A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Abdominal pain	1 (<0.1)	1 (<0.1)		2 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Breast cancer stage I	1 (<0.1)	0		1 (<0.1)
Colon cancer stage III	1 (<0.1)	0		1 (<0.1)
Endometrial cancer	3 (<0.1)	0		3 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Injection site lymphadenopathy	1 (<0.1)	3 (<0.1)		4 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.
MedDRA version 23.0.

Peritonitis	0	1 (<0.1)		1 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.
MedDRA version 23.0.

Vertebral foraminal stenosis	1 (<0.1)	0		1 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.
MedDRA version 23.0.

Diabetic foot infection	0	1 (<0.1)		1 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Choking sensation	0	1 (<0.1)		1 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Post procedural haemorrhage	1 (<0.1)	2 (<0.1)		3 (<0.1)
Procedural nausea	3 (<0.1)	2 (<0.1)		5 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.
MedDRA version 23.0.

Parotitis	0	1 (<0.1)		1 (<0.1)
Periodontitis	0	1 (<0.1)		1 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Dry eye	1 (<0.1)	2 (<0.1)		3 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Vaccination site lymphadenopathy	1 (<0.1)	0		1 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Skin cancer	2 (<0.1)	3 (<0.1)		5 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Muscle rupture	0	1 (<0.1)		1 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Conjunctivitis bacterial	4 (<0.1)	0		4 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Subject Incidence of Unsolicited Medically-Attended TEAE by Age Group, System Organ Class and Preferred Term in Overall Stage Safety Set

Age Group: >=18 and <65 Years

System Organ Class Preferred Term	Placebo (N=11411) n (%)	mRNA-1273 (N=11415) n (%)	Rate Ratio (95% CI)	Total (N=22826) n (%)
Cardiac disorders (Cont.)				
Postural orthostatic tachycardia syndrome	1 (<0.1)	0		1 (<0.1)
Sinus arrest	1 (<0.1)	0		1 (<0.1)
Sinus bradycardia	1 (<0.1)	0		1 (<0.1)
Supraventricular extrasystoles	1 (<0.1)	0		1 (<0.1)
Vascular disorders	169 (1.5)	130 (1.1)		299 (1.3)
Hypertension	139 (1.2)	110 (1.0)	0.79 (0.62, 1.01)	249 (1.1)
Deep vein thrombosis	4 (<0.1)	3 (<0.1)		7 (<0.1)
Haematoma	2 (<0.1)	3 (<0.1)		5 (<0.1)
Orthostatic hypotension	0	3 (<0.1)		3 (<0.1)
Hypertensive urgency	1 (<0.1)	2 (<0.1)		3 (<0.1)
Varicose vein	1 (<0.1)	2 (<0.1)		3 (<0.1)
Achenbach syndrome	0	1 (<0.1)		1 (<0.1)
Embolism venous	0	1 (<0.1)		1 (<0.1)
Flushing	1 (<0.1)	1 (<0.1)		2 (<0.1)
Hot flush	2 (<0.1)	1 (<0.1)		3 (<0.1)
Hypotension	4 (<0.1)	1 (<0.1)		5 (<0.1)
Peripheral arterial occlusive disease	0	1 (<0.1)		1 (<0.1)
Polyarteritis nodosa	0	1 (<0.1)		1 (<0.1)
Thrombophlebitis	0	1 (<0.1)		1 (<0.1)
Thrombophlebitis superficial	3 (<0.1)	1 (<0.1)		4 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.
MedDRA version 23.0.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.
MedDRA version 23.0.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Tooth socket haemorrhage	1 (<0.1)	0		1 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

C-reactive protein increased	1 (<0.1)	1 (<0.1)		2 (<0.1)
Carotid bruit	0	1 (<0.1)		1 (<0.1)
Chest X-ray	0	1 (<0.1)		1 (<0.1)
Glomerular filtration rate decreased	0	1 (<0.1)		1 (<0.1)
Heart rate increased	1 (<0.1)	1 (<0.1)		2 (<0.1)
Hepatic enzyme abnormal	0	1 (<0.1)		1 (<0.1)
Hepatic enzyme increased	1 (<0.1)	1 (<0.1)		2 (<0.1)
Hepatitis C antibody positive	0	1 (<0.1)		1 (<0.1)
Lymphocyte count decreased	0	1 (<0.1)		1 (<0.1)
Neutrophil count increased	0	1 (<0.1)		1 (<0.1)
Transaminases increased	1 (<0.1)	1 (<0.1)		2 (<0.1)
White blood cell count increased	0	1 (<0.1)		1 (<0.1)
Blood iron decreased	2 (<0.1)	0		2 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.
MedDRA version 23.0.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Subject Incidence of Unsolicited Medically-Attended TEAE by Baseline SARS-CoV-2 Status, System Organ Class and Preferred Term up to 28 Days After Any Injection
Safety Set

Baseline SARS-CoV-2 Status: Negative

System Organ Class Preferred Term	Placebo (N=14741) n (%)	mRNA-1273 (N=14750) n (%)	Rate Ratio (95% CI)	Total (N=29491) n (%)
Musculoskeletal and connective tissue disorders (Cont.)				
Fibromyalgia	2 (<0.1)	1 (<0.1)		3 (<0.1)
Flank pain	2 (<0.1)	1 (<0.1)		3 (<0.1)
Floating patella	0	1 (<0.1)		1 (<0.1)
Fracture nonunion	0	1 (<0.1)		1 (<0.1)
Groin pain	1 (<0.1)	1 (<0.1)		2 (<0.1)
Intervertebral disc degeneration	3 (<0.1)	1 (<0.1)		4 (<0.1)
Osteitis	0	1 (<0.1)		1 (<0.1)
Osteopenia	2 (<0.1)	1 (<0.1)		3 (<0.1)
Palindromic rheumatism	0	1 (<0.1)		1 (<0.1)
Periarthritis	2 (<0.1)	1 (<0.1)		3 (<0.1)
Plantar fascial fibromatosis	0	1 (<0.1)		1 (<0.1)
Plantar fasciitis	1 (<0.1)	1 (<0.1)		2 (<0.1)
Polyarthritis	1 (<0.1)	1 (<0.1)		2 (<0.1)
Rheumatoid arthritis	1 (<0.1)	1 (<0.1)		2 (<0.1)
Sacroiliitis	0	1 (<0.1)		1 (<0.1)
Spondylolysis	0	1 (<0.1)		1 (<0.1)
Tendon disorder	0	1 (<0.1)		1 (<0.1)
Tenosynovitis	1 (<0.1)	1 (<0.1)		2 (<0.1)
Trismus	0	1 (<0.1)		1 (<0.1)
Undifferentiated connective tissue disease	0	1 (<0.1)		1 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.
MedDRA version 23.0.

Table 14.3.1.19.3.3
Subject Incidence of Unsolicited Medically-Attended TEAE by Baseline SARS-CoV-2 Status, System Organ Class and Preferred Term in Overall Stage
Safety Set

Baseline SARS-CoV-2 Status: Negative

System Organ Class Preferred Term	Placebo (N=14741) n (%)	mRNA-1273 (N=14750) n (%)	Rate Ratio (95% CI)	Total (N=29491) n (%)
Endocrine disorders (Cont.)				
Hypogonadism	3 (<0.1)	1 (<0.1)		4 (<0.1)
Thyroid cyst	0	1 (<0.1)		1 (<0.1)
Thyroiditis	0	1 (<0.1)		1 (<0.1)
Androgen deficiency	1 (<0.1)	0		1 (<0.1)
Autoimmune thyroiditis	1 (<0.1)	0		1 (<0.1)
Hyperparathyroidism primary	1 (<0.1)	0		1 (<0.1)
Thyroiditis subacute	1 (<0.1)	0		1 (<0.1)
Metabolism and nutrition disorders	217 (1.5)	186 (1.3)		403 (1.4)
Hyperlipidaemia	44 (0.3)	32 (0.2)	0.73 (0.46, 1.14)	76 (0.3)
Type 2 diabetes mellitus	25 (0.2)	31 (0.2)	1.24 (0.74, 2.09)	56 (0.2)
Vitamin D deficiency	25 (0.2)	24 (0.2)	0.96 (0.55, 1.67)	49 (0.2)
Hypercholesterolaemia	29 (0.2)	20 (0.1)	0.69 (0.39, 1.21)	49 (0.2)
Diabetes mellitus	10 (<0.1)	11 (<0.1)	1.10 (0.48, 2.53)	21 (<0.1)
Glucose tolerance impaired	10 (<0.1)	10 (<0.1)	1.00 (0.43, 2.34)	20 (<0.1)
Dehydration	13 (<0.1)	9 (<0.1)	0.69 (0.30, 1.58)	22 (<0.1)
Gout	13 (<0.1)	9 (<0.1)	0.69 (0.30, 1.58)	22 (<0.1)
Hyponatraemia	9 (<0.1)	9 (<0.1)	1.00 (0.41, 2.44)	18 (<0.1)
Hypokalaemia	16 (0.1)	5 (<0.1)	0.31 (0.12, 0.82)	21 (<0.1)
Hyperglycaemia	5 (<0.1)	4 (<0.1)		9 (<0.1)
Decreased appetite	4 (<0.1)	3 (<0.1)		7 (<0.1)
Diabetes mellitus inadequate control	2 (<0.1)	3 (<0.1)		5 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Nasal discomfort	0	1 (<0.1)		1 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Malignant melanoma	1 (<0.1)	0		1 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Pneumonia	6 (<0.1)	6 (<0.1)		12 (<0.1)
Appendicitis	4 (<0.1)	3 (<0.1)		7 (<0.1)
Cellulitis	4 (<0.1)	3 (<0.1)		7 (<0.1)
Sepsis	1 (<0.1)	3 (<0.1)		4 (<0.1)
Suspected COVID-19	1 (<0.1)	3 (<0.1)		4 (<0.1)
Upper respiratory tract infection	2 (<0.1)	3 (<0.1)		5 (<0.1)
Urinary tract infection	3 (<0.1)	3 (<0.1)		6 (<0.1)
Peritonitis	0	2 (<0.1)		2 (<0.1)
Pyelonephritis	3 (<0.1)	2 (<0.1)		5 (<0.1)
Septic shock	2 (<0.1)	2 (<0.1)		4 (<0.1)
Sinusitis	1 (<0.1)	2 (<0.1)		3 (<0.1)
Tooth infection	0	2 (<0.1)		2 (<0.1)
Abdominal abscess	0	1 (<0.1)		1 (<0.1)
Abscess limb	0	1 (<0.1)		1 (<0.1)
Appendicitis perforated	1 (<0.1)	1 (<0.1)		2 (<0.1)
Atypical pneumonia	0	1 (<0.1)		1 (<0.1)
Bacterial pyelonephritis	0	1 (<0.1)		1 (<0.1)
Bronchitis	4 (<0.1)	1 (<0.1)		5 (<0.1)
COVID-19	55 (0.4)	1 (<0.1)	0.02 (0.00, 0.10)	56 (0.2)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Subject Incidence of Unsolicited Severe Medically-Attended TEAE by System Organ Class and Preferred Term in Overall Stage Safety Set

System Organ Class Preferred Term	Placebo (N=15162) n (%)	mRNA-1273 (N=15184) n (%)	Rate Ratio (95% CI)	Total (N=30346) n (%)
Respiratory, thoracic and mediastinal disorders	29 (0.2)	21 (0.1)		50 (0.2)
Cough	1 (<0.1)	3 (<0.1)		4 (<0.1)
Dyspnoea	1 (<0.1)	3 (<0.1)		4 (<0.1)
Pleural effusion	1 (<0.1)	3 (<0.1)		4 (<0.1)
Acute respiratory failure	5 (<0.1)	2 (<0.1)		7 (<0.1)
Asthma	5 (<0.1)	2 (<0.1)		7 (<0.1)
Nasal congestion	1 (<0.1)	2 (<0.1)		3 (<0.1)
Pulmonary embolism	4 (<0.1)	2 (<0.1)		6 (<0.1)
Rhinorrhoea	1 (<0.1)	2 (<0.1)		3 (<0.1)
Bronchiectasis	0	1 (<0.1)		1 (<0.1)
Chronic obstructive pulmonary disease	5 (<0.1)	1 (<0.1)		6 (<0.1)
Nasal septum deviation	0	1 (<0.1)		1 (<0.1)
Pleurisy	0	1 (<0.1)		1 (<0.1)
Pneumothorax	0	1 (<0.1)		1 (<0.1)
Respiratory failure	0	1 (<0.1)		1 (<0.1)
Tachypnoea	0	1 (<0.1)		1 (<0.1)
Emphysema	1 (<0.1)	0		1 (<0.1)
Epistaxis	1 (<0.1)	0		1 (<0.1)
Hypoxia	2 (<0.1)	0		2 (<0.1)
Oropharyngeal pain	1 (<0.1)	0		1 (<0.1)
Pulmonary infarction	1 (<0.1)	0		1 (<0.1)
Rhinalgia	1 (<0.1)	0		1 (<0.1)
Sleep apnoea syndrome	1 (<0.1)	0		1 (<0.1)

A treatment-emergent adverse event (TEAE) is defined as any event not present before exposure to study vaccination or any event already present that worsens in intensity or frequency after exposure.
Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.

Table 14.3.1.22.1
Subject Incidence of Vasculitis [1] by Preferred Term by Age Group
Safety Set

Age Group: Overall

Preferred Term	Placebo (N=15162) n (%)	mRNA-1273 (N=15184) n (%)	Rate Ratio (95% CI)	Total (N=30346) n (%)
Number of Subjects Reporting Vasculitis [1]	1 (<0.1)	1 (<0.1)		2 (<0.1)
Number of Vasculitis [1]	1	1		2
Polyarteritis nodosa	0	1 (<0.1)		1 (<0.1)
Polymyalgia rheumatica	1 (<0.1)	0		1 (<0.1)

Percentages are based on the number of safety subjects. The rate ratio is calculated as the ratio of percentage of participants reporting the event in mRNA-1273 divided by that in Placebo. The 95% CI is calculated using the Miettinen and Nurminen method.
MedDRA version 23.0.
[1] Vasculitis is identified through selected SMQ.

Total	23 (0.2)	15159 (99.8)	1 (<0.1)	1 (<0.1)	0	0	15184 (100)

UNK = unknown due to missing vital sign result.
Worst post-baseline result is defined as the highest toxicity grade during vaccination stage.
Percentages are based on the number in the cell on the Total row and Total column.
Program Path: \\wilbtia\wilbtia01\Moderna MODMRNA1273P301_U\BLA\TLF\t14030202.sas 25JUN2021 12:40

Table 14.3.2.2
Shift from Baseline in Vital Signs Toxicity Grades by Visit
Safety Set

Treatment Group: mRNA-1273 (N=15184)
Temperature (C) - Fever

	Baseline						
Timepoint Post-Baseline Grade	UNK n (%)	Grade 0 n (%)	Grade 1 n (%)	Grade 2 n (%)	Grade 3 n (%)	Grade 4 n (%)	Total n (%)
Worst Post-Baseline

Abbreviations: AE=adverse event; SAE= serious adverse event.

Participant Number:	US323-2048 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	21 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	18 Sep 2020 (Study Day 29)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Amyotrophic Lateral Sclerosis/Complication Of Amyotrophic Lateral Sclerosis	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	05 Nov 2020 (Study Day 77) – 12 Dec 2020 (Study Day 114)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US323-2048, a 73-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 21 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 18 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 05 Nov 2020 (Study Day 77), 76 days after the first dose and 48 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of amyotrophic lateral sclerosis. Action taken with the IP was not applicable. The event of complication of amyotrophic lateral sclerosis lasted for 38 days, after which it was considered to be fatal on 12 Dec 2020 (Study Day 114). The investigator assessed the event of amyotrophic lateral sclerosis to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 05 Nov 2020 (Study Day 77), the participant experienced a serious adverse event of complication of amyotrophic lateral sclerosis (ALS). The participant was placed in hospice care at home on 19 Nov 2020 (Study Day 91) secondary to dysphagia and progression of ALS. Treatment included a percutaneous endoscopic gastrostomy tube placement.

Action taken with study IP in response to the event of ALS was not applicable, as the participant had already received both scheduled doses.

The event, ALS, was considered fatal on 12 Dec 2020 (Study Day 114). The cause of death was reported as ALS. An autopsy was not requested by the participant's spouse. A death certificate was

issued on 13 Jan 2021 (Study Day 146) and the cause of death was documented as complications from ALS.

The investigator assessed the event, of ALS, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001092	Amyotrophic lateral sclerosis

Study Completion/Discontinuation

On 12 Dec 2020 (Study Day 114), the participant discontinued from the study due to death. On 12 Dec 2020 (Study Day 114), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Astigmatism	Astigmatism bilateral (eyeglasses)	1959 - Ongoing
Inguinal hernia	Inguinal hernia	2013 - 2013
Hypertension	High blood pressure	18 Dec 2013 (Study Day -2438) - Ongoing
Atrial fibrillation	Atrial fibrillation	19 Dec 2013 (Study Day -2437) - 2014
Benign prostatic hyperplasia	BPH	19 Dec 2013 (Study Day -2437) - 23 Nov 2015 (Study Day -1733)
Erectile dysfunction	Erectile dysfunction	2015 - Ongoing
Memory impairment	Memory changes	2017 - Ongoing
Heart rate irregular	Irregular heart beat	16 May 2019 (Study Day -463) - 16 May 2019 (Study Day -463)
Gastrooesophageal reflux disease	GERD	24 Sep 2019 (Study Day -332) - Ongoing
Amyotrophic lateral sclerosis	Amyotrophic lateral sclerosis	02 Dec 2019 (Study Day -263) - Ongoing
Insomnia	Insomnia	04 Feb 2020 (Study Day -199) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	14 Apr 2016 (Study Day -1590) - 12 Dec 2020 (Study Day 114)	Cardiac Prophylactic

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ascorbic acid	2019 - 12 Dec 2020 (Study Day 114)	Maintenance
Guanfacine	06 Dec 2019 (Study Day -259) - 12 Dec 2020 (Study Day 114)	Hypertension
Carvedilol	17 Dec 2019 (Study Day -248) - 12 Dec 2020 (Study Day 114)	Hypertension
Riluzole	17 Dec 2019 (Study Day -248) - 12 Dec 2020 (Study Day 114)	ALS
Quetiapine	04 Feb 2020 (Study Day -199) - 12 Dec 2020 (Study Day 114)	Insomnia
Magnesium	03 Mar 2020 (Study Day -171) - 12 Dec 2020 (Study Day 114)	Maintenance
Probiotics NOS	03 Mar 2020 (Study Day -171) - 12 Dec 2020 (Study Day 114)	Maintenance
Vitamins NOS	03 Mar 2020 (Study Day -171) - 12 Dec 2020 (Study Day 114)	Maintenance
Colecalciferol	12 May 2020 (Study Day -101) - 12 Dec 2020 (Study Day 114)	Maintenance
Hyoscyamine sulfate	23 Sep 2020 (Study Day 34) - 12 Dec 2020 (Study Day 114)	Secretions
Influenza vaccine inact split 3v	02 Oct 2020 (Study Day 43) - 02 Oct 2020 (Study Day 43)	Influenza Vaccine
Patient received percutaneous endoscopic gastrostomy tube*	10 Dec 2020 (Study Day 112) - 10 Dec 2020 (Study Day 112)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Salivary Hypersecretion	Grade 2/moderate	Not related	23 Sep 2020 (Study Day 34) - 12 Dec 2020 (Study Day 114)
Dysphagia	Grade 2/moderate	Not related	10 Dec 2020 (Study Day 112) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US327-2070 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	06 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	03 Sep 2020 (Study Day 29)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Myocardial Infarction/ Myocardial Infarction	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	01 Oct 2020 (Study Day 57) – 01 Oct 2020 (Study Day 57)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US327-2070, a 74-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 06 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 03 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Oct 2020 (Study Day 57), 56 days after the first dose and 28 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of myocardial infarction. Action taken with the IP was not applicable. The event of myocardial infarction was considered to be fatal on 01 Oct 2020 (Study Day 57). The investigator assessed the event of myocardial infarction to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 01 Oct 2020 (Study Day 57), the participant experienced a fatal serious adverse event of myocardial infarction (MI) and was hospitalized. The participant's initial rhythm was irregular narrow complexes on the monitor without pulse, and pulseless electrical activity arrest. An endotracheal tube (ET) tube was placed and cardiopulmonary resuscitation (CPR) was initiated. Return of spontaneous circulation was achieved with advanced cardiovascular life support (ACLS) for approximately 20 minutes. The participant presented to hospital via emergency medical services as a cardiac arrest. Initially, the participant was mentally confused but able to answer questions and was moderately lethargic. The participant had several episodes of emesis and desaturation, and rapid sequence intubation was performed. Relevant laboratory and diagnostic test results showed sodium 139 mmol/L, potassium 4.0 mmol/L, chloride 105 mmol/L (no

reference ranges were reported), troponin 0.45 ng/mL (reference range ≤ 0.04 ng/mL), oxygen saturation 94%, and heart rate 116 beats/minute. A chest x-ray showed low lung volumes with patchy pulmonary consolidation and interstitial thickening. Additionally, the participant was given ketamine, rocuronium, and propofol via IV drip. Electrocardiogram results showed global ischemia and ST elevation in augmented vector right. The participant was taken to catheterization laboratory. Approximately, 30 to 45 minutes later, code blue was activated. The participant was also given epinephrine IV in accordance with ACLS. The participant presented with agonal rhythm and no palpated pulse. Additionally, an arterial line had excellent waveform during compressions but no pressure during pulse checks. The ET remained in place while the cardiologist was performing coronary catheterization during CPR. Calcium was given but the participant did not regain pulses and was confirmed dead. Additional treatment for the event included acetylsalicylic acid rectal, verapamil, nitroglycerin, and heparin intra-arterial; propofol IV; sodium chloride 0.9% IV; and phenylephrine, iopamidol, norepinephrine, and vasopressin. It was noted by the investigator that the participant had numerous cardiovascular risk factors that precipitated the event, which included diabetes mellitus, hypertension, and hyperlipidemia.

Action taken with the study IP was not applicable in response to the event.

The participant died on 01 Oct 2020 (Study Day 57). The cause of death was reported as MI.

The investigator assessed the event, MI, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000399	Myocardial infarction

Study Completion/Discontinuation

On 01 Oct 2020 (Study Day 57), the participant discontinued from the study due to death. On 01 Oct 2020 (Study Day 57), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type 2	2000 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2010 - Ongoing
Hypertension	Hypertension	2017 - Ongoing
Chronic obstructive pulmonary disease	COPD	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	1987 - Ongoing	Cardiac Prophylaxis
Metformin	1987 - Ongoing	Diabetes Mellitus Type 2
Insulin	2000 - Ongoing	Diabetes Mellitus Type 2
Gabapentin	2008 - Ongoing	Diabetes Mellitus Type 2
Amitriptyline	2010 - Ongoing	Type 2 Diabetes Mellitus
Colecalciferol	2010 - Ongoing	Hypercholesterolemia
Cyanocobalamin	2010 - Ongoing	Nutritional Supplement
Simvastatin	2010 - Ongoing	Hypercholesterolemia
Hydrochlorothiazide	2017 - Ongoing	Hypertension
Losartan	2018 - Ongoing	Hypertension
Empagliflozin	2019 - Ongoing	Diabetes Mellitus Type 2
Acetylsalicylic acid	01 Oct 2020 (Study Day 57) - 01 Oct 2020 (Study Day 57)	Myocardial Infarction

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US329-2023 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	04 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	01 Sep 2020 (Study Day 29)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Diabetic Ketoacidosis/Diabetic Ketoacidosis	SAE	Grade 3/ severe	Not related	22 Oct 2020 (Study Day 80) – 26 Oct 2020 (Study Day 84)	Recovered/ resolved
Cardiac Failure Congestive/End Stage Congestive Heart Failure	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	19 Dec 2020 (Study Day 138) – 23 Jan 2021 (Study Day 173)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US329-2023, an 80-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 04 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 01 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 22 Oct 2020 (Study Day 80), 79 days after the first dose and 51 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of diabetic ketoacidosis. Action taken with the IP was not applicable. The event of diabetic ketoacidosis lasted for 5 days, after which it was considered to be recovered/resolved on 26 Oct 2020 (Study Day 84). The investigator assessed the event of diabetic ketoacidosis to be not related to the IP.

On 19 Dec 2020 (Study Day 138), 137 days after the first dose and 109 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of cardiac failure congestive. Action taken with the IP was not applicable. The event of end stage congestive heart failure lasted for 36 days, after which it was considered to be fatal on 23 Jan 2021 (Study Day 173). The investigator assessed the event of cardiac failure congestive to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 22 Oct 2020 (Study Day 80), the participant experienced a serious adverse event of diabetic ketoacidosis. On the same day, the participant was not feeling well due to an insulin pump that

was not functioning correctly. Scar tissue in the participant's skin was preventing the flow of insulin. The participant had been waiting for a replacement pump that was overdue for delivery. The participant checked their blood sugar which had been registering between 500 and 700 (no units or reference range reported) with the lowest reading of 468 (no units). After realizing that their glucose levels were not dropping to normal levels, they contacted emergency medical services and were transported to the hospital where they were evaluated by emergency department physicians and were hospitalized for diabetic ketoacidosis. Treatment included an insulin drip. There was no COVID-19 testing performed.

On 26 Oct 2020 (Study Day 84), the participant was discharged from the hospital in stable condition.

Action taken with the study IP was not applicable in response to the event, as the participant had already received both scheduled doses.

The event, diabetic ketoacidosis, was reported as resolved on 26 Oct 2020 (Study Day 84).

The investigator assessed the event, diabetic ketoacidosis, as not related to study IP or study procedure.

On 19 Dec 2020 (Study Day 138), the participant experienced a fatal serious adverse event of cardiac failure congestive. The participant was initially admitted to the hospital with diabetic ketoacidosis (DKA), lactic acidosis, hyperkalemia, acute kidney injury (AKI), and met the severe sepsis criteria in addition to a femur fracture that they sustained from a fall prior to hospital admission. Per the participant’s spouse, the participant had been having many fluctuations in their glucose levels over the few days. The participant became confused when their glucose was abnormal; lost their balance and fell. An electrocardiogram (ECG) on admission showed mild ST depressions in inferior leads. Troponin was normal on admission but ultimately increased to >50 (no units or reference range reported) on 20 Jan 2021 (Study Day 170). On presentation with DKA, the participant’s creatinine had been up to 2.4 (no units or reference range reported). Persistent AMS was suspected due to metabolic encephalopathy but stroke or other causes like central nervous system (CNS) infection could not be ruled out. On admission, the AMS was likely due to DKA, but the participant's mentation did not improve. On an unspecified date, a computerized tomography (CT) scan of the head was negative; the scan was repeated on an unspecified date and was also negative. It was reported that prior to admission, the participant was mentally functional. The participant continued to have AMS and was not able to tolerate a magnetic resonance imaging (MRI)/CT scan due to agitation. The participant was on empiric antibiotic coverage with meropenem and in case the AMS was due to meningitis, as doctors were unable to perform a lumbar puncture (LP) per an infectious disease (ID) condition; the participant's mental status was not improving. The participant had no agitation since they had been on quetiapine but was still

confused. An electroencephalogram (EEG) was negative. Treatment for end stage congestive heart failure included ceftriaxone IV.

On 20 Dec 2020 (Day 139), the participant developed acute hypoxemic respiratory failure and cardiogenic shock due to an ST-elevation myocardial infarction (STEMI) and was found to have a severely depressed ejection fraction (EF) of 20% due to acute systolic congestive heart failure (CHF)/dilated cardiomyopathy. The participant underwent a percutaneous coronary intervention (PCI) and drug-eluting stent (DES) implantation × 2 to the ostial proximal diagonal artery (PDA) and proximal and mid-PDA. A repeat ECG showed ST elevations in lateral and inferior leads. An echocardiogram showed a severely reduced ejection fraction (EF) of about 20% (no reference range reported), with severe global hypokinesis of the left ventricle. The participant was to continue acetylsalicylic acid, clopidogrel, atorvastatin, and carvedilol (starting time of all medications unknown); as the participant was unable to take anything by mouth (PO) due to dysphagia, a Dobhoff tube was in place to administer these medications as the participant had shown no improvement in mentation and had failed a swallow study due to persistent AMS; the participant was then followed by speech therapy. Carvedilol was also indicated for the participant's dilated cardiomyopathy (nonischemic > ischemic)/acute systolic CHF. The participant had also been receiving furosemide IV intermittently. On this date, the participant was also intubated due to acute respiratory failure with hypoxia, likely related to aspiration pneumonia (status post treatment).

On 21 Dec 2020 (Day 140), the participant underwent cardioversion for ventricular tachycardia and continued on amiodarone.

On 26 Dec 2020 (Day 145), the participant completed their course of piperacillin/tazobactam for aspiration pneumonia on admission, with recurrence.

On 27 Dec 2020 (Day 146), the participant was extubated.

On 01 Jan 2021 (Day 151), the participant was started on piperacillin/tazobactam for persistent leukocytosis without a clear source despite aggressive antibiotics/antivirals IV.

On 05 Jan 2021 (Day 155), the participant was started on doxycycline for persistent leukocytosis. The participant's dose of amiodarone was changed to 200 mg daily per cardiologist's recommendations. The participant was awaiting medical stability for surgical intervention of the left hip. Despite the *Enterococcus*, doctors were reluctant to add vancomycin to the participant's treatment regimen as they were at high risk for AKI. The plan was to re-culture blood and urine and add doxycycline, which would provide some broad-spectrum coverage (including *Staphylococcus* in the participant's lungs and perhaps *Enterococcus* in their wound). Since the participant's most recent urine culture was negative and a CT scan of the chest was negative, it

was hoped that those were not areas of active infection. The participant's procalcitonin was 0.16 (no units or reference range reported), which seemed to indicate a lack of acute sepsis.

On 12 Jan 2021 (Day 162), the participant's piperacillin/tazobactam was changed to meropenem for persistent leukocytosis. Treatment also included acyclovir for meningitis empiric coverage.

On 15 Jan 2021 (Day 165), the participant's hypernatremia was not improving with free water flushes; the concern was that the participant was on high-volume free water and also tube feedings (TF). It was decided that the participant would be started on a low dose of ¼ normal saline (NS). The plan was to monitor renal function and adjust the free water flushes as well as IV fluids and when not needed, discontinue IV fluids.

On 19 Jan 2021 (Day 169), the overall hospital course was discussed with the participant's child and included no improvement in the participant's mental status; hospice was discussed and the consent for hospice was signed. On this date, the participant pulled out the Dobhoff tube; this had happened multiple times, and it was ultimately left out since the participant was being discharged to hospice. Vital signs at 11:55 included temperature 97.7°F (low), respiratory rate (RR) 17 breaths per minute, and oxygen saturation (SpO_2) 100%; at 15:09 included diastolic blood pressure (DBP) 72 mm Hg; at 19:36 included temperature 97°F (low), heart rate (HR) 69 beats per minute (bpm), RR 18 breaths per minute; at 23:33 included HR 55 bpm (low), systolic blood pressure (SBP) 117 mm Hg, and DBP 59 mm hg (low).

On 20 Jan 2021 (Day 170), the participant was discharged from the hospital with diagnoses of diabetic ketoacidosis with underlying type 1 diabetes mellitus (resolved), acute respiratory failure with hypoxia/respiratory arrest requiring mechanical ventilation (resolved), AKI (resolved), lactic acidosis on admission (resolved), cardiogenic shock on admission (resolved), STEMI status post DES × 2 (diagonal/PDA), acute systolic CHF/dilated cardiomyopathy with EF 20%, acute aspiration pneumonia with recurrence, acute and persistent metabolic encephalopathy, left commuted displaced femur fracture related to a mechanical fall prior to admission, acute thrombocytosis (improving), atrial flutter (paroxysmal), ventricular tachycardia (paroxysmal), acute hypernatremia (resolved), dysphagia, community acquired sacral deep tissue injury (DTI) with progression to unstageable, severe protein-calorie malnutrition with a prealbumin of 7 (no units or reference range reported). The participant's doxycycline and acyclovir were discontinued upon discharge to hospice. There was no improvement to mentation or leukocytosis with the antibiotic regimen. A repeat blood culture was negative. A CT scan of abdomen/pelvis showed no abscess, but a 2 cm nodule in the left upper renal pole was identified (incidental finding), that was concerning for neoplasm, it also showed a chronic L4 compression fracture, increased anasarca, and persistent bilateral layering pleural effusions with partial compressive lower lobe atelectasis. The participant's thrombocytosis was reactive due to inflammation/infection. The participant's platelet count peaked at over 1100 (no units or reference range reported), but it was trending down

upon discharge. The participant's heart was in sinus rhythm, continuing on amiodarone, and carvedilol for paroxysmal atrial flutter (CHA2DS2-VASc score was 5). The participant's type 1 diabetes with DKA on admission had resolved, and they were off the insulin drip. The participant's hemoglobin was stable and would continue to be monitored. The participant was not ready for surgery on their left comminuted displaced femur fracture related to a fall prior to admission at the time of discharge, it was considered for the following week, pending evaluations by cardiology and orthopedics; the patient would remain as a high-risk surgical candidate regardless of timing of procedure. The participant was continued on levothyroxine for their hypothyroidism. The wound care service had been following the participant for their community acquired DTI which had progressed to unstageable sacral/coccyx pressure ulcer which extended to the bilateral buttocks and a new left lateral malleolus stage 2 pressure ulcer. The participant also was on a low air loss mattress, and the sites were offloaded. The participant's hypernatremia was resolving, and the water flush was stopped. Laboratory test results from samples collected at 02:37 included sodium 147, potassium 3.8, chloride 110, carbon dioxide 28, anion gap 13, glucose level 81, calcium 8.1 (low), blood urea nitrogen 39 (high), creatinine 1.07, magnesium 2.3, phosphate 2.9, white blood cells 17.83 (high), red blood cells 3.67 (low), hemoglobin 11.6 (low), hematocrit 37.5 (low), mean cell volume 102.2 (high), mean cell hemoglobin 31.6, mean corpuscular hemoglobin concentration 30.9 (low), red cell distribution width (RDW-CV) 17.2 (high), platelet count 325 (adequate), mean platelet volume 10.4, nucleated red blood cells (NRBC) auto absolute < 0.01, NRBC% 0.0 (no units or reference ranges reported). Vital signs taken at 04:17 included SpO_2 94%, at 07:18 included temperature 97.8°F (low), HR 65 bpm, RR 18 breaths per minute, SBP 142 mm Hg (high), DBP 65 mm Hg, and SpO2 94% (on room air). A physical examination was normal except for decreased breath sounds in the lungs and confusion. The participant's condition at discharge was stable, their discharge activity level was bedrest, and the discharge diet was pleasure feeds. The participant was discharged to hospice. A COVID-19 PCR test completed during the participant's hospitalization resulted as "not detected".

On 23 Jan 2021 (Day 173) at 09:45, the participant died. The coroner arrived to find the participant absent of vital signs. The oxygen and Foley catheter were removed. The cause of death was end stage heart failure. An autopsy was not performed.

Action taken with the study IP was not applicable in response to the event, as the participant had already received both scheduled doses.

The event, cardiac failure congestive, was reported as fatal on 23 Jan 2021. The cause of death was reported as end stage heart failure.

The investigator assessed the event, cardiac failure congestive, as not related to study IP or study procedure.

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
CIOMS MOD-2020-000556	Diabetic ketoacidosis
CIOMS MOD-2021-017317	Cardiac failure congestive

Study Completion/Discontinuation

On 23 Jan 2021 (Study Day 173), the participant discontinued from the study due to death. On 23 Jan 2021 (Study Day 173), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug delivery device implantation	Insulin pump	Not reported - Ongoing
Tonsillectomy	Tonsillectomy	1946 - 1946
Tonsillitis	Tonsilitis	1946 - 1946
Appendicectomy	Appendectomy	1958 - 1958
Appendicitis	Appendicitis	1958 - 1958
Penile operation	Peyronie's plaque surgery	1982 - 1982
Peyronie's disease	Peyronie's plaque	1982 - 1988
Penile operation	Surgery to penis	1988 - 1988
Mycotic allergy	Seasonal allergy: mold	1990 - Ongoing
Seasonal allergy	Seasonal allergy: mountain cedar	1990 - Ongoing
Spinal fracture	Fractured back	1990 - 1990
Spinal operation	Back surgery	1990 - 1990
Type 1 diabetes mellitus	Type i diabetes	1999 - Ongoing
Renal stone removal	Kidney surgery - remove benign spot on kidney	2006 - 2006
Arthralgia	Knee pain	2007 - Ongoing
Chondroplasty	Bilateral cartilage buildup in knees	2007 - 2009
Glaucoma	Bilateral glacoma	2007 - Ongoing
Knee operation	Knee surgery - left knee	2007 - 2007
Dermatitis atopic	Atopic dermitis on face	2009 - Ongoing
Knee arthroplasty	Knee replacement - left knee	2009 - 2009
Hypothyroidism	Hypothyroid	2010 - Ongoing
Coronary artery disease	Coronary artery disease	2012 - Ongoing
Stent placement	Stent placement	2012 - 2012
Diabetic neuropathy	Diabetic peripheral neuropathy	2013 - Ongoing
Drug intolerance	Intolerant to aricept	2013 - Ongoing
Depression	Depression	2017 - Ongoing
Vitamin D deficiency	Vitamin d deficency	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin lispro	Not reported - Ongoing	Type 1 Diabetes
Glucose	1999 - Ongoing	Type 1 Diabetes
Lisinopril	2000 - Ongoing	Kidney Disease Prevention
Brimonidine tartrate; timolol maleate	2007 - Ongoing	Bilateral Glaucoma
Latanoprost	2007 - Ongoing	Bilateral Glaucoma
Latanoprost; netarsudil mesilate	2007 - Ongoing	Bilateral Glaucoma
Tramadol	2007 - Ongoing	Left Knee Pain
Triamcinolone	2009 - Ongoing	Facial Atopic Dermatitis
Levothyroxine	2010 - Ongoing	Hypothyroid
Gabapentin	2013 - Ongoing	Diabetic Peripheral Neuropathy
Ascorbic acid	2016 - Ongoing	Supplement
Doxycycline	2016 - Ongoing	Dental Infection
Vitamin b12 nos	2016 - Ongoing	Preventative
Duloxetine	2017 - Ongoing	Depression
Ergocalciferol	2019 - Ongoing	Vitamin D Deficiency
Influenza vaccine	23 Sep 2020 (Study Day 51) - 23 Sep 2020 (Study Day 51)	Influenza
Glucose	22 Oct 2020 (Study Day 80) - 22 Oct 2020 (Study Day 80)	Diabetic Ketoacidosis
Insulin	22 Oct 2020 (Study Day 80) - 22 Oct 2020 (Study Day 80)	Diabetic Ketoacidosis
Sodium bicarbonate; sodium chloride	22 Oct 2020 (Study Day 80) - 22 Oct 2020 (Study Day 80)	Diabetic Ketoacidosis
Sodium chloride	22 Oct 2020 (Study Day 80) - 22 Oct 2020 (Study Day 80)	Diabetic Ketoacidosis
Tooth extraction*	30 Nov 2020 (Study Day 119) - 30 Nov 2020 (Study Day 119)	Adverse Event
Ceftriaxone	19 Dec 2020 (Study Day 138) - 19 Dec 2020 (Study Day 138)	End Stage Congestive Heart Failure
Piperacillin; tazobactam	19 Dec 2020 (Study Day 138) - 19 Dec 2020 (Study Day 138)	End Stage Congestive Heart Failure
Doxycycline	Jan 2021 - Jan 2021	End Stage Congestive Heart Failure
Piperacillin sodium; tazobactam sodium	Jan 2021 - Jan 2021	End Stage Congestive Heart Failure

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Tooth Infection	Grade 2/moderate	Not related	27 Nov 2020 (Study Day 116) - 30 Nov 2020 (Study Day 119)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3377927

Participant Number:	US330-2395 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 29)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Myocardial Infarction/Myocardial Infarction	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	04 Jan 2021 (Study Day 131) – 04 Jan 2021 (Study Day 131)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US330-2395, a 67-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 24 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Jan 2021 (Study Day 131), 130 days after the first dose and 102 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of myocardial infarction. Action taken with the IP was not applicable. The event of myocardial infarction was considered to be fatal on 04 Jan 2021 (Study Day 131). The investigator assessed the event of myocardial infarction to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 04 Jan 2021 (Study Day 131), the participant experienced a fatal serious adverse event of myocardial infarction (MI). The participant was found deceased at home, and MI was determined to be the cause. The participant did not have any risk factors for MI. The participant's child requested unblinding of the participant's actual study IP, and the site let the family know that the participant had received placebo. The participant's child agreed to send a copy of death certificate when available.

According to the participant's child, no medical intervention was given for the event of MI, as the participant was found deceased.

Action taken with the study IP was not applicable in response to the event, as the participant had already received both scheduled doses.

The participant died on 04 Jan 2021 (Study Day 131). The cause of death was reported as MI.

The investigator assessed the event, MI, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-006670	Myocardial infarction

Study Completion/Discontinuation

On 04 Jan 2021 (Study Day 131), the participant discontinued from the study due to death. On 04 Jan 2021 (Study Day 131), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Insomnia	Insomnia	2017 - Ongoing
Peripheral sensorimotor neuropathy	Sensorimotor neuropathy in bilateral feet	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Trazodone	2017 - Ongoing	Insomnia
Gabapentin	2019 - Ongoing	Neuropathy In Feet

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US332-2199 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	02 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	01 Oct 2020 (Study Day 30)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Myocardial Infarction/Fatal Myocardial Infarction	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	16 Nov 2020 (Study Day 76) – 16 Nov 2020 (Study Day 76)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US332-2199, a 64-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 02 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 01 Oct 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Nov 2020 (Study Day 76), 75 days after the first dose and 46 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of myocardial infarction. Action taken with the IP was not applicable. The event of myocardial infarction was considered to be fatal on 16 Nov 2020 (Study Day 76). The investigator assessed the event of myocardial infarction to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 16 Nov 2020 (Study Day 76), the participant suffered a fatal serious adverse event of myocardial infarction. The participant had multiple known cardiac risk factors. All communication methods have been tried to get further information and medical records from the family with no success.

Action taken with the study IP was not applicable in response to the event, as the participant had already received both scheduled doses prior to the event.

The participant died on 16 Nov 2020 (Study Day 76). The cause of death was reported as myocardial infarction.

The investigator assessed the event, myocardial infarction, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000870	Myocardial infarction

Study Completion/Discontinuation

On 16 Nov 2020 (Study Day 76), the participant discontinued from the study due to death. On 16 Nov 2020 (Study Day 76), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Exostosis	Bone spur	Not reported - 2012
Obesity	Obesity	Not reported - Ongoing
Drug hypersensitivity	Penicillin allergy	1959 - Ongoing
Bundle branch block left	Left bundle branch block	1976 - Ongoing
Bone lesion excision	Bone spur surgery	2012 - 2012
Eczema	Eczema	Sep 2016 - Ongoing
Spinal operation	Back surgery	31 Oct 2017 (Study Day -1037) - 31 Oct 2017 (Study Day -1037)
Hypertension	Hypertension	Sep 2018 - Ongoing
Hypercholesterolaemia	Hypercholesteremia	Jan 2019 - Ongoing
Supraventricular tachycardia	Arrhythmia (supraventricular tachycardia)	Jan 2019 - Ongoing
Glucose tolerance impaired	Pre-diabetes	Feb 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	Jan 2019 - Ongoing	Cardiac Prophylaxis
Atenolol	Jan 2019 - Ongoing	Arythmia/Hypertension
Atorvastatin	Jan 2019 - Ongoing	Hypercholestremia
Amlodipine	Oct 2019 - Ongoing	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US334-2256 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	14 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cardio-Respiratory Arrest/Cardiopulmonary Arrest	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	20 Sep 2020 (Study Day 7) – 20 Sep 2020 (Study Day 7)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US334-2256, a 43-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 14 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Sep 2020 (Study Day 7), 6 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 5 serious adverse event of cardio-respiratory arrest. On 20 Sep 2020 (Study Day 7), the IP dose was discontinued due to death. The event of cardiopulmonary arrest was considered to be fatal on 20 Sep 2020 (Study Day 7). The investigator assessed the event of cardio-respiratory arrest to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 20 Sep 2020 (Study Day 7), the participant experienced a fatal serious adverse event of cardiorespiratory arrest. The participant presented to the emergency department (ED) with chest pain and shortness of breath. The participant had a witnessed collapse in the ED with cardiopulmonary arrest. The participant underwent endotracheal intubation, defibrillation, an electrocardiogram, and IV catheterization via the right antecubital fossa. Resuscitation was unsuccessful.

Action taken with the study IP was not applicable in response to the event.

The participant died on 20 Sep 2020 (Study Day 7). The cause of death was reported as atherosclerotic and hypertensive cardiovascular disease.

On 21 Sep 2020 (Study Day 8), an autopsy demonstrated a well-developed, obese person without significant injuries. The heart showed cardiomegaly, and there was left ventricular hypertrophy. There was an atherosclerosis and stenosis of the coronary arteries. The participant had 75% coronary artery stenosis (CAS), 50% left mainstem CAS, 75% left anterior CAS, and 40% left circumflex CAS. The right ventricle free wall thickness was 0.3 cm, left ventricular free wall thickness was 1.8 cm, and interventricular septal thickness was 1.7 cm (no reference ranges provided). There was arterionephrosclerosis commonly observed with hypertension. The autopsy also showed mild fatty streaks in the atherosclerosis of the aorta. The defibrillator pads and the electrocardiogram electrode pads were affixed to the torso and upper extremities. Injuries related to resuscitative attempts included bilateral anterolateral rib fractures with associated intercostal muscle hemorrhage and hemorrhage in the pancreatic tail without overt necrosis. The participant had a marked amount of blood and frothy fluid, indicative of pulmonary congestion and edema. There was an intravascular catheter protruding from the right antecubital fossa with scattered abrasions of the posterior left hand (ranging from 0.5 to 1 cm in the greatest dimension). A 0.7 by 0.3 cm crusted abrasion of the right ankle was seen. Postmortem toxicology testing showed a femoral blood ethanol result of 0.05% and a vitreous fluid ethanol result of 0.06% (no reference ranges provided). A postmortem computerized tomography scan revealed bilateral anterolateral rib fractures, cardiomegaly, and focal coronary artery calcification. There was no mention of COVID-19 testing per the medical examiner report.

On 08 Oct 2020 (Study Day 25), the participant's spouse called the site to inform the site staff of the participant's death.

The investigator assessed the event, cardio-respiratory arrest, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000433	Cardio-respiratory arrest

Study Completion/Discontinuation

On 20 Sep 2020 (Study Day 7), the participant discontinued from the study due to death. On 20 Sep 2020 (Study Day 7), the participant died due to adverse event. An autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cardiomegaly	Cardiomegaly	Not reported - Ongoing
Coronary artery disease	Coronary artery disease	Not reported - Ongoing
Left ventricular hypertrophy	Left ventricular hypertrophy	Not reported - Ongoing
Nephrosclerosis	Arterionephrosclerosis	Not reported - Ongoing
Obesity	Obesity	Not reported - Ongoing
Headache	Headaches	2007 - Ongoing
Diverticulum	Diverticulosis	2010 - Ongoing
Gastrectomy	Gastric sleeve surgery	May 2014 - May 2014
Tooth infection	Tooth infection	Jun 2020 - Jul 2020
Tooth extraction	Tooth extraction	Jul 2020 - Jul 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2008 - Ongoing	Headaches
Defibrillation*	20 Sep 2020 (Study Day 7) - 20 Sep 2020 (Study Day 7)	Adverse Event
Electrocardiogram*	20 Sep 2020 (Study Day 7) - 20 Sep 2020 (Study Day 7)	Adverse Event
Endotracheal intubation*	20 Sep 2020 (Study Day 7) - 20 Sep 2020 (Study Day 7)	Adverse Event
Intravascular catheterization right antecubital fossa*	20 Sep 2020 (Study Day 7) - 20 Sep 2020 (Study Day 7)	Adverse Event
Postmortem CT scan*	21 Sep 2020 (Study Day 8) - 21 Sep 2020 (Study Day 8)	Adverse Event
Toxicology labs postmortem*	02 Oct 2020 (Study Day 19) - 02 Oct 2020 (Study Day 19)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US337-2228 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	24 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 36)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Death/Death-Unknown Cause	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	25 Jan 2021 (Study Day 155) – 25 Jan 2021 (Study Day 155)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US337-2228, a 55-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 24 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 28 Sep 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Jan 2021 (Study Day 155), 154 days after the first dose and 119 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of death. Action taken with the IP was not applicable. The event of death-unknown cause was considered to be fatal on 25 Jan 2021 (Study Day 155). The investigator assessed the event of death to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 20 Jan 2021 (Day 150), the participant underwent a cervical fusion and was discharged home after the procedure with no complications.

On 25 Jan 2021 (Day 155), the participant experienced a fatal serious adverse event of death. The participant's spouse called the site to report that the participant had died. The spouse went to help the participant out of bed that night; the participant was awake at the time, then took a breath and died. The underlying cause of death is unknown.

Action taken with the study IP was not applicable in response to the event, as the participant had received both scheduled doses.

The participant died on 25 Jan 2021 (Study Day 155). The cause of death was unknown.

The investigator assessed the event, death, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-009157	Death

Study Completion/Discontinuation

On 25 Jan 2021 (Study Day 155), the participant discontinued from the study due to death. On 25 Jan 2021 (Study Day 155), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Chronic tonsillitis	Tonsillitis - chronic	1984 - 1986
Tonsillectomy	Tonsillectomy	1986 - 1986
Depression	Depression	1990 - Ongoing
Insomnia	Insomnia	1990 - Ongoing
Bursitis	Bursitis left elbow	1994 - 1994
Joint fluid drainage	Left elbow bursa sac drainage	1994 - 1994
Intervertebral disc protrusion	Herniated disc thoracic spine	1996 - 2016
Lipoma	Right armpit benign lipoma	1996 - 1996
Lipoma excision	Right armpit lipoma enucleation	1996 - 1996
Staphylococcal infection	Left foot mrsa infection	1996 - 1996
Cholecystectomy	Cholecystectomy	2008 - 2008
Cholelithiasis	Cholelithiasis	2008 - 2008
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2008 - Ongoing
Sinusitis	Sinusitis	2013 - 2014
Functional endoscopic sinus surgery	Left nostril sinus endoscopic	2014 - 2014
Hypertension	Hypertension	2014 - Ongoing
Hypogonadism male	Male hypogonadism	2014 - Ongoing
Meniscus injury	Torn meniscus right knee	2014 - 2016
Type 2 diabetes mellitus	Diabetes mellitus type ii	2014 - Ongoing
Bursitis	Bursitis left elbow	2015 - 2016
Arthritis infective	Left elbow mycobacterium infection	2016 - 2016
Arthroscopy	Arthroscopy right knee	2016 - 2016
Bursa removal	Left elbow bursectomy	2016 - 2016
Cartilage injury	Torn cartilage right knee	2016 - 2016
Intervertebral disc protrusion	Herniated disc cervical spine	2016 - Ongoing
Spinal fusion surgery	Thoracic spine fusion	2016 - 2016
Arthroscopy	Arthroscopy left knee	2018 - 2018

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Meniscus injury	Torn meniscus left knee	2018 - 2018
Obesity	Obesity	2019 - Ongoing
Vitamin B12 deficiency	Vitamin b12 deficiency	Aug 2019 - Ongoing
Osteoarthritis	Generalized osteoarthritis	Jun 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Eszopiclone	1990 - Ongoing	Insomnia`
Trazodone	1990 - Ongoing	Depression
Amlodipine	2000 - Ongoing	Hypertension
Atenolol	2000 - Ongoing	Hypertension
Lisinopril	2000 - Ongoing	Hypertension
Omeprazole	2008 - Ongoing	Gastroesophageal Reflux Disease
Diphtheria vaccine toxoid; pertussis vaccine; tetanus vaccine toxoid	2012 - 2012	Diphtheria Tetanus And Acellular Pertussis Prophylaxis/Prevention
Acetylsalicylic acid	2014 - Ongoing	Cardiac Prophylaxis
Folic acid	2014 - Ongoing	Dietary Supplement
Metformin	2014 - Ongoing	Diabetes Mellitus Type Ii
Testosterone cipionate	2014 - Ongoing	Male Hypogonadism
Pneumococcal vaccine	2015 - 2015	Pneumonia Prophylaxis/Prevention
Varicella zoster vaccine	Jan 2019 - Jan 2019	Herpes Zoster Prophylaxis/Prevention
Influenza vaccine	Aug 2019 - Aug 2019	Influenza Prophylaxis/Prevention
Vitamin b12 nos	Aug 2019 - Ongoing	Vitamin B12 Deficiency
Ascorbic acid	Jan 2020 - Ongoing	Dietary Supplement
Vitamin d nos	Jan 2020 - Ongoing	Dietary Supplement
Oxycodone hydrochloride; paracetamol	Jun 2020 - Ongoing	Generalized Osteoarthritis
Cervical fusion*	20 Jan 2021 (Study Day 150) - 20 Jan 2021 (Study Day 150)	Medical History

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US347-2001 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	01 Oct 2020 (Study Day 32)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Myocardial Infarction/ Provisional Diagnosis Only - Sudden Fatal Event, Likely Myocardial Infarction	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	27 Nov 2020 (Study Day 89) – 27 Nov 2020 (Study Day 89)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US347-2001, a 70-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 01 Oct 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 27 Nov 2020 (Study Day 89), 88 days after the first dose and 57 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of myocardial infarction. Action taken with the IP was not applicable. The event of provisional diagnosis only - sudden fatal event, likely myocardial infarction was considered to be fatal on 27 Nov 2020 (Study Day 89). The investigator assessed the event of myocardial infarction to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 27 Nov 2020 (Study Day 89), the participant experienced a fatal serious adverse event of myocardial infarction. On the same day, the participant was found dead on the bathroom floor. The time of death and cause of death have not yet been determined. Per the investigator, the sudden fatal event was likely a myocardial infarction. The investigator requested family permission to conduct limited postmortem exam, but the family refused an autopsy.

Action taken with the study IP was not applicable in response to the event, as the participant had already received both scheduled doses.

The participant died on 27 Nov 2020 (Study Day 89). The cause of death has not yet been determined and the site was unable to obtain the death certificate.

The investigator assessed the event, myocardial infarction, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000914	Myocardial infarction

Study Completion/Discontinuation

On 27 Nov 2020 (Study Day 89), the participant discontinued from the study due to death. On 27 Nov 2020 (Study Day 89), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hyperlipidaemia	Hyperlipidemia	Not reported - Ongoing
Essential hypertension	Essential hypertension	2005 - Ongoing
Obesity	Morbid obesity	2005 - Ongoing
Osteoarthritis	Osteoarthritis in both lower extremities	2005 - Ongoing
Wolff-Parkinson-White syndrome	Wolf Parkinson white syndrome	2005 - Ongoing
Constipation	Constipation	2010 - Ongoing
Sleep apnoea syndrome	Obstructive sleep apnea	2012 - Ongoing
Renal cyst	Benign renal cyst	Aug 2012 - Ongoing
Aortic stenosis	Mild aortic stenosis	2016 - Ongoing
Atrial fibrillation	Atrial fibrillation	2016 - Ongoing
Left ventricular hypertrophy	Left ventricular hypertrophy	2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrochlorothiazide; losartan potassium	2005 - Ongoing	Hypertension
Metoprolol	2005 - Ongoing	Hypertension
Atorvastatin	2010 - Ongoing	Hyperlipidemia
Bisacodyl	2010 - Ongoing	Constipation
Docusate sodium	2010 - Ongoing	Constipation
Apixaban	2016 - Ongoing	Prophylaxis For Vte

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamin b nos	Sep 2019 - Ongoing	Health Promotion
Influenza vaccine	15 Sep 2020 (Study Day 16) - 15 Sep 2020 (Study Day 16)	Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hepatitis C Antibody Positive	Grade 1/mild	Not related	29 Sep 2020 (Study Day 30) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US351-2042 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	12 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cardio-Respiratory Arrest/Cardiopulmonary Arrest	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	01 Sep 2020 (Study Day 21) – 01 Sep 2020 (Study Day 21)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US351-2042, a 78-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 12 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Sep 2020 (Study Day 21), 20 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 5 serious adverse event of cardio-respiratory arrest. On 01 Sep 2020 (Study Day 21), the IP dose was discontinued due to death. The event of cardiopulmonary arrest was considered to be fatal on 01 Sep 2020 (Study Day 21). The investigator assessed the event of cardio-respiratory arrest to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

The participant tolerated the study vaccine well with only minimal local injection site tenderness and was scheduled to undergo an elective cochlear implant on 03 Sep 2020 (Study Day 23) and stopped taking acetylsalicylic acid 2 to 5 days prior to surgery.

On 30 Aug 2020 (Study Day 19), the participant was sick. On 31 Aug 2020 (Study Day 20), the participant had 3 episodes of vomiting and nausea. The participant did not have a fever, weight change, swelling or any other symptoms. The participant went to bed separately from their spouse.

On 01 Sep 2020 (Study Day 21), the participant experienced a fatal serious adverse event of cardio-respiratory arrest. In the morning of that day, the spouse found the participant who had died at home.

There was no action taken with the study IP in response to the event.

The participant died on 01 Sep 2020 (Study Day 21). Per the death certificate, cause of death was cardiopulmonary arrest due to hypertension/hyperlipidemia. No autopsy was performed.

The investigator assessed the event, cardio-respiratory arrest, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
CIOMS MOD-2020-000244	Cardio-respiratory arrest

Study Completion/Discontinuation

On 01 Sep 2020 (Study Day 21), the participant discontinued from the study due to death. On 01 Sep 2020 (Study Day 21), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1947 - Ongoing
Tremor	Right hand tremor	1990 - Ongoing
Dyspepsia	Heartburn	1998 - Ongoing
Gastric ulcer	Gastric ulcer gastric	1998 - 1998
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	1998 - Ongoing
Cataract	Bilateral cataracts	2000 - 2010
Hypersensitivity	Environmental allergies	2000 - Ongoing
Blood cholesterol increased	High cholesterol	2005 - Ongoing
Drug hypersensitivity	Allergy to penicillin	2005 - Ongoing
Drug hypersensitivity	Allergy to sulfa	2005 - Ongoing
Hypertension	High blood pressure	2005 - Ongoing
Deafness bilateral	Bilateral hearing loss	2010 - Ongoing
Erectile dysfunction	Erectile dysfunction	2010 - Ongoing
Intraocular lens implant	Bilateral lens implant	2010 - 2010
Sleep apnoea syndrome	Sleep apnea	2012 - Ongoing
Spinal stenosis	Spinal stenosis	2013 - Ongoing
Atrial fibrillation	Paroxysmal atrial fibrillation	2015 - Ongoing
Cerebrovascular accident	Stroke	27 Jun 2016 (Study Day -1507) - 27 Jun 2016 (Study Day -1507)
Retinal vascular thrombosis	Left side ocular thrombosis	27 Jun 2016 (Study Day -1507) - 27 Jun 2016 (Study Day -1507)
Anxiety	Anxiety	2019 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cholecystitis chronic	Chronic cholecystitis	2019 - Ongoing
Constipation	Constipation	2019 - Ongoing
Depression	Depression	2019 - Ongoing
Hip fracture	Fracture left hip	2019 - 2019
Insomnia	Insomnia	2019 - Ongoing
Osteoarthritis	Generalized unspecified joint osteoarthritis	2019 - Ongoing
Pelvic fracture	Broken pelvis secondary to fall	02 Aug 2019 (Study Day -376) - 08 Aug 2019 (Study Day -370)
Pelvic operation	Pelvic repair surgery	08 Aug 2019 (Study Day -370) - 08 Aug 2019 (Study Day -370)
Acetabulum fracture	Acetabular fracture	Nov 2019 - Dec 2019
Hip surgery	Acetabular surgery	Nov 2019 - Nov 2019
Prostatomegaly	Enlarged prostate	Nov 2019 - Ongoing
Hip surgery	Acetabular surgery	Dec 2019 - Dec 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine hydrochloride	2000 - Ongoing	Seasonal Allergies
Losartan potassium	2005 - Ongoing	High Blood Pressure
Atorvastatin	2010 - Ongoing	High Cholesterol
Hydrochlorothiazide	2015 - Ongoing	High Blood Pressure
Acetylsalicylic acid	2016 - Ongoing	Post Stroke
Paracetamol	2019 - Ongoing	Osteoarthritis Hip
Mirtazapine	Nov 2019 - Ongoing	Depression
Tamsulosin hydrochloride	Nov 2019 - Ongoing	Benign Prostatic Hyperplasia
Hydrocodone	Dec 2019 - Ongoing	Hip Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Malaise	Grade 2/moderate	Not related	30 Aug 2020 (Study Day 19) - 01 Sep 2020 (Study Day 21)
Nausea	Grade 2/moderate	Not related	30 Aug 2020 (Study Day 19) - 01 Sep 2020 (Study Day 21)
Vomiting	Grade 1/mild	Not related	31 Aug 2020 (Study Day 20) - 31 Aug 2020 (Study Day 20)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US352-2109 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	10 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pericardial Effusion/Pericardial Effusion	SAE	Grade 4	Related	16 Nov 2020 (Study Day 96) – 22 Feb 2021 (Study Day 194)	Recovered/ resolved
Pericarditis/Pericarditis	SAE	Grade 2/ moderate	Related	16 Nov 2020 (Study Day 96) – 22 Feb 2021 (Study Day 194)	Recovered/ resolved
Pleural Effusion/ Pleural Effusions (Bilateral)	SAE	Grade 4	Related	17 Nov 2020 (Study Day 97) – 22 Feb 2021 (Study Day 194)	Recovered/ resolved
Atrial Flutter/Episodic Atrial Flutter	SAE	Grade 1/mild	Not related	26 Nov 2020 (Study Day 106) – 01 Dec 2020 (Study Day 111)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US352-2109, a 59-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 13 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 10 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Nov 2020 (Study Day 96), 95 days after the first dose and 67 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pericardial effusion. Action taken with the IP was not applicable. The event of pericardial effusion lasted for 99 days, after which it was considered to be recovered/resolved on 22 Feb 2021 (Study Day 194). The investigator assessed the event of pericardial effusion to be related to the IP.

