associated With COVID Infection
Paracetamol	27 Sep 2020 (Study Day 6) - 01 Oct 2020 (Study Day 10)	Fever Associated With COVID Infection
Azithromycin	05 Oct 2020 (Study Day 14) - 09 Oct 2020 (Study Day 18)	Cough From COVID
Varicella zoster vaccine	10 Nov 2020 (Study Day 50) - 10 Nov 2020 (Study Day 50)	Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Not related	22 Sep 2020 (Study Day 1) - 10 Oct 2020 (Study Day 19)
COVID-19	Grade 2/moderate	Not related	22 Sep 2020 (Study Day 1) - 09 Oct 2020 (Study Day 18)
Chills	Grade 1/mild	Not related	24 Sep 2020 (Study Day 3) - 06 Oct 2020 (Study Day 15)
Headache	Grade 2/moderate	Not related	24 Sep 2020 (Study Day 3) - 30 Sep 2020 (Study Day 9)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US349-2242 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	23 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19 Infection	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	29 Sep 2020 (Study Day 7) – 22 Oct 2020 (Study Day 30)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US349-2242, a 29-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 23 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 29 Sep 2020 (Study Day 7), 6 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 20 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 infection lasted for 24 days, after which it was considered to be recovered/resolved on 22 Oct 2020 (Study Day 30). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000403	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Sleep apnoea syndrome	Sleep apnea	2016 - Ongoing
Hypertension	Hypertension	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Losartan	2019 - Ongoing	Hypertension
Diphenhydramine hydrochloride; paracetamol; phenylephrine hydrochloride	29 Sep 2020 (Study Day 7) - Ongoing	Cough Later Found To Be Related To COVID-19
Dextromethorphan hydrobromide; doxylamine succinate; paracetamol	04 Oct 2020 (Study Day 12) - 07 Oct 2020 (Study Day 15)	Cough, Related To COVID 19 Infection
Dextromethorphan hydrobromide; guaifenesin	07 Oct 2020 (Study Day 15) - 14 Oct 2020 (Study Day 22)	Cough, Related To COVID 19 Infection
Metoprolol	22 Nov 2020 (Study Day 61) - 06 Mar 2021 (Study Day 165)	Worsening Hypertension
Metoprolol	06 Mar 2021 (Study Day 165) - Ongoing	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	29 Sep 2020 (Study Day 7) - 22 Oct 2020 (Study Day 30)
Hypertension	Grade 2/moderate	Not related	22 Nov 2020 (Study Day 61) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US349-2299 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	13 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	10 Nov 2020 (Study Day 29) – Ongoing	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US349-2299, a 55-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 13 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Nov 2020 (Study Day 29), 28 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 09 Nov 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 was considered to be ongoing. The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000962	COVID-19

Study Completion/Discontinuation

On 20 Jan 2021 (Study Day 100), the participant discontinued from the study due to lost to follow-up.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1966 - Ongoing
Hypogonadism	Low testosterone - hypogonadism	2005 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Chorionic gonadotrophin	2010 - Ongoing	Hypogonadism
Loratadine	2010 - Ongoing	Seasonal Allergies
Testosterone cipionate	2012 - Ongoing	Hypogonadism
Paracetamol	20 Nov 2020 (Study Day 39) - Ongoing	Fevers - COVID 19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US351-2199 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Asymptomatic COVID-19/Asymptomatic COVID-19 Infection	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	02 Sep 2020 (Study Day 1) – 12 Sep 2020 (Study Day 11)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US351-2199, a 59-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 02 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 02 Sep 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of asymptomatic COVID-19. On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of asymptomatic COVID-19 infection lasted for 11 days, after which it was considered to be recovered/resolved on 12 Sep 2020 (Study Day 11). The investigator assessed the event of asymptomatic COVID-19 to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypothyroidism	Hypothyroidism	(b) (6) 1961 (Study Day (b) (6) - Ongoing
Insomnia	Insomnia	1966 - Ongoing
Tobacco user	Current tobacco use	1990 - Ongoing
Intraventricular haemorrhage	Intraventricular brain bleed	2008 - 2008
Retinal detachment	Left retinal detachment	2008 - 2008
Blood cholesterol increased	High cholesterol	2010 - Ongoing
Blood triglycerides increased	High triglycerides	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	2010 - Ongoing
Hypermetropia	Farsighted bilateral	2018 - Ongoing
Musculoskeletal pain	Right shoulder pain	2018 - Ongoing
Skin laceration	Cut on left knee	25 Jun 2020 (Study Day -69) - 25 Jun 2020 (Study Day -69)
Suture insertion	One stitch placed from left knee cut	25 Jun 2020 (Study Day -69) - 25 Jun 2020 (Study Day -69)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fenofibric acid	2010 - Ongoing	High Triglycerides
Levothyroxine	2010 - Ongoing	Hypothyroidism
Metformin	2010 - Ongoing	Type 2 Diabetes
Metoprolol	2010 - Ongoing	Hypertension
Nicardipine	2010 - Ongoing	Hypertension
Pitavastatin calcium	2010 - Ongoing	High Cholesterol
Acetylsalicylic acid	2015 - Ongoing	Prophylaxis For Coronary Artery Disease
Zolpidem	2016 - Ongoing	Insomnia
Naproxen sodium	2018 - Ongoing	Right Shoulder Pain
Amlodipine	2019 - Ongoing	Hypertension
Dulaglutide	01 May 2020 (Study Day -124) - Ongoing	Type 2 Diabetes
Glimepiride	01 Sep 2020 (Study Day -1) - Ongoing	Type 2 Diabetes
Naproxen sodium	08 Sep 2020 (Study Day 7) - 08 Sep 2020 (Study Day 7)	Worsening Right Shoulder Soreness Secondary To Yard Work
Influenza vaccine	16 Sep 2020 (Study Day 15) - 16 Sep 2020 (Study Day 15)	Seasonal Influenza

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Asymptomatic COVID-19	Grade 1/mild	Not related	02 Sep 2020 (Study Day 1) - 12 Sep 2020 (Study Day 11)
Musculoskeletal Pain	Grade 1/mild	Not related	08 Sep 2020 (Study Day 7) - 08 Sep 2020 (Study Day 7)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US352-2042 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	07 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	22 Aug 2020 (Study Day 16) – 30 Aug 2020 (Study Day 24)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US352-2042, a 34-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 07 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 22 Aug 2020 (Study Day 16), 15 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 03 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 9 days, after which it was considered to be recovered/resolved on 30 Aug 2020 (Study Day 24). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000215	COVID-19

