

```

%macro mu_check_req_parameters(
  parameters_to_check =
,help =
,debug =
) / store SOURCE des='V1.0.0.3';
*****FILENAM*****E: MU_CHECK_REQ_PARAMETER.SAS
DEVELOPER: (b) (6)
PLATFORM: 9.2+
DATE: 20120225
PURPOSE: This macro should be called within another macro ("parent macro") to check if
          the parent macro has required parameters that are null. If a particular parameter
          is null, this macro will issue an alert and abort.
NOTE:
MACROS USED: mu_help_debug, mu_wordscan

PARAMETERS:

PARAMETER_TO_CHECK = the parent macro parameter(s) to be checked to see if they are
null.
      If a particular parent macro parameter is null, this macro will issue an
alert and abort.
      (REQUIRED)