On 16 Nov 2020 (Study Day 96), 95 days after the first dose and 67 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of pericarditis. Action taken with the IP was not applicable. The event of pericarditis lasted for 99 days, after which it was considered to be recovered/resolved on 22 Feb 2021 (Study Day 194). The investigator assessed the event of pericarditis to be related to the IP.

On 17 Nov 2020 (Study Day 97), 96 days after the first dose and 68 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pleural effusion. Action taken with the IP was not applicable. The event of pleural effusions (bilateral) lasted for 98 days, after which it was considered to be recovered/resolved on 22 Feb 2021 (Study Day 194). The investigator assessed the event of pleural effusion to be related to the IP.

On 26 Nov 2020 (Study Day 106), 105 days after the first dose and 77 days after the second dose of the IP, the participant experienced a Grade 1/mild serious adverse event of atrial flutter. Action taken with the IP was not applicable. The event of episodic atrial flutter lasted for 6 days, after which it was considered to be recovered/resolved on 01 Dec 2020 (Study Day 111). The investigator assessed the event of atrial flutter to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 15 Sep 2020 (Study Day 34), the participant experienced acute shortness of breath along with chest discomfort and presented to the emergency department (ED). Laboratory test results included white blood cell (WBC) count $10.4 \times 10^3/\mu L$ (reference range 3.8 to $10.6 \times 10^3/\mu L$), red blood cell count $4.79 \times 10^6/\mu L$ (reference range 4.15 to $5.55 \times 10^6/\mu L$), absolute monocytes $1.0 \times 10^3/\mu L$ (reference range 0.00 to $0.80 \times 10^3/\mu L$), potassium 3.4 mmol/L (reference range 3.5 to 5.0 mmol/L), blood urea nitrogen 28 mg/dL (reference range 10 to 25 mg/dL), quantitative D-dimer 1.01 µg/mL fibrinogen equivalent units (reference range < 0.59 µg/mL), troponin < 18 ng/L (reference range < 19 ng/L), prothrombin time (PT) 12.9 seconds (reference range 12.1 to 14.5 seconds), and partial thromboplastin time (PTT) 33 seconds (reference range 22 to 36 seconds). A chest x-ray revealed no pneumothorax; pulmonary vasculature, cardiac, and mediastinal silhouettes were within normal limits; lungs were clear; osseous structures were intact; no evidence of pulmonary embolism or pericardial effusion; and no acute process. The participant was discharged from the ED.

On 05 Oct 2020 (Study Day 54), the participant developed sinus congestion.

On 13 Oct 2020 (Study Day 62), the participant received Flublok RIV4 vaccination for influenza prophylaxis.

On 15 Nov 2020 (Study Day 95), the participant experienced chest heaviness and pain and felt chest pressure when leaning forward. The participant had a spell of nausea and “passed out” after kneeling on the floor. The participant reported that their heart rate was between 84 to 117 beats per minute (bpm).

On 16 Nov 2020 (Study Day 96), the participant experienced serious adverse events (SAEs) of pericardial effusion and pericarditis while visiting their primary care physician concerning the symptoms they had been experiencing. The participant's heart rate was 114 bpm and they were referred to a cardiologist for additional work-up.

On 17 Nov 2020 (Study Day 97), the participant experienced an SAE of pleural effusion. A computed tomography (CT) angiography scan showed stable minimal to mild dilatation of the ascending aorta and new small bilateral pleural effusions, left greater than right, and moderate pericardial effusion with diffuse pericardial enhancement, a correlate for pericarditis.

On 18 Nov 2020 (Study Day 98), an echocardiogram (ECHO) showed a normal left ventricular ejection fraction of 60 to 65%, small pericardial effusion circumferentially around the entire heart with no evidence of cardiac tamponade. Etiology was suspected to be reactive (viral or inflammatory). The participant's erythrocyte sedimentation rate (ESR) was 34 mm/hr (reference range 0 to 20 mm/hr). Treatment included high-dose acetylsalicylic acid and colchicine.

On 23 Nov 2020 (Study Day 103), SARS-CoV-2 RT-PCR testing was negative.

On 26 Nov 2020 (Study Day 106), the participant experienced an SAE of atrial flutter. The participant presented to the ED for chest pain, epigastric pain, and rising fatigue. An episodic atrial flutter was noted, which was considered secondary to pericarditis. A CT scan showed no pulmonary embolism, no lung consolidation, mild to moderate left- and right-sided pleural effusions, underlying compressive atelectasis in the lungs, and mild to moderate pericardial effusion. Laboratory test results included ESR 101 mm/hr, procalcitonin 0.38 ng/mL (reference range < 0.25 ng/mL), antinuclear antibodies were negative, platelets 492 × 10^3/µL (reference range 150 to 450 × 10^3/µL), troponin < 4, brain natriuretic peptide 112 pg/mL (reference range < 50 pg/mL), and WBC 20.0 × 10^3/µL. The participant was admitted to the hospital.

On 27 Nov 2020 (Study Day 107), an ECHO showed improvement in the participant's pericardial effusion. Relevant laboratory results included C-reactive protein (CRP) 24.4 mg/dL (reference range < 0.5 mg/dL), WBC 14.3 × 10^3/µL, hemoglobin (Hgb) 10.8 g/dL (reference range 12 to 15 g/dL), hematocrit (Hct) 32.9% (reference range 36 to 46%), and platelets 454 × 10^3/µL; human immunodeficiency virus antigen and antibody testing was nonreactive, urine *Histoplasma* antigen testing was negative, and blood cultures showed no growth. A respiratory virus panel PCR test on a nasopharyngeal sample, which included adenovirus, respiratory syncytial virus, parainfluenza, coronavirus (excluding COVID-19), and influenza, was negative for all pathogens tested. Treatment with methocarbamol and paracetamol were started for pericarditis.

On 28 Nov 2020 (Study Day 108), laboratory test results included free thyroxine 1.05 ng/dL (reference range 0.61 to 1.44 ng/dL), thyroid stimulating hormone 3.16 µIU/mL (reference range 0.45 to 5.33 µIU/mL), PT 16 seconds, and PTT 50 seconds.

On 30 Nov 2020 (Study Day 110), laboratory test results included WBC 9.6 × 10^3/µL, Hgb 10.7 g/dL, Hct 30.5%, and platelets 474 × 10^3/µL. A left-side thoracentesis was performed, removing 450 mL of clear yellow fluid. Results of pleural fluid analyses were consistent with

transudate and included cultures negative for bacteria and fungi, with a lactate dehydrogenase of 78 IU/L (reference range < 220 IU/L) and protein of 3.3 g/dL (reference range < 8.3 g/dL).

Infectious disease was consulted and did not have a strong suspicion for infection. The participant was given ketorolac and prednisone for pericarditis.

On 01 Dec 2020 (Study Day 111), the participant was feeling better, sitting upright with no conversational dyspnea, on room air; still had fatigue, but it was improving, overall. Vital signs included blood pressure 129/74 mm Hg, pulse 67 bpm, temperature 36.4°C, respiratory rate 18 breaths per minute, and oxygen saturation 96%. The participant was discharged home in stable condition. The participant was treated with diphenhydramine. Treatment for the events continued on discharge included metoprolol for atrial flutter, and colchicine and prednisone for pericarditis.

On 02 Dec 2020 (Study Day 112), the participant started low-dose acetylsalicylic acid for pericarditis.

On 04 Dec 2020 (Study Day 114), during the post-hospitalization follow-up, atrial flutter was not observed, and the participant was not reporting any shortness of breath or pleurodynia. Relevant laboratory test results included WBC 14 × 10^3/µL, Hgb 11.7 g/dL, Hct 35.5%, platelets 555 × 10^3/µL, CRP 2.2 mg/dL, and ESR 49 mm/hr. A cardiology follow-up was scheduled for 16 Dec 2020 (Study Day 126).

On 07 Dec 2020 (Study Day 117), the participant remained on a prednisone taper for pericarditis.

On 13 Jan 2021 (Study Day 154), the participant had a follow-up visit with cardiology. The participant had not experienced any symptoms related to atrial flutter since hospitalization but remained on metoprolol as a precaution. The cardiologist believed the irritation from the pericarditis caused the atrial flutter and that it had now resolved. There was no pericardial rub on examination, however, the participant had occasional chest and upper abdominal pain that was likely related to the pericardial fluid. Prednisone tapering was continued, and the participant was instructed to follow up with rheumatology in January 2021 and cardiology again in April 2021.

On 18 Jan 2021 (Study Day 159), during a follow-up visit, the physician noted the participant still experienced serositis (pericarditis and small bilateral pleural effusion).

On 22 Feb 2021 (Study Day 194), the participant was weaned off prednisone and was asymptomatic with no shortness of breath or chest pain. No pulmonology follow-up appointment was scheduled.

Action taken with study IP in response to the events of pericardial effusion, pericarditis, pleural effusion, and atrial flutter, was not applicable, as the participant had already received both scheduled doses.

The event of atrial flutter was considered resolved on 01 Dec 2020 (Study Day 111). The events of pericardial effusion, pericarditis, and pleural effusion were considered resolved on 22 Feb 2021 (Study Day 194).

The investigator assessed the events of pericardial effusion, pericarditis, and pleural effusion as related to study IP, based on the timing of chest pain after the study dosing and diagnosis with etiology matching an inflammatory response. The event of atrial flutter was assessed as not related to the study IP. The events of pericardial effusion, pericarditis, pleural effusion, and atrial flutter were assessed as not related to study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000916	Pericardial effusion
MOD-2020-000916	Pericarditis
MOD-2020-000916	Pleural effusion
MOD-2020-000916	Atrial flutter

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Arthritis	Right knee arthritis	Not reported - Ongoing
Asthma	Mild asthma	Not reported - Ongoing
Basal cell carcinoma	Basal cell carcinoma chest	Not reported
Basal cell carcinoma	Basal cell carcinoma nose	Not reported
Eyelid ptosis	Droopy eyelids interfering with vision	Not reported - Ongoing
Migraine	Migraine headaches	Not reported - Ongoing
Seasonal allergy	Seasonal allergies	Not reported - Ongoing
Arthralgia	Migratory pains in joints of knees, legs (saw rhematologist, no diagnosis)	2013 - 2013
Osteoarthritis	Knee replacement surgery (due to osteoarthritis)	2013 - 2013
Postmenopause	Post menopause	24 Jan 2013 (Study Day -2758) - Ongoing
Aortic aneurysm	Enlarged descending aorta	2017 - 2017
Joint swelling	Middle finger of left hand joint swelling, no known cause	2019 - 2019
Facial paralysis	Bell's palsy	Feb 2019 - Feb 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Naproxen	Not reported - Ongoing	Knee Pain
Salbutamol	Not reported - Ongoing	Asthma
Basic metabolic profile*	15 Sep 2020 (Study Day 34) - 15 Sep 2020 (Study Day 34)	Diagnostic
Cbc and differential*	15 Sep 2020 (Study Day 34) - 15 Sep 2020 (Study Day 34)	Diagnostic
Ct chest with iv contrast pulmonary embolism*	15 Sep 2020 (Study Day 34) - 15 Sep 2020 (Study Day 34)	Diagnostic
D-dimer, quantitative*	15 Sep 2020 (Study Day 34) - 15 Sep 2020 (Study Day 34)	Diagnostic
Pt/inr/ptt*	15 Sep 2020 (Study Day 34) - 15 Sep 2020 (Study Day 34)	Diagnostic
Troponin i*	15 Sep 2020 (Study Day 34) - 15 Sep 2020 (Study Day 34)	Diagnostic
Fluticasone	05 Oct 2020 (Study Day 54) - Ongoing	Sinus Congestion
Influenza vaccine rha 4v (baculovirus)	13 Oct 2020 (Study Day 62) - 13 Oct 2020 (Study Day 62)	Flu Prevention
Excision biopsy of left shoulder and left cheek skin lesions*	05 Nov 2020 (Study Day 85) - 05 Nov 2020 (Study Day 85)	Diagnostic
Photodynamic therapy (red light)*	13 Nov 2020 (Study Day 93) - 13 Nov 2020 (Study Day 93)	Adverse Event
Ecg 12 lead*	16 Nov 2020 (Study Day 96) - 16 Nov 2020 (Study Day 96)	Diagnostic
Ct angiography chest gated with iv contrast (**non-coronary**)*	17 Nov 2020 (Study Day 97) - 17 Nov 2020 (Study Day 97)	Diagnostic
Acetylsalicylic acid	18 Nov 2020 (Study Day 98) - 25 Nov 2020 (Study Day 105)	Pericarditis
Ana screen and titer*	18 Nov 2020 (Study Day 98) - 18 Nov 2020 (Study Day 98)	Diagnostic
Bnp*	18 Nov 2020 (Study Day 98) - 18 Nov 2020 (Study Day 98)	Diagnostic
Colchicine	18 Nov 2020 (Study Day 98) - Ongoing	Pericarditis
Erythrocyte sedimentation rate*	18 Nov 2020 (Study Day 98) - 18 Nov 2020 (Study Day 98)	Diagnostic
Troponin i*	18 Nov 2020 (Study Day 98) - 18 Nov 2020 (Study Day 98)	Diagnostic
2019 ncoronavirus, pcr (covid-19)*	25 Nov 2020 (Study Day 105) - 25 Nov 2020 (Study Day 105)	Diagnostic
Acetylsalicylic acid	25 Nov 2020 (Study Day 105) - 01 Dec 2020 (Study Day 111)	Pericarditis/ Pericardial Effusion
Aluminium hydroxide; magnesium hydroxide; simeticone	26 Nov 2020 (Study Day 106) - 26 Nov 2020 (Study Day 106)	Gastro Esophageal Reflux Disease

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Basic metabolic profile*	26 Nov 2020 (Study Day 106) - 26 Nov 2020 (Study Day 106)	Diagnostic
Bnp*	26 Nov 2020 (Study Day 106) - 26 Nov 2020 (Study Day 106)	Diagnostic
Cbc and differential*	26 Nov 2020 (Study Day 106) - 26 Nov 2020 (Study Day 106)	Diagnostic

Prednisone	18 Jan 2021 (Study Day 159) - 25 Jan 2021 (Study Day 166)	Pericarditis
Prednisone	25 Jan 2021 (Study Day 166) - Ongoing	Pericarditis
Prednisone	25 Jan 2021 (Study Day 166) - 28 Jan 2021 (Study Day 169)	Pericarditis
Prednisone	28 Jan 2021 (Study Day 169) - 31 Jan 2021 (Study Day 172)	Pericarditis
Prednisone	31 Jan 2021 (Study Day 172) - 03 Feb 2021 (Study Day 175)	Pericarditis
Prednisone	03 Feb 2021 (Study Day 175) - 07 Feb 2021 (Study Day 179)	Pericarditis
Prednisone	07 Feb 2021 (Study Day 179) - 10 Feb 2021 (Study Day 182)	Pericarditis
Prednisone	10 Feb 2021 (Study Day 182) - 16 Feb 2021 (Study Day 188)	Pericarditis
Prednisone	16 Feb 2021 (Study Day 188) - 22 Feb 2021 (Study Day 194)	Pericarditis
Blepharoplasty*	17 Feb 2021 (Study Day 189) - 17 Feb 2021 (Study Day 189)	Medical History
Diagnostic ultrasound bilateral hands*	02 Mar 2021 (Study Day 202) - 02 Mar 2021 (Study Day 202)	Diagnostic
Botulinum toxin type a	15 Mar 2021 (Study Day 215) - 15 Mar 2021 (Study Day 215)	Facial Rhytides (Glabella And Crows Feet)
Hyaluronic acid	15 Mar 2021 (Study Day 215) - 15 Mar 2021 (Study Day 215)	Cosmetic (Face)

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Chest Pain	Grade 4	Related	13 Sep 2020 (Study Day 32) - 15 Sep 2020 (Study Day 34)
Fatigue	Grade 2/moderate	Related	13 Sep 2020 (Study Day 32) - 18 Sep 2020 (Study Day 37)
Chest Discomfort	Grade 2/moderate	Related	30 Sep 2020 (Study Day 49) - 03 Oct 2020 (Study Day 52)
Headache	Grade 1/mild	Not related	30 Sep 2020 (Study Day 49) - 03 Oct 2020 (Study Day 52)
Actinic Keratosis	Grade 3/severe	Not related	22 Oct 2020 (Study Day 71) - 13 Nov 2020 (Study Day 93)
Malignant Melanoma In Situ	Grade 3/severe	Not related	22 Oct 2020 (Study Day 71) - 05 Nov 2020 (Study Day 85)
Fatigue	Grade 3/severe	Related	15 Nov 2020 (Study Day 95) - 02 Dec 2020 (Study Day 112)
Nausea	Grade 2/moderate	Not related	15 Nov 2020 (Study Day 95) - 15 Nov 2020 (Study Day 95)
Pericardial Effusion	Grade 2/moderate	Not related	15 Nov 2020 (Study Day 95) - 16 Feb 2021 (Study Day 188)
Gastrooesophageal Reflux Disease	Grade 1/mild	Not related	01 Dec 2020 (Study Day 111) - 22 Feb 2021 (Study Day 194)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US362-2169 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	09 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	07 Oct 2020 (Study Day 29)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pneumonia/Pneumonia	SAE	Grade 4	Not related	06 Dec 2020 (Study Day 89) – 04 Jan 2021 (Study Day 118)	Recovered/ resolved
Hepatocellular Carcinoma/Metastatic Hepatocellular Carcinoma	SAE	Grade 4	Not related	30 Dec 2020 (Study Day 113) – 04 Jan 2021 (Study Day 118)	Recovered/ resolved with sequelae
Hepatocellular Carcinoma/Worsening Metastatic Hepatocellular Carcinoma	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	16 Jan 2021 (Study Day 130) – 21 Jan 2021 (Study Day 135)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US362-2169, a 56-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 09 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 07 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Dec 2020 (Study Day 89), 88 days after the first dose and 60 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of pneumonia. Action taken with the IP was not applicable. The event of pneumonia lasted for 30 days, after which it was considered to be recovered/resolved on 04 Jan 2021 (Study Day 118). The investigator assessed the event of pneumonia to be not related to the IP.

On 30 Dec 2020 (Study Day 113), 112 days after the first dose and 84 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of hepatocellular carcinoma. Action taken with the IP was not applicable. The event of metastatic hepatocellular carcinoma lasted for 6 days, after which it was considered to be recovered/resolved with sequelae on 04 Jan 2021 (Study Day 118). The investigator assessed the event of hepatocellular carcinoma to be not related to the IP.

On 16 Jan 2021 (Study Day 130), 129 days after the first dose and 101 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of hepatocellular carcinoma. Action taken with the IP was not applicable. The event of worsening metastatic hepatocellular carcinoma lasted for 6 days, after which it was considered to be fatal on 21 Jan 2021 (Study Day 135). The investigator assessed the event of hepatocellular carcinoma to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 29 Nov 2020 (Study Day 82), the participant experienced a nonserious adverse events of nasal congestion and worsening dyspnea.

On 03 Dec 2020 (Study Day 86), the participant was contacted for the Month 3 safety call. The participant continued to experience nasal congestion and worsening dyspnea and was scheduled for an illness visit on 04 Dec 2020 (Study Day 87).

On 04 Dec 2020 (Study Day 87), the participant did not go to the illness visit and continued experiencing symptoms of nasal congestion and worsening dyspnea.

On 06 Dec 2020 (Study Day 89), the participant experienced a serious adverse event (SAE) of pneumonia. The participant presented to the emergency department with chief complaints of shortness of breath, weakness, and abdominal pain for 3 days. The participant's oxygen saturation was 89 to 90% on room air and their respiratory rate was 24 breaths per minute. The participant was admitted to the hospital in intensive care unit (ICU) for pneumonia. On the same day, a computerized tomography (CT) scan revealed liver lesions and multiple lung nodules suggestive of hepatocellular carcinoma with lung metastases. Relevant laboratory test results included platelet count 99 (low), calcium 8.4 (low), alkaline phosphatase 240 (high), total bilirubin 1.9 (high), alanine aminotransferase (ALT) 55 (high), and aspartate aminotransferase (AST) 94 (high) (no units or reference ranges reported). A chest x-ray revealed a right large pleural effusion.

On 11 Dec 2020 (Study Day 94), the participant underwent right thoracentesis (amount and type of fluid was not reported).

On 15 Dec 2020 (Study Day 98), a right pleural drain was placed under ultrasound guidance.

On 28 Dec 2020 (Study Day 111), relevant laboratory test results included sodium 131 (low); calcium 8.0 (low); AST 7.2 (high); *Mycoplasma pneumoniae* IgM was positive; SARS antigen was negative; and COVID-19 RT-PCR was negative. A chest x-ray showed bilateral lung infiltrates; right greater than left and the infiltrates were stable.

On 30 Dec 2020 (Study Day 113), the participant experienced an SAE of hepatocellular carcinoma (metastatic hepatocellular carcinoma), which was confirmed with a CT-guided liver biopsy.

On 31 Dec 2020 (Study Day 114), a chest x-ray showed decreasing vascular congestion and small bilateral plural effusions with bibasilar atelectasis and/or infiltrate.

On 04 Jan 2021 (Study Day 118), a chest x-ray showed bilateral lung infiltrate.

Treatment for the events included oxygen; azithromycin, ceftriaxone, piperacillin/tazobactam, vancomycin, calcium chloride, methylprednisolone, furosemide, sodium chloride (all IV), albuterol/ipratropium intranasal; azithromycin, furosemide, montelukast, spironolactone, and paracetamol (all PO).

The event of pneumonia was considered resolved on 04 Jan 2021 (Study Day 118), the event of hepatocellular carcinoma (metastatic hepatocellular carcinoma), was considered resolved with sequelae on 04 Jan 2021 (Study Day 118), and the participant was discharged from the hospital on the same day.

On 16 Jan 2021 (Study Day 130), the participant experienced an SAE of hepatocellular carcinoma (worsening metastatic hepatocellular carcinoma). The participant presented to the hospital with complaints of multiple syncopal episodes, worsening edema, worsening shortness of breath, right upper quadrant pain, and fatigue. The participant was admitted to the ICU for 4 days. The participant had a negative COVID-19 test. Subsequent hospital events included anasarca and sepsis. Treatment for the event of hepatocellular carcinoma (worsening metastatic hepatocellular carcinoma) included rifaximin, sodium bicarbonate, lactulose, famotidine (all PO); vancomycin, daptomycin, micafungin, albumin, sodium bicarbonate, hydromorphone, cefepime, metronidazole, vasopressin, meropenem, ceftriaxone, norepinephrine, octreotide, albuterol/ipratropium, and methylprednisolone (all IV).

On 21 Jan 2021 (Study Day 135), the participant experienced cardiopulmonary arrest and died. The cause of death was reported as hepatocellular carcinoma (worsening metastatic hepatocellular carcinoma).

Action taken with study IP was not applicable in response to the events as the participant had already received both scheduled doses.

The investigator assessed the events, pneumonia and hepatocellular carcinoma (metastatic hepatocellular carcinoma and worsening metastatic hepatocellular carcinoma), as not related to the study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001051	Pneumonia
MOD-2020-001051	Hepatocellular carcinoma metastatic (worsening)
MOD-2020-001051	Hepatocellular carcinoma metastatic

Study Completion/Discontinuation

On 21 Jan 2021 (Study Day 135), the participant discontinued from the study due to death. On 21 Jan 2021 (Study Day 135), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	1985 - Ongoing
Fluid retention	Fluid retention	1991 - Ongoing
Obesity	Severe obesity (BMI 49.6)	2008 - Ongoing
Diabetes mellitus	Diabetes	2014 - Ongoing
Dyspnoea	Dyspnea	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Furosemide	2017 - Ongoing	Fluid Retention
Spironolactone	2017 - Ongoing	Fluid Retention
Salbutamol	2018 - Ongoing	Dyspnea
Influenza vaccine	25 Aug 2020 (Study Day -15) - Ongoing	Influenza Prophylaxis
Abdominal ultrasound*	06 Dec 2020 (Study Day 89) - 06 Dec 2020 (Study Day 89)	Diagnostic
Ascorbic acid	06 Dec 2020 (Study Day 89) - 04 Jan 2021 (Study Day 118)	Vitamin Supplementation
Azithromycin	06 Dec 2020 (Study Day 89) - 15 Dec 2020 (Study Day 98)	Pneumonia
Calcium chloride	06 Dec 2020 (Study Day 89) - 06 Dec 2020 (Study Day 89)	Unknown
Ceftriaxone	06 Dec 2020 (Study Day 89) - 06 Dec 2020 (Study Day 89)	Pneumonia
CTA chest*	06 Dec 2020 (Study Day 89) - 06 Dec 2020 (Study Day 89)	Diagnostic
EKG*	06 Dec 2020 (Study Day 89) - 06 Dec 2020 (Study Day 89)	Diagnostic
Famotidine	06 Dec 2020 (Study Day 89) - 04 Jan 2021 (Study Day 118)	Reflux Prevention
Furosemide	06 Dec 2020 (Study Day 89) - 22 Dec 2020 (Study Day 105)	Unknown
Heparin	06 Dec 2020 (Study Day 89) - 11 Dec 2020 (Study Day 94)	Unknown
Iopamidol	06 Dec 2020 (Study Day 89) - 09 Dec 2020 (Study Day 92)	Unknown
Ipratropium bromide; salbutamol sulfate	06 Dec 2020 (Study Day 89) - 04 Jan 2021 (Study Day 118)	Pneumonia
Methylprednisolone sodium succinate	06 Dec 2020 (Study Day 89) - 06 Dec 2020 (Study Day 89)	Unknown

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Methylprednisolone sodium succinate	06 Dec 2020 (Study Day 89) - 11 Dec 2020 (Study Day 94)	Unknown
Oxygen	06 Dec 2020 (Study Day 89) - 04 Jan 2021 (Study Day 118)	Dyspnea, Pneumonia
Spironolactone	06 Dec 2020 (Study Day 89) - 22 Dec 2020 (Study Day 105)	Unknown
X-ray*	06 Dec 2020 (Study Day 89) - 06 Dec 2020 (Study Day 89)	Diagnostic
Zinc sulfate	06 Dec 2020 (Study Day 89) - 04 Jan 2021 (Study Day 118)	Vitamin Supplementation
Chest x-ray*	07 Dec 2020 (Study Day 90) - 07 Dec 2020 (Study Day 90)	Diagnostic
Colecalciferol	07 Dec 2020 (Study Day 90) - 04 Jan 2021 (Study Day 118)	Vitamin Supplementation
Echocardiogram*	07 Dec 2020 (Study Day 90) - 07 Dec 2020 (Study Day 90)	Diagnostic
Paracetamol	07 Dec 2020 (Study Day 90) - 04 Jan 2021 (Study Day 118)	Unknown
Azithromycin	08 Dec 2020 (Study Day 91) - 03 Jan 2021 (Study Day 117)	Pneumonia
Ceftriaxone	08 Dec 2020 (Study Day 91) - 11 Dec 2020 (Study Day 94)	Pneumonia
Lactulose	08 Dec 2020 (Study Day 91) - 04 Jan 2021 (Study Day 118)	Unknown
Quetiapine	08 Dec 2020 (Study Day 91) - 03 Jan 2021 (Study Day 117)	Unknown
Chest x-ray*	09 Dec 2020 (Study Day 92) - 09 Dec 2020 (Study Day 92)	Diagnostic
Ct abd/pelvis w/wo contrast*	09 Dec 2020 (Study Day 92) - 09 Dec 2020 (Study Day 92)	Diagnostic
Lorazepam	09 Dec 2020 (Study Day 92) - 03 Jan 2021 (Study Day 117)	Unknown (According To Medical Records)
Chest x-ray*	10 Dec 2020 (Study Day 93) - 10 Dec 2020 (Study Day 93)	Diagnostic
Chest x-ray*	11 Dec 2020 (Study Day 94) - 11 Dec 2020 (Study Day 94)	Diagnostic
Codeine; guaifenesin	11 Dec 2020 (Study Day 94) - 04 Jan 2021 (Study Day 118)	Cough
Right thoracentesis*	11 Dec 2020 (Study Day 94) - 11 Dec 2020 (Study Day 94)	Diagnostic
Nadolol	12 Dec 2020 (Study Day 95) - 31 Dec 2020 (Study Day 114)	Unknown
Chest x-ray*	13 Dec 2020 (Study Day 96) - 13 Dec 2020 (Study Day 96)	Diagnostic
Chest x-ray*	14 Dec 2020 (Study Day 97) - 14 Dec 2020 (Study Day 97)	Diagnostic
Chest x-ray*	15 Dec 2020 (Study Day 98) - 15 Dec 2020 (Study Day 98)	Diagnostic
Right pleural drain placement under US guidance*	15 Dec 2020 (Study Day 98) - 15 Dec 2020 (Study Day 98)	Diagnostic
Albumin human	16 Dec 2020 (Study Day 99) - 22 Dec 2020 (Study Day 105)	Unknown
Chest x-ray*	19 Dec 2020 (Study Day 102) - 19 Dec 2020 (Study Day 102)	Diagnostic
Chest x-ray*	21 Dec 2020 (Study Day 104) - 21 Dec 2020 (Study Day 104)	Diagnostic
Piperacillin sodium; tazobactam sodium	21 Dec 2020 (Study Day 104) - 23 Dec 2020 (Study Day 106)	Pneumonia
Chest x-ray*	23 Dec 2020 (Study Day 106) - 23 Dec 2020 (Study Day 106)	Diagnostic
Chest x-ray*	24 Dec 2020 (Study Day 107) - 24 Dec 2020 (Study Day 107)	Diagnostic
Ondansetron	24 Dec 2020 (Study Day 107) - 04 Jan 2021 (Study Day 118)	Nausea
Vancomycin	24 Dec 2020 (Study Day 107) - 26 Dec 2020 (Study Day 109)	Pneumonia
Chest x-ray*	25 Dec 2020 (Study Day 108) - 25 Dec 2020 (Study Day 108)	Diagnostic
Chest x-ray*	26 Dec 2020 (Study Day 109) - 26 Dec 2020 (Study Day 109)	Diagnostic
Vancomycin	26 Dec 2020 (Study Day 109) - 03 Jan 2021 (Study Day 117)	Pneumonia
Venous duplex ultrasound UE right*	26 Dec 2020 (Study Day 109) - 26 Dec 2020 (Study Day 109)	Diagnostic
CTA chest*	27 Dec 2020 (Study Day 110) - 27 Dec 2020 (Study Day 110)	Diagnostic

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Chest x-ray*	28 Dec 2020 (Study Day 111) - 28 Dec 2020 (Study Day 111)	Diagnostic
Chest x-ray*	29 Dec 2020 (Study Day 112) - 29 Dec 2020 (Study Day 112)	Diagnostic
CT guided liver biopsy*	30 Dec 2020 (Study Day 113) - 30 Dec 2020 (Study Day 113)	Diagnostic
Chest x-ray*	31 Dec 2020 (Study Day 114) - 31 Dec 2020 (Study Day 114)	Diagnostic
Echocardiogram*	31 Dec 2020 (Study Day 114) - 31 Dec 2020 (Study Day 114)	Diagnostic
Chest x-ray*	01 Jan 2021 (Study Day 115) - 01 Jan 2021 (Study Day 115)	Diagnostic
Midodrine	01 Jan 2021 (Study Day 115) - 04 Jan 2021 (Study Day 118)	Hypotension
Chest x-ray*	03 Jan 2021 (Study Day 117) - 03 Jan 2021 (Study Day 117)	Diagnostic
Chest x-ray*	04 Jan 2021 (Study Day 118) - 04 Jan 2021 (Study Day 118)	Diagnostic
Furosemide	10 Jan 2021 (Study Day 124) - 10 Jan 2021 (Study Day 124)	Metastatic Hepatocellular Carcinoma
Abdominal ultrasound*	16 Jan 2021 (Study Day 130) - 16 Jan 2021 (Study Day 130)	Diagnostic
Albumin NOS	16 Jan 2021 (Study Day 130) - 20 Jan 2021 (Study Day 134)	Sepsis
Cefepime	16 Jan 2021 (Study Day 130) - 18 Jan 2021 (Study Day 132)	Sepsis
Central venous line placement*	16 Jan 2021 (Study Day 130) - 16 Jan 2021 (Study Day 130)	Diagnostic
Chest x-ray*	16 Jan 2021 (Study Day 130) - 16 Jan 2021 (Study Day 130)	Diagnostic
CT chest, abdomen, pelvis*	16 Jan 2021 (Study Day 130) - 16 Jan 2021 (Study Day 130)	Diagnostic
Norepinephrine	16 Jan 2021 (Study Day 130) - 20 Jan 2021 (Study Day 134)	Sepsis
Ondansetron	16 Jan 2021 (Study Day 130) - 21 Jan 2021 (Study Day 135)	Nausea Prevention
Vancomycin	16 Jan 2021 (Study Day 130) - 18 Jan 2021 (Study Day 132)	Sepsis
Vasopressin	16 Jan 2021 (Study Day 130) - 18 Jan 2021 (Study Day 132)	Sepsis
Albumin NOS	17 Jan 2021 (Study Day 131) - 17 Jan 2021 (Study Day 131)	Sepsis
CT abdomen pelvis w/wo contrast*	17 Jan 2021 (Study Day 131) - 17 Jan 2021 (Study Day 131)	Diagnostic
Lactulose	17 Jan 2021 (Study Day 131) - 20 Jan 2021 (Study Day 134)	Sepsis
Meropenem	17 Jan 2021 (Study Day 131) - 18 Jan 2021 (Study Day 132)	Sepsis
Metronidazole	17 Jan 2021 (Study Day 131) - 20 Jan 2021 (Study Day 134)	Sepsis
Octreotide	17 Jan 2021 (Study Day 131) - 20 Jan 2021 (Study Day 134)	Sepsis
Rifaximin	17 Jan 2021 (Study Day 131) - 20 Jan 2021 (Study Day 134)	Sepsis
Chest x-ray*	18 Jan 2021 (Study Day 132) - 18 Jan 2021 (Study Day 132)	Diagnostic
Daptomycin	18 Jan 2021 (Study Day 132) - 20 Jan 2021 (Study Day 134)	Sepsis
Enoxaparin sodium	18 Jan 2021 (Study Day 132) - 20 Jan 2021 (Study Day 134)	Prevention Of Blood Clots
Famotidine	18 Jan 2021 (Study Day 132) - 20 Jan 2021 (Study Day 134)	Unknown
Micafungin	18 Jan 2021 (Study Day 132) - 20 Jan 2021 (Study Day 134)	Sepsis
Sodium bicarbonate	18 Jan 2021 (Study Day 132) - 20 Jan 2021 (Study Day 134)	Sepsis
Echocardiogram*	19 Jan 2021 (Study Day 133) - 19 Jan 2021 (Study Day 133)	Diagnostic
Lorazepam	19 Jan 2021 (Study Day 133) - 19 Jan 2021 (Study Day 133)	Unknown (According To Medical Records)
Sodium bicarbonate	19 Jan 2021 (Study Day 133) - 19 Jan 2021 (Study Day 133)	Sepsis
Glycopyrronium	20 Jan 2021 (Study Day 134) - 21 Jan 2021 (Study Day 135)	Unknown (According To Medical Records)

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydromorphone hydrochloride	20 Jan 2021 (Study Day 134) - 21 Jan 2021 (Study Day 135)	Metastatic Hepatocellular Carcinoma
Ipratropium; salbutamol	20 Jan 2021 (Study Day 134) - 21 Jan 2021 (Study Day 135)	Unknown
Nystatin	20 Jan 2021 (Study Day 134) - 21 Jan 2021 (Study Day 135)	Unknown

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Dyspnoea	Grade 2/moderate	Not related	29 Nov 2020 (Study Day 82) - 21 Jan 2021 (Study Day 135)
Nasal Congestion	Grade 1/mild	Not related	29 Nov 2020 (Study Day 82) - 21 Jan 2021 (Study Day 135)
Sepsis	Grade 3/severe	Not related	16 Jan 2021 (Study Day 130) - 21 Jan 2021 (Study Day 135)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US375-2173 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	20 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	18 Sep 2020 (Study Day 30)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Myocardial Infarction/ Myocardial Infarction	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	01 Nov 2020 (Study Day 74) – 01 Nov 2020 (Study Day 74)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US375-2173, a 77-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 20 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 18 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 01 Nov 2020 (Study Day 74), 73 days after the first dose and 44 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of myocardial infarction. Action taken with the IP was not applicable. The event of myocardial infarction was considered to be fatal on 01 Nov 2020 (Study Day 74). The investigator assessed the event of myocardial infarction to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 01 Nov 2020 (Study Day 74), the participant experienced a fatal serious adverse event of myocardial infarction. The participant's child reported that they died of a "massive heart attack". No treatment was given for the event because the participant died at home.

Action taken with the study IP was not applicable in response to the event.

The participant died on 01 Nov 2020 (Study Day 74).

The investigator assessed the event, myocardial infarction, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000604	Myocardial infarction

Study Completion/Discontinuation

On 01 Nov 2020 (Study Day 74), the participant discontinued from the study due to death. On 01 Nov 2020 (Study Day 74), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	Not reported - Ongoing
Skin graft	Island Peticoh transplant left hand	Not reported
Limb reconstructive surgery	Reconstructive left-hand surgery	1979 - 1979
Gastrooesophageal reflux disease	Gerd/reflux	2002 - Ongoing
Prostatomegaly	Prostate enlargement	2004 - Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	2005 - Ongoing
Deafness bilateral	Bilateral hearing loss	2005 - Ongoing
Back pain	Low back pain	2015 - Ongoing
Cardiomyopathy	Cardiomyopathy	2015 - Ongoing
Cholecystectomy	Cholecystectomy for cholecystitis	2015 - 2015
Cholecystitis	Cholecystitis	2015 - 2015
Gout	Gout (location unknown)	2015 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2015 - Ongoing
Myocardial infarction	Myocardial infarction	2015 - 2015
Catheterisation cardiac	Cardiac catheterization	06 Nov 2015 (Study Day -1749) - 06 Nov 2015 (Study Day -1749)
Coronary artery disease	Coronary artery disease	Dec 2015 - Ongoing
Basal cell carcinoma	Basal cell cancer on face	2019 - 2019
Cataract	Cataracts	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fish oil	May 2005 - 01 Nov 2020 (Study Day 74)	Prophylaxis For Cardiac Disease
Omeprazole	Jan 2010 - 01 Nov 2020 (Study Day 74)	GERD
Acetylsalicylic acid	Jun 2015 - 01 Nov 2020 (Study Day 74)	Prophylaxis For Cardiac Disease
Atorvastatin	Jun 2015 - 01 Nov 2020 (Study Day 74)	Hyperlipidemia
Budesonide; formoterol fumarate	Jun 2015 - 01 Nov 2020 (Study Day 74)	Chronic Obstructive Pulmonary Disease
Carvedilol	Jun 2015 - 01 Nov 2020 (Study Day 74)	Hypertension
Fluticasone	Jun 2015 - 01 Nov 2020 (Study Day 74)	Chronic Obstructive Pulmonary Disease
Allopurinol	Jul 2018 - 01 Nov 2020 (Study Day 74)	Gout
Vitamins nos	Feb 2019 - 01 Nov 2020 (Study Day 74)	Supplement
Tamsulosin	Aug 2019 - 01 Nov 2020 (Study Day 74)	Enlarged Prostate
Guaifenesin	Jan 2020 - 01 Nov 2020 (Study Day 74)	Chronic Obstructive Pulmonary Disease
Salbutamol	Jan 2020 - 01 Nov 2020 (Study Day 74)	Chronic Obstructive Pulmonary Disease
Influenza vaccine	20 Oct 2020 (Study Day 62) - 20 Oct 2020 (Study Day 62)	Prophylaxis For Seasonal Influenza

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US383-2237 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	20 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	17 Sep 2020 (Study Day 29)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Death/Death (Unknown Cause)	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	19 Nov 2020 (Study Day 92) – 19 Nov 2020 (Study Day 92)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US383-2237, a 50-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 20 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 17 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 19 Nov 2020 (Study Day 92), 91 days after the first dose and 63 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of death. Action taken with the IP was not applicable. The event of death was considered to be fatal on 19 Nov 2020 (Study Day 92). The investigator assessed the event of death to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 19 Nov 2020 (Study Day 92), the participant experienced a fatal serious adverse event of death. Per the participant's spouse, the participant was found dead by the local authorities. The participant's spouse suspected that the participant's past history of severe alcohol addiction, mental health problems, and suicidal tendencies contributed to the participant's death. No treatment was reported.

Action taken with the study IP was not applicable in response to the event, as the participant had already received both scheduled doses.

The participant died on 19 Nov 2020 (Study Day 92). The cause of death was reported as unknown.

The investigator assessed the event, death, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000959	Death

Study Completion/Discontinuation

On 19 Nov 2020 (Study Day 92), the participant discontinued from the study due to death. On 19 Nov 2020 (Study Day 92), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety	Anxiety	1978 - Ongoing
Hypertension	Hypertension	2014 - Ongoing
Gastrooesophageal reflux disease	Acid reflux with nausea	2017 - Ongoing
Insomnia	Insomnia	2018 - Ongoing
Vitamin D deficiency	Vitamin d deficiency	Dec 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Losartan	2014 - 08 Oct 2020 (Study Day 50)	Hypertension
Sertraline	2016 - Ongoing	Anxiety
Diphenhydramine hydrochloride	2017 - Ongoing	Acid Reflux With Nausea
Clonidine	Dec 2019 - Ongoing	Insomnia
Metoprolol	Dec 2019 - Ongoing	Hypertension
Buspirone hydrochloride	Jan 2020 - Ongoing	Anxiety
Colecalciferol	Apr 2020 - Ongoing	Vitamin D3 Deficiency
Losartan	08 Oct 2020 (Study Day 50) - Ongoing	Worsening Of Hypertension
Influenza vaccine	13 Oct 2020 (Study Day 55) - 13 Oct 2020 (Study Day 55)	Influenza Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious event is presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypertension	Grade 1/mild	Not related	08 Oct 2020 (Study Day 50) - 15 Oct 2020 (Study Day 57)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US388-2011 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	03 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	02 Oct 2020 (Study Day 30)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Seizure/Seizure	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	06 Jan 2021 (Study Day 126) – 06 Jan 2021 (Study Day 126)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US388-2011, a 59-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 03 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 02 Oct 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Jan 2021 (Study Day 126), 125 days after the first dose and 96 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of seizure. Action taken with the IP was not applicable. The event of seizure was considered to be fatal on 06 Jan 2021 (Study Day 126). The investigator assessed the event of seizure to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 06 Jan 2021 (Study Day 126), the participant experienced a fatal serious adverse event of seizure. The participant resided in a short-term care facility. The nursing station was notified that the participant experienced chest pain on a scale of 10 out of 10 that radiated to their shoulder blades and complained of indigestion (likely angina). Emergency services were called, and the participant was in full arrest. An electrocardiogram showed normal sinus rhythm. The participant had seizure-like activity (likely myoclonic jerking) followed by full cardiac arrest. A bag valve mask ventilator, chest compressions, and electric shock were attempted for the participant's ventricular fibrillation. The participant coded in the emergency department for approximately 27 minutes and was reportedly shocked multiple times, but a pulse was not able to be recovered.

There was no evidence of acute trauma, and the manner of death was natural. An enzyme-linked immunosorbent assay drug screen was presumptively positive for methamphetamine and methylenedioxymethamphetamine. All other results were negative. A blood alcohol test result was negative.

Action taken with the study IP was not applicable in response to the event, as the participant had already received both scheduled doses.

The participant died on 06 Jan 2021 (Study Day 126). An autopsy revealed the cause of death was due to sudden cardiac death as a result of hypertensive heart disease, complicated by diabetes mellitus and obesity. Additional cause of death per coroner report was acute myocardial infarction with ventricular fibrillation.

The investigator assessed the event, seizure, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002295	Seizure

Study Completion/Discontinuation

On 06 Jan 2021 (Study Day 126), the participant discontinued from the study due to death. On 06 Jan 2021 (Study Day 126), the participant died due to adverse event. An autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Back pain	Chronic low back pain	14 Feb 2018 (Study Day -932) - Ongoing
Deafness	Hearing loss	14 Feb 2018 (Study Day -932) - Ongoing
Dental caries	Dental caries	14 Feb 2018 (Study Day -932) - Ongoing
Drug abuse	Nondependent cannabis abuse	14 Feb 2018 (Study Day -932) - Ongoing
Erectile dysfunction	Erectile dysfunction	14 Feb 2018 (Study Day -932) - Ongoing
Homeless	Homeless	14 Feb 2018 (Study Day -932) - Not reported
Hypertension	HTN - hypertension	14 Feb 2018 (Study Day -932) - Ongoing
Hypothyroidism	Hypothyroidism	14 Feb 2018 (Study Day -932) - Ongoing
Mixed anxiety and depressive disorder	Mood disorder; depression and anxiety	14 Feb 2018 (Study Day -932) - Ongoing
Obesity	Obesity	14 Feb 2018 (Study Day -932) - Ongoing
Osteoarthritis	Osteoarthritis of knee	14 Feb 2018 (Study Day -932) - Ongoing
Tinnitus	Tinnitus	14 Feb 2018 (Study Day -932) - Ongoing
Tobacco user	Tobacco user	14 Feb 2018 (Study Day -932) - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type 2	14 Feb 2018 (Study Day -932) - Ongoing
Type V hyperlipidaemia	Mixed hyperlipidemia	14 Feb 2018 (Study Day -932) - Ongoing
Drug dependence	Methamphetamine dependence	02 Aug 2020 (Study Day -32) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Colecalciferol	Not reported - Ongoing	Prophylaxis For Health Promotion
Duloxetine hydrochloride	Not reported - Ongoing	Mood - Depression
Fish oil	Not reported - Ongoing	Supplementation
Hydroxyzine hydrochloride	Not reported - Ongoing	Anxiety
Ibuprofen	Not reported - Ongoing	General Body Pain
Levothyroxine sodium	Not reported - Ongoing	Thyroid/Hypothyroidism
Lisinopril	Not reported - Ongoing	High Blood Pressure
Paracetamol	Not reported - Ongoing	General Body Pain
Simvastatin	Not reported - Ongoing	High Cholesterol (Hyperlipidemia)
Varenicline	17 Oct 2020 (Study Day 45) - Ongoing	Smoking Cessation
Loperamide	16 Nov 2020 (Study Day 75) - 03 Dec 2020 (Study Day 92)	Stomach Flu With Diarrhea
Ondansetron	16 Nov 2020 (Study Day 75) - 03 Dec 2020 (Study Day 92)	Stomach Flu With Nausea
EKG*	06 Jan 2021 (Study Day 126) - 06 Jan 2021 (Study Day 126)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Gastroenteritis Viral	Grade 1/mild	Not related	16 Nov 2020 (Study Day 75) - 03 Dec 2020 (Study Day 92)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US391-2024 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 28)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Nephrolithiasis/ Obstructing Nephrolithiasis	SAE	Grade 3/ severe	Not related	31 Oct 2020 (Study Day 65) – 04 Nov 2020 (Study Day 69)	Recovered/ resolved
Acute Kidney Injury/Acute Renal Failure	SAE	Grade 3/ severe	Not related	03 Nov 2020 (Study Day 68) – Ongoing	Not recovered/not resolved
Flank Pain/Flank Pain (Left)	SAE	Grade 3/ severe	Not related	03 Nov 2020 (Study Day 68) – Ongoing	Not recovered/not resolved
Thrombocytopenia/ Thrombocytopenia	SAE	Grade 4	Not related	03 Nov 2020 (Study Day 68) – Ongoing	Not recovered/not resolved
Duodenal Ulcer Perforation/Perforated Duodenal Ulcer	SAE	Grade 3/ severe	Not related	08 Nov 2020 (Study Day 73) – 08 Nov 2020 (Study Day 73)	Recovered/ resolved with sequelae
Gastrointestinal Haemorrhage/Gi Bleed	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	08 Nov 2020 (Study Day 73) – 22 Nov 2020 (Study Day 87)	Fatal
Generalised Oedema/Anasarca	SAE	Grade 3/ severe	Not related	08 Nov 2020 (Study Day 73) – Ongoing	Not recovered/ not resolved
Intra-Abdominal Fluid Collection/Intraabdominal Fluid	SAE	Grade 2/ moderate	Not related	08 Nov 2020 (Study Day 73) – Ongoing	Not recovered/ not resolved
Anaemia/Anemia	SAE	Grade 3/ severe	Not related	15 Nov 2020 (Study Day 80) – Ongoing	Not recovered/ not resolved
Acute Respiratory Failure/Acute Hypoxic Respiratory Failure	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	20 Nov 2020 (Study Day 85) – 22 Nov 2020 (Study Day 87)	Fatal
Multiple Organ Dysfunction Syndrome/Multisystem Organ Failure	Death, SAE, AE leading to study	Grade 5	Not related	20 Nov 2020 (Study Day 85) – 22 Nov 2020 (Study Day 87)	Fatal

FDA-CBER-2022-1614-3377972

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
	discontinuation				

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US391-2024, a 72-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 24 Sep 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 31 Oct 2020 (Study Day 65), 64 days after the first dose and 37 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of nephrolithiasis. Action taken with the IP was not applicable. The event of obstructing nephrolithiasis lasted for 5 days, after which it was considered to be recovered/resolved on 04 Nov 2020 (Study Day 69). The investigator assessed the event of nephrolithiasis to be not related to the IP.

On 03 Nov 2020 (Study Day 68), 67 days after the first dose and 40 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of acute kidney injury. Action taken with the IP was not applicable. The event of acute renal failure was considered to be ongoing. The investigator assessed the event of acute kidney injury to be not related to the IP.

On 03 Nov 2020 (Study Day 68), 67 days after the first dose and 40 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of flank pain. Action taken with the IP was not applicable. The event of flank pain (left) was considered to be ongoing. The investigator assessed the event of flank pain to be not related to the IP.

On 03 Nov 2020 (Study Day 68), 67 days after the first dose and 40 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of thrombocytopenia. Action taken with the IP was not applicable. The event of thrombocytopenia was considered to be ongoing. The investigator assessed the event of thrombocytopenia to be not related to the IP.

On 08 Nov 2020 (Study Day 73), 72 days after the first dose and 45 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of duodenal ulcer perforation. Action taken with the IP was not applicable. The event of perforated duodenal ulcer lasted for 1 day, after which it was considered to be recovered/resolved with sequelae on 08 Nov 2020 (Study Day 73). The investigator assessed the event of duodenal ulcer perforation to be not related to the IP.

On 08 Nov 2020 (Study Day 73), 72 days after the first dose and 45 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of gastrointestinal haemorrhage.

Action taken with the IP was not applicable. The event of gi bleed lasted for 15 days, after which it was considered to be fatal on 22 Nov 2020 (Study Day 87). The investigator assessed the event of gastrointestinal haemorrhage to be not related to the IP.

On 08 Nov 2020 (Study Day 73), 72 days after the first dose and 45 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of generalised oedema. Action taken with the IP was not applicable. The event of anasarca was considered to be ongoing. The investigator assessed the event of generalised oedema to be not related to the IP.

On 08 Nov 2020 (Study Day 73), 72 days after the first dose and 45 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of intra-abdominal fluid collection. Action taken with the IP was not applicable. The event of intraabdominal fluid was considered to be ongoing. The investigator assessed the event of intra-abdominal fluid collection to be not related to the IP.

On 15 Nov 2020 (Study Day 80), 79 days after the first dose and 52 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of anaemia. Action taken with the IP was not applicable. The event of anemia was considered to be ongoing. The investigator assessed the event of anaemia to be not related to the IP.

On 20 Nov 2020 (Study Day 85), 84 days after the first dose and 57 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of acute respiratory failure. Action taken with the IP was not applicable. The event of acute hypoxic respiratory failure lasted for 3 days, after which it was considered to be fatal on 22 Nov 2020 (Study Day 87). The investigator assessed the event of acute respiratory failure to be not related to the IP.

On 20 Nov 2020 (Study Day 85), 84 days after the first dose and 57 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of multiple organ dysfunction syndrome. Action taken with the IP was not applicable. The event of multisystem organ failure lasted for 3 days, after which it was considered to be fatal on 22 Nov 2020 (Study Day 87). The investigator assessed the event of multiple organ dysfunction syndrome to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 31 Oct 2020 (Study Day 65), the participant experienced a serious adverse event (SAE) of nephrolithiasis. The participant was initially assessed with ureteral stones.

On 03 Nov 2020 (Study Day 68), the participant experienced SAEs of flank pain, thrombocytopenia, and acute kidney injury. On the same day, the participant presented to the emergency department for worsened abdominal pain in the left flank. Upon arrival, the participant's platelets were low (value not reported), and this was considered life threatening; hemoglobin (Hgb) was stable at 12.6 g/dL (reference range 13.0 to 17.0 g/dL). The participant was

subsequently hospitalized for thrombocytopenia and acute kidney failure secondary to nephrolithiasis. On 03 Nov 2020 (Study Day 68), 04 Nov 2020 (Study Day 69), and 05 Nov 2020 (Study Day 70), the participant's creatinine levels were 3.5 mg/dL, 3.1 mg/dL, and 3.3 mg/dL (reference range 0.6 to 1.3 mg/dL), respectively. On 03 Nov 2020 (Study Day 68), an abdominal and pelvic computerized tomography (CT) scan revealed the proximal portion of left ureter was obstructed by stones measuring up to 9 mm in size; mild hydronephrosis; and worsened edema in the left renal region. Based on the findings, pyelonephritis was suspected, and a left renal stone was diagnosed. The participant had a ureteral stent inserted. Treatment medications included piperacillin/tazobactam IV and hydromorphone (route not reported). On 04 Nov 2020 (Study Day 69), the event of acute kidney injury worsened to acute renal failure. Treatment medications included oxycodone and sennoside (both PO); ceftriaxone, tamsulosin, morphine, and midazolam (all IV); and heparin SC. On 05 Nov 2020 (Study Day 70), the participant reported ongoing abdominal pain. Later, on the same day, their platelet count decreased from $79 \times 10^3/\mu L$ to $73 \times 10^3/\mu L$ and then dropped to $59 \times 10^3/\mu L$ (reference range not reported). No sign of active bleeding was reported. Treatment medications included meropenem IV and hydrocodone/paracetamol PO. On 06 Nov 2020 (Study Day 71), a follow-up renal ultrasound revealed no hydronephrosis.

On 08 Nov 2020 (Study Day 73), the participant experienced SAEs of duodenal ulcer perforation, gastrointestinal hemorrhage, generalized edema, and intra-abdominal fluid collection. On 08 Nov 2020 (Study Day 73), the participant had worsened lower abdominal pain that was more constant and severe, along with decreased appetite and nausea. Their Hgb dropped to 10.9 g/dL. An abdominal and pelvic CT on the same day showed increased atelectasis consolidation in both lower lobes with new patchy infiltrate in the posterior right upper lobe; a moderately large volume of free fluid with a large amount in the pneumoperitoneum and acute massive free air and fluid were found in the intra-abdominal and the intraperitoneal spaces, respectively. Perforation was suspected, but the site could not be identified. The participant had an exploratory laparotomy, and post-operative results showed closure of a duodenal ulcer with a Graham patch, extensive lysis of adhesions, and drainage of peritoneal abscesses. A drain was brought out through the incision in the right upper quadrant and then was placed posterior and superior to the actual ulcer. A follow-up CT on an unreported date was performed to ensure there was no leak or obstruction. Comorbidities for the perforated ulcer included Crohn's disease, multiple/recurrent small bowel obstruction/resection, colon resection, nonalcoholic cirrhosis status post transjugular intrahepatic portosystemic shunt, and a hepatic stent.

On 09 Nov 2020 (Study Day 74), the participant's Hgb was 8.7 g/dL. On 12 Nov 2020 (Study Day 77), the participant received ferric sodium gluconate complex IV for anemia. On 13 Nov 2020 (Study Day 78), the participant continued to have dark brown fluid leaking from the

right-side Jackson Pratt drain. On the same day, an abdominal and pelvic CT revealed interval placement of a surgical drain in the subhepatic space with a diminishing volume of ascites, residual gravity dependent fluid in the pelvis, post-surgical change in the ventral abdominal wall, edematous changes in the omentum, small loculations of fluid adjacent to the descending colon, worsening bilateral pulmonary infiltrates and pleural effusions, and worsening soft tissue anasarca.

On 15 Nov 2020 (Study Day 80), the participant experienced an SAE of anemia due to the perforated duodenal ulcer. On the same day, their Hgb dropped to 6.2 g/dL. While hospitalized, the participant was treated with multiple transfusions of packed red blood cells (RBCs) and potassium chloride. After the transfusions, the participant's platelets improved but never recovered. On 17 Nov 2020 (Study Day 82), the relevant laboratory results showed Hgb 7.8 g/dL, hematocrit (Hct) 23.7% (reference range 37 to 49%), and platelet count 31 × 10^3/µL (no reference range provided).

On 18 Nov 2020 (Study Day 83), a single-view chest x-ray revealed a clinical indication for renal failure, fluid overload, development of diffuse bilateral interstitial infiltrates or edema, volume loss at the lung bases, and trace pleural fluid at the costophrenic angles. Treatment medication included furosemide IV for fluid overload due to acute renal failure. On 19 Nov 2020 (Study Day 84), an abdominal and pelvic CT revealed diffuse water density; simple appearing loculated collections of fluid throughout the peritoneal cavity, the largest of which extended from the left upper quadrant caudally into the pelvis; and no associated inflammatory changes or free air.

On 20 Nov 2020 (Study Day 85), the participant experienced SAEs of multiple organ dysfunction syndrome and acute respiratory failure. The participant underwent CT guided drainage as opposed to draining through the existing drain. Due to the suspicion of post-operative bleeding, monitoring for ongoing bleeding continued. On the same day, the participant experienced a code blue for an acute hypoxic respiratory failure with bradycardia secondary to airway blockage from oral bleeding. During the rescue measures, the participant was noted to have active bleeding in the back of the mouth and the presence of dried blood. Blood in the urine was also noted. The oxygen saturation (SpO_2) dropped to 23% (reference range not reported), with a heart rate of 52 beats/minute (bpm). The laboratory test results on 20 Nov 2020 (Study Day 85) included blood gas pH 7.234 (at 20:10) and 7.346 (at 22:30) (reference range 7.35 to 7.45); pO_2 147.4 mm Hg and 261.5 mm Hg (reference range 80 to 100 mm Hg); bicarbonate 18.5 mmol/L and 21.7 mmol/L (reference range 22 to 26 mmol/L); arterial blood gas (ABG) base excess -8.4 L and -3.6 L (reference range -2 to 2 L); Allen test positive; sodium 151 mmol/L (reference range 135 to 143 mmol/L); chloride 123 mmol/L (reference range 95 to 110 mmol/L); urea 64 mg/dL (reference range 5 to 20 mg/dL); estimated creatinine clearance 28.73 mL/min (reference range >30 mL/min); estimated glomerular filtration rate (eGFR) (non-African American) 28 (reference

range >60; units not reported); bilirubin 2.1 mg/dL (reference range 0.0 to 1.3 mg/dL); total protein 5.8 g/dL (reference range 6.4 to 8.2 g/dL); albumin 1.8 g/dL (reference range 3.4 to 5.0 g/dL); and creatinine 2.3 mg/dL and 2.4 mg/dL (reference range 0.6 to 1.3 mg/dL). Efforts to recover from decreasing platelets and down-trending Hgb failed, as the participant had Hgb 6.0 g/dL, Hct 19.9% (reference ranges not reported), and RBC 1.98 (no units or reference range reported). After intubation and treatment in the intensive care unit, the participant's SpO_2 and heart rate improved to 96% and 126 bpm, respectively. Treatment included ventilation with sedation (propofol/fentanyl), paracetamol, albumin human IV, alteplase, amiodarone, calcium carbonate, diatrizoate, enoxaparin, fentanyl IV, hydrocodone/paracetamol, ipratropium, calcium chloride dihydrate/potassium chloride, levalbuterol, melatonin, metoprolol, morphine, mupirocin, naloxone, nitroglycerine, norepinephrine, ondansetron, pantoprazole, piperacillin/tazobactam, potassium chloride, and total parenteral nutrition.

On 21 Nov 2020 (Study Day 86), laboratory test results included blood gas pH 7.291, pO_2 143.4 mm Hg, bicarbonate standard 20.7 mmol/L, ABG base excess –5.4 L, Allen test positive, creatinine 2.1 mg/dL, sodium 144, (no unit reported) potassium 5.4 mmol/L (reference range 3.5 to 5.1 mmol/L), chloride 118 mmol/L, urea 61 mg/dL, eGFR (non-African American) 33 (no units provided), calcium 8.4 mg/dL (reference range 8.8 to 10.5 mg/dL), bilirubin 2.3 mg/dL, total protein 4.9 g/dL, albumin 1.6 g/dL, Hgb 5.7 g/dL, and Hct 18.7%. Treatment included 1 unit of packed RBCs and albumin.

On 22 Nov 2020 (Study Day 87), the participant's family decided to discontinue any life-saving measures. The participant was taken off the ventilator and died the same day.

Action taken with the study IP in response to the events was reported as not applicable as both doses had already been administered.

The event, nephrolithiasis, was considered resolved on 04 Nov 2020 (Study Day 69). The event, duodenal ulcer perforation, was considered resolved with sequelae of anemia on 08 Nov 2020 (Study Day 73). The events of thrombocytopenia, flank pain (left), anemia, intra-abdominal fluid collection, acute kidney failure, and generalized oedema were ongoing at the time of death. The events of gastrointestinal hemorrhage, acute respiratory failure, and multiple organ dysfunction syndrome were considered fatal on 22 Nov 2020 (Study Day 87).