Study Completion/Discontinuation

On 24 Dec 2020 (Study Day 140), the participant discontinued from the study due to other.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	Not reported - Ongoing
Seasonal allergy	Seasonal allergies	Not reported - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Loratadine	Not reported - Ongoing	Seasonal Allergies
Hydrochlorothiazide	2012 - Ongoing	Hypertension
Paracetamol	23 Aug 2020 (Study Day 17) - 24 Aug 2020 (Study Day 18)	Symptomatic COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	22 Aug 2020 (Study Day 16) - 30 Aug 2020 (Study Day 24)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US352-2297 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19 Infection	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	18 Sep 2020 (Study Day 29) – 26 Sep 2020 (Study Day 37)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US352-2297, a 63-year-old race unknown male, received the first dose of placebo in the left arm on 21 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 18 Sep 2020 (Study Day 29), 28 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 17 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 infection lasted for 9 days, after which it was considered to be recovered/resolved on 26 Sep 2020 (Study Day 37). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000327	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No prior or concomitant medications or procedures were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	22 Aug 2020 (Study Day 2) - 23 Aug 2020 (Study Day 3)	Joint Aches In Several Joints
Acetylsalicylic acid	18 Sep 2020 (Study Day 29) - 26 Sep 2020 (Study Day 37)	Symptomatic COVID-19 Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	18 Sep 2020 (Study Day 29) - 26 Sep 2020 (Study Day 37)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US354-2043 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	24 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	07 Sep 2020 (Study Day 15) – 14 Sep 2020 (Study Day 22)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US354-2043, a 26-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 24 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Sep 2020 (Study Day 15), 14 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 20 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 8 days, after which it was considered to be recovered/resolved on 14 Sep 2020 (Study Day 22). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000378	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cardiac murmur	Systolic murmur	2008 - Ongoing
Migraine	Migraines	2011 - Ongoing
Allergy to animal	Allergies (dogs)	Jul 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levonorgestrel	Feb 2016 - 03 Nov 2020 (Study Day 72)	Contraception
Topiramate	Mar 2019 - Ongoing	Migraine
Cetirizine hydrochloride	Jul 2020 - Ongoing	Dog Allergy
Phenylephrine	08 Sep 2020 (Study Day 16) - 11 Sep 2020 (Study Day 19)	Symptomatic COVID-19
Colposcopy*	03 Nov 2020 (Study Day 72) - 03 Nov 2020 (Study Day 72)	Diagnostic
Amoxicillin	27 Dec 2020 (Study Day 126) - 03 Jan 2021 (Study Day 133)	Dog Bite To The Face

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	07 Sep 2020 (Study Day 15) - 14 Sep 2020 (Study Day 22)
Cervical Dysplasia	Grade 1/mild	Not related	06 Oct 2020 (Study Day 44) - Ongoing
Animal Bite	Grade 2/moderate	Not related	24 Dec 2020 (Study Day 123) - 31 Dec 2020 (Study Day 130)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US359-2196 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	16 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Asymptomatic COVID-19/ Asymptomatic COVID-19 Positive	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not applicable	16 Aug 2020 (Study Day 1) – 28 Aug 2020 (Study Day 13)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US359-2196, a 69-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 16 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 16 Aug 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of asymptomatic COVID-19. On 12 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of asymptomatic COVID-19 positive lasted for 13 days, after which it was considered to be recovered/resolved on 28 Aug 2020 (Study Day 13). The investigator assessed the event of asymptomatic COVID-19 to be not applicable to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Headache	Headaches occasionally	1957 - Ongoing
Drug hypersensitivity	Penicillin allergy	1969 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypothyroidism	Hypothyroidism	1969 - Ongoing
Osteoarthritis	Osteoarthritis general	1990 - Ongoing
Seasonal allergy	Seasonal allergies	1990 - Ongoing
Nausea	Nausea	1991 - Ongoing
Fibromyalgia	Fibromyalgia	1993 - Ongoing
Constipation	Constipation	2000 - Ongoing
Nocturia	Nocturia	2000 - Ongoing
Postmenopause	Postmenopausal	2000 - Ongoing
Deafness bilateral	Bilateral hearing loss	2010 - Ongoing
Dry eye	Dry eye, bilateral	2010 - Ongoing
Flatulence	Occasional excess stomach gas	2010 - Ongoing
Hypokalaemia	Hypokalemia	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	1970 - Ongoing	Hypothyroidism
Diphenhydramine	1990 - Ongoing	Seasonal Allergies
Naproxen sodium	1990 - Ongoing	Osteoarthritis
Pseudoephedrine	1990 - Ongoing	Seasonal Allergies
Ondansetron	1993 - Ongoing	Nausea
Ascorbic acid	2000 - Ongoing	Nutritional Supplement
Calcium citrate; colecalciferol	2000 - Ongoing	Nutritional Supplement
Chondroitin; glucosamine	2000 - Ongoing	Osteoarthritis
Colecalciferol	2000 - Ongoing	Nutritional Supplement
Docusate sodium	2000 - Ongoing	Constipation
Estradiol	2000 - Ongoing	Post Menopausal
Medroxyprogesterone	2000 - Ongoing	Post Menopausal
Melatonin	2000 - Ongoing	Nutritional Supplement
Solifenacin	2000 - Ongoing	Nocturia
Vitamins nos	2000 - Ongoing	Nutritional Supplement
Ciclosporin	2010 - Ongoing	Dry Eye
Lysine	2010 - Ongoing	Cold Sores Prophylaxis
Simeticone	2010 - Ongoing	Excess Stomach Gas
Potassium chloride	2015 - Ongoing	Hypokalemia
Methocarbamol	Jan 2020 - Ongoing	Fibromyalgia
Naproxen	20 Aug 2020 (Study Day 5) - 20 Aug 2020 (Study Day 5)	Muscle Aches
Naproxen	22 Aug 2020 (Study Day 7) - 22 Aug 2020 (Study Day 7)	Headache

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	16 Sep 2020 (Study Day 32) - 16 Sep 2020 (Study Day 32)	Influenza Prophylaxis
Famotidine	08 Oct 2020 (Study Day 54) - Ongoing	Acid Reflux
Hydrocortisone	28 Jan 2021 (Study Day 166) - Ongoing	Osteoarthritis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Asymptomatic COVID-19	Grade 1/mild	Not applicable	16 Aug 2020 (Study Day 1) - 28 Aug 2020 (Study Day 13)
Gastrooesophageal Reflux Disease	Grade 1/mild	Not related	08 Oct 2020 (Study Day 54) - 03 Nov 2020 (Study Day 80)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US360-2111 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	29 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	24 Oct 2020 (Study Day 26) – 23 Nov 2020 (Study Day 56)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US360-2111, a 36-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 29 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Oct 2020 (Study Day 26), 25 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 26 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 31 days, after which it was considered to be recovered/resolved on 23 Nov 2020 (Study Day 56). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000662	COVID-19