The participant died on 22 Nov 2020 (Study Day 87). The cause of death was reported as gastrointestinal hemorrhage, acute respiratory failure, and multiple organ dysfunction syndrome. No autopsy was performed.

The investigator assessed the events of thrombocytopenia, anemia, acute respiratory failure, multiple organ dysfunction syndrome, acute kidney failure, nephrolithiasis, duodenal ulcer perforation, flank pain (left), intra-abdominal fluid collection, gastrointestinal hemorrhage, and generalized oedema as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000787	Nephrolithiasis
MOD-2020-000787	Acute Kidney Injury
MOD-2020-000787	Flank Pain
MOD-2020-000787	Thrombocytopenia
MOD-2020-000787	Duodenal Ulcer Perforation
MOD-2020-000787	Gastrointestinal Haemorrhage
MOD-2020-000787	Generalised Oedema
MOD-2020-000787	Intra-Abdominal Fluid Collection
MOD-2020-000787	Anaemia
MOD-2020-000787	Acute Respiratory Failure
MOD-2020-000787	Multiple Organ Dysfunction Syndrome

Study Completion/Discontinuation

On 22 Nov 2020 (Study Day 87), the participant discontinued from the study due to death. On 22 Nov 2020 (Study Day 87), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies (nasal drainage, cough)	1971 - Ongoing
Colectomy	Partial colectomy	1985 - 1985
Crohn's disease	Chron's disease	1985 - Ongoing
Short-bowel syndrome	Short bowel syndrome	1998 - Ongoing
Anxiety	Anxiety	2012 - Ongoing
Arthritis	Arthritis	2012 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diclofenac	2012 - Ongoing	Arthritis Pain
Hydroxyzine	2012 - Ongoing	Anxiety
Tamsulosin	2016 - Ongoing	Benign Prostatic Hyperplasia
Dextromethorphan; guaifenesin	2017 - Ongoing	Seasonal Allergies
Ascorbic acid; betacarotene; cupric oxide; tocopheryl acetate; zinc oxide	Aug 2019 - Ongoing	Vision Loss
Levocetirizine dihydrochloride	01 Jul 2020 (Study Day -58) - Ongoing	Seasonal Allergies
Sodium chloride	02 Sep 2020 (Study Day 6) - Ongoing	Seasonal Allergies
Influenza vaccine	23 Oct 2020 (Study Day 57) - 23 Oct 2020 (Study Day 57)	Flu Prevention
Ct of abdomen/pelvis*	03 Nov 2020 (Study Day 68) - 03 Nov 2020 (Study Day 68)	Diagnostic
Hydromorphone hydrochloride	03 Nov 2020 (Study Day 68) - 10 Nov 2020 (Study Day 75)	Obstructing Nephrolithiasis
Piperacillin sodium; tazobactam sodium	03 Nov 2020 (Study Day 68) - 17 Nov 2020 (Study Day 82)	Klebsiella Complicated Pyelonephritis
Ureteral stent*	03 Nov 2020 (Study Day 68) - 03 Nov 2020 (Study Day 68)	Adverse Event
X-ray cystogram*	03 Nov 2020 (Study Day 68) - 03 Nov 2020 (Study Day 68)	Diagnostic
Bifidobacterium bifidum; lactobacillus acidophilus; lactobacillus bulgaricus; streptococcus thermophilus	04 Nov 2020 (Study Day 69) - 08 Nov 2020 (Study Day 73)	To Maintain Gut Health
Ceftriaxone	04 Nov 2020 (Study Day 69) - 06 Nov 2020 (Study Day 71)	Klebsiella Complicated Pyelonephritis
Cystourethroscopy with left retrograde ureteropyelogram*	04 Nov 2020 (Study Day 69) - 04 Nov 2020 (Study Day 69)	Adverse Event
Docusate sodium; senna alexandrina	04 Nov 2020 (Study Day 69) - 05 Nov 2020 (Study Day 70)	Obstructing Nephrolithiasis
Heparin	04 Nov 2020 (Study Day 69) - 04 Nov 2020 (Study Day 69)	To Prevent Clotting
Melatonin	04 Nov 2020 (Study Day 69) - 04 Nov 2020 (Study Day 69)	Insomnia Following Laparotomy For Obstructing Nephrolithiasis
Midazolam hydrochloride	04 Nov 2020 (Study Day 69) - 20 Nov 2020 (Study Day 85)	Anxiety
Morphine sulfate	04 Nov 2020 (Study Day 69) - 05 Nov 2020 (Study Day 70)	Obstructing Nephrolithiasis
Oxycodone	04 Nov 2020 (Study Day 69) - 04 Nov 2020 (Study Day 69)	Obstructing Nephrolithiasis
Tamsulosin hydrochloride	04 Nov 2020 (Study Day 69) - 04 Nov 2020 (Study Day 69)	Benign Prostatic Hypertrophy
Hydrocodone bitartrate; paracetamol	05 Nov 2020 (Study Day 70) - 05 Nov 2020 (Study Day 70)	Pain Associated With Perforated Duodenal Ulcer

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ipratropium bromide	05 Nov 2020 (Study Day 70) - 05 Nov 2020 (Study Day 70)	Atelectasis, Bilateral Lower Lobes
Levosalbutamol hydrochloride	05 Nov 2020 (Study Day 70) - 05 Nov 2020 (Study Day 70)	Atelectasis, Bilateral Lower Lobes
Meropenem	05 Nov 2020 (Study Day 70) - 05 Nov 2020 (Study Day 70)	Klebsiella Complicated Pyelonephritis
Macrogol 3350	06 Nov 2020 (Study Day 71) - 06 Nov 2020 (Study Day 71)	Crohn's Disease
Renal ultrasound*	06 Nov 2020 (Study Day 71) - 06 Nov 2020 (Study Day 71)	Diagnostic
Sodium bicarbonate	06 Nov 2020 (Study Day 71) - 10 Nov 2020 (Study Day 75)	Currently Unknown
Magnesium citrate	07 Nov 2020 (Study Day 72) - 07 Nov 2020 (Study Day 72)	Currently Unknown
Omeprazole	07 Nov 2020 (Study Day 72) - 09 Nov 2020 (Study Day 74)	Gi Protection
Ct of abdomen/pelvis without contrast*	08 Nov 2020 (Study Day 73) - 08 Nov 2020 (Study Day 73)	Diagnostic
Drain placement posterior superior to the perforated duodenal ulcer*	08 Nov 2020 (Study Day 73) - 08 Nov 2020 (Study Day 73)	Adverse Event
Exploratory laparotomy with closure of duodenal ulcer*	08 Nov 2020 (Study Day 73) - 08 Nov 2020 (Study Day 73)	Adverse Event
Graham patch*	08 Nov 2020 (Study Day 73) - 08 Nov 2020 (Study Day 73)	Adverse Event
Lysis of adhesions from abdominal wall*	08 Nov 2020 (Study Day 73) - 08 Nov 2020 (Study Day 73)	Adverse Event
Platelet transfusion*	08 Nov 2020 (Study Day 73) - 08 Nov 2020 (Study Day 73)	Adverse Event
Albumin human	09 Nov 2020 (Study Day 74) - 20 Nov 2020 (Study Day 85)	Protein Replacement Due To Cirrhosis
Enoxaparin sodium	09 Nov 2020 (Study Day 74) - 10 Nov 2020 (Study Day 75)	Clot Prevention
Fluconazole	10 Nov 2020 (Study Day 75) - 10 Nov 2020 (Study Day 75)	Post Op Infection Prophylaxis
X-ray upper gi*	11 Nov 2020 (Study Day 76) - 11 Nov 2020 (Study Day 76)	Diagnostic
Ferric sodium gluconate complex	12 Nov 2020 (Study Day 77) - 12 Nov 2020 (Study Day 77)	Anemia
Metoprolol tartrate	12 Nov 2020 (Study Day 77) - 16 Nov 2020 (Study Day 81)	Hypertension
Solutions for parenteral nutrition	12 Nov 2020 (Study Day 77) - 20 Nov 2020 (Study Day 85)	Prophylaxis For Malnutrition
Ct of abdomen/pelvis without contrast*	13 Nov 2020 (Study Day 78) - 13 Nov 2020 (Study Day 78)	Diagnostic
Packed red blood cells*	15 Nov 2020 (Study Day 80) - 15 Nov 2020 (Study Day 80)	Adverse Event
Potassium chloride	15 Nov 2020 (Study Day 80) - 20 Nov 2020 (Study Day 85)	Hypernatremia /Low Potassium, Ongoing Acute Renal Failure
X-ray abdomen /kidneys, ureter, bladder*	15 Nov 2020 (Study Day 80) - 15 Nov 2020 (Study Day 80)	Diagnostic

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Potassium phosphate dibasic	16 Nov 2020 (Study Day 81) - 16 Nov 2020 (Study Day 81)	Corrective Supplement
Platelet transfusion*	17 Nov 2020 (Study Day 82) - 17 Nov 2020 (Study Day 82)	Adverse Event
Furosemide	18 Nov 2020 (Study Day 83) - 18 Nov 2020 (Study Day 83)	Fluid Overload Due To Acute Renal Failure
X-ray chest*	18 Nov 2020 (Study Day 83) - 18 Nov 2020 (Study Day 83)	Adverse Event
Ct abdomen/pelvis without contrast*	19 Nov 2020 (Study Day 84) - 19 Nov 2020 (Study Day 84)	Diagnostic
Ct guided drain placement*	20 Nov 2020 (Study Day 85) - 20 Nov 2020 (Study Day 85)	Adverse Event
Fentanyl	20 Nov 2020 (Study Day 85) - 20 Nov 2020 (Study Day 85)	Multi-System Organ Failure
Mupirocin	20 Nov 2020 (Study Day 85) - 20 Nov 2020 (Study Day 85)	Restore Moisture
Propofol	20 Nov 2020 (Study Day 85) - 21 Nov 2020 (Study Day 86)	Sedation For Mechanical Ventilation
X-ray chest*	20 Nov 2020 (Study Day 85) - 20 Nov 2020 (Study Day 85)	Diagnostic
Intubation*	21 Nov 2020 (Study Day 86) - 21 Nov 2020 (Study Day 86)	Adverse Event
Norepinephrine bitartrate	21 Nov 2020 (Study Day 86) - 21 Nov 2020 (Study Day 86)	Currently Unknown
Packed red blood cells*	21 Nov 2020 (Study Day 86) - 21 Nov 2020 (Study Day 86)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Cough	Grade 1/mild	Not related	17 Oct 2020 (Study Day 51) - 19 Oct 2020 (Study Day 53)
Vomiting	Grade 2/moderate	Not related	17 Oct 2020 (Study Day 51) - 19 Oct 2020 (Study Day 53)
Rhonchi	Grade 1/mild	Not related	22 Oct 2020 (Study Day 56) - 27 Oct 2020 (Study Day 61)
Bacterial Pyelonephritis	Grade 3/severe	Not related	03 Nov 2020 (Study Day 68) - 17 Nov 2020 (Study Day 82)
Atelectasis	Grade 2/moderate	Not related	05 Nov 2020 (Study Day 70) - Ongoing
Lung Infiltration	Grade 2/moderate	Not related	08 Nov 2020 (Study Day 73) - Ongoing
Pleural Effusion	Grade 3/severe	Not related	18 Nov 2020 (Study Day 83) - Ongoing
Malnutrition	Grade 3/severe	Not related	20 Nov 2020 (Study Day 85) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2197 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	26 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	27 Oct 2020 (Study Day 32)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Death/Death Of Unknown Origin*	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	13 Mar 2021 (Study Day 169) – 13 Mar 2021 (Study Day 169)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

* According to the safety database, the preferred term was "Toxicity to various agents" and the verbatim term was "Death due to combination of fentanyl and ethanol intoxication".

Participant US393-2197, a 37-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 26 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 27 Oct 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 13 Mar 2021 (Study Day 169), 168 days after the first dose and 137 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of death. Action taken with the IP was not applicable. The event of death was considered to be fatal on 13 Mar 2021 (Study Day 169). The investigator assessed the event of death to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 13 Mar 2021 (Study Day 169), the participant experienced a fatal serious adverse event due to a combination of fentanyl and ethanol intoxication. On 03 Apr 2021 (Study Day 190), the participant's parent called the site and told them their child had died. The participant's parent was contacted and could not provide any information but gave another child's contact information for follow-up. The participant's sibling was contacted and reported that the participant was found dead alone in their home on 13 Mar 2021 (Study Day 169). The sibling also stated that the participant had depression and noted that the paramedics found a bottle of fentanyl in the participant's home.

Action taken with the study IP was not applicable in response to the event, as the participant had already received both scheduled doses.

The participant died on 13 Mar 2021 (Study Day 169). The primary cause of death was reported as combined fentanyl and ethanol intoxication.

The investigator assessed the event, death due to combination of fentanyl and ethanol intoxication, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-070499	Death

Study Completion/Discontinuation

On 13 Mar 2021 (Study Day 169), the participant discontinued from the study due to death. On 13 Mar 2021 (Study Day 169), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anaemia	Anemia	2000 - 2000

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	26 Sep 2020 (Study Day 1) - 26 Sep 2020 (Study Day 1)	Pain At Injection Site
Paracetamol	28 Oct 2020 (Study Day 33) - 29 Oct 2020 (Study Day 34)	Body Aches And Headaches

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US396-2094 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	09 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Head Injury/Head Trauma	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	15 Oct 2020 (Study Day 37) – 15 Oct 2020 (Study Day 37)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US396-2094, a 56-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 09 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Oct 2020 (Study Day 37), 36 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 5 serious adverse event of head injury. On 06 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of head trauma was considered to be fatal on 15 Oct 2020 (Study Day 37). The investigator assessed the event of head injury to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 12 Oct 2020 (Study Day 34), the site contacted the participant's sibling (emergency contact) after several unsuccessful attempts were made via telephone, email, and certified letter to reach the participant.

On 14 Oct 2020 (Study Day 36), the participant's sibling contacted the police for a wellness check for the participant.

On 15 Oct 2020 (Study Day 37), the participant experienced a fatal serious adverse event of head injury. The site received a voice mail message that stated the participant had died and no autopsy was done. The police found the participant deceased on the bathroom floor and reported the participant had head trauma from a fall.

There was no action taken with the study IP in response to the event.

The participant died on 15 Oct 2020 (Study Day 37). The cause of death was reported as head injury.

The investigator assessed the event, head injury, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000491	Head trauma

Study Completion/Discontinuation

On 15 Oct 2020 (Study Day 37), the participant discontinued from the study due to death. On 15 Oct 2020 (Study Day 37), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Allergy to chemicals	Pine tar allergy	1970 - Ongoing
Food allergy	Capsicum allergy	1970 - Ongoing
Seasonal allergy	Seasonal allergies	1982 - Ongoing
Glaucoma	Glaucoma both eyes	1995 - Ongoing
Fluid retention	Water retention	1998 - Ongoing
Muscle spasms	Muscle spasms	2000 - Ongoing
Carpal tunnel syndrome	Bilateral carpal tunnel syndrome	2012 - Ongoing
Arthralgia	Chronic pain knee	2013 - Ongoing
Back pain	Chronic pain back	2013 - Ongoing
Hysterectomy	Hysterectomy	2013 - 2013
Musculoskeletal pain	Chronic pain shoulder	2013 - Ongoing
Ovarian cancer	Ovarian cancer	2013 - 2013
Uterine cancer	Uterine cancer	2013 - 2013
Hypertension	Hypertension	2015 - Ongoing
Intervertebral disc protrusion	Herniated disc	2015 - 2015
Muscle spasms	Leg spasms	2015 - Ongoing
Osteoarthritis	Osteoarthritis knees	2015 - Ongoing
Osteoarthritis	Osteoarthritis shoulder	2015 - Ongoing
Spinal osteoarthritis	Osteoarthritis back	2015 - Ongoing
Blood cholesterol increased	High cholesterol	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Pseudoephedrine hydrochloride	1982 - Ongoing	Seasonal Allergies
Vitamins nos	1990 - Ongoing	Dietary Supplement
Latanoprost	1995 - Ongoing	Glaucoma
Hypericum perforatum	1997 - Ongoing	Dietary Supplement
Hydrochlorothiazide	1998 - Ongoing	Water Retention
Diclofenac	2000 - Ongoing	Muscle Spasms
Colecalciferol	2010 - Ongoing	Dietary Supplement
Iron	2010 - Ongoing	Dietary Supplement
Hydrocodone bitartrate; paracetamol	2013 - Ongoing	Chronic Pain - Back, Knees And Shoulders
Gabapentin	2014 - Ongoing	Chronic Pain Back, Knees And Shoulders
Lisinopril	2015 - Ongoing	Hypertension
Potassium chloride	2015 - Ongoing	Leg Spasms
Methocarbamol	2018 - Ongoing	Chronic Pain
Pravastatin	2019 - Ongoing	High Cholesterol
Fish oil	12 Sep 2020 (Study Day 4) - Ongoing	High Triglycerides

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Gastrooesophageal Reflux Disease	Grade 1/mild	Not related	07 Oct 2020 (Study Day 29) - Ongoing
Fall	Grade 1/mild	Not related	15 Oct 2020 (Study Day 37) - 15 Oct 2020 (Study Day 37)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US397-2010 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	24 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	21 Sep 2020 (Study Day 29)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Death/Undetermined Cause Pending Autopsy	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	08 Jan 2021 (Study Day 138) – 08 Jan 2021 (Study Day 138)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US397-2010, a 59-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 24 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 21 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Jan 2021 (Study Day 138), 137 days after the first dose and 109 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of death. Action taken with the IP was not applicable. The event of undetermined cause pending autopsy was considered to be fatal on 08 Jan 2021 (Study Day 138). The investigator assessed the event of death to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 08 Jan 2021 (Study Day 138), the participant experienced a fatal serious adverse event of death.

The participant was due for a safety call but did not respond to voicemail or email. The participant's emergency contact was called on 22 Jan 2021 (Study Day 152) and informed the site that the participant had been found dead on 08 Jan 2021 (Study Day 138). The participant's emergency contact refused to give additional details but was willing to send a copy of the autopsy result when they received it.

Action taken with study IP in response to the event was not applicable, as the participant had already received both scheduled doses.

The investigator assessed the event, death, as not related to study IP and not related to study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-006644	Death

Study Completion/Discontinuation

On 08 Jan 2021 (Study Day 138), the participant discontinued from the study due to death. On 08 Jan 2021 (Study Day 138), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

No prior or concomitant medications or procedures were reported.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US303-2204 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	14 Sep 2020 (Study Day 32)
Reason for Narrative:	Death, SAE, Severe COVID-19, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/Symptomatic COVID-19	Death, SAE, COVID-19, , AE leading to study discontinuation	Grade 5	Not related	09 Nov 2020 (Study Day 88) – 16 Nov 2020 (Study Day 95)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US303-2204, a 54-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 14 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 14 Sep 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 09 Nov 2020 (Study Day 88), 87 days after the first dose and 56 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of symptomatic COVID-19.

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 32, 14 Sep 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 11 Nov 2020 (Study Day 90), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
09 Nov 2020 (Study Day 88)	Chills	Mild
09 Nov 2020 (Study Day 88)	Fatigue	Severe
09 Nov 2020 (Study Day 88)	Headache	Mild

Symptom Date	Symptom	Result
09 Nov 2020 (Study Day 88)	Nausea	Mild
09 Nov 2020 (Study Day 88)	Vomiting	Mild
10 Nov 2020 (Study Day 89)	Chills	Mild
10 Nov 2020 (Study Day 89)	Fatigue	Severe
10 Nov 2020 (Study Day 89)	Headache	Mild
10 Nov 2020 (Study Day 89)	Nausea	Mild
10 Nov 2020 (Study Day 89)	Vomiting	Mild
11 Nov 2020 (Study Day 90)	Chills	Mild
11 Nov 2020 (Study Day 90)	Fatigue	Severe
11 Nov 2020 (Study Day 90)	Headache	Mild
11 Nov 2020 (Study Day 90)	Nausea	Mild
11 Nov 2020 (Study Day 90)	Vomiting	Mild
12 Nov 2020 (Study Day 91)	Fatigue	Severe
12 Nov 2020 (Study Day 91)	Headache	Mild
12 Nov 2020 (Study Day 91)	Nausea	Mild
13 Nov 2020 (Study Day 92)	Chills	Mild
13 Nov 2020 (Study Day 92)	Cough	Mild
13 Nov 2020 (Study Day 92)	Fatigue	Severe
13 Nov 2020 (Study Day 92)	Headache	Mild
14 Nov 2020 (Study Day 93)	Body Aches	Mild
14 Nov 2020 (Study Day 93)	Cough	Severe
14 Nov 2020 (Study Day 93)	Diarrhea	Moderate
14 Nov 2020 (Study Day 93)	Difficulty Breathing	Severe
14 Nov 2020 (Study Day 93)	Fatigue	Severe
14 Nov 2020 (Study Day 93)	Muscle Aches (Myalgia)	Mild
14 Nov 2020 (Study Day 93)	Nausea	Severe
14 Nov 2020 (Study Day 93)	O2 Saturation (%)	87
14 Nov 2020 (Study Day 93)	Shortness of Breath	Severe
14 Nov 2020 (Study Day 93)	Vomiting	Moderate
15 Nov 2020 (Study Day 94)	Body Aches	Mild
15 Nov 2020 (Study Day 94)	Cough	Moderate
15 Nov 2020 (Study Day 94)	Difficulty Breathing	Moderate
15 Nov 2020 (Study Day 94)	Fatigue	Severe
15 Nov 2020 (Study Day 94)	Muscle Aches (Myalgia)	Mild
15 Nov 2020 (Study Day 94)	Nausea	Severe
15 Nov 2020 (Study Day 94)	O2 Saturation (%)	91
15 Nov 2020 (Study Day 94)	Shortness of Breath	Moderate
16 Nov 2020 (Study Day 95)	Body Aches	Mild
16 Nov 2020 (Study Day 95)	Chills	Mild
16 Nov 2020 (Study Day 95)	Cough	Moderate
16 Nov 2020 (Study Day 95)	Fatigue	Severe
16 Nov 2020 (Study Day 95)	Muscle Aches (Myalgia)	Moderate
16 Nov 2020 (Study Day 95)	Nausea	Mild

Symptom Date	Symptom	Result
16 Nov 2020 (Study Day 95)	O2 Saturation (%)	93
16 Nov 2020 (Study Day 95)	Shortness of Breath	Moderate

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
14 Nov 2020 (Study Day 93)	Oxygen Saturation	87%
14 Nov 2020 - 16 Nov 2020 (Study Day 93-95)	Oxygen Saturation of SpO2 <= 93% on room air at sea level	Yes

Action taken with the IP was not applicable. The event of symptomatic COVID-19 lasted for 8 days, after which it was considered to be fatal on 16 Nov 2020 (Study Day 95). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 09 Nov 2020 (Study Day 88), the participant experienced a fatal serious adverse event of COVID-19. The participant was symptomatic and had a positive SARS-CoV-2 RT-PCR nasopharyngeal swab collected on 11 Nov 2020 (Study Day 90). Treatment included acetylsalicylic acid PO.

From 09 Nov 2020 (Study Day 88) through 16 Nov 2020 (Study Day 95), the participant intermittently experienced mild to severe chills, cough, shortness of breath, difficulty breathing, fatigue, muscle aches, body aches, headache, nausea, vomiting, and diarrhea. The participant denied loss of taste, loss of smell, nasal congestion, runny nose, or sore throat.

On 10 Nov 2020 (Study Day 89), treatment included azithromycin, methylprednisolone, and ondansetron all PO.

On 14 Nov 2020 (Study Day 93), treatment included salbutamol inhalation.

From 14 Nov 2020 (Study Day 93) through 16 Nov 2020 (Study Day 95), the participant's oxygen saturation ranged from 87 to 93%.

Action taken with the study IP was not applicable as the participant had already received both scheduled doses.

On 16 Nov 2020 (Study Day 95), the participant was brought to the hospital emergency department and was dead on arrival. The cause of death was reported as symptomatic COVID-19.

The investigator assessed the event, COVID-19, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000822	COVID-19

Study Completion/Discontinuation

On 16 Nov 2020 (Study Day 95), the participant discontinued from the study due to death. On 16 Nov 2020 (Study Day 95), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 1 diabetes mellitus	Type 1 diabetic	1986 - 17 Nov 2020 (Study Day 96)
Hypothyroidism	Hypothyroidism	2017 - 17 Nov 2020 (Study Day 96)
Headache	Headaches	Jan 2019 - May 2019
Hypercholesterolaemia	Hypercholesterolemia	Jan 2019 - 17 Nov 2020 (Study Day 96)
Contusion	Head contusion due to fall on ice	Mar 2019 - Mar 2019
Intervertebral disc operation	C 8-9 taken out, replaced with a plate	May 2019 - May 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Atorvastatin	Jan 2019 - Ongoing	Medical History: Hypercholesterolemia
Metoprolol succinate	Jan 2019 - May 2019	Medical History: Headaches
Thyroid	Jan 2019 - Ongoing	Medical History: Hypothyroidism
Insulin degludec	Mar 2019 - Ongoing	Medical History: Type 1 Diabetes
Insulin aspart	Jun 2019 - Ongoing	Medical History: Diabetes Type 1
Thyroid	Nov 2019 - Ongoing	Medical History: Hypothyroidism
Influenza vaccine	30 Sep 2020 (Study Day 48) - 30 Sep 2020 (Study Day 48)	Prophylaxis For Seasonal Influenza
Acetylsalicylic acid	09 Nov 2020 (Study Day 88) - Ongoing	COVID-Like Illness
Azithromycin	10 Nov 2020 (Study Day 89) - 10 Nov 2020 (Study Day 89)	COVID-Like Illness
Methylprednisolone	10 Nov 2020 (Study Day 89) - 10 Nov 2020 (Study Day 89)	COVID-Like Illness
Ondansetron	10 Nov 2020 (Study Day 89) - Ongoing	COVID-Like Illness

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Azithromycin	11 Nov 2020 (Study Day 90) - 14 Nov 2020 (Study Day 93)	COVID Like Illness
Methylprednisolone	11 Nov 2020 (Study Day 90) - 11 Nov 2020 (Study Day 90)	COVID-Like Illness
Methylprednisolone	12 Nov 2020 (Study Day 91) - 12 Nov 2020 (Study Day 91)	COVID-Like Illness
Methylprednisolone	13 Nov 2020 (Study Day 92) - 13 Nov 2020 (Study Day 92)	COVID-Like Illness
Methylprednisolone	14 Nov 2020 (Study Day 93) - 14 Nov 2020 (Study Day 93)	COVID-Like Illness
Salbutamol	14 Nov 2020 (Study Day 93) - 16 Nov 2020 (Study Day 95)	COVID-Like Illness
Methylprednisolone	15 Nov 2020 (Study Day 94) - 15 Nov 2020 (Study Day 94)	COVID-Like Illness

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US308-2269 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	21 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Gastric Perforation/Intra-Abdominal Perforation	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	02 Oct 2020 (Study Day 12) – 03 Oct 2020 (Study Day 13)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US308-2269, a 75-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 21 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Oct 2020 (Study Day 12), 11 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 5 serious adverse event of gastric perforation. On 03 Oct 2020 (Study Day 13), the IP dose was discontinued due to death. The event of intra-abdominal perforation lasted for 2 days, after which it was considered to be fatal on 03 Oct 2020 (Study Day 13). The investigator assessed the event of gastric perforation to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 01 Oct 2020 (Study Day 11), the participant began having abdominal pain in the evening. On 02 Oct 2020 (Study Day 12), the participant complained of abdominal pain and dyspnea that morning. The participant went to their primary care physician's (PCP) office with palpitations and shortness of breath. While at the PCP, the participant was found to have uncontrolled atrial fibrillation (AF), hypoxia with oxygen of 45% (no reference range reported), and hypotension. The participant denied chest pains that morning but did have chest pains later in the day. A review of systems showed no chills, fatigue, or fever, and they did not have congestion, ear pain, rhinorrhea, sore throat, or eye pain. The participant did have shortness of breath without a cough, chest pains, and palpitations. There were no seizures, weakness, or headaches. At 11:23, acetylsalicylic acid 81 mg PO was administered.

On 02 Oct 2020 (Day 12), the participant experienced a serious adverse event of gastric perforation. On the same day, emergency medical services (EMS) was called, and the participant was transported to a hospital. Emergency medical services were unable to get a blood pressure (BP) reading while in transit and the participant's heart rate (HR) ranged from 50 to 156 beats per minute en route. On presentation to the emergency department (ED), the participant was tachycardic with a HR in the 140s, hypotensive, dyspneic, and mentating; they also experienced bradycardia, AF with a rapid ventricular rate, and ventricular arrhythmia. The participant reported no history of AF and stated they were significantly short of breath and was in a tripod position. The participant denied nausea and vomiting, was on 15 L of oxygen via a no-rebreather and was saturating well. While in the ED, the participant was electively intubated. A nasogastric tube was placed to decompress the participant's stomach. The participant's AF improved following rapid pressure infusion of normal saline, diltiazem IV and comfort improved with use of the nonrebreather. Pulmonary embolism was presumed due to the new onset of AF, shortness of breath, and hypoxia.

Physical examination showed that the participant appeared well-developed and well-nourished, and in no distress. Their head was normocephalic and atraumatic, eyes had normal conjunctivae, no sclera icterus, and the neck was supple with no thyromegaly present. The participant's heart rhythm was tachycardic and irregular, and the participant was in respiratory distress. An electrocardiogram (ECG) showed normal sinus rhythm with no signs of acute ischemia. A second ECG showed sinus tachycardia, rightward axis, and an inferior infarct could not be ruled out (cited on or before 02 Oct 2020 [Study Day 12]). This was an abnormal ECG (when compared with ECG of 02 Oct 2020 [Study Day 12] at 11:50) in which premature ventricular complexes were no longer present. The participant's ECG showed that they were not in sinus rhythm "was no longer with junctional escape complexes", and the QT interval was shortened. A chest x-ray showed severe pneumoperitoneum, low lung volumes, and probable atelectasis and/or scarring along the diaphragmatic domes. A nasogastric tube appeared to terminate near the gastroesophageal junction in the proper place. A computerized tomography angiogram (CTA) scan of the chest showed no evidence of pulmonary emboli, and a tremendous amount of pneumoperitoneum was noted. The CTA was reviewed with concerns for significant amounts of free air, decreasing lung volumes and intrathoracic pathology. The participant was later reported to be in pulseless electrical activity – ventricular arrythmia. Advanced Cardiovascular Life Support was initiated with medication, defibrillation, and intubation. The participant received 6 rounds of epinephrine, cardioversion, calcium chloride, and sodium bicarbonate and was also treated with 100 units of vasopressin in sodium chloride 0.9% infusion. Return of spontaneous circulation was achieved. The participant responded well to diltiazem (both IV and PO) and rhythm was obtained after defibrillation. The fraction of inspired oxygen was at 100%. Vital signs on 02 Oct 2020 (Study Day 12) are presented in the table below.

Time on 02 Oct 2020 (Study Day 12)	Blood Pressure (mm Hg)	Pulse (beats per minute)	O_2 saturation (%)	Respiratory Rate (breaths per minute)
Unreported time (supine)	109/69	-	88	-
11:32	84/69	142	92	23
15:08	93/64	98	89	23
16:15	79/54	135	88	24

Abbreviations: BP = blood pressure; RR = respiratory rate.

The participant's oral temperature was 97.5°F (36.4°C) at an unreported time and 97.7°F (36.5°C) at 12:49.

Laboratory test results included arterial blood gases that showed significant metabolic acidosis with "pH of 6.8, arterial pH 6.88 and 7.24" (reference range 7.35 to 7.45), arterial partial carbon dioxide 74 mm Hg and 52 mm Hg (reference range 35 to 48 mm Hg), arterial partial oxygen 72 mm Hg (reference range 83 to 108 mm Hg), bicarbonate 8.8 mmol/L (reference range 18 to 23 mmol/L), arterial oxygen saturation 81% and 23% (reference range 95 to 98%), arterial base excess < –5.0 mmol/L (reference range –2 to 2 mmol/L), blood lactic acid 11.6 mmol/L (reference range 0.5 to 2.2 mmol/L). A complete blood count showed signs of leukocytosis, with neutrophils 76.5% (reference range 42 to 75%), mean corpuscular hemoglobin 23.4 pg (reference range 26 to 34 pg), mean corpuscular hemoglobin concentration 29.3 g/dL (reference range 31 to 35.5 g/dL), and mean platelet volume 8.9% (reference range 9 to 12.5%). A coagulation profile included prothrombin time 11.6 seconds and 12.9 seconds (reference range 9.3 to 11.5 seconds), international normalized ratio 1.2 (reference range 0.9 to 1.1), and activated partial thromboplastin time 24.1 (no units or reference range). Blood chemistry laboratory test results included carbon dioxide 18 mmol/L (reference range 24 to 31 mmol/L), glucose 310 mg/dL and 172 mg/dL (reference range 75 to 110 mg/dL), creatinine 1.6 mg/dL and 2.9 mg/dL (reference range 0.5 to 1.4 mg/dL), blood urea nitrogen 23 mg/dL and 29 mg/dL (reference range 8 to 21 mg/dL), anion gap 17 mmol/L and 19 mmol/L (reference range 5 to 16 mmol/L), osmolality 297.0 mOsm/kg and 304.0 mOsm/kg (reference range 267 to 293 mOsm/kg), lipase 181 (no units or reference range), troponin 50.9 ng/L and 134.8 ng/L (reference range ≤ 47 ng/L), total protein 5.7 g/dL (reference range 6 to 8 g/dL), globulin 1.9 g/dL (reference range 2.2 to 4.0 g/dL), aspartate aminotransferase 91 IU/L (reference range 10 to 40 IU/L), alanine aminotransferase 68 IU/L (reference range 3 to 38 IU/L) and hemoglobin A1c 6.3 (no units or reference range). A urinalysis showed trace protein and glucose (both reference ranges were negative). Microscopic urinalysis only showed few bacteria (reference range none), and red blood cells were 5 to 10 (reference range 0 to 2). A COVID-19 SARS Coronavirus test by nasopharyngeal swab was negative.

General surgery was consulted, and it was advised that the participant be transferred to a tertiary care center due to the type of perforation with intrathoracic abdominal contents, however the participant was not stable enough for transfer. A plan of care was discussed. The participant's spouse desired that the participant be made comfortable instead of going through surgery and it was decided to maintain intubation and the participant was made 'do-not-resuscitate' in the event of ventricular arrhythmia. The participant was admitted to the intensive care unit to wait for family to arrive and withdraw care. On 03 Oct 2020 (Study Day 13), treatment included fentanyl IV for abdominal pain. The participant expired on 03 Oct 2020 (Study Day 13) at 03:20.

Problem list included an intra-abdominal perforation, pneumoperitoneum, cardiac arrest, cardiogenic shock, AF with rapid ventricular response, severe metabolic acidosis, and respiratory acidosis.

The cause of death was reported as pneumoperitoneum, presumed intra-abdominal perforation that led to cardiac arrest. An autopsy was performed and confirmed that the result of intra-abdominal perforation (stomach and colon) was cardiac arrest.

The investigator assessed the event, gastric perforation, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000415	Gastric perforation

Study Completion/Discontinuation

On 03 Oct 2020 (Study Day 13), the participant discontinued from the study due to death. On 03 Oct 2020 (Study Day 13), the participant died due to adverse event. An autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Gout	Gout (both feet)	2018 - Ongoing
Erectile dysfunction	Erectile dysfunction	2019 - Ongoing
Urinary retention	Urinary retention	2019 - Ongoing
Hiatus hernia	Hiatal hernia	21 Feb 2020 (Study Day -213) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Colchicine	2018 - Ongoing	Gout (Both Feet)
Tadalafil	2019 - Ongoing	Erectile Dysfunction
Tamsulosin	2019 - Ongoing	Urinary Retention
Acetylsalicylic acid	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Abdominal Pain
Albumin human	02 Oct 2020 (Study Day 12) - 03 Oct 2020 (Study Day 13)	Shock R/T SAE #1
Atropine	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Atrial Fibrillation
Central line placement*	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Adverse Event
Chest x-ray*	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Adverse Event
Ct angiogram of the chest*	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Adverse Event
Diltiazem	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Atrial Fibrillation
Etomidate	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Anaesthetic For SAE
Intubation*	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Adverse Event
Iopamidol	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Ct Imaging Contrast / Used To Diagnose Pneumoperitoneum
Norepinephrine	02 Oct 2020 (Study Day 12) - 03 Oct 2020 (Study Day 13)	Blood Pressure
Phenylephrine	02 Oct 2020 (Study Day 12) - 03 Oct 2020 (Study Day 13)	Blood Pressure
Piperacillin sodium; tazobactam sodium	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Infection Preventative
Rocuronium	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Paralytic
Sodium bicarbonate	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Electrolyte Replacement
Sodium bicarbonate	02 Oct 2020 (Study Day 12) - 03 Oct 2020 (Study Day 13)	Electrolyte Replacement
Sodium chloride	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Replacing Fluids
Vancomycin	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Infection Prevention
Vasopressin	02 Oct 2020 (Study Day 12) - 02 Oct 2020 (Study Day 12)	Blood Pressure
Calcium chloride; potassium chloride; sodium lactate	03 Oct 2020 (Study Day 13) - 03 Oct 2020 (Study Day 13)	Replacing Fluids/Electrolytes
Fentanyl	03 Oct 2020 (Study Day 13) - 03 Oct 2020 (Study Day 13)	Abdominal Pain

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sodium bicarbonate	03 Oct 2020 (Study Day 13) - 03 Oct 2020 (Study Day 13)	Electrolyte Replacement

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Atrial Fibrillation	Grade 4	Not related	02 Oct 2020 (Study Day 12) - 03 Oct 2020 (Study Day 13)
Hyperglycaemia	Grade 2/moderate	Not related	02 Oct 2020 (Study Day 12) - 03 Oct 2020 (Study Day 13)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US319-2569 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	29 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	26 Sep 2020 (Study Day 29)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hepatic Cancer/Liver Cancer	AE leading to study discontinuation	Grade 3/ severe	Not related	26 Jan 2021 (Study Day 151) – Ongoing	Not recovered/ not resolved
Pancreatic Carcinoma Stage IV/ Stage 4 Pancreatic Cancer	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	26 Jan 2021 (Study Day 151) – 17 Feb 2021 (Study Day 173)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US319-2569, a 76-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 29 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 26 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 26 Jan 2021 (Study Day 151), 150 days after the first dose and 122 days after the second dose of the IP, the participant experienced a Grade 3/severe nonserious adverse event of hepatic cancer. Action taken with the IP was not applicable. The event of liver cancer was considered to be ongoing. The investigator assessed the event of hepatic cancer to be not related to the IP.

On 26 Jan 2021 (Study Day 151), 150 days after the first dose and 122 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of pancreatic carcinoma stage IV. Action taken with the IP was not applicable. The event of stage IV pancreatic cancer lasted for 23 days, after which it was considered to be fatal on 17 Feb 2021 (Study Day 173). The investigator assessed the event of pancreatic carcinoma stage IV to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 26 Jan 2021 (Study Day 151), the participant experienced a fatal serious adverse event of pancreatic carcinoma stage IV and was hospitalized on a reported date. Treatment medication for the event included oxycodone/paracetamol.

Action taken with study IP in response to the event was not applicable, as the participant had already received both scheduled doses.

The participant died on 17 Feb 2021 (Study Day 173). According to the death certificate, the cause of death was malignant neoplasm of the pancreas with metastases.

The investigator assessed the event, pancreatic carcinoma stage IV, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-016694	Pancreatic cancer stage IV

Study Completion/Discontinuation

On 10 Feb 2021 (Study Day 166), the participant discontinued from the study due to adverse event. On 17 Feb 2021 (Study Day 173), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	1995 - Ongoing
Hypothyroidism	Hypothyroidism	1995 - Ongoing
Type 1 diabetes mellitus	Type i diabetes	2000 - Ongoing
Hip arthroplasty	Left hip replacement	2012 - 2012
Constipation	Chronic constipation	2017 - Ongoing
Hip arthroplasty	Right hip replacement	2018 - 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine sodium	1995 - Ongoing	Hypothyroidism
Ramipril	1995 - Ongoing	Hypertension
Insulin glargine	2000 - Ongoing	Type I Diabetes
Insulin lispro	2000 - Ongoing	Type I Diabetes
Linaclotide	2017 - Ongoing	Constipation

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Azithromycin	03 Jan 2021 (Study Day 128) - 08 Jan 2021 (Study Day 133)	Symptomatic COVID-19
Hydroxychloroquine	03 Jan 2021 (Study Day 128) - 10 Jan 2021 (Study Day 135)	Symptomatic COVID-19
Ct scan*	26 Jan 2021 (Study Day 151) - 26 Jan 2021 (Study Day 151)	Adverse Event
Oxycodone hydrochloride; paracetamol	01 Feb 2021 (Study Day 157) - Ongoing	Pain From Pancreatic And Liver Cancer
Mri*	02 Feb 2021 (Study Day 158) - 02 Feb 2021 (Study Day 158)	Adverse Event
Liver biopsy*	08 Feb 2021 (Study Day 164) - 08 Feb 2021 (Study Day 164)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
COVID-19	Grade 2/moderate	Not related	02 Jan 2021 (Study Day 127) - 21 Jan 2021 (Study Day 146)
Hepatic Cancer	Grade 3/severe	Not related	26 Jan 2021 (Study Day 151) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US342-2244 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	09 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	07 Oct 2020 (Study Day 29)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cardiac Arrest/ Cardiac Arrest	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	03 Jan 2021 (Study Day 117) – 03 Jan 2021 (Study Day 117)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US342-2244, a 65-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 09 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 07 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Jan 2021 (Study Day 117), 116 days after the first dose and 88 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of cardiac arrest. Action taken with the IP was not applicable. The event of cardiac arrest was considered to be fatal on 03 Jan 2021 (Study Day 117). The investigator assessed the event of cardiac arrest to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 03 Jan 2021 (Study Day 117), the participant experienced a fatal serious adverse event of cardiac arrest. The participant was found deceased at home by their spouse. The last contact with the participant via eDiary reported no issues on 01 Jan 2021 (Study Day 115).

Action taken with study IP in response to the event, cardiac arrest, was not applicable as the participant received both scheduled doses.

The participant died on 03 Jan 2021 (Study Day 117). The cause of death was reported as cardiac arrest. Toxicology and autopsy reports were pending at the time of this report.

The investigator assessed the event, cardiac arrest, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005920	Cardiac arrest

Study Completion/Discontinuation

On 03 Jan 2021 (Study Day 117), the participant discontinued from the study due to death. On 03 Jan 2021 (Study Day 117), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Osteoarthritis	Osteoarthritis	30 Jun 1975 (Study Day -16508) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Gabapentin	01 Jan 2020 (Study Day -252) - Ongoing	Osteoarthritis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US343-2295 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Death, SAE, AE leading to withdrawal from IP, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Dermatitis Bullous/Diffuse Bullous Rash (Non-Urticarial)	SAE	Grade 4	Not related	12 Sep 2020 (Study Day 18) – Ongoing	Not recovered/ not resolved
Systemic Inflammatory Response Syndrome/ Severe Systemic Inflammatory Syndrome In The Setting Of CLL	Death, SAE, AE leading to withdrawal from study vaccine, AE leading to study discontinuation	Grade 5	Not related	01 Oct 2020 (Study Day 37) – 02 Oct 2020 (Study Day 38)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US343-2295, an 83-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 26 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Sep 2020 (Study Day 18), 17 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of dermatitis bullous. On 02 Oct 2020 (Study Day 38), the IP dose was discontinued due to death. The event of diffuse bullous rash (non-urticarial) was considered to be ongoing. The investigator assessed the event of dermatitis bullous to be not related to the IP.

On 01 Oct 2020 (Study Day 37), 36 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 5 serious adverse event of systemic inflammatory response syndrome. On 02 Oct 2020 (Study Day 38), the IP dose was discontinued due to death. The event of severe systemic inflammatory syndrome in the setting of CLL lasted for 2 days, after which it was considered to be fatal on 02 Oct 2020 (Study Day 38). The investigator assessed the event of systemic inflammatory response syndrome to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

One month prior to the first administration of study IP, the participant began to experience new symptoms consistent with chronic lymphocytic leukemia (CLL) progression, including night sweats and fatigue. A positron emission tomography with computerized tomography (PET-CT) scan was performed on 04 Aug 2020 (Study Day –23) to further evaluate these symptoms and their potential relationship to the participant's disease transformation. Primary findings included uptake/avidity at the left base of the tongue, posterior right greater trochanter, right humeral head, right femoral head, left femoroacetabular joint space, and the right axillary lymph nodes, which were noted by the radiologist as atypical for a squamous cell carcinoma metastasis and was more compatible with a lymphoma. Splenomegaly (16 cm along the craniocaudal axis) was also observed.

On 04 Sep 2020 (Study Day 10), an ultrasound-guided lymph node biopsy of the right axilla was performed. Histopathology was consistent with a B-cell lymphoproliferative disorder.

On 12 Sep 2020 (Study Day 18), the participant experienced a serious adverse event (SAE) of dermatitis bullous. The participant developed a raised, red papular rash on their ankles that spread up both legs and body over the following days.

On 15 Sep 2020 (Study Day 21), the participant had a virtual visit with their primary care physician and then a dermatologist. The blistering rash had spread to involve more of their body. Treatment included triamcinolone acetonide cream and ciclopirox cream, both topical.

On 17 Sep 2020 (Study Day 23), the participant presented to the emergency department (ED) due to progression of the rash, which had become painful and itchy, forming large, weeping blisters. They denied mucosal lesions, fevers, chills, nausea, vomiting, abdominal pain, and diarrhea. The participant also denied recently starting any new medications. Initial vital signs in the ED were temperature 96.4°F, heart rate 88 beats/minute, blood pressure 128/57 mm Hg, respiratory rate 20 breaths/minute, and oxygen saturation 98% on room air. A physical examination was notable for a diffuse papular/vesicular/bullae rash with open blisters and yellowish serous drainage, much more confluent over the groin and torso, extending into the axillae bilaterally. The rash was more vesicular over the bilateral lower extremities with confluence towards the ankles and there were several areas of skin tearing on the participant’s back and in the inguinal folds. There were no lesions seen on examination of the oral mucosa, genitals, and palms. Initial laboratory results included white blood cell (WBC) count 25.7×10^3 (units not provided), neutrophils 46%, lymphocytes 42%, monocytes 9%, eosinophils 2%, atypical cells 1%, absolute neutrophil count 11.82×10^3 (units not provided), absolute lymphocyte count 11.05×10^3 (units not provided), absolute monocyte count $2.31 \times 10^3/\mu L$, platelet count (Plt) 176×10^3 (units not provided), blood urea nitrogen (BUN) 53, creatine 2.2 (baseline 1.1) (no units were provided), potassium 6.1 mmol/L then 5.4 mmol/L on repeat (no reference ranges were provided), and a negative

COVID-19 polymerase chain reaction (PCR) test result. An electrocardiogram (ECG) showed sinus rate 74 beats/minute, right bundle branch block with left anterior fascicular block, and T-wave flattening in lateral leads without ST depressions or elevations.

Dermatology was consulted and they assessed the participant's presentation as consistent with bullous vasculitis, neutrophilic dermatosis, or autoimmune bullous disease. A skin biopsy showed mixed spongiotic, interface, and focally acantholytic dermatitis with mid to upper dermal perivascular and interstitial lympho-eosinophilic infiltrate and upper dermal edema. There was no intraepidermal or basement membrane deposition of immunoglobulin (Ig)G, IgG4, IgA, IgM, C3, or fibrinogen seen. Periodic-acid Schiff stain was negative for fungi and showed areas of vacuolar degeneration of the basement membrane zone. Immunostain for *Varicella zoster* antigen was negative. The pathologist suggested diagnostic considerations of atypical/extensive Grover's disease secondary to a paraneoplastic process or a Grover's disease-like hypersensitivity reaction. Treatment included clobetasol propionate 0.05% topical.

On 18 Sep 2020 (Study Day 24), blood cultures were collected and showed no growth on the final report. Relevant laboratory test results included alanine aminotransferase (ALT) 14, aspartate aminotransferase (AST) 22, alkaline phosphatase (ALP) 97, total bilirubin 0.8, and lactate dehydrogenase (LDH) 381 (no units or reference ranges provided). The participant had no new symptoms and was improving.

On 22 Sep 2020 (Study Day 28), magnetic resonance imaging of the neck was performed at the request of the otolaryngology specialist, who was consulted to evaluate the potential biopsy of the lesion at the base of the participant's tongue noted on the 04 Aug 2020 (Study Day –23) PET-CT scan. There was no mass or abnormal enhancement in the region of the left tongue to correlate with the PET-CT scan finding. There was conglomerate right axillary and supraclavicular lymphadenopathy with possible contact with the brachial plexus. An ultrasound of the neck was also performed for biopsy planning and showed asymmetric, edematous soft tissue thickening in the left tonsillar fossa, likely correlating to the previously seen area of avidity on prior PET-CT scan, and no well-defined mass was identified. Ultimately, a biopsy was not collected from the base of the tongue/left tonsillar fossa upon otolaryngology specialist's evaluation.

On 23 Sep 2020 (Study Day 29), a right upper extremity venous ultrasound was performed to investigate swelling and showed no evidence of deep vein thrombosis.

On 24 Sep 2020 (Study Day 30), the participant's rash was improved overall upon examination. Laboratory test results included WBC 27.7×10^3 (units not provided), red blood cell (RBC) 3.26×10^6 (units not provided), hemoglobin (Hgb) 10.0 g/dL, hematocrit 31.4%, BUN 35, Plt 155×10^3 (units not provided), and uric acid 7.6 (no units or reference ranges reported). The participant was discharged on allopurinol PO on the same day.

The participant had been doing well and their rash had continued to improve since being discharged until, on 29 Sep 2020 (Study Day 35), they noted that the rash had progressed to a confluent erythematous rash on their right chest, extending into the axilla.

On 30 Sep 2020 (Study Day 36), the participant presented to the ED and was later admitted to the hospital with high-grade fevers, up to 104°F at home and maximum temperature of 102.2°F in ED, with diarrhea, and shortness of breath. The participant's initial vital signs were temperature 101.1°F, heart rate 100 beats/minute, blood pressure 137/66 mm Hg, respiratory rate 18 breaths/minute, and oxygen saturation of 94% on room air. Significant laboratory results included D-dimer 6750 ng/mL, fibrinogen 324 mg/dL, WBC 37.4×10^3 (units not provided), Hgb 11.2 (units not provided), lactate 1.9 (units not provided), Plt $130 \times 10^3/\mu L$, prothrombin time (PT) 18.1 seconds, international normalized ratio (INR) 1.7, BUN 30, sodium 133, uric acid 5.9, troponin 0.34, ALT 41, AST 48, ALP 227, albumin 3.2, calcium 8.2 (no units or reference ranges were provided), positive hepatitis A antibodies (negative IgM, denoted no active infection), and creatinine 1.7. A COVID-19 PCR test with a nasal swab was negative. A chest, abdomen, and pelvis CT showed considerable adenopathy in the chest and abdomen located in the bilateral axillae, retroperitoneum, pelvis, and inguinal regions (increased since the prior PET-CT scan on 04 Aug 2020 [Study Day -23]), new moderate left pleural effusion, and stable lung nodules. There was further increase in splenomegaly, which measured 21.7 cm, with multiple low-density lesions present. A cystic lesion in the pancreatic neck, measuring 1.2×0.7 cm, was noted. Treatment included ceftriaxone/azithromycin PO and paracetamol PO. Preadmission medications were levothyroxine, prednisolone, tamsulosin, fluticasone, allopurinol, triamcinolone 0.1%, and hydroxyzine.

On 01 Oct 2020 (Study Day 37), the participant's lungs were clear to auscultation bilaterally with an increased respiratory rate and increased work of breathing. The participant had a diffuse, resolving, macular rash involving the entire body with small patches of desquamation throughout, scattered, small, fluid-filled bullae on the dorsum of the right foot, and a large area of confluent erythema over their right chest, extending into the axilla. The participant's condition deteriorated throughout the day with the development of acute respiratory failure, requiring intubation and mechanical ventilation. The participant was transferred to the intensive care unit and their condition continued to worsen with pneumothorax and purpura fulminans, which covered almost all of their body. The PCR test results were negative for COVID-19, adenovirus, coronavirus (non-COVID-19), human metapneumovirus, human rhinovirus/enterovirus, all influenza, all parainfluenza, respiratory syncytial virus A and B, *Chlamydia pneumoniae*, and *Mycoplasma pneumoniae*.

On 02 Oct 2020 (Study Day 38), the participant experienced a fatal SAE of systemic inflammatory response syndrome. On the morning of 02 Oct 2020 (Study Day 38), the participant experienced cardiac arrest with pulseless electrical activity and was resuscitated. A hematologist was consulted

and confirmed the participant's diagnosis of purpura fulminans based on their examination and review of laboratory results. Due to the severity of their condition and poor prognosis, the participant's family elected to pursue comfort-focused care. The participant died that afternoon at 16:45. During this admission, the participant's laboratory test results were significant for increase in D-dimer from 6750 ng/mL to 21,600 ng/mL, decrease in fibrinogen from 324 mg/dL to 151 mg/dL, decrease in Plt from $130 \times 10^3/\mu L$ to $68 \times 10^3/\mu L$, and a progressive coagulopathy with increase in INR from 2.2 to 4.2, PT from 18.1 seconds to 46.1 seconds, schistocytes on smear, and eventually purpura fulminans/disseminated intravascular coagulation. The participant had elevated markers of inflammation, ferritin 1729 ng/mL, and lactate dehydrogenase 537 IU/L (no reference ranges were provided). The participant had a component of heart failure detected on chest x-ray and pro-brain natriuretic peptide of 18,965 pg/mL (no reference range provided). Electrocardiogram and creatine kinase-MB did not indicate myocardial infarction.

Study IP was delayed in response to the event of dermatitis bullous. Study IP was withdrawn in response to the event of severe systemic inflammatory syndrome in the setting of CLL.

The participant died on 02 Oct 2020 (Study Day 38). The cause of death, per autopsy report from 29 Oct 2020 (Study Day 65), was severe systemic inflammatory response syndrome in the setting of CLL. An infiltrate composed of T-cells (CD4+ predominant) and eosinophils was present in all major organs causing a myocarditis in the heart, vacuolar interface dermatitis in the skin, necrosis and histiocytic aggregates in the bone marrow and lymph nodes, and portal-based inflammation in the liver with biliary injury and endotheliitis of the portal and central veins. Infiltrates were also prominent in the bowel wall without mucosal involvement. The spleen was massively enlarged with prominent sinusoidal histiocytes present on histology.

The liver and kidney also showed acute ischemic injury. Microthrombi were seen in the skin but were likely secondary to the inflammation rather than a primary vasculitis. The participant's CLL was present in the nodes and marrow but were displaced by the inflammatory infiltrate. Sections of multiple nodes and marrow did not show large cell transformation. The lungs were heavy with edema and focal acute and organizing pneumonia, but no source of sepsis was identified, and postmortem blood and lung culture did not show significant growth. The conclusion of the autopsy report was that there was a massive immune response that was difficult to classify. There was no evidence of high-grade transformation or progression of the CLL or a source of infection that could account for the histologic picture. The trigger for this reaction was unclear, and a relationship to participant's recent vaccination could not be excluded based on the findings. At the time of the participant's death, the event of dermatitis bullous was considered not resolved.

The investigator assessed the events, dermatitis bullous and systemic inflammatory response syndrome (in the setting of CLL), as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000325	Dermatitis bullous
MOD-2020-000325	Systemic inflammatory response syndrome

Study Completion/Discontinuation

On 02 Oct 2020 (Study Day 38), the participant discontinued from the study due to death. On 02 Oct 2020 (Study Day 38), the participant died due to adverse event. An autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Aortic dilatation	Aortic root dilation	Not reported - Ongoing
Chronic kidney disease	CKD stage 3	Not reported - Ongoing
Corneal dystrophy	Fuchs' dystrophy	Not reported - Ongoing
Lymphadenopathy	Right axillary lympthodenopathy	Not reported - Ongoing
Night sweats	Night sweats	Not reported - Ongoing
Open angle glaucoma	Open angle glaucoma	Not reported - Ongoing
Renal cyst	Renal cyst	Not reported - Ongoing
Sleep apnoea syndrome	OSA	Not reported - Ongoing
Tonsillar hypertrophy	Soft tissue thickening in l tonsillar fossa	Not reported - Ongoing
Rhinitis	Idiopathic rhinitis	1990 - Ongoing
Bradycardia	Bradycardia	2000 - Ongoing
Hypothyroidism	Hypothyroidism	2005 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia	2017 - Ongoing
Chronic lymphocytic leukaemia	Chronic lymphocytic leukemia (no therapy, monitored)	2019 - Ongoing
Cataract	Cataracts	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydroxyzine	Not reported - 02 Oct 2020 (Study Day 38)	Pruitis (Entire Body)
Levothyroxine sodium	Not reported - 02 Oct 2020 (Study Day 38)	Hypothyroidism
Prednisolone acetate	Not reported - 02 Oct 2020 (Study Day 38)	Unk
Fluticasone	2000 - Ongoing	Idiopathic Rhinitis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	2005 - Ongoing	Hypothyroidism
Tamsulosin	2017 - Ongoing	Benign Prostatic Hyperplasia
Cataract surgery*	02 Sep 2020 (Study Day 8) - 02 Sep 2020 (Study Day 8)	Medical History
Axillary biopsy*	04 Sep 2020 (Study Day 10) - 04 Sep 2020 (Study Day 10)	Medical History
Ciclopirox	15 Sep 2020 (Study Day 21) - 02 Oct 2020 (Study Day 38)	Diffuse Bullous Rash (Non-Urticarial)
Triamcinolone acetonide	15 Sep 2020 (Study Day 21) - Ongoing	Diffuse Bullous Rash (Non-Urticarial)
Clobetasol	17 Sep 2020 (Study Day 23) - 17 Sep 2020 (Study Day 23)	Diffuse Bullous Rash (Non-Urticarial)
EKG*	17 Sep 2020 (Study Day 23) - 17 Sep 2020 (Study Day 23)	Medical History
Skin biopsy*	17 Sep 2020 (Study Day 23) - 17 Sep 2020 (Study Day 23)	Adverse Event
MRI- neck*	22 Sep 2020 (Study Day 28) - 22 Sep 2020 (Study Day 28)	Adverse Event
Ultrasound- neck*	22 Sep 2020 (Study Day 28) - 22 Sep 2020 (Study Day 28)	Adverse Event
Allopurinol	24 Sep 2020 (Study Day 30) - 02 Oct 2020 (Study Day 38)	Diffuse Bullous Rash (Non-Urticarial)
Azithromycin	30 Sep 2020 (Study Day 36) - 30 Sep 2020 (Study Day 36)	Rash (Diffuse Bullous Rash Non-Urticarial)
Ceftriaxone	30 Sep 2020 (Study Day 36) - 30 Sep 2020 (Study Day 36)	Rash (Diffuse Bullous Rash Non-Urticarial)
Ct scan (chest, abdomen, pelvis)*	30 Sep 2020 (Study Day 36) - 30 Sep 2020 (Study Day 36)	Medical History
Paracetamol	30 Sep 2020 (Study Day 36) - 30 Sep 2020 (Study Day 36)	Fever

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Lymphadenopathy	Grade 1/mild	Not related	22 Sep 2020 (Study Day 28) - 02 Oct 2020 (Study Day 38)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3378011

Participant Number:	US355-2191 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	23 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Basedow's Disease/Graves' Disease	SAE	Grade 4	Related	30 Sep 2020 (Study Day 36) – 01 Feb 2021 (Study Day 160)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2191, a 66-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 26 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 23 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Sep 2020 (Study Day 36), 35 days after the first dose and 7 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of Basedow's disease. Action taken with the IP was not applicable. The event of Basedow's disease lasted for 125 days, after which it was considered to be recovered/resolved with sequelae on 01 Feb 2021 (Study Day 160). The investigator assessed the event of Basedow's disease to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 30 Sep 2020 (Study Day 36), the participant experienced a serious adverse event (SAE) of Basedow's disease. The participant reported shortness of breath on exertion, fatigue, and swollen ankles.

On 07 Oct 2020 (Study Day 43), the participant continued to experience shortness of breath.

On 09 Oct 2020 (Study Day 45), the participant presented to the emergency department (ED) and was hospitalized overnight. Treatment for shortness of breath and swollen ankles included single dose of furosemide IV. An electrocardiogram showed sinus tachycardia and no evidence of injury pattern. A computed tomography of the chest showed no evidence of pulmonary embolism. An

x-ray was without significant or acute findings. On 10 Oct 2020 (Study Day 46), participant was discharged.

On 12 Oct 2020 (Study Day 48), an echocardiogram showed no pathologic processes.

On 23 Oct 2020 (Study Day 59), the participant informed the physician that recent laboratory results included free T4 4.16 ng/mL (reference range 0.7 to 1.48 ng/mL) and total T3 451 ng/mL (reference range 0.58 to 1.59 ng/mL).

On 26 Oct 2020 (Study Day 62), carvedilol PO for tachycardia and methimazole PO for the event of Basedow's disease were started, and on 30 Oct 2020 (Study Day 66), atenolol PO for tachycardia was also started.

On 09 Nov 2020 (Study Day 76), laboratory results included total T3 245.52 ng/dL, thyroid stimulating hormone (TSH) <0.003 µIU/mL (reference range 0.47 to 5 µIU/mL), and free T4 1.64 ng/mL, and dosing of methimazole PO was increased.

On 11 Nov 2020 (Study Day 78), the participant's peripheral edema had resolved, and their shortness of breath remained ongoing, which was retrospectively consistent with hyperthyroidism.