Study Completion/Discontinuation

On 06 Feb 2021 (Study Day 131), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma	1993 - Ongoing
Female sterilisation	Bilateral tubal ligation	2015 - 2015
Abdominoplasty	Abdominoplasty	2017 - 2017

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	1993 - Ongoing	Asthma
Vitamins nos	2018 - Ongoing	Dietary Supplement
Ibuprofen	24 Oct 2020 (Study Day 26) - 24 Oct 2020 (Study Day 26)	Fever
Ibuprofen	25 Oct 2020 (Study Day 27) - 28 Oct 2020 (Study Day 30)	Fever
Ibuprofen	29 Oct 2020 (Study Day 31) - 31 Oct 2020 (Study Day 33)	Headache
Ibuprofen	01 Nov 2020 (Study Day 34) - 01 Nov 2020 (Study Day 34)	Headache
Other viral vaccines	13 Jan 2021 (Study Day 107) - 13 Jan 2021 (Study Day 107)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US373-2207 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	14 Sep 2020 (Study Day 19) – Ongoing	Unknown

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US373-2207, a 30-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 27 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 14 Sep 2020 (Study Day 19), 18 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 23 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The outcome of the event was unknown. The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000334	COVID-19

Study Completion/Discontinuation

On 24 Sep 2020 (Study Day 29), the participant discontinued from the study due to withdrawal of consent by participant.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraine headaches	2008 - Ongoing
Anxiety	Anxiety	Nov 2010 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Erenumab	2008 - Ongoing	Migraine Headaches
Lorazepam	2010 - Ongoing	Anxiety
Ibuprofen	15 Sep 2020 (Study Day 20) - Ongoing	Symptomatic COVID-19
Paracetamol	17 Sep 2020 (Study Day 22) - Ongoing	Symptomatic COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US374-2253 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	04 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	20 Sep 2020 (Study Day 17) – 29 Sep 2020 (Study Day 26)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2253, a 44-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 04 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Sep 2020 (Study Day 17), 16 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 01 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 10 days, after which it was considered to be recovered/resolved on 29 Sep 2020 (Study Day 26). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000464	COVID-19

Study Completion/Discontinuation

On 07 Jan 2021 (Study Day 126), the participant discontinued from the study due to other.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Allergy to penicillin	1976 - Ongoing
Vitiligo	Vitiligo	1985 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	28 Sep 2020 (Study Day 25) - 23 Oct 2020 (Study Day 50)	Prophylaxis Of COVID-Related Hypercoagulability
Ascorbic acid	28 Sep 2020 (Study Day 25) - 23 Oct 2020 (Study Day 50)	Health Maintenance Prophylaxis
Influenza vaccine	07 Nov 2020 (Study Day 65) - 07 Nov 2020 (Study Day 65)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	20 Sep 2020 (Study Day 17) - 29 Sep 2020 (Study Day 26)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US374-2477 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	01 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	14 Oct 2020 (Study Day 14) – 31 Oct 2020 (Study Day 31)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2477, a 49-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 01 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 14 Oct 2020 (Study Day 14), 13 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 28 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 18 days, after which it was considered to be recovered/resolved on 31 Oct 2020 (Study Day 31). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000538	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	Not reported - Ongoing
Cyst removal	Cyst removal(left hand)	1995 - 1995
Female sterilisation	Tubal ligation	06 Mar 1998 (Study Day -8245) - 06 Mar 1998 (Study Day -8245)
Knee arthroplasty	Left knee replacement	Dec 2016 - Dec 2016
Osteoarthritis	Osteoarthritis	Dec 2016 - Ongoing
Asthma	Asthma moderate	Apr 2017 - Ongoing
Constipation	Constipation	Aug 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diclofenac	Not reported - Ongoing	Osteoarthritis, Knee Pain, Joint Pain
Beclometasone dipropionate	Apr 2017 - Ongoing	Asthma
Protein	May 2020 - Ongoing	Supplement
Herbal preparation	Aug 2020 - Ongoing	Constipation
Mineral supplements	Sep 2020 - Ongoing	Supplement
Ibuprofen	05 Oct 2020 (Study Day 5) - 07 Oct 2020 (Study Day 7)	Muscle Aches
Dextromethorphan hydrobromide; paracetamol; phenylephrine	07 Oct 2020 (Study Day 7) - 07 Oct 2020 (Study Day 7)	Rhinorrhea And Nasal Congestion
Paracetamol	15 Oct 2020 (Study Day 15) - 30 Oct 2020 (Study Day 30)	Symptomatic COVID-19
Ibuprofen	23 Oct 2020 (Study Day 23) - 25 Oct 2020 (Study Day 25)	Symptomatic COVID-19
Acetylsalicylic acid	29 Oct 2020 (Study Day 29) - 01 Nov 2020 (Study Day 32)	Thrombosis Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	07 Oct 2020 (Study Day 7) - 09 Oct 2020 (Study Day 9)
Nasal Congestion	Grade 2/moderate	Not related	07 Oct 2020 (Study Day 7) - 08 Oct 2020 (Study Day 8)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Rhinorrhoea	Grade 2/moderate	Not related	07 Oct 2020 (Study Day 7) - 07 Oct 2020 (Study Day 7)
Arthralgia	Grade 2/moderate	Not related	13 Oct 2020 (Study Day 13) - 26 Oct 2020 (Study Day 26)
Musculoskeletal Pain	Grade 2/moderate	Not related	13 Oct 2020 (Study Day 13) - 26 Oct 2020 (Study Day 26)
COVID-19	Grade 2/moderate	Not related	14 Oct 2020 (Study Day 14) - 31 Oct 2020 (Study Day 31)
Arthralgia	Grade 2/moderate	Not related	16 Nov 2020 (Study Day 47) - 19 Feb 2021 (Study Day 142)
Pain In Extremity	Grade 1/mild	Not related	16 Nov 2020 (Study Day 47) - Ongoing
Breast Mass	Grade 2/moderate	Not related	14 Dec 2020 (Study Day 75) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US375-2366 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	04 Sep 2020 (Study Day 3) – 16 Sep 2020 (Study Day 15)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US375-2366, a 49-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 02 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Sep 2020 (Study Day 3), 2 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 13 days, after which it was considered to be recovered/resolved on 16 Sep 2020 (Study Day 15). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000283	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cardiac murmur	Grade i cardiac murmur (final diagnosis unknown)	Not reported - Ongoing
Keratomileusis	Lasik eye surgery	Not reported
Rotator cuff repair	Decompression left subacromial arthroscopy	Not reported
Conjunctivitis allergic	Allergic conjunctivitis	1990 - Not reported
Rhinitis allergic	Allergic rhinitis	1990 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	2019 - Ongoing	Supplement
Paracetamol	06 Sep 2020 (Study Day 5) - 06 Sep 2020 (Study Day 5)	Symptomatic COVID-19
Influenza vaccine	05 Oct 2020 (Study Day 34) - 05 Oct 2020 (Study Day 34)	Prophylaxis For Seasonal Influenza