On 18 Nov 2020 (Study Day 85), the participant reported that their peripheral edema remained resolved, and their shortness of breath was still ongoing.

On 19 Nov 2020 (Study Day 86), laboratory results included thyroid stimulating immunoglobulins 498% baseline (reference range <140%), thyroid peroxidase antibody 18 IU/mL (reference range <9 IU/mL), total T3 74.5 ng/dL (0.745 ng/mL), free T4 1.03 ng/mL, and TSH <0.003 µIU/mL. The participant developed a rash and stopped treatment with methimazole. Treatment with prednisone PO was started.

On 24 Nov 2020 (Study Day 91), thyroid imaging revealed normal overall size of the thyroid, with the right lobe of the thyroid larger than the left lobe. There was a uniform distribution of radioiodine throughout both lobes, which was consistent with Basedow's disease.

On 01 Dec 2020 (Study Day 98), the participant was treated with radioiodine I-131 therapy.

On 03 Dec 2020 (Study Day 100), treatment included propranolol PO.

On 17 Dec 2020 (Study Day 114), free T4 was 1.01 ng/mL and total T3 was 74.5 ng/dL (0.745 ng/mL).

Action taken with study IP was not applicable in response to the events, as the participant had already received both scheduled doses.

The event, Basedow's disease, was considered resolved with sequelae of ongoing fatigue and need for medications on 01 Feb 2021 (Study Day 160).

The investigator assessed the event, Basedow's disease, as related to the study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001843	Basedow's disease

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	Not reported - Ongoing
Sleep apnoea syndrome	Obstructive sleep apnea	Not reported - Ongoing
Drug hypersensitivity	Medication allergy: tolectin	1987 - Ongoing
Intervertebral disc protrusion	Herniated disc	1987 - Ongoing
Osteoarthritis	Osteoarthritis	1987 - Ongoing
Depression	Depression	1990 - Ongoing
Rosacea	Rosacea	1990 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2000 - Ongoing
Menopause	Menopause	2003 - Ongoing
Breast cancer	Breast cancer	Jan 2007 - Jan 2012
Vitamin D deficiency	Vitamin d deficiency	2012 - Ongoing
Meniere's disease	Meniere's disease	2015 - Ongoing
Seasonal allergy	Seasonal allergies	2017 - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type 2	Jun 2018 - Ongoing
Constipation	Constipation	2019 - Ongoing
Tendonitis	Left heel achilles tendonitis	Mar 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Venlafaxine	1990 - Ongoing	Mild Depression
Atorvastatin	2010 - Ongoing	Hypercholesterolemia
Colecalciferol	2012 - Ongoing	Vitamin D Deficiency

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	2014 - Ongoing	Health Promotion
Hydrochlorothiazide; triamterene	2015 - Ongoing	Meniere's Disease
Gabapentin	2016 - Ongoing	Osteoarthritis
Cetirizine	2017 - Ongoing	Seasonal Allergies
Metformin	Jun 2018 - Ongoing	Type 2 Diabetes Mellitus
Vitamin b12 nos	Jun 2018 - Ongoing	Replacement For Or Preventative Of Metformin Depletion
Magnesium citrate	2019 - Ongoing	Constipation
Furosemide	09 Oct 2020 (Study Day 45) - 09 Oct 2020 (Study Day 45)	Graves' Disease
Carvedilol	26 Oct 2020 (Study Day 62) - 30 Oct 2020 (Study Day 66)	Tachycardia
Thiamazole	26 Oct 2020 (Study Day 62) - 08 Nov 2020 (Study Day 75)	Graves' Disease
Atenolol	30 Oct 2020 (Study Day 66) - 08 Nov 2020 (Study Day 75)	Tachycardia
Influenza vaccine	30 Oct 2020 (Study Day 66) - 30 Oct 2020 (Study Day 66)	Influenza Prophylaxis
Atenolol	09 Nov 2020 (Study Day 76) - 02 Dec 2020 (Study Day 99)	Tachycardia
Diphenhydramine hydrochloride	09 Nov 2020 (Study Day 76) - Ongoing	Generalized Itching
Thiamazole	09 Nov 2020 (Study Day 76) - 18 Nov 2020 (Study Day 85)	Graves' Disease
Prednisone	19 Nov 2020 (Study Day 86) - 18 Dec 2020 (Study Day 115)	Graves' Disease
Radioactive iodine uptake scan*	24 Nov 2020 (Study Day 91) - 24 Nov 2020 (Study Day 91)	Diagnostic
Thyroid ablation*	01 Dec 2020 (Study Day 98) - 01 Dec 2020 (Study Day 98)	Adverse Event
Propranolol	02 Dec 2020 (Study Day 99) - 17 Jan 2021 (Study Day 145)	Graves' Disease
Prednisone	19 Dec 2020 (Study Day 116) - 23 Dec 2020 (Study Day 120)	Grave's Disease
Propranolol	19 Dec 2020 (Study Day 116) - 19 Jan 2021 (Study Day 147)	Grave's Disease
Prednisone	24 Dec 2020 (Study Day 121) - 30 Dec 2020 (Study Day 127)	Graves' Disease
Prednisone	31 Dec 2020 (Study Day 128) - 06 Jan 2021 (Study Day 134)	Graves' Disease
Prednisone	07 Jan 2021 (Study Day 135) - 13 Jan 2021 (Study Day 141)	Graves' Disease
Prednisone	14 Jan 2021 (Study Day 142) - 19 Jan 2021 (Study Day 147)	Graves' Disease
Levothyroxine	01 Feb 2021 (Study Day 160) - Ongoing	Graves' Disease

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	24 Sep 2020 (Study Day 30) - 01 Feb 2021 (Study Day 160)
Cough	Grade 1/mild	Related	08 Oct 2020 (Study Day 44) - 08 Oct 2020 (Study Day 44)
Headache	Grade 1/mild	Related	08 Oct 2020 (Study Day 44) - 08 Oct 2020 (Study Day 44)
Oropharyngeal Pain	Grade 1/mild	Related	08 Oct 2020 (Study Day 44) - 08 Oct 2020 (Study Day 44)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Anaemia	Grade 2/moderate	Related	09 Oct 2020 (Study Day 45) - 20 Oct 2020 (Study Day 56)
Muscular Weakness	Grade 2/moderate	Related	09 Oct 2020 (Study Day 45) - 22 Dec 2020 (Study Day 119)
Sinus Tachycardia	Grade 1/mild	Related	09 Oct 2020 (Study Day 45) - 09 Nov 2020 (Study Day 76)
Pruritus	Grade 2/moderate	Related	09 Nov 2020 (Study Day 76) - 01 Feb 2021 (Study Day 160)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3378016

Participant Number:	US357-2086 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	25 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	23 Sep 2020 (Study Day 30)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cerebrovascular Accident/CVA	SAE	Grade 3/ severe	Not related	31 Dec 2020 (Study Day 129) – 13 Jan 2021 (Study Day 142)	Recovered/ resolved
COVID-19/ COVID-19	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	03 Jan 2021 (Study Day 132) – 12 Feb 2021 (Study Day 172)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee

Participant US357-2086, a 63-year-old Hispanic or Latino male, received the first dose of placebo in the right arm on 25 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 23 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 31 Dec 2020 (Study Day 129), 128 days after the first dose and 99 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of cerebrovascular accident. Action taken with the IP was not applicable. The event of CVA lasted for 14 days, after which it was considered to be recovered/resolved on 13 Jan 2021 (Study Day 142). The investigator assessed the event of cerebrovascular accident to be not related to the IP.

On 03 Jan 2021 (Study Day 132), 131 days after the first dose and 102 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of COVID-19. Action taken with the IP was not applicable. The event of COVID-19 lasted for 41 days, after which it was considered to be fatal on 12 Feb 2021 (Study Day 172). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 31 Dec 2020 (Study Day 129), the participant experienced a serious adverse event (SAE) of cerebrovascular accident. The participant presented to the hospital with headache, neck pain,

upper back pain, and pelvic pain status after a fall on 25 Dec 2020 (Study Day 123); reason for the fall was unclear. The participant denied loss of consciousness and presented with facial drooping to right side of face. The participant was admitted for neurological signs of stroke that had been present for 3 days before admission. The participant was convinced by their caretaker to come to the hospital. After being assessed in the emergency department (ED), the participant was found to be COVID-19 positive and was admitted to the COVID unit for supportive therapy and neurology was consulted.

On 03 Jan 2021 (Study Day 132), a computed tomography (CT) of head revealed postoperative changes related to a left frontal temporal craniotomy and aneurysm clip in the region of the terminal left internal carotid artery/middle cerebral artery segment of the middle cerebral artery and persistent areas of encephalomalacia involving the left frontal, temporal, and parietal lobes. Otherwise, no significant interval intracranial findings were observed. Relevant laboratory results included prothrombin time (PT) 10.8 and international normalized ratio (INR) 0.95 (no units and reference ranges reported). Treatment for the event of cerebrovascular accident included levofloxacin.

On 05 Jan 2021 (Study Day 134), laboratory results included hemoglobin (Hgb) 11.7 (low), hematocrit (Hct) 35 (low), platelet count 316, sodium 140, potassium 3.4 (low), carbon dioxide 27, chloride 106, creatinine (Cr) 0.59 (low), blood urea 11.57, glucose 146 (high), phosphorus 3.2, and calcium 8.5 (low) (no units and reference ranges reported).

On 06 Jan 2021 (Study Day 135), laboratory results included Hgb normalized to 17.10, Hct normalized to 51.2, Cr normalized to 0.63, magnesium 2.2, PT increased to 24 (high), INR increased to 2.0 (high), activated partial thromboplastin time 31.2, and troponin < 0.01 (no units and reference ranges reported).

On 07 Jan 2021 (Study Day 136), relevant laboratory results included Hgb dropped to 11.7 (low), Hct dropped to 35.3 (low), white blood cell 3.44 (low) (no unit and reference range reported), potassium 3.6, Cr dropped to 0.56 (low), glucose 136 (high), and calcium 8.2 (low).

On 08 Jan 2021 (Study Day 137), laboratory results showed PT remained elevated at 15.6 (high) and INR normalized at 1.3.

During hospitalization, the participant remained hemodynamically stable, stated weakness and mild shortness of breath for which oxygen supplement was provided with alleviation of symptoms. There was suspicion of some deconditioning, and an incentive spirometry was ordered (no results provided). The participant received remdesivir for 5 days and convalescent plasma for asymptomatic COVID-19 and levofloxacin PO for cerebrovascular accident.

On 13 Jan 2021 (Study Day 142), the participant was deemed ready for discharge to a nursing and rehabilitation center for ongoing physical and occupational therapy. Upon discharge, physical examination revealed right facial droop, right hand paresis, and left hand and lower extremities with decreased strength. Discharge medications included alprazolam PO, amlodipine PO, acetylsalicylic acid, atorvastatin, cholecalciferol, guaifenesin, labetalol PO, and losartan. Discharge diagnosis included cerebrovascular accident, pneumonia due to COVID-19, ambulatory dysfunction, benign essential hypertension, bicytopenia, fall, and left ankle sprain.

The event, cerebrovascular accident, was considered resolved on 13 Jan 2021 (Study Day 142).

On 03 Jan 2021 (Study Day 132), the participant experienced a fatal SAE of COVID-19. The participant tested positive for SARS-CoV-2 by real-time RT-PCR reaction nasopharyngeal swab. The participant presented to ED with progressive shortness of breath, was afebrile, tachycardic with a pulse of 91 beats/minute, which increased to as high as 114 beats/minute, and was tachypneic at 26 breaths/minute, which increased to as high as 40 breaths/minute. Pulse oximeter result was 78% on room air and improved to 98% on 15 large non-rebreather mask. Decreased breath sounds were reported. Laboratory results included lymphocytes 6.8%, glucose 126, and albumin 2.9 (no units and reference range reported), and showed no leukocytosis and stable electrolytes, creatinine, and liver function tests. A CT scan of the chest showed moderate to severe COVID-19 pneumonia. Criteria for sepsis was met. Treatment included fluid bolus, cefepime, vancomycin, and levofloxacin for sepsis (all IV).

On 17 Jan 2021 (Study Day 146), treatment with levofloxacin 500 mg QD for 10 days for COVID-19 pneumonia was started.

On 23 Jan 2021 (Study Day 152), the participant was admitted to a COVID-19 unit at a nursing home.

On 08 Feb 2021 (Study Day 168), a respiratory viral panel and COVID-19 PCR were negative. The participant had a protracted hospital course and continued to deteriorate from the time of admission. No significant complications or iatrogenic injury was reported during the hospital stay. The participant's radiographic, laboratory, and other diagnostic data showed progressive worsening of COVID-19 pneumonia and the participant's prognosis was discussed with their family, who decided to change the code status to a do-not-resuscitate order. The participant continued to be hemodynamically unstable, requiring 3 vasopressors to support their blood pressure, and they continued to desaturate on ventilator despite being on 100% FiO_2, blood O_2 saturations dropped into the 40s. The participant was hypothermic, tachycardic, tachypneic, and completely unresponsive. After consulting with the family, they decided to withdraw all aggressive care and place the participant on comfort measures only. All aggressive care was

withdrawn at 11:40. The participant began to experience progressively worsening bradycardia and expired at 11:44 on 12 Feb 2021.

Action taken with the study IP was not applicable as the participant had already received both scheduled doses.

The participant died on 12 Feb 2021 (Study Day 172). The cause of death was reported as COVID-19. It was not known whether an autopsy was performed.

The investigator assessed the events, cerebrovascular accident and COVID-19, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-004768	Cerebrovascular accident
MOD-2021-059237	COVID-19

Study Completion/Discontinuation

On 12 Feb 2021 (Study Day 172), the participant discontinued from the study due to death. On 12 Feb 2021 (Study Day 172), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hyperlipidaemia	Hyperlipidemia	Not reported - Ongoing
Cerebrovascular accident	Cerebrovascular accident (CVA)	2004 - 2004
Hypertension	Hypertension	2004 - Ongoing
Cerebrovascular accident	Cerebrovascular accident (CVA)	Feb 2020 - Feb 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	Feb 2020 - Ongoing	CVA
Influenza vaccine	21 Oct 2020 (Study Day 58) - 21 Oct 2020 (Study Day 58)	Flu Prevention

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Incentive spirometry*	01 Jan 2021 (Study Day 130) - 01 Jan 2021 (Study Day 130)	Adverse Event
O2 supplement*	01 Jan 2021 (Study Day 130) - 01 Jan 2021 (Study Day 130)	Adverse Event
Remdesivir administered for 5 days*	01 Jan 2021 (Study Day 130) - 01 Jan 2021 (Study Day 130)	Adverse Event
Levofloxacin hemihydrate	03 Jan 2021 (Study Day 132) - 12 Feb 2021 (Study Day 172)	CVA
Covid19 plasma*	05 Jan 2021 (Study Day 134) - 05 Jan 2021 (Study Day 134)	Other, COVID19 Positive
Physical and occupational therapy following CVA*	13 Jan 2021 (Study Day 142) - 13 Jan 2021 (Study Day 142)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hypertension	Grade 2/moderate	Not related	23 Sep 2020 (Study Day 30) - 12 Feb 2021 (Study Day 172)
Pneumonia	Grade 3/severe	Not related	03 Jan 2021 (Study Day 132) - 13 Jan 2021 (Study Day 142)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US360-2030 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	11 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	16 Oct 2020 (Study Day 36)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Immunisation Anxiety Related Reaction/Anxiety Related To The Vaccine	SAE	Grade 2/ moderate	Related	17 Sep 2020 (Study Day 7) – 07 Oct 2020 (Study Day 27)	Recovered/ resolved
Paraesthesia/Tingling On Right Side Of Face	SAE	Grade 2/ moderate	Related	17 Sep 2020 (Study Day 7) – 28 Sep 2020 (Study Day 18)	Recovered/ resolved
Swelling Face/Swelling To The Right Side Of The Face	SAE	Grade 2/ moderate	Related	17 Sep 2020 (Study Day 7) – 27 Sep 2020 (Study Day 17)	Recovered/ resolved
Pleuritic Pain/Left Sided Pleuritic Chest Pain	SAE	Grade 1/ mild	Not related	27 Sep 2020 (Study Day 17) – 29 Sep 2020 (Study Day 19)	Recovered/ resolved
Feeling Hot/Left Sided Chest Wall Warmth	SAE	Grade 2/ moderate	Related	06 Oct 2020 (Study Day 26) – 16 Oct 2020 (Study Day 36)	Recovered/ resolved
Paraesthesia/Left Sided Tingling	SAE	Grade 2/ moderate	Related	06 Oct 2020 (Study Day 26) – 16 Oct 2020 (Study Day 36)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US360-2030, a 41-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 11 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 16 Oct 2020 (Study Day 36). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 17 Sep 2020 (Study Day 7), 6 days after the first dose and 29 days before the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of immunisation anxiety related reaction. The IP dose was not changed due to the anxiety related to the vaccine. The event of anxiety related to the vaccine lasted for 21 days, after which it was considered to be recovered/resolved on 07 Oct 2020 (Study Day 27). The investigator assessed the event of immunisation anxiety related reaction to be related to the IP.

On 17 Sep 2020 (Study Day 7), 6 days after the first dose and 29 days before the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of paraesthesia. The IP dose was not changed due to the tingling on right side of face. The event of tingling on right

side of face lasted for 12 days, after which it was considered to be recovered/resolved on 28 Sep 2020 (Study Day 18). The investigator assessed the event of paraesthesia to be related to the IP.

On 17 Sep 2020 (Study Day 7), 6 days after the first dose and 29 days before the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of swelling face. The IP dose was not changed due to the swelling to the right side of the face. The event of swelling to the right side of the face lasted for 11 days, after which it was considered to be recovered/resolved on 27 Sep 2020 (Study Day 17). The investigator assessed the event of swelling face to be related to the IP.

On 27 Sep 2020 (Study Day 17), 16 days after the first dose and 19 days before the second dose of the IP, the participant experienced a Grade 1/mild serious adverse event of pleuritic pain. The IP dose was not changed due to the left sided pleuritic chest pain. The event of left sided pleuritic chest pain lasted for 3 days, after which it was considered to be recovered/resolved on 29 Sep 2020 (Study Day 19). The investigator assessed the event of pleuritic pain to be not related to the IP.

On 06 Oct 2020 (Study Day 26), 25 days after the first dose and 10 days before the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of feeling hot. The IP dose was delayed due to the left sided chest wall warmth. The event of left sided chest wall warmth lasted for 11 days, after which it was considered to be recovered/resolved on 16 Oct 2020 (Study Day 36). The investigator assessed the event of feeling hot to be related to the IP.

On 06 Oct 2020 (Study Day 26), 25 days after the first dose and 10 days before the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of paraesthesia. The IP dose was delayed due to the left sided tingling. The event of left sided tingling lasted for 11 days, after which it was considered to be recovered/resolved on 16 Oct 2020 (Study Day 36). The investigator assessed the event of paraesthesia to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 06 Aug 2020 (Study Day –36), the participant had their teeth cleaned.

On 28 Aug 2020 (Study Day –18), the participant had a root canal.

On 17 Sep 2020 (Study Day 7), the participant experienced serious adverse events (SAEs) of immunization anxiety related reaction, paraesthesia (tingling on right side of face), and swelling face. The participant had pain chewing on the back teeth due to root canal.

On 18 Sep 2020 (Study Day 8), the participant developed increased tingling and numbness along the jaw line (along the mandibular nerve distribution of the trigeminal nerve) and increased swelling and fullness over the maxilla. The participant did not have nasal discharge. Over the next 2 days, the participant's pain persisted.

On 21 Sep 2020 (Study Day 11), the participant visited their dentist, who did not find any issues with the tooth that had the root canal and felt that the participant could have shingles or some other medical issues leading to the jaw pain.

On 22 Sep 2020 (Study Day 12), the participant's vital signs included body temperature 96.4°F, blood pressure 128/81 mm Hg, pulse oximetry 100%, heart rate 98 beats per min, respiratory rate 12 breaths per min, and body mass index 38.4 kg/m^2. The participant had swelling in their cheek and jaw area but did not have redness of the face, tooth decay, pain on palpation of the tooth with the recent root canal, swelling of the jaw, facial droop, nasal congestion, or nasal redness.

On an unspecified date, as recommended, the participant consulted an ear, nose, and throat (ENT) specialist, who did not find a clear explanation for the events but suspected an odontogenic infection and referred the participant to an oral surgeon and recommended a sinus computerized tomography (CT) scan. The participant did not undergo the CT scan but did see an oral surgeon who thought the pain might be caused by an issue related to a dental crown at the same site as the recent root canal. The radiograph results were unremarkable.

On 27 Sep 2020 (Study Day 17), the participant's symptoms of facial swelling and numbness and tooth pain resolved. On the same day, the participant experienced an SAE of pleuritic pain. The participant reported left sided back pain, thoracic and pleuritic chest pain, and was evaluated by a cardiologist, who recommended an echocardiogram (ECHO) and stress test. The cardiologist confirmed that the chest pain was not cardiac related. The participant also had complaints of right-sided chest wall numbness and requested to be withdrawn from the next dose of the IP. Additionally, the participant requested unblinding of IP to lessen their anxiety while undergoing evaluation of symptoms. No additional medications or treatment was provided. The participant was recommended to continue to follow-up with cardiologist.

On 28 Sep 2020 (Study Day 18), the participant went to their primary care physician and had an electrocardiogram (ECG) and chest x-ray; results of both were normal.

On 06 Oct 2020 (Study Day 26), the participant experienced SAEs of feeling hot, described as left-sided chest wall warmth while lying down, and paraesthesia, described as left-sided tingling.

On 10 OCT 2020 (Study Day 30), a regular cardiac stress test showed no ischemia.

On 13 Oct 2020 (Study Day 33), an ECG showed normal size of left ventricle cavity, normal global wall motion, visual ejection fraction 55 to 60% (no reference range provided), doppler evidence of grade 1 (impaired), diastolic dysfunction, and a structurally normal trileaflet aortic valve with mild grade 1 regurgitation.

No action was taken with the study IP in response to the events of immunization anxiety related reaction, paraesthesia (tingling on right side of face), swelling face, and pleuritic pain. Study IP dose was delayed in response to the events of feeling hot and paresthesia (left-sided tingling).

The event of swelling face was considered resolved on 27 Sep 2020 (Study Day 17). The event of paresthesia (tingling on right side of face) was considered resolved on 28 Sep 2020 (Study Day 18). The event of pleuritic pain was considered resolved on 29 Sep 2020 (Study Day 19). The event of immunization anxiety related reaction was considered resolved on 07 Oct 2020 (Study Day 27). The events of feeling hot and paresthesia (left sided tingling) were considered resolved on 16 Oct 2020 (Study Day 36).

The investigator assessed the events of immunization anxiety related reaction, paraesthesia (tingling on right side of face), and swelling face as related to study IP and not related to study procedure. The investigator assessed the event, pleuritic pain, as not related to study IP or study procedure. The investigator assessed the events of feeling hot and paresthesia (left sided tingling) as related to study IP or study procedure.

The company assessed all of the events as unrelated to the study IP. The events might be explained by the participant's recent dental surgery and medical history of sinus surgery.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000323	Immunisation anxiety related reaction
MOD-2020-000323	Paraesthesia
MOD-2020-000323	Swelling face
MOD-2020-000323	Pleuritic pain
MOD-2020-000323	Feeling hot
MOD-2020-000323	Paraesthesia

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Endometriosis	Endometriosis s/p stripping	Not reported - Ongoing
Osteoarthritis	Left knee osteoarthritis	Not reported - Ongoing
Rhinitis	Non-allergic rhinitis	Not reported - Ongoing
Sinus operation	Multiple sinus surgeries	Not reported

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Vitamin D deficiency	Vitamin d insufficiency	Not reported - Ongoing
Asthma	Asthma	1995 - Ongoing
Gastrooesophageal reflux disease	Acid reflux	2010 - Ongoing
Insomnia	Insomnia	2010 - Ongoing
Dry eye	Dry eye syndrome	2012 - Ongoing
Hypertension	Hypertension	2014 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2015 - Ongoing
Dental cleaning	Tooth cleaning	06 Aug 2020 (Study Day -36) - 06 Aug 2020 (Study Day -36)
Alopecia	Hair thinning	11 Aug 2020 (Study Day -31) - Ongoing
Endodontic procedure	Root canal	28 Aug 2020 (Study Day -14) - 28 Aug 2020 (Study Day -14)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ciclosporin	Not reported - Ongoing	Dry Eye
Diclofenac	Not reported - Ongoing	Left Knee OA
Esomeprazole magnesium	Not reported - Ongoing	Acid Reflux
Fluticasone propionate	Not reported - Ongoing	Non- Allergic Rhinitis
Melatonin	Not reported - Ongoing	Insomnia
Probiotics nos	Not reported - Ongoing	Good Gi Health
Vitamin d nos	Not reported - Ongoing	Maintain Good Level
Vitamins nos	Not reported - Ongoing	Good Health
Fluticasone propionate; salmeterol xinafoate	2004 - Ongoing	Asthma
Azelastine hydrochloride	2005 - Ongoing	Non- Allergic Rhinitis
Telmisartan	2012 - Ongoing	HTN
Etonogestrel	24 Jun 2020 (Study Day -79) - Ongoing	Contraception And Endometriosis
Biotin	Aug 2020 - Ongoing	Thinning Of Hair
Dentist visit*	21 Sep 2020 (Study Day 11) - 21 Sep 2020 (Study Day 11)	Adverse Event
Chest x-ray (CXR)*	07 Oct 2020 (Study Day 27) - 07 Oct 2020 (Study Day 27)	Adverse Event
EKG*	07 Oct 2020 (Study Day 27) - 07 Oct 2020 (Study Day 27)	Adverse Event
Stress test*	07 Oct 2020 (Study Day 27) - 07 Oct 2020 (Study Day 27)	Adverse Event
Paracetamol	18 Oct 2020 (Study Day 38) - 18 Oct 2020 (Study Day 38)	Headache
Acetylsalicylic acid; caffeine; paracetamol	23 Oct 2020 (Study Day 43) - 23 Oct 2020 (Study Day 43)	Headache

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid; caffeine; paracetamol	02 Nov 2020 (Study Day 53) - 02 Nov 2020 (Study Day 53)	Headache
Acetylsalicylic acid; caffeine; paracetamol	04 Nov 2020 (Study Day 55) - 04 Nov 2020 (Study Day 55)	Headache
Cefalexin	04 Feb 2021 (Study Day 147) - 16 Feb 2021 (Study Day 159)	Right Maxillary Sinus Pain/Congestion

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Toothache	Grade 1/mild	Not related	17 Sep 2020 (Study Day 7) - 22 Sep 2020 (Study Day 12)
Headache	Grade 1/mild	Related	18 Oct 2020 (Study Day 38) - 24 Oct 2020 (Study Day 44)
Migraine	Grade 1/mild	Related	02 Nov 2020 (Study Day 53) - 03 Nov 2020 (Study Day 54)
Migraine	Grade 1/mild	Related	04 Nov 2020 (Study Day 55) - 04 Nov 2020 (Study Day 55)
Sinus Congestion	Grade 1/mild	Not related	04 Feb 2021 (Study Day 147) - 17 Feb 2021 (Study Day 160)
Sinus Pain	Grade 1/mild	Not related	04 Feb 2021 (Study Day 147) - 17 Feb 2021 (Study Day 160)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US367-2203 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	18 Sep 2020 (Study Day 31)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Completed Suicide/Committed Suicide	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	13 Dec 2020 (Study Day 117) – 13 Dec 2020 (Study Day 117)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US367-2203, a 25-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 18 Sep 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 13 Dec 2020 (Study Day 117), 116 days after the first dose and 86 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of completed suicide. Action taken with the IP was not applicable. The event of committed suicide was considered to be fatal on 13 Dec 2020 (Study Day 117). The investigator assessed the event of completed suicide to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 13 Dec 2020 (Study Day 117), the participant experienced a fatal serious adverse event of completed suicide. The site was informed after speaking with the participant's parent.

Action taken with study IP in response to the event was not applicable, as the participant had already received both scheduled doses.

The event, completed suicide, was considered fatal and serious. The participant died on 13 Dec 2020 (Study Day 117).

The investigator assessed the event, completed suicide, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005702	Completed suicide

Study Completion/Discontinuation

On 13 Dec 2020 (Study Day 117), the participant discontinued from the study due to death. On 13 Dec 2020 (Study Day 117), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Amoxicillin allergy	2000 - Ongoing
Anxiety	Anxiety	Jan 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Escitalopram oxalate	Jan 2020 - Ongoing	Anxiety

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US370-2010 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	04 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Death, SAE, Severe COVID-19, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/COVID-19 Infection (Onset 1/1/2021, Diagnosis 1/5/2021)	Death, SAE, COVID-19, AE leading to study discontinuation	Grade 5	Not related	01 Jan 2021 (Study Day 120) – 25 Feb 2021 (Study Day 175)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US370-2010, a 74-year-old Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 04 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Severe COVID-19 Details

On 01 Jan 2021 (Study Day 120), 119 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 5 serious adverse event of COVID-19 infection (onset 1/1/2021, diagnosis 1/5/2021).

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 02 Oct 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 08 Jan 2021 (Study Day 127), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
01 Jan 2021 (Study Day 120)	Chills	Mild
01 Jan 2021 (Study Day 120)	Cough	Moderate
01 Jan 2021 (Study Day 120)	Fatigue	Mild
01 Jan 2021 (Study Day 120)	Nasal Congestion	Severe

Symptom Date	Symptom	Result
02 Jan 2021 (Study Day 121)	Chills	Mild
02 Jan 2021 (Study Day 121)	Cough	Moderate
02 Jan 2021 (Study Day 121)	Fatigue	Mild
02 Jan 2021 (Study Day 121)	Nasal Congestion	Severe
03 Jan 2021 (Study Day 122)	Chills	Mild
03 Jan 2021 (Study Day 122)	Cough	Moderate
03 Jan 2021 (Study Day 122)	Fatigue	Mild
03 Jan 2021 (Study Day 122)	Nasal Congestion	Severe
04 Jan 2021 (Study Day 123)	Chills	Mild
04 Jan 2021 (Study Day 123)	Cough	Moderate
04 Jan 2021 (Study Day 123)	Diarrhea	Mild
04 Jan 2021 (Study Day 123)	Fatigue	Mild
04 Jan 2021 (Study Day 123)	Nasal Congestion	Severe
04 Jan 2021 (Study Day 123)	Nausea	Mild
04 Jan 2021 (Study Day 123)	Vomiting	Mild
05 Jan 2021 (Study Day 124)	Chills	Mild
05 Jan 2021 (Study Day 124)	Cough	Moderate
05 Jan 2021 (Study Day 124)	Diarrhea	Mild
05 Jan 2021 (Study Day 124)	Difficulty Breathing	Severe
05 Jan 2021 (Study Day 124)	Fatigue	Mild
05 Jan 2021 (Study Day 124)	Nasal Congestion	Severe
05 Jan 2021 (Study Day 124)	Nausea	Mild
05 Jan 2021 (Study Day 124)	O2 Saturation (%)	90
05 Jan 2021 (Study Day 124)	Shortness of Breath	Mild
05 Jan 2021 (Study Day 124)	Temperature (°F)	38.3
05 Jan 2021 (Study Day 124)	Vomiting	Mild
06 Jan 2021 (Study Day 125)	Cough	Mild
06 Jan 2021 (Study Day 125)	Difficulty Breathing	Mild
06 Jan 2021 (Study Day 125)	Fatigue	Mild
06 Jan 2021 (Study Day 125)	Nasal Congestion	Moderate
06 Jan 2021 (Study Day 125)	Shortness of Breath	Mild
07 Jan 2021 (Study Day 126)	Cough	Mild
07 Jan 2021 (Study Day 126)	Difficulty Breathing	Mild
07 Jan 2021 (Study Day 126)	Fatigue	Mild
07 Jan 2021 (Study Day 126)	Nasal Congestion	Moderate
07 Jan 2021 (Study Day 126)	Shortness of Breath	Mild
08 Jan 2021 (Study Day 127)	Cough	Mild
08 Jan 2021 (Study Day 127)	Difficulty Breathing	Mild
08 Jan 2021 (Study Day 127)	Fatigue	Mild
08 Jan 2021 (Study Day 127)	Nasal Congestion	Moderate
08 Jan 2021 (Study Day 127)	Shortness of Breath	Mild
09 Jan 2021 (Study Day 128)	Cough	Mild
09 Jan 2021 (Study Day 128)	Difficulty Breathing	Mild

Symptom Date	Symptom	Result
09 Jan 2021 (Study Day 128)	Fatigue	Mild
09 Jan 2021 (Study Day 128)	Nasal Congestion	Moderate
09 Jan 2021 (Study Day 128)	Shortness of Breath	Mild
10 Jan 2021 (Study Day 129)	Cough	Mild
10 Jan 2021 (Study Day 129)	Difficulty Breathing	Mild
10 Jan 2021 (Study Day 129)	Fatigue	Mild
10 Jan 2021 (Study Day 129)	Nasal Congestion	Moderate
10 Jan 2021 (Study Day 129)	Shortness of Breath	Mild
11 Jan 2021 (Study Day 130)	Cough	Mild
11 Jan 2021 (Study Day 130)	Fatigue	Mild
11 Jan 2021 (Study Day 130)	Nasal Congestion	Moderate
11 Jan 2021 (Study Day 130)	O2 Saturation (%)	93
12 Jan 2021 (Study Day 131)	Cough	Mild
12 Jan 2021 (Study Day 131)	Fatigue	Mild
12 Jan 2021 (Study Day 131)	Nasal Congestion	Mild
13 Jan 2021 (Study Day 132)	Difficulty Breathing	Mild
13 Jan 2021 (Study Day 132)	Shortness of Breath	Mild
14 Jan 2021 (Study Day 133)	Shortness of Breath	Mild
15 Jan 2021 (Study Day 134)	Shortness of Breath	Mild
16 Jan 2021 (Study Day 135)	Cough	Mild
16 Jan 2021 (Study Day 135)	Difficulty Breathing	Mild
16 Jan 2021 (Study Day 135)	Nasal Congestion	Mild
17 Jan 2021 (Study Day 136)	Chills	Mild
17 Jan 2021 (Study Day 136)	Cough	Mild
17 Jan 2021 (Study Day 136)	Difficulty Breathing	Mild
17 Jan 2021 (Study Day 136)	Nasal Congestion	Mild
17 Jan 2021 (Study Day 136)	O2 Saturation (%)	93
18 Jan 2021 (Study Day 137)	Chills	Mild
18 Jan 2021 (Study Day 137)	Cough	Mild
18 Jan 2021 (Study Day 137)	Difficulty Breathing	Mild
18 Jan 2021 (Study Day 137)	Nasal Congestion	Mild
18 Jan 2021 (Study Day 137)	Temperature (°F)	100.8
19 Jan 2021 (Study Day 138)	Chills	Mild
19 Jan 2021 (Study Day 138)	Cough	Mild
19 Jan 2021 (Study Day 138)	Difficulty Breathing	Mild
19 Jan 2021 (Study Day 138)	Nasal Congestion	Mild

The participant had the following indications of severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
05 Jan 2021 (Study Day 124)	Heart Rate >= 125 per Minute	Yes
05 Jan 2021 (Study Day 124)	Oxygen Saturation	90%

Dates	Severity Indication	Result
05 Jan 2021 (Study Day 124)	PaO2/FIO2 Ratio < 300 mm Hg	Yes
05 Jan 2021 (Study Day 124)	Systolic Blood Pressure < 90 mm Hg, Diastolic Blood Pressure < 60 mm Hg	Yes
05 Jan 2021 (Study Day 124)	Vasopressors Required	Yes
05 Jan 2021 - 05 Jan 2021 (Study Day 124-124)	Clinical Evidence of Pneumonia	Yes
05 Jan 2021 - 05 Jan 2021 (Study Day 124-124)	Oxygen Saturation of SpO2 <= 93% on room air at sea level	Yes
05 Jan 2021 - 05 Jan 2021 (Study Day 124-124)	Radiographical Evidence of Pneumonia	Yes
20 Jan 2021 - 20 Jan 2021 (Study Day 139-139)	Acute Respiratory Distress Syndrome (ARDS)	Yes
20 Jan 2021 - 24 Jan 2021 (Study Day 139-143)	High-Flow Oxygen	Yes
21 Jan 2021 - 24 Jan 2021 (Study Day 140-143)	Non-Invasive Ventilation	Yes
24 Jan 2021 - 25 Feb 2021 (Study Day 143-175)	Admission to an intensive care unit due to SARS-CoV-2	Yes
24 Jan 2021 - 25 Feb 2021 (Study Day 143-175)	Mechanical Ventilation	Yes
24 Jan 2021 - 24 Jan 2021 (Study Day 143-143)	Respiratory Failure	Yes

On 01 Oct 2020 (Study Day 28), the IP dose was discontinued due to other. The event of COVID-19 infection (onset 1/1/2021, diagnosis 1/5/2021) lasted for 56 days, after which it was considered to be fatal on 25 Feb 2021 (Study Day 175). The investigator assessed the event of COVID-19 to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 01 Jan 2021 (Study Day 120), the participant experienced a fatal serious adverse event of COVID-19 infection with symptom onset the same day and diagnosed on 05 Jan 2021 (Study Day 124) with a positive SARS-CoV-2 RT-PCR test result via nasopharyngeal swab collected on 08 Jan 2021 (Study Day 127).

From 01 Jan 2021 (Study Day 120) through 19 Jan 2021 (Study Day 138), the participant intermittently experienced mild chills, shortness of breath, fatigue, nausea, vomiting and diarrhea; mild to moderate cough; mild to severe nasal congestion, and difficulty breathing. The participant denied muscle aches, body aches, headache, loss of taste, loss of smell, runny nose, or sore throat.

On 02 Jan 2021 (Study Day 121), the participant took ibuprofen PO for a fever.

On 05 Jan 2021 (Study Day 124), the participant was seen for symptoms suggestive of COVID-19 including fever, cough, and dyspnea on exertion. At the visit, the participant was noted to be coughing and short of breath with exertion; emergency medical services (EMS) was called and the participant was hospitalized. COVID-19 pneumonia was diagnosed, with clinical and

radiographical evidence including pulmonary infiltrates, hypoxemia, and a positive RT-PCR for SARS-CoV2. The participant had an oxygen saturation of 90% on room air at sea level, was hypoxic with ambulation (O_2 saturation 89%) but was otherwise medically stable with no end organ damage. The participant's temperature was noted as 38.3°C, which returned to normal 36.8°C on the following day. The participant did not require intensive care unit (ICU) admission or mechanical ventilation. The participant received remdesivir IV, and dexamethasone, enoxaparin SC, ibuprofen, and *Senna alexandrina* (all PO) for treatment of the event and ceftriaxone IV and ibuprofen PO for fever.

On 06 Jan 2021 (Study Day 125), participant's treatment included remdesivir IV, benzonatate, and dexamethasone PO.

On 11 Jan 2021(Study Day 130), the participant was discharged from the hospital. On the same day, the participant was re-hospitalized and treated with a 5-day course of remdesivir and dexamethasone. The participant's O_2 saturation was 93% and returned to 94% the following day.

On 15 Jan 2021 (Study Day 134), the participant was discharged from the hospital, for the second time, and was stable until the participant discontinued dexamethasone.

On 16 Jan 2021 (Study Day 135), the participant noted fevers, worsening hypoxia, and shortness of breath.

On 17 Jan 2021 (Study Day 136), the participant's O_2 saturation was 93%.

On 18 Jan 2021(Study Day 137), the participant's O_2 saturation returned to normal, 97%; temperature 100.8°F and normalized to 100.1°F the following day.

On 19 Jan 2021 (Study Day 138), the participant took paracetamol PO for the event.

On 20 Jan 2021 (Study Day 139), the participant called EMS and was re-admitted to the hospital for acute respiratory failure secondary to pneumonia, requiring high flow oxygen and bilevel noninvasive positive pressure ventilation. Despite reinstitution of steroids, empiric treatment for bacterial pneumonia, and empiric coverage for *Pneumocystis jirovecii* pneumonia, the participant developed worsening hypoxemia.

On 24 Jan 2021 (Study Day 143), the participant was intubated and transferred to the ICU. During the stay, the participant was sedated and paralyzed on mechanical ventilation with high ventilatory requirements and persistent hypoxemia. The participant had recurrent supraventricular tachycardia, treated with amiodarone and cardioversion. Additionally, the participant had electrolyte disturbances. Work-up revealed no other microbial explanation for pneumonia/acute respiratory distress syndrome (ARDS) other than SARS-CoV2 as the participant remained RT-PCR positive on 31 Jan 2021 (Study Day 150) and 25 Feb 2021 (Study Day 175). After

several weeks with no improvement, and given the severity of the lung damage, the participant's family elected to sign a do-not-resuscitate order.

On an unspecified date, the participant had a PaO_2/FIO_2 ratio less than 300 mm Hg and evidence of shock requiring vasopressors with systolic blood pressure less than 90 mm Hg and diastolic blood pressure less than 60 mm Hg and heart rate of more than or equal to 125 beats per minute.

On 21 Feb 2021 (Study Day 171), the participant's relevant laboratory test results showed white blood cell (WBC) count 21.97 (high), hemoglobin (Hgb) 9.8 (low), hematocrit (Hct) 33.8 (low), and platelets 70 (low) (no units or reference range provided).

On 23 Feb 2021 (Study Day 173), the participant's relevant laboratory test results showed creatinine 1.19 (high), blood urea nitrogen (BUN) 111 (high), glucose 151 (high), calcium 8.1 (low), WBC 18.77 (high), Hct 33.2 (low), and prothrombin time (PT) 13.3 (high) (no units or reference range provided).

On 24 Feb 2021 (Study Day 174), the participant's relevant laboratory test results showed creatinine 1.31 (high) and BUN 114 (high) (no units or reference range provided).

On 25 Feb 2021 (Study Day 175), the participant's relevant laboratory test results showed WBC 23.11 (high), Hgb 10.5 (low), Hct 35.1 (low), platelets 120 (low), potassium 5.3 and 5.5 (high), creatinine 1.57 (high), BUN 129 (high), magnesium 2.5 and 2.6 (high), phosphate 5.9 (high), and calcium 8.0 (low) (no units or reference range provided). The participant died from ARDS with the only identified causative organism being SARS-CoV2.

Action taken with study IP in response to the event was not applicable, as the participant refused to receive a second dose.

The event, COVID-19 infection, was reported as fatal on 25 Feb 2021 (Study Day 175). The cause of death was reported as ARDS due to COVID-19.

The investigator assessed the event, COVID-19 infection, as not related to the study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002834	COVID-19 infection

Study Completion/Discontinuation

On 25 Feb 2021 (Study Day 175), the participant discontinued from the study due to death. On 25 Feb 2021 (Study Day 175), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Constipation	Constipation	Not reported - Ongoing
HIV infection	Human immunodeficiency virus infection	Not reported - Ongoing
Insulin resistance	Insulin resistance	Not reported - Ongoing
Depression	Depression	2000 - Ongoing
Herpes simplex	Herpes simplex	2000 - Ongoing
Hepatic cirrhosis	Cirrhosis of liver due to hepatitis c	2007 - Ongoing
Hypertension	Hypertension	2007 - Ongoing
Lipodystrophy acquired	Lipodystrophy due to aids antiretroviral therapy	2007 - Ongoing
Benign prostatic hyperplasia	Benign prostatic hyperplasia associated with nocturia	2010 - Ongoing
Bundle branch block right	Exercise-induced right bundle branch block during exercise stress test - asymptomatic	2012 - Ongoing
Large intestine polyp	Colonic polyps	2013 - Not reported
Hepatitis C	Hepatitis c	2015 - 2015
Oesophageal variceal ligation	Esophageal varices with h/o banding	2016 - Ongoing
Portal hypertensive gastropathy	Portal hypertensive gastropathy	10 Oct 2019 (Study Day -330) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bisacodyl	28 Apr 2016 (Study Day -1590) - Ongoing	Constipation
Valaciclovir hydrochloride	07 Jun 2017 (Study Day -1185) - Ongoing	Hsv
Azelastine hydrochloride	24 Sep 2018 (Study Day -711) - Ongoing	Allergies
Clotrimazole	12 Nov 2018 (Study Day -662) - Ongoing	Unknown
Bictegravir sodium; emtricitabine; tenofovir alafenamide fumarate	20 Apr 2020 (Study Day -137) - Ongoing	Hiv
Escitalopram	20 Apr 2020 (Study Day -137) - Ongoing	Depression

Benzonatate	06 Jan 2021 (Study Day 125) - 11 Jan 2021 (Study Day 130)	COVID-19
Dexamethasone	06 Jan 2021 (Study Day 125) - 15 Jan 2021 (Study Day 134)	COVID-19
Remdesivir	06 Jan 2021 (Study Day 125) - 09 Jan 2021 (Study Day 128)	COVID-19
Melatonin	09 Jan 2021 (Study Day 128) - 09 Jan 2021 (Study Day 128)	Insomnia
Paracetamol	19 Jan 2021 (Study Day 138) - 19 Jan 2021 (Study Day 138)	COVID-19
Hi-flow oxygen and bi-level non-invasive positive pressure ventilation*	20 Jan 2021 (Study Day 139) - 20 Jan 2021 (Study Day 139)	Adverse Event
Intubation*	24 Jan 2021 (Study Day 143) - 24 Jan 2021 (Study Day 143)	Adverse Event
Cardioversion*	12 Feb 2021 (Study Day 162) - 12 Feb 2021 (Study Day 162)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Nausea	Grade 3/severe	Related	04 Sep 2020 (Study Day 1) - 11 Sep 2020 (Study Day 8)
Fatigue	Grade 3/severe	Related	05 Sep 2020 (Study Day 2) - 11 Sep 2020 (Study Day 8)
Fatigue	Grade 1/mild	Related	11 Sep 2020 (Study Day 8) - 02 Oct 2020 (Study Day 29)
Abdominal Pain Lower	Grade 1/mild	Not related	23 Oct 2020 (Study Day 50) - 26 Oct 2020 (Study Day 53)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US381-2060 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	06 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	31 Aug 2020 (Study Day 26)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Myocardial Infarction/Myocardial Infarction	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	24 Nov 2020 (Study Day 111) – 24 Nov 2020 (Study Day 111)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2060, a 62-year-old not Hispanic or Latino male, received the first dose of placebo in the right arm on 06 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 31 Aug 2020 (Study Day 26). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Nov 2020 (Study Day 111), 110 days after the first dose and 85 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of myocardial infarction. Action taken with the IP was not applicable. The event of myocardial infarction was considered to be fatal on 24 Nov 2020 (Study Day 111). The investigator assessed the event of myocardial infarction to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 24 Nov 2020 (Study Day 111), the participant experienced a fatal serious adverse event of myocardial infarction (MI).

On 04 Dec 2020 (Study Day 121), the site contacted the participant's sibling who reported that the participant was found dead on 30 Nov 2020 (Study Day 117) but may have expired 1 week prior.

Action taken with study IP in response to the event was not applicable as the participant had already received both scheduled doses.

The participant died on 24 Nov 2020 (Study Day 111). According to the participant's death certificate, the cause of death was reported as probable MI.

The investigator assessed the event, MI, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001025	Myocardial infarction

Study Completion/Discontinuation

On 24 Nov 2020 (Study Day 111), the participant discontinued from the study due to death. On 24 Nov 2020 (Study Day 111), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Inguinal hernia	Left side inguinal hernia	(b) (6) 1958 (Study Day (b) (6) - 1966
Inguinal hernia repair	Left side inguinal hernia operation	1966 - 1966
Anxiety	Anxiety	1967 - Ongoing
Blood cholesterol increased	High cholesterol	1998 - Ongoing
Depression	Depression	2000 - Ongoing
Colon adenoma	Tubular adenoma of colon	2019 - Ongoing
Presbyacusis	Presbycusis both side	2019 - Ongoing
Tinnitus	Tinnitis	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Bupropion hydrochloride	2005 - Ongoing	Depression
Colecalciferol	2005 - Ongoing	General Health
Duloxetine hydrochloride	2005 - Ongoing	Depression
Atorvastatin	2018 - Ongoing	High Cholesterol
Other alimentary tract and metabolism products	Aug 2019 - Ongoing	General Health
Vitamins nos	Aug 2019 - Ongoing	General Health
Influenza vaccine	22 Sep 2020 (Study Day 48) - 22 Sep 2020 (Study Day 48)	Flu Prevention

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine hydrochloride; paracetamol	16 Oct 2020 (Study Day 72) - 16 Oct 2020 (Study Day 72)	COVID-Like Illness
Diphenhydramine hydrochloride; paracetamol	17 Oct 2020 (Study Day 73) - 17 Oct 2020 (Study Day 73)	COVID-Like Illness
Zinc acetate; zinc gluconate	17 Oct 2020 (Study Day 73) - 17 Oct 2020 (Study Day 73)	COVID-Like Illness
Diphenhydramine hydrochloride; paracetamol	18 Oct 2020 (Study Day 74) - 18 Oct 2020 (Study Day 74)	COVID-Like Illness
Zinc acetate; zinc gluconate	18 Oct 2020 (Study Day 74) - 18 Oct 2020 (Study Day 74)	COVID-Like Illness
Zinc acetate; zinc gluconate	19 Oct 2020 (Study Day 75) - 19 Oct 2020 (Study Day 75)	COVID-Like Illness

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Hordeolum	Grade 1/mild	Not related	29 Sep 2020 (Study Day 55) - 01 Oct 2020 (Study Day 57)
Suspected COVID-19	Grade 2/moderate	Not related	16 Oct 2020 (Study Day 72) - 21 Oct 2020 (Study Day 77)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US386-2141 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	08 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	06 Oct 2020 (Study Day 29)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cardio-Respiratory Arrest/Cardiopulmonary Arrest	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	09 Mar 2021 (Study Day 183) – 09 Mar 2021 (Study Day 183)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US386-2141, a 72-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 08 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 06 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 09 Mar 2021 (Study Day 183), 182 days after the first dose and 154 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of cardio-respiratory arrest. Action taken with the IP was not applicable. The event of cardiopulmonary arrest was considered to be fatal on 09 Mar 2021 (Study Day 183). The investigator assessed the event of cardio-respiratory arrest to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 09 Mar 2021 (Study Day 183), the participant experienced a fatal serious adverse event of cardio-respiratory arrest. On the same day, the participant was hospitalized for a cardiopulmonary arrest related to the underlying medical conditions of coronary artery disease and atrial fibrillation requiring implantable cardioverter defibrillator. Earlier in the day, the participant had a leak in the house and ran upstairs quickly to check. After the rapid movement, their heart was racing, and they collapsed and lost consciousness. They briefly regained consciousness but then quickly lost consciousness again. The participant had no other complaints, seizure activity, or "holding chest." Their family began bystander cardiopulmonary resuscitation (CPR) 2 minutes after they collapsed. The participant was transported to the emergency department (ED) via emergency medical services (EMS). The EMS reported that the participant's initial rhythm was pulseless electrical activity

(PEA), thus they placed a supraglottic airway device (i-gel) and put them on an automated active compression-decompression CPR device (LUCAS) to continue CPR. The EMS administered 5 rounds of epinephrine on route to the ED with no return of pulses; the participant's blood glucose was noted to be 165 mg/dL (reference range 70 to 99 mg/dL).

Upon arrival in the ED, the participant's rhythm was PEA and CPR was continued using the LUCAS. They were given 2 doses of calcium, 2 grams of magnesium, and 1 more dose of epinephrine in the ED with good effect; return of spontaneous circulation (ROSC) was obtained at 07:47. The participant was intubated. They had an episode of ventricular tachycardia and were defibrillated at 200 joules. The participant briefly lost pulses again at 07:53 and compressions were resumed, with return of their pulse at 07:55. Vital signs included blood pressure 126/76 mm Hg at 08:09, oxygen saturation 98% with FiO_2 100% at 07:58. Physical examination revealed ill appearance; cool skin; nonreactive pupils; no spontaneous circulation; i-gel in place, ventilated respirations; Glasgow coma scale included eyes open 1/4, verbal response 1/5, motor response 1/6, and total score 3; and the rest of the physical examination results were normal. Laboratory data at 08:36 included potassium 4.8 mmol/L (reference range 3.5 to 5.1 mmol/L), magnesium 3.8 mg/dL (high) (reference range 1.8 to 2.4 mg/dL), lactic acid 6.7 mmol/L (high) (reference range 0.5 to 2.2 mmol/L), carbon dioxide 17 mmol/L (low) (reference range 24 to 31 mmol/L), anion gap 14.8 mmol/L (reference range 10 to 20 mmol/L), blood glucose 342 mg/dL (high) (reference range 70 to 99 mg/dL), calcium 16.1 mg/dL (high) (reference range 8.5 to 10.5 mg/dL), total creatine kinase 385 U/L (high) (reference 12 to 191 U/L), troponin-I 0.35 ng/mL (reference range 0 to 0.40 ng/mL). Blood gas results showed pH 7.10 (low) (reference range 7.35 to 7.45), pCO_2 45 mm Hg (reference range 35 to 45 mm Hg), pO_2 271 mm Hg (high) (reference range 80 to 100 mm Hg), bicarbonate 14 mmol/L (low) (reference range 22 to 26 mmol/L), base excess -15 mmol/L (low) (reference range -2 to 2 mmol/L), arterial oxygen saturation 99.8% (reference range 95 to 100%). Electrocardiogram (ECG) at 08:54 showed ventricular rate 63 beats per minute (bpm) with electronic ventricular pacemaker replacing sinus rhythm. A COVID-19 nucleic acid amplification test was negative. There was no clear history to suggest pulmonary coronary thrombosis, and the participant's ECG was without signs of ST-elevation myocardial infarction (STEMI). The participant was not hypothermic. They had hyperkalemia, which was possible given their response to the administration of calcium. There were no signs on bedside ultrasound of cardiac tamponade or tension pneumothorax. There was no reported serious trauma to suggest hypovolemic shock and blood loss. The participant did not have any history that would suggest ingestion, and nothing in their history to suggest severe acidosis. Laboratory test result data were notable for a mild troponin elevation (value and time of test not reported) after initially being negative; this elevation could have been due to CPR for non-STEMI. The participant was acidotic with lactic acidosis, suspected to be secondary to tissue hypoperfusion in the setting of arrest. The participant had hyperglycemia, however, with only a mild gap that could be explained

by their lactic acidosis. Treatment included cefepime IV in sterile water and vancomycin/sodium chloride IV. Vital signs at 09:32 included blood pressure 185/77 mm Hg, peripheral pulse rate 69 bpm, respiratory rate 19 breaths per minute, and oxygen saturation 100%.

Laboratory data at 10:13 included potassium 5.4 mmol/L (high), magnesium 3.3 mg/dL (high), lactic acid 2.8 mmol/L (high), carbon dioxide 20 mmol/L (low), anion gap 11.4 mmol/L, blood glucose 263 mg/dL (high), calcium 13.6 mg/dL, and troponin-I 5.28 ng/mL (high). Blood gas showed pH 7.21 (low), pCO_2 40 mm Hg, pO_2 330 mm Hg (high), bicarbonate 17 mmol/L (low), base excess -11 mmol/L (low), and arterial oxygen saturation 99.9%. A computerized tomography scan of the brain without contrast revealed no intracranial abnormality, mild deep white matter periventricular ischemic changes, and paranasal sinus mucosal disease. After speaking with the participant's outpatient cardiologist, the participant was transferred to the intensive care unit (ICU) and started on sedation and cooling. A review of systems was not obtained due to the participant's clinical condition and altered mental status. Blood gas at 12:33 showed pH 7.19 (low), pCO_2 44 mm Hg, pO_2 159 mm Hg (high), bicarbonate 17 mmol/L (low), base excess -11 mmol/L (low), and arterial oxygen saturation 99%. Laboratory data at 12:35 included potassium 5.4 mmol/L (high), magnesium 3.1 mg/dL (high), carbon dioxide 18 mmol/L (low), anion gap 15.4 mmol/L, blood glucose 259 mg/dL (high), calcium 13.3 mg/dL (high), and troponin-I 17.80 ng/mL (high). Laboratory data at 12:36 included lactic acid 1.6 mmol/L. An ECG at 13:13 showed no ST-T changes, normal PR and QRS intervals, and a paced rhythm without any significant ST segment discordance or concordance. Vital signs at 13:15 included temperature 95.1°F degrees (rectal), apical heart rate 69 bpm, respiratory rate 10 breaths per minute (low), systolic blood pressure 163 mm Hg (high). Physical examination revealed no acute distress; the participant was not alert and oriented; respirations nonlabored with support of ventilator; heart rate normal; altered level of consciousness (comatose), abnormal movements: myoclonus and tics (bilateral upper and lower extremities); not cooperative; and palliative performance scale 10 (no reference range provided). Electrophysiology was consulted for interrogation of the participant's defibrillator, as the participant had what appeared to be ventricular tachycardia without activation of their implanted defibrillator. Vital signs included pulse 66 bpm, rhythm A-sensed biventricular paced, blood pressure 107/79 mm Hg, and oxygen saturation 98% (intubated). Interrogation of biventricular pacemaker defibrillator revealed normal function, and no arrhythmias were noted, with only an episode of nonsustained ventricular tachycardia. Transthoracic echocardiogram with Doppler was performed that showed left ventricular ejection fraction of 25 to 30%, blood pressure 133/80 mm Hg, and heart rate 66 bpm. Laboratory data at 16:27 included blood glucose 232 mg/dL (high). Laboratory data at 17:58 included troponin-I 26.40 ng/mL (high). Blood gas included pH 7.17 (low), pCO_2 43 mm Hg, pO_2 83 mm Hg, bicarbonate 16 mmol/L (low), base excess -12 mmol/L (low), and arterial oxygen saturation 92.7% (low).

After being transferred to the ICU, the participant again had a cardiac arrest that evening. A code blue was called, and CPR was started. The participant received advanced cardiac life support medications with brief ROSC; unfortunately, the participant's systolic blood pressure remained in the 40s mm Hg despite maximum norepinephrine/dopamine/epinephrine drips. Vasoactive and bicarbonate drips were ordered. The participant subsequently went into ventricular fibrillation with defibrillation given as well as their own automatic implantable cardioverter-defibrillator (AICD) firing. Maximal efforts were given with bicarbonate/epinephrine/calcium chloride pushes and subsequent defibrillations as well as the participant's own defibrillator firing. The participant deteriorated to sustained ventricular fibrillation with their own AICD firing. No heart sounds could be auscultated. There were no palpable pulses via the right carotid artery or right radial artery. Asystole was shown on telemetry with flat A-line. When the ventilator was turned off, there was no chest rise and no auscultated breath sounds. The participant's pupils were fixed and dilated. The time of death was declared to be 19:52.

Action taken with the study IP was not applicable in response to the event, as the participant had already received both scheduled doses.

The participant died on 09 Mar 2021 (Study Day 183). The causes of death reported were ventricular fibrillation arrest and nonischemic cardiomyopathy.

The investigator assessed the event, cardio-respiratory arrest secondary to ventricular fibrillation, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-038453	Cardio-respiratory arrest

Study Completion/Discontinuation

On 09 Mar 2021 (Study Day 183), the participant discontinued from the study due to death. On 09 Mar 2021 (Study Day 183), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type 2	1990 - Ongoing
Hypothyroidism	Hypothyroidism	1995 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Atrial fibrillation	Atrial fibrillation	2004 - Ongoing
Cardiac failure congestive	Congestive heart failure	2004 - Ongoing
Hypertension	Hypertension	2004 - Ongoing
Coronary artery disease	Coronary artery disease	2005 - Ongoing
Insomnia	Insomnia	2008 - Ongoing
Seasonal allergy	Seasonal allergies	2010 - Ongoing
Gout	Gout of both feet	2016 - Ongoing
Peptic ulcer	Peptic ulcer	2016 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	1995 - Ongoing	Hypothyroidism
Carvedilol	2004 - Ongoing	Congestive Heart Failure
Furosemide	2004 - Ongoing	Congestive Heart Failure
Acetylsalicylic acid	2005 - Ongoing	Coronary Artery Disease
Atorvastatin	2005 - Ongoing	Coronary Artery Disease
Alprazolam	2008 - Ongoing	Insomnia
Allopurinol	2016 - Ongoing	Gout
Colecalciferol	2016 - Ongoing	Supplement
Insulin	2016 - Ongoing	Diabetes Mellitus Type 2
Pantoprazole	2016 - Ongoing	Peptic Ulcer
Vitamins nos	2016 - Ongoing	Supplement
Amiodarone	Jan 2020 - Ongoing	Atrial Fibrillation
Apixaban	Jan 2020 - 15 Jan 2021 (Study Day 130)	Atrial Fibrillation
Influenza vaccine inact split 3v	14 Aug 2020 (Study Day -25) - 14 Aug 2020 (Study Day -25)	Prophylaxis For Influenza
Paracetamol	08 Oct 2020 (Study Day 31) - 08 Oct 2020 (Study Day 31)	Injection Site Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US387-2318 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Completed Suicide/Suicide	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	16 Sep 2020 (Study Day 21) – 16 Sep 2020 (Study Day 21)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2318, a 62-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 27 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 16 Sep 2020 (Study Day 21), 20 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 5 serious adverse event of completed suicide. On 16 Sep 2020 (Study Day 21), the IP dose was discontinued due to death. The event of suicide was considered to be fatal on 16 Sep 2020 (Study Day 21). The investigator assessed the event of completed suicide to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 20 Aug 2020 (Study Day –8), per the participant's family, the participant complained of stomach pain, constipation, and diarrhea.

On 16 Sep 2020 (Study Day 21), the participant experienced a fatal serious adverse event of suicide. The participant's family member contacted the site and indicated that their parent had committed suicide. The participant seemed to have had an obsessive concern about cancer and was convinced that a recent episode of constipation requiring an emergency department evaluation was due to concerns of cancer and the participant was relieved to know that the constipation was not due to cancer. The participant was prescribed bisacodyl suppositories and polyethylene glycol/electrolytes PO. The participant's family member suspected that their parent may have

purchased diet pills prior to their death, which contained caffeine. The family member also believed that their parent suffered from depression and may have thought about suicide before.