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	04 Sep 2020 (Study Day 3) - 16 Sep 2020 (Study Day 15)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US378-2198 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	23 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Psoriasis/Exacerbation Psoriasis	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	09 Nov 2020 (Study Day 18) – 05 Dec 2020 (Study Day 44)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US378-2198, a 30-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 23 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Nov 2020 (Study Day 18), 17 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of psoriasis. On 19 Nov 2020 (Study Day 28), the IP dose was discontinued due to physician decision. The event of exacerbation psoriasis lasted for 27 days, after which it was considered to be recovered/resolved on 05 Dec 2020 (Study Day 44). The investigator assessed the event of psoriasis to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Back pain	Occasional back pain	2006 - Ongoing
Anxiety	Anxiety	2008 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Psoriasis	Psoriasis	2018 - Ongoing
Pharyngitis streptococcal	Strep pharyngitis	17 Oct 2020 (Study Day -6) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2006 - Ongoing	Occasional Back Pain
Amoxicillin	17 Oct 2020 (Study Day -6) - 26 Oct 2020 (Study Day 4)	Strep Pharyngitis
Clobetasol propionate	20 Nov 2020 (Study Day 29) - Ongoing	Excacerbation Psoriasis
Diphenhydramine hydrochloride	26 Nov 2020 (Study Day 35) - 02 Dec 2020 (Study Day 41)	Exacerbation Psoriasis
Betamethasone dipropionate; calcipotriol monohydrate	02 Dec 2020 (Study Day 41) - 14 Dec 2020 (Study Day 53)	Exacerbation Proriasis
Ceftriaxone	02 Dec 2020 (Study Day 41) - 02 Dec 2020 (Study Day 41)	Exacerbation Psoriasis
Fludroxycortide	02 Dec 2020 (Study Day 41) - 19 Dec 2020 (Study Day 58)	Exacerbation Proriasis
Methylphenidate	18 Jan 2021 (Study Day 88) - Ongoing	Anxiety

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Psoriasis	Grade 2/moderate	Not related	09 Nov 2020 (Study Day 18) - 05 Dec 2020 (Study Day 44)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US381-2174 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	14 Aug 2020 (Study Day 1) – 26 Sep 2020 (Study Day 44)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2174, a 18-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 14 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 14 Aug 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 10 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 44 days, after which it was considered to be recovered/resolved on 26 Sep 2020 (Study Day 44). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000291	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Mild asthma	2007 - 2014
Amnesia	Mild short term memory loss	2010 - Ongoing
Concussion	Concussion	2010 - 2010
Obesity	Obesity	2010 - Ongoing
Hypersensitivity	Environmental allergies	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

No prior or concomitant medications or procedures were reported.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	14 Aug 2020 (Study Day 1) - 26 Sep 2020 (Study Day 44)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US381-2197 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	17 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	24 Aug 2020 (Study Day 8) – 28 Aug 2020 (Study Day 12)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2197, a 38-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 17 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Aug 2020 (Study Day 8), 7 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 13 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID-19 lasted for 5 days, after which it was considered to be recovered/resolved on 28 Aug 2020 (Study Day 12). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000239	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1998 - Ongoing
Finger repair operation	Right ring finger repair	2000 - 2000
Hand fracture	Right broken ring finger	2000 - 2000
Hiatus hernia	Hiatal hernia	2000 - 2000

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

No prior or concomitant medications or procedures were reported.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	24 Aug 2020 (Study Day 8) - 28 Aug 2020 (Study Day 12)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US381-2257 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	25 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19 Infection	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	25 Aug 2020 (Study Day 1) – 11 Jan 2021 (Study Day 140)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2257, a 52-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 25 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 25 Aug 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 21 Sep 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 infection lasted for 140 days, after which it was considered to be recovered/resolved on 11 Jan 2021 (Study Day 140). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Visual impairment	Bilateral impaired vision	1972 - Ongoing
Food allergy	Coconut allergy	1977 - Ongoing
Hypersensitivity	Environmental allergies	1977 - Ongoing
Alcohol use	Alcohol consumption 1-2 times per week	1988 - Ongoing
Continuous positive airway pressure	Cpap usage	2005 - Ongoing
Gout	Gout bilateral feet and knees	2005 - Ongoing
Sleep apnoea syndrome	Sleep apnea	2005 - Ongoing
Hypertension	Hypertension	Jun 2005 - Ongoing
Carpal tunnel syndrome	Left carpel tunnel	2010 - Mar 2020
Obesity	Obesity	2010 - Ongoing
Cardiac failure congestive	Congestive heart failure	Aug 2012 - Ongoing
Contrast media allergy	Lipid microsphere allergy	Aug 2012 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	Aug 2012 - Ongoing
Hypokalaemia	Potassium deficiency	Aug 2012 - Ongoing
Myocardial infarction	Myocardial infarction	Aug 2012 - Aug 2012
Gastric bypass	Gastric bypass	Dec 2018 - Dec 2018
Carpal tunnel decompression	Left carpel tunnel repair	Mar 2020 - Mar 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine	Jun 2005 - Ongoing	Hypertension
Carvedilol	Jun 2005 - Ongoing	Hypertension
Cetirizine hydrochloride	2010 - Ongoing	Seasonal/Environmental Allergies
Acetylsalicylic acid	Aug 2012 - Ongoing	Cardiac Health
Allopurinol	Aug 2012 - Ongoing	Gout Bilateral Feet And Knees
Atorvastatin	Aug 2012 - Ongoing	Hypercholesterolemia
Furosemide	Aug 2012 - Ongoing	Hypertension
Losartan	Aug 2012 - Ongoing	Hypertension
Potassium	Aug 2012 - Ongoing	Potassium Deficiency
Influenza vaccine	29 Oct 2020 (Study Day 66) - 29 Oct 2020 (Study Day 66)	Flu Prevention
Amoxicillin	30 Dec 2020 (Study Day 128) - 15 Jan 2021 (Study Day 144)	Bilateral Otitis Media

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Prednisone	01 Jan 2021 (Study Day 130) - 06 Jan 2021 (Study Day 135)	Bilateral Otitis Media

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	25 Aug 2020 (Study Day 1) - 11 Jan 2021 (Study Day 140)
Diplacusis	Grade 1/mild	Not related	30 Dec 2020 (Study Day 128) - 15 Jan 2021 (Study Day 144)
Otitis Media	Grade 1/mild	Not related	30 Dec 2020 (Study Day 128) - 15 Jan 2021 (Study Day 144)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US384-2060 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	21 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Asymptomatic COVID-19/A-Symptomatic COVID-19	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	26 Oct 2020 (Study Day 6) – 29 Oct 2020 (Study Day 9)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US384-2060, a 57-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 21 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 26 Oct 2020 (Study Day 6), 5 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of asymptomatic COVID-19. On 17 Nov 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of a-symptomatic COVID-19 lasted for 4 days, after which it was considered to be recovered/resolved on 29 Oct 2020 (Study Day 9). The investigator assessed the event of asymptomatic COVID-19 to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Rotator cuff repair	Right rotator cuff surgery	2008 - 2008
Intervertebral disc protrusion	Chronic leg weakness (both) herniated disk	2010 - Ongoing
Peripheral sensory neuropathy	Neuropathy, right side of face (sensory)	2010 - Ongoing
Intervertebral disc protrusion	Herniated disk t10 t11	2020 - Ongoing
Seasonal allergy	Seasonal rhinitis (allergic)	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamin b12 nos	2016 - Ongoing	Nutritional Supplement
Botulinum toxin type a	2019 - Ongoing	Neuropathy, Face (Right Side)
Simvastatin	2019 - Ongoing	Reduce Risk Of Mi Or Brain Attack
Vitamin d nos	Sep 2020 - Ongoing	Nutritional Supplement
Diazepam	17 Nov 2020 (Study Day 28) - 17 Nov 2020 (Study Day 28)	Anxiety Related To Mri Induced Claustrophobia
Zinc	Dec 2020 - Ongoing	Nutritional Supplement
Botox administration to face every 90 days*	13 Jan 2021 (Study Day 85) - 13 Jan 2021 (Study Day 85)	Other, Neuropathy, Right Side Of Face

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Asymptomatic COVID-19	Grade 1/mild	Not related	26 Oct 2020 (Study Day 6) - 29 Oct 2020 (Study Day 9)
Anxiety	Grade 2/moderate	Not related	17 Nov 2020 (Study Day 28) - 17 Nov 2020 (Study Day 28)
Claustrophobia	Grade 2/moderate	Not related	17 Nov 2020 (Study Day 28) - 17 Nov 2020 (Study Day 28)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US387-2138 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	11 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Urinary Tract Infection/Urinary Tract Infection	AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	27 Aug 2020 (Study Day 17) – 08 Sep 2020 (Study Day 29)	Recovered/ resolved
Retching/Dry Heaves	AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	31 Aug 2020 (Study Day 21) – 31 Aug 2020 (Study Day 21)	Recovered/ resolved
Vertigo/Vertigo	AE leading to withdrawal from study vaccine	Grade 3/ severe	Not related	31 Aug 2020 (Study Day 21) – 31 Aug 2020 (Study Day 21)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2138, a 73-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 11 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 27 Aug 2020 (Study Day 17), 16 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of urinary tract infection. On 07 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of urinary tract infection lasted for 13 days, after which it was considered to be recovered/resolved on 08 Sep 2020 (Study Day 29). The investigator assessed the event of urinary tract infection to be not related to the IP.

On 31 Aug 2020 (Study Day 21), 20 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of retching. On 07 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of dry heaves lasted for 1 day, after which it was considered to be recovered/resolved on 31 Aug 2020 (Study Day 21). The investigator assessed the event of retching to be not related to the IP.

On 31 Aug 2020 (Study Day 21), 20 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe non-serious adverse event of vertigo. On 07 Sep 2020

(Study Day 28), the IP dose was discontinued due to other. The event of vertigo lasted for 1 day, after which it was considered to be recovered/resolved on 31 Aug 2020 (Study Day 21). The investigator assessed the event of vertigo to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cholelithiasis	Gallstones	1968 - 1968
Presbyopia	Presbyopia	1975 - Ongoing
Hysterectomy	Complete hysterectomy	1984 - 1984
Uterine leiomyoma	Uterine fibroids	1984 - 1984
Intervertebral disc protrusion	Herniated l4-5 disc	1986 - 1986
Hypertension	Hypertension	2005 - Ongoing
Cataract	Bilateral cataracts	2013 - 2013
Increased tendency to bruise	Easy bruising	2013 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Valsartan	2005 - Ongoing	Hypertension
Amoxicillin; clavulanic acid	30 Aug 2020 (Study Day 20) - 30 Aug 2020 (Study Day 20)	Urinary Tract Infection
Sulfamethoxazole; trimethoprim	31 Aug 2020 (Study Day 21) - 06 Sep 2020 (Study Day 27)	Urinary Tract Infection
Influenza vaccine	13 Oct 2020 (Study Day 64) - 13 Oct 2020 (Study Day 64)	Flu Prevetion
Ibuprofen	09 Dec 2020 (Study Day 121) - 10 Dec 2020 (Study Day 122)	Headache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Urinary Tract Infection	Grade 3/severe	Not related	27 Aug 2020 (Study Day 17) - 08 Sep 2020 (Study Day 29)
Retching	Grade 3/severe	Not related	31 Aug 2020 (Study Day 21) - 31 Aug 2020 (Study Day 21)
Vertigo	Grade 3/severe	Not related	31 Aug 2020 (Study Day 21) - 31 Aug 2020 (Study Day 21)
Cough	Grade 2/moderate	Not related	09 Dec 2020 (Study Day 121) - 10 Dec 2020 (Study Day 122)
Headache	Grade 1/mild	Not related	09 Dec 2020 (Study Day 121) - 10 Dec 2020 (Study Day 122)
Diarrhoea	Grade 2/moderate	Not related	20 Dec 2020 (Study Day 132) - 22 Dec 2020 (Study Day 134)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3380648