Action taken with the study IP in response to the event was not applicable.

The participant died on 16 Sep 2020 (Study Day 21). Per the death certificate, the cause of death was reported as multiple blunt force injuries.

The investigator assessed the event, completed suicide, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000304	Suicide

Study Completion/Discontinuation

On 16 Sep 2020 (Study Day 21), the participant discontinued from the study due to death. On 16 Sep 2020 (Study Day 21), the participant died due to adverse event. An autopsy was not performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Rotator cuff repair	Left rotator cuff repair	1976 - 1976
Rotator cuff syndrome	Rotator cuff tear	1976 - 1976
Allergy to animal	Allergy to dogs	2010 - Ongoing
Umbilical hernia	Umbilical hernia	2017 - Ongoing
Umbilical hernia repair	Umbilical hernia repair	2017 - 2017
Constipation	Constipation	22 Aug 2020 (Study Day -5) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine hydrochloride	2010 - Ongoing	Dog Allergies

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US387-2496 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	09 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	09 Oct 2020 (Study Day 31)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Death/Death (Details Unknown)	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	17 Dec 2020 (Study Day 100) – 17 Dec 2020 (Study Day 100)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2496, a 61-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 09 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 09 Oct 2020 (Study Day 31). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 17 Dec 2020 (Study Day 100), 99 days after the first dose and 69 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of death. Action taken with the IP was not applicable. The event of death (details unknown) was considered to be fatal on 17 Dec 2020 (Study Day 100). The investigator assessed the event of death to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On an unspecified date, the participant was admitted to the hospital. No treatment information was reported by the investigator.

On an unspecified date in April 2021, the participant's emergency contact was called, and they reported that the participant had died in early December 2020.

Action taken with the study IP was not applicable in response to the event as the participant had already received both scheduled doses.

The participant died on 17 Dec 2020 (Study Day 100). The cause of death was unknown.

The investigator assessed the event, death (details unknown), as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-073412	Death

Study Completion/Discontinuation

On 17 Dec 2020 (Study Day 100), the participant discontinued from the study due to death. On 17 Dec 2020 (Study Day 100), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Intervertebral disc disorder	Damaged cervical disk	2004 - Ongoing
Musculoskeletal pain	Occasional generalized musculoskeletal pain	2004 - Ongoing
Neck pain	Occasional disc pain neck	2004 - Ongoing
Hypertension	Hypertension	2008 - Ongoing
Type 2 diabetes mellitus	Diabetes mellitus type ii	2014 - Ongoing
Asthma	Asthma	2016 - Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Oxycodone	2004 - Ongoing	Disc Pain
Enalapril	2008 - Ongoing	Hypertension
Gabapentin	2016 - Ongoing	Disc Pain
Metformin	2016 - Ongoing	Diabetes Mellitus Type Ii
Salbutamol	2016 - Ongoing	Asthma
Labetalol	2017 - Ongoing	Hypertension
Beclometasone dipropionate	2018 - Ongoing	Copd
Exenatide	Mar 2020 - 28 Sep 2020 (Study Day 20)	Diabetes Mellitus Type Ii

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Dulaglutide	05 Oct 2020 (Study Day 27) - Ongoing	Type Ii Dm
Acetylsalicylic acid	10 Oct 2020 (Study Day 32) - 12 Oct 2020 (Study Day 34)	Injection Site Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US393-2147 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	16 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Cardiac Failure Congestive/Worsening Of Congestive Heart Failure	SAE, AE leading to withdrawal from study vaccine	Grade 4	Not related	05 Oct 2020 (Study Day 20) – 11 Oct 2020 (Study Day 26)	Recovered/ resolved
Chronic Obstructive Pulmonary Disease/ Exacerbated COPD Caused By Worsening Congestive Heart Failure	SAE, AE leading to withdrawal from study vaccine	Grade 4	Not related	05 Oct 2020 (Study Day 20) – 05 Nov 2020 (Study Day 51)	Recovered /resolved
Atrial Fibrillation/ Atrial Fibrillation	SAE	Grade 3/ severe	Not related	29 Dec 2020 (Study Day 105) – Ongoing	Not recovered/ not resolved
Cardiac Failure Congestive/Worsening Of Congestive Heart Failure	SAE	Grade 4	Not related	29 Dec 2020 (Study Day 105) – Ongoing	Not recovered/ not resolved
Chronic Kidney Disease/Worsening Of Chronic Kidney Disease	SAE	Grade 4	Not related	29 Dec 2020 (Study Day 105) – Ongoing	Not recovered/ not resolved
Acute Respiratory Failure/Acute Respiratory Failure	SAE	Grade 4	Not related	03 Jan 2021 (Study Day 110) – Ongoing	Not recovered/ not resolved
Blood Loss Anaemia/Anemia Secondary To Gi Bleed	SAE	Grade 3/ severe	Not related	06 Jan 2021 (Study Day 113) – Ongoing	Not recovered/ not resolved
COVID-19/COVID 19	SAE	Grade 4	Not related	06 Jan 2021 (Study Day 113) – Ongoing	Not recovered/ not resolved
Gastrointestinal Haemorrhage/Gi Bleed Of Unknown Cause	SAE	Grade 3/ severe	Not related	06 Jan 2021 (Study Day 113) – Ongoing	Not recovered/ not resolved
COVID-19 Pneumonia/Pneumonia Secondary To COVID-19	SAE	Grade 3/ severe	Not related	08 Jan 2021 (Study Day 115) – Not reported	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US393-2147, an 84-year-old not Hispanic or Latino female, received the first dose of placebo in the right arm on 16 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 05 Oct 2020 (Study Day 20), 19 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of cardiac failure congestive. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of worsening of congestive heart failure lasted for 7 days, after which it was considered to be recovered/resolved on 11 Oct 2020 (Study Day 26). The investigator assessed the event of cardiac failure congestive to be not related to the IP.

On 05 Oct 2020 (Study Day 20), 19 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of chronic obstructive pulmonary disease. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of exacerbated copd caused by worsening congestive heart failure lasted for 32 days, after which it was considered to be recovered/resolved on 05 Nov 2020 (Study Day 51). The investigator assessed the event of chronic obstructive pulmonary disease to be not related to the IP.

On 29 Dec 2020 (Study Day 105), 104 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of atrial fibrillation. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of atrial fibrillation was considered to be ongoing. The investigator assessed the event of atrial fibrillation to be not related to the IP.

On 29 Dec 2020 (Study Day 105), 104 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of cardiac failure congestive. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of worsening of congestive heart failure was considered to be ongoing. The investigator assessed the event of cardiac failure congestive to be not related to the IP.

On 29 Dec 2020 (Study Day 105), 104 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of chronic kidney disease. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of worsening of chronic kidney disease was considered to be ongoing. The investigator assessed the event of chronic kidney disease to be not related to the IP.

On 03 Jan 2021 (Study Day 110), 109 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of acute respiratory failure. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of acute respiratory failure was considered to be ongoing. The investigator assessed the event of acute respiratory failure to be not related to the IP.

On 06 Jan 2021 (Study Day 113), 112 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of blood loss anaemia. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of anemia secondary to gi bleed was considered to be ongoing. The investigator assessed the event of blood loss anaemia to be not related to the IP.

On 06 Jan 2021 (Study Day 113), 112 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of COVID-19. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of COVID 19 was considered to be ongoing. The investigator assessed the event of COVID-19 to be not related to the IP.

On 06 Jan 2021 (Study Day 113), 112 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of gastrointestinal haemorrhage. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of gi bleed of unknown cause was considered to be ongoing. The investigator assessed the event of gastrointestinal haemorrhage to be not related to the IP.

On 08 Jan 2021 (Study Day 115), 114 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of covid-19 pneumonia. On 13 Oct 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of pneumonia secondary to COVID-19 was considered to be ongoing. The investigator assessed the event of covid-19 pneumonia to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 05 Oct 2020 (Study Day 20), the participant experienced serious adverse events (SAEs) of cardiac failure congestive and chronic obstructive pulmonary disease (COPD). On the same day, the participant experienced shortness of breath, nonradiating chest pressure without chills or fever and was hospitalized. The participant had complained of a dry cough for 2 weeks. An electrocardiogram (ECG) determined that the participant had worsening of congestive heart failure (CHF) which led to exacerbation of COPD. A chest x-ray was consistent with CHF. Both pulmonology and cardiology were consulted on admission. The participant's troponin was high at 19 ng/L (no reference range provided). A COVID-19 test result was negative. Treatment for exacerbated COPD included antibiotics IV and steroids IV. Treatment for worsening of CHF included nifedipine PO and furosemide IV. The participant's shortness of breath improved, but the participant developed an acute kidney injury. The kidney injury improved after stopping diuretics on an unreported date.

On 08 Oct 2020 (Study Day 23), an echocardiogram confirmed that the participant had worsening of their CHF which led to exacerbation of their COPD. On 09 Oct 2020 (Study Day 24), laboratory

test results included albumin 4.2, alkaline phosphatase 90, aspartate aminotransferase 36, alanine aminotransferase 23, and total bilirubin 0.2 (no units or reference range provided). On 10 Oct 2020 (Study Day 25), the participant's vital signs included temperature (oral) 36.6°C and laboratory test results included magnesium 2.6 (no units or reference range provided).

On 11 Oct 2020 (Study Day 26), the participant's vital signs included blood pressure 157/74 mm Hg, respiratory rate 18 breaths per minute, oxygen saturation 98%, temperature oral 36.4°C (97.5°F), and heart rate 74 beats/minute (bpm). Laboratory test results included white blood cell (WBC) 9.0, red blood cell 3.48, hemoglobin (Hgb) 10.6, hematocrit 34.0, mean corpuscular Hgb concentration 31.2, mean corpuscular volume 98, platelet count 195, blood sodium 141, blood potassium 4.7, chloride 102, carbon dioxide 29, blood glucose 138, blood urea nitrogen 85, creatinine 1.54, and calcium 9.0 (no units and reference ranges provided). On 11 Oct 2020 (Study Day 26), the participant was stable and discharged from the hospital on furosemide, metoprolol, nifedipine, prednisone, acetylsalicylic acid, cyanocobalamin, montelukast, glyceryl trinitrate, and pramipexole (all PO), and albuterol and albuterol-ipratropium (both inhaled). The participant was ambulating dependently without difficulty, and their dyspnea on exertion had improved. The participant's oxygen saturation was consistent with the participant's baseline oxygen saturation on oxygen at 3 L/min. The participant was advised to eat a heart healthy diet with less than 2 g of sodium per day and was scheduled for follow-up with primary care physician, nephrology, and pulmonology.

The study IP was discontinued in response to these events.

The event, cardiac failure congestive, was reported as resolved on 11 Oct 2020 (Study Day 26). The event, COPD, was reported as resolved on 05 Nov 2020 (Study Day 51).

The investigator assessed the events, COPD and cardiac failure congestive, as not related to study IP or study procedure.

From 05 Dec 2020 (Study Day 81) through 28 Dec 2020 (Study Day 104), the participant intermittently experienced mild to moderate chills; and mild to severe cough, shortness of breath, difficulty breathing, fatigue, and body aches. The participant denied muscle aches, headache, new loss of taste or smell, nasal congestion, runny nose, nausea, vomiting, diarrhea, and sore throat.

On 18 Dec 2020 (Study Day 94), a SARS-CoV-2 RT-PCR nasopharyngeal swab was negative.

On 29 Dec 2020 (Study Day 105), the participant experienced SAEs of atrial fibrillation, cardiac failure congestive, and chronic kidney disease and was hospitalized. The participant presented to an emergency department (ED) with a complaint of chest pain and palpitations. They reported that the pain started approximately 2 hours prior to the ED visit, and they took 10 tablets of acetylsalicylic acids (baby aspirin) for any alleviation of their pain. The participant's heart rate was up to 160 bpm. The participant felt better, and their chest pain improved after receiving

diltiazem IV and oxygen. The participant's oxygen saturation was >92%. In the ED, laboratory test results showed leukocytosis with WBC $14 \times 10^3/\mu L$, stable Hgb with chronic anemia, stable renal function (serum creatinine 1.4), an elevated brain natriuretic peptide (NT-pro BNP) of 45000 pg/mL, and elevated troponin T of 360 (previously 162) (no units or reference ranges provided). An ECG showed atrial fibrillation but no acute ischemia. A chest x-ray showed mild pulmonary congestion with trace left pleural effusion and atelectasis, but there was no sign of pneumonia. The participant's glomerular filtration rate ranged from 10 to 40 mL/min/1.73m^2 (reference range ≥69 mL/min/1.73m^2). The participant was treated with apixaban IV for worsening CHF, epoetin alfa PO for chronic kidney disease, and amiodarone PO for worsening CHF. No medications were given for atrial fibrillation. The participant had progressed to acute renal failure and required dialysis starting on 29 Dec 2020 (Study Day 105).

On 01 Jan 2021 (Study Day 108), the participant was given regadenoson IV for worsening of CHF. The participant's troponin ranged from 40 to 300 ng/L (reference range ≥11 ng/L).

On 03 Jan 2021 (Study Day 110), the participant experienced an SAE of acute respiratory failure and had a positive test result for COVID-19. The participant was given guaifenesin PO and *Plantago ovata* PO for pneumonia caused by COVID-19, and 3 L of oxygen.

On 04 Jan 2021 (Study Day 111), the participant was given ondansetron IV and tiotropium inhalation for COVID-19. A computerized tomography (CT) scan of the chest without contrast and a retro-peritoneal ultrasound were performed.

On 06 Jan 2021 (Study Day 113), the participant experienced SAEs of blood loss anemia, COVID-19, and gastrointestinal (GI) hemorrhage. On the same day, a nurse practitioner from the hospital requested an emergency unblinding due to the participant contracting COVID-19 in the hospital. On the same day, the participant Hgb values continued to drop. Blood transfusions were given on 07 Jan 2021 (Study Day 114), 08 Jan 2021 (Study Day 115), 11 Jan 2021 (Study Day 118), 16 Jan 2021 (Study Day 123), and 19 Jan 2021 (Study Day 126).

On 08 Jan 2021 (Study Day 115), the participant developed an SAE of COVID-19 pneumonia found in both lungs. The participant completed remdesivir IV and dexamethasone IV on an unreported date. The participant was seen by pulmonology and cardiology specialists and was on high flow oxygen that was eventually weaned to 4 L. On an unreported date, the participant developed chest pain. No catheterization intervention was performed as the participant required anticoagulation and there was a high bleeding risk with their significant drop in Hgb. The participant was also too high risk for an endoscopy.

During this hospitalization, 3 additional chest x-rays were performed on 06 Jan 2021 (Study Day 113), 08 Jan 2021 (Study Day 115), and 18 Jan 2021 (Study Day 125); a CT scan of the chest and abdomen and a nuclear medicine myocardial perfusion scan were performed on 01 Jan 2021

(Study Day 108); and echocardiograms were performed on 30 Dec 2020 (Study Day 106), 01 Jan 2021 (Study Day 108), 07 Jan 2021 (Study Day 114), and 17 Jan 2021 (Study Day 124); no results were reported for any of these tests.

Action taken with study IP in response to the events was not applicable.

The events, cardiac failure congestive, chronic kidney disease, atrial fibrillation, acute respiratory failure, blood loss anemia, COVID-19, COVID-19 pneumonia, and GI hemorrhage, were reported as not resolved.

The investigator assessed the events, CHF, chronic kidney disease, atrial fibrillation, acute respiratory failure, blood loss anemia, COVID-19, COVID-19 pneumonia, and GI hemorrhage, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001757	Atrial fibrillation
MOD-2021-001757	Cardiac failure congestive
MOD-2021-001757	Chronic kidney disease
MOD-2021-001757	Acute respiratory failure
MOD-2021-001757	Blood loss anaemia
MOD-2021-001757	COVID-19
MOD-2021-001757	Gastrointestinal haemorrhage
MOD-2021-001757	COVID-19 pneumonia
MOD-2020-000422	Chronic obstructive pulmonary disease
MOD-2020-000422	Cardiac failure congestive

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug intolerance	Ambien intolerance	Not reported - Ongoing
Drug intolerance	Coticosteroid intolerance	Not reported - Ongoing
Cardiac murmur	Heart murmur - unknown etiology	(b) (6) 1936 - Ongoing
Asthma	Asthma	1939 - Ongoing
Migraine	Migraines	1945 - 2010
Uterine leiomyoma	Fibroid tumors	1950 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Allergy to morphine, codeine, and demerol	1956 - Ongoing
Drug hypersensitivity	Penicillin allergy	1956 - Ongoing
Drug hypersensitivity	Statin medication allergy	1956 - Ongoing
Hypertension	Hypertension	1956 - Ongoing
Nephrolithiasis	Kidney stones	1959 - 1959
Pneumonia	Lung infection	1960 - 1960
Blood cholesterol increased	High cholesterol	1984 - Ongoing
Hepatic enzyme increased	Liver enzyme elevation	1984 - 1984
Postmenopause	Post-menopausal	1989 - Ongoing
Chronic kidney disease	Chronic kidney disease	2000 - Ongoing
Upper limb fracture	Left arm fracture	2000 - 2000
Cataract	Bilateral cataracts	2009 - 2009
Renal cyst	Bilateral kidney cysts benign	2010 - Ongoing
Restless legs syndrome	Restless leg syndrome	2010 - Ongoing
Obesity	Obesity	2011 - Ongoing
Cardiac failure congestive	Congestive heart failure	2014 - Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	2014 - Ongoing
Emphysema	Emphysema	2014 - Ongoing
Poor peripheral circulation	Poor circulation in legs	2014 - Ongoing
Upper limb fracture	Left shoulder fracture	2015 - 2015
Deafness bilateral	Bilateral hearing loss	2016 - Ongoing
Fluid retention	Bilateral ankle/ feet fluid retention	2016 - Ongoing
Urinary incontinence	Bladder incontinence	2016 - Ongoing
Intestinal ischaemia	Ischemic bowel disease	2017 - 2017
Myalgia	Muscle aches	2017 - Ongoing
Seasonal allergy	Seasonal allergies	2017 - Ongoing
Transfusion	Blood transfusion	2017 - 2017
Abdominal hernia	Abdominal hernia	2019 - Ongoing
Herpes zoster	Shingles	2019 - 2019
Constipation	Constipation	2020 - Ongoing
Anaemia	Anemia	Apr 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	2000 - Ongoing	Emphysema/COPD/Asthma
Metoprolol	2010 - Ongoing	Hypertension
Pramipexole	2016 - Ongoing	Restless Leg Syndrome
Fluticasone	2017 - Ongoing	Seasonal Allergies

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Umeclidinium bromide; vilanterol trifenatate	2017 - Ongoing	Emphysema
Ipratropium; salbutamol	2018 - Ongoing	Emphysema/ COPD/Asthma
Vitamin B12 NOS	2018 - Ongoing	Vitamin Supplement
Docusate sodium	Apr 2020 - Ongoing	Constipation
Ferrous sulfate	Apr 2020 - Ongoing	Anemia
Hydralazine	May 2020 - Ongoing	Hypertension
Verapamil	May 2020 - Ongoing	Hypertension
Furosemide	Sep 2020 - Ongoing	Bilateral Ankle/ Feet fluid Retention
Potassium	Sep 2020 - Ongoing	Bilateral Ankle/ Feet fluid Retention
Chest x ray*	05 Oct 2020 (Study Day 20) - 05 Oct 2020 (Study Day 20)	Adverse Event
ECG*	05 Oct 2020 (Study Day 20) - 05 Oct 2020 (Study Day 20)	Adverse Event
Pramipexole dihydrochloride	05 Oct 2020 (Study Day 20) - Ongoing	Restless Leg Syndrome
Electrocardiogram*	07 Oct 2020 (Study Day 22) - 07 Oct 2020 (Study Day 22)	Adverse Event
Echocardiogram*	08 Oct 2020 (Study Day 23) - 08 Oct 2020 (Study Day 23)	Adverse Event
Glyceryl trinitrate	11 Oct 2020 (Study Day 26) - Ongoing	Worsening CHF
Nifedipine	11 Oct 2020 (Study Day 26) - Ongoing	Worsening Congestive Heart Failure
Doxycycline hyclate	22 Dec 2020 (Study Day 98) - Ongoing	Unknown Indication
Prednisone	22 Dec 2020 (Study Day 98) - Ongoing	COPD
Amiodarone	29 Dec 2020 (Study Day 105) - Ongoing	Worsening CHF
Apixaban	29 Dec 2020 (Study Day 105) - 06 Jan 2021 (Study Day 113)	Worsening CHF
Chest x-ray*	29 Dec 2020 (Study Day 105) - 29 Dec 2020 (Study Day 105)	Adverse Event
Dialysis*	29 Dec 2020 (Study Day 105) - 29 Dec 2020 (Study Day 105)	Adverse Event
Diltiazem	29 Dec 2020 (Study Day 105) - Ongoing	Worsening CHF
Echocardiogram*	29 Dec 2020 (Study Day 105) - 29 Dec 2020 (Study Day 105)	Adverse Event
Electrocardiogram*	29 Dec 2020 (Study Day 105) - 29 Dec 2020 (Study Day 105)	Adverse Event
Epoetin alfa	29 Dec 2020 (Study Day 105) - Ongoing	Chronic Kidney Disease
Glucagon	29 Dec 2020 (Study Day 105) - Ongoing	Diabetes Mellitus
Glucose	29 Dec 2020 (Study Day 105) - Ongoing	Diabetes Mellitus Type 2
Insulin	29 Dec 2020 (Study Day 105) - Ongoing	Diabetes Mellitus Type 2
Methylprednisolone	29 Dec 2020 (Study Day 105) - Ongoing	Worsening COPD
Pantoprazole	29 Dec 2020 (Study Day 105) - 06 Jan 2021 (Study Day 113)	GERD
Electrocardiogram*	30 Dec 2020 (Study Day 106) - 30 Dec 2020 (Study Day 106)	Adverse Event
Electrocardiogram*	01 Jan 2021 (Study Day 108) - 01 Jan 2021 (Study Day 108)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Nuclear medicine myocardial perfusion scan*	01 Jan 2021 (Study Day 108) - 01 Jan 2021 (Study Day 108)	Adverse Event
Regadenoson	01 Jan 2021 (Study Day 108) - 01 Jan 2021 (Study Day 108)	Worsening Of CHF
Guaifenesin	03 Jan 2021 (Study Day 110) - Ongoing	Pneumonia Caused By COVID
Oxygen	03 Jan 2021 (Study Day 110) - 21 Jan 2021 (Study Day 128)	Acute Respiratory Failure
Plantago ovata	03 Jan 2021 (Study Day 110) - Ongoing	Pneumonia Caused By COVID
CT chest without contrast*	04 Jan 2021 (Study Day 111) - 04 Jan 2021 (Study Day 111)	Adverse Event
Ondansetron	04 Jan 2021 (Study Day 111) - Ongoing	COVID-19
Retro-peritoneal ultrasound*	04 Jan 2021 (Study Day 111) - 04 Jan 2021 (Study Day 111)	Adverse Event
Tiotropium	04 Jan 2021 (Study Day 111) - Ongoing	COVID-19
Chest x-ray*	06 Jan 2021 (Study Day 113) - 06 Jan 2021 (Study Day 113)	Adverse Event
Blood transfusion*	07 Jan 2021 (Study Day 114) - 07 Jan 2021 (Study Day 114)	Adverse Event
Electrocardiogram*	07 Jan 2021 (Study Day 114) - 07 Jan 2021 (Study Day 114)	Adverse Event
Blood transfusion*	08 Jan 2021 (Study Day 115) - 08 Jan 2021 (Study Day 115)	Adverse Event
Chest x-ray*	08 Jan 2021 (Study Day 115) - 08 Jan 2021 (Study Day 115)	Adverse Event
Blood transfusion*	11 Jan 2021 (Study Day 118) - 11 Jan 2021 (Study Day 118)	Adverse Event
Blood transfusion*	16 Jan 2021 (Study Day 123) - 16 Jan 2021 (Study Day 123)	Adverse Event
Electrocardiogram*	17 Jan 2021 (Study Day 124) - 17 Jan 2021 (Study Day 124)	Adverse Event
Chest x-ray*	18 Jan 2021 (Study Day 125) - 18 Jan 2021 (Study Day 125)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Cough	Grade 1/mild	Not related	20 Sep 2020 (Study Day 5) - 27 Sep 2020 (Study Day 12)
Diarrhoea	Grade 1/mild	Not related	20 Sep 2020 (Study Day 5) - 27 Sep 2020 (Study Day 12)
Dyspnoea	Grade 1/mild	Not related	20 Sep 2020 (Study Day 5) - 27 Sep 2020 (Study Day 12)
Fatigue	Grade 1/mild	Not related	20 Sep 2020 (Study Day 5) - 27 Sep 2020 (Study Day 12)
Headache	Grade 1/mild	Related	20 Sep 2020 (Study Day 5) - 27 Sep 2020 (Study Day 12)
Myalgia	Grade 1/mild	Related	20 Sep 2020 (Study Day 5) - 27 Sep 2020 (Study Day 12)
Nasal Congestion	Grade 1/mild	Not related	20 Sep 2020 (Study Day 5) - 27 Sep 2020 (Study Day 12)
Rhinorrhoea	Grade 1/mild	Not related	20 Sep 2020 (Study Day 5) - 27 Sep 2020 (Study Day 12)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Acute Kidney Injury	Grade 2/moderate	Not related	05 Oct 2020 (Study Day 20) - 11 Oct 2020 (Study Day 26)
Gastrooesophageal Reflux Disease	Grade 2/moderate	Not related	15 Jan 2021 (Study Day 122) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US393-2246 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	13 Oct 2020 (Study Day 1)
Second Dose of Vaccine:	10 Nov 2020 (Study Day 29)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Death/Death-Pending Autopsy*	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	02 Jan 2021 (Study Day 82) – 02 Jan 2021 (Study Day 82)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

* According to information from the safety database, the preferred term was "Illicit drug intoxication" and the verbatim term was "death due to toxic effects of fentanyl".

Participant US393-2246, a 37-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 13 Oct 2020 (Study Day 1). The second dose was administered in the left arm on 10 Nov 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Jan 2021 (Study Day 82), 81 days after the first dose and 53 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of death. Action taken with the IP was not applicable. The event of death-pending autopsy was considered to be fatal on 02 Jan 2021 (Study Day 82). The investigator assessed the event of death to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 02 Jan 2021 (Study Day 82), the participant experienced a fatal serious adverse event of illicit drug intoxication. On that day, the participant was found unresponsive. The emergency personnel responded and death was pronounced on scene. The participant was last known alive on the evening of 01 Jan 2021 (Study Day 81) and had no complaints at that time. No trauma or homicide was suspected. Per the participant's family member, the participant was not ill or had recent hospitalization.

On 04 Jan 2021 (Study Day 84), an autopsy was performed. The cause of death was listed as toxic effects of fentanyl. The manner of death was accident and the injury occurred via use of fentanyl. Internal examination findings included toxic effects of fentanyl (pulmonary edema and congestion; moderate cerebral edema), obesity (cardiomegaly, 475 g, with biventricular dilation; cholesterosis), nephrosclerosis, and polycystic ovaries. Postmortem examination showed no significant trauma. Postmortem toxicology revealed fentanyl as well as hydroxyzine, venlafaxine, nicotine, and caffeine. Based on the findings, reported circumstances of death, and all other investigative information received, it was the medical examiner's opinion that the cause of death was the toxic effects of fentanyl.

Samples of cardiac blood, iliac blood, vitreous fluid, and urine were collected and submitted for toxicological analysis. Positive findings from the toxicology report (from iliac blood sample) included despropionyl fentanyl positive (report limit 0.10 ng/mL), caffeine positive (report limit 0.20 µg/mL), cotinine positive (report limit 200 ng/mL), nicotine positive (report limit 100 ng/mL), venlafaxine 24 ng/mL (report limit 20 ng/mL), O-desmethylvenlafaxine 290 ng/mL (report limit 20 ng/mL), hydroxyzine 31 ng/mL (report limit 5.0 ng/mL), fentanyl 16 ng/mL (report limit 0.10 ng/mL), and norfentanyl 7.7 ng/mL (report limit 0.20 ng/mL). The examination of the specimens submitted did not reveal any additional positive findings of toxicological significance.

Action taken with the study IP in response to the event was not applicable, as the participant had already received both scheduled doses.

The participant died on 02 Jan 2021 (Study Day 82). The cause of death was reported as toxic effects of fentanyl.

The investigator assessed the event, toxicity to various agents, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001844	Illicit drug intoxication

Study Completion/Discontinuation

On 02 Jan 2021 (Study Day 82), the participant discontinued from the study due to death. On 02 Jan 2021 (Study Day 82), the participant died due to adverse event. An autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma	Not reported - Ongoing
Lactose intolerance	Lactose intolerance	1993 - Ongoing
Female sterilisation	Bilateral tubal ligation	22 Nov 2011 (Study Day -3248) - 22 Nov 2020 (Study Day 41)
Anxiety	Anxiety	2015 - Ongoing
Depression	Depression	2015 - Ongoing
Post-traumatic stress disorder	Post traumatic stress disorder	2015 - Ongoing
Psoriasis	Psoriasis - elbows	2015 - Ongoing
Psoriasis	Psoriasis - knees	2015 - Ongoing
Umbilical hernia	Umbilical hernia	2018 - 2018
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disorder	Dec 2019 - Ongoing
Nephrolithiasis	Kidney stone	Dec 2019 - Dec 2019
Nephrolithiasis	Kidney stone	Feb 2020 - Feb 2020
Hypothyroidism	Hypothyroidism	Sep 2020 - Ongoing
Cervicitis	Cervicitis	02 Oct 2020 (Study Day -11) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Gabapentin	Jun 2020 - Ongoing	Post Traumatic Stress Disorder
Hydroxyzine	Jun 2020 - Ongoing	Anxiety
Venlafaxine	Jun 2020 - Ongoing	Post Traumatic Stress Disorder, Anxiety
Fluticasone propionate; salmeterol xinafoate	25 Sep 2020 (Study Day -18) - Ongoing	Chronic Obstructive Pulmonary Disease
Levothyroxine	25 Sep 2020 (Study Day -18) - Ongoing	Hypothyroidism
Salbutamol sulfate	25 Sep 2020 (Study Day -18) - Ongoing	Chronic Obstructive Pulmonary Disease
Doxycycline	02 Oct 2020 (Study Day -11) - 16 Oct 2020 (Study Day 4)	Cervicitis
Metronidazole	02 Oct 2020 (Study Day -11) - 16 Oct 2020 (Study Day 4)	Cervicitis
Paracetamol	02 Oct 2020 (Study Day -11) - Ongoing	Cervical Infection Pain
Levonorgestrel	26 Oct 2020 (Study Day 14) - Ongoing	Birth Control

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 2/moderate	Related	10 Nov 2020 (Study Day 29) - 21 Nov 2020 (Study Day 40)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3378065

Participant Number:	US395-2094 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	15 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	14 Oct 2020 (Study Day 30)
Reason for Narrative:	Death, SAE, Severe COVID-19, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ SARS-Cov-2 Infection	Death, SAE, COVID-19, AE leading to study discontinuation	Grade 5	Not related	24 Dec 2020 (Study Day 101) – 30 Jan 2021 (Study Day 138)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.
The severity was based on investigator assessment, but severe COVID-19 narratives were adjudicated as severe by the adjudication committee.

Participant US395-2094, a 57-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 15 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 14 Oct 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Dec 2020 (Study Day 101), 100 days after the first dose and 71 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of covid-19. Action taken with the IP was not applicable. The event of SARS-CoV-2 infection lasted for 38 days, after which it was considered to be fatal on 30 Jan 2021 (Study Day 138). The investigator assessed the event of covid-19 to be not related to the IP.

Severe COVID-19 Details

On Study Day 1, a nasal swab tested by RT-PCR was negative for SARS-CoV-2. On Study Day 29, 14 Oct 2020, a nasal swab tested by RT-PCR was negative for SARS-CoV-2.

On 24 Dec 2020 (Study Day 101), the participant was tested for SARS-CoV-2 with the following results: Coronavirus SARS-CoV-2 RT-PCR (Study Qualitative): positive.

The participant experienced the following symptoms:

COVID-19 Symptom Log:

Symptom Date	Symptom	Result
01 Jan 2020 (Study Day -258)	Cough	Mild
01 Jan 2020 (Study Day -258)	Shortness of Breath	Mild
22 Dec 2020 (Study Day 99)	Cough	Mild
22 Dec 2020 (Study Day 99)	Shortness of Breath	Mild
23 Dec 2020 (Study Day 100)	Cough	Mild
23 Dec 2020 (Study Day 100)	Shortness of Breath	Mild
24 Dec 2020 (Study Day 101)	New Loss of Smell	Mild
24 Dec 2020 (Study Day 101)	O2 Saturation (%)	89
24 Dec 2020 (Study Day 101)	Runny Nose (Rhinorrhea)	Mild
24 Dec 2020 (Study Day 101)	Temperature (°F)	39.0
25 Dec 2020 (Study Day 102)	Cough	Mild
25 Dec 2020 (Study Day 102)	New Loss of Smell	Mild
25 Dec 2020 (Study Day 102)	Shortness of Breath	Mild
26 Dec 2020 (Study Day 103)	Cough	Mild
26 Dec 2020 (Study Day 103)	New Loss of Smell	Mild
26 Dec 2020 (Study Day 103)	Shortness of Breath	Mild
27 Dec 2020 (Study Day 104)	Cough	Mild
27 Dec 2020 (Study Day 104)	New Loss of Smell	Mild
27 Dec 2020 (Study Day 104)	Shortness of Breath	Mild
28 Dec 2020 (Study Day 105)	Cough	Mild
28 Dec 2020 (Study Day 105)	New Loss of Smell	Mild
28 Dec 2020 (Study Day 105)	Shortness of Breath	Mild
29 Dec 2020 (Study Day 106)	Cough	Mild
29 Dec 2020 (Study Day 106)	New Loss of Smell	Mild
29 Dec 2020 (Study Day 106)	Shortness of Breath	Mild
30 Dec 2020 (Study Day 107)	Cough	Mild
30 Dec 2020 (Study Day 107)	New Loss of Smell	Mild
30 Dec 2020 (Study Day 107)	Shortness of Breath	Mild
31 Dec 2020 (Study Day 108)	Cough	Mild
31 Dec 2020 (Study Day 108)	Shortness of Breath	Mild
02 Jan 2021 (Study Day 110)	Cough	Mild
02 Jan 2021 (Study Day 110)	Diarrhea	Mild
02 Jan 2021 (Study Day 110)	Shortness of Breath	Mild
03 Jan 2021 (Study Day 111)	Cough	Mild
03 Jan 2021 (Study Day 111)	Diarrhea	Mild
03 Jan 2021 (Study Day 111)	Shortness of Breath	Mild
04 Jan 2021 (Study Day 112)	Cough	Mild
04 Jan 2021 (Study Day 112)	Diarrhea	Mild
04 Jan 2021 (Study Day 112)	Shortness of Breath	Mild
05 Jan 2021 (Study Day 113)	Cough	Mild
05 Jan 2021 (Study Day 113)	Diarrhea	Mild
05 Jan 2021 (Study Day 113)	Shortness of Breath	Mild

Symptom Date	Symptom	Result
06 Jan 2021 (Study Day 114)	Cough	Mild
06 Jan 2021 (Study Day 114)	Shortness of Breath	Mild
07 Jan 2021 (Study Day 115)	Cough	Mild
07 Jan 2021 (Study Day 115)	Shortness of Breath	Mild
08 Jan 2021 (Study Day 116)	Cough	Mild
08 Jan 2021 (Study Day 116)	Shortness of Breath	Mild
09 Jan 2021 (Study Day 117)	Cough	Mild
10 Jan 2021 (Study Day 118)	Cough	Mild
10 Jan 2021 (Study Day 118)	Temperature (°F)	102.2
11 Jan 2021 (Study Day 119)	Cough	Mild
12 Jan 2021 (Study Day 120)	Cough	Mild
12 Jan 2021 (Study Day 120)	Shortness of Breath	Mild
13 Jan 2021 (Study Day 121)	Temperature (°F)	39.1
14 Jan 2021 (Study Day 122)	Cough	Mild
14 Jan 2021 (Study Day 122)	Shortness of Breath	Severe
15 Jan 2021 (Study Day 123)	O2 Saturation (%)	85
15 Jan 2021 (Study Day 123)	Shortness of Breath	Mild
26 Jan 2021 (Study Day 134)	O2 Saturation (%)	91

The participant had the following indications of Severe COVID-19 infection:

Severe COVID-19 Indication Log:

Dates	Severity Indication	Result
19 Jan 2021 (Study Day 127)	Oxygen Saturation	74%
13 Jan 2021 (Study Day 121)	Respiratory Rate	46 breaths/min
24 Dec 2020 - 24 Dec 2020 (Study Day 101-101)	Clinical Evidence of Pneumonia	Yes
24 Dec 2020 - 13 Jan 2021 (Study Day 101-121)	Non-Invasive Ventilation	Yes
24 Dec 2020 - 24 Dec 2020 (Study Day 101-101)	Radiographical Evidence of Pneumonia	Yes
13 Jan 2021 - 19 Jan 2021 (Study Day 121-127)	High-Flow Oxygen	Yes
13 Jan 2021 - 30 Jan 2021 (Study Day 121-138)	Respiratory Rates >= 30 per Minute	Yes
19 Jan 2021 - 19 Jan 2021 (Study Day 127-127)	Acute Respiratory Distress Syndrome (ARDS)	Yes
19 Jan 2021 - 30 Jan 2021 (Study Day 127-138)	Admission to an intensive care unit due to SARS-CoV-2	Yes
19 Jan 2021 - 30 Jan 2021 (Study Day 127-138)	Mechanical Ventilation	Yes
19 Jan 2021 - 30 Jan 2021 (Study Day 127-138)	Oxygen Saturation of SpO2 <= 93% on room air at sea level	Yes
19 Jan 2021 - 19 Jan 2021 (Study Day 127-127)	Respiratory Failure	Yes

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 24 Dec 2020 (Study Day 101), the participant experienced a serious adverse event of COVID-19. The participant tested positive for SARS-CoV-2 by RT-PCR nasopharyngeal swab and presented to the emergency department with cough, shortness of breath with chest pain, and fever. The participant was hypoxic with an oxygen saturation of 89%, heart rate of 108 beats per

minute, and respiratory rate of 24 breaths per minute, and they required 2 L of oxygen to maintain adequate oxygenation. The participant was given paracetamol PO for the fever, and dexamethasone IV was started because COVID-19 was suspected. A chest x-ray and computerized tomography (CT) scan were consistent with COVID-19. A cardiac work-up was performed for the chest pain; the participant's troponin result was negative, and no ischemia was seen on the electrocardiogram. Test results for influenza A/B and respiratory syncytial virus were all negative. Additional treatment included azithromycin PO, ceftriaxone IV, and enoxaparin SC. Over the course of the hospitalization, the participant needed up to 15 L/min oxygen via a non-rebreather. The participant completed a 5-day course of remdesivir IV and a 10-day course of dexamethasone IV.

On 05 Jan 2021 (Study Day 113), the participant had a CT angiography pulmonary done with unreported results.

On 13 Jan 2021 (Study Day 121), the participant had worsening shortness of breath, with tachypnea of over 40 breaths per minute, and a worsening chest x-ray, and was started on vancomycin IV and piperacillin/tazobactam IV for new sepsis due to hospital-acquired pneumonia. On the same day, the participant was triaged to the surgical intensive care unit for acute hypoxic respiratory insufficiency requiring high-flow nasal cannula of 60 L of 100% oxygen. The hospital course was complicated by *Clostridium difficile* infection, for which the participant received vancomycin PO.

From 24 Dec 2020 (Study Day 101) through 15 Jan 2021 (Study Day 123), the participant intermittently experienced mild cough, shortness of breath, new loss of smell, runny nose, and diarrhea. The participant denied experiencing chills, difficulty breathing, muscle aches, body aches, fatigue, headache, new loss of taste, nasal congestion, nausea, vomiting, or sore throat.

On 19 Jan 2021 (Study Day 127), the participant was intubated.

On 26 Jan 2021 (Study Day 134), palliative care was consulted.

On 27 Jan 2021 (Study Day 135), a bronchoscopy was performed emergently for potential airway occlusion; however, the participant's airways were found to be patent.

On 28 Jan 2021 (Study Day 136), the participant received a blood transfusion.

On 30 Jan 2021 (Study Day 138) at 02:07, the participant died. The cause of death was reported as COVID-19. As updated by the investigator, it was highly unlikely that an autopsy would be performed. There was no known COVID-19 exposure prior to this event.

Action taken with study IP was not applicable in response to the event, as the participant had already received both scheduled doses.

The investigator assessed the event, COVID-19, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-001545	SARS-CoV-2 infection

Study Completion/Discontinuation

On 30 Jan 2021 (Study Day 138), the participant discontinued from the study due to death. On 30 Jan 2021 (Study Day 138), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Diabetes mellitus	Diabetes	2000 - Ongoing
Intervertebral disc protrusion	Neck hernia	2008 - Ongoing
Blood cholesterol increased	High cholesterol	2010 - Ongoing
Hypertension	Hypertension	2010 - Ongoing
Arthralgia	Left knee pain	27 Feb 2020 (Study Day -201) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	2010 - Ongoing	Hypertension
Simvastatin	2015 - Ongoing	High Cholesterol
Metformin hydrochloride; sitagliptin	2019 - Ongoing	Diabetes
Meloxicam	Mar 2020 - Ongoing	Left Knee Pain
Influenza vaccine	23 Aug 2020 (Study Day -23) - 23 Aug 2020 (Study Day -23)	Flu Prevention
Hydrocortisone	09 Oct 2020 (Study Day 25) - 09 Oct 2020 (Study Day 25)	Left Knee Pain
Paracetamol	24 Dec 2020 (Study Day 101) - 30 Jan 2021 (Study Day 138)	SARS-CoV-2 Infection
X-ray of chest*	24 Dec 2020 (Study Day 101) - 24 Dec 2020 (Study Day 101)	Adverse Event
Azithromycin	25 Dec 2020 (Study Day 102) - 29 Dec 2020 (Study Day 106)	SARS-CoV-2 Infection
Ceftriaxone	25 Dec 2020 (Study Day 102) - 25 Dec 2020 (Study Day 102)	SARS-CoV-2 Infection
CT of chest*	25 Dec 2020 (Study Day 102) - 25 Dec 2020 (Study Day 102)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Dexamethasone	25 Dec 2020 (Study Day 102) - 25 Dec 2020 (Study Day 102)	SARS-CoV-2 Infection
Dexamethasone	25 Dec 2020 (Study Day 102) - 03 Jan 2021 (Study Day 111)	SARS-CoV-2 Infection
Enoxaparin	25 Dec 2020 (Study Day 102) - 30 Jan 2021 (Study Day 138)	SARS-CoV-2 Infection
Remdesivir	25 Dec 2020 (Study Day 102) - 29 Dec 2020 (Study Day 106)	SARS-CoV-2 Infection
Vancomycin	04 Jan 2021 (Study Day 112) - 17 Jan 2021 (Study Day 125)	Clostridium Difficile
CT angiography pulmonary*	05 Jan 2021 (Study Day 113) - 05 Jan 2021 (Study Day 113)	Adverse Event
Piperacillin sodium; tazobactam sodium	13 Jan 2021 (Study Day 121) - 22 Jan 2021 (Study Day 130)	Hospital Acquired Pneumonia
Vancomycin	13 Jan 2021 (Study Day 121) - 22 Jan 2021 (Study Day 130)	Hospital Acquired Pneumonia
X-ray of the chest*	13 Jan 2021 (Study Day 121) - 13 Jan 2021 (Study Day 121)	Adverse Event
Intubation*	19 Jan 2021 (Study Day 127) - 19 Jan 2021 (Study Day 127)	Adverse Event
X-ray of the chest*	26 Jan 2021 (Study Day 134) - 26 Jan 2021 (Study Day 134)	Adverse Event
Bronchoscopy*	27 Jan 2021 (Study Day 135) - 27 Jan 2021 (Study Day 135)	Adverse Event
Blood transfusion*	28 Jan 2021 (Study Day 136) - 28 Jan 2021 (Study Day 136)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Clostridium Difficile Infection	Grade 2/moderate	Not related	03 Jan 2021 (Study Day 111) - 17 Jan 2021 (Study Day 125)
Pneumonia	Grade 2/moderate	Not related	13 Jan 2021 (Study Day 121) - 22 Jan 2021 (Study Day 130)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US397-2045 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 29)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Coronary Artery Disease/Death Suspected Due To Coronary Artery Disease	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	03 Dec 2020 (Study Day 99) – 03 Dec 2020 (Study Day 99)	Fatal
Diabetic Complication/ Death Probably To Complications Of Diabetes Mellitus	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	03 Dec 2020 (Study Day 99) – 03 Dec 2020 (Study Day 99)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US397-2045, a 62-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 24 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Dec 2020 (Study Day 99), 98 days after the first dose and 70 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of coronary artery disease. The IP dose was not changed due to the death suspected due to coronary artery disease. The event of death suspected due to coronary artery disease was considered to be fatal on 03 Dec 2020 (Study Day 99). The investigator assessed the event of coronary artery disease to be not related to the IP.

On 03 Dec 2020 (Study Day 99), 98 days after the first dose and 70 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of diabetic complication. Action taken with the IP was not applicable. The event of death probably to complications of diabetes mellitus was considered to be fatal on 03 Dec 2020 (Study Day 99). The investigator assessed the event of diabetic complication to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 24 Nov 2020 (Study Day 90), the safety call for Study Day 85 was completed. This was the last contact the site had with the participant.

On an unspecified day in December 2020, a safety call for Study Day 119 was attempted but the participant did not answer the phone. The coordinator searched the internet for the participant's name and an obituary report was found confirming they had died on 03 Dec 2020 (Study Day 99). The emergency contact person was called but did not answer, and a voice message was left to call the site back.

On 04 Jan 2021 (Study Day 131), the investigator reported that the participant had severe type 2 diabetes and had the complication of a foot ulcer for the previous 4 years. They had recently undergone a foot surgery. On 21 Oct 2020 (Study Day 56), they had been diagnosed with diabetic gastroparesis (nonserious adverse event). The participant's emergency contact person returned the call to the investigator and reported that the participant was found deceased in their home on 03 Dec 2020 (Study Day 99). A "light autopsy" confirmed the cause of death was complications of diabetes mellitus and coronary artery disease.

Action taken with the study IP was not applicable as the participant had already received both scheduled doses.

The participant died on 03 Dec 2020 (Study Day 99). The cause of death was reported on 06 Jan 2021 (Study Day 133) as diabetic complication and coronary artery disease.

The investigator assessed the events, fatal diabetic complication and fatal coronary artery disease, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001305	Coronary artery disease
MOD-2020-001305	Diabetic complication

Study Completion/Discontinuation

On 03 Dec 2020 (Study Day 99), the participant discontinued from the study due to death. On 03 Dec 2020 (Study Day 99), the participant died due to adverse event. An autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Type 2 diabetes mellitus	Diabetic mellitus type 2	1993 - Ongoing
Hypertension	Hypertension	2014 - Ongoing
Blood cholesterol increased	High cholesterol	2016 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Diabetic foot	Diabetic ulcer (l) foot	2016 - Ongoing
Ligament rupture	Torn ACL right knee	2017 - 2017
Localised infection	Infected toes right foot	Jan 2017 - Jan 2017
Diabetic neuropathy	L foot diabetic neuropathy	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Insulin aspart	1993 - Ongoing	Diabetes Mellitus Ii
Insulin glargine	1993 - Ongoing	Diabetes Mellitus Ii
Lisinopril	2014 - Ongoing	Hypertension
Atorvastatin	2016 - Ongoing	Hypercholesterolemia
Gabapentin	2018 - Ongoing	Left Foot Diabetic Neuropathy
Ibuprofen	2018 - Ongoing	Left Foot Diabetic Neuropathy
Omeprazole	21 Oct 2020 (Study Day 56) - Ongoing	Diabetic Gastroparesis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Diabetic Gastroparesis	Grade 1/mild	Not related	21 Oct 2020 (Study Day 56) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US382-2443 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine in Part A:	28 Sep 2020 (Study Day 1)
Second Dose of Vaccine in Part A:	27 Oct 2020 (Study Day 30)
Reason for Narrative:	Death, SAE, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Abdominal Pain/Abdominal Pain	SAE	Grade 3/ severe	Not related	04 Dec 2020 (Study Day 68) – 14 Dec 2020 (Study Day 78)	Recovered/ resolved
Pulmonary Mass/Right Lower Lobe Pulmonary Nodule Concerning For Primary Lung Malignancy	Death, SAE, AE leading to study discontinuation	Grade 5	Not related	11 Jan 2021 (Study Day 106) – 11 Feb 2021 (Study Day 137)	Fatal

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US382-2443, a 75-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 28 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 27 Oct 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 04 Dec 2020 (Study Day 68), 67 days after the first dose and 38 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of abdominal pain. Action taken with the IP was not applicable. The event of abdominal pain lasted for 11 days, after which it was considered to be recovered/resolved on 14 Dec 2020 (Study Day 78). The investigator assessed the event of abdominal pain to be not related to the IP.

On 11 Jan 2021 (Study Day 106), 105 days after the first dose and 76 days after the second dose of the IP, the participant experienced a Grade 5 serious adverse event of pulmonary mass. Action taken with the IP was not applicable. The event of right lower lobe pulmonary nodule concerning for primary lung malignancy lasted for 32 days, after which it was considered to be fatal on 11 Feb 2021 (Study Day 137). The investigator assessed the event of pulmonary mass to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 04 Dec 2020 (Study Day 68), the participant experienced a serious adverse event of abdominal pain. The participant presented to the emergency department and was admitted with complaints of

leg swelling, abdominal pain, nausea, poor appetite, and vomiting that lasted for 4 days. The participant's troponin was 34 (no unit and reference range reported). A computerized tomography of the abdomen and pelvis with contrast showed partial imaging of a pulmonary nodule in the right lower lobe; minimal pleural effusions with atelectatic change; passive congestion of liver; status of post-cholecystectomy; stable cyst of 5.8 cm in size in the right lobe of liver; small amount of free intraperitoneal fluid in the pelvis; and stable small cystic lesion at the head of pancreas. A 2-view chest x-ray showed chronic obstructive pulmonary disease with emphysematous changes with no localized infiltrates. Positron emission tomography scan showed a hypermetabolic lesion of 1.6 × 1.8 cm in size in the right lower lung, a hypermetabolic lesion of 2.5 × 2 cm in size in the hepatic flexure of the colon near the liver cyst but separate, increased uptake in the left adrenal gland suggestive of hyperplasia.

On 10 Dec 2020 (Study Day 74), a single-view chest x-ray showed hyperinflation of the lungs consistent with emphysema; a partial consolidation at both lung bases and small bilateral pleural effusions, possibly pneumonia; and a cardiac silhouette within normal limits. Relevant laboratory test results included red blood cell (RBC) 3.60 × 10^6/μL (reference range 3.72 to 4.93 × 10^6/μL), hemoglobin (Hgb) 10.0 g/dL (reference range 11.5 to 15.0 g/dL), and hematocrit (Hct) 31% (reference range 34 to 44%).

On 12 Dec 2020 (Study Day 76), the COVID-19 test was negative. The participant's abdominal pain with nausea and vomiting was felt to be multifocal with fluid overload from cor pulmonale and possibly surgery related to the colonic mass. Treatment for the event included furosemide IV.

On 13 Dec 2020 (Study Day 77), relevant laboratory test results included RBC 3.7 × 10^6/μL, Hgb 10.2 g/dL, Hct 32%, chloride 97 mmol/L (reference range 98 to 107 mmol/L), carbon dioxide (CO_2) 42 mmol/L (reference range 21 to 31 mmol/L), and anion gap 4 mmol/L (reference range 3 to 15 mmol/L).

On 14 Dec 2020 (Study Day 78), relevant laboratory test results included chloride 94 mmol/L, CO_2 44 mmol/L, and anion gap 2 mmol/L. The participant was discharged from the hospital in stable condition.

Action taken with the study IP in response to the event of abdominal pain was not applicable, as the participant had already received both scheduled doses.

The event, abdominal pain, was considered resolved on 14 Dec 2020 (Study Day 78).

On 11 Jan 2021 (Study Day 106), the participant experienced a fatal SAE of pulmonary mass. The participant had a pulmonary nodule in the right lower lobe, concerning for primary lung malignancy.

On 11 Feb 2021 (Study Day 137), the participant's spouse reported that the participant died, and the cause of death was likely the participant's recent diagnosis of possible right lower lobe pulmonary nodule concerning for primary lung malignancy.

Action taken with the study IP in response to the event of pulmonary mass was not applicable, as the participant had already received both scheduled doses.

The participant died on 11 Feb 2021 (Study Day 137). The cause of death was likely the pulmonary mass.

The investigator assessed the events, abdominal pain and pulmonary mass, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001303	Abdominal pain
MOD-2021-014149	Pulmonary mass

Study Completion/Discontinuation

On 11 Feb 2021 (Study Day 137), the participant discontinued from the study due to death. On 11 Feb 2021 (Study Day 137), the participant died due to adverse event. It is unknown if an autopsy was performed.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Female sterilisation	Tubal ligation	1976 - Ongoing
Myopia	Nearsighted	1990 - Ongoing
Intervertebral disc protrusion	Herniated disc	1997 - 2014
Chronic obstructive pulmonary disease	Copd	2006 - Ongoing
Chronic obstructive pulmonary disease	Shortness of breath related to copd	2006 - Ongoing
Pneumonia	Pneumonia	2008 - 2012
Dysphagia	Trouble swallowing	2010 - Ongoing
Seasonal allergy	Seasonal allergies	2010 - Ongoing
Sinusitis	Sinus infections	2010 - Ongoing
Anxiety	Anxiety	2014 - Ongoing
Atrial fibrillation	Atrial fibillilation	2014 - Ongoing
Intervertebral disc operation	Back surgery for herniated disc	2014 - Ongoing
Dyspepsia	Heartburn	2015 - Ongoing
Dyspepsia	Indigestion	2015 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Gastrointestinal ulcer haemorrhage	Ulcers - gi hemmorhage	2015 - 2015
Gastrooesophageal reflux disease	Acid reflux	2015 - Ongoing
Hypertension	Hypertension	2016 - Ongoing
Increased tendency to bruise	Easy brusing	2017 - Ongoing
Osteoporosis	Osteoporosis	2018 - Ongoing
Hypertonic bladder	Overactive bladder	2019 - Ongoing
Urinary incontinence	Urinary incontinence	2019 - Ongoing
Constipation	Frequent constipation	Mar 2020 - Ongoing
Irritable bowel syndrome	Irritable bowel syndrome	Mar 2020 - Ongoing
Chest discomfort	Chest discomfort	Jun 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	2010 - Ongoing	Copd, Shortness Of Breath
Digoxin	2014 - Ongoing	Atrial Fibrillation
Duloxetine	2014 - Ongoing	Anxiety
Diphtheria vaccine toxoid; pertussis vaccine acellular; tetanus vaccine toxoid	28 May 2014 (Study Day -2315) - 28 May 2014 (Study Day -2315)	Vaccine
Levosalbutamol	2015 - Ongoing	Copd
Pantoprazole	2015 - Ongoing	Acid Reflux
Vitamins nos	2015 - Ongoing	Supplement
Budesonide	2016 - Ongoing	Copd
Diltiazem	2016 - Ongoing	Hypertension
Pneumococcal vaccine	14 Apr 2016 (Study Day -1628) - 14 Apr 2016 (Study Day -1628)	Vaccine
Acetylsalicylic acid	2017 - Ongoing	Supplement
Dextromethorphan hydrobromide; guaifenesin	2017 - Ongoing	Seasonal Allergies
Montelukast	2017 - Ongoing	Shortness Of Breath, Copd
Denosumab	2018 - Ongoing	Osteoporosis
Ipratropium bromide	2018 - Ongoing	Seasonal Allergies
Calcium carbonate	2019 - Ongoing	Supplement
Cod-liver oil	2019 - Ongoing	Supplement
Colecalciferol	2019 - Ongoing	Supplement
Formoterol fumarate	2019 - Ongoing	Copd
Prednisone	2019 - Ongoing	Copd
Vitamin e nos	2019 - Ongoing	Supplement
Influenza vaccine	15 Oct 2019 (Study Day -349) - 15 Oct 2019 (Study Day -349)	Vaccine

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Linaclotide	2020 - Ongoing	Constipation
Revefenacin	Jan 2020 - Ongoing	Copd
Macrogol 3350	Feb 2020 - Ongoing	Constipation
Furosemide	04 Dec 2020 (Study Day 68) - 05 Dec 2020 (Study Day 69)	Abdominal Pain And Swollen Feet
Oxygen	04 Dec 2020 (Study Day 68) - Ongoing	Copd
Metoprolol	06 Dec 2020 (Study Day 70) - Ongoing	Hypertension
Furosemide	12 Dec 2020 (Study Day 76) - 12 Dec 2020 (Study Day 76)	Abdominal Pain
Prednisone	14 Dec 2020 (Study Day 78) - 19 Dec 2020 (Study Day 83)	Copd

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Pain In Extremity	Grade 2/moderate	Not related	14 Nov 2020 (Study Day 48) - 15 Nov 2020 (Study Day 49)
Peripheral Swelling	Grade 2/moderate	Not related	02 Dec 2020 (Study Day 66) - 08 Dec 2020 (Study Day 72)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US300-2122 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	07 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	04 Sep 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	21 Nov 2020 (Study Day 107) – 21 Nov 2020 (Study Day 107)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US300-2122, a 25-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 07 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 04 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	07 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	04 Sep 2020 (Study Day 29)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 21 Nov 2020 (Study Day 107), the participant had a positive pregnancy test. The participant reported using condoms as a means of contraception. The first day of the participant's last menstrual period was on 19 Oct 2020 (Study Day 74). The estimated date of conception was unknown, and the due date was estimated as 28 Jul 2021 (Study Day 356).

Action taken with study IP in response to the event of pregnancy was not applicable, as the participant had already received both scheduled doses.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of drug exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-026742	Drug exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Headache	Intermittent headache	2010 - Ongoing
Depression	Depression	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	2010 - Ongoing	Intermittent Headaches
Sertraline hydrochloride	Dec 2019 - Ongoing	Depression
Phentermine	24 Aug 2020 (Study Day 18) - 21 Nov 2020 (Study Day 107)	Weight Gain
Influenza vaccine	24 Nov 2020 (Study Day 110) - 24 Nov 2020 (Study Day 110)	Influenza Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Weight Increased	Grade 1/mild	Not related	24 Aug 2020 (Study Day 18) - Ongoing
Myalgia	Grade 1/mild	Related	29 Aug 2020 (Study Day 23) - 29 Aug 2020 (Study Day 23)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US303-2323 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	22 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 34)
Reason for Narrative:	Pregnancy, SAE

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Vaccine exposure before pregnancy/Vaccine exposure before pregnancy	Pregnancy	Nonserious	Not applicable	25 Jan 2021 (Study Day 157) – 02 Feb 2021 (Study Day 165)	Recovered/ resolved
Abortion Spontaneous/Spontaneous Abortion Of Pregnancy	SAE, Pregnancy	Grade 3/ severe	Not related	02 Feb 2021 (Study Day 165) – 02 Feb 2021 (Study Day 165)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US303-2323, a 19-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 22 Aug 2020 (Study Day 1). The second dose was administered in the right arm on 24 Sep 2020 (Study Day 34). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Feb 2021 (Study Day 165), 164 days after the first dose and 131 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of abortion spontaneous. Action taken with the IP was not applicable. The event of spontaneous abortion of pregnancy lasted for 1 day, after which it was considered to be recovered/resolved on 02 Feb 2021 (Study Day 165). The investigator assessed the event of abortion spontaneous to be not related to the IP.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	22 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	24 Sep 2020 (Study Day 34)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 25 Jan 2021 (Study Day 157), the participant had a positive pregnancy test. The first day of the participant's last menstrual period was unknown due to a history of irregular menstrual cycles. The estimated date of conception was reported as an unknown day in November 2020 and the estimated due date was reported as not applicable.

On an unknown date, the participant experienced bloating and nausea that were symptoms of the pregnancy. The participant also had some upper respiratory symptoms (not specified) and saw their primary care provider who performed a COVID-19 test, which was negative, and a pregnancy test, which was positive.

On 02 Feb 2021 (Study Day 165), the participant experienced a serious adverse event of spontaneous abortion as evidenced by heavy cramping and bleeding. The participant contacted an obstetrician/gynecologist who confirmed a spontaneous miscarriage had occurred at an estimated 12 weeks of gestation. There was no history of any trauma prior to the event. The participant was blood type A– and was given a one-time dose of anti-D immunoglobulin IM on 03 Feb 2021 (Study Day 166). The participant reported that there had not been an ultrasound prior to the miscarriage and that they were not using contraception.

Action taken with study IP in response to the events, vaccine exposure before pregnancy and abortion spontaneous, was not applicable, as the participant had already received both scheduled doses.

The events, vaccine exposure before pregnancy and spontaneous abortion, were reported as resolved on 02 Feb 2021 (Study Day 165).

The investigator's assessment of the relationship between the event of vaccine exposure before pregnancy and the study IP or study procedure was not reported. The investigator assessed the event, spontaneous abortion, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the pregnancy and serious event are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-020781	Vaccine exposure before pregnancy
MOD-2021-020781	Abortion spontaneous

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	2001 - Ongoing
Menstruation irregular	Irregular menstral cycle	2014 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Drospirenone; ethinylestradiol	2018 - Ongoing	Birth Control
Anti-D immunoglobulin	03 Feb 2021 (Study Day 166) - 03 Feb 2021 (Study Day 166)	Postpartum Rh Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Upper Respiratory Tract Infection	Grade 1/mild	Not related	15 Jan 2021 (Study Day 147) - 23 Jan 2021 (Study Day 155)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US304-2177 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	10 Sep 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Exposure during pregnancy/Drug exposure during pregnancy	Pregnancy	Nonserious	Not applicable	10 Sep 2020 (Study Day 29) – 10 Sep 2020 (Study Day 29)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US304-2177, a 22-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 13 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 10 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The participant had at least one positive test result for pregnancy, with first positive pregnancy reported on 22 Oct 2020 (Study Day 71).