Participant Number:	US387-2501 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Asymptomatic COVID-19/COVID-19 (Asymptomatic)	AE leading to withdrawal from study vaccine	Grade 1/ mild	Not related	19 Sep 2020 (Study Day 10) – 24 Oct 2020 (Study Day 45)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2501, a 62-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 10 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 19 Sep 2020 (Study Day 10), 9 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of asymptomatic COVID-19. On 07 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 (asymptomatic) lasted for 36 days, after which it was considered to be recovered/resolved on 24 Oct 2020 (Study Day 45). The investigator assessed the event of asymptomatic COVID-19 to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	2005 - Ongoing
Osteoarthritis	Osteoarthritis (hands, knees and hip	2005 - Ongoing
Drug hypersensitivity	Allergic to lisinopril	2008 - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type 2	2008 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2012 - Ongoing	Cardiac Prophylaxis
Hydrochlorothiazide	2012 - Ongoing	Hypertension
Metformin	2013 - Ongoing	Diabetes Mellitus Type 2
Amlodipine	2015 - Ongoing	Hypertension
Metoprolol	2015 - Ongoing	Hypertension
Naproxen	2015 - Ongoing	Osteoarthritis
Influenza vaccine	20 Oct 2020 (Study Day 41) - 20 Oct 2020 (Study Day 41)	Influenza Prevention
Tetanus vaccine	20 Oct 2020 (Study Day 41) - 20 Oct 2020 (Study Day 41)	Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Asymptomatic COVID-19	Grade 1/mild	Not related	19 Sep 2020 (Study Day 10) - 24 Oct 2020 (Study Day 45)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US388-2049 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	23 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	25 Nov 2020 (Study Day 34) – 03 Dec 2020 (Study Day 42)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US388-2049, a 66-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 23 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Nov 2020 (Study Day 34), 33 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 19 Nov 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 9 days, after which it was considered to be recovered/resolved on 03 Dec 2020 (Study Day 42). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000953	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Glucose tolerance impaired	Pre-diabetes	Not reported - Ongoing
Hyperlipidaemia	Hyperlipidemia	Not reported - Ongoing
Malignant melanoma	Malignant melanoma	Not reported - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Rosuvastatin	Not reported - Ongoing	Hyperlipidemia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	25 Nov 2020 (Study Day 34) - 03 Dec 2020 (Study Day 42)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US390-2064 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	10 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	15 Sep 2020 (Study Day 6) – 25 Sep 2020 (Study Day 16)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US390-2064, a 50-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 10 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Sep 2020 (Study Day 6), 5 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 07 Oct 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 11 days, after which it was considered to be recovered/resolved on 25 Sep 2020 (Study Day 16). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000344	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsilectomy	1986 - 1986
Tonsillitis	Tonsillitis	1986 - 1986
Hysterectomy	Hysterectomy	2000 - 2000
Uterine leiomyoma	Uterine fibroids	2000 - 2000
Hypothyroidism	Hypothyroidism	Mar 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	Mar 2020 - Ongoing	Hypothyroidism
Naproxen sodium	15 Sep 2020 (Study Day 6) - Oct 2020	COVID-19
Paracetamol	15 Sep 2020 (Study Day 6) - Oct 2020	COVID-19
Azithromycin	17 Sep 2020 (Study Day 8) - 21 Sep 2020 (Study Day 12)	COVID-19
Oxymetazoline hydrochloride	17 Sep 2020 (Study Day 8) - Oct 2020	COVID-19
Cyclobenzaprine hydrochloride	19 Oct 2020 (Study Day 40) - Ongoing	Back Pain
Propranolol	06 Nov 2020 (Study Day 58) - Ongoing	Ae: Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	15 Sep 2020 (Study Day 6) - 25 Sep 2020 (Study Day 16)
Eye Swelling	Grade 1/mild	Not related	18 Sep 2020 (Study Day 9) - 25 Sep 2020 (Study Day 16)
Hypertension	Grade 3/severe	Not related	18 Sep 2020 (Study Day 9) - Ongoing
Ear Pain	Grade 1/mild	Not related	26 Sep 2020 (Study Day 17) - Ongoing
Back Pain	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 33) - Ongoing
Dizziness	Grade 1/mild	Not related	12 Oct 2020 (Study Day 33) - Ongoing
Fatigue	Grade 1/mild	Not related	28 Oct 2020 (Study Day 49) - 06 Nov 2020 (Study Day 58)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Feeling Abnormal	Grade 1/mild	Not related	28 Oct 2020 (Study Day 49) - 06 Nov 2020 (Study Day 58)
Malaise	Grade 1/mild	Not related	28 Oct 2020 (Study Day 49) - 06 Nov 2020 (Study Day 58)
Myalgia	Grade 1/mild	Not related	28 Oct 2020 (Study Day 49) - 06 Nov 2020 (Study Day 58)
Pain	Grade 1/mild	Not related	29 Oct 2020 (Study Day 50) - 06 Nov 2020 (Study Day 58)
Nausea	Grade 1/mild	Not related	01 Nov 2020 (Study Day 53) - 06 Nov 2020 (Study Day 58)
Dyspnoea	Grade 1/mild	Not related	02 Nov 2020 (Study Day 54) - 06 Nov 2020 (Study Day 58)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3380655

Participant Number:	US392-2074 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	02 Oct 2020 (Study Day 31)
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Bipolar Disorder/Bipolar Disorder	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	19 Jan 2021 (Study Day 140) –Ongoing	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US392-2074, a 50-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 02 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 02 Oct 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 19 Jan 2021 (Study Day 140), 139 days after the first dose and 109 days after the second dose of the IP, the participant experienced a Grade 2/moderate non-serious adverse event of bipolar disorder. The IP dose was withdrawn due to the bipolar disorder. The event of bipolar disorder was considered to be ongoing. The investigator assessed the event of bipolar disorder to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Rhinitis allergic	Allergic rhinitis	1996 - Ongoing
Appendicectomy	Appendectomy	1997 - 1997