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	13 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	10 Sep 2020 (Study Day 29)	Negative
Choriogonadotropin Beta	22 Oct 2020 (Study Day 71)	Positive

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 15 Oct 2020 (Study Day 64), the participant had a positive pregnancy test. The first day of the participant's last menstrual period was unknown as the participant was postpartum. The participant reported using condoms as a contraceptive method during the postpartum period. The estimated date of conception was 29 Aug 2020 (Study Day 17) and the estimated due date was 22 May 2021 (Study Day 283).

On 22 Oct 2020 (Study Day 71), a urine pregnancy test was positive.

On an unspecified date, an ultrasound confirmed twin gestation with a due date of 22 May 2021 (Study Day 283).

The participant had completed the study IP dosing and therefore, no action was taken with the study IP as a result of the pregnancy.

The outcome of the event, exposure during pregnancy, was not reported.

The investigator's assessment of the relationship between the event of exposure during pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000511	Exposure during pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	11 Sep 2020 (Study Day 30) - 12 Sep 2020 (Study Day 31)	Headache And Pain At Injection Site
Paracetamol	11 Sep 2020 (Study Day 30) - 12 Sep 2020 (Study Day 31)	Headache And Pain At Injection Site
Influenza vaccine	19 Nov 2020 (Study Day 99) - 19 Nov 2020 (Study Day 99)	Influenza Prevention
Paracetamol	21 Nov 2020 (Study Day 101) - 24 Nov 2020 (Study Day 104)	Viral Syndrome Of Unknown Etiology
Fluoxetine	13 Jan 2021 (Study Day 154) - Ongoing	Depression
Ciprofloxacin hydrochloride; dexamethasone	19 Mar 2021 (Study Day 219) - Ongoing	Eczema-Right External Ear Canal
Pantoprazole	19 Mar 2021 (Study Day 219) - Ongoing	Gastroesophageal Reflux Disease

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Seasonal Allergy	Grade 1/mild	Not related	01 Sep 2020 (Study Day 20) - Ongoing
Viral Infection	Grade 1/mild	Not related	31 Oct 2020 (Study Day 80) - 10 Nov 2020 (Study Day 90)
Viral Infection	Grade 1/mild	Not related	16 Nov 2020 (Study Day 96) - 24 Nov 2020 (Study Day 104)
Depression	Grade 1/mild	Not related	13 Jan 2021 (Study Day 154) - Ongoing
Gestational Diabetes	Grade 1/mild	Not related	09 Feb 2021 (Study Day 181) - Ongoing
Eczema	Grade 1/mild	Not related	19 Mar 2021 (Study Day 219) - Ongoing
Gastrooesophageal Reflux Disease	Grade 1/mild	Not related	19 Mar 2021 (Study Day 219) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US305-2020 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	30 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	26 Aug 2020 (Study Day 28)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	04 Dec 2020 (Study Day 128) – 14 Jan 2021 (Study Day 169)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US305-2020, a 26-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 30 Jul 2020 (Study Day 1). The second dose was administered in the left arm on 26 Aug 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	30 Jul 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	26 Aug 2020 (Study Day 28)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 04 Jan 2021 (Study Day 159), the participant had a positive pregnancy test. The first day of the participant's last menstrual period was on 20 Nov 2020 (Study Day 114). The estimated date of conception was 04 Dec 2020 (Study Day 128) and the estimated due date was 27 Aug 2021 (Study Day 394).

On 06 Jan 2021 (Study Day 161), the participant experienced a serious adverse event of abortion spontaneous and was seen in the emergency department for first trimester vaginal bleeding. An ultrasound scan showed a single intrauterine pregnancy with no fetal pole or cardiac activity. A laboratory test result for beta human chorionic gonadotropin was 7367 (no units and reference range provided). It was unknown if the participant had a history of subfertility or if the participant had prenatal care, prenatal testing, or investigations done.

Action taken with study IP in response to drug exposure before pregnancy and abortion spontaneous was not applicable, as the participant had already received both scheduled doses.

On 14 Jan 2021 (Study Day 169), the participant's vaginal bleeding had resolved. The participant was 6 weeks pregnant, and had a spontaneous abortion not otherwise specified, which had resolved as well.

The investigator's assessment of the relationship between the events of drug exposure before pregnancy and abortion spontaneous and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002171	Drug exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsilectomy	2006 - 2006
Appendicectomy	Appendectomy	2014 - 2014
Anxiety	Anxiety	26 Aug 2019 (Study Day -339) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	26 Aug 2020 (Study Day 28) - 26 Aug 2020 (Study Day 28)	Headache After 2nd Injection
Venlafaxine	26 Aug 2020 (Study Day 28) - Ongoing	Anxiety

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US309-2099 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	09 Sep 2020 (Study Day 31) – 09 Sep 2020 (Study Day 31)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US309-2099, a 19-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 10 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was positive.

Pregnancy Details

The participant had at least one positive test result for pregnancy, with first positive pregnancy reported on 09 Sep 2020 (Study Day 31).

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	10 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	09 Sep 2020 (Study Day 31)	Positive
Choriogonadotropin Beta	05 Nov 2020 (Study Day 88)	Positive

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 07 Sep 2020 (Study Day 29), the participant had a positive urine pregnancy test, prior to their second dose. An additional urine pregnancy test was performed, which was also positive. Additionally, a blood sample was collected to confirm pregnancy, which was positive. An ultrasound was scheduled. The date of the participant's last menstrual period was 25 Jul 2020 (Study Day –17). The estimated date of conception and estimated due date were not reported.

Action taken with the study IP was withdrawn as a result of the pregnancy.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of drug exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000282	Drug exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	10 Aug 2020 (Study Day 1) - 10 Aug 2020 (Study Day 1)	Pain At Injection Site
Vitamins nos	Jan 2021 - Ongoing	Abnormal/Unhealthy Pregnancy

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US317-2349 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	26 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Ectopic Pregnancy/Ectopic Pregnancy	SAE, Pregnancy	Grade 2/ moderate	Not related	06 Oct 2020 (Study Day 42) – 13 Oct 2020 (Study Day 49)	Recovered/ resolved
Spontaneous abortion/ spontaneous abortion	Pregnancy	Grade 2/ moderate	Not related	31 Aug 2020 (Study Day 6) - 13 Oct 2020 (Study Day 49)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US317-2349, a 35-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 26 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Oct 2020 (Study Day 42), 41 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate serious adverse event of ectopic pregnancy. On 22 Sep 2020 (Study Day 28), the IP dose was discontinued due to pregnancy. The event of ectopic pregnancy ended in miscarriage lasted for 8 days, after which it was considered to be recovered/resolved on 13 Oct 2020 (Study Day 49). The investigator assessed the event of ectopic pregnancy to be not related to the IP.

Pregnancy Details

The participant had at least one positive test result for pregnancy, with first positive pregnancy reported on 23 Sep 2020 (Study Day 29).

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	26 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	23 Sep 2020 (Study Day 29)	Positive

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 22 Sep 2020 (Study Day 28), the participant had a positive home urine pregnancy test. The first day of the participant's last menstrual period was on 25 Aug 2020 (Study Day –1). The estimated date of conception was 31 Aug 2020 (Study Day 6), and the estimated due date was 26 May 2021 (Study Day 274). The participant reported using condoms with spermicide and ethinylestradiol/norgestimate as dual means of contraception.

On 23 Sep 2020 (Study Day 29), the participant arrived at the clinic and reported the pregnancy. The participant reported that they missed their menses that month and decided to perform a urine pregnancy test the day prior, which was positive. Urine was collected and a pregnancy test was performed, which was positive. Additionally, blood was collected for a qualitative/quantitative test and sent out to the local laboratory for final confirmation, which resulted positive.

Study IP was discontinued as a result of the pregnancy and the second dose was not administered.

On 06 Oct 2020 (Study Day 42), the participant experienced serious adverse events of ectopic pregnancy and spontaneous abortion. The participant noted having a small amount of vaginal bleeding.

On 07 Oct 2020 (Study Day 43), the participant presented to the emergency department with complaint of vaginal bleeding and abdominal pain since the previous day. The participant had some brown spotting from the vagina in the previous week, which resolved during the weekend, but started again with a brighter red color on the morning of 07 Oct 2020 (Study Day 43). The participant denied passing any clots. The participant's vital signs were stable. An obstetric ultrasound showed a uterus empty of a gestational sac and no uterine masses were identified, with normal ovaries. Laboratory results showed normal prothrombin time of 12.1 seconds, normal international normalized ratio of 1.05, normal partial thromboplastin time of 37.2 seconds, low hematocrit level of 36.7%, high mean platelet volume of 10.7 fL, and high quantitative human chorionic gonadotropin of 1292.30 mIU/mL (no reference ranges reported); "an antibody screen was negative". The participant was hemodynamically stable, feeling much better, and was discharged home with information regarding ectopic pregnancy, threatened miscarriage, and miscarriage. Upon discharge, the participant was instructed to not take part in any physical activity, have pelvic rest, no sexual intercourse for 2 weeks, and stay hydrated.

Action taken with study IP was not applicable for the events, ectopic pregnancy and spontaneous abortion.

The events, ectopic pregnancy and spontaneous abortion, were reported as resolved on 13 Oct 2020 (Study Day 49).

The investigator assessed the events, ectopic pregnancy and spontaneous abortion, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000360	Ectopic pregnancy
MOD-2020-000360	Abortion spontaneous

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Headache	Headaches	2008 - Ongoing
Back pain	Back pain	2017 - Ongoing
Caesarean section	Cesarean section	04 Apr 2017 (Study Day -1240) - 04 Apr 2017 (Study Day -1240)
Ovarian cyst	Right ovarian cyst benign	Aug 2019 - Sep 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ethinylestradiol; norgestimate	Aug 2019 - 22 Sep 2020 (Study Day 28)	Contraception
Paracetamol	09 Sep 2020 (Study Day 15) - 09 Sep 2020 (Study Day 15)	Back Pain
Rest observation*	06 Oct 2020 (Study Day 42) - 06 Oct 2020 (Study Day 42)	Adverse Event
Ethinylestradiol; norgestimate	15 Nov 2020 (Study Day 82) - Ongoing	Contraception

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Abortion Spontaneous	Grade 2/moderate	Not related	06 Oct 2020 (Study Day 42) - 13 Oct 2020 (Study Day 49)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US318-2151 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	04 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	01 Sep 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy.	Pregnancy	Nonserious	Not applicable	02 Sep 2020 (Study Day 30) – 02 Sep 2020 (Study Day 30)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US318-2151, a 41-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 04 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 01 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The participant had at least one positive test result for pregnancy, with first positive pregnancy reported on 29 Sep 2020 (Study Day 57).

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	04 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	01 Sep 2020 (Study Day 29)	Negative
Choriogonadotropin Beta	29 Sep 2020 (Study Day 57)	Positive

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 28 Sep 2020 (Study Day 56), the participant had a positive urine home pregnancy test. The first day of the participant's last menstrual period was on 19 Aug 2020 (Study Day 16). The estimated date of conception was on 02 Sep 2020 (Study Day 30) and the estimated due date as 26 May 2021 (Study Day 296). The participant was using condom with spermicide for contraception and this was not a planned pregnancy. The participant began taking prenatal vitamins PO, cyanocobalamin PO, and folic acid PO.

On 29 Sep 2020 (Study Day 57), the participant had a positive urine pregnancy test and scheduled their obstetrics and gynecology appointment for 12 Oct 2020 (Study Day 70).

The participant had completed the study IP dosing and therefore, no action was taken with the study IP as a result of the pregnancy.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of drug exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the nonserious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000380	Drug exposure before pregnancy

Study Completion/Discontinuation

On 24 Mar 2021 (Study Day 233), the participant discontinued from the study due to pregnancy.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	1999 - Ongoing
Gastric bypass	Gastric bypass	2009 - 2009
Seasonal allergy	Seasonal allergies	2010 - Ongoing
Myopia	Bilateral myopia	2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine hydrochloride	2010 - Ongoing	Seasonal Allergies
Vitamins NOS	May 2020 - 27 Sep 2020 (Study Day 55)	Health Maintenance
Paracetamol	06 Aug 2020 (Study Day 3) - 06 Aug 2020 (Study Day 3)	Headache
Paracetamol	10 Aug 2020 (Study Day 7) - 10 Aug 2020 (Study Day 7)	Joint Aches
Folic acid	28 Sep 2020 (Study Day 56) - Ongoing	Health Maintenance
Vitamin B12 NOS	28 Sep 2020 (Study Day 56) - Ongoing	Health Maintenance

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins NOS	28 Sep 2020 (Study Day 56) - Ongoing	Health Maintenance

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US320-2366 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	11 Oct 2020 (Study Day 42) – 11 Oct 2020 (Study Day 42)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US320-2366, a 30-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 28 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	31 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	28 Sep 2020 (Study Day 29)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 25 Oct 2020 (Study Day 56), the participant had a positive urine pregnancy test at home.

On 02 Dec 2020 (Study Day 94), an ultrasound performed per their obstetrician confirmed the participant was approximately 7 weeks pregnant. The first day of the participant's last menstrual period was 05 Oct 2020 (Study Day 36). The estimated date of conception was 11 Oct 2020 (Study Day 42) and the estimated due date as 18 Jul 2021 (Study Day 322). The participant reported using double barrier contraception without fail.

The participant had completed study IP dosing; therefore, action taken with study IP was not applicable as a result of the pregnancy.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of drug exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy and serious event are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001036	Drug exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Seasonal allergy	Seasonal allergies	1995 - Ongoing
Eczema	Eczema	2000 - Ongoing
Drug eruption	Allergy to keflex reaction- entire body rash	2010 - Ongoing
Fatigue	Chronic fatigue	2015 - Ongoing
Gastrooesophageal reflux disease	Chronic acid reflux	2015 - Ongoing
Menorrhagia	Heavy menstrual bleeding	2015 - Ongoing
Hiatus hernia	Hiatal hernia	Aug 2015 - Ongoing
Diarrhoea	Chronic diarrhea- controlled with diet	2018 - Ongoing
Irritable bowel syndrome	Irritable bowel syndrome- controlled with diet	2018 - Ongoing
Glucose tolerance impaired	Pre-diabetes	Jul 2018 - Ongoing
Ovarian cyst	Left ovarian cyst	2019 - Ongoing
Uterine leiomyoma	Uterine fibroid	2019 - Ongoing
Blood testosterone increased	Elevated testosterone level	Jun 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Biotin	2010 - Ongoing	General Health Supplement
Vitamins nos	2010 - 01 Dec 2020 (Study Day 93)	General Health Supplement

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	2015 - Ongoing	Heavy Menstrual Bleeding
Fexofenadine hydrochloride	May 2017 - 15 Feb 2021 (Study Day 169)	Seasonal Allergies
Metformin	Jul 2018 - 15 Feb 2021 (Study Day 169)	Pre-Diabetes
Fluticasone propionate	Apr 2020 - Ongoing	Seasonal Allergies
Magnesium	Jun 2020 - Ongoing	General Health Supplement
Fluconazole	03 Sep 2020 (Study Day 4) - 03 Sep 2020 (Study Day 4)	Vaginal Candidiasis
Sulfamethoxazole; trimethoprim	03 Sep 2020 (Study Day 4) - 08 Sep 2020 (Study Day 9)	Urinary Tract Infection
Urine pregnancy test*	02 Dec 2020 (Study Day 94) - 02 Dec 2020 (Study Day 94)	Other, Confirmation Of Pregnancy
Vaginal ultrasound*	02 Dec 2020 (Study Day 94) - 02 Dec 2020 (Study Day 94)	Other, Confirmation Of Pregnancy

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 1/mild	Related	31 Aug 2020 (Study Day 1) - 08 Sep 2020 (Study Day 9)
Urinary Tract Infection	Grade 2/moderate	Not related	02 Sep 2020 (Study Day 3) - 08 Sep 2020 (Study Day 9)
Vulvovaginal Candidiasis	Grade 1/mild	Not related	02 Sep 2020 (Study Day 3) - 03 Sep 2020 (Study Day 4)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US321-2182 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	14 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	17 Aug 2020 (Study Day 4) – 17 Aug 2020 (Study Day 4)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US321-2182, a 20-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 14 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The participant had at least one positive test result for pregnancy, with first positive pregnancy reported on 11 Sep 2020 (Study Day 29).

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	14 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	11 Sep 2020 (Study Day 29)	Positive

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 11 Sep 2020 (Study Day 29), the participant had a positive urine pregnancy test. The participant and their partner were using condoms with spermicide as a method of contraception. The first day of the participant's last menstrual period was 12 Aug 2020 (Study Day -2). The estimated date of conception was 17 Aug 2020 (Study Day 4) and the estimated due date was in May 2021.

Action taken with the study IP was withdrawn as a result of the event of drug exposure before pregnancy.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of drug exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the nonserious event and pregnancy are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000287	Drug exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Mild asthma	2002 - Ongoing
Appendicectomy	Appendectomy	2016 - 2016
Appendicitis	Appendicitis	2016 - 2016

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	2002 - Ongoing	Asthma Rescue
Vitamins nos	14 Sep 2020 (Study Day 32) - Ongoing	Pregnancy
Influenza vaccine	16 Oct 2020 (Study Day 64) - 16 Oct 2020 (Study Day 64)	Immunization
Phenoxymethylpenicillin potassium	21 Oct 2020 (Study Day 69) - 25 Oct 2020 (Study Day 73)	Group B Streptococcal Infection (Gbs Positive)
Brompheniramine maleate; dextromethorphan hydrobromide; phenylephrine hydrochloride	18 Jan 2021 (Study Day 158) - 12 Feb 2021 (Study Day 183)	Cough
Other cough suppressants	18 Jan 2021 (Study Day 158) - 12 Feb 2021 (Study Day 183)	Cough
Ferrous sulfate	05 Mar 2021 (Study Day 204) - Ongoing	Anemia
Ondansetron	23 Mar 2021 (Study Day 222) - 23 Mar 2021 (Study Day 222)	Gastroenteritis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Morning Sickness	Grade 1/mild	Not related	13 Sep 2020 (Study Day 31) - 26 Oct 2020 (Study Day 74)
Streptococcal Infection	Grade 2/moderate	Not related	15 Oct 2020 (Study Day 63) - 25 Oct 2020 (Study Day 73)
Hyperemesis Gravidarum	Grade 2/moderate	Not related	26 Oct 2020 (Study Day 74) - Ongoing
Cough	Grade 1/mild	Not related	18 Jan 2021 (Study Day 158) - Ongoing
COVID-19	Grade 2/moderate	Not related	28 Jan 2021 (Study Day 168) - 06 Feb 2021 (Study Day 177)
Iron Deficiency Anaemia	Grade 2/moderate	Not related	04 Mar 2021 (Study Day 203) - Ongoing
Gastroenteritis	Grade 2/moderate	Not related	23 Mar 2021 (Study Day 222) - 23 Mar 2021 (Study Day 222)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US325-2009 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	03 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Maternal exposure during pregnancy/ Maternal exposure during pregnancy, first trimester	Pregnancy	Nonserious	Not related	03 Aug 2020 (Study Day 1) - 03 Aug 2020 (Study Day 1)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US325-2009, a 33-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 03 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The participant had at least one positive test result for pregnancy, with first positive pregnancy reported on 01 Sep 2020 (Study Day 30).

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	03 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	01 Sep 2020 (Study Day 30)	Positive

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 03 Aug 2020 (Study Day 1), at screening, the participant had a negative urine pregnancy test.

On 29 Aug 2020 (Study Day 27), the participant had a positive home urine pregnancy test. On 01 Sep 2020 (Study Day 30), during the Day 29 visit, the participant reported findings of the home pregnancy test. A serum human chorionic gonadotropin pregnancy test was performed, which was positive. The date of the last menstrual period was on 10 Jun 2020 (Study Day –55), the estimated date of conception was 27 Jul 2020 (Study Day –8) and the estimated due date was 01 Apr 2021 (Study Day 242). The participant's form of contraception included ethinylestradiol/norgestimate

PO, and the participant reported compliance with this method. At the time of the report, the participant has not had any problems during pregnancy.

Study IP was withdrawn in response to the event.

The outcome of the event, maternal exposure during pregnancy, was not reported.

The event of maternal exposure during pregnancy was considered unrelated to the study IP according to the investigator's assessment.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000250	Maternal exposure during pregnancy

Study Completion/Discontinuation

On 13 Jan 2021 (Study Day 164), the participant discontinued from the study due to other.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ethinylestradiol; norgestimate	Apr 2020 - Ongoing	Contraceptive
Vitamins nos	14 Sep 2020 (Study Day 43) - Ongoing	Pregnancy
Influenza vaccine	16 Sep 2020 (Study Day 45) - 16 Sep 2020 (Study Day 45)	Flu Vaccine

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US330-2345 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	24 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	21 Sep 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	01 Nov 2020 (Study Day 70) – 01 Nov 2020 (Study Day 70)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US330-2345, a 26-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 24 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 21 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	24 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	21 Sep 2020 (Study Day 29)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 19 Nov 2020 (Study Day 88), the participant had a positive pregnancy test. The first day of the participant's last menstrual period was on 27 Oct 2020 (Study Day 65). The estimated date of conception was 01 Nov 2020 (Study Day 70) and the due date was estimated as 03 Aug 2021 (Study Day 345). The participant reported taking an oral contraceptive; however, they missed 1 dose. The participant reported that their pregnancy was going "great".

The participant had completed study IP dosing; therefore, no action was taken with study IP as a result of the pregnancy.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of drug exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-011804	Drug exposure before pregnancy

Study Completion/Discontinuation

On 02 Feb 2021 (Study Day 163), the participant discontinued from the study due to pregnancy.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety	Anxiety	2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ethinylestradiol; ferrous fumarate; norethisterone acetate	2018 - Ongoing	Birth Control
Escitalopram oxalate	2020 - Ongoing	Anxiety
Paracetamol	25 Aug 2020 (Study Day 2) - 26 Aug 2020 (Study Day 3)	Injection Pain

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US331-2573 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	09 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	07 Oct 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Maternal exposure during pregnancy/Maternal exposure during pregnancy	Pregnancy	Nonserious	Not applicable	13 Sep 2020 (Study Day 5) – 07 Oct 2020 (Study Day 29)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US331-2573, a 34-year-old Hispanic or Latino female, received the first dose of placebo in the left arm on 09 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 07 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	09 Sep 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	07 Oct 2020 (Study Day 29)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 07 Oct 2020 (Study Day 29), the participant had a urine pregnancy test prior to the second dose of blinded IP. The pregnancy test was read at 4 minutes from the start of the test and was negative. The pregnancy test was left on the counter and was noted to be positive over an hour later when the staff was cleaning the counter. By then, the participant had been dosed and was about to leave the building. The subinvestigator notified the participant, confirmed history and dates of etonogestrel use, and a urine pregnancy test was repeated on a new sample. This pregnancy test was positive and gave the positive signal within the product specification time frame. A quantitative human chorionic gonadotropin blood test was measured as 6747 mIU/mL

(no reference range provided). The participant was referred to their primary care provider regarding possible etonogestrel failure. The first day of the participant's last menstrual period was on 30 Aug 2020 (Study Day –11). The estimated date of conception was on 13 Sep 2020 (Study Day 5), and the estimated due date was 06 Jun 2021 (Study Day 271).

The participant had completed study IP dosing; therefore, no action was taken with study IP as a result of the pregnancy.

The outcome of the event, maternal exposure during pregnancy, was not reported.

The investigator's assessment of the relationship between the event of maternal exposure during pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000435	Maternal exposure during pregnancy

Study Completion/Discontinuation

On 31 Oct 2020 (Study Day 53), the participant discontinued from the study due to lost to follow-up.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Etonogestrel	Jan 2019 - Ongoing	Birth Control

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US334-2142 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	24 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	21 Sep 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Maternal exposure before pregnancy/Maternal exposure before pregnancy	Pregnancy	Nonserious	Not applicable	15 Oct 2020 (Study Day 53) – 15 Oct 2020 (Study Day 53)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US334-2142, a 37-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 24 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 21 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	24 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	21 Sep 2020 (Study Day 29)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 11 Nov 2020 (Study Day 80), the participant had a positive urine pregnancy test. On an unspecified date, the participant had a second positive urine pregnancy test. The first day of the participant's last menstrual period was 04 Oct 2020 (Study Day 42). The estimated date of conception was 15 Oct 2020 (Study Day 53), and the estimated due date was 10 Jul 2021 (Study Day 321). The participant reported no problems with the pregnancy thus far and was scheduled for an appointment with the obstetrician/gynecologist in the coming week.

The participant had completed study IP dosing; therefore, no action was taken with study IP as a result of the pregnancy.

The outcome of the event, maternal exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of maternal exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000863	Maternal exposure before pregnancy

Study Completion/Discontinuation

On 19 Jan 2021 (Study Day 149), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Ventricular septal defect	Ventricular septal defect	(b) (6) 1983 (Study Day (b) (6) - 1985
Genital herpes simplex	Herpes simplex virus i (genital)	2003 - Ongoing
Supraventricular tachycardia	Supraventricular tachycardia	2014 - Ongoing
Seasonal allergy	Seasonal allergies	2015 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Cetirizine hydrochloride	2016 - Ongoing	Seasonal Allergies
Ibuprofen	24 Sep 2020 (Study Day 32) - 25 Sep 2020 (Study Day 33)	Headache
Influenza vaccine	11 Nov 2020 (Study Day 80) - 11 Nov 2020 (Study Day 80)	Influenza Prophylaxis
Other viral vaccines	12 Jan 2021 (Study Day 142) - 12 Jan 2021 (Study Day 142)	COVID-19 Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US335-2200 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine in Part A:	22 Aug 2020 (Study Day 1)
Second Dose of Vaccine in Part A:	19 Sep 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Not applicable	Not applicable	12 Jan 2021 (Study Day 144) - 12 Jan 2021 (Study Day 144)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US335-2200, a 36-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 22 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 19 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The participant had at least one positive test result for pregnancy, with first positive pregnancy reported on 26 Jan 2021 (Study Day 158).

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	22 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	19 Sep 2020 (Study Day 29)	Negative
Choriogonadotropin Beta	26 Jan 2021 (Study Day 158)	Positive

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 12 Jan 2021 (Study Day 144), the participant had a positive urine pregnancy test. On 26 Jan 2021 (Study Day 158), the participant had another positive urine pregnancy test. The participant's last menstrual period was on 07 Nov 2020 (Study Day 78). The estimated date of conception was not reported, and the estimated due date was 15 Aug 2021 (Study Day 359). The participant reported that they had been using a barrier method contraception. The participant began mineral/vitamin PO for the pregnancy.

On 09 Mar 2021 (Study Day 200), the participant had an ultrasound, and the findings were reported as single live intrauterine pregnancy of 17 weeks 2 days, amniotic fluid volume appeared normal, no gross fetal abnormality visualized. An expected delivery date in correspondence with the findings was 15 Aug 2021 (Study Day 359).

Action taken with study IP in response to the pregnancy was not applicable, as the participant had already received both scheduled doses.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of drug exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-008625	Drug exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Migraine	Migraines	2005 - Ongoing
Myopia	Nearsighted	2005 - Ongoing
Inguinal hernia	Right inguinal hernia	2011 - 2011
Inguinal hernia repair	Right inguinal hernia repair	2011 - 2011
Caesarean section	C section	2018 - 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	2015 - Ongoing	Migraines
Paracetamol	23 Aug 2020 (Study Day 2) - 23 Aug 2020 (Study Day 2)	Headache
Paracetamol	20 Sep 2020 (Study Day 30) - 20 Sep 2020 (Study Day 30)	Fever
Paracetamol	20 Sep 2020 (Study Day 30) - 20 Sep 2020 (Study Day 30)	Headache
Vitamins nos	20 Jan 2021 (Study Day 152) - Ongoing	Multivitamin

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US337-2229 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	24 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Pregnancy, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pregnancy/Pregnancy	Pregnancy, AE leading to withdrawal from study vaccine	Nonserious	Not related	25 Sep 2020 (Study Day 33) – Not reported	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US337-2229, a 34-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 24 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The participant had at least one positive test result for pregnancy, with first positive pregnancy reported on 28 Sep 2020 (Study Day 36).

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	24 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	28 Sep 2020 (Study Day 36)	Positive

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 25 Sep 2020 (Study Day 33), the participant had a positive home urine pregnancy test. The estimated date of conception was on an unknown date in August 2020. The first day of their last menstrual period was around 26 Aug 2020 (Study Day 3), and the estimated due date was not provided. The participant was using condoms with spermicide for contraception.

On 28 Sep 2020 (Study Day 36), at the site, the participant had a positive urine pregnancy test.

Action taken with the study IP was withdrawn as a result of the pregnancy.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator assessed the event of pregnancy to be not related to the study IP or study procedure.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000374	Drug exposure before pregnancy

Study Completion/Discontinuation

On 01 Mar 2021 (Study Day 190), the participant discontinued from the study due to protocol deviation.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Myopia	Myopia (near sighted)	1995 - 2009
Breast enlargement	Macromastia	2002 - 2005
Depression	Depression	2004 - Ongoing
Mammoplasty	Bilateral reduction mammoplasty	2005 - 2005
Photorefractive keratectomy	Bilateral photorefractive keratectomy	2009 - 2009
Caesarean section	Cesarean section	22 Nov 2017 (Study Day -1006) - 22 Nov 2017 (Study Day -1006)

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Japanese encephalitis vaccine	2013 - 2013	Japanese Encephalitis Prophylaxis/Prevention
Rabies vaccine	2013 - 2013	Rabies Prophylactic
Diphtheria vaccine; pertussis vaccine	2017 - 2017	Diphtheria/Tetanus And Acellular Pertussis Prophylaxis/Prevention
Influenza vaccine	Sep 2018 - Sep 2018	Influenza Prophylaxis/Prevention
Fluoxetine hydrochloride	Feb 2019 - Ongoing	Depression
Ondansetron	30 Oct 2020 (Study Day 68) - Ongoing	Hyperemesis

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Other viral vaccines	14 Feb 2021 (Study Day 175) - 14 Feb 2021 (Study Day 175)	COVID-19 Prevention / Prophylaxis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Pregnancy	Grade 1/mild	Not related	25 Sep 2020 (Study Day 33) - Ongoing
Dehydration	Grade 2/moderate	Not related	30 Oct 2020 (Study Day 68) - 30 Oct 2020 (Study Day 68)
Vomiting	Grade 2/moderate	Not related	30 Oct 2020 (Study Day 68) - Not reported
Cough	Grade 1/mild	Not related	12 Jan 2021 (Study Day 142) - 19 Jan 2021 (Study Day 149)
Nasal Congestion	Grade 1/mild	Not related	12 Jan 2021 (Study Day 142) - 18 Jan 2021 (Study Day 148)
Oropharyngeal Pain	Grade 1/mild	Not related	12 Jan 2021 (Study Day 142) - 17 Jan 2021 (Study Day 147)
Rhinorrhoea	Grade 1/mild	Not related	12 Jan 2021 (Study Day 142) - 18 Jan 2021 (Study Day 148)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US340-2316 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	09 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	11 Sep 2020 (Study Day 34)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Pregnancy/Pregnancy	Pregnancy	Nonserious	Not applicable	18 Oct 2020 (Study Day 71) – 18 Oct 2020 (Study Day 71)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US340-2316, a 29-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 09 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 11 Sep 2020 (Study Day 34). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	09 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	11 Sep 2020 (Study Day 34)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 25 Oct 2020 (Study Day 78), the participant had a positive home pregnancy test. The first day of the participant's last menstrual period was on 25 Sep 2020 (Study Day 48). The estimated date of conception was 18 Oct 2020 (Study Day 71), and the estimated due date was 30 Jun 2021 (Study Day 326). The participant reported that they missed reinserting their ethinylestradiol/ etonogestrel ring by 1 day and had unprotected coitus on that particular day.

On 08 Dec 2020 (Study Day 122), the participant had an appointment scheduled with their gynecologist.

The participant had completed study IP dosing; therefore, action taken with study IP was not applicable as a result of the pregnancy.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of drug exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy and nonserious event are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000533	Drug exposure before pregnancy
MOD-2020-000487	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Binge eating	Binge eating disorder	2000 - Ongoing
Drug hypersensitivity	Allergy to morphine	2015 - Ongoing
Anxiety	Anxiety	Dec 2019 - Ongoing
Depression	Depression	Dec 2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ethinylestradiol; etonogestrel	2018 - Ongoing	Birth Control
Bupropion hydrochloride	Dec 2019 - Ongoing	Anxiety And Depression
Citalopram hydrobromide	Jul 2020 - Ongoing	Anxiety And Depression
Ciprofloxacin	10 Sep 2020 (Study Day 33) - 16 Sep 2020 (Study Day 39)	Urinary Tract Infection
Influenza vaccine	10 Sep 2020 (Study Day 33) - 10 Sep 2020 (Study Day 33)	Flu Prevention
Paracetamol	12 Sep 2020 (Study Day 35) - Ongoing	Pain At Injection Site

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Urinary Tract Infection	Grade 2/moderate	Not related	09 Sep 2020 (Study Day 32) - 16 Sep 2020 (Study Day 39)
Fatigue	Grade 1/mild	Related	11 Sep 2020 (Study Day 34) - 20 Sep 2020 (Study Day 43)
COVID-19	Grade 2/moderate	Not related	12 Oct 2020 (Study Day 65) - 26 Oct 2020 (Study Day 79)
Pregnancy	Grade 1/mild	Not related	24 Oct 2020 (Study Day 77) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US346-2076 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	07 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	04 Sep 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Exposure during pregnancy/Exposure during pregnancy	Pregnancy	Nonserious	Not applicable	04 Sep 2020 (Study Day 29) – 04 Sep 2020 (Study Day 29)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US346-2076, a 28-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 07 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 04 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	07 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	04 Sep 2020 (Study Day 29)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 07 Sep 2020 (Study Day 32), the participant had a positive urine pregnancy test. The first day of the participant's last menstrual period was 11 Aug 2020 (Study Day 5). The estimated date of conception was 25 Aug 2020 (Study Day 19), and the estimated due date was 16 May 2021 (Study Day 283). The participant had been on etonogestrel implant at Study Visit 0/Visit 1. Per the participant, etonogestrel may have been removed without the site's knowledge on 16 Aug 2020 (Study Day 10) when the participant switched to oral contraceptive pills. It was assessed that the participant became pregnant during the switch in contraceptive method.

The participant had completed study IP dosing; therefore, action taken with study IP was not applicable as a result of the pregnancy.

The outcome of the event, exposure during pregnancy, was not reported.

The investigator's assessment of the relationship between the event of exposure during pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000267	Exposure during pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Eczema	Eczema	2017 - Ongoing
Rhinitis perennial	Perennial allergic rhinitis	2019 - Ongoing
Pain	Occasional body pain	Jan 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Etonogestrel	Aug 2019 - Ongoing	Birth Control
Paracetamol	Jan 2020 - Ongoing	Occasional Body Pain
Vitamins nos	May 2020 - Ongoing	Supplement
Norethisterone	16 Aug 2020 (Study Day 10) - 07 Sep 2020 (Study Day 32)	Birth Control
Paracetamol	17 Aug 2020 (Study Day 11) - 18 Aug 2020 (Study Day 12)	Upper Respiratory Tract Infection
Paracetamol	04 Sep 2020 (Study Day 29) - 06 Sep 2020 (Study Day 31)	Injection Site Pain
Ondansetron	02 Oct 2020 (Study Day 57) - Ongoing	Nausea

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Upper Respiratory Tract Infection	Grade 2/moderate	Not related	15 Aug 2020 (Study Day 9) - 21 Aug 2020 (Study Day 15)
Ligament Sprain	Grade 3/severe	Not related	07 Sep 2020 (Study Day 32) - 22 Sep 2020 (Study Day 47)
Nausea	Grade 1/mild	Not related	25 Sep 2020 (Study Day 50) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US372-2239 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	13 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	10 Sep 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	18 Nov 2020 (Study Day 98) – 18 Nov 2020 (Study Day 98)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US372-2239, a 20-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 13 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 10 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	13 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	10 Sep 2020 (Study Day 29)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 05 Dec 2020 (Study Day 115), the participant had a positive pregnancy test. The first day of the participant's last menstrual period was on 05 Nov 2020 (Study Day 85). The estimated date of conception was 18 Nov 2020 (Study Day 98), and the estimated due date was 22 Jun 2021 (Study Day 314). The participant reported not using contraception.

On 10 Dec 2020 (Study Day 120), the participant was seen by a physician for the pregnancy.

The participant had completed study IP dosing; therefore, action taken with study IP was not applicable as a result of the pregnancy.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of drug exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001110	Drug exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety	Anxiety	2017 - Ongoing
Migraine	Migraines	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sertraline hydrochloride	2017 - Ongoing	Anxiety
Gabapentin	2018 - Ongoing	Migraines
Ibuprofen	14 Aug 2020 (Study Day 2) - 16 Aug 2020 (Study Day 4)	Pain At Injection Site
Ibuprofen	11 Sep 2020 (Study Day 30) - 18 Sep 2020 (Study Day 37)	Fever, Pain At Injection Site, Muscle Aches, Generalized Joint Aches

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Pain	Grade 3/severe	Not related	10 Sep 2020 (Study Day 29) - 11 Sep 2020 (Study Day 30)
Pyrexia	Grade 2/moderate	Related	10 Sep 2020 (Study Day 29) - 11 Sep 2020 (Study Day 30)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US372-2305 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	19 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	16 Sep 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	24 Sep 2020 (Study Day 37) – 24 Sep 2020 (Study Day 37)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US372-2305, a 34-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 19 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 16 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	19 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	16 Sep 2020 (Study Day 29)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 01 Oct 2020 (Study Day 44), the participant had a positive pregnancy test. The first day of the participant's last menstrual period was 19 Sep 2020 (Study Day 32). The participant reported not using any contraceptive method. The estimated date of conception was 24 Sep 2020 (Study Day 37), and the estimated due date was 19 Jun 2021 (Study Day 305).

Action taken with study IP in response to the pregnancy was not applicable, as the participant had already received both doses of study IP per protocol.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of drug exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-002711	Drug exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypothyroidism	Hypothyroidism	2000 - Ongoing
Migraine	Migraine headaches	2017 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	2010 - Ongoing	Hypothyroidism
Amitriptyline hydrochloride	2019 - Ongoing	Migraine Headaches
Paracetamol	20 Aug 2020 (Study Day 2) - 21 Aug 2020 (Study Day 3)	Headache, Pain At Injection Site
Ibuprofen	17 Sep 2020 (Study Day 30) - 20 Sep 2020 (Study Day 33)	Headache, Pain At Injection Site

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US374-2148 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	16 Jan 2021 (Study Day 142) – 29 Jan 2021 (Study Day 155	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2148, a 24-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 25 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	28 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	25 Sep 2020 (Study Day 29)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 16 Jan 2021 (Study Day 142), the participant had positive home urine pregnancy tests on 16 Jan 2021 (Study Day 142) and 17 Jan 2021 (Study Day 143). The first day of the participant's last menstrual period was on 16 Dec 2020 (Study Day 111). The estimated date of conception and estimated due date were not reported.

On 29 Jan 2021 (Study Day 155), at an estimated sixth week of pregnancy, the participant experienced a serious adverse event of spontaneous abortion. The participant reported suffering a miscarriage and consulted their obstetrician/gynecologist, who confirmed the miscarriage on the same date; the cause was not otherwise specified.

Action taken with the study IP in response to the events, drug exposure before pregnancy and spontaneous abortion, was not applicable, as the participant had already received both scheduled doses.

The events, drug exposure before pregnancy and spontaneous abortion, were reported as resolved on 29 Jan 2021 (Study Day 155).

The investigator assessed the event, spontaneous abortion, as not related to study IP or study procedure. The investigator's assessment of the relationship between the event of drug exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the serious event and pregnancy are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-005522	Drug exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Anxiety	Anxiety	2016 - Ongoing
Depression	Depression	2016 - Ongoing
Post-traumatic stress disorder	Post traumatic stress disorder	Nov 2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Paracetamol	30 Aug 2020 (Study Day 3) - 01 Sep 2020 (Study Day 5)	Headache
Influenza vaccine	20 Nov 2020 (Study Day 85) - 20 Nov 2020 (Study Day 85)	Flu Prophylaxis
Nitrofurantoin	21 Feb 2021 (Study Day 178) - Ongoing	Urinary Tract Infection
Escitalopram	07 Mar 2021 (Study Day 192) - Ongoing	Depression

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Prazosin	07 Mar 2021 (Study Day 192) - Ongoing	Post Traumatic Stress Disorder

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Urinary Tract Infection	Grade 2/moderate	Not related	21 Feb 2021 (Study Day 178) - 28 Feb 2021 (Study Day 185)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US383-2250 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	24 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Maternal exposure before pregnancy/ Maternal exposure before pregnancy	Pregnancy	Nonserious	Not applicable	12 Sep 2020 (Study Day 20) – 21 Sep 2020 (Study Day 29)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US383-2250, a 28-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 24 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The participant had at least one positive test result for pregnancy, with first positive pregnancy reported on 21 Sep 2020 (Study Day 29).

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	24 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	21 Sep 2020 (Study Day 29)	Positive

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 21 Sep 2020 (Study Day 29), the participant had a positive urine pregnancy test prior to the scheduled second dose of the study IP. The first day of the participant's last menstrual period was 31 Aug 2020 (Study Day 8). The estimated date of conception was 12 Sep 2020 (Study Day 20), and the estimated due date was 18 Jun 2021 (Study Day 299).

The participant was initially compliant with their IUD contraception. However, they had removed the IUD prior to the intercourse due to discomfort and inserted a new device following intercourse. The participant denied any problems with the pregnancy.

Action taken with the study IP was withdrawn as a result of the pregnancy.

The outcome of the event, maternal exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of maternal exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000330	Maternal exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Appendicitis	Appendicitis	2005 - 2005
Cholecystitis	Cholecystitis	2015 - 2015

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ethinylestradiol; etonogestrel	2019 - 21 Sep 2020 (Study Day 29)	Contraception
Promethazine	02 Oct 2020 (Study Day 40) - Ongoing	Ae- Nausea

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 1/mild	Not related	31 Aug 2020 (Study Day 8) - 01 Sep 2020 (Study Day 9)
Nausea	Grade 2/moderate	Not related	02 Oct 2020 (Study Day 40) - 20 Oct 2020 (Study Day 58)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US386-2086 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/ Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	28 Aug 2020 (Study Day 1) – 09 Oct 2020 (Study Day 42)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US386-2086, a 28-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 28 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The participant had at least one positive test result for pregnancy, with first positive pregnancy reported on 25 Sep 2020 (Study Day 29).

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	28 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	25 Sep 2020 (Study Day 29)	Positive

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 25 Sep 2020 (Study Day 29), the participant had a positive urine pregnancy test at the Dose 2 visit. The first day of the participant's last menstrual period was 31 Aug 2020 (Study Day 4). The estimated date of conception was 28 Aug 2020 (Study Day 1), and the estimated due date was not reported.

Between 08 Oct 2020 (Study Day 42) and 09 Oct 2020 (Study Day 43), the participant underwent an elective medical termination of intrauterine pregnancy. No complications were reported during the pregnancy or termination. The number of weeks of pregnancy was unknown per the investigator. Treatment medications provided for the elective termination of pregnancy included

oral mifepristone 200 mg on 08 Oct 2020 (Study Day 42) and buccal misoprostol 800 mg on 09 Oct 2020 (Study Day 43).

Action taken with the study IP was withdrawn as a result of the pregnancy.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the events of drug exposure before pregnancy and abortion elective and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000362	Drug exposure before pregnancy

Study Completion/Discontinuation

On 14 Jan 2021 (Study Day 140), the participant discontinued from the study due to other.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Eczema	Eczema	1995 - Ongoing
Migraine	Migraines	2006 - Ongoing
Drug hypersensitivity	Allergy to pcn	2008 - Ongoing
Arthroscopy	Left knee arthroscopy	Feb 2008 - Feb 2008
Asthma exercise induced	Exercise induced asthma	2012 - Ongoing
Endometriosis	Endometriosis	2014 - Ongoing
Tonsillectomy	Tonsillectomy	Aug 2015 - Aug 2015
Uterine dilation and curettage	Endometrial excision	Jul 2017 - Jul 2017
Depression	Depression	2018 - Ongoing
Anxiety	Anxiety	2019 - Ongoing
Insomnia	Insomnia	2019 - Ongoing
Seasonal allergy	Seasonal allergies	2019 - Ongoing
Drug hypersensitivity	Allergy to ribavirin	20 Mar 2019 (Study Day -527) - Ongoing
Exposure to communicable disease	Exposure to hepatitis c	20 Mar 2019 (Study Day -527) - 20 Mar 2019 (Study Day -527)
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	Apr 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Salbutamol	2012 - Ongoing	Asthma
Cetirizine hydrochloride	Mar 2019 - Ongoing	Seasonal Allergies
Alprazolam	Jul 2019 - Ongoing	Anxiety And Insomnia
Venlafaxine	Jul 2019 - Ongoing	Depression
Zolpidem	Jul 2019 - Ongoing	Insomnia
Lansoprazole	2020 - Ongoing	Gastroesophageal Reflux Disease
Elective medical termination of intrauterine pregnancy*	08 Oct 2020 (Study Day 42) - 08 Oct 2020 (Study Day 42)	Other, Pregnancy
Mifepristone	08 Oct 2020 (Study Day 42) - 08 Oct 2020 (Study Day 42)	Elective Termination Of Pregnancy
Misoprostol	09 Oct 2020 (Study Day 43) - 09 Oct 2020 (Study Day 43)	Elective Termination Of Pregnancy

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US387-2213 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	17 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	15 Sep 2020 (Study Day 30)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	18 Jan 2021 (Study Day 155) – 18 Jan 2021 (Study Day 155)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2213, a 36-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 17 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 15 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	17 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	15 Sep 2020 (Study Day 30)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 03 Mar 2021 (Study Day 199), the participant had a positive urine human chorionic gonadotropin pregnancy test. The participant reported using condoms with spermicide as a means of contraception. The first day of the participant's last menstrual period was 04 Jan 2021 (Study Day 141). The estimated date of conception was 18 Jan 2021 (Study Day 155), and the due date was estimated as 07 Oct 2021 (Study Day 417).

Action taken with study IP in response to the pregnancy was not applicable, as the participant had already received both scheduled doses.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event of drug exposure before pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-033970	Drug exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypertension	Hypertension	15 May 2020 (Study Day -94) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Hydrochlorothiazide	15 May 2020 (Study Day -94) - Ongoing	Hypertension

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Rhinorrhoea	Grade 1/mild	Not related	21 Sep 2020 (Study Day 36) - 01 Oct 2020 (Study Day 46)
Cough	Grade 1/mild	Not related	23 Sep 2020 (Study Day 38) - 06 Nov 2020 (Study Day 82)
Fatigue	Grade 1/mild	Not related	27 Sep 2020 (Study Day 42) - 01 Nov 2020 (Study Day 77)
Headache	Grade 1/mild	Not related	27 Sep 2020 (Study Day 42) - 30 Sep 2020 (Study Day 45)
Rhinorrhoea	Grade 1/mild	Not related	03 Oct 2020 (Study Day 48) - 10 Oct 2020 (Study Day 55)
Oropharyngeal Pain	Grade 1/mild	Not related	07 Oct 2020 (Study Day 52) - 11 Oct 2020 (Study Day 56)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Nasal Congestion	Grade 1/mild	Not related	10 Oct 2020 (Study Day 55) - 15 Oct 2020 (Study Day 60)
Rhinorrhoea	Grade 1/mild	Not related	15 Oct 2020 (Study Day 60) - 17 Oct 2020 (Study Day 62)
Nasal Congestion	Grade 1/mild	Not related	17 Oct 2020 (Study Day 62) - 18 Oct 2020 (Study Day 63)
Rhinorrhoea	Grade 1/mild	Not related	18 Oct 2020 (Study Day 63) - 19 Oct 2020 (Study Day 64)
Nasal Congestion	Grade 1/mild	Not related	19 Oct 2020 (Study Day 64) - 23 Oct 2020 (Study Day 68)
Cough	Grade 1/mild	Not related	28 Dec 2020 (Study Day 134) - 13 Apr 2021 (Study Day 240)
Nasal Congestion	Grade 1/mild	Not related	20 Feb 2021 (Study Day 188) - 13 Apr 2021 (Study Day 240)
Exposure During Pregnancy	Grade 3/severe	Not applicable	03 Mar 2021 (Study Day 199) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US387-2345 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	01 Oct 2020 (Study Day 35) – 09 Jan 2021 (Study Day 135)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US387-2345, a 36-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the right arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 25 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	28 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	25 Sep 2020 (Study Day 29)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 31 Dec 2020 (Study Day 126), the participant had a positive urine pregnancy test. The participant reported using condoms with spermicide as a means of contraception. The first day of the participant's last menstrual period was unknown. The estimated date of conception was 01 Oct 2020 (Study Day 35), and the estimated due date was 30 Apr 2021 (Study Day 246). The participant did not realize they were pregnant until 31 Dec 2020 (Study Day 126), when they believed they were approximately 20 weeks pregnant. The participant did not know for sure when their last period was because they had a history of irregular periods. The pregnancy was not planned.

On 09 Jan 2021 (Study Day 135), the participant experienced a serious adverse event of abortion elective. At approximately 20 weeks of pregnancy, the participant chose to terminate the pregnancy with an elective abortion. There were no complications following the procedure. The outcome of the pregnancy was elective termination without congenital anomaly.

On 19 Feb 2021 (Study Day 176), the participant reported the pregnancy to the site.

Action taken with study IP in response to the pregnancy was not applicable, as the participant had already received both scheduled doses.

The outcome of the events, drug exposure before pregnancy and elective abortion, was not reported.

The investigator's assessment of the relationship between the events of drug exposure before pregnancy and elective abortion and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy and serious adverse event are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-017500	Drug exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	11 Dec 2020 (Study Day 106) - 11 Dec 2020 (Study Day 106)	Prophylactic Influenza
Pregnancy fermentation*	09 Jan 2021 (Study Day 135) - 09 Jan 2021 (Study Day 135)	Other, Unwanted Pregnancy

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Insomnia	Grade 2/moderate	Not related	01 Dec 2020 (Study Day 96) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3378141

Participant Number:	US394-2027 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	29 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	24 Sep 2020 (Study Day 27)
Reason for Narrative:	SAE, Pregnancy

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	10 Dec 2020 (Study Day 104) – 17 Dec 2020 (Study Day 111)	Recovered/ resolved
Abortion Spontaneous/ Spontaneous Abortion	SAE, Pregnancy	Grade 3/ severe	Not related	10 Dec 2020 (Study Day 104) – 17 Dec 2020 (Study Day 111)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US394-2027, a 23-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 29 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 24 Sep 2020 (Study Day 27). The participant's baseline SARS-CoV-2 status was positive.

Event Details

On 10 Dec 2020 (Study Day 104), 103 days after the first dose and 77 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of abortion spontaneous. Action taken with the IP was not applicable. The event of spontaneous abortion lasted for 8 days, after which it was considered to be recovered/resolved on 17 Dec 2020 (Study Day 111). The investigator assessed the event of abortion spontaneous to be not related to the IP.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	29 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	24 Sep 2020 (Study Day 27)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 10 Dec 2020 (Study Day 104), the participant had a positive pregnancy test. The first day of the participant's last menstrual period was on 08 Nov 2020 (Study Day 72). The estimated date of conception was in December 2020.

On 14 Dec 2020 (Study Day 108), human chorionic gonadotropin (HCG) quantitative level was 112.5 (no unit or reference range reported).

On 17 Dec 2020 (Study Day 111), the participant presented to the emergency department, where it was confirmed that they had experienced a spontaneous abortion. The participant's HCG quantitative level was 38.1 (no units or reference range). No treatment was given.

Action taken with the study IP was not applicable in response to the events, as the participant had already received both scheduled doses.

The events, drug exposure before pregnancy and spontaneous abortion, were considered resolved on 17 Dec 2020 (Study Day 111).

The investigator's assessment of the relationship of the event, drug exposure before pregnancy, and the study IP or study procedure was not reported. The investigator assessed the event, abortion spontaneous, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the pregnancy and serious event are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001223	Drug exposure before pregnancy
MOD-2020-001223	Abortion spontaneous

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Pre-eclampsia	Preeclampsia	2016 - 2016
Toothache	Tooth ache	Feb 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Naproxen sodium	Feb 2020 - Ongoing	Tooth Ache
Nitrofurantoin	14 Dec 2020 (Study Day 108) - 21 Dec 2020 (Study Day 115)	Urinary Tract Infection
Ob ultrasound*	17 Dec 2020 (Study Day 111) - 17 Dec 2020 (Study Day 111)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Urinary Tract Infection	Grade 1/mild	Not related	14 Dec 2020 (Study Day 108) - 21 Dec 2020 (Study Day 115)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US397-2210 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	22 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	20 Oct 2020 (Study Day 29)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Drug exposure before pregnancy/Drug exposure before pregnancy	Pregnancy	Nonserious	Not applicable	22 Apr 2021 (Study Day 213) – 22 Apr 2021 (Study Day 213)	Ongoing

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US397-2210, a 28-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 22 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 20 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	22 Sep 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	20 Oct 2020 (Study Day 29)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 22 Apr 2021 (Study Day 213), the participant had a positive urine pregnancy test. The first day of the participant's last menstrual period was on 29 Mar 2021 (Study Day 189). After speaking with the principal investigator, the participant confirmed their pregnancy but did not elaborate due to the planned site visit on 26 Apr 2021 (Study Day 217). The estimated date of conception was 22 Apr 2021 (Study Day 213), and the estimated due date was 03 Jan 2022 (Study Day 469).

Action taken with study IP in response to the pregnancy was not applicable, as the participant had already received both scheduled doses.

The outcome of the event, drug exposure before pregnancy, was not reported.

The investigator's assessment of the relationship between the event, drug exposure before pregnancy, and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-089803	Drug exposure before pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Asthma	Asthma	1996 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Norethisterone	Aug 2020 - Ongoing	Birth Control Pregnancy Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US303-2112 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	05 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	03 Sep 2020 (Study Day 30)
Reason for Narrative:	Pregnancy

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Maternal exposure during pregnancy	Pregnancy	Nonserious	Not applicable	03 Sep 2020 (Study Day 30) – 03 Sep 2020 (Study Day 30)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US303-2112, a 30-year-old race not reported female, received the first dose of placebo in the left arm on 05 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 03 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Pregnancy Details

The laboratory test results for pregnancy are reported in the table below:

Laboratory Results:

Test Name	Test Date	Result
Choriogonadotropin Beta	05 Aug 2020 (Study Day 1)	Negative
Choriogonadotropin Beta	03 Sep 2020 (Study Day 30)	Negative

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 03 Sep 2020 (Study Day 30), the participant had a positive pregnancy test performed in December 2020. The first day of the participant's last menstrual period was 11 Aug 2020 (Study Day 7). The estimated date of conception was 25 Aug 2020 (Study Day 21), and the estimated due date was 18 May 2021 (Study Day 287). The participant reported using condoms with spermicide as a method of contraception.

On 08 Oct 2020 (Study Day 65), the participant's ultrasound (8 weeks and 2 days of gestational age) showed a singleton live intrauterine pregnancy (IUP) with fetal heart rate 148 beats per minute (bpm). On the ultrasound, the yolk sac and embryo were seen. The cervix, adnexa, and uterus appeared normal. The participant tested negative for syphilis, human immunodeficiency virus, hepatitis B virus, human papillomavirus, *Neisseria gonorrhoeae*, and *Chlamydia trachomatis*.

On 22 Jan 2021 (Study Day 171), the participant stated their pregnancy was progressing well.

On 28 Apr 2021 (Study Day 267), at 37 weeks 1 day of gestational age, the participant was induced due to polyhydramnios and gestational diabetes and was given hydration IV and antiemetics. Artificial rupture of membranes was performed. The participant utilized an epidural. The birth was spontaneous vaginal without complication. Oxytocin was used for augmentation of labor. After approximately 15 minutes of second stage of labor, a viable male was born. The infant was noted to have bilateral club feet (previously noted in ultrasound). Nuchal cord was checked, and no nuchal cord was noted. Third stage of labor was without complication. There were no perineal lacerations noted. Time elapsed between rupture of membrane and delivery was 7 hours 55 minutes. Postpartum period was uncomplicated. Infant was bottle fed using infant formula with iron. During the review of medical records, infant's weight was 3895 gm, length was 53.34 cm, and head circumference was 34.29 cm. Apgar score at 1 minute was 8, and at 5 minutes was 9. The infant had 2 preauricular skin tags on right ear. On an unspecified day in May 2021, a retroperitoneal ultrasound on the infant showed minimal hydronephrosis on the left, otherwise bilateral kidneys, and urinary bladder were within normal limits.

Action taken with study IP in response to the event, maternal exposure during pregnancy, was not applicable, as the participant had already received both scheduled doses.

The outcome of the event, maternal exposure during pregnancy, was not reported.

The investigator's assessment of the relationship between the event of maternal exposure during pregnancy and the study IP or study procedure was not reported.

Additional Information From the Safety Database

Additional details for the pregnancy are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-007678	Maternal exposure during pregnancy

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Drug hypersensitivity	Penicillin allergy	1992 - Ongoing
Urticaria	Allergy to sulfa-hives	1992 - Ongoing
Urticaria	Allergy to levaquin-hives	2010 - Ongoing
Genital herpes	Genital herpes	2014 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Mammary duct ectasia	Mammary duct ectasia left	2018 - Ongoing
Abscess drainage	Abscess drained in right breast	May 2020 - May 2020
Breast abscess	Absess right breast	May 2020 - May 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Aciclovir	08 Oct 2020 (Study Day 65) - Ongoing	Genital Herpes
Ultrasound*	31 Dec 2020 (Study Day 149) - 31 Dec 2020 (Study Day 149)	Adverse Event
Glibenclamide	05 Feb 2021 (Study Day 185) - 28 Apr 2021 (Study Day 267)	Gestational Diabetes

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Gestational Diabetes	Grade 1/mild	Not related	05 Feb 2021 (Study Day 185) - 28 Apr 2021 (Study Day 267)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US303-2112_a (Part A) (Fetus/Infant Narrative)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	05 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	03 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Talipes/Bilateral Talipes Equinovarus Of Fetus*	SAE	Grade 3/ severe	Not related	11 Aug 2020 (Study Day 7) – Ongoing	Not recovered/ not resolved

* This narrative is a description of the event related to the fetus/infant of Participant US303-2112.

Event Details

On 11 Aug 2020 (Study Day 7), 6 days after the first dose and 23 days before the second dose of the IP, the fetus/infant of participant experienced a Grade 3/severe serious adverse event of talipes. Action taken with the IP was not applicable. The event of bilateral talipes equinovarus of fetus was considered to be ongoing. The investigator assessed the event of talipes to be not related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 31 Dec 2020 (Study Day 149), the participant's fetus experienced a serious adverse event of talipes (bilateral talipes equinovarus of fetus). On the same day, the participant's ultrasound (20 weeks and 2 days of gestational age) showed a singleton live intrauterine pregnancy with cervical length 4.68 cm, nuchal fold 7.8 mm, fetal heart rate 154 bpm, and in transverse position with normal amniotic fluid. Fetal heart chambers were not seen well. It also showed abnormal face profile, frontal bossing (present in some views and in other views appears normal), and bilateral talipes equinovarus (club feet). The participant had noninvasive prenatal testing (NIPT) done.

On 05 Jan 2021 (Study Day 154), the participant had an ultrasound (21 weeks and 0 days of gestational age) at the perinatal center that showed the fetus had a nuchal fold that measured 9.4 mm (abnormal), left and right club feet, and levorotation of the cardiac axis. The participant's cervical length was 5.13 cm. The fetal heart rate was 159 bpm. The remainder of the ultrasound was normal with fetus in breech position. The participant reported feeling well and denied any obstetrical complaints. Differential diagnosis included trisomy 18, other obstetrical aneuploidy, nonaneuploid syndrome, and/or congenital anomaly without underlying genetic abnormality. The perinatal physician discussed the risks and benefits of an amniocentesis. After discussion, the plan of care was to wait for the NIPT results. If NIPT results were negative, then they would defer

diagnostic genetics until the newborn period. If NIPT results were positive, then they would continue with counseling with the genetic counselor to finalize a decision to proceed with or decline amniocentesis. The participant's NIPT showed no aneuploidy detected and the fetal sex was male.

On 28 Apr 2021 (Study Day 267), at 37 weeks 1 day of gestational age, infant was born and noted to have bilateral club feet (previously noted in ultrasound).

Action taken with study IP in response to the event, talipes, was not applicable, as the participant had already received both scheduled doses.

The event, talipes, was considered as not recovered/not resolved on 25 Mar 2021 (Study Day 233).