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Appendicitis	Appendicitis	1997 - 1997
Ligament operation	Acl reconstruction l knee	2002 - 2002
Ligament rupture	Torn acl l knee	2002 - 2002
Intervertebral disc degeneration	Degenerative disc disease l5-s1	2005 - 2005
Spinal fusion surgery	Lumbar fusion l5-s1	2005 - 2005
Sleep apnoea syndrome	Obstructive sleep apnea	2008 - Ongoing
Dyspepsia	Heartburn	2013 - Ongoing
Hypertension	Hypertension	2013 - Ongoing
Blood testosterone decreased	Low testosterone	2016 - Ongoing
Cervical radiculopathy	Cervical radiculopathy (nerve pain in neck)	2019 - Ongoing
Headache	Headache	2019 - Ongoing
Depression	Depression	15 Mar 2020 (Study Day -171) - Ongoing
Large intestine polyp	Colon polyp (benign)	19 Aug 2020 (Study Day -14) - 26 Aug 2020 (Study Day -7)
Large intestinal polypectomy	Colon polypectomy (benign)	26 Aug 2020 (Study Day -7) - 26 Aug 2020 (Study Day -7)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	2012 - Ongoing	Hyperlipidemnia
Losartan	2013 - Ongoing	Hypertension
Pantoprazole	2013 - Ongoing	Heartburn
Lamotrigine	01 Jan 2014 (Study Day -2436) - Ongoing	Depression
Hydroxyzine	2015 - Ongoing	Seasonal Allergies
Testosterone cipionate	2016 - Ongoing	Low Testosterone
Methocarbamol	2019 - 25 Nov 2020 (Study Day 85)	Cervical Radiculopathy
Indometacin	Oct 2019 - Ongoing	Intermittent Headache
Oxcarbazepine	Jul 2020 - 23 Mar 2021 (Study Day 203)	Bipolar Depression
Paracetamol	04 Oct 2020 (Study Day 33) - 04 Oct 2020 (Study Day 33)	Pain At Injection Site
Influenza vaccine	29 Oct 2020 (Study Day 58) - 29 Oct 2020 (Study Day 58)	Flu Prophylaxis
Gabapentin	03 Nov 2020 (Study Day 63) - 25 Nov 2020 (Study Day 85)	Cervical Radiculopathy
Aripiprazole	15 Dec 2020 (Study Day 105) - Ongoing	Ae#2 (Worsening Of Depression)
Fluticasone propionate	11 Jan 2021 (Study Day 132) - Ongoing	Ae #4 (Right Sided Partial Hearing Loss) And Ae #5 (Right Sided Tinnitus)
Lurasidone hydrochloride	20 Jan 2021 (Study Day 141) - Ongoing	Ae# 3 Bipolar Disorder
Eszopiclone	15 Feb 2021 (Study Day 167) - Ongoing	Ae#6 Insomnia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Aripiprazole	20 Feb 2021 (Study Day 172) - Ongoing	Ae #2 (Worsening Depression)
Quetiapine fumarate	23 Mar 2021 (Study Day 203) - Ongoing	Ae #6 (Insomnia)

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	09 Sep 2020 (Study Day 8) – 10 Sep 2020 (Study Day 9)
Cervical Radiculopathy	Grade 2/moderate	Not related	04 Oct 2020 (Study Day 33) - 25 Nov 2020 (Study Day 85)
Hypoacusis	Grade 1/mild	Not related	12 Dec 2020 (Study Day 102) - Ongoing
Tinnitus	Grade 1/mild	Not related	12 Dec 2020 (Study Day 102) - 19 Mar 2021 (Study Day 199)
Depression	Grade 2/moderate	Not related	15 Dec 2020 (Study Day 105) - Ongoing
Bipolar Disorder	Grade 2/moderate	Not related	19 Jan 2021 (Study Day 140) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2238 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	13 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Not related	07 Nov 2020 (Study Day 26) – 09 Dec 2020 (Study Day 58)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2238, a 59-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 13 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Nov 2020 (Study Day 26), 25 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of COVID-19. On 09 Nov 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of COVID-19 lasted for 33 days, after which it was considered to be recovered/resolved on 09 Dec 2020 (Study Day 58). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000837	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Single functional kidney	Solitary rt kidney	23 Oct 1966 (Study Day -19714) - Ongoing
Hypothyroidism	Hypothyroidism	1995 - Ongoing
Diverticulitis	Diverticulitis	2001 - 2001
Hypertension	Hypertension	2012 - Ongoing
Lumbar vertebral fracture	Lumbar spine fracture	2012 - 2012
Type 2 diabetes mellitus	Diabetes type 2	2013 - Ongoing
Hypercholesterolaemia	Hypecholesterolemia	2014 - Ongoing
Foot fracture	Lt foot fracture	2017 - 2017
Lower limb fracture	Rt knee fracture	May 2018 - Aug 2018
Foot fracture	Rt toe fracture	2020 - 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	1995 - Ongoing	Hypothyroidism
Lisinopril	2012 - Ongoing	High Blood Pressure
Dapagliflozin propanediol monohydrate	2013 - Ongoing	Diabetes Type 2
Atorvastatin	2014 - Ongoing	High Cholesterol
Dulaglutide	2017 - Ongoing	Diabetes Type 2
Calcium; vitamin d nos	Sep 2020 - Ongoing	Vitamin Supplement
Influenza vaccine	07 Sep 2020 (Study Day -36) - 07 Sep 2020 (Study Day -36)	Influenza Prophylaxis
Calcium; vitamin d nos	22 Oct 2020 (Study Day 10) - 26 Dec 2020 (Study Day 75)	Vitamin D Deficiency
Botulinum toxin type a	07 Jan 2021 (Study Day 87) - 07 Jan 2021 (Study Day 87)	Antiaging
Paracetamol	24 Feb 2021 (Study Day 135) - 24 Feb 2021 (Study Day 135)	Headache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Vitamin D Deficiency	Grade 2/moderate	Not related	22 Oct 2020 (Study Day 10) - 26 Dec 2020 (Study Day 75)
COVID-19	Grade 2/moderate	Not related	07 Nov 2020 (Study Day 26) - 09 Dec 2020 (Study Day 58)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US394-2044 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Headache/Headache	AE leading to withdrawal from study vaccine	Grade 1/mild	Not related	25 Sep 2020 (Study Day 24) – 14 Oct 2020 (Study Day 43)	Recovered/ resolved
Oropharyngeal Pain/Sore Throat	AE leading to withdrawal from study vaccine	Grade 1/mild	Not related	25 Sep 2020 (Study Day 24) – 14 Oct 2020 (Study Day 43)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US394-2044, a 39-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 02 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Sep 2020 (Study Day 24), 23 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of headache. On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of headache lasted for 20 days, after which it was considered to be recovered/resolved on 14 Oct 2020 (Study Day 43). The investigator assessed the event of headache to be not related to the IP.

On 25 Sep 2020 (Study Day 24), 23 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of oropharyngeal pain. On 29 Sep 2020 (Study Day 28), the IP dose was discontinued due to other. The event of sore throat lasted for 20 days, after which it was considered to be recovered/resolved on 14 Oct 2020 (Study Day 43). The investigator assessed the event of oropharyngeal pain to be not related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	25 Sep 2020 (Study Day 24) - 14 Oct 2020 (Study Day 43)	Headache

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Cough	Grade 1/mild	Not related	25 Sep 2020 (Study Day 24) - 14 Oct 2020 (Study Day 43)
Fatigue	Grade 1/mild	Not related	25 Sep 2020 (Study Day 24) - 14 Oct 2020 (Study Day 43)
Headache	Grade 1/mild	Not related	25 Sep 2020 (Study Day 24) - 14 Oct 2020 (Study Day 43)
Oropharyngeal Pain	Grade 1/mild	Not related	25 Sep 2020 (Study Day 24) - 14 Oct 2020 (Study Day 43)
Rhinorrhoea	Grade 1/mild	Not related	25 Sep 2020 (Study Day 24) - 14 Oct 2020 (Study Day 43)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US397-2225 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	12 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID 19	AE leading to withdrawal from study vaccine	Grade 1/mild	Not related	15 Oct 2020 (Study Day 4) – 16 Nov 2020 (Study Day 36)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US397-2225, a 22-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 12 Oct 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Oct 2020 (Study Day 4), 3 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of COVID-19. On 08 Nov 2020 (Study Day 28), the IP dose was discontinued due to SARS-CoV-2. The event of symptomatic COVID 19 lasted for 33 days, after which it was considered to be recovered/resolved on 16 Nov 2020 (Study Day 36). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Information From the Safety Database

Additional details for the non-serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000732	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Leukaemia	Leukemia	2006 - 2008
Bacterial infection	Bacterial infection on right hand	2007 - 2007
Sinusitis	Sinusitis	2007 - 2007
Tonsillitis	Tonsillitis	2009 - 2009
Anxiety	Anxiety	2012 - Ongoing
Eczema	Eczema	2013 - Ongoing
Cholelithiasis	Gall stones	2015 - 2015

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Alprazolam	2014 - Ongoing	Anxiety
Dienogest; ethinylestradiol	2014 - Ongoing	Pregnancy Prevention
Sertraline	2014 - Ongoing	Anxiety
Betamethasone dipropionate; clotrimazole	2015 - Ongoing	Eczema
Ibuprofen	14 Oct 2020 (Study Day 3) - 18 Oct 2020 (Study Day 7)	Headache
Azithromycin	18 Oct 2020 (Study Day 7) - 23 Oct 2020 (Study Day 12)	COVID-19 Infection
Paracetamol	18 Oct 2020 (Study Day 7) - 25 Oct 2020 (Study Day 14)	Headache
Salbutamol	18 Oct 2020 (Study Day 7) - 23 Oct 2020 (Study Day 12)	COVID-19 Infection

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 1/mild	Not related	15 Oct 2020 (Study Day 4) - 16 Nov 2020 (Study Day 36)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US398-2158 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	11 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Idiopathic Intracranial Hypertension/Worsening Pseudotumor Cerebri	AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	14 Sep 2020 (Study Day 4) – 01 Oct 2020 (Study Day 21)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US398-2158, a 52-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 11 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 14 Sep 2020 (Study Day 4), 3 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate non-serious adverse event of idiopathic intracranial hypertension. On 08 Oct 2020 (Study Day 28), the IP dose was discontinued due to physician decision. The event of worsening pseudotumor cerebri lasted for 18 days, after which it was considered to be recovered/resolved on 01 Oct 2020 (Study Day 21). The investigator assessed the event of idiopathic intracranial hypertension to be related to the IP.

Additional Information From the Safety Database

No additional details for the event are available.

Study Completion/Discontinuation

On 16 Oct 2020 (Study Day 36), the participant discontinued from the study due to protocol deviation.

FDA-CBER-2022-1614-3380666

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Severe obesity	Not reported - Ongoing
Hypertension	Hypertension	2000 - Ongoing
Menorrhagia	Menorrhagia	2000 - 02 Dec 2018 (Study Day -649)
Idiopathic intracranial hypertension	Pseudotumor cerebri	2006 - Ongoing
Hysterectomy	Hysterectomy	02 Dec 2018 (Study Day -649) - 02 Dec 2018 (Study Day -649)
Salpingo-oophorectomy bilateral	Bilateral salpingo oophorectomy	02 Dec 2018 (Study Day -649) - 02 Dec 2018 (Study Day -649)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atenolol	2000 - Ongoing	Hypertension
Lisinopril	2000 - Ongoing	Hypertension
Acetylsalicylic acid	15 Sep 2020 (Study Day 5) - 21 Sep 2020 (Study Day 11)	Headache
Butalbital; caffeine; paracetamol	16 Sep 2020 (Study Day 6) - 21 Sep 2020 (Study Day 11)	Headache
Dextromethorphan; paracetamol; phenylephrine	17 Sep 2020 (Study Day 7) - Ongoing	Headache
Acetazolamide	18 Sep 2020 (Study Day 8) - 01 Oct 2020 (Study Day 21)	Worsening Pseudotumor Cerebri

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

16 APPENDICES

16.1 Study Information

16.1.1 Protocol and Protocol Amendments
16.1.2 Sample Case Report Form (Unique Pages Only)
16.1.3 List of IECs and IRBs (Plus the Name of the Committee Chair if Required by the Regulatory Authority) and Representative Written Information for Participant and Sample Consent Forms
16.1.4 List and Description of Investigators and Other Important Participants in the Study, Including Brief (One Page) Curricula Vitae or Equivalent Summaries of Training and Experience Relevant to the Performance of the Study
16.1.5 Signatures of Principal or Coordinating Investigator(s) and Sponsor's Responsible Medical Officer, Depending on the Regulatory Authority's Requirement, and Signature of Responsible Biostatistician
16.1.6 Listing of Participants Receiving Investigational Product/Investigational Product(s) From Specific Batches, Where More Than One Batch Was Used
16.1.7 Randomization Scheme and Codes (Participant Identification and Treatment Assigned)
16.1.8 Audit Certificates (if available)
16.1.9 Documentation of Statistical Methods
16.1.10 Documentation of Interlaboratory Standardization Methods and Quality Assurance Procedures if Used
16.1.11 Publications Based on the Study
16.1.12 Important Publications Referenced in the Report
16.1.13 Optional Appendix

16.2 Participant Data Listings

16.2.1 Discontinued Participants
16.2.2 Protocol Deviations
16.2.3 Participants Excluded From the Efficacy Analysis
16.2.4 Demographic Data
16.2.5 Compliance or Drug Concentration Data (or both, if available)
16.2.6 Individual Efficacy Response Data
16.2.7 Adverse Event Listings (Each Participant)
16.2.8 Listing of Individual Laboratory Measurements by Participant, When Required by Regulatory Authorities

16.3 Case Report Forms (CRFs)

16.3.1 CRFs for Deaths, Serious Adverse Events, and Withdrawals for Adverse Events

16.3.2 Other CRFs Submitted (only if applicable)

16.4 Individual Participant Data Listings

16.5 Genotyping Report

16.6 Summary of Biomarker Assays Used in the mRNA-1273 Program

FDA-CBER-2022-1614-3380669