The investigator assessed the event, talipes, as not related to study IP or study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-117184	Talipes

Participant Number:	US321-2326 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	27 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	25 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Autonomic Nervous System Imbalance/ Autonomic Dysfunction	SAE	Grade 2/ moderate	Related	25 Sep 2020 (Study Day 30) – 01 Mar 2021 (Study Day 187)	Recovered/ resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US321-2326, a 46-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 27 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 25 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Sep 2020 (Study Day 30), 29 days after the first dose and on the day of the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of autonomic nervous system imbalance. Action taken with the IP was not applicable. The event of autonomic dysfunction lasted for 158 days, after which it was considered to be recovered/resolved with sequelae on 01 Mar 2021 (Study Day 187). The investigator assessed the event of autonomic nervous system imbalance to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 25 Sep 2020 (Study Day 30), the participant experienced a serious adverse event of autonomic nervous system imbalance after receiving the second dose of study IP. While driving home, about 30 minutes after the second dose, the participant had a strange feeling in their head. The participant reported not being able to think right. They wanted to pull over to the side of the road but did not because of the traffic. The participant kept driving home and when they got home, they had a fever with a maximum temperature of 102.5°F for 2 days. The participant reported feeling better after the fever resolved. Treatment for the fever/pain reactogenicity included paracetamol PO.

On 18 Oct 2021 (Study Day 53), the participant reported intense vertigo upon standing with no prior history of vertigo. They awoke the next morning with persistent vertigo. On an unknown

date, the participant went to their primary care provider (PCP) who prescribed amoxicillin/clavulanate PO (taken from 25 Oct 2020 [Study Day 60] to 30 Oct 2020 [Study Day 65]) for possible sinus congestion. The PCP did not find any sinus or ear problems. The participant reported menstrual periods every 15 days. The participant's hemoglobin was 13.1 (no units or reference range provided), and a complete metabolic panel, thyroid levels, and D-dimer were all normal. The participant reported symptoms of intermittent palpitations and intermittent dizziness. They were unable to tolerate their usual level of activity/exercise; they were typically able to run 10 miles without problems, but recently, they could run only a mile and developed heart palpitations (heart pounding) and dizziness if they walked a block. The participant denied spinning sensation, syncope, and depression. The participant's vertigo had mostly resolved, but they continued to have shortness of breath, palpitations, and lack of stamina. Treatment for the event included formoterol inhalation.

On 03 Nov 2020 (Study Day 69), the participant was treated with meclizine PO for autonomic dysfunction.

On 18 Nov 2020 (Study Day 84), an electrocardiogram was normal. Additional diagnostic test results reported, without dates, included a magnetic resonance imaging scan of the brain that showed no acute changes with cerebral spinal fluid collection at the right cerebellomedullary angle suggestive of an arachnoid cyst; chest x-ray was normal; thyroid-stimulating hormone, complete blood count, chemistries, aspartate aminotransferase, alanine aminotransferase, and D-dimer were normal. A Hallpike maneuver was negative with no nystagmus (they were briefly dizzy); blood pressure was 118/79 mm Hg and pulse 71 beats per minute (bpm) while supine and 111/77 mm Hg and pulse 76 bpm while standing. The participant reported having intermittent dizziness and vertigo often precipitated by exercise. The participant was referred to get a Holter monitor and cardiology evaluation with encouragement from the investigator and an additional recommendation for a neurology evaluation as they continued to have symptoms of fatigue and dizziness that limited their exercise and activities.

On 16 Dec 2020 (Study Day 112), the participant had an echocardiogram which showed normal left ventricular systolic function with an ejection fraction of greater than 55%, normal left ventricular wall thickness, mild mitral regurgitation, normal aortic and tricuspid valve, and no pericardial effusion. The participant also had a stress test which was interpreted to be a normal maximum stress test; predicted maximum heart rate was 174 bpm, 80% target heart rate was 148 bpm; cardiac and pulmonary examinations were normal.

Action taken with the study IP was not applicable in response to the event as the participant received both doses of study IP.

The event, autonomic nervous system imbalance, was reported as resolved with sequelae (palpitations) on 01 Mar 2021 (Study Day 187).

The investigator assessed the event, autonomic nervous system imbalance, as related to study IP and not related to study procedure.

The investigator stated that the participant's symptoms of fatigue, dizziness, and palpitations were possibly related to the study IP based on a temporal relationship and no other cause had been identified despite medical check-ups with physicians.

The investigator assessed the event, autonomic nervous system imbalance, as related to study IP. The sponsor considered the event to be unrelated to the study IP, as the symptoms described were relatively common and nonspecific in this subject with multiple confounders, including concomitant sinus infection and thyroid dysfunction, which would provide more plausible explanations for the symptoms experienced.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000862	Autonomic nervous system imbalance

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Female sterilisation	Bilateral tubal ligation	2005 - 2005
Benign neoplasm of thyroid gland	Left thyroid nodule, benign	2006 - 2006
Hypothyroidism	Hypothyroidism	2006 - Ongoing
Thyroidectomy	Left thyroidectomy	2006 - 2006
Plantar fasciitis	Plantar fasciitis left foot	2015 - 2015

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine sodium	Jun 2006 - Ongoing	Hypothyroidism

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Fish oil	2014 - Ongoing	Deficiency; General Health
Xantofyl; zeaxanthin	2017 - Ongoing	Eye Health; General Health
Ascorbic acid; folic acid; vitamin b complex	Jan 2020 - Ongoing	Deficiency; General Health
Calcium carbonate; colecalciferol	Jan 2020 - Ongoing	Deficiency; General Health
Paracetamol	25 Sep 2020 (Study Day 30) - 26 Sep 2020 (Study Day 31)	Fever/Pain Reactogenicity
Formoterol	21 Oct 2020 (Study Day 56) - 21 Oct 2020 (Study Day 56)	Autonomic Dysfunction
Amoxicillin sodium; clavulanate potassium	25 Oct 2020 (Study Day 60) - 30 Oct 2020 (Study Day 65)	Acute Non-Recurrent Pansinusitis
Meclozine	03 Nov 2020 (Study Day 69) - 03 Nov 2020 (Study Day 69)	Autonomic Dysfunction
Chest x-ray*	07 Dec 2020 (Study Day 103) - 07 Dec 2020 (Study Day 103)	Adverse Event
Mri head*	07 Dec 2020 (Study Day 103) - 07 Dec 2020 (Study Day 103)	Adverse Event
Cardiac stress test*	16 Dec 2020 (Study Day 112) - 16 Dec 2020 (Study Day 112)	Adverse Event
Echocardiogram*	16 Dec 2020 (Study Day 112) - 16 Dec 2020 (Study Day 112)	Adverse Event
Holter monitor (ambulatory ekg)*	16 Dec 2020 (Study Day 112) - 16 Dec 2020 (Study Day 112)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Fatigue	Grade 2/moderate	Related	20 Oct 2020 (Study Day 55) - 24 Dec 2020 (Study Day 120)
Sinusitis	Grade 1/mild	Not related	23 Oct 2020 (Study Day 58) - 02 Nov 2020 (Study Day 68)
Upper-Airway Cough Syndrome	Grade 1/mild	Not related	25 Oct 2020 (Study Day 60) - 24 Dec 2020 (Study Day 120)
Polymenorrhoea	Grade 1/mild	Related	08 Nov 2020 (Study Day 74) - 27 Dec 2020 (Study Day 123)
Palpitations	Grade 1/mild	Related	01 Mar 2021 (Study Day 187) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US332-2329 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	12 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	15 Oct 2020 (Study Day 34)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Swelling Face/Facial Swelling	SAE	Grade 3/ severe	Related	17 Oct 2020 (Study Day 36) – 22 Oct 2020 (Study Day 41)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US332-2329, a 51-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 12 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 15 Oct 2020 (Study Day 34). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 17 Oct 2020 (Study Day 36), 35 days after the first dose and 2 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of swelling face. Action taken with the IP was not applicable. The event of facial swelling lasted for 6 days, after which it was considered to be recovered/resolved on 22 Oct 2020 (Study Day 41). The investigator assessed the event of swelling face to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 02 Oct 2020 (Study Day 21), the participant had cosmetic injections in their cheeks. They were injected with a Botox/Filler combination consisting of 60 units of BOTOX® (onabotulinumtoxinA) Cosmetic, 1 unit of Juvederm® Ultra Plus XC, and 3 units of Juvederm® Voluma SC.

On 15 Oct 2020 (Study Day 34), the participant presented to the site for their second dose visit and their physical examination, including a skin assessment, which was normal.

On 17 Oct 2020 (Study Day 36), the participant experienced a serious adverse event of swelling face, which was considered medically significant. The participant developed injection site swelling/hardness measuring 125 mm with mild deltoid tenderness at the site of study IP administration, but they denied trouble moving the affected arm. That night, they experienced bilateral facial swelling, which was greater on the left side than the right. The participant contacted

the doctor who performed the cosmetic procedure with concerns of moderate facial swelling and was prescribed a 5-day course of prednisolone PO (initial dose of 25 mg, followed by 40 mg daily) as the treatment.

On 18 Oct 2020 (Study Day 37), the area of swelling/hardness at the study IP injection site reduced to 55 mm.

On 20 Oct 2020 (Study Day 39), the participant reported that their facial swelling was almost completely resolved, with minimal swelling remaining under the left eye.

Action taken with study IP in response to the event was not applicable as the participant had already received both scheduled doses.

The event, swelling face, was considered resolved on 22 Oct 2020 (Study Day 41).

The investigator assessed the event, swelling face, as related to study IP and not related to study procedure. The investigator noted that facial swelling was a known potential side effect of Voluma dermal filler injections and stated that the injection of dermal filler was believed to be a contributing factor to the participant's development of facial swelling. However, since the participant developed facial swelling almost 2 weeks after the dermal filler injections and only 2 days after administration of study IP, the investigator concluded that the temporal relationship provided a reasonable probability of a causal relationship between the participant's facial swelling and receipt of the IP.

The sponsor cannot rule out a possible cause and effect relationship between administration of study IP and the occurrence facial swelling. After review of the clinical details and investigator comments pertaining to this adverse event, and based upon experience to date, the sponsor does not believe that changes to the conduct of this clinical trial are warranted.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000515	Swelling face

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cervical dysplasia	Cervical dysplasia	2007 - 2007
Hysterectomy	Hysterectomy	2007 - 2007
Postmenopause	Post menopausal	2014 - Ongoing
Foot operation	Foot surgery	2018 - 2018
Sports injury	Tennis injury-left foot	2018 - 2018

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Estradiol	2014 - Ongoing	Post Menopausal
Testosterone	2014 - Ongoing	Post Menopausal
Naproxen	16 Sep 2020 (Study Day 5) - 16 Sep 2020 (Study Day 5)	Generalized Myalgia
Botulinum toxin type a	Oct 2020 - Oct 2020	Facial Cosmetic Injection(Wrinkles)
Dermal filler injection*	02 Oct 2020 (Study Day 21) - 02 Oct 2020 (Study Day 21)	Other, Cosmetic
Hyaluronic acid	02 Oct 2020 (Study Day 21) - 02 Oct 2020 (Study Day 21)	Cosmetic Procedure
Naproxen	16 Oct 2020 (Study Day 35) - 16 Oct 2020 (Study Day 35)	Headache, Left Arm Injection Site Swelling
Amoxicillin; clavulanic acid	17 Oct 2020 (Study Day 36) - 21 Nov 2020 (Study Day 71)	Facial Swelling
Prednisolone	17 Oct 2020 (Study Day 36) - 17 Oct 2020 (Study Day 36)	Facial Swelling
Prednisolone	18 Oct 2020 (Study Day 37) - Ongoing	Facial Swelling
Influenza vaccine	23 Nov 2020 (Study Day 73) - 23 Nov 2020 (Study Day 73)	Preventative Healthcare

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Injection Site Pain	Grade 1/mild	Related	17 Nov 2020 (Study Day 67) - 01 Dec 2020 (Study Day 81)
Upper Respiratory Tract Infection	Grade 1/mild	Not related	11 Jan 2021 (Study Day 122) - 14 Jan 2021 (Study Day 125)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US343-2023 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	05 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Polymyalgia Rheumatica/Possible Polymyalgia Rheumatica	SAE, AE leading to withdrawal from study vaccine	Grade 3/ severe	Related	20 Aug 2020 (Study Day 16) – Ongoing	Recovering/ resolving

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US343-2023, an 83-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 05 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 20 Aug 2020 (Study Day 16), 15 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of polymyalgia rheumatica. On 01 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of possible polymyalgia rheumatica was considered to be ongoing. The investigator assessed the event of polymyalgia rheumatica to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 07 Aug 2020 (Study Day 3), the participant returned to the clinic for an unscheduled visit, due to a complaint of mild body aches. They had a negative nasopharyngeal RT-PCR SARS-CoV-2 test.

On 20 Aug 2020 (Study Day 16), the participant experienced a serious adverse event of polymyalgia rheumatica (PMR). The participant presented to the emergency department and was hospitalized due to generalized weakness and severe myalgias that lasted for 3 days. In the days leading up to the hospitalization, the participant developed progressive, migratory myalgias of bilateral lumbar/sacroiliac joint, bilateral deltoid, right occiput, cervical paraspinal muscles which had worsened over 2 weeks; and progressive weakness until they were unable to get out of bed. The participant reported difficulty abducting bilateral upper extremities due to weakness and

pain. In addition, they experienced headache, which was relieved by paracetamol. The participant denied fever or chills. The participant did not experience vertigo, unilateral weakness/numbness or speech changes; thus, stroke was excluded.

On an unspecified date in August, laboratory test results included C-reactive protein at 96.9 mg/L (reference range 0.0 to 5.0 mg/L); erythrocyte sedimentation rate of 56 mm/h (reference range 0 to 15 mm/h); troponin 30 then 29 (no units or reference range provided), creatinine 2.6 (participant's baseline level was 1.9 to 2.1; no units or reference range provided), and magnesium 2.0 (no unit or reference range reported). An infectious disease work-up was negative including an unremarkable urinalysis, negative COVID-19 test, and negative chest x-ray. An electrocardiogram (ECG) was unchanged from the prior ECG.

The admitting physician, primary investigator, and infectious disease consultant originally assessed that the myalgias were unlikely related to study IP, given the timing of onset of symptoms and insignificant findings in clinic 7 days after study IP dose. Rheumatologists were consulted and provided a possible diagnosis of PMR; however, a vaccine side effect was also suspected. Their recommendation included a one-time dose of prednisone of 15 mg. After the one-time dose was administered, the participant's pain resolved.

On 21 Aug 2020 (Study Day 17), the participant reported feeling much better; however, they still had mild tenderness over right occiput, deltoid and cervical paraspinal areas on examination. Their range of motion (ROM) had improved; they were able to fully abduct their shoulders; and ROM of cervical spine was intact. Their sensation and strength were equal bilaterally, with no focal deficits. The abnormal laboratory results on the same day included chloride 113 (high), carbon dioxide 15 (low), blood urea nitrogen 37 (high), creatinine 2.03 (high), glucose 125 (high), red blood cell count 2.61 (low), hemoglobin 7.5 (low), hematocrit 22.9 (low), and platelet count 125 (low) (no units and reference ranges reported). Vital signs included temperature 97.9°F, heart rate 59 beats per minute, respiratory rate 18 breaths per minute, blood pressure 153/65 mm Hg, and oxygen saturation 97% on room air. On the same day, the participant was discharged on a 15-day prednisone taper (starting dose of 20 mg daily) with plans to follow-up on symptoms and laboratory tests after the taper was completed.

On 26 Aug 2020 (Study Day 22), the participant reported feeling good during the day, however, upon waking up in the morning, they experienced some pain in their shoulders and neck. The pain went away approximately 2 hours after taking prednisone.

On 04 Sep 2020 (Study Day 31), the participant completed their prednisone taper; however, they experienced recurrence of axial myalgias.

On 09 Sep 2020 (Study Day 36), the participant was seen by a rheumatologist as an outpatient. Laboratory test results included antinuclear antibody <1:40 (no units, reference range <1:40) and

rheumatoid factor <10 IU/mL (reference range 0 to 15 IU/mL). Prednisone was restarted at 20 mg for 2 weeks, followed by slow taper.

During study follow-up visits on 01 Oct 2020 (Study Day 58) and 13 Oct 2020 (Study Day 70), the participant responded well on the prednisone regimen. They planned to continue follow-up with rheumatology for the speed of their prednisone taper and overall condition.

Study IP was discontinued in response to the event, as the investigator was concerned that administering the next scheduled study IP dose might interfere with symptom assessment of PMR due to the participant's ongoing prednisone taper.

The event, PMR, was considered resolving.

The investigator assessed the event, PMR, as related to study IP and not related to study procedure. Per the investigator, there may be a possible relationship due to the symptomatology described as polymyalgia and weakness that developed after the study IP was administered.

Based on review of available data, the sponsor cannot rule out a possible cause and effect relationship between administration of study IP and the occurrence of polymyalgia rheumatica.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000211	Polymyalgia rheumatica

Study Completion/Discontinuation

Heparin	03 Feb 2021 (Study Day 183) - 16 Feb 2021 (Study Day 196)	Coagulant Prophylaxis
Salbutamol	03 Feb 2021 (Study Day 183) - 16 Feb 2021 (Study Day 196)	Wheezing Associated With Idiopathic Interstitial Pneumonitis
Paracetamol	04 Feb 2021 (Study Day 184) - 16 Feb 2021 (Study Day 196)	Pain And Fever
Atovaquone	08 Feb 2021 (Study Day 188) - 11 Feb 2021 (Study Day 191)	Pjp Prophylaxis
Methylprednisolone sodium succinate	08 Feb 2021 (Study Day 188) - 11 Feb 2021 (Study Day 191)	Pmr
Prednisone	11 Feb 2021 (Study Day 191) - 15 Feb 2021 (Study Day 195)	Pmr
Prednisone	15 Feb 2021 (Study Day 195) - 03 Mar 2021 (Study Day 211)	Pmr
Abdomen ultrasound*	16 Feb 2021 (Study Day 196) - 16 Feb 2021 (Study Day 196)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US354-2108 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	29 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Swelling Face/Cheek Swelling, Bilateral	SAE	Grade 2/ moderate	Related	30 Sep 2020 (Study Day 31) – 05 Oct 2020 (Study Day 36)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US354-2108, a 46-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 31 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 29 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 30 Sep 2020 (Study Day 31), 30 days after the first dose and 1 day after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of swelling face. Action taken with the IP was not applicable. The event of cheek swelling, bilateral lasted for 6 days, after which it was considered to be recovered/resolved on 05 Oct 2020 (Study Day 36). The investigator assessed the event of swelling face to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 29 Sep 2020 (Study Day 30), the participant experienced injection site pain from the second vaccination at night through the next day.

On 30 Sep 2020 (Study Day 31), the participant experienced a serious adverse event of swelling face that was considered a medically important event. The participant woke up with significant bilateral cheek swelling; no rash, pain, tenderness, oral or respiratory symptoms were reported. The participant had no fever or chills and felt well aside from unsightly cheek swelling. The participant had no new medications, foods, creams, toothpaste, etc.

On 01 Oct 2020 (Study Day 32), treatment included diphenhydramine 50 mg QD PO with no relief. On 03 Oct 2020 (Study Day 34), the participant started methylprednisolone 4 mg PO.

On 04 Oct 2020 (Study Day 35), the participant's face swelling had improved considerably.

Action taken with IP in response to the event was not applicable, as the participant had already received both doses per protocol.

The event, swelling face, was considered resolved on 05 Oct 2020 (Study Day 36) and there was no recurrence.

The investigator assessed the event, swelling face, as related to IP and not related to study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000656	Swelling face

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Caesarean section	C section	13 Oct 2005 (Study Day -5436) - 13 Oct 2005 (Study Day -5436)
Caesarean section	C section	30 Jun 2008 (Study Day -4445) - 30 Jun 2008 (Study Day -4445)
Mastectomy	Mastectomy - flap reconstruction	Apr 2017 - Apr 2017
Anxiety	Anxiety	2018 - Ongoing
Dermal filler injection	Dermal filler (voluma) cheek injections, bilaterl	Mar 2020 - Mar 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Duloxetine hydrochloride	2018 - Ongoing	Anxiety
Paracetamol	30 Sep 2020 (Study Day 31) - 03 Oct 2020 (Study Day 34)	Headache And Myalgias
Diphenhydramine hydrochloride	01 Oct 2020 (Study Day 32) - 03 Oct 2020 (Study Day 34)	Cheek Swelling
Methylprednisolone sodium succinate	03 Oct 2020 (Study Day 34) - 07 Oct 2020 (Study Day 38)	Cheek Swelling

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Diphenhydramine hydrochloride	17 Oct 2020 (Study Day 48) - 17 Oct 2020 (Study Day 48)	Ocular Pruritus
Influenza vaccine	26 Oct 2020 (Study Day 57) - 26 Oct 2020 (Study Day 57)	Influenza Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Eye Pruritus	Grade 1/mild	Not related	17 Oct 2020 (Study Day 48) - 17 Oct 2020 (Study Day 48)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US355-2053 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	17 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	14 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Nausea/Nausea	SAE	Grade 4	Related	15 Sep 2020 (Study Day 30) – 21 Sep 2020 (Study Day 36)	Recovered/ resolved
Vomiting/Intractable Vomiting	SAE	Grade 4	Related	15 Sep 2020 (Study Day 30) – 21 Sep 2020 (Study Day 36)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2053, a 65-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 17 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 14 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 15 Sep 2020 (Study Day 30), 29 days after the first dose and 1 day after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of nausea. Action taken with the IP was not applicable. The event of nausea lasted for 7 days, after which it was considered to be recovered/resolved on 21 Sep 2020 (Study Day 36). The investigator assessed the event of nausea to be related to the IP.

On 15 Sep 2020 (Study Day 30), 29 days after the first dose and 1 day after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of vomiting. Action taken with the IP was not applicable. The event of intractable vomiting lasted for 7 days, after which it was considered to be recovered/resolved on 21 Sep 2020 (Study Day 36). The investigator assessed the event of vomiting to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 15 Sep 2020 (Study Day 30), the participant experienced serious adverse events (SAEs) of nausea and vomiting. The participant described the events as intractable vomiting and mild nausea, accompanied by fever, with a maximum temperature of 101°F, and moderate headache. The participant had not been able to drink much and was not able to keep food down. The participant drank 22 ounces of fluid with no food and experienced an interference with activity.

On 16 Sep 2020 (Study Day 31), the participant reported mild headache and severe nausea and stated that, since the time of contact with the site that day, their oral intake was "only a few sips of fluids." The participant's fever resolved with a recorded temperature of 98°F. That evening of the same day, the participant visited an urgent care and received treatment with fluids and ondansetron for the event of intractable nausea with vomiting. The participant was provided a prescription for ondansetron for ongoing treatment at home.

In the morning of 17 Sep 2020 (Study Day 32), the participant felt better, and both the headache and nausea improved to mild. The participant reported not filling the ondansetron prescription provided the day before. That evening, the participant's symptoms worsened again. The participant's spouse reported that they were unable to keep fluids down and wanted to go to the emergency department (ED). The ondansetron prescription had been filled and the participant took a dose "a few minutes" before the call to the site without any improvement. The participant's spouse also reported that they had a prior history of headaches with severe nausea that had led to hospital admissions in the past.

In the evening of 17 Sep 2020 (Study Day 32), the participant presented to the ED with intractable nausea and vomiting and was admitted to the hospital. Vital signs included blood pressure 162/70 mm Hg, respiratory rate 18 breaths per minute, and heart rate 63 beats per minute. Laboratory results included glucose 121 mg/dL (high), white blood cell (WBC) count $6.2 \times 10^3/\mu L$, red blood cell count (RBC) $4.40 \times 10^6/\mu L$, hemoglobin (Hgb) 13.5 g/dL, hematocrit (Hct) 40%, platelet count $228 \times 10^3/\mu L$, potassium 4.2 mmol/L, blood urea nitrogen (BUN) 13 mg/dL, creatinine 0.8 mg/dL, calcium 9.6 mg/dL, albumin 4.4 g/dL, and alkaline phosphate 86 U/L (no reference ranges reported). Urinalysis revealed hazy clarity and trace ketones but was otherwise within normal limits. While hospitalized, no COVID-19 testing was done. Treatment for the event included IV fluids and ondansetron.

On 18 Sep 2020 (Study Day 33), the participant's symptoms had improved and they were discharged from the hospital. Relevant laboratory results included WBC $7.2 \times 10^3/\mu L$, RBC $4.07 \times 10^6/\mu L$, Hgb 12.4 g/dL, Hct 37.3%, platelet count $203 \times 10^3/\mu L$, potassium 4.2 mmol/L, BUN 11 mg/dL, creatinine 0.9 mg/dL, calcium 9.0 mg/dL, albumin 3.8 g/dL, and alkaline phosphatase 74 U/L. Ongoing treatment prescribed at discharge included metoclopramide and ondansetron. The participant reported not taking the treatment medications prescribed at discharge.

On 21 Sep 2020 (Study Day 36), the participant was symptom free. Throughout the course of illness, the participant denied taking any over-the-counter or prescription medications to treat symptoms at home, outside of the single dose of ondansetron on 17 Sep 2020.

Action taken with the IP was reported as not applicable in response to the events of intractable vomiting and nausea, as the participant had already received both scheduled doses.

The events, nausea and vomiting, were considered resolved on 21 Sep 2020 (Study Day 36).

The investigator assessed the events, nausea and vomiting, as related to IP. Per the investigator, the events were related to IP because the participant developed a headache during the "diary card period" (designated period to collect solicited reactogenicity events) after receiving the second injection. The headache contributed to the nausea and vomiting, which necessitated the hospitalization. Since the headache was experienced in the "diary card" (reactogenicity) period, this caused the investigator to assess the events as related. The investigator assessed the events, nausea and vomiting, as not related to study procedure.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000306	Nausea
MOD-2020-000306	Vomiting

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Irritable bowel syndrome	Irritable bowel disease	Not reported - Ongoing
Mitral valve prolapse	Mitral valve prolapse	Not reported - Ongoing
Nausea	Nausea	Not reported - Ongoing
Supraventricular tachycardia	Cardiac arrythmia - paroxysmal supraventricular tachycardia	Not reported - Ongoing
Endometriosis	Endometriosis	1985 - Aug 1996
Uveitis	Chronic right uveitis	1989 - Ongoing
Hysterectomy	Hysterectomy	Aug 1996 - Aug 1996
Hemiparesis	Left sided weakness	Jan 2007 - Ongoing
Insomnia	Insomnia	Jan 2007 - Ongoing
Headache	Headaches	Oct 2007 - Ongoing
Hypoaesthesia	Left calf numbness	Oct 2007 - Ongoing
Nephrolithiasis	Kidney stones	Oct 2007 - Ongoing
Spinal fusion surgery	Spinal fusion	Oct 2007 - Oct 2007
Synovial cyst	Benign synovial cyst	Oct 2007 - Oct 2007
Synovial cyst removal	Synovial cyst removal	Oct 2007 - Oct 2007
Bunion operation	Bunionectomy left first metatarsal and 5th metatarsal	2018 - 2018

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Bunion operation	Bunionectomy right first metatarsal and 5th metatarsal	2018 - 2018
Foot deformity	Bunions: left first metatarsal and 5th metatarsal, right first metatarsal and 5th metatarsal	2018 - 2018
Skin wrinkling	Rhytids	2018 - Ongoing
Meniscus injury	Left meniscus tear	Jan 2020 - May 2020
Meniscus operation	Left meniscus arthroscopic repair	May 2020 - May 2020

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Prednisolone acetate	1989 - Ongoing	Chronic Right Eye Uveitis
Diphenhydramine hydrochloride	2015 - Ongoing	Insomnia
Melatonin	2015 - Ongoing	Insomnia
Cefalexin	28 Aug 2020 (Study Day 12) - 04 Sep 2020 (Study Day 19)	Toothache
Ondansetron	16 Sep 2020 (Study Day 31) - 16 Sep 2020 (Study Day 31)	Nausea, Intractable Vomiting
I.v. solutions	17 Sep 2020 (Study Day 32) - 18 Sep 2020 (Study Day 33)	Nausea, Intractable Vomiting
Ondansetron	18 Sep 2020 (Study Day 33) - 18 Sep 2020 (Study Day 33)	Nausea, Intractable Vomiting

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Toothache	Grade 2/moderate	Not related	28 Aug 2020 (Study Day 12) - 04 Sep 2020 (Study Day 19)
Diarrhoea	Grade 1/mild	Related	19 Sep 2020 (Study Day 34) - 19 Sep 2020 (Study Day 34)
Supraventricular Tachycardia	Grade 2/moderate	Not related	10 Nov 2020 (Study Day 86) - 14 Dec 2020 (Study Day 120)
Migraine	Grade 2/moderate	Not related	19 Nov 2020 (Study Day 95) - 10 Dec 2020 (Study Day 116)
Mitral Valve Incompetence	Grade 1/mild	Not related	19 Nov 2020 (Study Day 95) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US355-2232 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥65 Years
First Dose of Vaccine:	29 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Acute Kidney Injury/Acute Kidney Injury	SAE	Grade 4	Related	26 Sep 2020 (Study Day 29) – 08 Oct 2020 (Study Day 41)	Recovered/ resolved
Acute Myocardial Infarction/Non-ST Elevated Myocardial Infarction	SAE	Grade 4	Related	26 Sep 2020 (Study Day 29) – 26 Sep 2020 (Study Day 29)	Recovered/ resolved
Atrial Fibrillation/Paroxysmal Atrial Fibrillation	SAE	Grade 4	Related	26 Sep 2020 (Study Day 29) – 30 Oct 2020 (Study Day 63)	Recovered/ resolved with sequelae
Hypomagnesaemia/ Hypomagnesia	SAE	Grade 4	Related	26 Sep 2020 (Study Day 29) – 08 Oct 2020 (Study Day 41)	Recovered/ resolved
Organising Pneumonia/Cryptogenic Organizing Pneumonia	SAE	Grade 4	Related	26 Sep 2020 (Study Day 29) – 19 Nov 2020 (Study Day 83)	Recovered/ resolved
Respiratory Failure/Respiratory Failure	SAE, AE leading to withdrawal from study vaccine	Grade 4	Related	28 Sep 2020 (Study Day 31) – 19 Nov 2020 (Study Day 83)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US355-2232, a 70-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 29 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 26 Sep 2020 (Study Day 29), 28 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of acute kidney injury. On 25 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of acute kidney injury lasted for 13 days, after which it was considered to be recovered/resolved on 08 Oct 2020 (Study Day 41). The investigator assessed the event of acute kidney injury to be related to the IP.

On 26 Sep 2020 (Study Day 29), 28 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of acute myocardial infarction. On 25 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of non-st elevated myocardial infarction lasted for 1 day, after which it was considered to be recovered/resolved on 26 Sep 2020 (Study Day 29). The investigator assessed the event of acute myocardial infarction to be related to the IP.

On 26 Sep 2020 (Study Day 29), 28 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of atrial fibrillation. On 25 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of paroxysmal atrial fibrillation lasted for 35 days, after which it was considered to be recovered/resolved with sequelae on 30 Oct 2020 (Study Day 63). The investigator assessed the event of atrial fibrillation to be related to the IP.

On 26 Sep 2020 (Study Day 29), 28 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of hypomagnesaemia. On 25 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of hypomagnesia lasted for 13 days, after which it was considered to be recovered/resolved on 08 Oct 2020 (Study Day 41). The investigator assessed the event of hypomagnesaemia to be related to the IP.

On 26 Sep 2020 (Study Day 29), 28 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of organising pneumonia. On 25 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of cryptogenic organizing pneumonia lasted for 55 days, after which it was considered to be recovered/resolved on 19 Nov 2020 (Study Day 83). The investigator assessed the event of organising pneumonia to be related to the IP.

On 28 Sep 2020 (Study Day 31), 30 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 4 serious adverse event of respiratory failure. On 25 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of respiratory failure lasted for 53 days, after which it was considered to be recovered/resolved on 19 Nov 2020 (Study Day 83). The investigator assessed the event of respiratory failure to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 22 Sep 2020 (Study Day 25), the participant experienced a cough and took dextromethorphan/ chlorpheniramine.

On 25 Sep 2020 (Study Day 28), the participant reported typical allergy symptoms of sniffles, postnasal drainage, and a cough. They were advised to call back if symptoms worsened or changed. Further reported symptoms included general body aches, headache, chest tightness, and fatigue.

On 26 Sep 2020 (Study Day 29), the participant experienced serious adverse events (SAEs) of acute kidney injury (AKI), acute myocardial infarction (MI), atrial fibrillation (AFib), hypomagnesemia, and organizing pneumonia. The participant experienced a worsening cough, fever of 101°F, new onset paroxysmal AFib with rapid ventricular response, and a non-ST elevated MI and was admitted to the hospital. The participant's troponin values were elevated on admission, with a peak of 2.415 ng/mL (reference range <0.038 ng/mL), likely secondary to demand ischemia from rapid AFib. Further laboratory test results included sodium 135 mmol/L (reference range 138 to 145 mmol/L), carbon dioxide (CO2) 18 mmol/L (reference range 23 to 31 mmol/L), blood urea nitrogen (BUN) 47 mg/dL (reference range 8.4 to 25.7 mg/dL), creatinine (Cr) 2.59 mg/dL (reference range 0.72 to 1.25 mg/dL), glucose 466 mg/dL (reference range 70 to 105 mg/dL), white blood cell (WBC) count 10.8 × 109/L (reference range 4.4 to 10.7 × 109/L), red blood cell (RBC) count 3.72 × 1012/L (reference range 3.80 to 5.40 × 1012/L), hemoglobin (Hgb) 11.3 g/dL (reference range 12.0 to 17.6 g/dL), hematocrit (Hct) 33.5% (reference range 35.2 to 51.7%), neutrophils 90.5% (reference range 44.0 to 73.0%), lymphocytes 2.2% (reference range 20.0 to 43.0%), absolute neutrophil count (ANC) 9.75 × 109/L (reference range 2.01 to 7.14 × 109/L), absolute lymphocyte count 0.24 × 109/L (reference range 1.07 to 3.94 × 109/L), magnesium 1.0 mg/dL (reference range 1.6 to 2.6 mg/dL), and procalcitonin 2.76 ng/mL (reference range <0.10 ng/mL). A chest x-ray showed bilateral infiltrates consistent with multifocal pneumonia, which was a pattern suggestive of, but not a diagnostic for, COVID-19 pneumonia. The first blood culture showed Staphylococcus hominis and the second showed no growth; the S hominis was considered a likely contaminant. A urine culture revealed <10,000 CFU/mL of urogenital flora. A urinalysis revealed color yellow, protein 3+, blood 1+, leukocyte trace, glucose 3+, and WBC count >100 (no reference ranges reported). A respiratory panel was negative. Initial treatment included ceftriaxone and azithromycin, which were stopped as the diagnosis was likely cryptogenic organizing pneumonia. Treatment for AKI included IV fluids. Further treatment included acetylsalicylic acid, magnesium, enoxaparin, insulin aspart, and dexamethasone.

On 27 Sep 2020 (Study Day 30), vital signs included blood pressure (BP) 142/61 mm Hg, pulse 96 beats per minute (bpm), respiratory rate 25 breaths per minute (breaths/min), temperature 98.1°F, and oxygen saturation 76% at 01:56, which improved to 93% at 01:58. Laboratory test results included troponin I 1.643 ng/mL, WBC count 14.5 × 109/L, RBC count 3.63 × 1012/L, Hgb 11.0 g/dL, Hct 33.8%, neutrophils 91.0%, lymphocytes 2.7%, ANC 13.21 × 109/L, absolute lymphocyte count 0.38 × 109/L, Hgb A1c 9.0% (reference range 4.2 to 5.6%), glucose 120 mg/dL, CO2 20 mmol/L, BUN 48 mg/dL, Cr 2.40 mg/dL, total protein 6.2 g/dL (reference range 6.4 to

8.3 g/dL), and albumin 3.1 g/dL (reference range 3.2 to 4.6 g/dL). Paroxysmal AFib was noted. The participant self-converted to sinus rhythm with Bachmann's bundle. A nasopharyngeal swab was negative for COVID-19. Treatment included ondansetron for nausea, benzonatate for cough, and acetylsalicylic acid. The participant's type II diabetes was uncontrolled, and their insulin glargine dose was increased.

On 28 Sep 2020 (Study Day 31), the participant experienced an SAE of respiratory failure secondary to bilateral pulmonary infiltrates with ongoing cough and fever of 101°F. A physical examination revealed diminished breath sounds with coarse crackles and lower extremity edema. The participant was treated with 6 L of oxygen and remained hospitalized. A cardiology workup was performed. An echocardiogram (ECHO) showed cardiomyopathy with an ejection fraction (EF) of 30 to 35% (no reference range provided). A chest x-ray showed increasing bilateral patchy airspace consolidation, right greater than left. Laboratory test results for ferritin was 334 ng/mL (reference range 22 to 276 ng/mL) and C-reactive protein was 31.37 mg/dL (reference range ≤0.50 mg/dL). Treatment included levofloxacin PO.

On 29 Sep 2020 (Study Day 32), the participant's condition worsened, and they were treated with 8 L/min of oxygen. Vital signs included BP 171/95 mm Hg, pulse 72 bpm, respiratory rate 24 breaths/min, temperature 97.4°F, and oxygen saturation 97%. Laboratory test results included chloride (Cl) 110 mmol/L (reference range 98 to 107 mmol/L), CO2 17 mmol/L, BUN 63 mg/dL, Cr 2.25 mg/dL, glucose 160 mg/dL, WBC count 20.9 × 109/L, RBC count 3.69 × 1012/L, Hgb 11.2 g/dL, Hct 34.6%, neutrophils 94.6%, lymphocytes 1.5%, monocytes 2.4%, ANC 19.80 × 109/L, and absolute lymphocytes count 0.02 × 109/L. A computerized tomogram (CT) of the chest showed findings in keeping with multifocal pneumonia, no lobe was spared; small bilateral pleural effusions were noted, with right greater than left; and nonspecific esophageal wall thickening was considered to be correlated with esophageal reflux. A follow-up chest CT was recommended after the appropriate course of therapy to document resolution of these findings. An ECHO showed the left ventricle was normal in size, systolic left ventricular function was moderately to markedly reduced, EF of 30 to 35%, left ventricle wall thickness was normal, no regional wall motion abnormalities, left ventricular diastolic function parameters were normal, and right ventricular systolic pressure was 30 mm Hg. Urine Streptococcus pneumoniae and Legionella spp antigens test results were negative. Treatment included a course of steroids, hydrocodone/paracetamol, and dextromethorphan/guaifenesin.

On 30 Sep 2020 (Study Day 33), the participant underwent a bronchoscopy, which showed unresolved bilateral infiltrates. Bronchial washing Gram stain and culture were obtained from the endobronchial tree, and bronchoalveolar lavage Gram stain was performed from the right upper lobe and right middle lobe; there was no evidence of diffuse alveolar hemorrhage, and culture

results showed moderate polymorphonuclear (PMN) cells and no organisms. The WBC differential from the manual bronchoalveolar lavage showed neutrophils 45%, lymphocytes 73%, macrophages 32%, and cells counted 100 (no reference ranges provided). Laboratory test results included WBC count 15.9 × 109/L, Hgb 10.1 g/dL, Hct 30.9%, Cl 111 mmol/L, CO2 20 mmol/L, BUN 56 mg/dL, Cr 1.98 mg/dL, glucose 116 mg/dL, and calcium (Ca) 8.1 mg/dL (reference range 8.1 to 10.4 mg/dL). A respiratory panel was negative. The participant was weaned to 3 L of oxygen. Treatment included salbutamol 0.5%, lidocaine 4%, and levalbuterol.

On 01 Oct 2020 (Study Day 34), treatment included enoxaparin and diltiazem. Bronchoalveolar lavage culture, Gram stain, and bronchial washing culture and Gram stain showed no growth, moderate PMN cells, and no organisms were seen. Blood culture showed no growth. A bronchoalveolar lavage pathology smear revealed no malignancy.

On 02 Oct 2020 (Study Day 35), bronchoalveolar lavage culture and Gram stain and bronchial washing culture and Gram stain showed no growth, moderate PMN cells, and no organisms were seen. Blood culture showed growth of S hominis, which was a possible contaminant unless multiple cultures were positive for the same isolate. Bronchial washing cytology showed no cytological diagnosis and was negative for malignancy. Treatment for pneumonia included prednisone PO.

On 03 Oct 2020 (Study Day 36), vital signs included BP 159/90 mm Hg, pulse 97 bpm, respiratory rate 20 breaths/min, temperature 97.2°F, and oxygen saturation 95%. Physical examination revealed diminished breath sounds with coarse crackles; tachycardia, irregular rhythm; and lower extremity edema.

On 04 Oct 2020 (Study Day 37), a PCR test for Herpes simplex types 1 and 2 was negative.

On 05 Oct 2020 (Study Day 38), the participant's Foley catheter was removed, and they were able to void. Treatment included digoxin and amiodarone. A bronchoalveolar lavage acid-fast bacilli smear showed no acid-fast bacilli. A fungal culture and smear of bronchial washing showed no fungi isolated, no yeast or hyphae seen, and Pneumocystis jirovecii was not detected.

On 06 Oct 2020 (Study Day 39), a chest x-ray showed bilateral infiltrates mildly increased on the right. Laboratory test results included WBC count 12.6 × 109/L, RBC count 3.60 × 1012/L, Hgb 10.9 g/dL, Hct 34.0%, Cl 108 mmol/L, CO2 20 mmol/L, BUN 47 mg/dL, Cr 1.58 mg/dL, glucose 148 mg/dL, Ca 8.1 mg/dL, neutrophils 76.8%, lymphocytes 11.2%, and ANC 9.67 × 109/L.

On 07 Oct 2020 (Study Day 40), a limited ECHO showed and EF of 35 to 45%. A cardiac LifeVest™ was considered. A bronchoalveolar lavage culture for Legionella spp was negative.

On 08 Oct 2020 (Study Day 41), vital signs included BP 168/86 mm Hg, pulse 92 bpm, respiratory rate 20 breaths/min, temperature 97.8°F, and oxygen saturation 94%. Physical examination revealed coarse breath sounds, irregular rhythm, and minimal lower extremity edema. Treatment included amiodarone and apixaban for paroxysmal AFib, prednisone for pneumonia, metoprolol and furosemide for hypertension, and clopidogrel was stopped. Venlafaxine was started for depression. Acute kidney injury secondary to acute tubular necrosis and nonanion gap metabolic acidosis improved. Hypertension was increasing and hydralazine was resumed. The participant was discharged from the hospital in good condition with 2 L of supplemental oxygen and a Holter monitor for 30 days. Discharge diagnoses included community acquired pneumonia, elevated troponin, AFib with rapid ventricular response, sepsis, and chest pain.

On 09 Oct 2020 (Study Day 42), Cytomegalovirus was not detected using a PCR of bronchoalveolar lavage fluid.

On 12 Oct 2020 (Study Day 45), the participant reported they were on 4 L of supplemental oxygen and remained on prednisone.

On 15 Oct 2020 (Study Day 48), the participant was rehospitalized for AFib. The participant presented with atrial flutter/rapid ventricular response and symptoms of shortness of breath. Cardiology and pulmonary were consulted. A chest x-ray showed extensive bilateral infiltrates consistent with multifocal pneumonia slightly improved in the interval. Treatment included benzonatate PO for cough, diltiazem IV and amiodarone IV for paroxysmal AFib, and enoxaparin SC for coronary artery disease.

On 16 Oct 2020 (Study Day 49), the participant was lying in bed, appeared comfortable, and continued with an amiodarone IV drip and 4 L of oxygen via nasal cannula. Laboratory test results included RBC count 3.57 × 1012/L, Hgb 10.6 g/dL, Hct 32.9%, sodium 133 mmol/L, Cr 1.51 mg/dL, glucose 222 mg/dL, Ca 8.0 mg/dL, albumin 2.7 g/dL, total protein 4.8 g/dL, and Hgb A1c 9.5%. Treatment included insulin aspart SC for diabetes type II.

On 17 Oct 2020 (Study Day 50), the participant was discharged from the hospital. Discharge diagnoses included AFib/rapid ventricular response, nonischemic cardiomyopathy, acute hypoxemic respiratory failure, diabetes, and AKI. As recommended by cardiology, apixaban was given upon discharge. Treatment also included prednisone PO for pneumonia.

On 19 Nov 2020 (Study Day 83), the investigator reported that as per pulmonology reports, the participant was recovering and would follow up in 3 months.

There was no action taken with study IP in response to the events of organizing pneumonia, AFib, acute MI, hypomagnesia, and AKI. Study IP was discontinued in response to the event of respiratory failure.

The event, acute MI, was reported as resolved on 26 Sep 2020 (Study Day 29). The events, hypomagnesia and AKI, were reported as resolved on 08 Oct 2020 (Study Day 41). The event, AFib, was reported as resolved with sequelae on 30 Oct 2020 (Study Day 63); the participant was in sinus rhythm but could intermittently go in and out of AFib and on medication and was following up with their primary care physician to control and monitor. The events of organizing pneumonia and respiratory failure were reported as resolved on 19 Nov 2020 (Study Day 83).

The investigator assessed the events, organizing pneumonia, respiratory failure, AFib, acute MI, hypomagnesia, and AKI, as related to study IP and not related to study procedure.

The sponsor assessed the events as unrelated to the study IP, noting that the events are more likely explained by the subject's comorbid conditions.

Additional Information From the Safety Database

Additional details for the serious and nonserious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000369	Acute kidney injury
MOD-2020-000369	Acute myocardial infarction
MOD-2020-000369	Atrial fibrillation
MOD-2020-000369	Hypomagnesaemia
MOD-2020-000369	Organising pneumonia
MOD-2020-000369	Respiratory failure
MOD-2021-009983	COVID-19

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Exposure to communicable disease	Tuberculosis exposure	Not reported
Urinary tract infection	Recurrent urinary tract infections	Not reported - Ongoing
Seasonal allergy	Seasonal allergies	1951 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Joint dislocation	Right shoulder dislocation	1975 - 1975
Hypertension	Hypertension	1992 - Ongoing
Type 2 diabetes mellitus	Type 2 diabetes	1992 - Ongoing
Depression	Depression	13 Jun 2008 (Study Day -4460) - Ongoing
Insomnia	Insomnia	2010 - Ongoing
Gastritis	Gastritis	10 Oct 2011 (Study Day -3246) - 31 Oct 2011 (Study Day -3225)
Helicobacter infection	H. pylori infection	12 Oct 2011 (Study Day -3244) - 31 Oct 2011 (Study Day -3225)
Chronic kidney disease	Chronic kidney disease	24 Jan 2012 (Study Day -3140) - Ongoing
Coronary artery disease	Coronary artery disease	2013 - Ongoing
Cellulitis	Right lower extremity cellulitis	08 Jan 2014 (Study Day -2425) - Not reported
Pulmonary embolism	Pulmonary embolism	08 Jan 2014 (Study Day -2425) - 18 Jan 2014 (Study Day -2415)
Pyuria	Pyuria	08 Jan 2014 (Study Day -2425) - 18 Jan 2014 (Study Day -2415)
Iron deficiency anaemia	Iron deficiency anemia	13 Jan 2014 (Study Day -2420) - Ongoing
Diabetic neuropathy	Sensory diabetic neuropathy	21 Jul 2014 (Study Day -2231) - Ongoing
Back pain	Low back pain	2015 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2015 - Ongoing
Mitral valve incompetence	Mitral valve regurgitation	28 Apr 2016 (Study Day -1584) - Ongoing
Staphylococcus test positive	Mrsa positive	2017 - 2017
Coronary arterial stent insertion	Coronary artery stent	20 Apr 2018 (Study Day -862) - 20 Apr 2018 (Study Day -862)
Diabetic retinopathy	Diabetic retinopathy left eye	2019 - Ongoing
Lens disorder	Left lens erosion	2019 - Ongoing
Colon adenoma	Adenomatous colon polyp	17 Jun 2019 (Study Day -439) - 17 Jun 2019 (Study Day -439)
Colonoscopy	Colonscopy	17 Jun 2019 (Study Day -439) - 17 Jun 2019 (Study Day -439)
Diverticulum intestinal	Diverticulosis of colon	17 Jun 2019 (Study Day -439) - 30 Jun 2019 (Study Day -426)
Benign prostatic hyperplasia	Benign prostatic hypertrophy	Nov 2019 - Ongoing
Urinary retention	Urinary retention	Nov 2019 - Ongoing
Myocardial infarction	Myocardial infarction	01 Nov 2019 (Study Day -302) - 01 Nov 2019 (Study Day -302)
Wound	Wound right elbow	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Trazodone	2010 - Ongoing	Insomnia

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Acetylsalicylic acid	2013 - 25 Sep 2020 (Study Day 28)	Coronary Artery Disease
Amlodipine	2013 - 15 Oct 2020 (Study Day 48)	Coronary Artery Disease
Clopidogrel bisulfate	2013 - 08 Oct 2020 (Study Day 41)	Coronary Artery Disease
Atorvastatin	2015 - Ongoing	Hyperlipidemia
Metformin	2015 - 08 Oct 2020 (Study Day 41)	Type 2 Diabetes
Liraglutide	2017 - Ongoing	Type 2 Diabetes
Insulin glargine	2018 - Ongoing	Type 2 Diabetes
Finasteride	Nov 2019 - Ongoing	Benign Prostatic Hypertension
Hydralazine	Feb 2020 - 29 Mar 2021 (Study Day 213)	Hypertension
Tamsulosin hydrochloride	Feb 2020 - Ongoing	Urinary Retention
Chlorphenamine maleate; dextromethorphan hydrobromide	22 Sep 2020 (Study Day 25) - 26 Sep 2020 (Study Day 29)	Seasonal Allergies/Nasal Congestion
Acetylsalicylic acid	26 Sep 2020 (Study Day 29) - 26 Sep 2020 (Study Day 29)	Non-St Elevated Myocardial Infarction
Azithromycin	26 Sep 2020 (Study Day 29) - 28 Sep 2020 (Study Day 31)	Pneumonia, Respiratory Failure
Ceftriaxone	26 Sep 2020 (Study Day 29) - 28 Sep 2020 (Study Day 31)	Pneumonia, Respiratory Failure
Dexamethasone	26 Sep 2020 (Study Day 29) - 27 Sep 2020 (Study Day 30)	Pneumonia, Respiratory Failure
Enoxaparin sodium	26 Sep 2020 (Study Day 29) - 28 Sep 2020 (Study Day 31)	Coagulation Prophylaxis
Insulin aspart	26 Sep 2020 (Study Day 29) - 08 Oct 2020 (Study Day 41)	Type 2 Diabetes
Magnesium	26 Sep 2020 (Study Day 29) - 26 Sep 2020 (Study Day 29)	Hypomagnesia
Acetylsalicylic acid	27 Sep 2020 (Study Day 30) - Ongoing	Coronary Artery Disease
Benzonatate	27 Sep 2020 (Study Day 30) - 29 Sep 2020 (Study Day 32)	Cough
Ondansetron	27 Sep 2020 (Study Day 30) - 27 Sep 2020 (Study Day 30)	Nausea
Levofloxacin	28 Sep 2020 (Study Day 31) - 28 Sep 2020 (Study Day 31)	Pneumonia, Respiratory Failure
Dextromethorphan hydrobromide; guaifenesin	29 Sep 2020 (Study Day 32) - 08 Oct 2020 (Study Day 41)	Pneumonia
Hydrocodone bitartrate; paracetamol	29 Sep 2020 (Study Day 32) - 01 Oct 2020 (Study Day 34)	Pneumonia
Bronchoscopy*	30 Sep 2020 (Study Day 33) - 30 Sep 2020 (Study Day 33)	Diagnostic
Levosalbutamol	30 Sep 2020 (Study Day 33) - 02 Oct 2020 (Study Day 35)	Pneumonia, Respiratory Failure
Lidocaine	30 Sep 2020 (Study Day 33) - 30 Sep 2020 (Study Day 33)	Bronchoscopy
Salbutamol	30 Sep 2020 (Study Day 33) - 30 Sep 2020 (Study Day 33)	Bronchoscopy
Diltiazem	01 Oct 2020 (Study Day 34) - 01 Oct 2020 (Study Day 34)	Paroxysmal Atrial Fibrillation
Enoxaparin sodium	01 Oct 2020 (Study Day 34) - 02 Oct 2020 (Study Day 35)	Coronary Artery Disease

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Prednisone	02 Oct 2020 (Study Day 35) - 15 Oct 2020 (Study Day 48)	Pneumonia, Respiratory Failure
Amiodarone	05 Oct 2020 (Study Day 38) - 05 Oct 2020 (Study Day 38)	Paroxysmal Atrial Fibrillation
Amiodarone	05 Oct 2020 (Study Day 38) - 06 Oct 2020 (Study Day 39)	Paroxysmal Atrial Fibrillation
Digoxin	05 Oct 2020 (Study Day 38) - 05 Oct 2020 (Study Day 38)	Paroxysmal Atrial Fibrillation
Amiodarone	06 Oct 2020 (Study Day 39) - Ongoing	Paroxysmal Atrial Fibrillation
Apixaban	08 Oct 2020 (Study Day 41) - Ongoing	Paroxysmal Atrial Fibrillation
Furosemide	08 Oct 2020 (Study Day 41) - 08 Oct 2020 (Study Day 41)	Hypertension
Metoprolol	08 Oct 2020 (Study Day 41) - Ongoing	Atrial Fibrillation
Venlafaxine hydrochloride	08 Oct 2020 (Study Day 41) - Ongoing	Depression
Amiodarone	15 Oct 2020 (Study Day 48) - 15 Oct 2020 (Study Day 48)	Paroxysmal Atrial Fibrillation
Benzonatate	15 Oct 2020 (Study Day 48) - 20 Nov 2020 (Study Day 84)	Cough
Diltiazem	15 Oct 2020 (Study Day 48) - 15 Oct 2020 (Study Day 48)	Paroxysmal Atrial Fibrillation
Enoxaparin sodium	15 Oct 2020 (Study Day 48) - 17 Oct 2020 (Study Day 50)	Coronary Artery Disease
Insulin aspart	16 Oct 2020 (Study Day 49) - 17 Oct 2020 (Study Day 50)	Diabetes Type 2
Prednisone	17 Oct 2020 (Study Day 50) - 24 Oct 2020 (Study Day 57)	Pneumonia, Respiratory Failure
Prednisone	25 Oct 2020 (Study Day 58) - 01 Nov 2020 (Study Day 65)	Pneumonia
Influenza vaccine	14 Dec 2020 (Study Day 108) - 14 Dec 2020 (Study Day 108)	Influenza Prophylaxis
Codeine phosphate; paracetamol	Jan 2021 - 29 Mar 2021 (Study Day 213)	Back Pain
Chlorphenamine maleate; dextromethorphan hydrobromide	18 Jan 2021 (Study Day 143) - 01 Feb 2021 (Study Day 157)	COVID-19

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Nausea	Grade 2/moderate	Related	27 Sep 2020 (Study Day 30) - 27 Sep 2020 (Study Day 30)
COVID-19	Grade 2/moderate	Not related	18 Jan 2021 (Study Day 143) - 31 Jan 2021 (Study Day 156)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US360-2051 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	17 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	14 Oct 2020 (Study Day 28)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Aortic Stenosis/Worsening Of Aortic Stenosis	SAE	Grade 4	Not related	28 Oct 2020 (Study Day 42) – 02 Nov 2020 (Study Day 47)	Recovered/ resolved with sequelae
Procedural Haemorrhage/Increased Bleeding Intra Operative Time	SAE	Grade 4	Related	29 Oct 2020 (Study Day 43) – 29 Oct 2020 (Study Day 43)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US360-2051, a 52-year-old Hispanic or Latino male, received the first dose of placebo in the left arm on 17 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 14 Oct 2020 (Study Day 28). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 28 Oct 2020 (Study Day 42), 41 days after the first dose and 14 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of aortic stenosis. Action taken with the IP was not applicable. The event of worsening of aortic stenosis lasted for 6 days, after which it was considered to be recovered/resolved with sequelae on 02 Nov 2020 (Study Day 47). The investigator assessed the event of aortic stenosis to be not related to the IP.

On 29 Oct 2020 (Study Day 43), 42 days after the first dose and 15 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of procedural haemorrhage. Action taken with the IP was not applicable. The event of increased bleeding intra operative time lasted for 1 days, after which it was considered to be recovered/resolved on 29 Oct 2020 (Study Day 43). The investigator assessed the event of procedural haemorrhage to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 19 Oct 2020 (Study Day 33), the participant experienced a nonserious adverse event (AE) of aortic stenosis. On the same day, an echocardiogram showed normal left ventricular systolic function, ejection fraction estimated at 65-70%, grade 1 (mild) left ventricular diastolic dysfunction, moderate concentric hypertrophy, mildly dilated left atrium, aortic valve showed that

a bicuspid valve could not be excluded, there was heavy calcification of the aortic valve, and severe stenosis. Trace regurgitation was revealed on pulsed-wave (PW) color-flow doppler; atrioventricular (AV) peak gradient was 107.0 mmHg, AV mean gradient was 82.0 mmHg, aortic valve area measured 0.49 cm^2 (no reference ranges were provided), and the pulmonic valve showed trace regurgitation on PW color-flow doppler, and minimal coronary artery disease.

On 27 Oct 2020 (Study Day 41), an electrocardiogram (ECG) was abnormal, and a SARS-CoV-2 RT-PCR nasopharyngeal swab result was negative.

On 28 Oct 2020 (Study Day 42), the participant experienced a serious adverse event (SAE) of aortic stenosis. The participant experienced rib pain at a level of 8/10 bilaterally and experienced recurrent syncope with exertion. The participant was given acetylsalicylic acid PO prior to aortic valve replacement (AVR) surgery. According to the Primary Investigator's assessment, a single dose of acetylsalicylic acid taken the day before surgery was probably not solely responsible for the bleeding seen after the AVR. Laboratory test results included partial thromboplastin time (PTT) 14.6 seconds (reference range 12.2 to 14.4 seconds), PTT 29.9 seconds (reference range 23.4 to 38.9 seconds), and international normalized ratio (INR) 1.16 (reference range 0.80 – 1.20).

On 29 Oct 2020 (Study Day 43), the participant experienced an SAE of procedural hemorrhage. On the same day, the participant was admitted to the hospital for AVR surgery and was noted to bleed profusely after undergoing AVR. Medications received for the surgical procedure included aztreonam, fentanyl, ketorolac, paracetamol, midazolam, morphine, prochlorperazine, vancomycin, and warfarin (all IV); diazepam and metoprolol tartrate PO. The participant had an additional abnormal ECG. A post-surgical transesophageal echocardiogram showed the valve was well seated without evidence of paravalvular leak. Treatment included a fresh frozen plasma (FFP) transfusion, and the participant was placed in the intensive care unit for 2 days. After the surgical incision had been closed despite heparin reversal with protamine and the activated clotting time returned to 116 (approximately baseline; no units or reference rang provided), there was continued mediastinal bleeding of an unknown source with notably very poor clot formation; however, despite giving a unit of FFP and platelets, coagulopathy was not corrected and there was significant bleeding from sternal edges. The participant's chest tube output was monitored. Laboratory test results included PTT 17.9 seconds, INR 1.52, hemoglobin (Hgb) 8.8 g/dL (reference range 13.0 to 17.0 g/dL), hematocrit (Hct) 24.7% (reference range 38.7 to 50.0%) and platelets $127 \times 10^3/\mu L$ (reference range 135 to $430 \times 10^3/\mu L$).

On 30 Oct 2020 (Study Day 44), the participant was transferred to the cardiac stepdown unit. An ECG was again abnormal. Laboratory test results included PTT 15.1 seconds, PTT 33.7 seconds, INR 1.21, Hgb 8.8 g/dL, Hct 25.1%, and platelets $142 \times 10^3/\mu L$. Treatment included acetylsalicylic acid.

On 01 Nov 2020 (Study Day 46), laboratory test results included Hgb 8.4 g/dL, Hct 24.6%, and platelets 131 × 10^3/µL. On 02 Nov 2020 (Study Day 47), the participant was discharged from the hospital with treatment medication including bacitracin topical for incision care and apixaban PO for non-valvular atrial fibrillation prophylaxis following AVR surgery. Activity instructions were as tolerated, no lifting, driving, or strenuous exercise until specified and planned post-surgical follow-up in 1 and 2 weeks.

Action taken with the study IP was not applicable as the participant had already received both scheduled doses.

The SAE, increased bleeding intraoperative time, was reported as resolved on 29 Oct 2020 (Study Day 43). The SAE, worsening of aortic stenosis, was reported as resolved with sequelae (participant with open-heart surgery and post-operative recovery ongoing) on 02 Nov 2020 (Study Day 47).

The investigator assessed the event, aortic stenosis, as not related to study IP or study procedure.

The investigator assessed the event, procedural hemorrhage, as related to study IP and not related to study procedure. The surgeon felt that that there was no known cause and raised the possibility of association of the bleeding risk with the use of a study IP.

The event, worsening aortic stenosis, was considered resolved with sequelae on Study Day 47, 3 days after the surgical intervention, and the event, intraoperative bleeding, was considered resolved on the same day it occurred (Study Day 43).

The event of procedural hemorrhage (increased bleeding intraoperative time) was considered unrelated to IP by the company and related to study IP by the investigator. The event of procedural hemorrhage may be explained by the participant's intake of acetylsalicylic acid prior to the surgical intervention.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000664	Aortic stenosis
MOD-2020-000664	Procedural haemorrhage

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Cardiac murmur	Non-specific cardiac murmur (diagnosed a few years ago)	Not reported - Ongoing
Rotator cuff repair	Rotator cuff repair (right)	1996 - 1996
Rotator cuff syndrome	Rotator cuff tear (right)	1996 - 1996
Tobacco user	Smoking	2000 - Mar 2020
Tension headache	Headaches (type: tension)	2005 - Ongoing
Hyperlipidaemia	Hyperlipidemia	2008 - Ongoing
Polyarthritis	Arthritis (type: unknown; location: knees bilaterally, neck)	2011 - Ongoing
Genital herpes	Genital herpes (last outbreak july 2020)	2012 - Ongoing
Knee arthroplasty	Knee replacement	2012 - 2012
Bronchitis	Bronchitis (mild)	2015 - Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease	2015 - Ongoing
Syncope	Syncope (recurrent)	2018 - Ongoing
Aortic stenosis	Aortic stenosis	2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ibuprofen	2005 - Jul 2020	Headaches
Atorvastatin	2011 - Ongoing	HLD
Salbutamol sulfate	2015 - Ongoing	COPD Exacerbation/Wheezing
Umeclidinium bromide	2015 - Ongoing	COPD
Vitamins nos	2015 - Ongoing	General Good Health
Ascorbic acid	2016 - Ongoing	General Good Health
Vitamin D1	2016 - Ongoing	General Good Health
Fish oil	2018 - Ongoing	General Good Health
Nicotine	Mar 2020 - Ongoing	Smoking Cessation
Zinc	Jun 2020 - Ongoing	General Good Health
Aciclovir	Jul 2020 - Jul 2020	Genital Herpes (Outbreak)
Ibuprofen	14 Oct 2020 (Study Day 28) - 14 Oct 2020 (Study Day 28)	Headache
Color-flow pw echocardiogram*	19 Oct 2020 (Study Day 33) - 19 Oct 2020 (Study Day 33)	Diagnostic

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Electrocardiogram (EKG)*	27 Oct 2020 (Study Day 41) - 27 Oct 2020 (Study Day 41)	Diagnostic
Acetylsalicylic acid	28 Oct 2020 (Study Day 42) - 28 Oct 2020 (Study Day 42)	Unk (Taken Prior To Atrial Valve Replacement Surgery)
Cardiac catheterization*	28 Oct 2020 (Study Day 42) - 28 Oct 2020 (Study Day 42)	Adverse Event
Diazepam	28 Oct 2020 (Study Day 42) - 28 Oct 2020 (Study Day 42)	Unknown
Diphenhydramine hydrochloride	28 Oct 2020 (Study Day 42) - 28 Oct 2020 (Study Day 42)	Insomnia
Physical therapy (prior to AVR surgery)*	28 Oct 2020 (Study Day 42) - 28 Oct 2020 (Study Day 42)	Adverse Event
Aortic valve replacement surgery*	29 Oct 2020 (Study Day 43) - 29 Oct 2020 (Study Day 43)	Adverse Event
Aztreonam	29 Oct 2020 (Study Day 43) - 31 Oct 2020 (Study Day 45)	Anti-Biotic (Surgical Prophylaxis)
Blood/platelet/cryoprecipitate transfusion (intraoperative, AVR surgery)*	29 Oct 2020 (Study Day 43) - 29 Oct 2020 (Study Day 43)	Adverse Event
Electrocardiogram (EKG)*	29 Oct 2020 (Study Day 43) - 29 Oct 2020 (Study Day 43)	Diagnostic
Fentanyl	29 Oct 2020 (Study Day 43) - 29 Oct 2020 (Study Day 43)	Pain Control (RVA Surgery)
Metoprolol tartrate	29 Oct 2020 (Study Day 43) - 29 Oct 2020 (Study Day 43)	R/T To RVA Surgery
Midazolam hydrochloride	29 Oct 2020 (Study Day 43) - 29 Oct 2020 (Study Day 43)	Sedation (R/T RVA Surgery
Morphine	29 Oct 2020 (Study Day 43) - 30 Oct 2020 (Study Day 44)	Moderate Pain (R/T RVA Surgery)
Morphine	29 Oct 2020 (Study Day 43) - 30 Oct 2020 (Study Day 44)	Severe Pain (8-10) R/T RVA Surgery
Ondansetron	29 Oct 2020 (Study Day 43) - 30 Oct 2020 (Study Day 44)	Prophylaxis For Nausea/Vomiting (S/P AVR Surgery)
Paracetamol	29 Oct 2020 (Study Day 43) - 29 Oct 2020 (Study Day 43)	Pain (Musculoskeletal And Connective Tissue Related Chest Pain Due To AVR Surgery Related Incision)
Paracetamol	29 Oct 2020 (Study Day 43) - 30 Oct 2020 (Study Day 44)	Pain Control R/T AVR Surgery Due To SAE Worsening Of Aortic Stenosis
Pethidine	29 Oct 2020 (Study Day 43) - 29 Oct 2020 (Study Day 43)	Shivering (S/P RVA Surgery)
Prochlorperazine edisylate	29 Oct 2020 (Study Day 43) - 29 Oct 2020 (Study Day 43)	Unknown (Administered During RVA Surgery)
Vancomycin hydrochloride	29 Oct 2020 (Study Day 43) - 30 Oct 2020 (Study Day 44)	Anti-Biotic To Prevent Infection R/T Arv Surgery Due To Worsening Of Aortic Stenosis
Acetylsalicylic acid	30 Oct 2020 (Study Day 44) - Ongoing	S/P Cardiac Surgery
Electrocardiogram (EKG)*	30 Oct 2020 (Study Day 44) - 30 Oct 2020 (Study Day 44)	Diagnostic
Ketorolac tromethamine	31 Oct 2020 (Study Day 45) - 31 Oct 2020 (Study Day 45)	Pain Control (S/P RVA Surgery)

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Tramadol hydrochloride	31 Oct 2020 (Study Day 45) - 02 Nov 2020 (Study Day 47)	Moderate Pain (4-7) In Chest R/T S/P AVR Surgery Due To Worsening Of Aortic Stenosis
Warfarin sodium	31 Oct 2020 (Study Day 45) - 31 Oct 2020 (Study Day 45)	Anticoagulant (S/P AVR Surgery)
Warfarin sodium	01 Nov 2020 (Study Day 46) - 01 Nov 2020 (Study Day 46)	Anticoagulant (S/P AVR Surgery)
Apixaban	02 Nov 2020 (Study Day 47) - Ongoing	Non-Valvular Atrial Fibrillation
Bacitracin	02 Nov 2020 (Study Day 47) - Ongoing	Incision Care
Ferrous sulfate	02 Nov 2020 (Study Day 47) - Ongoing	Anemia From Inadequate Iron In The Body (S/P AVR)
Oxycodone hydrochloride	02 Nov 2020 (Study Day 47) - Ongoing	Pain
Physical therapy (following AVR surgery prior to discharge)*	02 Nov 2020 (Study Day 47) - 02 Nov 2020 (Study Day 47)	Adverse Event
Simvastatin	30 Nov 2020 (Study Day 75) - Ongoing	Hyperlipidemia

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Musculoskeletal Chest Pain	Grade 3/severe	Not related	27 Oct 2020 (Study Day 41) - 31 Oct 2020 (Study Day 45)

Preferred terms are coded using MedDRA version 23.0.

FDA-CBER-2022-1614-3378186

Participant Number:	US365-2038 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	25 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
COVID-19/ COVID-19	AE leading to withdrawal from study vaccine	Grade 1/mild	Not related	25 Oct 2020 (Study Day 31) – 06 Nov 2020 (Study Day 43)	Recovered/ resolved
Cerebrovascular Accident/Cryptogenic Stroke (Official Diagnosis On 12/4, Symptoms Beginning On 11/30)	SAE	Grade 3/ severe	Related	30 Nov 2020 (Study Day 67) – 15 Dec 2020 (Study Day 82)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US365-2038, a 34-year-old Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 25 Sep 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 25 Oct 2020 (Study Day 31), 30 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 1/mild non-serious adverse event of covid-19. On 22 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of COVID-19 lasted for 13 days, after which it was considered to be recovered/resolved on 06 Nov 2020 (Study Day 43). The investigator assessed the event of covid-19 to be not related to the IP.

On 30 Nov 2020 (Study Day 67), 66 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of cerebrovascular accident. On 22 Oct 2020 (Study Day 28), the IP dose was discontinued due to adverse event. The event of cryptogenic stroke (official diagnosis on 12/4, symptoms beginning on 11/30) lasted for 16 days, after which it was considered to be recovered/resolved on 15 Dec 2020 (Study Day 82). The investigator assessed the event of cerebrovascular accident to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 22 Oct 2020 (Study Day 28), a rapid test and a SARS-CoV-2 RT-PCR nasopharyngeal swab at a local urgent care was negative.

On 25 Oct 2020 (Study Day 31), the participant experienced a nonserious adverse event of COVID-19 with a positive SARS-CoV-2 RT-PCR nasopharyngeal swab collected on 26 Oct 2020 (Study Day 32). The participant was exposed by their childcare provider who tested positive on 21 Oct 2020 (Study Day 27), and their child tested positive on 22 Oct 2020 (Study Day 28).

From 25 Oct 2020 (Study Day 31) to 04 Nov 2020 (Study Day 41), the participant intermittently experienced mild fatigue, loss of smell, nasal congestion, nausea, and diarrhea. They denied chills, cough, shortness of breath, difficulty breathing, muscle aches, body aches, headache, loss of taste, runny nose, vomiting, or sore throat. Saliva was collected per protocol on days 3, 5, 7, 9, 14, and 21 after the positive SARS-CoV-2 test. On days 3 and 7, after the positive SARS-CoV-2 test, saliva resulted in positive tests. On days 5 and 9, after the positive SARS-CoV-2 test, saliva results were reported as not detected and on days 14 and 21, after the positive SARS-CoV-2 test, saliva results were “did not result”.

On 28 Oct 2020 (Study Day 34), the participant reported that their symptoms had resolved. No medical intervention was given for their symptoms.

On 31 Oct 2020 (Study Day 37), the participant had another positive COVID-19 test. The participant was monitored via telehealth visits for the next 14 days.

Study IP was discontinued in response to the event.

The event, COVID-19, was reported as resolved on 06 Nov 2020 (Study Day 43).

The investigator assessed the event, COVID-19, as not related to study IP or study procedure.

On 30 Nov 2020 (Study Day 67), the participant experienced a serious adverse event of cerebrovascular accident. The participant was seen in the emergency department after developing acute symptoms of nausea, vomiting, and difficulty walking due to a sensation of being pulled to one side. The participant was treated with metoclopramide PO and ondansetron PO. The participant was discharged on meclizine PO with a presumed diagnosis of vertigo. The participant’s symptoms were improving but they continued to have some vertigo with associated headache and nausea.

On 01 Dec 2020 (Study Day 68), the participant began treatment with meclizine PO.

On 02 Dec 2020 (Study Day 69), the participant had a follow-up appointment with a neurologist and all laboratory test results including a complete blood panel and C-reactive protein were normal. At that time, the participant was given a working diagnosis of vestibular neuritis and a magnetic resonance imaging (MRI) scan was scheduled to rule out other conditions.

On 04 Dec 2020 (Study Day 71), the participant was admitted to the neurology intensive care unit (ICU) for a second opinion. They spent 5 days in the ICU. An MRI scan showed an acute left posterior inferior cerebellar artery (PICA) territory infarct with a mass effect on the fourth ventricle. A magnetic resonance angiography of the head and neck was unremarkable. A computed tomography angiogram of the head and neck with contrast showed a questionable focal occlusion of the PICA just left of midline. A transesophageal echocardiogram showed a patent foremen ovale (PFO) with right to left shunting. Hypercoagulability laboratory test results showed no suggestion of a current hypercoagulable state. A lumbar puncture and lower extremities ultrasound were negative. The final diagnosis was a cryptogenic stroke with a prominent PFO. Due to the participant's age, a stroke could not completely exclude a paradoxical/embolic etiology, and a PFO with concerning features, a decision was made to close the PFO.

On 05 Dec 2020 (Study Day 72), laboratory test results of cerebral spinal fluid included red blood cells 40/µL (abnormal), protein 29.5 mg/dL, and lymphocytes 71% (no reference ranges provided).

On 06 Dec 2020 (Study Day 73), laboratory test results included thrombin time 16.8 seconds, C-reactive protein 0.4 mg/mL, factor II 93%, fibrinogen 280 mg/dL, D-dimer 0.27 µg/mL, and factor V level 88% (no reference ranges provided). A Doppler of the extremities indicated no evidence of deep venous thrombus in the right or left femoral-popliteal venous system.

On 07 Dec 2020 (Study Day 74), the participant underwent closure of their PFO. Treatment included atorvastatin, apixaban, and acetylsalicylic acid (all PO) for stroke prevention. The participant's vital signs included blood pressure 99/85 mm Hg, pulse 99 beats per minute, respiratory rate 14 breaths per minute, and oxygen saturation 100%. Laboratory test results included international normalized ratio 1.1 (no reference range provided) and prothrombin time 13.6 seconds (reference range 12.3 to 14.9 seconds). A meningitis panel was negative. A cerebral angiogram with right radial access was performed indicating no evidence of central nervous system vasculopathy or vasculitis. The participant was sedated with midazolam and fentanyl for the procedure. Heparin, verapamil, and nitroglycerine were used for radial access.

On 08 Dec 2020 (Study Day 75), the participant was discharged from the hospital.

Action taken with study IP in response to the event was not applicable as the participant experienced a previous nonserious event of COVID-19 and was not able to receive the second dose of study IP.

The event, cerebrovascular accident, was reported as resolved on 15 Dec 2020 (Study Day 82).

The investigator assessed the event, cerebrovascular accident, as related to study IP and not related to study procedure. The investigator could not reasonably exclude that the vaccine did not, with or without the addition of mild COVID-19, contribute to their stroke that did have a temporal factor. Markers typically seen with COVID-19-related clotting were not elevated in the participant.

Although the participant's PFO was treated, there were discordant results on the bubble studies. The presence of 1 positive test would reasonably support treatment for PFO given the clinical event, but the discordance is enough to place some reasonable doubt that it is the full cause of the event.

The investigator assessed the event of cerebrovascular accident as related to the study vaccine; however, the sponsor considered the event unrelated to the study vaccine noting the PFO, which is associated with cryptogenic stroke and increases the risk of stroke.

Additional Information From the Safety Database

Additional details for the serious and nonserious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000622	COVID-19
MOD-2020-001032	Cerebrovascular accident

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

No medical history or ongoing medical conditions were reported.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Vitamins nos	Jan 2019 - Ongoing	Supplement
Ibuprofen	26 Sep 2020 (Study Day 2) - 26 Sep 2020 (Study Day 2)	Pain At Injection Site Left Arm (Ediary Symptoms)
Metoclopramide	30 Nov 2020 (Study Day 67) - 30 Nov 2020 (Study Day 67)	Pica Territory Infarct Mass Effect
Ondansetron	30 Nov 2020 (Study Day 67) - 04 Dec 2020 (Study Day 71)	Nausea And Vomiting (Related To Cryptogenic Stroke)
Ondansetron	30 Nov 2020 (Study Day 67) - 30 Nov 2020 (Study Day 67)	Pica Territory Infarct Mass Effect
Meclozine	01 Dec 2020 (Study Day 68) - Ongoing	Pica Territory Infarct Mass Effect
Bloodwork*	02 Dec 2020 (Study Day 69) - 02 Dec 2020 (Study Day 69)	Adverse Event

Cefazolin	08 Dec 2020 (Study Day 75) - 08 Dec 2020 (Study Day 75)	Antibiotic Prophylaxis For Procedure Related To Cryptogenic Stroke

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Headache	Grade 2/moderate	Not related	07 Oct 2020 (Study Day 13) - 07 Oct 2020 (Study Day 13)
COVID-19	Grade 1/mild	Not related	25 Oct 2020 (Study Day 31) - 06 Nov 2020 (Study Day 43)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US374-2077 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	25 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	22 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Angioedema/Angioedema [lips]	SAE	Grade 2/ moderate	Related	23 Sep 2020 (Study Day 30) – 25 Sep 2020 (Study Day 32)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2077, a 29-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 25 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 22 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 23 Sep 2020 (Study Day 30), 29 days after the first dose and 1 day after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of angioedema. Action taken with the IP was not applicable. The event of angioedema [lips] lasted for 3 days, after which it was considered to be recovered/resolved on 25 Sep 2020 (Study Day 32). The investigator assessed the event of angioedema to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 23 Sep 2020 (Study Day 30), the participant experienced a serious adverse event of angioedema (angioedema [lips]). The participant developed reactogenicity symptoms of fever 10 hours after their second dose of study IP on 22 Sep 2020 (Study Day 29), with highest temperature of 103.1°F, accompanied by chills (Grade 2), headache and fatigue (Grade 3), and nausea (Grade 1). Treatment for lip angioedema included diphenhydramine PO and famotidine PO.

On 24 Sep 2020 (Study Day 31), the participant woke up with severe lip angioedema without hives, rash, tongue or mouth swelling, dysphagia, dyspnea, wheeze, or stridor. They also complained of painful muscles in the back of their neck and mental fogginess. All symptoms resolved within 48 hours. The participant had no known allergies or family history of angioedema, but approximately 1 year ago, they had experienced similar lip angioedema following a flu vaccine.

Action taken with study IP in response to the event was not applicable, as the participant had already received both scheduled doses.

The event, angioedema, was considered resolved on 25 Sep 2020 (Study Day 32).

The investigator assessed the event, angioedema, as related to study IP and not related to study procedure.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000921	Angioedema

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Acne	Acne	2007 - Ongoing
Angioedema	Angioedema	2019 - 2019

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Drospirenone; ethinylestradiol	2010 - Ongoing	Birth Control
Botulinum toxin type a	2019 - 2019	Cosmetic To Forehead
Hyaluronic acid	May 2019 - Oct 2019	Cosmetic To Lips
Hyaluronic acid	Dec 2019 - Sep 2020	Cosmetic To Bilateral Eyes
Botulinum toxin type a	2020 - 2020	Cosmetic To Forehead
Hyaluronic acid; lidocaine hydrochloride	Jul 2020 - Jul 2020	Cosmetic To Lips
Hyaluronic acid; lidocaine hydrochloride	Jul 2020 - Jul 2020	Cosmetic To Naso Labial Folds Bilaterally
Paracetamol	26 Aug 2020 (Study Day 2) - 26 Aug 2020 (Study Day 2)	Pain At Vaccination Site
Diphenhydramine hydrochloride	23 Sep 2020 (Study Day 30) - 26 Sep 2020 (Study Day 33)	Angioedema

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Famotidine	23 Sep 2020 (Study Day 30) - 26 Sep 2020 (Study Day 33)	Angioedema
Paracetamol	23 Sep 2020 (Study Day 30) - 24 Sep 2020 (Study Day 31)	Fever Reactogencity
Influenza vaccine	14 Oct 2020 (Study Day 51) - 14 Oct 2020 (Study Day 51)	Flu Prevention
Hyaluronic acid	Nov 2020 - Nov 2020	Cosmetic To Cheeks Bilaterally
Doxycycline	13 Nov 2020 (Study Day 81) - 13 Dec 2020 (Study Day 111)	Acne
Microneedling with radiofrequency*	13 Nov 2020 (Study Day 81) - 13 Nov 2020 (Study Day 81)	Other, Acne Scarring
Bupropion hydrochloride	04 Dec 2020 (Study Day 102) - Ongoing	Situational Depression
Spironolactone	12 Feb 2021 (Study Day 172) - Ongoing	Acne

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious event is presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Adjustment Disorder With Depressed Mood	Grade 2/moderate	Not related	15 Sep 2020 (Study Day 22) - 01 Mar 2021 (Study Day 189)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US374-2169 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	31 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Rheumatoid Arthritis/ Rheumatoid Arthritis	SAE, AE leading to withdrawal from study vaccine	Grade 2/ moderate	Related	31 Aug 2020 (Study Day 1) – Ongoing	Recovering /resolving

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US374-2169, a 57-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the right arm on 31 Aug 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 31 Aug 2020 (Study Day 1), on the day of the first dose of the IP (second dose not applicable), the participant experienced a Grade 2/moderate serious adverse event of rheumatoid arthritis. On 27 Sep 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of rheumatoid arthritis was considered to be ongoing. The investigator assessed the event of rheumatoid arthritis to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database

On 31 Aug 2020 (Study Day 1), the participant experienced a serious adverse event of rheumatoid arthritis. On the same day, the participant received their first and only dose of mRNA-1273. Later that same day, through 06 Sep 2020 (Study Day 7), the participant reported muscle and joint aches/pain (Vaccine Toxicity Scale Grades 1 to 2 in severity) in the eDiary. The participant also experienced tinnitus, insomnia, and constipation post-vaccination.

During the time period starting around 10 Sep 2020 (Study Day 11) through the last week of September 2020, the participant experienced recurrent muscle and joint aches/pain. The quality of the pain was different from the joint aches/pain previously reported, mainly with the left knee and right shoulder. The pain was constant regardless of rest or activity and was not worse at any particular time of the day. The participant also experienced joint stiffness in the mornings, which

improved with a shower and movement. They denied joint swelling. Additionally, they had intermittent pain at base of their neck. The participant treated their symptoms with paracetamol and diclofenac, which reduced the pain; diclofenac was only used at the peak of pain for a few days.

On 25 Sep 2020 (Study Day 26), a review of systems was positive for weight gain, weakness, hearing loss, tinnitus, wheezing, constipation, nausea, headache, insomnia, joint pain, and muscle weakness. Relevant laboratory test results, on the same day, included complement factor C3 of 194 (high) (no units and reference range reported), rheumatoid factor (RF) 62.5 IU/mL (reference range 0 to 13 IU/mL), cyclic citrullinated peptide (CCP) antibody >250 units (reference range <20 units), complement factor C4 of 32 (no units and reference range reported), an antinuclear antibody test was negative, erythrocyte sedimentation rate (ESR) 4 mm/hour (no reference range reported), and C-reactive protein (CRP) <0.1 (no unit, reference range 1 to 3).

On 29 Sep 2020 (Study Day 30), the participant's rheumatologist noted that the participant reported ongoing mild pain in the left elbow when lifting objects, right shoulder, and right knee. They reported feeling a little weak at the peak of their pain and denied shortness of breath, chest pain, rash, and fevers during their arthralgias. The participant also felt their heart rate was higher than usual; in the 80 beats per minute (bpm) range, when it was typically in the 50 to 60 bpm range. Vital signs during the visit included blood pressure 124/71 mm Hg, heart rate 70 bpm, body mass index (BMI) 29.78 kg/m^2, and a pain score of 6.5. Physical examination findings included 5/5 strength in bilateral upper and lower extremities, mild left elbow discomfort with extreme flexion and with lifting a box of surgical gloves, tenderness in bilateral elbows at the lateral epicondyles, and no other findings of musculoskeletal tenderness, swelling, effusion, or limitations to range of motion. The rheumatologist's initial assessment was that the participant had reactive arthritis based on mild symptoms and tenderness over their lateral epicondyles. However, after reviewing the laboratory test results, the rheumatologist was concerned about the possibility of rheumatoid arthritis (RA) due to the high level of CCP antibody and RF. Diagnoses included RA and lateral epicondylitis. No new medications or treatment were prescribed.

On 20 Oct 2020 (Study Day 51), the participant had a follow-up visit with a rheumatologist, where they reported recurrence of pain in both elbows and arms starting about 6 days prior and right knee pain. The pain was worse on the left side and with activities, such as lifting weights. The back of their hand hurt with fist clenching and they had forearm pain with lifting their laptop. The participant noted that the base of their neck was painful at times and they felt this caused their right arm to feel weak, but they denied numbness, tingling, or burning pain in the right arm. The right hip was still bothering them, though not as bad as before. They had noticed twitching in the left index finger when at rest in the past week and denied joint stiffness or swelling. The participant had taken paracetamol for a couple of days preceding the follow-up visit and noted that their pain

was much improved. Vital signs included blood pressure 119/77 mm Hg, pulse 70 bpm, BMI 30.55 kg/m^2, and pain scale 2/10. Review of systems was positive for weight gain, joint pain, joint swelling, muscle cramping, myalgia, neck pain, and neck stiffness. Physical examination findings included right lateral neck tenderness with cervical spine range of motion and on palpation, assessed as possibly muscular. Hand grip caused lateral and medial elbow pain bilaterally and the participant felt nauseated and had to lay down. They had lateral and medial epicondyle tenderness of both elbows. Laboratory test results included CRP 0.88 (reference range 1 to 3, no unit reported) and ESR 13 (no unit reported, reference range 0 to 20). A joint examination did not reveal active inflammatory arthritis, though they still had arthralgias to varying degrees by history. The rheumatologist noted that early RA can manifest in a palindromic pattern, consistent with participant's presentation. The participant began treatment with meloxicam PO and was instructed to use elbow straps during activities. A cervical spine x-ray was ordered, and they were instructed to follow-up in 4 weeks.

On 20 Nov 2020 (Study Day 82), a magnetic resonance imaging (MRI) scan of the right elbow revealed mild distal triceps tendinosis and no findings to suggest RA. An MRI scan of the left elbow revealed medial and lateral epicondylitis, low grade insertional tearing of the common extensor tendon, and distal long head biceps tendinosis without evidence of tear. A cervical spine x-ray with flexion/extension views revealed overall mild multilevel, multifactorial degenerative changes, normal alignment, and no listhesis with flexion or extension.

On 04 Dec 2020 (Study Day 96), the participant had a follow-up visit with a rheumatologist, where they reported ongoing elbow pain that was exacerbated with movement and interfered with their sleep. Use of forearm straps, meloxicam, and ice helped to relieve their elbow pain during the day but they woke up with elbow pain at night despite use of elbow straps at night. They felt that meloxicam was helping with all of their other pains. Vital signs included blood pressure 127/75 mm Hg, pulse 59 bpm, BMI 30.4 kg/m^2, and pain scale 7/10. During the review of systems, the participant reported weight gain, dyspnea, constipation, bowel changes, polydipsia, headache, sleep disturbances, joint pain, joint tenderness, morning stiffness, neck pain, and neck stiffness. During the physical examination, a hand grip test caused lateral and medial elbow pain bilaterally, which led to the participant to feeling nauseated, without dizziness, and they had to lay down. Physical examination revealed right shoulder joint tenderness; right elbow moderate medial epicondyle tenderness; and left elbow severe medial and moderate lateral epicondyle tenderness. No other joint swelling, tenderness, effusion, or decreased range of motion was noted. The participant’s Clinical Disease Activity Index score was 8 out of 76. Laboratory test results included CCP 103.0 (reference range 0.0 to 6.9), RF Immunoglobulin (Ig) A 118 (reference range 0 to 35), RF IgG 42 (reference range 0 to 20), RF IgM 64 (reference range 0 to 25), CRP 1.74 (reference

range 1 to 3) and ESR 12 (units not reported). Meloxicam was discontinued due to incomplete pain relief and treatment with celecoxib 200 mg BID was prescribed.

On 17 Dec 2020 (Study Day 109), the participant had a follow-up visit with a rheumatologist, where they reported they felt better in general after taking celecoxib; however, the past few days they had recurrent left elbow and mild right elbow pain. They reported that the left elbow pain was both lateral and medial, and hurt when they used their arm, straightening their elbow, it hurt overnight when they were still for a while and when they moved to turn over or pull up the covers. They were having significant morning stiffness, though it improved when they moved around. Their neck felt much better with celecoxib and their right ankle was felt like it was "giving out" on them intermittently. They reported that they did not lift much. Their pain assessment was 6/10. There was no change from the prior visit to the participant's review of systems or physical examination. A triamcinolone 40 mg injection was given in left elbow, medial and lateral epicondyles. Additional treatment of hydroxychloroquine 200 mg BID was started.

Action taken with the study IP was withdrawn in response to the event.

The event of RA was considered resolving.

The investigator assessed the event of RA to be related to study IP and not related to study procedure. The provider was suspicious of a positive causal relationship to study IP due to the participant's lack of symptoms prior to study IP administration.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000411	Rheumatoid arthritis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hypersensitivity	Environmental allergies	1990 - Ongoing
Hypothyroidism	Hypothyroidism	1990 - Ongoing
Asthma	Asthma	2000 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2010 - Ongoing
Hypertension	Hypertension	2018 - Ongoing
Pain in extremity	Left outer thigh pain	Jan 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Levothyroxine	1990 - Ongoing	Hypothyroidism
Montelukast	1990 - Ongoing	Environmental Allergies
Salbutamol	2000 - Ongoing	Asthma
Rabeprazole	2010 - Ongoing	Gastroesophageal Reflux Disease
Enalapril	2018 - Ongoing	Hypertension
Levocetirizine	2018 - Ongoing	Environmental Allergies
Fluticasone furoate; vilanterol trifenatate	Aug 2020 - Ongoing	Asthma
Fibre, dietary	15 Sep 2020 (Study Day 16) - Ongoing	Constipation
Paracetamol	16 Sep 2020 (Study Day 17) - 24 Sep 2020 (Study Day 25)	Rheumatoid Arthritis

Hydroxychloroquine	19 Mar 2021 (Study Day 201) - Ongoing	Rheumatoid Arthritis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Insomnia	Grade 2/moderate	Not related	07 Sep 2020 (Study Day 8) - 25 Sep 2020 (Study Day 26)
Constipation	Grade 2/moderate	Not related	13 Sep 2020 (Study Day 14) - 25 Sep 2020 (Study Day 26)

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Vomiting	Grade 1/mild	Not related	19 Sep 2020 (Study Day 20) - 20 Sep 2020 (Study Day 21)
Tinnitus	Grade 2/moderate	Not related	20 Sep 2020 (Study Day 21) - 22 Sep 2020 (Study Day 23)
Constipation	Grade 2/moderate	Not related	22 Oct 2020 (Study Day 53) - 09 Jan 2021 (Study Day 132)
Viral Infection	Grade 2/moderate	Not related	31 Oct 2020 (Study Day 62) - 14 Nov 2020 (Study Day 76)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US381-2085 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	08 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	02 Sep 2020 (Study Day 26)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Alopecia Areata/ Alopecia Areata	SAE	Grade 1/ mild	Related	10 Sep 2020 (Study Day 34) – Ongoing	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2085, a 31-year-old not Hispanic or Latino male, received the first dose of mRNA-1273 in the left arm on 08 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 02 Sep 2020 (Study Day 26). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 10 Sep 2020 (Study Day 34), 33 days after the first dose and 8 days after the second dose of the IP, the participant experienced a Grade 1/mild serious adverse event of alopecia areata. Action taken with the IP was not applicable. The event of alopecia areata was considered to be ongoing. The investigator assessed the event of alopecia areata to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 10 Sep 2020 (Study Day 34), the participant experienced a serious adverse event of alopecia areata, which was considered medically significant. On 26 Oct 2020 (Study Day 80), the participant first reported thinning of their beard to the site staff.

On 15 Dec 2020 (Study Day 130), the participant was diagnosed with alopecia areata by their dermatologist. Their hair loss was moderate in severity and sudden in onset. They denied any scalp symptoms and washed their hair 3 times a week. They were on minoxidil and reported they switched their medication emtricitabine/tenofovir disoproxil fumarate to emtricitabine/tenofovir alafenamide fumarate and participated in clinical trials for COVID-19. They believed that these events had something to do with hair loss. The participant denied family history of alopecia areata. An examination was performed including the scalp (including hair inspection), head (including face), and neck. General appearance of the participant was well developed and well nourished.

There were discrete nonscarring patches of hair loss distributed on the face. Treatment included 0.5% betamethasone topical. They were provided with counselling on topical steroids, skin care, expectations for treatment and were advised to contact the doctor's office if the alopecia areata did not improve or worsened despite treatment and follow-up in 1 month.

Action taken with study IP in response to the event was not applicable, as the participant had already received both scheduled doses.

The event of alopecia areata was reported as not resolved.

The investigator assessed the event of alopecia areata to be related to study IP as the participant received their second dose 8 days prior to event onset and not related to study procedure.

The sponsor considered the event of alopecia areata to be not related to study IP as the condition reported is not uncommon in the general population, and therefore, this single report does not provide sufficient evidence of a relationship to study IP.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2021-009195	Alopecia areata

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Herpes simplex	Herpes simplex virus type 2	Feb 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Emtricitabine; tenofovir disoproxil fumarate	May 2019 - 01 Oct 2020 (Study Day 55)	Hiv Preventative
Aciclovir	Apr 2020 - Ongoing	Herpes Simplex Virus Type 2
Ibuprofen	03 Sep 2020 (Study Day 27) - 04 Sep 2020 (Study Day 28)	Headache

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Emtricitabine; tenofovir alafenamide fumarate	02 Oct 2020 (Study Day 56) - Ongoing	Hiv Preventative
Betamethasone dipropionate	15 Dec 2020 (Study Day 130) - Ongoing	Alopecia Areata

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US381-2291 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	28 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	28 Sep 2020 (Study Day 32)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Multiple Sclerosis/Multiple Sclerosis	SAE	Grade 2/ moderate	Related	08 Dec 2020 (Study Day 103) – Ongoing	Not recovered/ not resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US381-2291, a 36-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 28 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 28 Sep 2020 (Study Day 32). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 08 Dec 2020 (Study Day 103), 102 days after the first dose and 71 days after the second dose of the IP, the participant experienced a Grade 2/moderate serious adverse event of multiple sclerosis. Action taken with the IP was not applicable. The event of multiple sclerosis was considered to be ongoing. The investigator assessed the event of multiple sclerosis to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 08 Dec 2020 (Study Day 103), the participant experienced a serious adverse event of multiple sclerosis (MS). The participant developed symptoms of pain, light sensitivity, and motion sensitivity of their eye (later diagnosed as MS). The participant also experienced left eye pain and decreased peripheral vision starting on the same day.

On 14 Dec 2020 (Study Day 109), the participant was evaluated by an ophthalmologist, who ordered an optic nerve magnetic resonance imaging (MRI) scan, which was performed on 17 Dec 2020 (Study Day 112). The results of the optic nerve MRI scan were abnormal, and the participant was diagnosed with MS. Treatment with methylprednisolone PO was initiated. On the same day, the participant also underwent an MRI of the brain and orbits. The final report revealed left optic neuritis and scattered white matter cerebral lesions that were consistent with MS.

Treatment for the event included methylprednisolone, temazepam, escitalopram, and cetirizine (all PO). The participant was given multiple options for disease-modifying therapy but had not yet started any of them.

On 19 Dec 2020 (Study Day 114), a cervical and thoracic spinal MRI scan was performed that revealed demyelinating disease that was consistent in both the cervical and thoracic spinal cord. The participant reported that the initial symptoms were ongoing but denied any additional changes in their health.

On 15 Feb 2021 (Study Day 172), the participant began treatment with prednisone PO and stopped treatment on 20 Feb 2021 (Study Day 177).

Action taken with study IP in response to the event was not applicable, as the participant had already received both scheduled doses.

The event of MS was considered not resolved.

The investigator assessed the event of MS to be related to study IP and not related to study procedure. The rationale provided by the investigator for assessing the event as related was that this new diagnosis of MS occurred within a plausible timeframe of study IP administration and that there were no other possible etiologies known at the time of assessment.

The sponsor considered the event of MS as not related to study IP, as there was insufficient supporting evidence to suggest a reasonable possibility that the study IP caused the adverse event. Additionally, in 2017 the prevalence of adults with MS in the United States has been estimated to be about 362 cases per 100,000, with a 3:1 female to male ratio, and MS most often appears in young adulthood (National Multiple Sclerosis Society, 2020). Although a temporal relationship exists between the study IP administration and the diagnosis of MS, epidemiological data support an already greater likelihood for this participant, as 1 of more than 30,000 people, to be diagnosed with MS, independent of their participation in this study.

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001212	Multiple sclerosis

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Tonsillectomy	Tonsillectomy	2003 - 2003
Tonsillitis	Tonsillitis	2003 - 2003
Rubber sensitivity	Latex allergy	2005 - Ongoing
Anxiety	Anxiety	2015 - Ongoing
Mammoplasty	Bilateral breast augmentation	2015 - 2015
Aphthous ulcer	Recurrent oral aphthous ulcers	2018 - Ongoing
Myalgia	Intermittent generalized muscle aches	2018 - Ongoing
Rhinitis allergic	Allergic rhinitis	2018 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Botulinum toxin type a	2010 - 2010	Wrinkle Prevention
Escitalopram oxalate	2015 - Ongoing	Anxiety
Melatonin	2015 - Ongoing	Sleep Health
Cetirizine hydrochloride	2018 - Ongoing	Environmental Allergies
Ibuprofen	2018 - 27 Aug 2020 (Study Day -1)	Intermittent Generalized Muschle Aches
Levonorgestrel	2019 - Ongoing	Contraception
Montelukast sodium	01 Sep 2020 (Study Day 5) - Ongoing	Environmental Allergies
Ibuprofen	29 Sep 2020 (Study Day 33) - 30 Sep 2020 (Study Day 34)	Headache
Paracetamol	29 Sep 2020 (Study Day 33) - 29 Sep 2020 (Study Day 33)	Fever
Doxycycline	06 Oct 2020 (Study Day 40) - Ongoing	Facial Acne
Influenza vaccine	14 Oct 2020 (Study Day 48) - 14 Oct 2020 (Study Day 48)	Influenza Prevention

Prednisone	15 Feb 2021 (Study Day 172) - 20 Feb 2021 (Study Day 177)	Multiple Sclerosis

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Acne	Grade 1/mild	Not related	01 Oct 2020 (Study Day 35) - Ongoing
Optic Neuritis	Grade 2/moderate	Related	08 Dec 2020 (Study Day 103) - 01 Jan 2021 (Study Day 127)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US382-2043 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥65 Years
First Dose of Vaccine:	07 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	02 Sep 2020 (Study Day 27)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
B-Cell Small Lymphocytic Lymphoma/Small Lymphocytic Lymphoma	SAE	Grade 3/ severe	Related	02 Oct 2020 (Study Day 57) – 22 Dec 2020 (Study Day 138)	Recovered/ resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US382-2043, a 75-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 07 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 02 Sep 2020 (Study Day 27). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 02 Oct 2020 (Study Day 57), 56 days after the first dose and 30 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of b-cell small lymphocytic lymphoma. Action taken with the IP was not applicable. The event of small lymphocytic lymphoma lasted for 82 days, after which it was considered to be recovered/resolved with sequelae on 22 Dec 2020 (Study Day 138). The investigator assessed the event of b-cell small lymphocytic lymphoma to be related to the IP.

Additional Relevant Information From the Safety/Pharmacovigilance Database:

On 05 Sep 2020 (Study Day 30), the participant was scheduled for a routine computed tomography (CT) scan of the chest to screen for lung cancer. The CT revealed new enlarged left axillary lymph nodes; the partially solid 11-mm nodule in the right upper lobe was stable as it remained unchanged since 26 Jun 2018 (Study Day -804). Due to the findings, the participant was scheduled for an ultrasound guided biopsy.

On 02 Oct 2020 (Study Day 57), the participant experienced a serious adverse event of B-cell small lymphocytic lymphoma. On the same day, the participant underwent a biopsy of the left axillary lymph node that revealed partial involvement by small B-cell lymphocytic lymphoma

(chronic lymphocytic leukemia), which was considered a medically significant. The participant had no known risk factors for the event and remained asymptomatic.

On 21 Oct 2020 (Study Day 76), the participant was seen by an oncologist. A physical examination showed no lymphadenopathy of the neck, axilla, or groin. On the same day, the relevant laboratory test results included white blood cell count $8.9 \times 10^3/\mu L$, red blood cell count $4.21 \times 10^6/\mu L$, and red cell distribution width 11.7% (low) (no reference ranges reported). The serology testing, including B2 macroglobulin, low lactate dehydrogenase, and complete blood count, did not reveal lymphocytosis. No treatment was provided for the event. The participant's prognosis was considered positive, but this remained to be seen if any treatment would be required for this malignancy.

Action taken with the study IP was not applicable in response to the event.

The event, B-cell small lymphocytic lymphoma, was considered resolved with sequelae of stable disease on 22 Dec 2020 (Study Day 138). Per the investigator, the participant would be monitored via regular CT scans for disease progression as they did not currently meet criteria to initiate the first-line treatment.

The investigator assessed the event, B-cell small lymphocytic lymphoma, as related to study IP or study procedure as the event occurred approximately 1 month after the second dose of study IP.

The sponsor considered the event of B-cell small lymphocytic lymphoma as unrelated to the study medication, noting the short latency between study medication dosing and the event onset. Causality of the event was also confounded by the participant's prior history of neoplastic disease (stage IV non-small cell lung cancer, lung nodule, bone metastasis, stage IIA invasive mammary carcinoma, and basal cell carcinoma).

Additional Information From the Safety Database

Additional details for the serious event are available in the following CIOMS report:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000540	B-cell small lymphocytic lymphoma

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Metastases to bone	Bone metastasis	Not reported
Non-small cell lung cancer stage IV	Stage iv non small cell lung cancer	Not reported
Postmenopause	Post menopausal	1969 - Ongoing
Mixed anxiety and depressive disorder	Mixed anxiety and depressive disorder	1996 - Ongoing
Type V hyperlipidaemia	Mixed hyperlipidemia	2009 - Ongoing
Gastrooesophageal reflux disease	Gastroesophageal reflux disease	2012 - Ongoing
Rhinitis allergic	Allergic rhinitis	2012 - Ongoing
Juvenile melanoma benign	Pre melanoma left forearm	2014 - 2014
Skin neoplasm excision	Skin cancer surgery for removal of pre melonoma on left forearm (mohs surgery)	2014 - 2014
Pulmonary mass	Lung nodule	05 Feb 2014 (Study Day -2375) - Ongoing
Basal cell carcinoma	Basal cell carcinoma	2015 - 2015
Hypertension	Hypertension	2015 - Ongoing
Skin neoplasm excision	Skin cancer surgery for removal of basal cell carcinoma (mohs surgery)	2015 - 2015
Osteoporosis	Osteoporosis	2017 - Ongoing
Chronic obstructive pulmonary disease	Chronic obstructive lung disease	06 Nov 2018 (Study Day -640) - Ongoing
Diverticulum	Diverticulosis	06 Nov 2018 (Study Day -640) - Ongoing
Restless legs syndrome	Restless leg syndrome	06 Nov 2018 (Study Day -640) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Sertraline	1997 - Ongoing	Depression And Anxiety
Simvastatin	2009 - Ongoing	Mixed Hyperlipidemia
Calcium	2010 - Ongoing	Supplement

Varicella zoster vaccine rge (cho)	21 Feb 2019 (Study Day -533) - 21 Feb 2019 (Study Day -533)	Vaccine
Ct chest for lung cancer screening - moderate centrilobular emphysema, moderate-severe coronary arterial calcifications. normal heart size.*	05 Sep 2020 (Study Day 30) - 05 Sep 2020 (Study Day 30)	Medical History
Ultrasounds guided core biopsy*	02 Oct 2020 (Study Day 57) - 02 Oct 2020 (Study Day 57)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Arteriosclerosis Coronary Artery	Grade 2/moderate	Not related	05 Sep 2020 (Study Day 30) - Ongoing
Emphysema	Grade 2/moderate	Not related	05 Sep 2020 (Study Day 30) - Ongoing
Lymphadenopathy	Grade 2/moderate	Related	05 Sep 2020 (Study Day 30) - 06 Oct 2020 (Study Day 61)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US300-2046 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	29 Jul 2020 (Study Day 1)
Second Dose of Vaccine:	Not Administered
Reason for Narrative:	SAE, AE leading to withdrawal from IP, AE leading to study discontinuation

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hip Fracture/Left Hip Fracture	SAE, AE leading to withdrawal from study vaccine, AE leading to study discontinuation	Grade 3/severe	Not related	12 Aug 2020 (Study Day 15) – 14 Aug 2020 (Study Day 17)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US300-2046, a 60-year-old not Hispanic or Latino female, received the first dose of placebo in the left arm on 29 Jul 2020 (Study Day 1). The second dose on Study Day 29 was not administered. The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 12 Aug 2020 (Study Day 15), 14 days after the first dose of the IP (second dose not applicable), the participant experienced a Grade 3/severe serious adverse event of hip fracture. On 25 Aug 2020 (Study Day 28), the IP dose was discontinued due to serious adverse event. The event of left hip fracture lasted for 3 days, after which it was considered to be recovered/resolved on 14 Aug 2020 (Study Day 17). The investigator assessed the event of hip fracture to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000255	Hip fracture

Study Completion/Discontinuation

On 06 Nov 2020 (Study Day 101), the participant discontinued from the study due to serious adverse event.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Postmenopause	Post- menopausal	2010 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Left hip fracture repair*	14 Aug 2020 (Study Day 17) - 14 Aug 2020 (Study Day 17)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US300-2131 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	07 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	04 Sep 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Embolism Venous/Venous Thromboembolism	SAE	Grade 4	Not related	07 Dec 2020 (Study Day 123) – 12 Dec 2020 (Study Day 128)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US300-2131, a 51-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 07 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 04 Sep 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 07 Dec 2020 (Study Day 123), 122 days after the first dose and 94 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of embolism venous. Action taken with the IP was not applicable. The event of venous thromboembolism lasted for 6 days, after which it was considered to be recovered/resolved on 12 Dec 2020 (Study Day 128). The investigator assessed the event of embolism venous to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001082	Embolism venous

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Ventricular septal defect	Ventricular foramen (hole in lower left ventricle)	1969 - 1971
Ventricular septal defect repair	Repair of ventricular foramen	1971 - 1971
Obesity	Obesity	1998 - Ongoing
Cardiomyopathy	Cardiomyopathy	2001 - 2013
Cardiac murmur	Grade 1 systolic murmur	07 Aug 2020 (Study Day 1) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Amlodipine	01 Dec 2020 (Study Day 117) - Ongoing	Hypertension
Doppler of left leg*	07 Dec 2020 (Study Day 123) - 07 Dec 2020 (Study Day 123)	Adverse Event
Ferrous sulfate	11 Dec 2020 (Study Day 127) - Ongoing	Anemia Prophylaxis
Rivaroxaban	12 Dec 2020 (Study Day 128) - Ongoing	Venous Thromboembolism Prevention
Uterine ablation*	13 Jan 2021 (Study Day 160) - 13 Jan 2021 (Study Day 160)	Adverse Event

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Uterine Leiomyoma	Grade 3/severe	Not related	30 Sep 2020 (Study Day 55) - 13 Jan 2021 (Study Day 160)
Anaemia	Grade 1/mild	Not related	01 Dec 2020 (Study Day 117) - 12 Dec 2020 (Study Day 128)
Hypertension	Grade 1/mild	Not related	01 Dec 2020 (Study Day 117) - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US300-2259 (Part A)
Vaccination Group:	Placebo
Randomization Strata:	≥18 and <65 Years and Not at Risk
First Dose of Vaccine:	08 Sep 2020 (Study Day 1)
Second Dose of Vaccine:	06 Oct 2020 (Study Day 29)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Hydrocephalus/Hydrocephalus	SAE	Grade 4	Not related	06 Dec 2020 (Study Day 90) – 15 Dec 2020 (Study Day 99)	Recovered/resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US300-2259, a 64-year-old not Hispanic or Latino male, received the first dose of placebo in the left arm on 08 Sep 2020 (Study Day 1). The second dose was administered in the left arm on 06 Oct 2020 (Study Day 29). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 06 Dec 2020 (Study Day 90), 89 days after the first dose and 61 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of hydrocephalus. Action taken with the IP was not applicable. The event of hydrocephalus lasted for 10 days, after which it was considered to be recovered/resolved on 15 Dec 2020 (Study Day 99). The investigator assessed the event of hydrocephalus to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-001069	COVID-19
MOD-2020-001069	Hydrocephalus

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Hyperlipidaemia	Hyperlipidemia	2005 - Ongoing
Hypertension	Hypertension	2005 - Ongoing
Back pain	Chronic back pain	2015 - Ongoing
Diverticulum	Diverticulosis	Jul 2019 - Ongoing
Small intestinal obstruction	Small bowel obstruction	Jul 2019 - Jul 2019
Small intestinal resection	Small bowel resection	Jul 2019 - Jul 2019
Anxiety	Anxiety	Jun 2020 - Ongoing
Muscular weakness	Bilateral leg weakness	Jun 2020 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Lisinopril	2005 - Ongoing	Hypertension
Metoprolol	2005 - Ongoing	Hypertension
Hydrochlorothiazide	2008 - Ongoing	Hypertension
Paracetamol	2015 - Ongoing	Chronic Back Pain
Escitalopram	Jun 2020 - Ongoing	Anxiety
Influenza vaccine	23 Oct 2020 (Study Day 46) - 23 Oct 2020 (Study Day 46)	Influenza Prevention
Methylprednisolone sodium succinate	10 Dec 2020 (Study Day 94) - 14 Dec 2020 (Study Day 98)	Hydrocephalus
Foley catheter placement*	15 Dec 2020 (Study Day 99) - 15 Dec 2020 (Study Day 99)	Adverse Event
Ventriculoperitoneal shunt placement*	15 Dec 2020 (Study Day 99) - 15 Dec 2020 (Study Day 99)	Adverse Event
Tamsulosin hydrochloride	22 Dec 2020 (Study Day 106) - Ongoing	Urinary Retention
Thiamine	22 Dec 2020 (Study Day 106) - Ongoing	Vitamin B-12 Deficiency
Apixaban	25 Dec 2020 (Study Day 109) - Ongoing	Atrial Fibrillation
Amlodipine	25 Jan 2021 (Study Day 140) - 17 Feb 2021 (Study Day 163)	Worsening Of Hypertension
Varicella zoster vaccine	03 Feb 2021 (Study Day 149) - 03 Feb 2021 (Study Day 149)	Shingles Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

The unsolicited nonserious events are presented in the following table:

Preferred Term	Severity	Relationship to IP	Start Date – Stop Date/Ongoing
Muscular Weakness	Grade 2/moderate	Not related	19 Nov 2020 (Study Day 73) - Ongoing
COVID-19	Grade 2/moderate	Not related	04 Dec 2020 (Study Day 88) - 19 Dec 2020 (Study Day 103)
Atrial Fibrillation	Grade 1/mild	Not related	06 Dec 2020 (Study Day 90) - Ongoing
Urinary Retention	Grade 2/moderate	Not related	16 Dec 2020 (Study Day 100) - Ongoing
Vitamin B12 Deficiency	Grade 1/mild	Not related	16 Dec 2020 (Study Day 100) - Ongoing
Hypertension	Grade 1/mild	Not related	25 Jan 2021 (Study Day 140) - 17 Feb 2021 (Study Day 163)

Preferred terms are coded using MedDRA version 23.0.

Participant Number:	US301-2096 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	08 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Crohn's Disease/Crohn's Disease	SAE	Grade 3/severe	Not related	03 Nov 2020 (Study Day 86) – 27 Apr 2021 (Study Day 261)	Recovered/resolved with sequelae

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US301-2096, a 59-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 10 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 08 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 03 Nov 2020 (Study Day 86), 85 days after the first dose and 56 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of crohn's disease. Action taken with the IP was not applicable. The event of crohn's disease lasted for 176 days, after which it was considered to be recovered/resolved with sequelae on 27 Apr 2021 (Study Day 261). The investigator assessed the event of crohn's disease to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2021-068030	Crohn's Disease

Study Completion/Discontinuation

At the time of last contact, the participant was continuing in the study.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	1995 - Ongoing
Seasonal allergy	Seasonal allergies	1995 - Ongoing
Hysterectomy	Hysterectomy	1996 - 1996
Postmenopause	Post menopausal	1996 - Ongoing
Uterine leiomyoma	Uterine fibroids	1996 - 1996
Bipolar disorder	Bipolar disorder	2008 - Ongoing
Depression	Depressioin	2008 - Ongoing
Type 2 diabetes mellitus	Diabetes, type ii	2010 - Ongoing
Hypertension	Hypertension	2012 - Ongoing
Intervertebral disc protrusion	Herniated disc : l4	2014 - Ongoing
Muscle spasms	Back spasms	2014 - Ongoing
Gastrooesophageal reflux disease	Gerd	2017 - Ongoing
Peripheral sensory neuropathy	Neuropathy (sensor), bilateral feet	2017 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2018 - Ongoing
Chronic obstructive pulmonary disease	Copd	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Metformin	2010 - Ongoing	Diabetes, Type Ii
Amlodipine	2012 - Ongoing	Hypertension
Lisinopril	2012 - Ongoing	Hypertension
Duloxetine	2014 - Ongoing	Depression
Hydrocodone bitartrate; paracetamol	2014 - Ongoing	Pain, Back And Feet, Due To Neuropathy
Gabapentin	2017 - Ongoing	Neuropathy, Bilateral Feet
Omeprazole	2017 - Ongoing	Gerd
Ziprasidone	2017 - Ongoing	Bipolar Depression
Atorvastatin	2018 - Ongoing	Hypercholesterolemia
Tizanidine	2018 - Ongoing	Back Spasms
Diphenhydramine hydrochloride	2019 - Ongoing	Seasonal Allergies
Fluticasone	2019 - Ongoing	Seasonal Allergies
Colecalciferol	May 2019 - Ongoing	Nutritional Supplement
Hydrocodone bitartrate; paracetamol	09 Sep 2020 (Study Day 31) - 09 Sep 2020 (Study Day 31)	Pain At Injection Site

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Influenza vaccine	01 Oct 2020 (Study Day 53) - 01 Oct 2020 (Study Day 53)	Influenza Prevention

Medications are coded using WHO Drug Dictionary version Mar 2020. Concomitant procedures are denoted by *.

Unsolicited Nonserious Adverse Events

No unsolicited nonserious events were reported.

Participant Number:	US301-2098 (Part A)
Vaccination Group:	mRNA-1273
Randomization Strata:	≥18 and <65 Years and at Risk
First Dose of Vaccine:	10 Aug 2020 (Study Day 1)
Second Dose of Vaccine:	08 Sep 2020 (Study Day 30)
Reason for Narrative:	SAE

Narrative Overview

MedDRA Preferred Term/ Verbatim Term	Event Category	Severity	Relationship to IP	Start Date – Stop Date	Outcome
Colitis/Colitis	SAE	Grade 3/severe	Not related	24 Sep 2020 (Study Day 46) – 30 Sep 2020 (Study Day 52)	Recovered/ resolved
Acute Respiratory Failure/Acute Hypoxic Respiratory Failure	SAE	Grade 4	Not related	29 Sep 2020 (Study Day 51) – 12 Oct 2020 (Study Day 64)	Recovered/ resolved
Cardiac Failure Congestive/Exacerbation Of Diastolic Chf	SAE	Grade 3/severe	Not related	29 Sep 2020 (Study Day 51) – 12 Oct 2020 (Study Day 64)	Recovered/ resolved
Clostridium Difficile Infection/Clostridium Difficile	SAE	Grade 3/severe	Not related	29 Sep 2020 (Study Day 51) – 25 Oct 2020 (Study Day 77)	Recovered/ resolved

Abbreviations: IP = investigational product; MedDRA = Medical Dictionary for Regulatory Activities version 23.0.

Participant US301-2098, a 60-year-old not Hispanic or Latino female, received the first dose of mRNA-1273 in the left arm on 10 Aug 2020 (Study Day 1). The second dose was administered in the left arm on 08 Sep 2020 (Study Day 30). The participant's baseline SARS-CoV-2 status was negative.

Event Details

On 24 Sep 2020 (Study Day 46), 45 days after the first dose and 16 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of colitis. Action taken with the IP was not applicable. The event of colitis lasted for 7 days, after which it was considered to be recovered/resolved on 30 Sep 2020 (Study Day 52). The investigator assessed the event of colitis to be not related to the IP.

On 29 Sep 2020 (Study Day 51), 50 days after the first dose and 21 days after the second dose of the IP, the participant experienced a Grade 4 serious adverse event of acute respiratory failure. Action taken with the IP was not applicable. The event of acute hypoxic respiratory failure lasted for 14 days, after which it was considered to be recovered/resolved on 12 Oct 2020 (Study Day 64). The investigator assessed the event of acute respiratory failure to be not related to the IP.

On 29 Sep 2020 (Study Day 51), 50 days after the first dose and 21 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of cardiac failure congestive. Action taken with the IP was not applicable. The event of exacerbation of diastolic chf lasted for 14 days, after which it was considered to be recovered/resolved on 12 Oct 2020 (Study Day 64). The investigator assessed the event of cardiac failure congestive to be not related to the IP.

On 29 Sep 2020 (Study Day 51), 50 days after the first dose and 21 days after the second dose of the IP, the participant experienced a Grade 3/severe serious adverse event of clostridium difficile infection. Action taken with the IP was not applicable. The event of clostridium difficile lasted for 27 days, after which it was considered to be recovered/resolved on 25 Oct 2020 (Study Day 77). The investigator assessed the event of clostridium difficile infection to be not related to the IP.

Additional Information From the Safety Database

Additional details for the serious events are available in the following CIOMS reports:

CIOMS Number	MedDRA Preferred Term
MOD-2020-000395	Colitis
MOD-2020-000395	Acute respiratory failure
MOD-2020-000395	Cardiac failure congestive
MOD-2020-000395	Clostridium difficile infection

Study Completion/Discontinuation

On 02 Dec 2020 (Study Day 115), the participant discontinued from the study due to withdrawal of consent by participant.

Medical History/Ongoing Medical Conditions

The participant's medical history and ongoing medical conditions are presented in the following table:

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Obesity	Obesity	1980 - Ongoing
Hypothyroidism	Hypothyroidism	1990 - Ongoing
Umbilical hernia	Umbilical hernia	1997 - Ongoing
Drug hypersensitivity	Keflex allergy	1999 - Ongoing
Drug hypersensitivity	Lithium allergy	1999 - Ongoing
Drug hypersensitivity	Lyrica allergy	1999 - Ongoing
Anxiety	Anxiety	2000 - Ongoing
Back pain	Back pain lumbar region	2000 - Ongoing
Bipolar disorder	Bipolar disorder	2000 - Ongoing
Depression	Depression	2000 - Ongoing
Dyspepsia	Heartburn	2000 - Ongoing

Preferred Term	Condition	Start Date – Stop Date/Ongoing
Fibromyalgia	Fibromyalgia	2000 - Ongoing
Gastrooesophageal reflux disease	Gerd	2000 - Ongoing
Insomnia	Insomnia	2000 - Ongoing
Panic attack	Panic attacks	2000 - Ongoing
Seasonal allergy	Seasonal allergies	2000 - Ongoing
Hypertonic bladder	Overactive bladder	2005 - Ongoing
Menopause	Menopause	2005 - Ongoing
Diverticulitis	Diverticulitis	2010 - Ongoing
Osteoarthritis	Osteoarthritis (lower back, lower neck)	2010 - Ongoing
Chronic obstructive pulmonary disease	Copd	Mar 2018 - Ongoing
Cardiac failure congestive	Diastolic congestive heart failure	2019 - Ongoing
Emphysema	Emphysema	2019 - Ongoing
Hypercholesterolaemia	Hypercholesterolemia	2019 - Ongoing
Hypertension	Hypertension	2019 - Ongoing

Preferred terms are coded using MedDRA version 23.0.

Prior/Concomitant Medications and Procedures

The participant was taking the prior and/or concomitant medications and underwent the concomitant procedures presented in the following table:

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Aripiprazole	2000 - Ongoing	Depression
Clonidine	2000 - Ongoing	Anxiety, Hypertension
Hydrocodone bitartrate; paracetamol	2000 - Ongoing	Osteoarthritis
Chondroitin; glucosamine	2015 - Ongoing	Nutritional Supplement
Diprophylline	2015 - Ongoing	Emphysema
Doxepin	2015 - Ongoing	Anxiety
Fish oil	2015 - Ongoing	Nutritional Supplement
Fluticasone propionate	2015 - Ongoing	Seasonal Allergies
Dexlansoprazole	2017 - Ongoing	Diverticulitis
Iron	2017 - Ongoing	Nutritional Supplement
Montelukast	2017 - Ongoing	Seasonal Allergies
Topiramate	2017 - Ongoing	Fibromyalgia
Hydroxyzine	2018 - Ongoing	Insomnia
Lamotrigine	2018 - Ongoing	Bipolar Disorder
Levothyroxine	2018 - Ongoing	Hypothyroidism
Metoprolol	2018 - Ongoing	Hypertension
Atorvastatin	2019 - Ongoing	Hypercholesterolemia
Salbutamol	2019 - Ongoing	Emphysema
Vortioxetine hydrobromide	2019 - Ongoing	Depression
Ondansetron	28 Sep 2020 (Study Day 50) - Ongoing	Nausea
Chest ct for pulmonary embolus, negative*	29 Sep 2020 (Study Day 51) - 29 Sep 2020 (Study Day 51)	Adverse Event

Medication/Procedure Term	Start Date – Stop Date/Ongoing	Indication
Ct scan - abdomen/pelvis for diagnosis, normal*	29 Sep 2020 (Study Day 51) - 29 Sep 2020 (Study Day 51)	Adverse Event
Dicycloverine	29 Sep 2020 (Study Day 51) - 12 Oct 2020 (Study Day 64)	Colitis (Ae #1)
Electrocardiogram*	29 Sep 2020 (Study Day 51) - 29 Sep 2020 (Study Day 51)	Adverse Event
Furosemide	29 Sep 2020 (Study Day 51) - 01 Oct 2020 (Study Day 53)	Diuretic, From Hospitalization
Gi panel- bacteria pcr - negative*	29 Sep 2020 (Study Day 51) - 29 Sep 2020 (Study Day 51)	Diagnostic
Macrogol	29 Sep 2020 (Study Day 51) - 12 Oct 2020 (Study Day 64)	Pain In Abdomen Dx Colitis
Metronidazole	29 Sep 2020 (Study Day 51) - 01 Oct 2020 (Study Day 53)	Uti Treatment Part Of Hospitalization
Metronidazole	29 Sep 2020 (Study Day 51) - 01 Oct 2020 (Study Day 53)	Uti Treatment Pre-Emptive Part Of Hospitalization
Morphine sulfate	29 Sep 2020 (Study Day 51) - 13 Oct 2020 (Study Day 65)	Pain In Abdomen Part Of Hospitalization (Diagnosed As Colitis)
Pantoprazole sodium sesquihydrate	29 Sep 2020 (Study Day 51) - 12 Oct 2020 (Study Day 64)	Gerd During Hospitalization
Tramadol hydrochloride	29 Sep 2020 (Study Day 51) - 12 Oct 2020 (Study Day 64)	Pain In Abdomen Dx Colitis During Hospitalization
Umeclidinium; vilanterol	29 Sep 2020 (Study Day 51) - 12 Oct 2020 (Study Day 64)	Copd- During Hospitalization
Vancomycin	29 Sep 2020 (Study Day 51) - 22 Oct 2020 (Study Day 74)	C-Diff
